However, learning a foreign language is a great challenge for learners with learning difficulties, especially if one considers the difficulty of those learners to cope with tasks while learning a foreign language (Crombie, 1995). What has hitherto been investigated in the Greek context concerning this issue, focuses mainly on student performance (particularly of dyslexic students) and on EFL teachers' perceptions and practices with regard to dealing with dyslexia in secondary education. For instance, Rontou (2012) focuses on the differentiation of teaching methods, and on the extra time needed in class for learners with dyslexia in secondary school. EFL teachers' perceptions as regards the issue of dyslexia in Greek state secondary schools have also been explored (Gouzkouri, 2012). Various other studies, which are beyond the scope of the present study and therefore will not be mentioned in detail, deal with the difficulties Greek students face in spelling English due to the opacity of the English language as opposed to the transparency of the Greek language (Spencer, 2000).

Although numerous studies conducted investigate students' performance or the EFL secondary school teachers' perceptions towards learning difficulties, other issues, such as the teacher's ability to recognize and distinguish difficulties in a primary school setting, have yet to be adequately examined. Lemperou (2009) has attempted to identify EFL primary school teachers' experience and views on the challenges of dyslexic children in the mainstream classroom. An investigation of the inclusion techniques employed by state primary school EFL teachers in Greece in order to promote the successful incorporation of students with dyslexia in the general classroom has also been made (Katrini, 2005).

However, and bearing in mind that the PEAP programme constitutes a special EFL context, where school literacy has not yet been introduced and children are exposed to a foreign language at a very young age, it seems as though the issue of learning difficulties in the particular context requires further research. Therefore, the present study is an attempt to investigate the EFL teachers' perceptions of learning difficulties in the PEAP classes and their experience with these learners in general.

It has to be clarified at this point that the term "learning difficulties" in this study is conceptualized as a broader term than the term "dyslexia" as the latter is used in most studies so far. The concept of the "learning difficulty" is hereafter used to refer to students who cannot cope efficiently with basic reading skills, written expression and reasoning in combination with memory and/or attention problems as well as several perceptual disorders, such as the inability to recognize, discriminate and interpret stimuli (Mercer, 1997). This conceptualization of learning difficulties has guided the development of the research tools of this study, used in two research phases, which are presented and explained below.

Methodology and data collection

First research phase: a questionnaire survey

In the first research phase, a questionnaire survey was conducted with a view to tracing PEAP teachers' perceptions concerning learning difficulties in young learners, as well as gathering information on possible misconceptions on this area, which would be further investigated in the second research phase (i.e. the teachers' interviews). The tool employed was an online questionnaire designed by the working team for the elicitation of

data on the PEAP teachers' profile, their views on what a learning difficulty is and its impact on foreign language learning at a very young age.

More specifically, the tool was divided into three sections; in the first section the respondents were asked to provide us with their demographic characteristics, including their years of teaching experience in the public sector in general and the PEAP programme in particular. The participants were also asked to evaluate their knowledge in the field of learning difficulties, as well as to specify on how they have gained it (e.g. their studies, seminars, etc.). The second part of the questionnaire aimed at investigating the teachers' perceptions on learning difficulties and thus, the participants were asked, among others, to describe those student behaviours which they consider a sign of a learning difficulty, to outline the profile of students with learning difficulties and provide their own definition of learning difficulties. In the third and final part of the questionnaire, the respondents commented on the teacher's role when realizing that a student might be facing a learning difficulty. Most items of the present tool were open-ended questions as the working team was aiming at a qualitative analysis of the teachers' views.

The participants were contacted by the School Advisors of English, who kindly accepted to administer the tool to the PEAP teachers in the area of their responsibility (snowball sampling). Although the questionnaire survey took place in the beginning of the school year when several English teachers have not yet been appointed to their schools, 75 PEAP teachers in state schools all over Greece responded to this call and completed the questionnaire.

Second research phase: Interviews

Moving on to the second phase of the research, a structured interview scheme was designed and divided into two parts. The first part contained a number of statements of student behavior classified under four key categories (Reception of oral speech, Production of oral speech, Reading and writing, Reasoning and inclusion in the school environment). Several items have been adopted by Panteliadu & Sideridis' standardized test of tracing learning difficulties (Panteliadu & Sideridis, 2008). The participants were then asked to evaluate these statements as signs of learning difficulty, taking into account their experience in class. They could answer positively, negatively or state that they do not know whether a certain behaviour signifies the existence of a learning difficulty or not. Then, they were asked to contemplate on the frequency of encountering each of the stated behaviours in their classes. As the distinction between signs of a learning difficulty and typical young learner characteristics can be difficult to make, the research team deliberately included some statements in the interview scheme, which were descriptive of typical young learner characteristics and the participants' answers to these specific questions were separately evaluated.

The second part of the interview contained general questions about the teachers' experience with children with learning difficulties. The questions in this part revolved around the following three axes of teacher experience: a) their perceptions of whether bilingual children exhibit signs of learning difficulty in the PEAP classes, b) how the reactions of children with learning difficulties change as their school experience increases and c) the impact of the existence of children with learning difficulty in class on the rest of the children as well as on the teacher's role. Finally, teachers were encouraged to make general comments and express possible problems on the issue of dealing with very young learners with learning difficulties in the English language classroom.

In this research phase, the participants were 21 respondents in the questionnaire of the first phase, who have willingly agreed to participate in 20-minute telephone interviews, thus providing further detail on the issues touched upon in the questionnaire.

Results

Major questionnaire findings

With regard to the respondents' profile it should be noted that all of them hold a BA in English Language and Literature. A significant number of the participant teachers hold an MA in TEFL (34%), a few of them (14%) hold a BA in a different field and only a small minority (6%) holds a PhD in TEFL. The vast majority of the PEAP teachers who responded to the questionnaire were women (96%). As regards their age, half of the participants (50%) belonged to the 36-45 age group, 18% aged up to 35 years, and 32% were older than 46 years old. Moreover, half of those teachers have more than 16 years of service in the public sector, 32% of them have 6-10 years, 14% have 11-15 years and only 4% have 1-5 years of service. It is also of great significance that 44% of the respondents have been teaching English in grades A and B since the PEAP launch, 16% have been

teaching in the programme for two school years, 24% for just one school year, while 16% of them have just been introduced to the programme. In addition, almost all the participants of the survey (98%) are currently teaching English within the context of PEAP.

The respondents were also asked to comment on the extent to which they consider themselves informed about learning difficulties. Only a small minority (6%) of the respondents declare that they consider themselves very informed, 36% of them consider themselves more or less informed, the majority (58%) claim they are a little informed on learning difficulties, while none of the participants stated that they are not informed whatsoever. What is really interesting though, is their source of information about learning difficulties. The vast majority of the teachers (76%) said that they have been informed in training seminars, 60% that their source is the Internet, 50% that they study bibliography on the field on their own, 42% that they get informed at academic conferences and seminars, 34% stated that their knowledge derives from their BA degree and only 4% that it derives from their MA degree. It becomes obvious that state school English teachers rely on their own initiatives to get informed about learning difficulties, as it is an issue they have to deal with on a daily basis in their classes.

Furthermore, almost all participants (98%) confirmed that they have encountered learners with learning difficulties in their PEAP classes. It is also worth mentioning that a great number of the respondents have estimated that more than 10% of their students face a learning difficulty (see table below).

Graph 1: Teachers' perceptions on the percentage of learners with learning difficulties in their classrooms

When the participants were asked to describe the learner behaviours that they consider a sign of learning difficulty, they have mostly referred to:

- hyperactivity
- poor concentration
- hostility
- inability to cooperate and adjust in the school environment

Many teachers also point out that the students' inability to remember words or sounds, a negative attitude towards writing, difficulties in articulating oral speech, shyness, lack of self-confidence, emotional instability, omission or reversals of letters/syllables, difficulty in holding the pencil or scissors and the inability to understand and follow the teacher's instructions may also indicate a learning difficulty.

All the above problematic behaviours according to the respondents tend to be signs of several learning difficulties such as Dyslexia, Dysgraphia, the Attention Deficit Hyperactivity Disorder (ADHD), the Asperger Syndrome or Autism. Most of the teachers asked also claim that students having a learning difficulty in acquiring their mother tongue, do so in English language acquisition as well.

With regard to this special student group profile, the participants highlight that they often tend to have a generally poor performance at school (i.e. not solely in the language classes). They also have a tendency to adopt problematic behaviour which could be a result of domestic violence, a poor academic and social background of their family or their personal low self-esteem. The respondents stress that these tendencies are often witnessed in immigrant children and their families and thus, teachers should not always conclude that they indicate a learning difficulty. Moreover, they declare that learners with learning difficulties usually find it demanding to cooperate with other students and adjust to the school environment.

In the definitions of learning difficulties, the participants articulated themselves, they referred to learning difficulties as a factor that makes the acquisition of new knowledge difficult for some students. They also stressed that students with learning difficulties are intelligent in their own unique way and that they need a different teaching approach. Below are some of the most interesting definitions provided by the respondents:

(a) Having a learning difficulty usually means that the student finds no joy in learning something new, instead the learning process becomes an exhausting procedure often accompanied by the feeling of disappointment.

(b) Trying to avoid writing, illegible handwriting, difficulty in concentrating.

(c) A student who has a learning difficulty needs more time than other students when working on an activity, while s/he needs to discover his/her own way to memorize and recall information.

(d) Students with learning difficulties need reward and love, not rejection.

(e) Students with learning difficulties are intelligent students who are imaginative and artistic; they find it difficult to adjust to the rules and pace of others mostly because they are too slow for them. They seek for action, creative expression, release of the tension. They often fail to follow and understand linear stream of thought, reading or writing because their own boundaries are broader.

As regards the teacher's role when s/he has an indication that a student has a learning difficulty, the participants stressed that it is their duty to:

cooperate with the class teacher and the school principal

inform, advise and support the students' parents

seek for advice from experts in the field

differentiate his/her instruction adjusting it to the student's needs

support, protect and encourage the student highlighting his/her strengths

keep himself/herself informed so that they are able to detect and face potential problems.

Finally, the majority of the state school teachers of this survey claimed that their experience in the programme did not change their perception of learning difficulties. Those who said that they gained some knowledge on the field, suggest that it derives from their newly-developed insight into teaching young learners.

Major interview findings

Using their background knowledge and their experience in the PEAP classes, 21 teachers participated in the interview and proceeded to an evaluation of a series of statements of learner behaviour. Interestingly, in this first part of the interview, most statements of learner behavior were considered as possible signs of a learning difficulty by the interviewees. However, after responding positively to the evaluation of some statements, many of the participants tended to comment that certain behaviours could also be attributed to the learners' young age. Upon reflection, they identified several additional causes, rather than the mere existence of a learning difficulty, such as the lack of school experience and the lack of practice in English or in general world knowledge on the part of the young learners. Generally, only 10-30% of the respondents tended to state that they did not know whether a statement was a sign of a learning difficulty or not.

Out of the four categories of learner behavior included in the interview and already described above, the statements most frequently evaluated by the participants as signs of learning difficulty were under the headings "Reading and writing" as well as "Reasoning and inclusion in the school environment". This is especially interesting as at the age we are discussing, children **do not** possess **literacy skills**. Specifically, "Reordering, replacing, omitting or adding letters when writing" was considered a sign of difficulty by 85,7% of the respondents, "Negative attitude towards writing" was pointed out as a difficulty by 81% of the respondents, while other behaviours, such as "Easily giving up the effort to understand" was considered a difficulty by 76,2% of the respondents. Similar answers were given for the following statements: "Difficulty in understanding written English (at word level) but relative ease when they hear the oral representation" (61,9% of the respondents), "Being easily distracted when they perform an activity" (66,7%), "Difficulty in discerning phonemes" (57,1%) and "Inability to identify the gist" (57,1%).

Moreover, most of the participants classified many of the most typical young learner characteristics of the aforementioned two categories as signs of a learning difficulty. Specifically, the vast majority of the respondents (90,5%) categorized the learners' "Inability to concentrate for a long time" as a learning difficulty. Behaviours such as the "General difficulty in the initial steps of reading and writing skills development" and the "Signs of hyperactivity" were also characterized as learning difficulties by a percentage of 71,4% of the respondents respectively. More than half of the participants (61,9%) claimed that the "Difficulty to discipline and follow class rules" is a sign of a learning difficulty and almost half of them (47,6%) hold the same belief for the children's "Inability to consolidate and reproduce new knowledge effortlessly".

Apparently, the undoubted difficulty in differentiating between typical young learner behaviour and a possible learning difficulty accounts for the high percentage of respondents stating that these behaviours are signs of a learning difficulty. It should be noted at this point, however, that this is not always a misinterpretation on the part of the teacher as in many cases some of these behaviours might as well have been signs of learning difficulty.

On the other hand, some other statements were deemed as more of a natural and expected behavior by children at this age and at this level of school experience. These statements of learner behavior, which were classified as rather unlikely to be a learning difficulty, are presented below: a) "Difficulty in the comprehension of a quickly uttered phrase/relative ease upon slower repetition of the utterance" (71,4% of the respondents), b) "Misinterpretation of directions given in English" (61,9% of the respondents), c) "Recalling another word of the same semantic category in English (e.g. notebook instead of book)" (52,4% of the respondents), d) "Difficulty in the clear articulation of oral speech in English" (52,4% of the respondents), e) "Inability to recall and reproduce new knowledge easily" (42,9% of the respondents).

Therefore, the respondents appear to be more lenient when young learners show signs of confusion, misinterpretation or difficulty in English than in Greek. For instance, as regards the difficulty in the articulation of oral speech in Greek, almost half of the respondents (47,6%) consider it a sign of learning difficulty, as opposed to a much lower percentage (19%) who state the opposite. On the other hand, when it comes to the difficulty in the articulation of oral speech in English only some of the respondents (19%) answered positively while for half of them (52,4%) this is not a learning difficulty. It seems as though young learners' limited experience with English plays a determining role in their teachers' judgement.

Moving on to the second part of the interview, almost half of the respondents (47,6%) have had the experience of teaching a PEAP class for two consecutive years. In this case, all of them record increased school experience on the part of student as a key factor in alleviating possible learning difficulties and helping learners mature and improve their behaviour.

Regarding the issue of the combination of *bilingualism* and *learning difficulties*, some of the participants (38,1%) claimed they had witnessed learning difficulties in bilingual children. Few respondents (28,6%) stated that they had **not** spotted learning difficulties in bilinguals and a percentage of 33,3% of the respondents were not certain and refrained from providing a specific answer. In an effort to explore their views on this issue, most respondents (61,9%) stated that they do **not** consider bilingual learners as a group of learners more prone to learning difficulty as opposed to a percentage of 23,8% who report the opposite. Another interesting finding is that many teachers have described bilingual students as extreme cases (i.e. either as excellent students or as students of poor performance).

When it comes to the teacher's role in class, the majority of the respondents (71,4%) argued that learners with learning difficulties hinder their work in the PEAP classes. They further explain that by referring to the need for differentiated instruction and the extra planning involved in dealing with mixed ability classes (e.g. simplification of educational material, etc).

A categorization of the responses in the open questions (qualitative analysis) yields the following findings. The PEAP teachers participating in the survey almost unanimously ask for special training in the area of learning difficulties. With respect to the Greek EYL project, they comment on its idiosyncratic nature in general, emphasizing on the carefully designed educational material, which helps soothe learning difficulties, as it familiarizes young learners with oral production, games and songs before the introduction of school literacy. Reference is also made to several other stakeholders, as the participants stress the need for informing parents, children and society as a whole on the issue of learning difficulties. Each of these stakeholders should be informed to the extent that this is necessary and can have a positive impact on the teaching process. Finally, the participant teachers point at the importance of their cooperation with the class teacher or even the kindergarten teacher where this is possible.

When reflecting on how they go about "diagnosing" possible learning difficulties in their students, the participants appear to have developed their own perceptions and "rules", thus being more alert in certain cases. For instance, when they witness a persistent appearance of a "problematic behaviour" in a student even as s/he grows older, they tend to attribute it to the existence of a learning difficulty. This finding renders student age one of the most important factors in "diagnosing" and perceiving learning difficulties. Another factor of great importance for teachers is the combined realization of certain behaviours in a child (e.g. hyperactivity along with a shorter attention span). Finally, frequency and intensity in the manifestation of the "problematic behaviour" also appear to count.

Conclusions

Examining the results of the present survey, it becomes evident that the respondents have already formulated certain views on what constitutes a learning difficulty and how they can go about dealing with it. However, they stress the need for further training which will enable them to recognize and cope with learning difficulties. Moreover, one of the significant findings of the current study was that most of the participants seem to be aware

of young learners' characteristics and of the fact that PEAP students belong to a special group of learners who need time to adjust in the school environment and especially before being introduced to literacy.

Still, teachers appear to misinterpret behaviours that relate to adjustment in the new sector with learning difficulties (hyperactivity, poor concentration, discipline, inability to follow instructions). There appears to be confusion between a typical young behaviour and learning difficulty. Teachers also indicate specific language learning problems in learners who have not developed literacy skills (negative attitude to writing, dyslexia, shyness to read).

What is really encouraging is that the participants have confirmed that the educational material used in the context of the programme helps students with learning difficulties participate in the learning process and build their self-esteem, promotes differentiated learning and gives equal opportunities to all students.

The respondents also admit that bilinguals do encounter several difficulties in language learning but they stress that this is due to their poor linguistic environment and does not always indicate a learning difficulty.

Some additional questions that would be interesting to explore in more detail in the future are:

-How can a teacher best deal with mixed ability classes of young learners?

-How can a teacher handle the parents whose children exhibit a degree of learning difficulty?

-To what extent is knowledge about learning difficulty in one's mother tongue applicable to foreign language acquisition?

Finally, an important limitation needs to be considered. The current study has only examined a small sample of PEAP teachers and the results presented are tendencies concerning the teachers' perceptions on learning difficulties. In order to draw safer and more accurate conclusions which can be generalized for all PEAP teachers, a larger scale survey should be carried out. The current study, however, along with the emerged interesting results can be of use to English teachers, teacher trainers and policy makers especially because teachers strongly emphasise their need for further training on the issue of learning difficulties.

New Teaching Methods in Nursing Education (HEVI)

C. Marcean^a M. Alexandru^b E. Cristescu^{c*}

^{a b c} Sanitary Post High School "Fundeni" Romania

Founded in 1950, the current Sanitary Post High School "Fundeni" comes to represent the most important institution of public education in the field of nursing training in Romania today.

The school's courses are attended by the approximate number of 2200 students, trained for the following specialties: registered nurse, physical therapist, pharmacy assistant, radiology assistant, laboratory assistant.

The school's teaching staff consists of a total of 137 teachers, highly qualified to train students in the art of nursing: 68 nursing professionals and 69 specialist teachers in the field of medicine, biology, psychology, sociology, etc.

The main facilities the Sanitary Post High School "Fundeni" offers consist in: 12 classrooms equipped with modern technology and quality resources for teaching and learning, 12 demonstration rooms with all the necessary resources to provide practical training for nursing students, 5 laboratories for anatomy, pharmacy and informatics lessons, equipped with the latest technology in the field, including audio and video resources and a library with 20.000 specialized books.

As a national training centre for nursing professionals, our school organizes the exams for Level I and Level II, educational psychology and pedagogy courses, as well as specialized courses for all the nursing teachers in Romania.

Since September 1990, The Sanitary Post High School "Fundeni" has established collaborative relationships at an international level, with a group of similar educational institutions from France, Denmark, Ireland, Great Britain, Belgium, Italy, Spain and the USA.

In the period 2008-2010, The Sanitary Post High School "Fundeni" was involved in the program Leonardo da Vinci – Domestic Violence (Intimate Partner Violence), along with similar institutions from other countries: Finland, Bulgaria, Germany, Estonia, Ireland, Lithuania.

In the period 2009-2011, The Sanitary Post High School "Fundeni", in collaboration with three hospitals from Bucharest, where practical training was held, carried out the project: „Nursing – the convergence of pre-university medical training with working life” - project funded with European funds – the first innovative project in the field of practical training in healthcare from Romania.

In the period 2010 -2012, The Sanitary Post High School "Fundeni", in collaboration with seven healthcare schools from all the development regions of the country, came to support the students in this field with a new national project to improve practical training and also to offer career guidance and counseling: „S.O.S. The Medical Sector! Pilot project to improve practice and insertion, correlated with national campaigns for promotion, guidance and counseling, in order to reduce the shortage of medical staff”. The project was co-funded by the European Social Fund through Sectoral Operational Program Human Resources Development 2007-2013 “Invest in people!”.

In the period 2010 – 2013, another project was carried out at national level. „Multi-regional program to improve the transition from school to working life for students at healthcare schools” was implemented by The Sanitary Post High School "Fundeni" in partnership with the most representative nursing schools in the country.

The project “Social and Healthcare Teachers against Violence, HEVI 2008-2010” aimed to provide teachers with the necessary tools for teaching and guiding the students on issues of intimate partner violence .

Intimate partner violence as a segment of domestic violence is a problem that affects a significant percentage of the population at European level and worldwide and ranks among the leading causes of death for the people involved (World Health Organization Multi-country Study 2006) .

Eradication / improvement of this phenomenon requires a partnership between Global and European prevention networks, strengthening national capacities and promoting best practices, launching campaigns against violence, developing social and health services at local and national level.

Healthcare professionals, especially those who work in emergency services are first to come into contact with victims of aggression. They must have adequate training for the situations they must cope with. In Romania, the nursing training curriculum includes topics related to family or domestic violence. A special role lies with health and social care teachers and specialists, who can form students to develop the abilities necessary for their work practice.

A study carried out in seven European countries with the participation of 104 health and social care teachers showed that only 13% of respondents consider themselves prepared to teach intimate partner violence and 30% are completely unprepared.

Most participants (39%) believe that after the training they are averagely prepared to teach intimate partner violence and 37% believe that they are prepared to teach intimate partner violence.

During the course of the project "Social and Healthcare Teachers Against Violence, HEVI 2008-2010" some different teaching resources were given to participants: training manual, audiovisual material, booklets, guidance manual, literature and recommendations. The suggested teaching methods and activities were: audio-video based learning problems (case studies), reflective study journal and inner dialogue in writing, "climbing" method, "brainstorming", "world association" method, "four corners" exercise, "true or false" method, "power and control wheel" method, "study cafe" method, the "working group" method, "photographing wounds" method and role play (with different variants).

Among these, we chose to present the audiovisual method, the method of "climbing", the role play and the case study.

The audio-visual method uses animated films or educational films which illustrate conflicts and their deployment. Although they have a strong emotional impact, they allow the teacher to analyze the situations revealed in the film and to develop solving scenarios together with the students.

The development of the activity:

1. The teacher prepares the film and the necessary equipment.
2. He / She assigns a task that the students know and sets the time.
3. He / She tells students the objectives for the while-viewing stage.
4. He / She shows the film.
5. He / She asks students to organize themselves into small groups. Every group should answer 2-3 questions on how to solve the problem shown in the film, naming people or institutions that can participate in improving the situation within the period fixed.
6. At the end of the discussion the groups will meet, will share findings and establish a work strategy for the issue previously mentioned, including services or organizations that may be involved.

The "Climbing" method can be used to discuss important documents regulating the personal and/ or social life of people: the Universal Declaration of Human Rights, patients' rights, children's rights, the rights of persons with disabilities. This method gives students the opportunity to familiarize themselves with various definitions and concepts, facilitates the knowledge acquisition about the rights of different people and also help them recognize situations where the human rights are not respected.

The development of the activity:

1. The teacher prepares a list of the Human Rights and a board to pin papers on.
2. He / She tells the student what is the topic about, the allotted period of time and how the task will proceed.
3. Students will be divided into groups of 4 or 5, depending on their total number. Each group will be given a list of rights that are cut into strips corresponding to each law (30 stripes for the 30 rights).
4. Students will be allowed 10 minutes to read the rights in silence.
5. When the time ends, the teacher asks them to imagine that they are at the foot of a mountain and they have to climb it to the top where there is a cottage; the weather conditions are optimal, but each student carries a backpack where there are those 30 rights. The students feel slightly tired and the teacher suggests that each group should throw 10 rights. For this to happen, the members of the group must come to an agreement (about which rights will be thrown). The teacher gathers the rights thrown by groups and pin them on the board for each team, according to the corresponding number of rights. The trip continues but the students feel tired again after a while and they must throw another 10 rights. When the students are near the top, they are forced to throw another 5 rights and arrive at the cottage with the last 5 rights in the backpack.

The teacher who observed the students throughout the activity may ask them to express their feelings, to argue why they gave up certain rights and not other and also about the difficulty of establishing priorities among rights.

The "role play" method (with different variants) offers the students the opportunity for sensorial experience, to recognize the perpetrators' reasons and strategies, to experiment abusive behavior, to acquire communication skills, such as active listening or listening without criticism and how to use open questions.

The task's objectives and the allotted time depend on the topic addressed by the teacher.

The teacher usually chooses pairs of students to play an aggressor and a victim, while their fellow students observe the situation. At the end of the exercise students will share their experience.

The teacher has an important role in this activity, since he must prepare the students carefully, so they can be credible enough in their part.

The "case study" method can be applied to obtain information about the abused and the abuser, to start and maintain a professional relationship with the assaulted person, to analyze the situation and suggest solutions to solve it.

The teacher introduces students to the data of a case, with as much information as possible, he formulates the task's requirements and determines the required time.

Students can be divided into groups of five, of which one is given the task of writing responses to the task requirements. When the time ends, the groups come together and present their solution(s) in an order determined by the teacher. After that, the solutions will be debated, the teacher's role consisting in assessing the appropriateness of the solutions presented, considering the situation and the requirements of the task.

From the initial questionnaires applied to the participants in this project, it was revealed their interest to be informed about appropriate methods of conveyance of knowledge and skills in this highly sensitive area.

The teaching of the contents existing in the national curriculum for specialty nurse is conditioned by certain characteristics of the students: age limit, differences in attitudes, values and culture, the use of knowledge in practical situations, actual problems in group cooperation, communication difficulties, the issue of ignoring violence, the existence among students of people who had these problems or experienced violence at some point.

At the end of the project the teachers who participated concluded that the modern methods presented are interactive and useful in adult education, they can use real-life examples and give students the knowledge and skills to develop their comprehension and also to analyze and synthesize this knowledge .

Sosyal Paylaşım Ağlarının İşbirlikli Öğrenmede Kullanımı: Bir Facebook Uygulaması

Using Social Media in Collaborative Learning: A Facebook Application

Derya Kıcı^a N. Emel Dilmen^{b*}

^a Araştırma Görevlisi, Toronto Üniversitesi, Kanada

^b Doç. Dr., Marmara Üniversitesi, Türkiye

Özet

Bu çalışmada çevrimiçi sosyal paylaşım ağlarının, işbirlikli öğrenmeyi desteklediğini ve değişen toplumsal yapı ve yaşam biçimi neticesinde ortaya çıkan bu ortamların işbirlikli öğrenmenin uygulanması için uygun bir ortam olduğunu göstermek amaçlanmaktadır. Bu amaçla yetişkin eğitiminde, işbirliği içerisinde problem çözme becerisini geliştirmek için bir amaçlı senaryo (Schank, 1994) tasarlanmış, bunun için gereken içerik geliştirilmiş ve hazırlanan eğitim uygulaması yetişkin grubuna uygulanarak sonuçları değerlendirilmiştir. Ayrıca bireylerin bilgi teknolojilerini kullanım yetkinlikleri ile işbirlikli öğrenmeye katılım isteklileri arasındaki ilişki de çalışma kapsamında incelenmiştir.

Anahtar kelimeler: İşbirlikli öğrenme, sosyal paylaşım ağları, problem çözme.

Abstract

The aim of this study is to show that online social networks support the collaboration in education and they are convenient for the use of collaborative learning methods. In order to achieve this, a goal based scenario (Schank, 1994) was designed as a Facebook application with the aim of developing problem solving skills in collaboration for adult learners, then it was practiced by 100 adult learners and finally the results of implementation were analyzed. Furthermore, the study seeks the relation between the digital competence and decision making collaboration of the participants.

Keywords: Collaborative learning, social networks, problem solving.

Marginalization of University Professors Training in Tunisia: From Pedagogical Provisions to Bureaucratic Formalities

Amani Bel Abed^a Nadia Hamrouni^{b*}

^aAssistant Professor, College of Humanities, University of Sousse

^bAssistant Professor, College of Humanities, University of Sousse

Abstract

While Tunisian authorities seem to acknowledge the correlation between teacher training, teaching effectiveness and student achievement, they are still quite detached from its immediate implications. In this paper, we reflect on the nature and status of Assistant Professors' training programs in Tunisia. We assess the qualitative aspects of the training programs using a questionnaire, referring to the training events attended in 2011 and 2013 at the University of Sousse. This questionnaire aims at soliciting the trainees' opinion on the training programs they attended. The main objective is to elicit a description of their experiences with the current training model and introspection about their needs for training provisions. After a diagnosis of the major problems encountered with the programs, we suggest a number of workable solutions and propose alternative training models that would be tailored to the trainees' needs.

Keywords.

INTRODUCTION

The training and support of Assistant Professors (APs) is a topic of continuous interest. Indeed, the education research community has extensively addressed the importance of teacher education and professional development along with their influence on teaching quality and student achievement (Desimone, Porter, Garet, Yoon, & Birman, 2002; Fishman, Marx, Best, & Tal, 2003; Garet, Porter, Desimone, Birman, & Yoon, 2001). The major concern has always been to find out the most effective and supportive teacher training models. In fact, it is generally accepted that fostering teacher quality plays a major role in reaching high-quality education. For that reason, authorities are usually concerned with providing the most supportive training programs for APs. Unfortunately; however, in Tunisia the authorities' involvement starts and ends with concern.

As a matter of fact, official recognition and implementation of APs teacher training in Tunisia started in 2008 with an Order of the Minister of Higher Education, Scientific Research and Technology fixing the participation of the new teachers in the educational training. As published in the Official Gazette of the Republic of Tunisia (2008), this Order stipulates that all newly recruited APs must undergo a probationary period/internship of two years that could be extended for one year. The aforementioned internship comprehends two teacher-training cycles that could be organized at the central, territorial or regional level in the framework of the university concerned. The participation as well as the attendance in the cycles of teacher training are considered essential factors in the evaluation of the internship. They are taken into consideration by the relevant bodies during the discussion of the issue of tenure; additionally the progress made on the doctoral thesis is also acknowledged. It is clear that policy-makers acknowledge the importance of providing teacher training for APs, however, nothing is said about the content and character of that training. The official text does not address the question of how teacher training should be made available to teachers nor does it specify its incentives and goals. It relegates this task to the 'university concerned', which in theory should be a good thing for it allows the different educational institutions to provide training opportunities that correspond to the needs of their APs. The actual state of affairs, however, is totally different. Despite recognition of its importance, the teacher training currently available to APs is woefully inadequate. The major problem is that most if not all universities do design teacher-training programs that suffer from a one-size-fits-all approach that does not account for the difference in knowledge, competences and skills of the different AP recruits. The current university-based teacher training programs tend to train APs based on universal 'best practices' without taking into consideration the local contexts or the specific needs related to the different content subjects that the trainees would actually teach.

In the present work, we assess the qualitative aspects of the APs teacher-training programs held at the University of Sousse in 2011 and 2013 (No training programmed/took place in 2012) using a self-completed web-based questionnaire. The latter allows us to elicit a description of the trainees' experiences with the current training model and introspection about their needs for training provisions. After a diagnosis of the major problems encountered with the programs, we suggest a number of workable solutions and propose alternative training models that would be tailored to the trainees' needs.

ASSESSMENT OF THE CURRENT APs TEACHER TRAINING PROGRAMS

If we want to provide a valid assessment of the current teacher-training programs offered by the University of Sousse, we need to identify the key elements that make up any professional development system (Borko, H. 2009: 4):

- The professional development program;
- The teachers, who are the learners in the system;
- The facilitator, who guides teachers as they construct new knowledge and practices; and
- The context in which the professional development occurs.

The professional development program corresponds to the teacher-training programs held at the University of Sousse in 2011 and 2013. The learners here correspond to the freshly recruited Assistant Professors by the University in question. As for the facilitators, they correspond to the trainers who are teachers qualified for training. Eventually, the context in which the professional development occurs is within the district of the University of Sousse.

Methodology

Participants

A group of nineteen diverse and accomplished Assistant Professors freshly recruited by the University of Sousse, and teaching different subject areas took part in this study. 56% of the participants held a doctoral degree.

Instrument and Procedure

We used a web-based questionnaire that was distributed to the participants by email. Self-completed web-based questionnaire is a research tool that offers time and place flexibility, reduces biasing errors and provides a higher degree of anonymity for the participants (Phellas et al. 2011). The questionnaire was partially adopted from a project implemented by SPAN on improving the quality of in-service teacher training system in Croatia (SPAN Consultants, 2013). It was designed and distributed using SurveyMonkey Software (www.surveymonkey.com). The questionnaire was administered in French, Tunisians' second language.

Results and analysis

The first part of the questionnaire aimed at eliciting information about the trainees' experiences with the training programs. When asked to describe the importance of the training program, 66.67% reported that it was important for their own job/educational process, 50% that it was important for their personal growth and development, and only 33.33% thought it was important as a requirement for getting tenured.

Graph 1: Importance of teacher training program

Even though they acknowledge the importance of the training, 25% of the participants admit missing some of the training sessions of the 2011 program. When asked for the reasons, 75% asserted that the content did not meet their professional needs and that they did not find the trainers to be skilled enough. Interestingly enough, 87.5% say they have not benefited from the program and 12.5% have a mitigated feeling. In fact, no participant asserted that they have benefited from the program. One participant reflecting on why s/he did not think s/he benefited from the program noted:

[The training program was too general in some cases, and in others too specific dealing only with a couple of disciplines. In addition, the trainers did not show a lot of interest in what they were delivering which made their sessions boring.]

In fact, 66.67% admit that the available training programs did not fulfill their professional and personal development needs. 66.67% find that their institution did not offer quality-training programs, and did not bring specialists in teacher training, pedagogy and communication. Interestingly, 100% of the participants admit that even though they were quite satisfied with their performance as teachers, they still thought they needed some improvement. Thus, it is clear that despite the fact that they were intrinsically motivated, all of the participants were quite dissatisfied with the available teacher-training programs.

One of the most recurrent motifs of the trainees' dissatisfaction with the teacher training programs they attended was the fact that the content did not fulfill their needs. Actually, 72.22% did not think that their respective institutions conducted a needs analysis study before implementing the training program. As a matter of fact, the second part of the questionnaire was specifically designed to address the trainees' teacher-training needs. The latter were divided into two major parts. The first addressed the topics and areas they needed to see more present in the training program. 72.22% of the participants considered teaching methodology as their most needed topic to be covered (4 to 5 on a Likert scale). Likewise, 62.21% expressed a high interest in developing communication skills, whereas 55.56% of the participants thought that research methodology were what they needed to see the most in the training program. Finally, 50% of the participants chose syllabus design and conducting students needs analysis as their most important areas for further development.

The second part is divided into six different sections according to major teaching core competences (SPAN Consultants, 2013). In each section, the participants were asked to assess the importance of a number of competences for teaching and other school related activities of teachers and their corresponding level of need for improvement. The first section addressed the core competence of "facilitating learner-centered innovative learning and work." 75% thought that providing learning experiences that promote problem solving, critical thinking, inquiry and creativity was of the highest importance and 58.33% expressed a high level of need for improvement in that area. 58.33% thought that fostering the development of independence in student learning was of the highest importance and 50% expressed a high level of need in that area.

Table 1: Core Competence 1: Facilitating Learner-Centered Innovative Learning and Work

	IMPORTANCE				NEED FOR IMPROVEMENT			
	0	1	2	3	0	1	2	3
Develop student learning independence	0%	0%	41.67%	58.33%	0%	8.33%	41.67%	50%
Promote problem solving, critical thinking, inquiry and creativity	0%	0%	25%	75%	0%	8.33%	33.33%	58.33%
Create opportunities for students collaborative work	0%	0%	75%	25%	0%	16.67%	66.67%	16.67%
Make use of ICT and audio-visuals	0%	25%	41.67%	33.33%	0%	8.33%	66.67%	25%
Clearly define and present the aim of the lesson	0%	8.33%	41.67%	50%	8.33%	25%	50%	16.67%
Identify and respond to students learning needs	0%	8.33%	58.33%	33.33%	0%	16.67%	66.67%	16.67%
Develop and implement a program that targets students needs	0%	16.67%	33.33%	50%	0%	16.67%	50%	33.33%
Evaluate work strategies used to address specific students learning needs	0%	33.33%	25%	41.67%	8.33%	25%	16.67%	50%

The second section addressed the core competence of "assessing and monitoring learning processes and outcomes." 58.33% of the participants thought that sharing knowledge and experience of using exemplary assessment strategies with colleagues was of the highest importance and 41.67% expressed a high level of need for improvement in that area. 58.33% declared that formulating learning outcomes, collecting a range of

evidence to monitor student learning outcomes, developing and implementing a range of exemplary assessment strategies, and reviewing the effectiveness of an exemplary assessment strategy were of moderate importance. 75% expressed a moderate level of need for improvement in collecting a range of evidence to monitor student-learning outcomes. Similarly, 66.67% felt a moderate level of need for improvement in formulating learning outcomes and in reviewing the effectiveness of an exemplary assessment strategy.

Table 2: Core Competence 2: Assessing and Monitoring Learning Processes and Outcomes

	IMPORTANCE				NEED FOR IMPROVEMENT			
	0	1	2	3	0	1	2	3
Formulate learning outcomes	0%	23.08%	53.85%	23.08%	0%	8.33%	41.67%	50%
Collect a range of evidence to monitor student learning outcomes	0%	7.69%	61.54%	30.77%	0%	8.33%	33.33%	58.33%
Record evidence of student attainment of learning outcomes in order to inform ongoing planning and reporting processes	0%	15.38%	46.15%	25%	0%	16.67%	66.67%	16.67%
Report student learning outcomes	15.38%	7.69%	53.85%	38.46%	0%	8.33%	66.67%	25%
Develop and apply fair and inclusive practices in assessment and reporting	0%	15.38%	53.85%	50%	8.33%	25%	50%	16.67%
Review the effectiveness of an exemplary assessment strategy	0%	7.69%	61.54%	33.33%	0%	16.67%	66.67%	16.67%
Share knowledge and experience of using exemplary assessment strategies with colleagues	0%	7.69%	38.46%	50%	0%	16.67%	50%	33.33%
Provide comprehensive, relevant information to students and other stakeholders	0%	7.69%	38.46%	41.67%	8.33%	25%	16.67%	50%

The third section, addressed the core competence of “designing and implementing programs, schedules, training materials and didactic methods.” 50% found that analyzing the institute’s learning environment as input for designing programs and institutional policy, and evaluating programs and institutional policy were of the highest importance. In addition, 41.67% expressed a need for improvement in leading the development and implementation of program design and/or institutional policy, and 50% also expressed a need for improvement in supporting the design, implementation and monitoring of the curriculum or institutional policy.

Table 3: Core Competence 3: Designing and Implementing Programs, Schedules, Training Materials and Didactic Methods

	IMPORTANCE				NEED FOR IMPROVEMENT			
	0	1	2	3	0	1	2	3
Support the design, implementation and monitoring of the curriculum or institutional policy	0%	0%	53.85%	46.15%	0%	7.69%	46.15%	46.15%
Analyze the institute’s learning environment as input for designing programs and institutional policy	0%	7.69%	46.15%	46.15%	0%	23.08%	30.77%	46.15%
Lead the development and implementation of program design and/or institutional policy	0%	7.69%	69.23%	23.08%	0%	23.08%	38.46%	38.46%
Evaluate programs and institutional policy	0%	7.69%	46.15%	46.15%	0%	23.08%	38.46%	38.46%
Convince superiors to provide necessary technical support and additional materials	0%	7.69%	53.85%	38.46%	0%	15.38%	46.15%	38.46%

The fourth section addressed the core competence of “providing learner guidance and counseling.” 75% thought that maintaining current information about learning resources, educational opportunities and support services was of the highest importance. Similarly, 58.33% found that carrying out individual training needs analyses and adapting the educational program to students’ individual needs with appropriate support were also of the highest importance. When it comes to assessing the level of need for improvement, 58.33% attributed the highest levels of need to maintaining current information about learning resources, educational opportunities and support services, and to building rapport with students to facilitate open communication.

Table 4: Core Competence 4: Providing Learner Guidance and Counseling

	IMPORTANCE				NEED FOR IMPROVEMENT			
	0	1	2	3	0	1	2	3
Maintain current information about learning resources, educational opportunities and support services	0%	7.69%	15.38%	76.92%	0%	15.38%	30.77%	53.85%
Use appropriate communication strategies	0%	7.69%	38.46%	53.85%	0%	0%	46.15%	53.85%
Build rapport with students to facilitate open communication	7.69%	15.38%	23.08%	53.85%	0%	7.69%	30.77%	61.54%
Carry out individual training needs analyses and adapt the educational program to students' individual needs with appropriate support	0%	15.38%	23.08%	61.54%	7.69%	7.69%	46.15%	38.46%
Recognize when to refer students to other services in-house or external counseling and guidance services	0%	15.38%	46.15%	38.46%	0%	23.08%	30.77%	46.15%

The fifth section addressed the core competence of “forming partnership within and outside own institution.” 76.92% found that developing collaborative partnerships between the institution and the wider community was the most important competence for teachers. 61.54% gave the highest importance to supporting the work of the team, 61.54% to motivating team members toward achieving quality outcomes, and to promoting cooperative decision-making processes. As for the need for improvement, 69.23% expressed the highest level of need for improvement in developing collaborative partnerships between the institution and the wider community, and 53.85% in supporting the work of the team. Furthermore, 61.54% expressed a moderate need for improvement in empowering team members to take responsibility for tasks.

Table 5: Core Competence 5: Forming Partnership within and outside Own Institution

	IMPORTANCE				NEED FOR IMPROVEMENT			
	0	1	2	3	0	1	2	3
Build partnerships with members of the wider educational community to support student learning	0%	0%	61.54%	38.46%	0%	15.38%	46.15%	38.46%
Engage in team planning processes	0%	15.38%	53.85%	30.77%	0%	38.46%	23.08%	38.46%
Contribute to team meetings	0%	23.08%	30.77%	46.15%	0%	0%	53.85%	46.15%
Support the work of the team	0%	15.38%	23.08%	61.54%	0%	0%	46.15%	53.85%
Motivate team members toward achieving quality outcomes	0%	15.38%	23.08%	61.54%	0%	15.38%	46.15%	38.46%
Provide direction for team members	0%	7.69%	53.85%	38.46%	0%	15.38%	53.85%	30.77%
Share knowledge of educational initiatives and perspectives to inform classroom practice	0%	15.38%	30.77%	53.85%	0%	0%	53.85%	46.15%
Empower team members to take responsibility for tasks	0%	7.69%	61.54%	30.77%	0%	7.69%	61.54%	30.77%
Promote cooperative decision-making processes	0%	7.69%	38.46%	53.85%	0%	15.38%	38.46%	46.15%
Develop collaborative partnerships between the institution and the wider community	0%	15.38%	7.69%	76.92%	0%	23.08%	7.69%	69.23%

The last section dealing with the teachers' needs addressed the core competence of “pursuing own professional development and creativity.” 53.85% gave the highest level of importance to identifying gaps in own competences on the basis of a competence framework analysis, and to integrating new educational methods and practices in designing learning arrangements and programs. 58.97%; however, found that supporting the induction of colleagues, and sharing professional experience, knowledge, understanding and skills with colleagues, and engaging in reflective activities both individually and with others were of moderate importance. As for the need for improvement, 61.54% attributed the highest level of need to identifying gaps in own competences on the basis of a competence framework analysis, demonstrating a strong ongoing commitment to professional learning, incorporating the experiences that learners bring into the educational setting from their multiple roles in life, and to integrating new educational methods, and practices in designing learning. 53.85% expressed that they needed the most improvement at demonstrating proficiency in ICT for instructional and administrative functions, developing and monitoring own professional development plan, and at supporting the induction of colleagues.

Table 6: Core Competence 6: Pursuing Own Professional Development and Creativity

	IMPORTANCE				NEED FOR IMPROVEMENT			
	0	1	2	3	0	1	2	3
Demonstrate a strong, ongoing commitment to professional learning	0%	15.38%	38.46%	46.15%	0%	7.69%	30.77%	61.54%

Demonstrate proficiency in ICT for instructional and administrative functions	0%	7.69%	46.15%	46.15%	0%	7.69%	38.46%	53.85%
Incorporate the experiences that learners bring into the educational setting from their multiple roles in life	0%	38.46%	15.38%	46.15%	0%	15.38%	23.08%	61.54%
Support the induction of colleagues	0%	30.77%	53.85%	15.38%	0%	15.38%	30.77%	53.85%
Share professional experience, knowledge, understanding and skills with colleagues	0%	0%	61.54%	38.46%	0%	0%	53.85%	46.15%
Identify gaps in own competences on the basis of a competence framework analysis	0%	7.69%	38.46%	53.85%	0%	7.69%	30.77%	61.54%
Develop and monitor own professional development plan	0%	23.08%	38.46%	38.46%	0%	15.38%	30.77%	53.85%
Engage in reflective activities both individually and with others	0%	7.69%	61.54%	30.77%	0%	15.38%	38.46%	46.15%
Integrate new educational methods and practices in designing learning	0%	0%	46.15%	53.85%	0%	7.69%	30.77%	61.54%

The third and last part of the questionnaire, addressed the trainees' preferences regarding the training format. When asked to rank different types of training from the least to the most preferred, 38.46% of the participants chose a combination of a pre-service training and continuous in-service training as their most preferred type. 30.77% of them chose pre-service training while 38.46% chose in-service training as their second most preferred type of training. On the other hand, 38.46% chose a combination of a pre-service training and one-time in-service training as their least preferred type. Thus, it is obvious that APs do favor continuous in-service training.

Table 7: Types Of Training

	1	2	3	4	5
Pre-service training	23.08%	7.69%	30.77%	7.69%	30.77%
In-service training	7.69%	15.38%	23.08%	38.46%	15.38%
Continuous in-service training	23.08%	15.38%	15.38%	23.08%	23.08%
A combination of pre-service training and one-time in-service training	38.46%	23.08%	30.77%	0%	7.69%
A combination of pre-service training and continuous in-service training	23.08%	7.69%	23.08%	7.69%	38.46%

When it comes to the preferred training methods, the first most preferred one (4 to 5 on a Likert scale) was the pedagogical (hands- on) workshop with 84.52%. The second most preferred method was the examples of good practice with 76.92%. 53.85% of the participants favor study visits and peer observation. As for the least preferred training method, it corresponds to the supervision method. Thus, it appears that Assistant Professors do privilege practical methods.

Table 8: Methods Of Training

	1	2	3	4	5
Plenary sessions	23.08%	30.77%	15.38%	23.08%	7.69%
Pedagogical (hands-on) workshops	0%	0%	15.38%	30.77%	53.85%
Examples of good practice	0%	7.69%	15.38%	30.77%	46.15%
Consultations-mentoring	23.08%	15.38%	38.46%	15.38%	7.69%
Modular in-service training	15.38%	23.08%	46.15%	7.69%	7.69%
Supervision	38.46%	38.46%	15.38%	7.69%	0%
Training for trainers	23.08%	7.69%	23.08%	23.08%	23.08%
Roundtable	30.77%	15.38%	15.38%	23.08%	15.38%
Study visits	15.38%	23.08%	7.69%	23.08%	30.77%
Peer observation	23.08%	15.38%	7.69%	23.08%	30.77%

As for the preferred training modes, the first most preferred one (4 to 5 on a Likert scale) was within field of expertise, with 84.62%. The second most preferred training mode was within department, with 46.15%. When it comes to the least preferred training mode, it was attributed to the on-line option, with 30.77%. It is clear that Assistant Professors prefer the training to be tailored to what they actually teach and they prefer the mode that offers the most proximity to their job.

Table 9: Modes Of Training

DISCUSSION AND IMPLICATIONS

While both Tunisian policy makers and APs recognize the crucial necessity for teacher training programs, they tend to diverge on the accommodation and realization of this necessity. Tunisian higher education policy makers see the teacher training programs as an administrative requirement for tenure. Training sessions take place only once throughout the AP's carrier as part of the preparation for tenure and usually few months after the APs are hired. APs, on the other hand, see these programs chiefly as opportunities for professional, academic and personal development. Yet, as shown by the results, only 33.33% of them see the training programs as an important requirement for getting tenured. What lead us to this assumption are the lack of needs analysis prior to the training programs and the lack of pre-service and continuous in-service training. Indeed the micro needs analysis that we conducted for our study shows a disconnection between what the current training programs are offering and how they are implemented, and what the APs needs are. As a matter of fact the 2011 and 2013 programs provided training in the following topics:

- Syllabus/Course planning,
- Learning tools,
- Lecturing and audiovisuals,
- Evaluation of learning,
- Animation of a group,
- Digitization of a course,
- Motivation of the learners,
- Research methodology,
- Communication, and
- Supervision

All of the aforementioned topics were delivered in plenary sessions by different trainers in different institutions. Even though the programs designers consider lecturing and audiovisuals, animation of a group, and motivation of learners as teaching methods, the results show that 72.22% of the trainees still felt that they needed that topic to be more present in the training. The same applies to research methodology and syllabus design with 55.56% and 50% respectively. This discrepancy implies that the trainees' dissatisfaction with both training events is not exclusively related to the content itself. In fact, most topics seem to be consistent with those our results show the participants to need the most. In order to find out the source of the problem, we need to go back to the key elements that make up any professional development system and proceed by elimination. We already ruled out part of the first element, which is the training program in terms of content areas. However, the results show that in terms of modes of delivery of that content, 84.62% of the trainees prefer that to be within their field of expertise. As for the delivering methods, 84.52% prefer pedagogical (hands-on) workshops and 76.92% prefer to have examples of good practice. However, the training programs under study are only delivered in plenary sessions format. Let's consider the second element, which are the learners who in our case are the APs. As shown by the results reported in the previous section, the APs were intrinsically motivated to take the training. Therefore, this option could be safely ruled out. The third key element, are the facilitators i.e. the teacher trainers. As a matter of fact, the results show that 75% of the trainees did not find the trainers to be skilled enough, and 66.67% did not consider them as specialists in the field of pedagogy. Therefore, the quality and competence of the trainers seem to be a major part of the problem, but are they the only problem? To find out we need to explore the last key element, which is the context in which the professional development occurs. As mentioned earlier, all of the training sessions took place in different institutions. The results; however, show that 69.23% of the participants preferred the training to take place in their department. Accordingly, we have spotted a number of problems that could explain the overall dissatisfaction with the training programs. First, the content was not tailored to the trainees' different fields of expertise. Then, the content delivering method did not correspond to their preferences as they clearly favored a more practical approach. In addition, the trainers were not perceived as skillful enough. Finally, the trainees appear to appreciate a greater proximity to their working place, which is not provided by the current program, as they had to take the different sessions in different institutions.

Having spotted the major sources of the trainees' dissatisfaction with the teacher training programs that the University of Sousse is providing, and having an idea about their needs, we make the following suggestions for a more efficient professional development system. Firstly, the training institution should conduct a needs analysis

prior to planning and initiating a training program. Additionally, training sessions should have more emphasis and should be more specifically tailored to the APs field of expertise and their professional needs as well. We also suggest that different modes of delivery be implemented; for example, training programs should provide APs with workshops to not only practice what they have learned of the theory, but also get feedback from trainers and peers alike about their teaching methods. As was indicated in the data above APs prefer trainers who are specialized for teacher training and are employed professionally as experts in training within that field, as opposed to regular staff and faculty. As proximity to one's own institution seems to be important to many APs while training, we recommend that all training be conducted within the institution in which the APs will be working. Additionally, our research suggests that training for an institution should include pre-service training as well as continuous in-service training. This is of paramount importance as it ensures APs are up to date with the most current methods and practices and are consistently learning new techniques and honing those they already possess. In conclusion, we feel that the changes to the methodology of training future APs will not only benefit their respective institutions and students, but also the APs themselves.

CONCLUSION

The present study was meant to evaluate the professional development system adopted by the University of Sousse for its freshly recruited APs. It shows that this system is failing to meet the needs of its beneficiaries for a number of reasons that have to do with several of its components. It appears that the authorities need to adjust their teacher training policies to meet the expectations of the trainees for any program to be successful. The ultimate objective should no longer be tenure but rather promotion of teaching quality. In other words, teacher training should become a pedagogical provision and not a mere bureaucratic formality.

Gaziantep’te Yabancı Dil Eğitiminde İlkokullarda ve Ortaokullarda Karşılaşılan Problemler

Sinem Kahraman^{a*}

^a Dönem Projesi, Eğitim Bilimleri

Özet

Bu araştırmanın amacı; Gaziantep’teki ortaokul ve ilkokullarda yabancı dil öğretimiyle ilgili problemlere ilişkin öğretmen görüşlerini belirlemektir. Bu çalışmada, 2012-2013 yılında Gaziantep merkez ilçelerine, merkez ilçe ve ilçe köylerine bağlı okullarında çalışan İngilizce öğretmenleriyle görüşme yapılmıştır. Bu kapsamda araştırma nitel çalışmadır. Toplamda 30 tane öğretmenle, görev sürelerini, Türkiye’deki yabancı dil eğitimi hakkında ne düşündüklerini ve Gaziantep’teki yabancı dil eğitim problemlerinin neler olduğunu düşündüklerini, bu konudaki önerilerini belirleyen bir görüşme yapılmıştır. Öğretmenlerin sorulara verdikleri yanıtlar kodlanmıştır, daha sonra aynı tema olduğu düşünülen kodlar aynı tema altında sıralanmıştır ve toplamda dört tema tespit edilmiştir. Bu temaların her biri problem kaynağı olarak kabul edilmiştir. Problem kaynaklarına ait problemlerin her birine sayı ile kod verilmiştir ve öğretmenlerin de sorulara verdikleri cevaplar da öğretmenlerin ortak veya farklı çalışma özelliklerine göre karşılaştırılmıştır. Elde edilen sonuçlara göre görüşme yapılan tüm öğretmenler Türkiye’de yabancı dil eğitimini problemli görmektedirler ve Gaziantep’te de en çok karşılaşılan problem öğrenci kaynaklı bir problem olan ilgisizliktir.

Anahtar kelimeler. Yabancı dil eğitimi, Gaziantep’te yabancı dil öğretimi, dil öğretim problemleri

BİRİNCİ BÖLÜM

GİRİŞ

Günümüzde bilgedeki değişme baş döndürücü bir hıza ulaşmıştır. İnsanlar kendi mesleki alan bilgilerinde meydana gelen değişimleri bile takip etmekte zorlanmaktadır (Demir, 2006:1). Yirminci yüzyılda, özellikle yüzyılın son çeyreğinde, dünya çok önemli değişim ve dönüşümler yaşadı. Bu değişim ve dönüşümlerin temelinde çeşitli sosyoekonomik gelişmeler ile bilim ve teknoloji alanındaki hızlı ve kapsamlı değişimler yatmaktadır. Bu değişim ve gelişmeler sonucunda günümüz toplumu bilgi ve teknolojinin yoğun olarak üretildiği ve tüketildiği toplum haline gelmiştir (Gedikoğlu, 2005: 67).

Gelişmeyle beraber, küreselleşen ve giderek küçülen dünyamızda farklı toplumlar arasında iletişim çok önemli hale gelmiştir. Günümüzde, iletişim çok yönlü ve farklı şekillerde gerçekleşebilmektedir. Yabancı dil bilmek başka uluslarla iletişim kurmada kuşkusuz önemli bir yere sahiptir. Yabancı dil bilgisi, diplomatik, bilimsel, ekonomik ve diğer birçok alanda uluslararası işbirliği için ön koşuldur ve bu yolları açmak için bir araçtır. Giderek küreselleşen dünyamızda, ülkelerarası yakın etkileşimin doğal sonucu olarak, yabancı dil öğretimi daha fazla önem kazanmıştır ve bu önem her geçen gün artmaktadır. Dünyanın pek çok yerinde yabancılar arasında en çok konuşulan dilin İngilizce olması, İngilizce öğrenme isteğini ve öğretimini artırmıştır. İngilizce artık tüm dünya ülkelerinin ikinci dili olma yolunda ilerlemektedir (Büyükyavuz ve Aydoslu, 2005:1032). Dolayısıyla, günümüz dünyasında çok dillilik özendirilmektedir. Bu bağlamda ülkemizin kalkınmış ülkeler arasındaki yerini alabilmesi için eğitim sistemimizin gelişmiş ülkelerin gerisinde kalmaması gerekir (Arıbaş ve Tok, 2004).

Türkiye’de yabancı dil öğretimi, imparatorluk döneminde sıbyan okulları ve medreselerde Arapçanın öğretilmesiyle; Tanzimat döneminde ise ordu personelinin Batılılaştırmak için Fransızcanın öğretilmesiyle başlamıştır (Wilson ve Başgöz, 1968: 15).

1997-1998 öğretim yılından itibaren uygulamaya konulan Eğitim Reformu kapsamında yabancı dil dersi (İngilizce, Almanca ve Fransızca dillerinden birisi) ilköğretim okullarının dördüncü sınıfından başlamak üzere ortaöğretim onuncu sınıfa kadar zorunlu hale getirilmiştir. Bazı özel okullarda ise İngilizce öğretimi ana sınıfından itibaren başlamaktadır (Büyükyavuz ve Aydoslu,2005:1032).

Son olarak 2012 'de 4+4+4ün getirilmesiyle yabancı Dil öğretimi 2. Sınıftan başlayacaktır (wikipedia 2013). Tüm bunlar yabancı dilin önemi, gerek devlet ve gerekse toplum tarafından benimsenmiş olup, açılan yabancı dil kurum sayısındaki artış bu ilginin en büyük göstergesidir. Bu konuda başarıyı yakalayıp, az zamanda daha çok bilgi ve beceri kazandırmayı hedefleyen kurumlar yarış halindedir (Büyükyavuz ve Aydoslu,2005:1032).

Türkiye'de yabancı dil öğretiminde atılan tüm adımlara rağmen, etkin bir dil öğretimi gerçekleşmemektedir. Dil öğretiminde karşılaşılan güçlükler geçmişte olduğu gibi günümüzde de güncelliğini korumaktadır. Devlet okullarımızda yabancı dil dersleri, ilköğretim dördüncü sınıftan ortaöğretim onuncu sınıfına kadar zorunlu ders olarak okutulmaktadır. Böylece, yaklaşık toplam 589 saat (31 hafta X 19 saat) yabancı dil dersi olarak yükseköğretime gelen öğrencilerin yabancı dil düzeylerine bakıldığında, dil öğretiminde varılan noktanın hiç iç açıcı olmadığı görülmektedir (Büyükyavuz ve Aydoslu, 2005:1032).

Ülkemizde bir yabancı dil bilmenin, özellikle İngilizce bilmenin gereklilikten ziyade gizli bir baskıyla mecbur bırakıldığı günümüzde, dil öğretimi sorunları hala aşılanamamıştır. Bu sorunlar çıkmaz içerisinde ve kısır döngüde devam etmektedir (Gömlüksiz ve Elaldı, 2011:443).

Dil öğretiminde karşılaşılan güçlükler geçmişte olduğu gibi günümüzde de güncelliğini korumakta, dil öğretimiyle ilgili çeşitli sorunlar varlığını her durumda sürdürmektedir. Bizim bu çalışmamızdaki amacımız dil ve dil öğretimi sorunlarının belirlenmesinin yanında belirlediğimiz sorunlara bir çözüm önerisi ya da önerileri üretmektir. Bunları yaparken de dilin tanımını, ülkemizde yabancı dil öğretim yöntemlerine ilişkin sorunları da katacağız (İşeri,1996:1).

DİL ÖĞRETİMİ VE YABANCI DİL

Duygu ve düşüncelerimizi başkalarına aktarabilmemiz, okuduğumuzu anlayıp anlatabilmemiz ve (dil bir düşünce aracı olduğuna göre) doğru düşünmemiz dili kullanma yetimize bağlıdır. Dili kullanma yetisinin edimi de dilbilgisinin temel yasalarını öğrenmekle gerçekleşecektir, zira dil sözcük dağarcığından ve bu sözcüklerin nasıl bir araya getirileceğine dair kurallardan oluşan bir dizgedir. Bir dil pek çok sözcüğün ve kuralın bir araya gelmesiyle örülmüş bir ağ, karmaşık toplumsal bir olgudur. Kendi anadilini iyi kullanan bir kişi başka bir dili öğrenmesi kuşkusuz kendi ana dilini bilmeyen birisine göre daha kolaydır. Bunda kişinin yaşı, öğrenim düzeyi, ortamı ve çevresinin de önemli ölçüde etkisi olduğu görülmektedir (İşeri,1996:5).

Yabancı dil öğretimi dilbilimsel bilginin öğretime uygulandığı bir etkinlik olduğu için dil öğretimiyle ilgilenen bireyler dilin ne olduğunu açıklamaya çalışan çağdaş dilbilgisi kurallarını ve ayrıntılarını iyi bilmek zorundadırlar. Yabancı dil öğrenimi ise, kişinin ses ve anlamdan oluşan yeni bir dil dizgesinin kurallarını öğrenmesi ve bu kurallar dâhilinde dili uygun ve doğru kullanmasıdır.

YABANCI DİL EĞİTİM PROBLEMLERİ

Ülkemizde yabancı dil öğretimini devlet okulları, özel okullar, dershaneler ve üniversiteler yürütmekte olup, ayrıca bir de resmi olmayan özel ders sektörü vardır.

Devlete bağlı okullar aşağıdaki nedenlerden dolayı istenen derecede başarılı olmadığı söylenebilir:

- 1-Öğretmen sayısının yetersizliği
- 2-Ders Öğretim Programlarının iyi hazırlanamaması ve ders saatleri yetersizliği
- 3-Sınıf geçme yönetmeliği
- 4-Öğretim metotlarının yeterince bilinmemesi
- 5-Yeterince öğretim yardımcı malzemesi üretilmemesi
- 6-Test tekniklerinin iyi bilinmemesi
- 7-Lise sınıflarında öğrencilerin ÖSS ye odaklanması
- 8-Sınıfların aşırı kalabalık olması

Bütün yukarıdaki engellemelere rağmen az da olsa başarılı olan devlet okulları vardır. Özel okullar ise kar amacıyla yeni mezun öğretmen peşinde koşmuş ihtisasa önem vermemiş ve yeterli düzeyde eğitim veremediklerinden birçokları kapanmıştır. İçlerinde çok başarılı olanları vardır ancak gerek OKS ve gerekse yüksek düzeyde fiyatlar dolayısıyla her öğrencinin buralarda eğitim görmesi olanaksızdır.

ARAŞTIRMANIN ÖNEMİ

Dil bir iletişim aracıdır. Bir toplumda yaşayan bireyler birbirleriyle aynı dili konuşarak iletişim kurarlar. Hızla gelişen ve değişen dünyamızda diğer milletlerle de iletişim kurmamız gerekiyor. Başka bir deyişle, diğer ülkelerle her alanda bilgi alışverişi yapabilmek, ekonomik ilişkilerimizi yürütebilmek ve kendi düşüncelerimizi

ifade edebilmek için anadilimizden başka en az bir yabancı dili bilmemiz gerekmektedir (Zipmaker, 2007, Şubat, 15)

Türkiye’de sayılı özel ve yabancı kolejler dışında hiçbir ilk ve orta öğretim kurumunda yeterli ve etkin bir yabancı dil öğretimi sağlanamamaktadır. Bu konuya ilişkin hepimizin bildiği birçok neden vardır elbette. Buna karşılık son yıllarda ilköğretimin kesintisiz sekiz yıla çıkarılması çerçevesinde dördüncü sınıftan başlayarak çocuklara yabancı dil dersi uygulamasına geçilmiştir (Anşin,2006:10).

Ardından 4+4+4 sistemine geçilmesiyle aynı şekilde dile önem verildiği vurgulanmıştır. Daha ürünler görülemez de ikinci sınıftan itibaren öğrenciler yabancı dil görmeye başlayacaktır. Ülkemizde yıllardan beri tüketilen zaman, büyük emek ve gayretlere rağmen yabancı dil öğretiminde arzu edilen başarıya ulaşıldığını söylemek zor. Durumun bu hale gelmesi kafalarda soru işareti oluşturmakta ve neden sorusunu sordurmaktadır. Bununla birlikte nedenler bilinirse çözüm yolları geliştirmek de kolay ve etkili olacaktır. Bu yönüyle yabancı dil eğitimindeki problemleri bilmek kaçınılmazdır.

PROBLEM CÜMLESİ

Bu araştırmada “Gaziantep ilinde ilköğretim düzeyinde karşılaşılan yabancı dil öğretimi problemlerine ilişkin öğretmen görüşleri nelerdir?” sorusuna cevap aranmıştır.

ARAŞTIRMANIN AMACI VE ALT PROBLEMLER

Bu araştırmanın amacı Gaziantep ilindeki ilkökuller ve ortaokullarındaki yabancı dil eğitimi problemlerini belirlemektir.

ALT PROBLEMLER

- 1-Merkez okulları problemleri ve köy okulları problemleri benzerlik göstermekte midir?
- 2-Öğretmenlerin ortaya koyduğu problemler çalışma yıllarına göre farklılık göstermekte midir?
- 3-Öğretmenlerin ortaya koyduğu problemler çalıştıkları bölgeye göre farklılık göstermekte midir?
- 4-Öğretmenlerin ortaya koyduğu problemler cinsiyete göre farklılık göstermekte midir?

İKİNCİ BÖLÜM

MATERYAL VE YÖNTEM

Bu bölümde araştırma modeli, evren, örneklem, veri toplama araçları, geçerlik ve güvenilirlik çalışmaları ve veri çözümlemesi üzerinde durulmuştur.

ARAŞTIRMA MODELİ

Bu çalışmada Gaziantep ilinde merkez ilçede, merkez ilçe köy okullarına bağlı ise 30 öğretmenle görüşme yapılmıştır. Öğretmenlerin sorduğumuz sorulara verdikleri yanıtlar ile problemlerin belirlenmesi hedeflenmiştir.

Bu araştırmada Gaziantep ilinde ilkökuller ve ortaokullarda İngilizce öğretmenlerinin yabancı dil eğitiminde karşılaştığı problemleri belirlemek amacıyla nitel araştırma yönteminden yararlanılmıştır.

Nitel araştırmalar, toplanan verilerin analizinde tümevarıma dayalı bir yaklaşım izler. Araştırmacı, topladığı verilerden yola çıkarak, incelediği probleme ilişkin ana temaları ortaya çıkararak, anlamlı bir yapıya kavuşturur (Kabaca ve Erdoğan,2007: 56).

ÇALIŞMA GRUBU

Bu araştırmanın çalışma grubunu Gaziantep ilinde merkeze ve köye bağlı ilkökuller ve ortaokullarında çalışan toplam 30 İngilizce öğretmeni oluşturmaktadır. Bu öğretmenlerden üçü köyde okullarında diğer 27 öğretmen de merkez okullarda çalışmaktadır. Gaziantep’teki öğretmenliğin 1 ile 5 yıl arasında olan öğretmen sayısı 10 dur; öğretmenliğinin 5 ile 15 yıl arasında olan öğretmen sayısı da 20’dir. Öğretmenlerin çalıştıkları okullar sırayla şunlardır:

- 1-Anneler Ortaokulu
- 2- Bağbaşı Memik Ayçiçek Ortaokulu
- 3-İsmet İnönü Ortaokulu- İsmet İnönü İlkokulu

- 4-Bahattin Kayalı Ortaokulu- Bahattin Kayalı Ortaokulu
- 5-Özdemirbey İlkokulu - Özdemir Bey Ortaokulu
- 6-8 Şubat Ortaokulu
- 7-24 Kasım İlkokulu-24 Kasım Ortaokulu
- 8-Mevlana İlkokulu- Mevlana Ortaokulu
- 9-Münire Kemal Kınoğlu Ortaokulu
- 10-Yüzüncü Yıl İlkokulu
- 11-Kapcağız Ortaokulu
- 12-Nuriye Zekeriya Kıncıl Ortaokulu
- 13-Karacaburç Ortaokulu
- 14-Köksalan Ortaokulu-Köksalan İlkokulu
- 15-Namın Kemal Ortaokulu
- 16-Hatice Karşıgil Ortaokulu
- 17-Hatice Karşıgil İlkokulu
- 18-Kıbrıs Ortaokulu
- 19-Yığınlı İlkokulu-Yığınlı Ortaokulu
- 20-Aktoprak Ortaokulu
- 21-Akçagöze İlkokulu- Akçagöze Ortaokulu
- 22-Abdullah Kep Kep Ortaokulu

2012 yılında eğitim sisteminde değişiklik yapılarak 4+4+4 uygulamasına geçilince, okullar Ortaokul ve İlkokul olarak ayrıldı. Sistem daha yeni olduğu ve yeteri kadar okul binası olmadığı için, Ortaokul ve İlkokulda öğrenim gören öğrenciler aynı okulda eğitim-öğretime devam etmek zorunda kaldı. Aynı şekilde öğretmen yetersizliğinden Ortaokul ve İlkokula ayrı öğretmen atanmadığı için onlar da hem daha önce çalıştıkları ilköğretim okulunun şimdiki ortaokul ve ilkokul kısmında eğitim ve öğretime devam etmek zorunda kaldılar. Biz bu listeyi oluştururken bir maddeye hem ortaokulu hem de ilkokulun adını yazdık. Bu demektir ki bu öğretmen daha önce çalıştığı okulun şu an hem ortaokul kısmında hem de ilkokul kısmında çalışmaktadır.

VERİ TOPLAMA ARACI

Araştırmada veri toplama aracı olarak, Gaziantep'te ilkokullar ve ortaokullardaki yabancı dil problemlerini belirlemek amacıyla, Gaziantep ilinde çalışan toplam 30 öğretmen ile görüşme yapılmıştır. Görüşmede, öğretmenlere toplamda 5 soru sorulmuştur, bunlar genel hatlarıyla sorunları belirlemede yeterlidir. İlk 2 soru öğretmenlerin hangi okulda ve kaç yıldır çalıştıklarıyla ilgili sorulardır. 3. Soru genel olarak ülkemizdeki yabancı dil eğitiminin boyutuyla alakalıdır. 4. Soru Gaziantep'teki ilkokul ve ortaokuldaki yabancı dil problemleriyle ve 5. soruda da öğretmenlerin problemlerin çözüm önerilerini kapsamaktadır. Sorular Ek 1de görülmektedir.

Görüşme nitel araştırmada en sık kullanılan veri toplama aracı olarak karşımıza çıkmaktadır. Görüşmenin etkili ve verimli bir veri toplama yöntemi olarak kullanılabilmesi için bu yöntemin temel özelliklerini, güçlü ve zayıf yönlerini iyi anlamak, nitel veriye ulaşmayı kolaylaştıracak bir görüşme formu hazırlamada görüşmeyi gerçekleştir (Şimşek ve Yıldırım,2011:119).

VERİLERİN TOPLANMASI VE ÇÖZÜMLENMESİ

Araştırmada Gaziantep'teki İngilizce öğretmenlerinin görüşlerini almak için görüşme yapıldı. Bunu gerçekleştirmek için öğretmenlerin okullarına gidildi, görüşmeler yapılarak verilen cevaplar kaydedildi. Kaydedilen veriler içerik analizine göre incelendi.

İçerik analizinde temel amaç, toplanan verileri açıklayabilecek kavramlara ve ilişkilere ulaşmaktır. Betimsel analize göre daha ayrıntılıdır. Bu çerçevede içerik analizi yoluyla verileri tanımlamaya, verilerin içinde saklı olabilecek gerçekleri ortaya çıkarmaya çalışılır. Yani, birbirine benzeyen veriler belirli kavramlar ve temalar çerçevesinde bir araya getirilir ve bunları okuyucunun anlayabileceği bir biçimde düzenleyerek yorumlanır (Şimşek ve Yıldırım,2011:227).

Bu araştırmanın analizi de bu sıraya göre yapıldı.

2.4.1.Verileri kodlanması: Bu aşamada elde edilen bilgiler incelenerek, anlamlı bölümlere ayrılmaya ve her bölümün kavramsal olarak ne ifade ettiği bulmaya çalışılır. Bu bölümler bazen bir sözcük, bazen bir cümle ya da paragraf, bazen de bir sayfalık veri olabilir (Şimşek ve Yıldırım, 2011:228).

Bu arařtırmada da, problemleri belirlemek amacıyla 3. ve 4. sorulara verilen cevaplar aralarındaki iliřkiye gre kodlanmıřtır. Daha sonra verilen kodlarla birlikte veriler bilgisayar ortamında Excel dosyasına kayıt edilmiřtir. Bu bize btncl bakıř aısı kazandırarak yorumları yapmayı kolaylařtırmıřtır.

2.4.2.Temaların bulunması: Bu ařama, ilk ařamada ortaya ıkan ortaya ıkan kodlardan yola ıkararak verileri, genel dzeyde aıklayabilen ve kodları belirli kategoriler altında toplayabilen temaların bulunma srecidir (řimřek ve Yıldırım, 2011:236).

Bu arařtırmada da yorumlamayı daha anlaşılır hale iin belirlenen kodlara ortak zelliklerine gre temalar verilmiřtir.

2.4.3.Verilerin kodlara ayrılması ve temalara gre dzenlenmesi ve tanımlanması: İlk ařamadaki ayrıntılı kodlama ve ikinci ařamadaki tematik kodlama sonucunda, arařtırmacı topladıđı verileri dzenleyebileđi bir sistem oluřturur; nc ařamada ise arařtırmacı bu sisteme gre elde edilen verileri dzenler ve bu řekilde belirli olgulara gre verileri tanımlamak ve yorumlamak mmkn olur (řimřek ve Yıldırım, 2011:237).

Yukarıda ifade edildiđi gibi bu arařtırmada da elde edilen tema ve kodlar belli olgulara gre sıralanmıřtır.

2.4.4 Bulguların Yorumlanması: Ayrıntılı bir biimde sunulan bulguların arařtırmacı tarafından yorumlanması ve bazı sonuların ıkarılması bu ařamada olmaktadır (řimřek ve Yıldırım 2011:238). Bu ařama da ifade edildiđi gibi gerekleřtirilmiřtir.

NC BLM

BULGULAR

Bu blmde grřmede elde edilen verilere deđinilecektir.

Öğretmen 24	K	Merkez	13	Problemlili
Öğretmen 25	E	Merkez	12	Gelişme göstermemiş
Öğretmen 26	K	Merkez	1	Problemlili
Öğretmen 27	K	Köy	3	Problemlili
Öğretmen 28	E	Merkez	5	Gelişme göstermemiş
Öğretmen 29	K	Köy	9	Problemlili
Öğretmen 30	K	Köy	13	Problemlili

Tablo 1’de görüşme yapılan öğretmenlerin 3. Soruya verdikleri cevaplar bulunmaktadır. Tüm öğretmenler “Ülkemizdeki yabancı dil eğitimini nasıl görüyorsunuz?” sorusuna çoğunlukla aynı cevabı vermişlerdir. Tüm öğretmenler Türkiye’de yabancı dil eğitimini problemlili ve geri kalmış olarak görmektedirler. Bu bize farklı bir bakış açısı sunmamaktadır ve söyleyebiliriz ki ülkemizde yabancı dil eğitimi problemlili.

GAZİANTEP’TEKİ İNGİLİZCE ÖĞRETMENLERİNİN GAZİANTEP’TEKİ YABANCI DİL PROBLEMLERİYLE İLGİLİ GÖRÜŞLERİ

4. soru “Gaziantep’teki ilkokul ve ortaokullardaki yabancı dil problemleri nelerdir?” şeklindedir ve problemleri belirleyecek sorudur. Bu soruya verilen cevaplarla beraber toplamda 25 tane problem belirlenmiştir. Bunlar en çok dile getirilenden en az dile getirilene doğru sırasıyla aşağıdaki gibidir:

- 1-İlgisizlik
- 2-Hazırbulunuşluk düzeyinin düşük olması
- 3-Telaffuz hataları
- 4-Anadile hâkim olmama
- 5-Kelime bilgisi eksikliği
- 6-Çalışma alışkanlığının olmaması
- 7-Cümle üretmede problem
- 8-Verimsiz çalışma
- 9-Türkçe ile İngilizceyi yanlış ilişkilendirme
- 10-Kitap okuma alışkanlığının olmayışı
- 11-Kendine güvenmeme
- 12-Sadece dışsal güdülenme
- 13- Gramer etkinlik ağırlıklı ders işleme
- 14-Öğretmenin güdülenememesi
- 15-Sınav odaklı öğretim
- 16-Öğretmenin donanımlı olmaması
- 17-Materyal eksikliği
- 18- Kalabalık sınıflar
- 19-Fiziki şartların elverişsizliği
- 20-Müfredatın ağır olması
- 21- Haftalık ders saatinin az olması
- 22- Öğretmen yetersizliği
- 23-Pratiğin az olması
- 24-Sosyo ekonomik durumun geride olması
- 25- Çocukların ticarete yönlendirilmesi

Bu problemler belirlendikten sonra yorumlamanın kolaylaşması için birbirinden farklı dört tema belirlenmiştir ve bu temalarla yukarıda saydığımız problemler eşleştirilmiştir. Bu temalar öğrenci kaynaklı problem, öğretmen kaynaklı problem, okul ve sistem kaynaklı problem ve aile kaynaklı problem olarak sıralanmaktadır. Aşağıda temalara göre problem sayıları gözükmektedir:

TABLO 2 Problem Kaynaklarına Göre Dağılım

Tablo 2’de de kaynaklarına göre problemler sıralanmıştır. İlk olarak tabloya göre, en fazla dileme sahip olan kısım öğrenci kısmıdır, toplamda öğrenci kaynaklı 12 tane sorun belirlenmiştir. Diğerlerine göre en yüksek orana sahiptir. Sonra arkasından okul ve sistem kaynaklı problemler gelmektedir. Toplamda 6 tane farklı okul ve sistem kaynaklı problem vardır. Son olarak da öğretmen kaynaklı problemler gelmektedir. O da toplamda 4 tanedir.

Bu tabloya göre yorum yapacak olursak öğretmen kaynaklı problemlerin az olması biraz görüşmenin sadece öğretmenle sınırlı kalmasındandır denilebilir, fakat öğretmenlerin rahatsız oldukları eğitim sisteminden değil de en fazla öğrenciden yakınmaları da objektif olduklarını Gaziantep’teki durumu ortaya koyduğunun belirtisidir.

Kaynaklarına göre problemler de aşağıdaki gibi sıralanmaktadır ve kodlarına göre numaralanmıştır:

Öğrenci Kaynaklı Problemler

- 1-İlgisizlik
- 2-Hazırbulunuşluk düzeyinin düşük olması
- 3-Telaffuz hataları
- 4-Anadile hâkim olmama
- 5-Kelime bilgisi eksikliği
- 6-Çalışma alışkanlığının olmaması
- 7-Cümle üretmede problem
- 8-Verimsiz çalışma
- 9-Türkçe ile İngilizceyi yanlış ilişkilendirme
- 10-Kitap okuma alışkanlığının olmayışı
- 11-Kendine güvenmeme
- 12-Sadece dışsal güdülenme

Öğretmen Kaynaklı Problemler

- 13- Gramer etkinlik ağırlıklı ders işleme
- 14-Öğretmenin güdülenememesi
- 15-Sınav odaklı öğretim
- 16-Öğretmenin donanımlı olmaması

Okul ve Sistem Kaynaklı Problemler

- 17-Materyal eksikliği
- 18- Kalabalık sınıflar
- 19-Fiziki şartların elverişsizliği
- 20-Müfredatın ağır olması
- 21- Haftalık ders saatinin az olması
- 22- Öğretmen yetersizliği
- 23-Pratiğin az olması

Aile Kaynaklı Problemler

- 24-Sosyo ekonomik durumun geride olması
- 25- Çocukların ticarete yönlendirilmesi

Tablo 3. 1-5 Yıldır Çalışan Öğretmen Görüşleri

İSİM	YIL	SORU 4
Öğretmen 1	5	1,7,8,17,20,22,23
Öğretmen 2	1	1,11,13,19,21,23,24,25
Öğretmen 3	4	1,2,6,13,17,19,20,23 ,24,25
Öğretmen 4	1	8,9,13,15,23
Öğretmen 5	1	1,18,22
Öğretmen 6	4	19
Öğretmen 9	5	1,2,3,18,20,23
Öğretmen 11	2	1,2,19,24
Öğretmen 12	1	1,2,3, 10,18,20 ,23
Öğretmen 15	5	1,4
Öğretmen 17	1	1,20,23
Öğretmen 18	5	1,4,8
Öğretmen 20	1	6,9
Öğretmen 22	3	1,2,17,19
Öğretmen 23	2	1,20,23
Öğretmen 26	1	1,6 ,18,20
Öğretmen 27	3	1,2,18,19,20
Öğretmen 28	5	1,2,18,19,20

Tablo 3 1 ile 5 yıl arasında görev yapan İngilizce öğretmenlerinin 4. soruya verdikleri yanıtları içermektedir. Tabloya baktığımızda, en fazla dile getirilen problem, okul ve sistem kaynaklı 20 kodlu müfredatın ağır olması problemidir. İkinci olarak, en çok dile getirilen problem 23 kodlu okul ve sistem kaynaklı pratiğin az olması problemidir. Onu 19 kodlu okul ve sistem kaynaklı fiziki şartların elverişsizliği problemi izler. Son olarak da okul ve sistem kaynaklı 28 kodlu kalabalık sınıflar problemi gelmektedir. Genelde problemler okul ve sistem kaynaklı problemler etrafında yoğunlaşmaktadır. Tek fark öğrenci kaynaklı 1. Kodlu ilgisizlik problemi de çok dile getirilmektedir.

Problem okul ve sistem kaynaklı olanların etrafında dönmesi 1ie 5 yılları arasında çalışan öğretmenlerin daha farklı düşünce yapısı ve deneyimleri olduğunu gösterir. Görevine yeni başlamış bir öğretmen yıllardır öğretmenlik yapan bireye göre daha idealisttir, şartları olgun bekler, problemlerin oradan başladığını düşünür. Durum 6 ile 15 yılları arasında öğretmenlik yapan bireylerden farklıdır.

Tablo 4. 6-15 Yıldır Çalışan Öğretmen Görüşleri

İSİM	YIL	SORU 4
Öğretmen 7	7	1 ,3,5,22
Öğretmen 8	11	1,2,3,10,18 ,20
Öğretmen 10	14	1,2,19,24
Öğretmen 13	14	13,14,18,23
Öğretmen 14	12	1,4,8
Öğretmen 16	7	1,2,3,18,20,23
Öğretmen 19	6	1 ,2,18,19,20
Öğretmen 21	13	1,11,13
Öğretmen 24	13	1,9
Öğretmen 25	12	12
Öğretmen 29	9	8,23
Öğretmen 30	13	14

Tablo 4'te 6 ile 15 yılları arasında çalışan İngilizce öğretmenlerinin 4. soruya verdikleri yanıtları içermektedir. Tabloya baktığımızda en fazla dile getirilen problem 1 kodlu öğrenci kaynaklı problem olan ilgisizliktir. Bunu 2 ve 18 Kodlu problemler olan hazırbulunuşluk düzeyinin düşük olması ve kalabalık sınıflardır. Bunlardan ilki öğrenci kaynaklı problem olup diğeri okul ve sistem kaynaklı problemdir. Son olarak da en çok dile getirilen problem 20. Koda sahip olan yine okul ve sistem kaynaklı problem olan müfredatın ağır olmasıdır.

Bu tabloya baktığımızda diyebiliriz ki 6 ile15 yılları arasında öğretmenlik yapan İngilizce öğretmenleri problemin kaynağını daha çok öğrenci merkezli olarak görmektedirler.

Tablo 5. Gaziantep Merkezinde Çalışan Öğretmen Görüşleri

İSİM	BÖLGE	SORU 4
Öğretmen 1	Merkez	1,7,8,17,20,22,23
Öğretmen 3	Merkez	1,2,6,13,17,19,20,23 ,24,25
Öğretmen 6	Merkez	19
Öğretmen 7	Merkez	1 ,3,5,22
Öğretmen 8	Merkez	1,2,3,10,18 ,20
Öğretmen 9	Merkez	1,2,3,18,20,23
Öğretmen 10	Merkez	1,2,19,24
Öğretmen 11	Merkez	1,2,19,24
Öğretmen 12	Merkez	1,2,3, 10,18,20 ,23
Öğretmen 13	Merkez	13,14,18,23
Öğretmen 14	Merkez	1,4,8
Öğretmen 15	Merkez	1,4
Öğretmen 16	Merkez	1,2,3,18,20,23
Öğretmen 17	Merkez	1,20,23
Öğretmen 18	Merkez	1,4,8
Öğretmen 19	Merkez	1 ,2,18,19,20
Öğretmen 20	Merkez	6,9
Öğretmen 23	Merkez	1,20,23
Öğretmen 24	Merkez	1,9
Öğretmen 25	Merkez	12
Öğretmen 26	Merkez	1,6 ,18,20
Öğretmen 28	Merkez	1,2,18,19,20

Tablo 5'te merkezde görev yapan tüm öğretmenlerin görüşleri vardır. En çok dile getirilen problem 1. Koda sahip olan öğrenci merkezli problem olan ilgisizliktir. Sonra onu okul ve sistem kaynaklı problem olan 20 müfredatın ağır olması da fazla dile getirilenler izlemektedir Son olarak 2 kodlu yine öğrenci kaynaklı problem olan hazırbulunuşluk düzeyinin düşük olmasıdır ve 18 kodlu okul sistem kaynaklı problem olan kalabalık sınıflar takip etmektedir.

Bu tabloya göre ilginç veri merkezde öğrencilerin derse karşı daha ilgili olması beklenirken ilgisiz oldukları görülmüştür.

Tablo 6. Gaziantep Köylerinde Çalışan Öğretmen Görüşleri

İSİM	BÖLGE	SORU 4
Öğretmen 2	Köy	1,11,13,19,21,23,24,25
Öğretmen 4	Köy	8,9,13,15,23
Öğretmen 5	Köy	1,18,22
Öğretmen 21	Köy	1,11,13
Öğretmen 22	Köy	1,2,17,19
Öğretmen 27	Köy	1,2,18,19,20
Öğretmen 29	Köy	8,23
Öğretmen 30	Köy	14

Tablo 6'da köyde çalışan tüm öğretmenlerin görüşleri bulunmaktadır. Görüşler çeşitli olup kaynaklarına baktığımızda en çok öğrenci kaynaklı problemler üzerinde durulmaktadır. Bunlar1. kodlu ilgisizlik,8. kodlu verimsiz çalışma ve 11. kodlu kendine güvenmemedir. Arkasından öğretmen kaynaklı olan sırayla 13. ve 14. kodlu gramer etkinlik ağırlıklı ders işleme ve öğretmenin güdülenememesidir. Son olarak da öğretmenler okul ve sistem kaynaklı problem olan pratiğin az olmasına değinmişlerdir.

Pratiğin az olması problemi kaynak olarak öğrenci, öğretmen ve okul ve sistem grubundan hepsiyle alakalıdır. Fakat öğretmenler bunu dile getirirken her şeyin sistemle başladığını sistem ne istiyorsa o yapıldığı için pratiğin az olmasında en büyük rolün sisteme ait olduğunu savundular. Böyle dile getirilmeseydi öğrenci kaynaklı problem diye değinilebilirdi.

Tablo 7. Bayan Öğretmen Görüşleri

İSİM	CİNSİYET	SORU 4
Öğretmen 1	K	1,7,8,17,20,22,23
Öğretmen 2	K	1,11,13,19,21,23,24,25
Öğretmen 3	K	1,2,6,13,17,19,20,23 ,24,25
Öğretmen 4	K	8,9,13,15,23
Öğretmen 7	K	1 ,3,5,22
Öğretmen 8	K	1,2,3,10,18 ,20
Öğretmen 9	K	1,2,3,18,20,23
Öğretmen 12	K	1,2,3, 10,18,20 ,23
Öğretmen 13	K	13,14,18,23
Öğretmen 15	K	1,4
Öğretmen 16	K	1,2,3,18,20,23
Öğretmen 17	K	1,20,23
Öğretmen 21	K	1,11,13
Öğretmen 22	K	1,2,17,19
Öğretmen 24	K	1,9
Öğretmen 26	K	1,6 ,18,20
Öğretmen 27	K	1,2,18,19,20
Öğretmen 29	K	8,23
Öğretmen 30	K	14

Tablo 7 Gaziantep’te çalışan araştırmaya katılmış tüm bayan İngilizce öğretmenlerin görüşlerini içermektedir. En fazla dile getirilen problem yine 1 kodlu, öğrenci kaynaklı problem olan ilgisizliktir. Diğer dile getirilen problem hazırbulunuşluk düzeyinin düşük olmasıdır. Bu 2 kodlu öğrenci kaynaklı problemidir. Bir diğer problem de 23 kodlu okul ve sistem kaynaklı pratiğin az olmasıdır.

Diğer dikkati çeken problem 20 kodlu okul ve sistem kaynaklı problem olan müfredatın ağır olmasıdır. Bu da zaten araştırma boyunca çok dile getirilen problemler arasındadır.

En çok dile getirilen bir diğer problem 19. Koda sahip olan okul ve sistem kaynaklı problem olan fiziki şartların elverişsizliğidir.

Tablo 8. Erkek Öğretmen Görüşleri

İSİM	CİNSİYET	BÖLGE	SORU 4
Öğretmen 6	E	Merkez	19
Öğretmen 11	E	Merkez	1,2,19,24
Öğretmen 14	E	Merkez	1,4,8
Öğretmen 18	E	Merkez	1,4,8
Öğretmen 19	E	Merkez	1 ,2,18,19,20
Öğretmen 20	E	Merkez	6,9
Öğretmen 23	E	Merkez	1,20,23
Öğretmen 25	E	Merkez	12
Öğretmen 28	E	Merkez	1,2,18,19,20

Tablo 8 ’de Gaziantep’te çalışan araştırmaya katılmış tüm erkek İngilizce öğretmenlerin görüşleri yer almaktadır. Bu tabloda da en çok 1.kodlu öğrenci kaynaklı problem olan ilgisizlik dile getirilmiştir. En çok dile getirilen bir diğer problem 19. Koda sahip olan okul ve sistem kaynaklı problem olan fiziki şartların elverişsizliğidir.

Genel olarak da bakıldığında erkek öğretmenlerin bayan öğretmenlerden farklı olarak dile fazla dile getirdiği bir problem de yoktur. Bu bize cinsiyet ayrımının sonuç üzerinde pek fark yaratmadığını göstermektedir.

Tablo 9. 1-5 yıldır Merkezde Çalışan Bayan Öğretmen Görüşleri

İSİM	CİNSİYET	BÖLGE	YIL	SORU 4
Öğretmen 1	K	Merkez	5	1,7,8,17,20,22,23
Öğretmen 3	K	Merkez	4	1,2,6,13,17,19,20,23 ,24,25
Öğretmen 9	K	Merkez	5	1,2,3,18,20,23
Öğretmen 12	K	Merkez	1	1,2,3, 10,18,20 ,23
Öğretmen 14	K	Merkez	5	1,4
Öğretmen 17	K	Merkez	1	1,20,23
Öğretmen 26	K	Merkez	1	1,6 ,18,20

Tablo 9.'da Gaziantep'te merkezde 1 ile 5 yılları arasında çalışan bayan İngilizce öğretmenlerinin görüşleri yer almaktadır. Aynı şekilde, en çok dile getirilen problem 1. koda sahip olan öğrenci kaynaklı ilgisizliktir. Diğer en çok dile getirilen, 20. koda sahip olan okul ve sitem kaynaklı problem müfredatın ağır olmasıdır.

Tablo 10. 1-5 yıldır Merkezde Çalışan Erkek Öğretmen Görüşleri

İSİM	CİNSİYET	BÖLGE	YIL	SORU 4
Öğretmen 6	E	Merkez	4	19
Öğretmen 11	E	Merkez	2	1,2,19,24
Öğretmen 18	E	Merkez	5	1,4,8
Öğretmen 20	E	Merkez	1	6,9
Öğretmen 23	E	Merkez	2	1,20,23
Öğretmen 28	E	Merkez	5	1,2,18,19,20

Tablo 10 Gaziantep'te merkezde 1 ile 5 yılları arasında çalışan erkek İngilizce öğretmenlerinin görüşleri yer almaktadır. En çok dile getirilen problemler sırasıyla ilgisizlik, fiziki şartların elverişsizliği, anadile hâkim olamama ve verimsiz çalışmadır. İlgisizlik ve fiziki şartların elverişsizliği bize merkezde 1 ile 5 yılları arasında merkezde öğretmenlik yapan bayan ve erkek İngilizce öğretmenlerinin görüşlerinin pek farklı olmadığını gösterir.

Tablo 11. 1-5 yıldır Köyde Çalışan Bayan Öğretmen Görüşleri

İSİM	CİNSİYET	BÖLGE	YIL	SORU 4
Öğretmen 2	K	Köy	1	1,11,13,19,21,23,24,25
Öğretmen 4	K	Köy	1	8,9,13,15,23
Öğretmen 22	K	Köy	3	1,2,17,19
Öğretmen 27	K	Köy	3	1,2,18,19,20

Tablo 11'de Gaziantep'te 1 ile 5 yılları arasında köyde görev yapan bayan İngilizce öğretmenlerinin görüşleri yer almaktadır. En çok dile getirilen problemler s ilgisizlik, gramer etkinlik ağırlıklı ders işleme, fiziki şartların elverişsizliği ve pratiğin az olmasıdır.

Tablo 12. 1-5 yıldır Köyde Çalışan Erkek Öğretmen Görüşleri

İSİM	CİNSİYET	BÖLGE	OKUL	SORU 4
Öğretmen 6	E	Köy	1	1,18,22

Tablo 3.12'de Gaziantep'te köyde 1 ile 5 yılları arasında çalışan araştırmaya katılan öğretmenin görüşleri yer almaktadır. Dile getirilen problemler sırasıyla ilgisizlik, kalabalık sınıflar ve öğretmen yetersizliğidir. Tablo 11'de olduğu gibi ilgisizlik bir problem olarak gözükmektedir. Bir de fazla dile getirilmeyen fakat önemli bir problem olan öğretmen yetersizliğinin de köyde yaşanıyor olması da beklenen bir durumdur.

Tablo 13. 5-15 yıldır merkezde çalışan erkek öğretmen görüşleri

İSİM	CİNSİYET	BÖLGE	YIL	SORU 4
Öğretmen 14	E	Merkez	12	1,4,8
Öğretmen 19	E	Merkez	6	1,2,18,19,20
Öğretmen 25	E	Merkez	12	12

Tablo 13'de Gaziantep'te merkezde 6-15 yıl arasında çalışan erkek İngilizce öğretmenlerinin görüşleri yer almaktadır. İlgisizlik en çok dile getirilen problemdir. Diğerleri sırasıyla anadile hâkim olamama, çalışma alışkanlığının olmaması, hazırbulunuşluk düzeyinin düşük olması, kalabalık sınıflar, fiziki şartların elverişsizliği, müfredatın ağır olması ve sadece dışsal güdülenmedir.

Tablo 14. 6-15 yıldır Köyde Çalışan Bayan Öğretmen Görüşleri

İSİM	CİNSİYET	BÖLGE	YIL	SORU 4
Öğretmen 21	K	Köy	13	1,11,13
Öğretmen 29	K	Köy	9	8,23
Öğretmen 30	K	Köy	13	14

Tablo 14'te Gaziantep'te 6 ile 15 yılları arasında köyde çalışan bayan İngilizce öğretmenlerinin görüşü yer almaktadır. Sırayla ilgisizlik, kendine güvenmeme ve gramer etkinlik ağırlıklı ders işleme, verimsiz çalışma ve pratiğin az olması dile getirilen problemlerdir.

Tablo 15. 6-15 yıldır Merkezde Çalışan Bayan Öğretmen Görüşleri

İSİM	CİNSİYET	BÖLGE	YIL	SORU 4
Öğretmen 7	K	Merkez	7	1,3,5,22
Öğretmen 8	K	Merkez	11	1,2,3,10,18,20
Öğretmen 13	K	Merkez	14	13,14,18,23
Öğretmen 16	K	Merkez	7	1,2,3,18,20,23
Öğretmen 24	K	Merkez	13	1,9

Tablo 15'te Gaziantep'te merkezde 6-15 yıldır çalışan bayan İngilizce öğretmenlerinin görüşleri yer almaktadır. En çok dile getirilen problem ilgisizlik, sonra sırayla kalabalık sınıflar ve telaffuz hatalarıdır. Görüldüğü gibi köydeki bayan İngilizce öğretmenlerinin ve merkezdeki bayan İngilizce öğretmenlerinin belirli farklılık yoktur. Ortak problem ilgisizliktir.

SONUÇ VE ÖNERİLER

Bu bölümde araştırmanın sonucu ve öneriler üzerinde durulacaktır.

SONUÇ

Araştırma, problemleri ortaya koymada iki soru üzerinde yoğunlaşmıştır. İlk olarak 3. Soru ülkenin yabancı dil eğitiminin nasıl olduğuyla alakalıdır. Sonucun olumsuz olması ne kadar ileride olmadığımızın kanıtı olarak kötü bir durumdur. Fakat öğretmenlerin tutarlı cevap vermeleri de iyi bir durum ifade eder.

Gaziantep'teki yabancı dil problemlerini ortaya çıkaracak olan 4. Soruya verilen cevaplar araştırmanın asıl konusunu oluşturmuştur. Bunlar üzerinde yorum yapacak olursak, en fazla dile getirilen problem öğrenci kaynaklı problem olan ilgisizliktir. Bu problem öğrenci kaynaklı olarak dile getirilmiştir, fakat şöyle bir düşünüldüğünde problemin kaynağı aile kaynaklıdır. Aile kaynaklı problem olan çocukların ticarete yönlendirilmesi çocuğun değil İngilizce 'ye olan ilgisini okula olan ilgisini düşürmektedir. Böylece ortaya amaçsızca eğitim gören öğrenci potansiyeli ortaya çıkmaktadır. Bu da hazırbulunuşluk düzeyinin düşük olması, verimsiz çalışma, çalışma alışkanlığının olmaması gibi diğer öğrenci kaynaklı problemleri de ortaya çıkarmaktadır.

Bir başka dile getirilen durum öğretmen kaynaklı problem olan gramer etkinlik ağırlıklı ders işlemedir. Bu da öğretmen kaynaklı problem olarak görülmektedir. Fakat öğretmenlerin gramer etkinlik ağırlıklı ders işlemleri sınav odaklı bir sistem olmasıyla alakalıdır dolayısıyla bunun asıl kaynağı sistemdir.

Öğretmenlerin en çok üzerinde durdukları diğer bir konu haftalık ders saatinin az olmasıdır ve buna yabancı dil öğretim yaşının düşmesi gerektiği düşüncesindedirler. Bu konuda da hem şanslı hem de şansız olduklarını kabul etmektedirler. Çünkü 4+4+4 sistemiyle 4. ve 5. sınıfların haftalık ders saatleri düşecek fakat yabancı dil eğitimi görmeye öğrenciler 2. Sınıftan itibaren başlayacaklardır.

Yine müfredatın ağır olması çok dile getirilen bir problemdir. Hem konu yoğunluğu hem de öğrenci seviyesine uygunsuzluğu üzerinde durulmaktadır. Haftalık ders saati bu müfredatı yetiştirebilecek kadar fazla değildir ve her öğrenci aynı seviyede olmadığı için konular bazı bölgedeki öğrenciler konulara uzak kalmaktadır. Bu konudan uzak kalma durumunu 27 numaralı öğretmen ifade etmiştir. Gaziantep çok göç alan bir ilimizdir ve Şanlıurfa'dan gelen öğrenci sayısı oldukça fazladır. Öğretmenimiz bu öğrencilerin yoğunlukta olduğu bir okulda çalışmaktadır. Öğretmenimiz 7. Sınıftaki öğrencilerin burçlar hakkında bilgisi olmadığını bulmuş ve konuyu ifade etmekte oldukça zorlanmıştır.

Az önce de söylediğimiz gibi Gaziantep çok göç alan bir ilimizdir. İşçi potansiyeli oldukça yüksek, sanayisi en çok gelişen dünyadaki nadir şehirlere dendir. Sanayinin gelişmesi insanların paraya olan bakış açılarını değiştirmiş kısa kolay yoldan para kazanma fikri onlar için ideal bir durum olmuştur. Aileler de çocuklarını ticarete yönlendirerek bunu önemsediklerini belli etmektedirler. Fakat bu durum okula olan ilgiyi azaltmaktadır.

Öte yandan söz konusu materyal eksikliği ile ilgili konuşacak olursak, materyallerle beraber öğrenci bununla beraber dilin iletişiminde kullanım alanlarını tanır, dinleme ve anlama becerisi edinir. Böylelikle bu öğrencinin diğer becerilerinin yanında konuşma becerisinin gelişmesini de etkileyecek, öğrenci günlük konuşma ortamına ve hızına, tümce yapılarına alışabilecek ve ayrıca sözcük dağarcığını da zenginleştirebilecektir. Onun için

bunlara derslerde mutlaka yer verilmez. Fakat bunun eksikliği yıllardan beri var olan bir durumdur pek ilerleme kaydedilememiştir. Bu da öğretmenlerin yakındığı problemler arsındadır.

Diğer bir üzerinde durulması gereken problem telaffuz hatalarıdır. Telaffuz hataları dinleme ve okuma etkinliklerinin az olmasıyla alakalıdır her dil öğrencisinde bu problemle karşı karşıya gelinir, fakat öğretmenlerimiz Gaziantep ilindeki öğrencilerin çok farklı bir süreç yaşadıklarını belirtmektedir. Çünkü Gaziantep ağzının öğrencilerin kelimeleri söylemelerini zorlaştırmaktadır.

Cümle üretmede problem ülkemizde olduğu gibi Gaziantep'te de öğretmenlerin çok yakındığı bir problemdir. İngilizce ile Türkçeyi yanlış ilişkilendirmeden dolayı cümle üretmede çok fazla sorun yaşanmaktadır.

Öğrenci anadilindeki uygulamalar dışına çıkınca öğrenim zorlaşabilir. Bu İngilizce ve Türkçe arasında ilişki kuramama olarak karşımıza çıkar. Bu durumu bir öğretmenimiz şöyle örnekleştirmektedir. "Türkçede üçüncü tekil kişi için kullanılan "o" sözcüğünün karşıtı İngilizcede dişi, erkek ve yansız olarak üç ayrı sözcükle belirtilir. Türkçe konuşurken üçüncü tekil kişiyi belirten adıda herhangi bir cins ayırımı yapmaya alışkın olmayan bir öğrenci, İngilizce öğrenirken bu cins ayırımı nedeniyle üçüncü tekil kişi adılarını yanlış biçimde kullanabilmektedir. Başka bir örnek vermek gerekirse, "Üç çocuk geldi." tuncesinde olduğu gibi Türkçede adlar sayılarla birlikte kullandığında çoğul eki almaz. Öğrenci İngilizce kurduğu tuncelerde de aynı uygulama eğilimini göstermektedir. Anadiline dayalı olarak yapılan uygulamalar sonucu ortaya çıkan yanlışların öğrenci tarafından düzeltilmesi de "oldukça uzun bir zaman almaktadır. Bu problemler de dediğimiz gibi hem İngilizce ve Türkçe arasında yanlış ilişki kurmaktan hem de anadile hakim olunamamasından kaynaklanmaktadır.

Kısaca belirtilen tüm problemler görüldüğü gibi birbiriyle sıkı sıkıya bağlantılıdır. Çözüm ilgili olanların hepsinin ortak çabasıyla ortadan kalkacaktır.

ÖNERİLER

Tüm bu problemlerle alakalı öğretmenlerimizin önerileri şunlardır.

İlk olarak hataların yapılmasıyla ilgili bir öğretmenimiz, gerçek hayatta dil kullanılmadığı sürece öğrenilemeyeceğini, öğrencilerin yabancı dil kullanabilecekleri ortamlarda bulunması gerektiği yani yurt dışı tecrübelerinin olmasını ifade etmekte ve sistemin bu imkanı yaratması gerektiğini savunmaktadır.

Ders öğretim programının ağır olmasıyla ilgili, okutulan kitapların değişmesi ve daha renkli daha fazla eğlenceli ve ilgi çekici etkinliklerin yer aldığı bir kitap kullanılmasının gerektiği söylenmektedir. Konuların ağır olmasıyla ilgili de sıkıcı ve uzun okuma parçalarından sıyrılması gerektiği ifade edilmektedir.

Öğretmenlere öğrencilerle daha fazla ilgilenmelerini sağlaması açısından sınıfların mevcudunun azaltılması gerekmektedir ve dil öğretimi için uygun laboratuvarların oluşturulması gerekmektedir.

Materyal eksikliğinin de çözülmesi gerekmektedir, ilgili makamlar bu konuya ilgili yapacakları şeyler üzerinde yoğunlaşmalıdırlar.

İlgisizlik problemi de ailelere fikirleri değiştirecek nitelikte farkındalık ve ihtiyaç olarak hissettirecek seminerlerle aşılabılır denilmektedir. Ayrıca velilerle görüşmelerin artırılması gerekmektedir. Bu aileye çocuklarının değerli olduklarını hissettirecektir.

Diğer bir çözüm önerisi de sınav odaklı eğitimden uzaklaşmakla mümkün olacaktı. Bu tür sınavların öğrenci başarısını belirlememesi gerektiği savunulmaktadır. Hatta bir öğretmenimiz konuşmaya ve yazmaya yönelik artırılması mümkünse ülkemizde ve yurt dışında dil kampları oluşturulup bunlardan yararlanılması gerektiğini savunmaktadır.

Diğer bir çözüm önerimiz de yabancı dil öğretiminin erken yaşlarda başlaması gerektiğiyle ilgilidir.

Müfredatın öğrenci seviyesinin ağır olmasıyla alakalı da müfredatta yerleşmeye gidilmesi, öğrenciye görelilik ve yakından uzağa ilkelerinin daha fazla benimsenmesi gerektiği ifade edilmektedir.

İlgisizlikle ilgili yine öğrencilere İngilizce öğrenmenin gerekleri idrak ettirilmelidir.

Başka bir öneri de materyal geliştirmeyle alakalı MEB öğretim yöntemleri, materyal kullanımı ve geliştirme eğitimlerinin verilmesidir. Yaygın eğitim yöntemlerinin kullanılması da hızlı bir gelişim sağlayacaktır.

Haftalık ders saatiyle alakalı olarak bunların artırılması veya müfredatın hafifletilmesi gerektiği ifade ediliyor.

Kitaplarla ilgili, yabancı kaynaklı kitapların tercih edilmesi gerektiği de ifade ediliyor. O kaynakların daha sağlıklı ve kısa zamanda başarılı oldukları ifade ediliyor.

Anadile hâkimiyet konusunda Türkçe ve İngilizce öğretmenlerinin koordineli bir biçimde çalışması gerektiği ifade edilmektedir.

Dil öğrenme yaşının düşürülmesi ve bu konudaki çalışmaların araştırılması gerektiği ifade ediliyor.

Son olarak, İngilizceye olan ilginin aileyle olan kısmının devletin çözebileceği bir durum olarak ifade ediliyor, vatandaşların bunun gerekliliğini anlayabilmesi için devletin çalışması gerektiği ifade ediliyor.

The Intrusive Sounds in the Connected Speech

Mehmet Deniz Demircioğlu^a

^a ELT Lecturer, Uludag University, School of Foreign Languages, 16369 "Bursa," Turkey

Abstract

In our modern and globally developing age, accurate and fluent verbal communication in English is inevitable for everybody. The use of technologically developing electronic devices, such as computer, Face book, twitter, and Skype has predominantly entailed educated people to learn English at the desired level accepted by all over the world. However, many people whose mother tongues are agglutinating languages, because of the insufficient and baseless educational systems that are based on the Grammar-Translation method put into practice in the developing countries' secondary and high schools, still have difficulty to learn English.

Every English teacher righteously justifies that the Grammar-Translation method is ineffective to teach English. On the other hand, most of the native and non-native ELT teachers find skill-based and task-based teaching methods are more useful and interactive than the Grammar-translation one in teaching English. Teaching pronunciation and articulation in which intrusive sounds play an important role is considered to improve the listening skill for learners.

Students who do not know how the intrusive sounds work and who have no experience in practicing on that have mostly difficulty in understanding what they hear, even if they watch TV in English such as BBC, CNN, and other international media organs.

The Turkish teachers who teach English in non-English speaking environment, especially in Turkey, often advise that the students watch TV, and listen to the radio in English as much as they can so that they can improve their understanding (listening) ability. No matter how much, and how long a student watches TV and listens to the radio in English to improve his or her English listening ability, practicing by students or learners without being informed in the presence of the intrusive sounds is absolutely observed to be less easily digestible than it is advised by those teachers.

After the function of the intrusive sounds being learnt by Turkish students and when they understand how those sounds work in the pronunciation and articulation, their listening abilities will improve quicker than expected.

Keywords. Intrusive sounds, pronunciation, articulation, Turkish language, Turkish learners, language families, language teaching.

Introduction

In our modern and globally developing age, accurate and fluent verbal communication in English is inevitable for everybody. The use of technologically developing electronic devices, such as computer, Face book, twitter, and Skype has predominantly entailed educated people to learn English at the desired level accepted by all over the world. However, many people whose mother tongues are agglutinating languages, because of the ineffective educational systems based on the Grammar-Translation method put into practice in the developing countries' secondary and high schools, still have difficulty to learn English.(especially in Turkey)

Every English teacher righteously justifies that the Grammar-Translation method is ineffective to teach English. On the other hand, most of the native and non-native ELT teachers find skill-based and task-based teaching methods are more useful and interactive than the Grammar-translation one in teaching English. Teaching pronunciation and articulation, as important tools of both listening and speaking abilities, in which intrusive sounds play a significant role is considered to improve the listening skill for learners.

Students who do not know how the intrusive sounds work and who have no experience in practicing on that have mostly difficulty in understanding what they hear, even if they watch TV in English such as BBC, CNN, and other international media organs.

The Turkish teachers who teach English in non-English speaking environment, especially in Turkey, often advise that the students watch TV, and listen to the radio in English as much as they can so that they can improve their understanding (listening) ability. No matter how much, and how long a student watches TV and listens to the radio in English to improve his or her English listening ability, practicing by students or learners without being informed about the presence of the intrusive sounds is absolutely observed to be less easily digestible than it is advised by those teachers.

Supported by well-acquired pronunciation units, listening can be the most accelerating tool for learners to learn speaking ability. Qualified input gives birth to be desired and accepted output in English learning.

The sound changes in the articulation and pronunciation of both the function and content words obscure the familiarity of the sounds of the words that learners encounter before. Especially, the weak forms in the function words cause to be misunderstood in a listening period. Two or three words in connected speech are perceived as if they were one word.

Function words carry only grammatical meaning, such as: prepositions, auxiliaries, articles, quantifiers, and pronouns. However: content words carry real meaning such as: nouns, verbs, adjectives, adverbs.

1) What are the several major problematic areas for learners of English:

The several major problematic areas are as important as the teaching methods of English language.

These are:

1.1)weakening - words such as prepositions, articles & auxiliary verbs are in their unstressed form, they are softer & shorter. The schwa sound **ə** (the most common) & the sounds **ɪ** & **ʊ** are reduced forms.

Here are the weak forms of 'him', 'she', 'does', 'some', 'them', 'was', 'that'.

/ɪm/ /ʃɪ/ /dəz/ /səm/ /ðəm/ /wəz/ /ðət/

1.2) Catenation/linking - a consonant at the end of one word is carried over to connect with a vowel at the beginning of the next word. This causes learners to misinterpret word boundaries. The two words 'he's in' are linked with the 's' & the 'i' - learners can hear this as one word.

/hi:zɪn/

The same linkage with 'an apple'

/ənæpl/

1.3) Intrusion - an extra sound is introduced to lubricate the flow of one vowel to another. The utterance 'we are leaving' needs the /j/ sound between the 'we' & the 'are'. Other common intrusive sounds are the /r/ & /w/

/wi:jəli:vɪŋ/

The /w/ sound is needed between 'go' & 'off'.

/gəʊwɒf/

1.4) Elision - a sound is missed out e.g. for 'correct' -

/krekt/

The /t/ sound is dropped in 'next door'.

/neksdɔ:/

1.5) Assimilation - a sound changes because it is affected by the sound that follows it e.g. for 'sandwich' & 'light blue' -

/sæmwɪdʒ/ /laɪtblu:/

As with all areas of phonology it is a good idea to introduce these gradually. I would introduce them in the order given above. This is based on frequency & the amount of interference they cause.

Any listening activity can be exploited for a focus on these areas. After the listening skills development, focus on a short extract with the script & ask the stds to find examples of one or two of the features.

Look at the following & decide which of the features above are present. (the sound of English, Hudson,J)

- | | |
|-----------------|------------------|
| a. go away | g. waste paper |
| b. acts | h. ten pounds |
| c. three onions | i. bright colour |
| d. scripts | j. I am |
| e. quite good | k. go away |
| | l. two hours |

2.0) Why do Turkish learners have difficulty in understanding, pronouncing, and articulating those sounds in both listening and speaking competence?

2.1) Being a member of Ural-Altaic Language family.

Turkish language is a member of the Ural-Altaic language family. However, English language is a member of The Hindu-European language family. The most important difference between those languages is that Turkish language is an agglutinating language like other languages such as Japanese and Korean.

The stem of the verb in those languages does not change in any form of sentence structure, e.g .positive ,negative, question, and negative-question forms nor in any tense grammatically, such as, the present simple, the present continuous, the simple future, and the past tenses. These differences between two languages, Turkish and English, make English learning difficult in terms of Turkish learners. Turkish language is mostly pronounced as written. So, Turkish learners have trouble with the sounds in which remarkable variations are evident in English languages, such as “th”, diphthongs, intrusive, assimilation, and so on. English is a member of The Inflectional languages.

In these languages, word stems show variation while lexicalising new word, and the word stem becomes unrecognizable. The particles can take place in the word as prefix, infix, and suffix. The main voices in the word stem remain the same while articulating a new sound.

(Hindu-European languages take place in this language family.) (Ceritoglu,M)

2.2) why do Turkish teachers who teach English not give importance to listening and especially pronunciation, articulation in speaking English in the lessons?

The Grammar-Translation method has been predominantly used to teach English at the state secondary, and high schools. The students who got sufficient grades from the English grammar lessons are thought to be good at every skill of English without taking any skill lessons during their education in English. However, in the privately-owned secondary and high schools, English lessons with all skills are considered to be as important as mathematics and science lessons are.

In spite of all efforts, the majority of the students who graduated from the privately-owned schools prefer to go to the U.K. or the U.S.A to improve their English in such a way as to communicate with foreign people and to find a good job either before university or after university graduation. The minority of the teachers who teach English at the state secondary and high schools gives more importance to pronunciation lessons, but they face the limited curriculum of English lesson. Those teachers are ground as wheat between the insufficient hours of lessons and the limited curriculum suggested by the ministry of National education.

The students who take English lessons can be divided into three categories at those schools. The students in the first category aim only to pass English lessons, and those in the second category aim to find a good job when they graduate from their schools by participating any foreign language courses, which will last only two or three months, and those in the third category, who are a minority among the others, expect to communicate with foreign people and want to have a master or phd programmes. Because of that, they give importance to pronunciation and articulation of English so that they can keep track of education given in foreign countries, TheU.K and the U.S.A coming ahead.

3.0) Why do the majority of Turkish learners have difficulty in learning English at the desired level, such as upper-intermediate, and advanced levels?

3.1) Can Turkish learners improve their listening competence only by listening?

They have problems with the English sounds they hear from English-speaking news Agencies, such as BBC, CNN, and others. The main reason why they have problems with those sounds is because they have no additional pronunciation lessons in which the voiced and unvoiced of “th” sounds, the diphthongs, and raising and falling intonation, pitches, catenation, intrusion, assimilations are mainly taught to follow the stream of speech. No matter how much they listen to the English-speaking news agencies, it is not possible for them to improve their listening competence without being learnt the functions of those linguistic peculiarities in English.

3.2) Is Turkish learner’s larynx suitable to pronounce and articulate all sound pronounced in English language?

The articulation and the pronunciation of the voiced and the unvoiced “th” sounds are initially difficult for Turkish learners because no such sounds are available in the agglutinating languages, that is, in Turkish. Secondly, the diphthongs also create another problem for Turkish learners because monothongs are predominantly used in the articulation. Special interest showed by the learners is the unique key to those pronunciation problems which are initially thought not to overcome easily. English language which is learnt in non-English speaking environment, that is, in Turkey is thought to be too difficult for Turkish learners, who are at the state secondary and high school, to learn at any time, and the majority of the learners think that English is the most difficult language that cannot be learnt because their larynxes are unsuitable for either learning or pronouncing. However, Turkish learners’ larynxes are suitable to articulate and pronounce the sounds of every language spoken all over the world. The main issue derives from the fact that they do not dedicate enough time to study English at the RP level.

When they go to the U.K. to improve their English after having intermediate level, they notice that they can articulate and pronounce the sounds of English easily without having difficulty with their larynxes. This proves that, to a certain extent, Turkish learners who are willing to learn how to be able to overcome the issue of articulation.

4.0) Are additional pronunciation and articulation training necessary for Turkish learners with listening and speaking lessons at schools in Turkey?

Absolutely it is. Owing to the remarkable differences between English and Turkish in terms of articulation, pronunciation, and language families that they have, the pronunciation and articulation of English sounds should be taught at the elementary level because it is extremely difficult to correct the wrong articulation and pronunciation at the upper levels.

All the students are Turkish, and they do not know any other foreign language. They have 30 lesson hours of English weekly. 8 of the 30 hours is speaking and listening at the pre-intermediate level. However, no pronunciation lesson is evident in the weekly schedule to support both listening and speaking lessons. The students generally have difficulty in understanding the connected speech when they are exposed to listening.

I selected six students from different classrooms at the pre-intermediate level. I divided them into two groups. The three students in the first group were said to listen to the news from BBC, CNN, and other English broadcasting channels in an hour period every day for two months. They were checked every three days, and I wanted them to record what they listened regularly from the English broadcasting channels.

The three students in the second group were exposed to weak forms of the sounds three hours in the first week. The second week, the catenation /linking were given to them so that they could understand whether the sound or sounds were one word or two words or a combination of a few sounds of the words. The following week, the intrusion in which /w/, /J/, /r/ sounds are , and the fourth week, the elision, and the last week, assimilation are given to the students with the examples of the sounds in the connected speech.

The rest of the three weeks, they were let to listen to the English speaking channels after those training.

As a conclusion, the students in the second group have been observed to be much better than those in the first group. This shows that English is a confusing language to pronounce. Its 19 vowel and 25 consonant sounds, joining rules, weak forms, stress and intonation all present challenges. Perhaps the most confusing aspect of all is the way written English can appear so different to its spoken form.

In particular the 5-week- training course has made them gain, to a certain extent;

*How to pronounce every vowel and consonant sounds of English from IPA chart.

* The rules of joining and sound selection in the intrusive sounds.

*Accurate use of intonation patterns and stress.

4.1) The function of “r” sound is important in British English pronunciation. “R”, “W”, “J” sounds play important roles in intrusive sounds in connecting the sounds one another as if they were one word in English

pronunciation. In addition to this function of “r” sound, it is not pronounced as “R” in final sound of a word. Such as; “beer or wine” (R) sound as final consonant is not pronounced by itself. However, in the connected speech, (r) is pronounced to connect the sound from “ bee-rand-wine”.

Another example for (R) sound in the connected speech; [**I saw a film**], (R) sound as intrusive sound is pronounced to connect the sounds in the speech. / **aɪ s) : r a film** /

4.2) Some examples for the intrusive sounds, [R, J, W] in the connected speech. In some sound connection [(?) glottal stop] is produced. (the sound of English, Hudson,J)

Go out the back way	/ gəʊ?aʊt /	(?)
The law isn't fair.	/ lɔ :rɪ zənt/	(r)
We own a few.	/ wi:jəʊn/	(j)
Yes, you are.	/ ju:wɑ : /	(w)
I study drama and music.	/ drɑ :mə?ænd/	(?)
I am interested.	/ aɪ ?æm/	(?)
My mother is over there.	/ 'mʌðəɪ z (slower, more careful speech)	
My father isn't in.	/ fɑ :ðərɪ zənt /	(r)

5.0) Catenation:

Catenation is as important as intrusive sounds: In order to emphasise the function of catenation, we can see a few examples;

- 1) Wha ta lo tof nonsense. (what a lot of nonsense.)
- 2) I tɪsn ta tall bad. (It isn't at all bad.)
- 3) I fe llin lo veon holiday. (I fell in love on holiday)
- 4) Ca nɪ ta kea napple. (Can I take an apple.)
- 5) Her - ban - kaccoun - ti - sin - the red. (Her bank account is in the red.)
- 6) It - sa - bi - to - fa - joke. (it is a bit of joke.)

6.0) the Sound changing in connected speech:

In spoken English we aim to join words together to create smooth .There are different ways words and sounds can join as follows;

6.1) consonant + consonant joining

When 2 identical sounds appear next to each other, we make one longer sound:

Ball_lunch. I wish_Sharon well.

6.2) consonant +consonant assimilation

Some consonant sounds can join together to form a different sounds (assimilate).

Most commonly this happens to /t/,d/ & /n/:

didn't_you t+j= **tS**
 Anne_Ball n+b= **m**
 That_man t+m=**P**

6.3) consonant+ vowel joining

Final consonants move to the next syllable if the next syllable starts with a vowel:

It _isn't_ always_ easy.= / I tɪ zə n to: weɪ zi: zi/
 Dan _and_ Anne_ aren't_in. / dæ nə næ nɑ :n tɪn/

6.4) vowel+vowel joining

If one word ends with a vowel and the next begins with a vowel, we often join the words with one of /j/ /w/ or /r/ :

You _offer (you **w** offer)
 We _entered (we **j** entered)
 China _expanded (china **r** expanded)

6.5) / R / only one sound as (R) :

* / R / at the end of a word : silent.

* /R / before a consonant : silent.

* /R/ before vowel /R/ is pronounced.

Their / car / worked / for / four / years / before

Breaking= breaking [(R) before vowel is pronounced].

Cu-r-r-y = y= i (i) is vowel so,(R) is pronounced. (the sound of English)

The table which has shown the students' success:

According to the research; 75 students, 38 of whom are girls, have been observed in the oral exam during two-week period in terms of:

- Weakening
- Catenation
- Intrusion
- Elision
- Assimilation

A) The male students from East-part of Turkey. (15 students)

B) The male students from West-part of Turkey.(22 students)

C) The female students from East-part of Turkey (18 students)

D) The female students from West-part of Turkey.(20 students)

	Weakening	Catenation	Intrusion	Elision	Assimilation	Total
A	14	13	14	14	13	68
B	16	15	17	15	15	78
C	16	14	15	16	15	76
D	17	16	18	16	16	83

Each section has 20 pts. : Proficiency grade (Total) is 60 pts.

Oral examination results : (A) got 68 pts out of 100 pts.

(B) got 78 pts out of 100 pts.

(C) got 76 pts out of 100 pts.

(D) got 83 pts out of 100 pts.

Conclusion

English teaching in Turkey at the state secondary and high schools in terms of verbal communication is insufficient. One of the main issues why Turkish learners have difficulty in learning English is that listening activities, in which the weakening, catenation, intrusion, elision, and assimilation factors are not evident, are beyond eliminating the barriers between Turkish learners and inactive English teaching methods.

The listening factors that I have mentioned above such as intrusion, elision, and so on, are thought to be effective in English learning in terms of verbal communication. As a result of the observation that I made over the students, those who are exposed to the training and practice including weakening, elision, assimilation and so on are more willing than the students who are not exposed to. I think that English learning should be initiated by listening. The intrusive sounds are generally thought to be more easily learnt than other factors which make learning easy.

The bibliography of the writer

I have been teaching English as an ELT lecturer at English department, School of Foreign Languages since 1985, when I graduated from the department of English language at Uludağ

University, Bursa. Teaching English is our family business because every individual of my family is predominantly engaged in teaching English at the schools and the university.

The lessons that I am responsible for are writing, reading, speaking, listening, and international trade English.

As a person who believes in the idea that everybody should refresh himself in his own field every time without considering how old he /she is, I participated in some courses in not only Turkey but also The U.K. Some of them are:

Fulbright in İstanbul,(1988), “Methodology in teaching English” in Norwich, the U.K. (1990), “Creative methodology for the classroom” Kent University, The U.K. (2012), “Workshop presenters’ training” at ITI in İstanbul.I have been doing DELTA [Diploma for English language teaching to adults] (module 3)at ITI in İstanbul (International Training Institute of Cambridge University).

The Conferences and membership:

- 1) On the dates of 2nd and 6th of May 2013,My article is about the pronunciation problems for Turkish learners in articulating of the voiced and unvoiced “ th “ sounds and the techniques of overcoming the difficulties for Turkish learners in English learning.” was accepted by the International Burch University, Sarajevo.
- 2) On the dates 24th and 27th of June 2013, the article I presented orally was about “the pronunciation problems for Turkish learners in articulating and pronouncing “the diphthongs” in the ELT international conference held in Rome.
- 3) On the dates of 30th of October and 3rd of November 2013, “Accessible Izmir 2013 International participation congress of urban problems and solutions for people with disabilities.” My article was about overcoming the problems of stammering [“ speak that I see thee” (Aristoteles)]
- 4) I am a member of (Linked in) ELT professionals around the world.

Appendix

A video presentation in which how the students in my classroom were trained to pronounce the intrusive sounds.

The video presentation is available in the Power Point.

Başarılı Öğretmenin Vasıfları

Muhammed Aydın^{a*}

^a Prof. Dr., İslami Bilimler Fakültesi, Katar Üniversitesi

Başarılı bir öğretmen, mesleğine bağlılık duyan, dersi en iyi şekilde aktarmak için farklı yöntemleri uygulayabilen, kalbinde sınımsız sevgi, muhabbet parıltıları bulunduran ve sahip olduğu ahlakıyla çevresindeki insanları kendisine imrendiren bir idealisttir.

İnsan iyiyi taklit ederek daha yükseklere çıkabilir. Bir öğretmen de zirveyi yakalaması için bir örnek zihninde canlandırması gerekir. Allah Resulü Hz. Peygamber (salat ve selam üzerine olsun), kıyamete kadar bütün insanlığın en son, en ideal, en başarılı, en örnek alınan ve en sevimli öğretmeni olarak karşımızda durmaktadır.

Başarılı bir öğretmen için bütün insanlığı terbiye etmek, güzel ahlâkı tamamlamak üzere gönderilen Hz. Peygamber (Salat ve selam üzerine olsun) örneği bulunmaktadır. Nitekim Hz. Peygamber (Salat ve selam üzerine olsun) şöyle buyurmuşlardır: “Beni Rabbim terbiye etti ve terbiyemi güzel yaptı” (Cami’us-sağır, Suyûtî, hadis no:1262). Kur’an-ı Kerim’de Yüce Allah da onu şöyle takdim etmiştir: “Andolsun Allah’ın Elçisinde sizin için Allah’a ve ahiret gününe kavuşmaya inanan ve Allah’ı çok anan kimseler için, (uyulacak) en güzel bir örnek” (Ahzab: 21)

Geniş anlamda “nitelik/vasıf” kavramının çok arandığı bir dönemde yaşıyoruz. “Nitelik” meselesi her şey için aranan ve başarı için gerekli bir unsurdur. Dolayısıyla bir öğreticinin yaptığı işin güzel olması ve yaptığı işinde başarılı olabilmesi için bazı niteliklere sahip olması gerekmektedir.

Yapılan bir işin güzel olması, pürüzsüz ve sağlam bir görünüm arz etmesi o işin mahiyetinin kavranması ve şartları gözetilerek yerine getirilmesine bağlıdır. Yüce Allah (c.c) “De ki: «Çalışın: Yaptıklarınızı Allah da, Resulü de, müminler de görecektir.»(*Tevbe Sûresi, 9/105*) ayetiyle işe hakim olmaya ve maharet göstererek yerine getirmeye işaret etmektedir. Bu da insanı hata yapmamak için kontrollü hareket etmeye itecek ve yanlışların sayısı za olacaktır.

Örneğin; bir müezzin güzel ezan okumalı; imam, huşu’ içinde güzel namaz kıldırmalı; cemaatle ibadet eden Müslüman, cemaatle ibadet yapmanın kazandıracağı sevap ve manevi atmosferin bilincinde olmalı; öğretmen hakkını vererek öğretmenlik yapmalı; sürücü, kurallara uygun şekilde aracını kullanmalıdır. Kısacası herkes, dünyası ile ilgili yapacağı en küçük işten ahireti ile yapacağı en cüzi ibadete kadar her davranışında sahip olduğu imkan ve birikimi en iyi şekilde ortaya koyarak kaliteyi yakalama gayretinde olmalıdır. Hz. Peygamber (salat ve selam üzerine olsun) bir hadis-i şeriflerinde “Allah, yaptığı işi itkan/ihsan üzere yapan insanı sever. (*Taberânî, el-mucemu’l-evsat, hadis no:897; Beyhakî, Sünen, hadis no:4929*) buyurmaktadır.

İtkan/Bir işi istenilir düzeyde yerine getirmek, Müslüman kimliğinin en belirgin özelliğidir. İslam, her ferdin ahlakını ve faaliyetlerini başlı başına etkileyen bu ayırt edici özelliği, mensuplarında aramış ve çeşitli tavsiyelerle bunu yerleştirmeye çalışmıştır.

Aslında insanın, dışarıda kendisini tanıtan davranışının güzellik ve çirkinliği, sahip olduğu “ihsan şuuru” ile orantılıdır. Kur’an ve sünneteki “ihsan” zannedildiği gibi sadece “iyilik yapmak” manasına gelmemektedir. Bilakis yapılan neyse onun en güzelini sergilemek, mükemmeliyeti elde etmek çabasıdır. Hz. Peygamber (salat ve selam üzerine olsun) “ihsan”ı tanımlarken “Allah’ı görüyormuşçasına O’na ibadet etmendir” (Buhârî, hadis no:48) ifadesiyle Allah rızasının söz konusu olduğu işlerde bulunmanın gerekliliğine vurgu yaparken aynı zamanda Allah’ı görüyor gibi kulluk yapmayı istemiştir.

Müslüman yaptığı bir işi, ibadete dönüştürebilmesi için onun üzerinde titrer ve sorumluluk bilinciyle hareket eder. Çünkü Müslüman’ın ister dünyevi ister uhrevi olsun yaptığı bir iş, ancak ibadet niyeti ile yapılırsa Allah katında geçerlidir. Zira Yüce Allah (c.c) Kur’an-ı Kerim’de “De ki: «Benim namazım da, her türlü ibadetlerim de, hayatım da ölümüm de hep Alemlerin Rabbi olan Allah’a aittir.»” (En’am Sûresi, 162) buyurmaktadır.

Acaba bizler, Müslüman bir toplumda yaşıyor olmamıza rağmen, yapılacak işin en güzelini ortaya koyacak kimliğe sahip bireyler yetiştirebiliyor muyuz? Belki de bugün geri kalmışlığımıza sebep olan en önemli noktalardan biri de yapacağımız işlerde özen göstermememiz, itkan ve ihsan şuuru ile fert ve toplumumuzu eğitmeyişimizdir.

Geliniz, yaptığımız her işte; öğreticiliğimizde, ibadetlerimizde ve muamelelerimizde ihsan derecesini yakalayabilmemiz için kendimize hedef olarak “güzel”i seçelim. Zira “güzel”de itkan/yapılan işi yerli yerinde

sağlam ve muntazam yapma vardır. Maharet, ustalık ve başarı vardır. Şüphe yok ki bunların bulunduğu yerde de dünya ve ahiret mutluluğu kazanılabilmektedir.

Bu çalışmamızda bir öğreticinin başarılı olabilmesi için gerekli görülen bazı vasıfları/özelliklerden önemli gördüklerimizi şöyle ortaya koyabiliriz:

Akıllı ve Zeki Olması

Akıl, insana işlerinde ve görüşlerinde isabet etmesini, gerçeği yakalayıp onunla hüküm vermesini sağlar. Bir öğretmenin başarılı olması için, her şeyden önce doğal ve fitri olarak akıllı ve zeki olması gerekmektedir. Zira en değerli varlık olan insanı yetiştirmek ile uğraşacaktır. Akıllı ve zekasını sadece ve sadece gerçek bilgi, ilim ve hakikatla donatacak ve çalıştıracaktır.

Ahlak Prensiplerine Bağlı Olması

Ahlak, bir öğretmenin uyması gereken ve uymasında zorunluluk gerektiren davranış kurallarıdır. Her şeyden önce öğrencisini en iyi seviyeye getirmeyi hedef seçen, iyiye ve güzele giden yolu gösteren öğretmenin, öncelikle kendisi ahlaklı olmalıdır. Ahlaki kurallara uygun ve amacı doğrultusunda hareket eden öğretmen, gerek kendisinin gerek başkalarının mutluluğuna yardımcı olmaktadır. Böylece öğretmen, öğrencileri arasında farklılık gösteren mizaçları uygun bir şekilde yönetir ve onlarda güzel huyların ve karakterlerin meydana gelmesini sağlamış olur.

Söz ve Fiillerinde Tutarlı Olması

İnsanı değerli kılan ve önemli yapan özellik, tutarlı olmasıdır. İnsanın tutarlı bir kişiliğe sahip olması, söz ve fiilinin tutarlı olmasına bağlıdır. Bu bağlamda öğretmenin sözü fiilini, davranışı da söylediğini desteklemelidir. Sözü ile fiili birbirine zıt olan, söylediğini davranışı desteklemeyen ve hareketleri sözlerine karşı olan öğretmen, başarılı olması söz konusu değildir. Böyle bir öğretmenin de tutarlı fertler yetiştirmesi beklenemez.

Vasıflı İnsan Yetiştirme Gayretinde Olması

Eğitim ve öğretimin en önemli ferdi ve toplumsal görevi, kişileri alanında yetkin yapmak ve yetiştirmektir. Başarılı bir öğretmen, eğittiği ve öğrettiği kişinin sahasında uzman bir kimliğe sahip olmasını kendisine hedef edinmelidir, bütün topluma faydalı kişiler olmasını sağlamalıdır. Zira toplumda vasıflı kişilerin sayısının az olması o toplumun en büyük eksikliğidir. Böyle bir toplumun uzun vadeli bir şekilde ayakta kalması mümkün değildir. Hatta vasıfsız bir insanın vasıflı bir işte görev alması çok yanlıştır.

Yüksek İdealleri Sahip Olması

Eğitim ve öğretim göreviyle uğraşan öğretmenin yüksek ideallere sahip olması gerekir. Yüksek ideallerin temelinde takva bulunması gerekir. Başarılı öğretmen Allah'ın emirlerini yerine getiren ve yasaklarından kaçınır. Takva, öğretmenin yüksek ideallere sahip olmasını sağlar. Yüzeysel duygulara sahip olan öğretmen yüce ve yüksek ideallerle donatılmış insanlar yetiştiremez. Dolayısıyla ideal kişiliği ile öğretmen, yetiştirdiği öğrencilerin yüksek hedeflere ulaşmaları için onlara rehberliği kendine şiar edinir, bazen de anne-baba konumunda olarak onlar için her şeyini feda eder

Öğrencinin Yanlışlarını Söylemede Yumuşak ve Nazik Tavırlar Takınması

Eğitimci, öğrencisine hitap ederken hitap tarzı çok nazik olmalı, gönül okşayıcı sözlerle hitap etmelidir. Kelimeleri incelik ve sevgi yüklü kelimeler olmalıdır. Öğrencisinde gördüğü bir hatayı düzeltmeyi istiyorsa diğer öğrencilerin önünde bunu yapmamalıdır. Zira hiç kimse başkalarının yanında kusurlarının ortaya dökülmesine tahammül edemez. Hatta üstü kapalı olarak bunların üzerinde konuşmakta sayısız faydalar vardır. Bu konuda en iyi yol, misallerle konuşmaktır. Kişide bulunan bir eksikliği açıkça, onun adını vererek değil de, o hata sanki başka bir kişide imiş gibi misallendirmek daha başarılı bir yöntemdir.

Öğrencilerin Seviyesine Göre Hitap Etmesi

Öğretmen, eğitim ve öğretim faaliyetlerinde muhataplarının kabiliyet ve yaratılışına uygun; zekâlarını, karakter ve kültürel farklılıklarını göz önüne tutarak hitapta bulunmalıdır. Hz. Ali (Allah kendisinden razı olsun) insanların seviyesine göre söz söylemenin önemini ve buna uymamaktan doğan felaketi şu şekilde ortaya koymuştur; "İnsanlara anlayacakları şekilde hitap edin, Allah ve Resulünün yalanlanması mı istiyorsunuz?" (Buhari, 1/37, hadis no:127)

Adaletli olması

Eğitim ve öğretimde öğretmenin adetli olması çok büyük önem taşımaktadır. Zira öğretmen, örnek ve önder durumdadır. Öğrencilerine eşit davranmalıdır. Hiçbir zaman, öğrenciler arasında ayırım yapmamalıdır. Ayırım yapması öğrenciler arasında olumsuz neticeler doğurur. Öğrencilere aynı değeri vermeli, farklı uygulamalarda bulunmamalıdır. Birini diğerine üstün tutmamalıdır.

Bunların yanında başarılı öğretmen her şeyden önce, disiplinli, planlı, vaktini en iyi şekilde kullanan program ve düzen etkenleriyle bütünleşir. Öğretmenlik mesleğini bir zorunluluk olarak görmez, bilakis ondan haz alır. Güler yüzüyle öğrencileriyle irtibatını devam ettirir, onların maneviyatını yükseltmek için onlara destek olmaya çalışır.

Öğretmenin bütün ilim dalları ve bilgilere karşı da objektif olması gerekir. Bilgi, hangi millet, din ve kaynaktan gelirse gelsin bilgiye objektif olarak yaklaşır. Öğretmen bilginin doğru olanına sahip çıkacaktır. Kaynağına bakarak ona karşı çekimser olmamalıdır. Objektiflik özelliğine binaen, bilginin doğru olup olmadığı araştırılacaktır. Bilgiyi kimden olursa olsun, doğru ise alacak, hakikat değilse terk edecektir. Zira bilgi evrenseldir.

Sahip olduğu güce aldanmayıp affedici ve toleranslı davranır, şiddete başvurmadan talep ettiği konularda kararlılığı öğrencileri tarafından kabullenilir. Sınıf hâkimiyetini otoriterlikle değil, sahasına olan hâkimiyeti ve kullandığı metot ve tekniklerin etkisiyle kurandır. Ufku geniş, eğitim metotları ile ilgili yeni çıkan materyali gün be gün takip eden ve sahası ile ilgili konularda kendisini yenileyendir.

Sonuç

Eğitim ve öğretim faaliyetlerinin icrasında birinci derece önemli olan husus, öğretmenin öğrencilere nasıl yaklaşılacağını ve nasıl davranacağını bilmesidir. Konuyu incelerken de ortaya çıktığı gibi öğretmenlik sanatında başarının sırrı, öğretmenin bazı özelliklere sahip olması ve öğrencilerine karşı alacağı pozisyonların nasıl olması gerektiğini çok iyi bir şekilde bilmesinde yatmaktadır.

Öğretmen Adaylarının Öğretmenlik Mesleğine Yönelik Tutumları

Ahmet Eskicumalım^a Kerim Karabacak^{b*}

^{a,b} Sakarya Üniversitesi Eğitim Fakültesi

Özet

Sakarya Üniversitesi Eğitim Fakültesi'nde öğrenim gören birinci ve dördüncü sınıf öğrencileri ile gerçekleştirilen bu araştırma öğretmen adaylarının öğretmenlik mesleğine yönelik tutumlarını ortaya koymayı amaçlamaktadır. Tarama modelinde gerçekleştirilen araştırmanın evrenini Sakarya Üniversitesi Eğitim Fakültesi'nde öğrenim gören öğretmen adaylarından oluşturmaktadır. Araştırmanın örnekleme ise amaçlı örnekleme yöntemi ile belirlenmiş, Psikolojik Danışmanlık ve Rehberlik ile İlköğretim Matematik Öğretmenliği Anabilim Dallarının 1. ve 4. sınıflarında öğrenim görmekte olan 191 öğrenciden oluşmaktadır. Toplanan veriler SPSS'e aktarılmış ve ortalama, standart sapma ve t-testi işlemleri yapılmıştır. Analiz sonuçlarına göre, Kız öğretmen adaylarının erkek öğretmen adaylarına göre öğretmenlik mesleğine yönelik tutumlarının daha yüksek olduğu görülmüştür. Ayrıca mesleki tutumun 4. sınıf öğrencilerinde 1. sınıf öğrencilerine göre daha fazla olduğu belirlenmiştir. Öğretmen adaylarının öğrenim gördükleri bölümle öğretmenlik mesleğine yönelik tutumlarına ilişkin anlamlı bir fark bulunmamıştır.

Anahtar kelimeler. Tutum, Öğretmenlik, Meslek, Mesleki Tutum.

Giriş

Birey, toplumun kendinden sosyal ve ekonomik anlamda sorumluluk almasını istemesi sonucu, hem kendi geçimini sağlayacak hem de toplumun kendinden beklediği sorumluluğu yerine getirmek için bilgi, beceri ve ilgileri doğrultusunda bir uğraşı alanında yer edinmeye çalışır. Meslek olarak isimlendirilen bu uğraşı alanı, profesyonel anlamda, özel uzmanlık bilgisi ve becerisi içeren, uzun ve yoğun bir akademik çalışma ile özel bir formasyon sahibi olmayı gerektirir (Erden, 2011). Bireyin tercih ettiği mesleğe ilişkin faaliyetleri etkili bir şekilde yürütebilmesi için gerekli bilgi, beceri, tavır ve tutumları kazandırmaya yönelik mesleki bir eğitimden (Alkan, Doğan ve Sezgin, 2001) geçmesi gerekir.

Günümüzde uzmanlık alan bilgisi, uzun yoğun akademik çalışma ve özel formasyon sahibi olmayı gerektiren ve profesyonel olarak yürütülen bir meslek olarak kabul gören *öğretmenlik*, birçok ülkede 19. yüzyıldan itibaren bir meslek olarak görülmeye başlanmıştır. Türkiye'de ise bu ülkelerin hemen ardından öğretmenlik bir meslek olarak ele alınmaya başlanmış ve 1848 yılında Darül-muallimin adıyla bugünkü manada öğretmen yetiştiren ilk meslek okulu kurulmuştur (Akyüz, 1997). Savaş yıllarının ardından cumhuriyetin ilanı ile birlikte öğretmen açığını kapatmak için "öğretmen nitelikleri" geri plana itilmiş "nicelik" ön plana çıkartılmış ve özellikle geçtiğimiz yirmi yıl içerisinde öğretmen nitelikleri üzerinde yoğun bir şekilde durulmaya başlanmıştır.

Öğretmenlik, eğitim sektörü ile ilgili olan sosyal, kültürel, ekonomik, bilimsel ve teknolojik boyutlara sahip, alanda özel uzmanlık bilgi ve becerisini temel alan akademik çalışma ve mesleki formasyonu gerektiren, profesyonel statüde uğraşı alanıdır (Hacıoğlu ve Alkan, 1997). Stephens ve Crawley'e göre (1994) etkili bir öğretmende (1) konu bilgisi, (2) konuyu uygulayabilme (aktarabilme), (3) sınıf yönetimi bilgisi, (4) Değerlendirme bilgisi, (5) mesleki gelişim olmak üzere beş temel niteliğin bulunması gerekmektedir. Jones'e göre (1993) öğretmen yeterliliğinin, sadece eğitim ve diplomayla belirlenmesiyle, öğretmenlerin sahip olması gereken temel özellikler göz ardı edilmektedir. Bir öğretmenin, sadece kendi konusunu bilmesi yeterli olmayıp aynı zamanda mesleki inanç ve samimiyet duygusuna da sahip olması gerekmektedir. Öğretmen niteliklerine yönelik yapılan araştırmalara göre öğretmenlerin kişilik özellikleri, davranışları, tutumları, ilgileri ve akademik özellikleri, öğretme ve öğrenme sürecinde önemli rol oynamaktadır (Erdem, Gezer ve Çokadar, 2005). Ayrıca öğretmenin alanındaki yeterliliğinin yanında, öğretme sırasındaki yetenekleri, tutumları ve öğrencilerle olan ilişkileri (Eskicumalı, 2002) ve mesleğe karşı olan duyarlılıkları da (Kavcar, 1999; Uygun, 2008; Karabacak ve Uzun, 2013) nitelik açısından oldukça önemli görülmektedir. Bu nedendir ki öğretmenlerin öğretmenlik

mesleğinde daha etkili olabilmeleri için mesleğe yönelik olumlu algılar geliştirmeleri gerekmektedir (Erdem, Gezer ve Çokadar, 2005).

Psikolojide bireylerin bir duruma karşı cevapları üzerine etki eden ve deneyimlerden organize edilmiş mental ve nöral bir hazırlık durumu olduğuna inanılan (Khine, 2001) tutum kavramı, kişilerin, nesnelere ve olayların olumlu veya olumsuz değerlendirilmesi şeklinde tanımlanmaktadır (Gerrig ve Zimbardo, 2012). Genel olarak bireyin çevresindeki herhangi bir olgu veya nesneye ilişkin sahip olduğu tepki eğilimini ifade eden tutum, bireyin kendine, herhangi bir nesne, toplumsal konu, ya da olaya karşı deneyim, bilgi, duygu ve güdülerine (motivation) dayanarak örgütlediği zihinsel, duygusal ve davranışsal bir tepki eğilimi (İnceoğlu, 2010) olarak da ifade edilmektedir. Demirel (2010) ise tutumu, bireyi, insanlar, nesnelere ve durumlar karşısında belli davranışlar göstermeye iten öğrenilmiş eğilimler olarak tanımlanmaktadır. Tutumlar uzun süre sabit kalırsa değerlendirmeler ve yapılanlar arasında güçlü bir ilişki meydana geleceğinden bireylerin davranışlarını tahmin etmek daha kolaylaşır. Ayrıca Tutumlar ve davranışlar arasındaki eşleşmeyi doğru bir şekilde yapabilmek için tutum ölçütlerinin de belirlenmesi gerekmektedir (Gerrig ve Zimbardo, 2012).

Mesleğine karşı olumlu tutum geliştiren bireyler, mesleklerini severek yapacaklarından, öğretmenlik mesleğine, bu mesleğini seven ve isteyen adayların seçilmesi, nitelikli öğretmenlerin yetiştirilmesinin önemli adımlardan biri (Özder, Konedra ve Zeki, 2010) olarak görülmektedir. Ancak ön yargılar, dolaylı ve yanlış bilgilenmeler sonucunda belli bir konu, durum ya da kişiye ilişkin geliştirilen bir takım tutumların, doğru ve yeterli bir bilgilenme süreciyle birlikte değiştirileceği unutulmamalıdır (İnceoğlu, 2010). Diğer bir ifadeyle öğretmenlik mesleğine yönelik olumlu tutumlara sahip öğretmen adaylarının öğretmenlik mesleğine seçilmesi gerektiği düşünülürken, öğretmenlik mesleğine yönelik olumlu tutumlara sahip olmayan adayların da eğitim sürecinde öğretmenlik mesleğine yönelik olumlu tutumlar kazanabilecekleri göz ardı edilmemelidir. Bu nedenle öğretmenlik mesleğini seçen ve öğretmenlik mesleğine yönelik olumlu tutumlara sahip olmayan öğretmen adaylarının, olumsuz tutumlarının olumlu hale getirilmesinde ve olumlu tutumlara sahip olanların da bu tutumlarının daha da olumlu hale getirilmesinde eğitim fakültelerine büyük görev ve sorumluluk düşmektedir.

Literatür incelendiğinde 1980'lerin sonlarından itibaren öğretmen adaylarının mesleki tutumlarına yönelik çok sayıda araştırmanın gerçekleştirildiği, özellikle 2004 yılından itibaren de bu alanda yapılan araştırmaların sayısının arttığı görülmektedir. (Bknz: Arslan, 2013; Aynal, 2013; Özkan 2012; Açışlı ve Kolomuç, 2012; Eraslan ve Çakıcı, 2011; Coşkun, 2011; Aksoy 2010; Bulut, 2009; Durmuşoğlu, Yanık ve Akkoyunlu 2009; Güneşli ve Aslan, 2009; Akkaya, 2009; Çetinkaya 2009; Başbay, Ünver ve Bümen, 2009; Demirtaş, Çömert ve Özer, 2008; Çapri ve Çelikkaleli, 2008; Pehlivan, 2008, 2004; Sağlam, 2008; Tanel, Şengören ve Tanel, 2007; Terzi ve Tezci, 2007; Özbek, 2007; Bozdoğan, Aydın ve Yıldırım, 2007; Şimşek 2005; Sayın, 2005; Gürbüz Türk ve Genç, 2004; Semerci ve Semerci, 2004; Oral, 2004; Semerci, 1999; Soran, Demirci ve Atay 1996; Çelenk, 1988).

Açışlı ve Kolomuç (2012) Sınıf Öğretmenliği bölümünde öğrenim gören öğretmen adayları üzerinde gerçekleştirdiği araştırmalarında, öğretmen adaylarının öğretmenlik mesleğine ilişkin tutumlarının cinsiyete, öğrenim gördükleri sınıflara ve mezun oldukları liselere göre anlamlı bir farkın bulunmadığını belirlemişlerdir.

Özder, Konedra ve Ender (2010) öğretmen adaylarının öğretmenlik mesleğine yönelik tutumlarının akademik başarılarına, cinsiyetlerine, sınıflarına göre farklılık göstermediğini, öğrenim gördükleri programlara göre farklılık gösterdiğini belirlemiştir. Yapmış oldukları araştırma sonuçlarına göre okul öncesi öğretmenliğinde öğrenim gören öğretmen adayları ile sınıf öğretmenliği bölümünde öğrenim gören öğretmen adayları arasında okul öncesi öğretmenlerin lehine bir farkın bulunduğunu belirlemişlerdir.

Bulut (2009) ilköğretim bölümünde öğrenim gören öğretmen adaylarının öğretmenlik mesleğine yönelik tutumlarını üniversite, anabilim dalı ve cinsiyet değişkenlerine göre incelediği çalışmasında, öğrenim görülen üniversite ve cinsiyete göre anlamlı bir fark belirlememiş, bölümlere göre ise anlamlı bir farkın bulunduğunu belirlemiştir. Bulut'un araştırma sonuçlarına göre Sosyal Bilgiler öğretmenliğinde öğrenim gören öğretmen adaylarının Fen Bilgi Öğretmenliğinde öğrenim gören öğretmen adaylarına göre öğretmenlik mesleğine yönelik daha fazla olumlu tutuma sahip olduğunu belirlemiştir.

Sağlam (2008) ve Oral (2004) tarafından yapılan çalışmalarda, öğretmen adaylarının öğrenim gördükleri sınıflara göre, sınıf seviyesinin yükseldikçe öğretmenlik mesleğine yönelik tutumlarının da olumlu yönde arttığı belirlenmiştir. Güdek (2007) ise müzik öğretmenliğinde öğrenim gören öğretmen adayları ile gerçekleştirdiği çalışmasında, öğretmen adaylarının öğretmenlik mesleğine yönelik tutumlarının sınıflara göre yukarıdaki araştırmalarının aksi yönde farklılık gösterdiğini belirlemiştir. Bu araştırma sonuçlarına göre 1. Sınıfta öğrenim gören müzik öğretmeni adaylarının 4. Sınıfta öğrenim gören öğretmen adaylarına göre daha fazla öğretmenlik mesleğine yönelik olumlu bir tutum içerisinde olduklarını belirlemiştir.

Araştırmanın Amacı

Bu araştırmanın amacı öğretmen adaylarının öğretmenlik mesleğine yönelik tutumlarını çeşitli değişkenler açısından incelemektir. Bu amaca ulaşmak için aşağıdaki alt problemlere cevap aranacaktır:

Öğretmen adaylarının öğretmenlik mesleğine yönelik tutumları;

- 1) Anabilim Dallarına göre,
- 2) Cinsiyetlerine göre,
- 3) Öğrenim gördüğü sınıflara göre farklılık göstermekte midir?

Araştırmanın Önemi

Bir mesleğe yönelik olarak geliştirilen tutum, bireyin o meslekteki başarısının en önemli belirleyicisidir (Çakır, 2005). Öğretmenlik mesleğini başarılı bir şekilde yerine getirmek için mesleği isteyerek seçmek ve severek yapmak gerektiğinden, öğretmenlik mesleğini ileride icra edecek öğretmen adaylarının bu mesleğe karşı olumlu tutuma sahip olması oldukça önem taşımaktadır. Tutumların, öğretmenlerin öğrencileri etkileyen en önemli kişilik özelliklerinden birisi olduğu ve özellikle mesleğe, öğrenciye ve okul çalışmalarına yönelik tutumların, öğrencilerin öğrenmesine ve kişiliğine geniş ölçüde etki ettiği bilinmektedir (Küçükahmet, 2003). Ayrıca öğretmenlerin mesleklerine yönelik sahip oldukları tutumun, tüm tutumlar gibi sonradan öğrenilmesi öğretmen eğitiminin önemini ortaya koymakta (Can, 1987) ve verilen eğitimin, onların mesleklerine karşı olumlu tutum geliştirmelerini sağlayacak nitelikte olma (Senemoğlu ve Özçelik, 1989) zorunluluğunu da beraberinde getirmektedir. Bu nedenlerden dolayıdır ki öğretmen adaylarının öğretmenlik mesleğine yönelik tutumlarının ne düzeyde olduğu ve eğitim fakültelerinin öğretmen adaylarının öğretmenlik mesleğine yönelik olumlu tutum geliştirmelerini sağlayıp sağlamadığının belirlenmesi büyük bir önem taşımaktadır.

Sınırlılıklar

Bu çalışma, 2013-2014 eğitim-öğretim yılında Sakarya Üniversitesi Eğitim Fakültesinin Psikolojik Danışma ve Rehberlik ile İlköğretim Matematik Öğretmenliği Anabilim Dallarında öğrenim gören öğretmen adayları ile sınırlıdır.

Yöntem

Araştırmanın Modeli, Evren ve Örneklem

Araştırma geçmişte ya da içinde o anda var olan bir durumu var olduğu şekliyle betimlemeyen ve tanımlamayı amaçlayan araştırma yaklaşımı (Karasar, 2006) olarak bilinen tarama modelinde gerçekleştirilmiştir. Bu araştırmanın evreni Sakarya Üniversitesi, Eğitim Fakültesinin Psikolojik Danışma ve Rehberlik ve İlköğretim Matematik Öğretmenliği Anabilim Daları'nda öğrenim gören öğretmen adaylarından oluşmaktadır. Örneklem ise araştırmacının kimlerin çalışmaya dâhil edileceği konusunda kendi yargısını kullandığı ve araştırmanın amacına en uygun olanları belirlemesine imkân veren (Balci, 2005) amaçlı örnekleme yöntemine göre belirlenmiştir. Bu bağlamda İlköğretim Matematik Öğretmenliğinin birinci ve dördüncü sınıflarından "88" ve Psikolojik Danışma ve Rehberlik Anabilim Dalının birinci ve dördüncü sınıflarından "103" olmak üzere toplam "191" öğretmen adayı örnekleme dâhil edilmiştir.

Veri Toplama Araçları ve Verilerin Toplanması

Araştırmada veri toplama aracı olarak Semerci tarafından geliştirilen 30 maddeden oluşan "Öğrencilerin Öğretmenlik Mesleğine İlişin Tutum Ölçeği" kullanılmıştır. Beşli Likert tipinde geliştirilen ölçek (5) "Tamamen katılıyorum", (4) "Kısmen katılıyorum", (3) "Kararsızım", (2) "katılmıyorum" ve (1) "Şiddetle Reddediyorum" şeklinde derecelendirilmiştir. Ölçeğin iç tutarlılık katsayısı (Cronbach Alfa) "0,68", yapılan geçerlik çalışmasına göre de KMO (Kaiser-Meyer-Olkin) değeri "0,88", Bartlett testi 89,8025'dir (Semerci 1999). Veriler öğretmen adaylarının derslerini aksatmayacak şekilde araştırmacı tarafından toplanmıştır.

Verilerin Analizi

Verilerin analizinde iki grubun ortalamalarını karşılaştırmak için ise bağımsız gruplar için "t-testi" kullanılmıştır. T-testi sonuçlarına göre anlamlı farklılıkların bulunduğu değişkenlerin ortalamaları, standart sapmaları ve bağıl değişim katsayıları hesaplanmıştır.

Bulgular

Bu bölümde, araştırmada elde edilen veriler ile gerçekleştirilen analizlere göre bulgulara yer verilmiştir. Tablo 1’de araştırmanın örneklemini oluşturan öğretmen adaylarına ait bazı istatistikler bulunmaktadır.

Tablo 1. Öğretmen Adaylarının Demografik Özelliklerine Ait Bulgular

Özellikler	N	%	Özellikler	N	%		
Cinsiyet	Kız	129	67,53	1. Sınıf	114	59,68	
	Erkek	62	32,47	4. Sınıf	77	41,32	
	Toplam	191	100	Toplam	191	100	
Mezuniyet	Düz Lise	72	37,69	Anabilim Dalı	PDR	103	53,92
	Anadolu Lisesi	57	29,84		İMÖ	88	46,08
	Anadolu Öğretmen Lisesi	28	14,65		Toplam	191	100
	Diğer	34	17,82				
Toplam	191	100					

Tablo 1’de görüldüğü üzere örnekleme yer alan 191 öğretmen adayının 129’u kız, 62’si erkektir. Öğretmen adaylarının 103’ü Psikolojik Danışma ve Rehberlik (PDR), 88’i de İlköğretim Matematik Öğretmenliğinde (İME) öğrenim görmektedir. Sınıflara göre incelendiğinde ise 1. sınıfta okuyan “114”, 4. sınıfta okuyan “77” öğretmen adayı bulunmaktadır. Öğretmen adaylarının mezun olduğu lise türlerine bakıldığında ise 72’si Düz lise’den, 57’si Anadolu Lisesi’nden, 28’i Anadolu Öğretmen Lisesi’nden, 34’ü de diğer liselerden mezun olmuştur.

Anabilim Dallarına Göre Öğretmen Adaylarının Öğretmenlik Mesleğine Yönelik Tutumlarına Ait Bulgular

Öğretmen adaylarının Anabilim Dalı, cinsiyetlerine ve sınıflarına göre öğretmenlik mesleğine yönelik tutumlarına ait gerçekleştirilen t-testi sonuçları Tablo 2’de verilmiştir.

Tablo 2. Öğretmen Adaylarının Anabilim Dalı, Cinsiyetlerin ve Sınıflarına göre Öğretmenlik

Mesleğine Yönelik Tutumlara Ait T-Testi Sonuçları

Bağımsız Değişken	N	\bar{X}	ss.	V%	T	df	P	
Anabilim Dalı	PDR	103	3,0330	,38827	12,8015	,609	189	,543
	İME	88	2,9985	,39330	13,1165			
Cinsiyet	Kız	129	3,0729	,39091	12,7212	2,906	189	,004*
	Erkek	62	2,9011	,36430	12,5573			
Sınıf	1. Sınıf	114	2,9485	,36698	12,4463	3,019	189	,003*
	4. Sınıf	77	3,1186	,40300	12,9224			

*P<0,05

Öğretmen adaylarının öğretmenlik mesleğine ilişkin tutumları, Tablo 2’den öğrenim gördükleri anabilim dallarına göre incelendiğinde, t-testi sonuçlarında “t=0,609” ve “p=0,543” değerleri elde edildiğinden “p<0,05” düzeyinde anlamlı bir ilişkinin bulunmadığı belirlenmiştir. Başka bir ifade ile Psikolojik Danışma ve Rehberlik Anabilim Dalı’nda öğrenim gören öğretmen adayları ile İlköğretim Matematik Öğretmenliğinde öğrenim gören öğretmen adaylarının öğretmenlik mesleğine yönelik tutumları arasında bir fark bulunmamıştır. Ayrıca her iki grubun bağıl değişim katsayıları (V%) incelendiğinde, değerlerin “%25” den düşük olduğu görülmektedir (V_{PDR}=12,802 ve V_{İME}=13,116). Bu değerler, grupların homojen bir dağılım gösterdiğini, başka bir ifade ile grup üyelerinin konu hakkında görüş birliği içerisinde olduğunu göstermektedir.

Cinsiyetlerine Göre Öğretmen Adaylarının Öğretmenlik Mesleğine Yönelik Tutumları

Öğretmen adaylarının öğretmenlik mesleğine ilişkin tutumları, cinsiyete göre incelendiğinde, Tablo 6'daki t-testi sonuçlarında “ $t=2,96$ ” ve “ $p=0,004$ ” değerleri elde edildiğinden “ $p<0,05$ ” düzeyinde anlamlı bir ilişkinin bulunduğu belirlenmiştir. Aynı Tablo'dan kız öğretmen adaylarının ortalaması ($\bar{X}=3,0729$) ile erkek öğretmen adaylarının ortalaması ($\bar{X}=2,9011$) karşılaştırıldığında, kızların erkeklere oranla öğretmenlik mesleğine yönelik tutumlarının daha yüksek olduğu belirlenmiştir. Bu ortalamalara göre öğretmen adayların öğretmenlik mesleğine yönelik tutumlarının orta düzeyde olduğu da ifade edilebilir. Ayrıca bağıl değişim katsayıları (V%) incelendiğinde her iki grubun bağıl değişim katsayısının “%25” den düşük olmasından dolayı ($V_{Kız}=12,721$; $V_{Erkek}=12,557$) grupların homojen bir dağılım gösterdiği bulgusuna ulaşılmıştır.

Öğrenim Gördüğü Sınıflara Göre Öğretmen Adaylarının Öğretmenlik Mesleğine Yönelik Tutumları

Öğrenim gördüğü sınıf düzeyine göre öğretmen adaylarının öğretmenlik mesleğine ilişkin tutumlarına ait t-testi sonuçları Tablo 2'den incelendiğinde “ $t=3,019$ ” ve “ $p=0,003$ ” değerlerinin elde edildiği görülmektedir. Bu değerler “ $p<0,05$ ” düzeyinde anlamlı bir ilişkinin bulunduğu ortaya koymaktadır. Aynı Tablo'dan 1. Sınıf öğretmen adaylarının ortalaması ($\bar{X}_{1.Sınıf}=2,9485$) ile 4. Sınıf öğretmen adaylarının ortalaması ($\bar{X}_{4.sınıf}=3,1186$) karşılaştırıldığında, 4. Sınıftaki öğretmen adaylarının, 1. Sınıfta öğrenim gören öğretmen adaylarına göre öğretmenlik mesleğine yönelik tutum puanlarının ortalamasının daha yüksek olduğu belirlenmiştir. Ancak her iki grubun öğretmenlik mesleğine yönelik tutumlarının yine de orta düzeyde bulunduğu ifade edilebilir. Bağıl değişim katsayılarının (V%) “%25”den düşük olması her iki gruptaki öğretmen adaylarının konu hakkında görüş birliği içerisinde olduğunu göstermektedir.

Tartışma

Sakarya Üniversitesi Eğitim Fakültesi'nin Psikolojik Danışma (PDR) ve Rehberlik (PDR) ve İlköğretim Matematik Öğretmenliğinde (İMÖ) öğrenim gören 191 öğretmen adayı ile gerçekleştirilen bu araştırmaya ait sonuçlara ilişkin tartışmalara aşağıda yer verilmiştir.

Psikolojik Danışma ve Rehberlik Anabilim Dalı'nda öğrenim gören öğretmen adayları ile İlköğretim Matematik Öğretmenliğinde öğrenim gören öğretmen adaylarının öğretmenlik mesleğine yönelik tutum puanlarının ortalaması arasında anlamlı bir fark bulunmamıştır. Özder, Konedra ve Ender (2010) ise okul öncesinde öğrenim gören öğretmen adaylarının Sınıf Öğretmenliğinde öğrenim gören öğretmen adaylarına göre öğretmenlik mesleğine ilişkin tutum puanlarının daha yüksek olduğunu belirlemişlerdir. Bulut'da (2009) araştırmasında Sosyal Bilgiler Öğretmenliğinde öğrenim gören öğretmen adaylarının, Fen Bilgisi Öğretmenliğinde öğrenim gören öğretmen adaylarına göre daha fazla öğretmenlik mesleğine yönelik olumlu tutum içerisinde olduklarını belirlemiştir.

Araştırma bulgularına göre kızların erkeklere oranla öğretmenlik mesleğine yönelik olumlu tutumlarının daha yüksek olduğu belirlenmiştir. Bu sonuç, Aksoy (2010), Durmuşoğlu, Yanık ve Akkoyunlu (2009), Güneyl ve Aslan, (2009) Akkaya (2009), Çetinkaya (2009), Çapri ve Çelikkaleli (2008), Pehlivan (2008), Sağlam (2008), Terzi ve Tezci (2007), Özbek (2007), Oral (2004), Çelenk (1988), tarafından gerçekleştirilen araştırma sonuçları ile paralellik göstermektedir. Açışlı ve Kolomuç (2012), Bulut (2009), Tanel, Şengören ve Tanel (2007), Gürbüz Türk ve Genç (2004), Başbay, Ünver ve Bümen (2009), Demirtaş, Çömert ve Özer (2008), Semerci ve Semerci (2004) gibi araştırmacıların gerçekleştirmiş oldukları araştırma sonuçlarına göre cinsiyet ile öğretmenlik mesleğine yönelik tutum arasında anlamlı bir fark bulunmamasından dolayı örtüşmemektedir. Türkiye'de öğretmenlik bir bayan mesleği olarak (Erden, 2011) görüldüğünden elde edilen bayanların erkeklere göre daha yüksek düzeyde olumlu tutuma sahip olması beklenen bir sonuçtur.

Araştırmada son olarak 4. Sınıftaki öğretmen adaylarının, 1. Sınıfta öğrenim gören öğretmen adaylarına göre öğretmenlik mesleğine yönelik tutum puanlarının ortalamasının daha yüksek olduğu belirlenmiştir. Elde edilen bu bulgu Sağlam (2008) ve Oral'ın (2004) araştırmaları ile tutarlılık gösterirken, eğitim fakültelerinin geleceğinin öğretmenlerini gerekli bilgi ve beceri yönünden yetiştirirken aynı zamanda onların mesleğe ilişkin tutumlarını da geliştirdiğinin bir göstergesidir. Ancak araştırma da elde edilen bu bulgu Açışlı ve Kolomuç (2012), Tekerek ve Polat (2011), Pehlivan (2008) tarafında gerçekleştirilen araştırmalarda sınıf düzeyine göre öğretmen adaylarının öğretmenlik mesleğine yönelik tutumları arasında anlamlı bir ilişki bulunmamasından dolayı farklılık göstermektedir. Sağlam (2008) ve Oral (2004) sınıf seviyesinin arttıkça öğretmenlik mesleğine yönelik olarak öğretmen adaylarının olumlu tutumlarının arttığını belirlemiştir. Ayrıca Güdek (2007) müzik öğretmenliğinde okuyan öğretmen adaylarının sınıf düzeylerine göre öğretmenlik mesleğine yönelik tutumları arasında anlamlı bir farkın olduğunu belirlemiştir. Ancak Güdek araştırmasında bu araştırmanın tam tersi bir

bulguya ulaşmıştır. Güdek, müzik öğretmenliği birinci sınıfta öğrenim gören öğretmen adaylarının 4. Sınıfta öğrenim gören öğretmen adaylarına göre daha fazla öğretmenlik mesleğine yönelik olumlu bir tutum içerisinde bulduklarını belirlemiştir.

Açıışlı ve Kolomuç (2012), Tekerek ve Polat(2011) Pehlivan (2008), Güdek (2007) tarafında gerçekleştirilen arařtırmalarda farklı sonuçlara ulaşılsa da eğitim fakültelerinin dördüncü sınıflarında öğrenim gören öğretmen adaylarının öğretmenlik mesleğine yönelik tutum puanlarının ortalamasının birinci sınıfta öğrenim gören öğretmen adaylarına göre anlamlı düzeyde yüksek olması beklenen bir durumdur. Ancak her ne kadar 4. Sınıfta öğrenim gören öğretmen adaylarının öğretmenlik mesleğine yönelik tutumları birinci sınıfta öğrenim görenlere oranla yüksek çıksa da orta düzeyde kaldığı da (\bar{X} 4. Sınıf =3,1186) göz ardı edilmemelidir. Öğretmenlik mesleği; alan bilgi ve becerilerinin yanı sıra, olumlu tutum ve düzenli alışkanlıklar gerektiren bir meslek olmasında dolayı okullarda öğrenim gören öğretmen adaylarının, mesleki değerleri ve olumlu tutumları en az bilgi ve beceri kadar kazanması gerekmektedir (Çeliköz ve Çetin, 2004). Eğitim fakültelerinin öğretmenlik mesleğine yüksek düzeyde olumlu tutuma sahip olan öğretmen adaylarını yetiřtirmesi aynı zamanda mesleğini seven, mesleki sorumluluk ve rollerini iyi bir şekilde üstlenen, çevresine ve yetiřtirdiği öğrencilere her zaman örnek olan ve öğrencilere olumlu kişilik özellikleri kazandıran öğretmenleri mesleğe kazandıracaktır.

Daha önce de ifade edildiği gibi mesleki olgunluk, biri mesleki yeterlilik ve diğeri mesleğe yönelik tutum olmak üzere iki boyuttan oluşmaktadır. Mesleki yeterlilik, mesleki bilgi ve beceri ile ilgili iken, mesleğe olan olumsuz tutumlar ileriye ilişkin planlardan ve mesleğin gerektirdiği davranışları edinmekten kaçınmak, olumlu tutumlar ise mesleğe yönelik planları ve ileriye yönelik atılacak olumlu adımları ifade etmektedir (Güdek, 2007). Bu nedenle eğitim fakültelerine yeni başlayan öğretmen adaylarına öğretmenlik mesleğine ilişkin olumlu tutum kazandırmak, onların bu meslek için gerekli olan bilgi ve beceriler ile sosyal ve duygusal alanda hazırlanma isteğini de olumlu yönde etkileyecektir. Bu bağlamda eğitim fakültelerine düşen görev öğretmen adaylarını sadece mesleki bilgi ve becerini geliřtirmek olmamalıdır.

Sonuçlar

Psikolojik Danışma ve Rehberlik Anabilim Dalı'nda öğrenim gören öğretmen adayları ile İlköğretim Matematik Öğretmenliği alanında öğrenim gören öğretmen adaylarının öğretmenlik mesleğine yönelik tutumları arasında bir fark yoktur.

Öğretmen adaylarının cinsiyetleri ile öğretmenlik mesleğine yönelik tutumları arasında anlamlı bir fark vardır. Kız öğretmen adayları erkek öğretmen adaylarına oranla öğretmenlik mesleğine ilişkin daha olumlu bir tutuma sahiptir.

Öğretmen adaylarının öğrenim gördüğü sınıflara göre öğretmenlik mesleğine yönelik tutumları arasında anlamlı bir fark vardır. 4. Sınıfta öğrenim gören öğretmen adayları 1. Sınıfta öğrenim görenlere oranla öğretmenlik mesleğine yönelik tutumları daha yüksek düzeydedir.

Öneriler

Eğitim Fakülteleri, kız öğretmen adayları ile erkek öğretmen adayları arasında öğretmenlik mesleğine yönelik tutumları arasındaki farkı ortadan kaldıracak şekilde programlar düzenleyebilir.

Her ne kadar bu araştırma sonuçlarına göre 4. Sınıftaki öğretmen adaylarının 1. Sınıftaki öğretmen adaylarına göre öğretmenlik mesleğine yönelik daha olumlu bir tutum içerisinde bulunsalar da ortalamalarının orta düzeyde kaldığı göz ardı edilmemelidir. Bu nedenle öğretmen adayları eğitim fakültelerine geldiği andan itibaren öğretmenlik mesleğine yönelik olumlu tutumlarını arttıracak çalışmalara yer verilebilir.

Belli bir konu, durum ya da kişiye ilişkin geliştirilen bir takım tutumların, doğru ve yeterli bir bilgilendirme süreciyle birlikte değiştirilebilmektedir. (İnceoğlu, 2010). Ayrıca tutum ve davranışlar arasında eşleřtirmeyi doğru bir şekilde yapabilmek için tutum ölçütlerinin belirlenmesi oldukça önemli (Gerrig ve Zimbardo, 2010) görüldüğünden, öğretmenlik mesleğine yönelik olumlu tutumları arttıracak ölçütler belirlenebilir. Bu ölçütler eğitim fakültelerindeki ders içeriklerine dahil edilerek veya ayrı bir program şeklinde öğrencilere kazandırılmaya çalışmak sureti ile öğretmen adaylarının öğretmenlik mesleğine olan tutumları artırılabilir. Ayrıca bu çalışmanın Türkiye genelinde gerçekleştirilmesi halinde daha önceki arařtırmalarda elde edilen üniversite, bölümler veya anabilim dalları başta olmak üzere bütün bağımsız deęişkenler arasındaki öğretmenlik mesleğine olan tutumlara ilişkin farkları da ortadan kaldırma fırsatı yaratabilir.

Öğretmenlik mesleğine olan olumlu tutuma ilişkin ölçütler belirlendikten sonra deney ve kontrol grubu oluşturularak, kontrol grubunda mevcut program uygulanırken, deney grubuna bu ölçütler çerçevesinde öğretmenlik mesleğine yönelik olumlu tutumları arttıracak çalışmaların gerçekleştirildiği deneysel bir araştırma yapılabilir.

Teachers Trainers: Village Elders

Oytun Sözüdoğru^a Bahire Efe Özad^{b*}

^{a,b} Eastern Mediterranean University

Abstract

Throughout the history, professional preparation has been undergoing change. Wallace (1991), classifies English Language Teacher preparation under three models. The Craft Model; The Applied Science Model; and The Reflective Model. According to the Craft Model, trainees learn the skill/craft of the job from the trainer who is experienced and knows the craft well through his/her experience. In the Applied Science Model, educators are university lecturers who pass the results of their research to the trainees. In other words, they educate the trainees. Practice is provided only towards the end of education as a supplement. Finally, Wallace blends the first two: The Craft Model & The Applied Science Model and adds the trainees existing knowledge, practice and reflection. He names this model as The Reflective Model. All these three models are still in practice in different parts of the world. Yet, the teacher trainers do not undergo any of these training/education. Teacher trainers mostly become teacher trainers as a result of experience. The present paper discusses this issue in relation to North Cyprus context.

Keywords. Teacher trainers, English Language Teaching, professional preparation models, North Cyprus.

Introduction

Starting with the 18th century, more in the 19th & 20th centuries and even more importance is given to professional preparation in 21st century. Despite this development, teacher trainers, mostly become trainers after gaining some experience and growing older in the field.

In relation to training foreign language teachers, Zahorik (1984); Zeichner & Lisbon (1986); Fish (1984); and Wallace (1991) suggest classification. In the ELT literature, Wallace's work (1991, Training Foreign Language Teachers) hold a significant place. In this book Wallace (1991) comes up with a classification of English Language Teachers as: Craft Model, The Applied Science Model and Reflective Model.

The Craft Model

The Craft Model is the oldest teacher preparation model. This model emphasizes the art side of teaching. Its conceptual basis, however, is widely utilized in practicum courses in which students work with classroom teachers. This model is based on the model in which a trainee or a novice teacher works closely with the expert teacher. The practitioner is supposed to learn by imitating all the teaching techniques used by the experienced teacher.

Figure 1: The Craft Model (Wallace 1991,p6)

The Applied Science Model

The Applied Science Model is the traditional and perhaps currently the most prevalent model underlying most ESL teacher education programs. Teaching is a science and as such can be examined rationally and objectively. Teachers learn to be teachers by being taught research-based theories. These theories are being conveyed to the students only by those who are considered to be the experts in the particular field. Practice is given towards the end of education and continuous in-service teacher training is provided throughout the teaching profession.

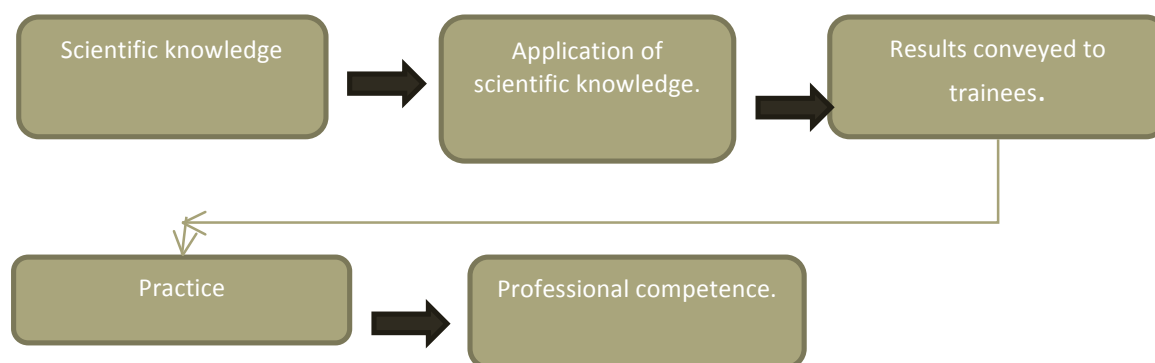

Figure 2 The Applied Science Model (Wallace 1991)

The Reflective Model

The Reflective Model embraces the former two models and adds reflective cycle to them. It is based on Schon’s work (1987), *Educating the Reflective Practitioner*. Above all, this model takes the trainees former education into consideration and do not treat the trainees as tabula rasa. Wallace then adds the received knowledge (from the Applied Science Model) and the experiential knowledge (from the Craft Model). Received knowledge is “facts, data, and theories often related to some kind of research” (1991:12). Experiential knowledge is knowing through ongoing experience of being students in the training classroom. He then suggests blending these two types of knowledge with practice in reflective cycle.

The reflective practice has become a dominant paradigm in language teacher education research and programs worldwide. The Reflective Model is based on the assumption that teachers develop professional competence through reflecting on their own practice. In other words, a teaching experience is recalled and considered to reach an evaluation and to provide input into future planning and action

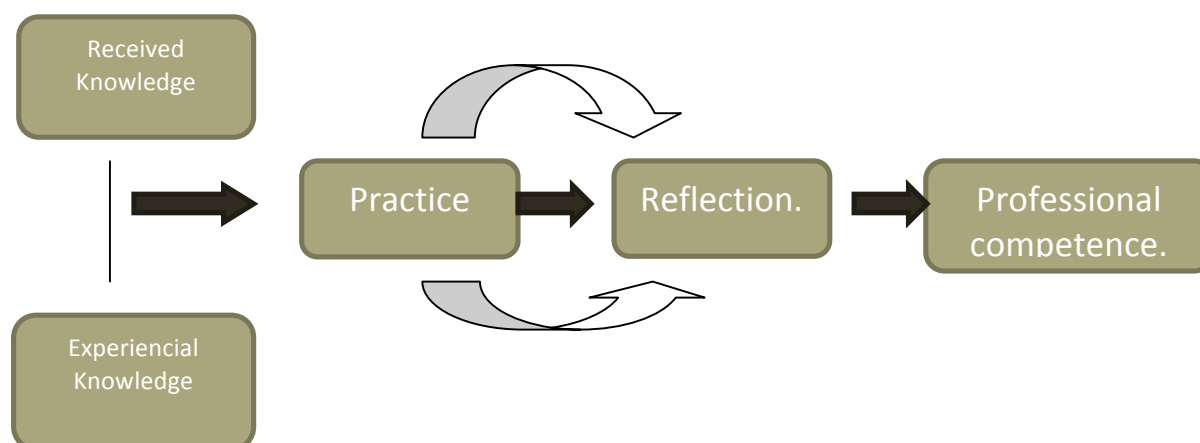

Figure 3 The Reflective Model (Wallace 1991, 49)

Nowadays, in North Cyprus all three models are in practice to a limited extent. Pre-service teacher trainees are sent to longer practicum and are attached to a mentor teacher. 'Sitting with Nellie' (Wallace 1991, p 6) is still in practice. What is more, experience teachers can apply to the Ministry of National Education & Youth and become 'inspectors'. Inspectors not only visit schools and teachers but from time to time are asked to give in-service training to the teachers. Thus, it can be concluded that the 'Craft Model' is still in practice.

Trainees take their pre-service training from universities either at home or abroad. In the local universities lecturers with academic degrees train/educate them. These trainees take in-service teachers training after they start teaching. This calls in the Applied Science Model as the main teacher education model. However, since education is given by the lecturers, this led to the problem of separation of content and process. One of us (Özad, 1997) draws attention to the discrepancy caused by the lecturers' teaching style and teachers teaching style.

With the rise of positivist thinking in education, following other social sciences, teacher training moved from craft training to the training colleges, and then to the universities where tutors delivered their instruction by lecturing. This form of education emphasizes the content of the courses. The assumption behind this form of education is that trainees would gain knowledge in the university and they would put the knowledge they gained during their degree courses into practice. The link between theory and practice - if there was any - was very poor. The only time when these trainees had any practical experience was when they went to teaching practice. After completion of their training course such teachers tend to perpetuate the poor methods of teaching they had been used to (Özad, 1997). This way of educating teachers made trainees impotent because it blocked their ability to be creative, original and mentally active.

In North Cyprus in-service teacher training provided by university lectures of ELT experts from the UK & USA. These experts are more aware of the significance of process and pay specific attention to training. The expert trainees from the UK&USA are aware of content/process dilemma/ distinction in ELT and try to give the best example of how process can be.

The global recognition of English language as "The international language" led to more attention given to this language and thus its teaching. Hence, ELT has been a pioneer in a number of aspects of education. One of these is the English teaching methodology & teacher training. Efforts led the field to look for better means for teacher training. Therefore, more complex model, reflective model is recommended. The Reflective model embraces the prior two models; the Craft model (experiential knowledge) and the Applied Science Model (received knowledge and blends these two with significant element of reflection.)

In North Cyprus, gradually more attention started to be paid to the process (experience) in addition to knowledge. What is more, English Language Teaching literature has grown. Yet, the reflective element is not given enough attention. In pre-service, teachers are asked to complete portfolios and this portfolio is taken as the reflective element. We hold that 'reflection' should be paid attention.

In conclusion, in all these models, teacher trainers or educators act as 'experienced' people (trainers, lecturers, mentors) in the field of education; village elders. However, today's world is more complicated. Now that the Reflective model is used in ELT teacher preparation in some parts of the world, for the preparation of teachers even this has a room to extend: technology.

In the 21st century, people integrate technology into their lives even more than before. People are swift in technology highway. Technology pointing new and numerous opportunities in all fields of our lives. This is very much so respect to our profession. Bearing in mind the distinction of Digital Natives and Digital Immigrants teachers mostly are a disadvantage. With the respect to technology. Thus, for those who will be teacher trainers, in addition to professional support, support in technology is needed.

Philosophy of Education of Human Anatomy for Dental Students

Bolekova Adriana ^a Lovasova Kvetuse ^b Kolesar Dalibor ^c Kluchova Darina ^d *

^{a b c d} Department of Anatomy, P.J. Safarik University, Faculty of Medicine, Kosice, Slovak Republic

Abstract

The aim of this work is to report on the results of the innovation in teaching gross anatomy especially for dental students. There is a clear need for dental students to learn anatomy of head and neck in detailed way; on the other side they should also have an appropriate knowledge of the anatomy of trunk and limbs.

Two groups of dental students underwent learning anatomy, one by the only systemic and other by combined systemic and regional approach. A new study material was prepared for them from regions of the trunk and limbs. The organization of textbook followed a need to be concise guide for dental students.

Teaching of systemic anatomy of head and neck structures was provided in the beginning, then the study was accomplished by the organs of rest of body; and finally, the regional anatomy teaching at the end of course was the most beneficial.

Keywords.

INTRODUCTION

Following new trends in methods of teaching, it is necessary to pay more attention to quality, depth and effectiveness of medical education. The modern tools intended to support educational process offers possibilities that allow teachers to present their subjects in an effective and more demonstrative way. The students have to be allowed to learn and utilize new things in as understandable way as possible. The main goal and the result of education process in human anatomy should be to offer for students of medical faculty the detailed study of human body, its organs and their topographical relation.

In the past, the tools of education were relatively simply, teachers or examiners had a dominant position, often was enough to learn their lectures or their textbooks. The approach to the teaching anatomy was very traditional. For centuries, anatomy has been taught by means of cadaveric classic dissection supplemented by factual lectures, because it is the best way to learn the human body. The main principles of education are also today the same; crucial roles in education process play teacher and students. The students are the main participants in the learning process. The teacher is only a consultant or supervisor, motivation factor in coordination of their work. Nowadays, the education process should to offer an actual knowledge from particular discipline. The nature of anatomy education has changed substantially over past decade due to both a new generation of students who are product of interactive generation and learn differently from those of past years; and enormity of advances in anatomical imaging and teaching. Bloom's taxonomy is helpful by solving the problem how to learn and it can be used also in anatomy to categorize course goals and assessments by these three cognitive objective competences: knowledge, comprehension and application (Bloom, 1956). Fox (1983) came up with the teaching style dimensions. He supposed that there is no best way to teach and he estimated four different personal theories. For anatomy is usable his transfer theory, according this the teaching is about exposing information to students and the critical thing is to find the best way to structure the information. Good way is to show student how they can improve remembering through associations and enforce their imagination. Roxa and Martensson (2009) mentioned about developing more effective conceptions of teaching and learning: "Becoming a good teacher means using observations of teaching and student learning, understanding these observations, and to improve over time." This opinion is also applicable in teaching and learning process in anatomy, because the performing of innovations frequently leads the teacher to find always better and more effectively manner to implement them into lessons. Biggs (1999) differ the learning in two types: deep learning, which makes knowledge personal and relevant to real-world application; and surface learning which relays on memorization and does not lead to deeper understanding. These both types of learning belong to the anatomy; important is also to found the appropriate way, how anatomical nomenclature can be taught more easily.

The aim of subject Anatomy is to provide the basic information about anatomical relations of human body, inner organs and topography of anatomy structures. Students should name parts and structures of the human body using of precise Anatomical nomenclature. Detailed systematic anatomy and topographical relationships of organs and structures of the head and neck is substantial for dental students. The basic and general knowledge of systematic and topographical anatomy of human body below head and neck helps to understand the human body entirely.

Anatomy is one of the most important and basic courses on medical faculties. Subject anatomy for dental students is termed as "General and Oral Anatomy". It is a compulsory two terms course in 1st year of Dental medicine with 7 credits in winter term and 8 in summer one. This course consists of lectures in amount three teaching hours/week and practical lessons in dissecting room with prosecuted material in amount four teaching hours/week. Total number of students is approximately 60 in Slovak course and 25 students in English course.

There was a question if students can handle better learning of systemic or regional anatomy. Systemic anatomy of human body is a traditional approach. It is characterised by description of the organ systems of the body, all organs and tissues for a particular system without recourse to precise location and the understanding of relationship between organs or tissues. Regional anatomy is a modern way how to teach anatomy, which concentrates on locations of organs and tissues, subdivides the regions and describes the relationships between organs or tissues. The advantages of systemic approach are in seeing the entirety of organs; systemic anatomy provides the descriptive skills for different types of anatomical structures and thus provides useful tools for future clinical reasoning. The disadvantages of systemic anatomy is that does not fit well enough with the requirements for those who are training to become surgeons or radiologists, patient's signs and symptoms present are not easily understood not best suited for teaching that involves dissection. On the other hand, the biggest advantage of regional approach is in the training of surgeons and radiologists to aid in the understanding of the presentations of signs and symptoms, appreciates structures, 3-dimensionally, structures as they are found from surface to deep levels. The disadvantage of regional approach is in lack of fit with fully integrated medical programmes.

In education of dental medicine students was the most time devoted to teaching anatomy of head and neck included neuroanatomy; for anatomy bellow the neck was intended to spent less time; thorax, abdomen, upper extremity: there was a need to teach only structures relevant to dental students and the only main structures were taught from the pelvis and lower extremity. There was created the new anatomy book for dental students which serve as a guide through the anatomy of the trunk and limbs.

METHODS AND PROCEDURES

Anatomy of head and neck for dental students was taught in as detailed way as it was for students of the general medicine. Dental students of two groups were used in this experiment. Both began to study anatomy in the first year of their study. The first group started learning structures of the skull and systemic anatomy of the head and neck in a detailed way: joints, muscles, vessels and nerves. Following, the anatomy of the central nervous system, trunk and limbs was taught systemically, but in a reduced manner comparing by general medicine students. This way of learning was completed for one group of students, while the second group of students began with regional anatomy of head and neck areas, and then continued by the anatomy of the central nervous system and the regional anatomy of the limbs and trunk. The curriculum of both groups was the same, only the way of teaching was different. The first group was taught using only systemic anatomy, while the second using regional approach. The results on practical and theoretical tests between both groups of dental students were compared.

There were two **written** and **two** practical compulsory assessment control tests that correspond to the anatomical regions to be evaluated. Each test covers region in a detailed and coherent manner, before tests the students had lectures and practical reinforcing of each anatomical region. Theoretical test was written during lecture time, it consists of 100 statements; students have to sign each of them if it is true or false. Practical tests done on lesson in dissecting room consists of 30 structures in prosecuted body which students have to recognize. Additional assessments, e.g. small tests on each lesson, were optional in competency of teachers.

A new textbook of anatomy was specifically designed for dental students to help them to study anatomy of trunk and limbs (Kluchova et al., 2014). In this book is limited text in extend which can be demonstrated in the dissecting room according to a new curriculum for dental students. Anatomy of limbs and pelvis was reduced the most, as well as the walls of the trunk. Anatomy of organs and systems of the trunk was taught in a different way. The time originally allocated to anatomy teaching for dental students was cut in one third of previous teaching material. After the introduction, the descriptive terms were offered to learn. Following, main systems were described in general: bones and skeletal system, joints, muscular system, cardiovascular and lymphatic

system. The anatomy of the upper and lower limb was mentioned in a limited way. Similarly, the main structures of the thorax were described. After that, more in detail were shown the very important parts of human body: heart, respiratory system and digestive system. Finally, the main structures of abdomen and retroperitoneal structures were described together with urinary system. Pelvis, male and female genital systems were shortly presented as well, as a last capture of the book. The book was completed by full colour drawings which should help students to learn and understand main anatomy structures of human body.

Our department has been also focusing on innovative teaching processes with substantial attention on anatomy lectures, and has already transferred the load of education on information and communication technologies. Because the imagination is a very important aspect in education of anatomy, the simulations and virtualization methods can be used to revive education. 3-dimensional virtual models serve students to imagine the anatomical structures like in the real body and to achieve as high precision as they need (Majernik, 2013).

RESULTS

The students' responses on changed curricula and mentioned innovations were very positive. In the textbook of human body for dental students were eliminated all unimportant anatomical details of trunk and limbs. Students using new books showed better understanding of anatomy, important for their clinical practice. With the reduction of time devoted to teaching anatomy, there is a need to manage learning of head and neck structures for dental students in a detailed way, as previously. Anatomy of the rest of body was taught in reduced manner.

For improving the imagination in anatomy, our lectures are completed by presentation of 3-dimensional virtual models, with the aim of more effective and more illustrative education. 3-dimensional projection systems are based on principles of virtual reality and can be presented in the specific lecture room. The students feel an existence of 3-dimensional space using specialized glasses. This virtual system consists of three components: large screen projection, teacher workstation and 3-dimensional camera. However, the using of virtual projection is limited to lecture room; due to this the Department of Medical Informatics transformed educational materials into the 2-dimensional pictures playable also outside the projection system. These can be equipped by audio and text comments and/or explanations of teachers. At the present, the movies are prepared according to the syllabus for Anatomy guaranteed by our department (Mjernik et al., 2010).

The effect of the innovation on students' learning method was measured by comparing results between students with innovative method in their group (I-group) and students without innovations in their group (N-group). This can be made after the assessment controls, or after the final exam, or by student feedback answers at the weakly quizzes. We chose to compare their results after completing the 3rd written assessment test. Two groups of students (38 in number) were evaluated, 18 students from the I-group and 20 from the N-group took part in the same written test focusing on the thorax and its structures. The limit for successful passing of the test was 75 points. In I-group 15 students passed the first test successfully, whereas 3 students failed. Therefore, the success rate was 83.3%. In N-group 16 students passed the test successfully, and 4 students failed which equals to a success rate of 80.0%. Absolute majority of anatomy students of both groups passed the test successfully with similar results (81.6% in overage). No significant differences were obtained between results from I-group which learned basic structures of human body by using innovation and N-group which was required to learn by using traditional methods. Both group was able prepare themselves to the written test. There occurred a question: how could we measure the effect of innovation? The time spent with learning and preparing themselves to the test and the results from assessment tests would be compared and evaluated. Students without innovations showed more difficulties with learning anatomy, and so they spent more time to learn the structures and their relationship. This is the way of how we will evaluate the innovation in the future.

At the end of the semester a short questionnaire to students was given to verify observed changes in teaching and learning. Students had to answer three simply questions: Did it work better? Did you understood material more deeply and remember it for longer time? Did you do better in your tests? Mostly answers were: Yes, it did (87%). Yes I did (98%). Yes I did (93%). Result from those: activity of students not only increased during practical lessons, but the students enjoyed the lessons. This is a big positive contribution of our innovation. Students with new textbook and using 3-dimensional imagination were better in their works and in-class activity by learning anatomy structures.

DISCUSSION

In subject, General and Oral Anatomy, information and skills learned in the classroom are in the tight connection not only with the next study of students but also with their future occupation as physicians. Students

have the best input into next subjects of medicine, because knowledge from anatomy build in Latin nomenclature is a base that they will use in their future study and job. The most of students can understand the relevance of this subject and they are interested of it and try to work hard. Hence the forms, methods, philosophy and didactics of the teaching have been changing very dynamically, is there no universal or dominant approach of teaching or learning in educational system. Teaching always depends of personality of each particular teacher. The personal contact of students with teacher and interaction between them is still very important; each student is able to receive information in a different manner. Students would have the opportunity to ask their questions and discuss problems without hesitance of being mocked or ashamed during expressing inquiries or opinions.

The modern teacher is supposed to be educated in modern approaches of teaching. Sad to say, but the greater part of university teachers, have no pedagogical education. Methods of teaching of young teacher are resembled to methods of advanced colleagues and in addition he/she have performed self-study to discover how to teach. The role of teacher is to help students understand the complicate and difficult facts by simply and easily way, teaching allows transferring knowledge from teacher to students. Interesting is share some example from clinical diseases and from own experiences by teaching about particular organs and organ system.

The continuous evaluation of student knowledge is a contributing factor to quality of knowledge and the regular evaluation is one of the motivating factors of study. For study anatomy is very important to evaluate both practical and theoretical knowledge of students that bring a big didactic benefit. It is necessary to continuously test their knowledge during semester for motivation and self controlling of depth of study of individual students. If students know that their efforts will be appreciated, a good result from the test can motivate them to their next work. They realized the importance of the facts mentioned in the test. Students who spend most of their time memorizing essential details without understanding their significance will be less successful in the test and who had understood of subject-matter will be more successful. Exactly this is the role of teacher, to help students understand the complicate and difficult facts by simply and easily way. On the other hand, the students have to be allowed to learn and utilize new things in as understandable way as possible.

There is very important to have lectures before practical lessons, veracity of the lectures has to relate with continuity with lessons. Lessons in dissecting room can be used for student to compare their learning home from lectures, textbooks and atlases. I think that direct instructions on the first lesson that clearly identify the rules regarding lectures, lessons, assessments, credits and exams, are very important for both, students and teachers. We always care for observance of the rules, and never changing them during the semester.

The best way how to reach that goal in teaching is in focussing on the most important facts and (if it is possible) in close cooperation with clinicians. For better retention of knowledge students would know why they learn some particular things. It is very important keep education interesting for students using effective methods how to make them more interesting, attractive manner for study with pleasure. To sum up our teaching philosophy is to teach attractively and focus to important things according to the newest requirements of the clinical practise.

CONCLUSION

There was a need for designing new anatomy curricula for dental students while the time for anatomy teaching for them has been reduced. Teaching anatomy faced problems to determine the proportional time for teaching of head and neck and regions bellow neck; what anatomical knowledge bellow neck is essential and in which order the anatomy of human body should be taught. After initial negative students response regarding the too intensive teaching and learning in the beginning; the course was repeatedly concluded as a very positive at its end. Especially the repetition of head and neck structures and teaching of regional anatomy at the end of course was perceived as a very useful. Clinical importance could be presented at the end as well. Conclusion with the reduction of teaching time, a new anatomy curriculum for dental students was created; main emphasize is put on the teaching of head and neck regions, gross anatomy underwent major revisions; firstly systemic anatomy, regional at the end of semester. In the addition, the method using 3-dimensional virtual projections and it offers students the possibilities of more detailed study of human body, its organs and their topographical relations. Using a variety of sophisticated applications they can easily understand the space relationships and synopsis of anatomical structures without the necessity of memorization, students increase self reliance on practical lessons as well. The innovation helps students to prepare for anatomy in a better way.

This study was supported by the Grant KEGA 006UPJS-4/2011.

Turing Teaching of Science Easy, Friendly, Intriguing and Innovative, Employing Various Teaching Aids

M. Masroor Akhtar Khan^a Moin Uddin^{b*}

^{a,b} Department of Botany, Aligarh Muslim University, Aligarh-202002, India

Abstract

Students must be at the center of the successful educational change that requires time, effort and on-going support. Collaborative practices are the key for sustaining the changes that support student learning. To make teaching of Science more easy, friendly, comprehensible, and Innovative is a big challenge for teachers, educationist and governments. Identifying effective teaching strategies, therefore, is the need of the hour. One should assess the effectiveness of one's current teaching style and consider innovative ways to make the teaching interesting, comprehensible and efficient as per the desired standard of teaching-learning process. Teaching devices are extraordinarily helpful tools for teaching in a classroom as well as for solo-learning. Teaching devices may help improve learning and other skills e.g. illustrate or reinforce a skill, fact, or idea, and relieve anxiety, fears, or boredom of the students. The computer application is a broad introduction to the features of education techniques in addition to achieving the high learning and teaching quality. We should no more stick to the traditional lecturing methods, using a blackboard or simple display charts. The basic principles of learning, i.e. observation, experimentation, discussion and interaction, evaluation, and individual attention, have been prevailing for many years. But, the methods used to implement these principles have always been delayed. The pace of the world has accelerated; fifty years ago students were required to imagine and act out much of their learning and their play, while today many children watch animated programs with highly realistic simulations. To enhance the quality of teaching for under-graduate and post-graduate students, we are using a variety of teaching aids in India, particularly in our University. Importance of teaching aids include clarification of the subject, direct experience, creation of concept of live and active classroom, discouragement of cramming, increasing the attention of students to the subject, motivation among students, and saving time and money. At present, we are using different teaching devices including, the Whiteboard, Display cards, Models, Specimens, Mnemonics, Overhead Projector and Overhead Transparencies, Film-strips and Film-strip Projector, 35-mm Slides and 35-mm Slides Projector, Microslide System, Audios and Videos, Computer Slideshows, (PowerPoint Presentations) etc., which has led to improved teaching standard, teacher's performance and enhanced learning skills in the students.

Keywords. Science teaching, teaching aids, innovative teaching, classroom aids, teaching resources, education widening

INTRODUCTION

Role and Significance of Teaching Aids in Successful Teaching

Teaching aids are integral components in any classroom. The many benefits of teaching aids include helping the learners improve reading comprehension skills, illustrating or reinforcing a skill or concept, differentiating instruction and relieving anxiety or boredom as a result of presenting information in a new and exciting way. Teaching aids also engage students' other senses, since there are no limits in what aids can be utilized when supplementing a lesson.

Reading Comprehension

As students are reading less and less on their own, teachers are finding reading comprehension skills very low among today's students. Teaching aids are helping teachers to close this gap and hone the reading comprehension skills of the students. Using magazine and newspaper articles, print-outs, ads and even comic books are viable teaching aids that assist in helping students comprehend the text.

Reinforcing a Skill or Concept

Teaching aids prove to be the encouraging supplements for teachers when the reinforcement of a skill or concept is necessary. By using these aids, not only do the teachers allow the students more time to practice, but they also present the information in a way which offers students a different way to engage with the study material. Of course, this is important in order to reach the various learning types in the class.

Differentiating Instruction

It is important for the teachers to reach all learners in a classroom. The use of teaching aids facilitates to achieve this objective by assisting teachers in differentiating instruction. Using aids such as graphs, charts, flashcards, videos, and smart boards provides the learners with visual stimulation and the opportunity to access the content from a different view point. This gives each learner the opportunity to interact with the content in a way which allows one to comprehend the subject more easily.

Relieving Boredom

Teaching aids help to make the learning environment interesting and engaging. As we move toward a more digital society, students are being exposed to computer technology and digital devices at a younger age. Since video games and iPods are now exciting the students, when they come to school they have little patience for lecture-style teaching. Students are seeking constant excitement and simply have no tolerance for boredom. Teaching aids are not only improving the quality of education in today's schools but also are providing students with the sense of excitement that they desire.

Teaching Aids Are Gaining Momentum

Teaching aids are becoming the teaching norms in the classroom. As traditional classrooms with blackboard and chalk indicate a thing of the past, and smart classrooms have become the usual norms of teaching, teaching aids are growing in popularity and advancement. Consequently, the blackboards are being replaced with white and smart boards. TVs are being replaced with LCD projectors and screens. And educators are becoming more focused on students growing with the technology, integrating it into the curriculum. Students are making podcasts, videos and even are creating web-quests. All of which are sound teaching aids to incorporate into the classroom. Current teaching methods, in developing countries, have some major limitations, where teaching is still practiced with traditional lecturing methods, utilizing blackboard and chalk or simply using the display charts. There, the teaching aids may prove extraordinarily helpful tools for teaching in a classroom; they can help the individual learners as well. Teachers can use them to help the students improve the reading and other skills, illustrate or reinforce a skill, concept, fact, or idea, in addition to relieving the anxiety, fears, or boredom of the students. Several teaching aids are very impressive and motivating, making the concepts of the subject to the students crystal clear with no doubts. In this context, the computer architecture is a broad introduction to the features of education techniques. In fact, internet has tremendously revolutionised the teaching of science as well as other subjects. It is now possible to sit in Aligarh and access lecture notes and slides for a course being offered at Cambridge, MIT or Berkley institutions. Undoubtedly, the teaching aids help the teachers to achieve the high performance in addition to driving the students toward achieving the goal of gaining perfect understanding of the subject.

About Our University

Aligarh Muslim University (AMU), is a residential academic university (<http://www.amu.ac.in>), established in 1875 by Sir Syed Ahmed Khan as Mohammedan Angelo-Oriental College; later, it was granted the status of Central University by an Act of the Indian Parliament in 1920. Spread over 468 hectares of land in the city of Aligarh (Uttar Pradesh), it is one of the first institutions established during the British rule. It has played a pioneering role in the independence of India. The university is one of the two in India to have earned the epithet "Oxford of the East" in its past. AMU is open for all and prohibits discrimination in all of its programs and activities on the basis of religion, race, color, disability, sex, etc.

AMU occupies an exalted position among Indian Universities and its contribution to nation building is in no way inferior to the best among the lot. With more than 30,000 students, about 1,400 teachers and some 6,000

non-teaching staff on its rolls, it has 12 faculties, comprising a wide spectrum of academic disciplines (95 departments, 5 institution and 13 centers) and 18 ‘Halls’ (residential areas protected by walls and gates) encompassing 73 hostels. The University offers 325 courses in the traditional and modern branches of education.

We are using a number of teaching aids in AMU for about a decade and their use has turned the quality of teaching up to a remarkable degree. Teaching aids have provided an incentive among the students for discovery and thinking. Using teaching aids in addition to the verbal and personal communications and interactions with the students, there has arisen activity-based learning among the students. In fact, using teaching aids is a confirmation that a teacher can be more careful about the students with the help of these learning aids. Global education systems stress upon the education quality, which should be judged by its contribution to the development of cognitive skills and behavioral traits, attitudes and values that are necessary for good citizenship and effective life in the community. Over the last decade, researches have been able to demonstrate that the quality of education has a statistically significant and positive effect on socio-economic growth. Indeed, the number of applicants in BSc, MSc and PhD courses has increased since the time these educational aids were used in th department as well as at those educational institutions where our educational materials was borrowed and used. In addition, the number and quality of research publications have also increased significantly wherever the technique of using teaching aids was applied. There was also an escalation in the number of research projects offered by different government agencies.

The teaching aids we are using are given as following:

Display cards. An educational display is an organized visual card-size (A3 or A4) presentation of a program or a concept. Such an educational display stimulates teachers’ thoughts regarding important facts or processes; additionally, it may result in response action on the reader’s part. The educational display may be a poster, a tabletop display, an A4 or A3 size paper display. Display may show any topic of an educational nature. The display may include electron micrographs, deficiency symptoms of an element in plants, shape of a crystal and so on. This is a good educational material that fits well for those who have limited funds to spend on education.

Mnemonics. Mnemonic means something related to the memory or that which aids the process of recalling or memorizing. Hence, a process or a series of steps in order to help a person to memorize things or facts is called as “mnemonic”. In other words, a mnemonic is a memory aid. For example: VIBGYOR is a mnemonic to remember 7 colors of sunlight, viz. Violet, Indigo, Blue, Green, Yellow, Orange and Red. Here are some examples of mnemonics:

- 1) To remember the order of the planets – starting from closest to the farthest to the sun. “My Very Educated Mother Just Served Us Nine Pizzas”; it may help memorize the seven planets as: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto.
- 2) A mnemonic to memorize “Mineral Hardness scale (1-10)”
- 3) “Teachers’ Guidance Can Flourish an Outstanding Quest to Cease Discord”
- 4) Talc (=1), Gypsum (=2), Calcite (=3), Fluorite (=4), Apatite (=5), Orthoclase (=6), Quartz (=7)
- 5) Topaz (=8), Corundum (=9) and Diamond (=10).
- 6) Similarly, we have prepared the following mnemonic to memorize 20 essential elements for plants.

A Mnemonic to Memorize 20 Essential Elements for Plants

C. Hopkin’s café claiming mighty good b’coz it’s cuisine is monarch-liked

C. Hopkin’s café claiming mighty good b’coz it’s cuisine is monarch-liked

- (1) To remember four levels of the atmosphere, there is mnemonic: “Tonight Snakes Make Tea”.

Explanation

T – Troposphere, S – Stratosphere, M- Mesosphere, T- Thermosphere

Overhead Projector and Overhead Transparencies. Even in this computer age, the overhead projector (OHP) is still one of the most effective teaching aids in the classroom. A well-prepared OHP presentation can often be more effective than an ill-prepared computer slideshow. Here are some tips in the usage of an OHP:

- (1) Make sure that the lighting near the teaching podium is *dimmed* to allow easy viewing of the screen contents.
- (2) Move the OHP sideways if necessary to ensure that the projection falls on the *centre of the screen*
- (3) Vary the distance between the OHP and the screen to *maximize* the size of the projection (Remember: the image is enlarged by moving the OHP away from the screen)
- (4) Make sure that the projection does not deviate too much from a square shape; use a book underneath the OHP to adjust the tilt of the machine if necessary
- (5) Make sure that the OHP is in focus
- (6) To enhance readability, underline the keywords/phrases with a colour marker, or if typed notes are shown, highlight them with a blue or green (but not yellow as it is too faint) marker
- (7) Give a title to each transparency
- (8) Use graphics to enhance effectiveness
- (9) Do not write too much information on to a transparency

Transparencies can be prepared in one of the two ways: First, a laser printer can be connected to a computer, which is loaded with a cartridge of cellulose acetate sheets. An image or document is then created within the computer, though images are prevalent due to text being illegible at certain distances from a projection, and then formatted to be printed. From there, the printer is engaged and the document printed on to the acetate sheet. It is wise to test the transparency before sending it out to the person requesting it.

Uses for transparencies are as varied as the organizations that use them. Certain classes, such as those associated with Mathematics or History, employ transparencies to illustrate a point or problem. Math classes in particular use a roll of acetate sheet to illustrate sufficiently long problems and to create illustrations that a computer cannot, due to the lack of math symbols on a standard computer keyboard. This problem is typically limited to High School and College-level mathematics, because of the inclusion of Algebra and Calculus courses in the syllabus. In recent years, more and more colleges are switching to digital projectors and PowerPoint presentations.

Film-strips and Film-strip Projector. This is also a useful teaching-aid in which a filmstrip is projected on a screen using a projector and a cassette is run in synchronization. In this way, the students view and listen the lesson simultaneously, getting a thorough perception of the subject. A filmstrip is a spooled roll of 35 mm positive film with approximately thirty to fifty images arranged in sequential order. A filmstrip is inserted vertically down in front of the projector aperture, rather than horizontally as in a slide projector. Therefore, the frame size is smaller than normal 35 mm film. A two-image frame of a filmstrip takes up the same amount of space as a single 35mm frame, including its guard band, so that a 25 exposure 35mm film can contain fifty filmstrip images. Earlier, celluloid filmstrips had a habit of melting or combusting from the intense and sustained heat of the projection lamp. These were called 'Pictorial Filmstrips' the first kind of filmstrips that were produced in a complete set. Typically, a filmstrip's running time was between ten and twenty minutes. Depending on how they were narrated or produced, filmstrips (which often came with an Instructor's Guide) were flexible enough to be used in self-paced learning formats or in a format suited for a full classroom. This teaching device is although obsolete in developed countries but can be used in developing countries as these are much inexpensive as compared with LCD projectors.

Microslide System. Microslides are 35mm image strips that are viewed using a Microslide Viewer, made up of high-impact styrene plastic. The viewer has two adjusting knobs for focusing. Each microslide lesson includes a strip of 35 mm film (microslide) showing different images of stained specimens photographed under ideal condition, from whole mount to electron micrographs. During the past thirty years, tens of thousands of teachers have been using the Microslide System in their classrooms to teach a number of students at a time. Combining superb photo-micrographs with detailed curriculum material and optional reproducible student activity sheets, the Microslide System is a comprehensive classroom ready-resource that has been proven to help students in learning. It provides micro-images that would otherwise be difficult to obtain. And, best of all, it is very affordable. Each Microslide System has three parts as given below:

- (1) **Microslide Lesson Sets:** These are the heart of the Microslide System. Each Lesson set contains a microslide showing eight examples of the subject and a highly detailed lesson plan designed to stimulate the students to answer the questions about the topic under discussion. Each lesson plan has a handy pocket to hold the microslide concerned. Lesson plans are printed on heavy tag stock and will serve for repeated use.
- (2) **Microslides:** These are reproducible microslides designed to reinforce the student's understanding of the lesson material. You may use them as a master to make as many as copies as you want.
- (3) **Microslide Viewer:** It is a teaching tool specially designed for viewing microslides. Students simply have to slip in the microslide, focus it and view.

35-mm Slides and 35-mm Slides Projector. A slide is a small piece of transparent material on which a single pictorial image or scene or graphic image has been photographed or reproduced otherwise. Slides are a form of projected media that are easy to prepare. They are still pictures on a positive film which you can process and mount individually yourself or send to a film laboratory. The standard size of a slide is 2 "× 2 "; any 35mm camera will make satisfactory slides. Slides can be made from photographs and pictures by teachers and pupils taking photographs and snapshots when they go on fieldtrips for historical, geographical, literary or scientific excursions. The arrangement of slides in proper sequence, according to the topic discussed, is an important aspect of teaching, as a matter of fact.

Advantages of Slide Projector:

1. No desktop, laptop or iPad is required.
2. Requires only filming, processing and mounting by oneself or laboratory staff.
3. Results are colorful, realistic, reproducible, and original as per demand of the subject.
4. Preparation is feasible with any 35mm camera for multiple uses.
5. Teaching material is easy to revise and up-date.
6. System is easily handled, stored and re-arranged for various uses.
7. The system can be combined with narration tape that can save time for discussion.
8. The device may be assigned to a group or is also fit for individual use.
9. 35 mm slides are also less expensive than other computer based teaching aids.

Computer Slide-shows (PowerPoint Presentation). The use of presentation softwares can save a lot of time for people who otherwise would have used other types of visual aid such as hand-drawn or mechanically typeset slides, blackboards or whiteboards, or overhead projections. Easy use of this device also encourages those who otherwise would not have used visual aids, or would not have given a presentation at all. As PowerPoint's style, animation, and multimedia abilities have become more sophisticated, and as the application has generally made it easier to produce presentations (even to the point of having an "AutoContent Wizard" (discontinued in PowerPoint 2007), the difference in needs and desires of presenters and audiences has become more noticeable.

PowerPoint is not only is it a useful tool for introductory lectures, but it also has multiple functions that also allow to review games, especially in the younger grades. Notwithstanding, yet there are no compelling results to prove or disprove that PowerPoint is more effective for learner attention than traditional presentation methods. The following are some tips to use PowerPoint.

Much of the advice for running the computer slideshows is similar to that of OHP usage.

- (1) Make sure that the lighting is *dim enough* for easy viewing of the projected image (the dim-light requirement is usually higher with PowerPoint than with the OHP, as the brightness of the image from the video projector is usually not as high as that from the OHP)
- (2) Use large font size and bold colors
- (3) Use bullet points instead of full sentences
- (4) Call up the bullet points one by one rather than showing them all at a time
- (5) Add *graphics* to enhance attractiveness
- (6) Use multimedia techniques (i.e. inclusion of still pictures, audio clips, video clips, animations, etc.) creatively if you can.
- (7) Include hyperlinks to relevant websites (make sure beforehand that the classroom has Internet connection).

Using websites. We can also make teaching of science easy and interesting by using hundreds of science education websites available on net. Further, we can prepare excellent websites that may be useful for the students and the scientific community. There are numerous websites on the World Wide Web (www) that have been created specifically for ESL/EFL learners as well as for native speakers of English. Many of these websites can help the students to improve their proficiency in English too. A great advantage of the World Wide Web is that it is available 24 hours a day and; if your students have access to the Internet outside the classroom, they can access the websites as per their leisure and space. We have developed two websites for the students of science, particularly the Plant Science. The following websites have been launched by us.

1. Innovative teaching - <http://innovative-teaching.in>
2. Directory of Useful Websites of Plant and Allied Sciences
<http://www.life.illinois.edu/govindjee/directory.html>

Asian Parenting Styles and Academic Achievement Through the Lens of Confucianism

Grace H. C. Huang^a Mary Gove^{b*}

^{a,b} Cleveland State University

Abstract

In light of the consistent Asian students PISA (Program for International Student Assessment) data results, this paper examines Asian parenting style and its relationship with students' academic performance through the lens of Confucianism. A literature review supports this conceptual paper that examines parenting styles and Confucianism's influences. Concerning parenting styles, the authors were drawn to the media phenomenon created by Amy Chua's book *Battle Hymn of the Tiger Mother* about Chua's parenting experiences raising two daughters. Chua's parenting style is quite strict by US standards. The authors classify her style as mixed ethnic minority and authoritarian parenting style. In this presentation, a framework of variables is introduced that defines each style, i.e. responsiveness to the child's needs, demandingness, and the extent interests of the child are encouraged. These variables are linked to Confucianism that is embedded in Asian culture and places value on education at societal, familial, and individual level.

Keywords. Confucianism, parenting styles, academic achievement, academic performance, Asian students

INTRODUCTION

The US media touts an achievement gap between white and African Americans and between white and Hispanic Americans so the general public tends to be aware of this achievement gap. However, less media attention is given to another achievement gap: the one between Asian Americans and Caucasian Americans. (Yong & Wei, 2009). Asian Americans out score whites, especially in mathematics, science and other technical areas. The latest PISA (Program for International Student Assessment) survey, an international educational survey conducted every three years by the Organization for Economic Cooperation and Development (OECD) released in 2012, indicated the top five overall ranking, including Shanghai (China), Singapore, Hong Kong, Taiwan, and South Korea, are all Asian countries (Brown, 2013). In the U.S., Asian American score higher on the SAT and ACT, and are overrepresented among winners of different prestigious scholarships, such as National Merit, US Presidential, and Westinghouse Science talent Search Scholars (Flynn, 1991; Zhao & Qiu, 2009). Hildebrand, Phenice, Gray, & Hines (2008) indicated that Asian Americans have become the largest ethnic minority group in many career fields and at many elite colleges. In 2003, 51 percent of Asian American males and 44 percent of females age 25 and older had a bachelor's degree or higher compared with 32 percent of non-Hispanic white males and 27 percent of non-Hispanic white females. In 1980, Asian Americans comprised only 1.5 percent of the population but Asian Americans consisted of 5 percent of all engineers and 8 percent of all doctors in the United States.

Why do Asian students attain such high academic performance in mathematics, science, reading, and technical fields? In this conceptual paper, we will relate parenting style and concepts involved in Confucianism on Asians' high academic performance. Drawing from western parenting theories, literature, and eastern philosophy, we examine relationships among Asian parenting style and Confucian influences on children's academic achievement.

Parenting Styles: Theories and Literature

Our interest in Asian parenting style drew from the media attention given to Amy Chua's (2011) book, *Battle Hymn of the Tiger Mother*. Chua's views and practices raised much controversy regarding parent-child interaction. Public and media began debating and discussing different views and practices about parenting (Chang, 2011; Chua, 2011; Flanagan, 2011; Husbands, 2012; Kohler, Kilgo, & Christensen, 2012a; Kohler,

Kilgo, & Christensen, 2012b; Ninh, 2011; Poon, 2011; Wang, 2011). Chua's book is a memoir of her own philosophy and practices of parenting raising two high achieving daughters. She placed great emphasis on her children's academic achievement. First, we focus on how adult-child interaction relates to children's academic achievement.

Based on Maccoby and Martin's (1983) work, the two primary factors or dimensions to determine parenting style are responsiveness and demandingness. Parental responsiveness refers to the degree parents respond to the child's needs. Parental demandingness or parental control is the degree of demands, control, or expectations parents have toward children (Maccoby and Martin, 1983). Analyzed by these two factors, 6 different types of parenting styles emerged (Baumrind, 1971; Maccoby and Martin, 1983). They are authoritative, authoritarian, permissive, ethnic minority, indifferent, and inconsistent parenting styles. This typology of parenting styles is commonly used to describe and examine parenting. In our analysis, we also look primarily at the demandingness/ control dimension. Another dimension considered here is the extent parents support the interests of children for it seems to be a distinguishing dimension between ethnic minority and authoritative parenting style.

As we consider the literature on parenting styles, we primarily focus on three of the styles articulated in the literature because of the way these three are related to achievement in children. The styles are authoritative, authoritarian, and ethnic minority parenting styles. Based on the findings, the authoritative style is recognized as related to high achievement, while authoritarian style relates to low achievement. Ethnic minority style is less often considered in the literature but reached the public arena through Chua's memoir (Baumrind, 1971; Baumrind, 1987; Chau, 2001; Chua, 2011, Fuligni & Tseng, 1999; Giarrusso, Du, Silverstein, & Bengtson, 2001; Heath, 2012; Hsai & Scanzoni, 1996; McLoyd & Smith, 2002; Shek & Chen, 1999).

With the authoritative parenting style, the parent has reasonable control, uses reasoning with the children, is responsive to the child's needs and interests, and is strongly related to high achieving children (Baumrind, 1971; Chau, 2001; Garg, Levin, Urajnik, & Kauppi, 2005; Heath, 2012; McLoyd & Smith, 2002; Steinberg & Levine, 1997). The authoritarian parenting style emphasizes the hierarchical relationships between adults and children and uses this to maintain control, sometimes with forceful means, may restrict children's autonomy and even respect, and is related to low achieving children. The ethnic minority parent style as articulated by Heath (2012) is less prominent in the literature of parenting styles, but we see coming to understand this style of parent-child interactions as quite important since Asian parenting style seem to fit in this category. Ethnic minority style has high demandingness or control and high responsiveness, but has a lower priority in supporting the child's interest. Ethnic minority style differs from a strict authoritarian style in that it is highly responsive to the child's needs; Ethnic minority style differs from Authoritative style in that parents with this style have high demandingness and do not place children's interests as a priority. Ethnic minority parenting style, at least in Asian American families, is related to high achievement as noted earlier. In this paper, we focus on demandingness and high expectations of the ethnic minority parenting style and how these parenting style traits may be influenced by Confucianism. Table 1 shows how parenting styles relates to the factors of demandingness, responsiveness, interests and academic performance.

Table 1: Parenting style analysis

	Demandingness (control)	Responsiveness	Interests	Children's academic performance
Authoritative parenting	Medium	High	High	High
Authoritarian parenting	High	Low	Low	Low
Ethnic Minority parenting	High	High	Low	High

Confucianism and Asian Families

Though Confucianism was developed in China, the philosophy has influenced many countries in Asia. This paper focuses on Asian Americans. Confucianism, developed by the greatest Chinese philosopher, Confucius, is a philosophy which focuses on the conduct and practices of people in daily life. For nearly 2,000 years, Confucianism has shaped the social, ethical and political aspect of Chinese cultures. It is a complex set of ethical and moral rules that dictate how a person relates to others. The Confucianism philosophy and principles play a key role in forming the norms of social morality which influence the culture in personal, familial, and social relationships. Additionally, Confucianism has a significant influence on education and families' educational practices.

Education and Social Class

Asian Education is associated with a person's social class. In old Chinese society (770 BC to 1910's), success is defined by your class, not necessary by a person's wealth (Lien, 2006). Social class is associated with occupations as well as the moral character related to the occupation. According to Confucius, out of four social strata which includes scholars (*Shi*), farmers (*nong*), workers (*gong*), and businessmen (*Shang*) based on occupation (Park & Chesla, 2007), the scholars strata is considered the highest class. Scholars did "mental labor," and usually made decisions that influenced the whole society. Based on Confucianism, leaders needed to be intelligent, have high standards of ethics, and learn scholarly work (Tu, 1998). Therefore scholarship was associated with high social class, leadership, and high moral character.

Today, Asian society and families still retain the idea that scholars belong to higher social class and education provides a route to reach the "scholarly" status. Highly educated people will become leaders and contribute to society. This value of education and social class influences the everyday life of Asian families. Asians believe that educational success leads to a better life, including higher social status, getting a good job, or a better marriage and relationships (Cheon, 2006; Hildebrand, Phenice, Gray, & Hines, 2008; Louie, 2004; Lien, 2006). Therefore, education is central to most Asian families. In fact, the various statistics indicated in the beginning is evidence of educational emphasis within the family. Asian parents, such as Amy Chua, place a high priority on educational success and that success is often measured by the test score.

Education as a Family Business

On the macro level, Asian cultures value the collectivist ideology (Lu and Shih, 1997) which affects family functions and parent-child interaction. Based on Confucianism, there are five basic human relationships, including father-son, emperor-subject, husband-wife, elder-younger, friend-friend. Three out of five bases of these relations occur in the family (Chang & Holt, 1991). Chinese cultures advocate that each individual should strive to expand the prosperity and vitality of one's family (Lu & Shih, 1997; Miller & Yang, 1997). In other words, individual's development and performance are to achieve the success of the family. Family, then, is in the center of an individual's life and everyday existence, including educational practice.

Education is considered a family business, an interdependent process for many Asian families. Though children are responsible for their own educational success, Asian parents believe that their children's educational achievement is greatly influenced by their parenting practices as well. They believe that they have the obligations and responsibilities to help build their children's success in education.

Parents possess passion and zeal for their children's education (Lien, 2006). Education is an intensive process, almost like a religious practice which affects the whole family's daily interaction and routines. Primary is daily activities and conversations surrounding the topic of education. For example, parents may converse with their children concerning homework and test results as soon as children come home from school.

Parents are highly demanding and exert high control over children's academic practice which relates to one of the dimensions of the ethnic minority parenting style: high demandingness (Baumrind, 1971; Maccoby and Martin, 1983). During the daily parent-child interaction, parental involvement on academic practice is a focused and intense practice. The Asian family takes academic success seriously. If parents have a difficult time exerting influence over their children's academic success, they may regard themselves as a failure as a parent and feel disappointed, anxious, and embarrassed (Kim, 2006). They take their children's academic failure as their own responsibility because they feel that they did not do their best to work with their children. Pressures can be high on both parents and children. Low achievement brings shame and embarrassment to the family (Chen, Miller, Wang, & Mark, 1996). On the other hand, if the child succeeds in academics, it represents the triumph of the entire family and is considered a family achievement.

In Chua's narrative, she did not allow her daughters to have play dates because they needed to focus on school success, not social experiences (Chua, 2011). Chua drilled them on homework from school and on their music lessons, which she also deemed quite important to success.

The Role of Education in Family Hierarchy and Family Harmony

Asian cultures value family hierarchy and harmony which are central concepts in Confucianism. These values also support the high demandingness of Asian parents. Based on Confucianism, the family system has a clear and highly structured hierarchy. Confucius' doctrine distinctly stated the order: *Let the prince be a prince, the minister a minister, the father a father, and the son a son* (Kao, 2006). Each individual's role and responsibilities are clearly defined.

For example, one of the virtues of family hierarchy, filial piety, portrays the relationship between parent and child. Filial piety is an expression of respect from the child toward parent and elderly. In Confucianism, this virtue is associated with a person's citizenship and leadership in the society. Asians believe that children who respect their parents will become good citizens and leaders (Terry, 2005). Therefore, filial piety is highly valued. In daily life, filial piety is reflected in children's respect and obedience on parental demands and authority. In most cases, children do not have many choices but to comply with parents' expectations. Rebellion against parents' authority is unacceptable and will result in harsh consequences. Being "unfilial" was considered a crime in the traditional Chinese society. As Terry (2005) indicated, it could result in death as a punishment. The virtue, filial piety, is interwoven with family's educational practice on a daily basis.

Additionally, Confucianism promotes social harmony in human relationships, including family relationships (Chang & Holt, 1991). To reach harmony within the context of family, it often relies on considering parent's authority, conformity, and role and responsibilities of each individual (Lu & Shih, 1997; Miller & Yang, 1997). Thus, the decisions children make regarding education are associated with family harmony as well. Asian children learn more behavioral rules than Westerner children do. Asian children are comfortable following instructions (Moneta, 2004). Today, parent's authority can be observed in educational decision-making and behaviors in homework, exams, school selections, career choices, and so on.

Because of this emphasis on filial piety and harmony of the family, Asian families are able to demand academic excellence. However, Asian families tend to be less supportive of children's social needs or other interests the children may want to pursue. For example, Lulu, Chua's younger daughter, wanted to learn tennis and she had to battle her mother in order to pursue this interest (Chua, 2011). Yet once Lulu pursued her desire to play tennis, she drew from the discipline she had acquired by working with her mother on academics and playing classical musical instruments, so that she was successful at tennis also.

Conclusion

We speculate that the ideas drawn from Confucianism---a high value placed on education, filial piety, family hierarchy, and family harmony---are many of the family parenting traits that lead to the high academic achievement Asian American youth exhibit. These traits then are reflected in the parenting style literature (ethnic minority parenting style) as high demandingness and high responsiveness especially toward concerns related to school and education. We further speculate, as Amy Chua's parenting illustrates (Chua, 2011), this kind of parenting tends to develop self-discipline in the children over time.

Prediction of Students' Academic Achievement at Higher Secondary Level on the Basis of Secondary Level Academic Achievement

B.B. Ramanuj^{a*}

^a Head of the Department, Department of Education, Saurashtra University, Rajkot-360005, Gujarat (INDIA)

Abstract

The main objective of the present research was to construct regression equation for predicting the academic achievement of the standard 12 students based on their 10th standard's result. Following the Documentary Survey method the researcher had chosen 128090 students of standard 12 based on their gender, medium of study and stream and had constructed eight regression equations following the 10th standard results of the same. Derived regressions equations are as following, (1). 'X= 1.41Y-24.02', (2). 'X=1.14Y+45.06', (3) .'X=0.16Y+38.86', (4). 'X=0.2Y+41.69', (5). 'X=0.61Y+14.6', (6). 'X=0.64Y+11.49', (7). 'X=0.84Y-1.44', (8). 'X=0.97Y-13.76'. SPSS 17.0 was used for the analysis of available data.

Keywords.

INTRODUCTION

There prevails the teaching pattern of 10+2+3 in Gujarat state. This pattern includes standard 9 and 10 into secondary level and standard 11 and 12 into higher secondary. Under this pattern, the examinations of standard 10 and 12 are conducted by *Gujarat Secondary and Higher Secondary Education Board*.

The decision regarding the selection between science stream or general stream is done after the result of standard 10. The branches like medicine, engineering or science graduation are opted after the result of standard 12 of science stream while the branches like arts, commerce graduation etc are opted after the result of standard 12 of general stream.

The students don't get the reliable guidance regarding what their academic performance would be whether they select the science stream or general stream.

The present research will help in predicting their academic performance whether they opt general or science stream based on their 10th standard's result. The result of the present research will be helpful in providing guidance and counselling the students.

OBJECTIVES OF THE STUDY

The objectives of the present study are as under.

1. To construct regression equation for predicting the marks of standard 12 on the basis of the marks obtained in standard 10 of the boy students who study in 12th standard general stream of Gujarati medium.
1. To construct regression equation for predicting the marks of standard 12 on the basis of the marks obtained in standard 10 of the boy students who study in 12th standard general stream of Gujarati medium.
2. To construct regression equation for predicting the marks of standard 12 on the basis of the marks obtained in standard 10 of the girl students who study in 12th standard general stream of Gujarati medium.
3. To construct regression equation for predicting the marks of standard 12 on the basis of the marks obtained in standard 10 of the boy students who study in 12th standard general stream of English medium.
4. To construct regression equation for predicting the marks of standard 12 on the basis of the marks obtained in standard 10 of the girl students who study in 12th standard general stream of English medium.
5. To construct regression equation for predicting the marks of standard 12 on the basis of the marks obtained in standard 10 of the boy students who study in 12th standard science stream of Gujarati medium.
6. To construct regression equation for predicting the marks of standard 12 on the basis of the marks obtained in standard 10 of the girl students who study in 12th standard science stream of Gujarati medium.
7. To construct regression equation for predicting the marks of standard 12 on the basis of the marks obtained in standard 10 of the boy students who study in 12th standard science stream of English medium.

8. To construct regression equation for predicting the marks of standard 12 on the basis of the marks obtained in standard 10 of the girl students who study in 12th standard science stream of English medium.

OPERATIONAL DEFINITIONS

In the present research some of the words were defined operationally in the following way.

Academic Achievement:- The result of exam in percentage, conducted by the secondary and higher secondary education board.

Secondary Level Academic Achievement:- The result of standard 10 exam in percentage, conducted by the secondary and higher secondary education board.

Higher Secondary Level Academic Achievement:- The result of standard 10 exam in percentage, conducted by the secondary and higher secondary education board.

RESEARCH METHODOLOGY

Documentary Survey Method was used as research method in the present study.

UNIVERSE AND SAMPLE

The boy students and girl students of standard 12 from Gujarati and English medium from state of Gujarat were included as a sample in the present study.

The entire universe was selected as a sample in the present study. The sample chosen for the present study is presented in the table no. 1

Table-1. The number of students of standard 12 general stream and standard 12 science stream

	General Stream			Science Stream			Total
	Gujarati Medium	English Medium	Total	Gujarati Medium	English Medium	Total	
Boys	38492	1540	40032	36848	5346	42194	82226
Girls	24410	1093	25503	17029	3332	20361	45864
Total	62902	2633	65535	53877	8678	62555	128090

According to table no 1 128090 students were selected as sample in the present study. There were 65535 students from general stream out of which the number of boys was 38492 and the number of girls was 24410. The number of boys from English medium was 1540 and the number of girls was 1093. In the same way the total number of students from science stream was 62555 out of which Gujarati medium students were 36848 and Gujarati medium girls were 17029. The number of English medium science stream boys was 5346 and the number of English medium science stream girls was 3332.

DATA COLLECTION AND ANALYSIS

In the present study the result, in percentage, of Gujarati and English medium boy and girl students of standard 12 general and science stream exam- conducted by the secondary and higher secondary education board- were collected. The same students' results in percentage of the standard 10 exam conducted by the secondary and higher secondary education board were collected.

The collected information of boys and girls of Gujarati and English medium from general and science stream is presented in the Table-2

Table 2. The Regression Equations for predicting the result of standard 12th exam based on the result of standard 10th exam

Stream			
Gender	<table border="1"> <tr> <td>Commerce</td> <td>Science</td> </tr> </table>	Commerce	Science
Commerce	Science		

	Std	Medium										Medium										
		Gujarati					English					Gujarati					English					
		N	M	S D	r	Equation	N	M	S D	r	Equation	N	M	S D	r	Equation	N	M	S D	r	Equation	
Male	10																					
	12	38492	53.79	7.63			1540	55.79	7.87			36848	74.12	10.20			5346	76.06	8.96			
Female	10																					
	12	24410	54.86	7.58			1093	57.30	7.43			17029	76.72	9.40			3332	78.87	8.08			
		38492	51.75	5.39	0.198	$X=1.41Y - 24.02$	1540	52.25	5.24	0.243	$X=0.16Y + 38.86$	36848	59.75	11.81	0.527	$X=0.61Y + 14.6$	5346	62.45	11.71	0.637	$X=0.84Y - 1.44$	
		24410	52.76	5.05	0.213	$X=0.14Y + 45.06$	1093	53.14	4.91	0.296	$X=0.2Y + 41.69$	17029	60.59	11.64	0.520	$X=0.64Y + 11.49$	3332	62.74	11.92	0.658	$X=0.97Y - 13.76$	

Table 2 shows the total number of standard 10th and 12th General stream and Science stream boy and girl students from Gujarati and English medium. It also shows the standard deviation of their average score and correlation score. Based on these scores the regression equation was constructed in accordance with the objectives of the study. SPSS 17.0 was used for this purpose.

FINDINGS.

The findings of the present study were as below.

1. In the present research the equation ' $X= 1.41Y-24.02$ ' was derived for the predicted score of general stream Gujarati medium boys of standard 12 where X = predicted score of standard 12 in percentage and Y = percentage obtained in standard 10.

With the help of this equation, one can predict any student's result of standard 12, in percentage based on the result of standard 10.

2. In the present research the equation ' $X= 1.14Y+45.06$ ' was derived for the predicted score of general stream Gujarati medium girls of standard 12 where X = predicted score of standard 12 in percentage and Y = percentage obtained in standard 10.

With the help of this equation, one can predict any student's result of standard 12, in percentage based on the result of standard 10.

3. In the present research the equation ' $X= 0.16Y+38.86$ ' was derived for the predicted score of general stream English medium boys of standard 12 where X = predicted score of standard 12 in percentage and Y = percentage obtained in standard 10.

With the help of this equation, one can predict any student's result of standard 12, in percentage based on the result of standard 10.

4. In the present research the equation ' $X= 0.2Y+41.69$ ' was derived for the predicted score of general stream English medium girls of standard 12 where X = predicted score of standard 12 in percentage and Y = percentage obtained in standard 10.

With the help of this equation, one can predict any student's result of standard 12, in percentage based on the result of standard 10.

5. In the present research the equation ' $X= 0.61Y+14.6$ ' was derived for the predicted score of science stream Gujarati medium boys of standard 12 where X = predicted score of standard 12 in percentage and Y = percentage obtained in standard 10.

With the help of this equation, one can predict any student's result of standard 12, in percentage based on the result of standard 10.

6. In the present research the equation ' $X= 0.64Y+11.49$ ' was derived for the predicted score of science stream Gujarati medium girls of standard 12 where **X**= predicted score of standard 12 in percentage and **Y**= percentage obtained in standard 10.

With the help of this equation, one can predict any student's result of standard 12, in percentage based on the result of standard 10.

7. In the present research the equation ' $X= 0.84Y-1.44$ ' was derived for the predicted score of science stream English medium boys of standard 12 where **X**= predicted score of standard 12 in percentage and **Y**= percentage obtained in standard 10.

With the help of this equation, one can predict any student's result of standard 12, in percentage based on the result of standard 10.

8. In the present research the equation ' $X= 0.97Y-13.76$ ' was derived for the predicted score of science stream English medium girls of standard 12 where **X**= predicted score of standard 12 in percentage and **Y**= percentage obtained in standard 10.

With the help of this equation, one can predict any student's result of standard 12, in percentage based on the result of standard 10.

Turkish Preservice Middle School Mathematics Teachers' Misconceptions for Constructing Histograms

Oktaý Mercimek^{a*}

^aFaculty of Education, Kastamonu University, Turkey

Abstract

This study investigated preservice middle school mathematics teachers' conceptual errors for constructing histograms. Sample consisted of third and fourth year preservice middle school mathematics teachers who already took 'Statistics and Probability' courses for two semesters. Data collected as a part of larger project that investigated preservice middle school mathematics teachers' knowledge of teaching statistics. Results indicated several misconceptions for constructing histograms such as (a) thinking that histograms is bivariate scatterplots, (b) histograms constructed from regular frequency tables, (c) histogram is a type of greatest integer function or interval length should be 1 when data has decimal points, (d) each intervals of histogram has equal number of observations; (e) histograms are constructed with separate rectangles, and (f) intervals of histogram can be shown on vertical axis. These findings revealed that preservice mathematics teachers had misconceptions in statistics even for the concepts they supposed to teach when they become teachers.

Keywords. Preservice teacher, mathematics teacher, statistics, histogram, misconception

INTRODUCTION

The term, histogram, is originally coined by Karl Pearson (Magnello 2005). he coined histogram to describe a 'time-diagram' in his lecture on 'Maps and Chartograms'. His main purpose for using the histogram was for historical graphs. He thought that blocks of time may better explain the investigated phenomena than using single time points. After Pearson, blocks of values principle applied to different variables rather than time.

Histogram in modern statistics books is usually described as series of contiguous rectangles shown on coordinate system where horizontal axes represent class intervals and vertical axes represent corresponding frequencies (Akdeniz, 2002; Black, 2011). It is also expressed that each rectangle's area is proportional to frequency in the group (Ellison et.al. 2009). There is also different ways for labeling the vertical axis. Some statisticians prefer labeling midpoints for each class interval while some prefer labeling start points for each interval.

The definition and construction of histograms mostly depend on class interval (Wasserman, 2004). The size of class interval and starting point may affect the shape of histogram which may prevent one to see the pattern of data.

As in most statistics topics, histograms are also misinterpreted by many students. Bruno and Espinel (2009) analyzed the construction and evaluation errors made by preservice teachers, and found that teacher candidates constructed the histograms making several mistakes such as (a) histograms where the rectangles are separated, (b) labeled the axes incorrectly or (c) omitted the zero frequency intervals.

Another study investigated the conceptual errors of undergraduate students related to histograms (Lee & Meletiou-Mavrotheris, 2003). Students were asked "What goes on the vertical axis and horizontal axis when constructing a histogram for describing the distribution of salaries for individuals that are 40 or older and have not yet retired?"

Most common misconception students held was the interpretation that histograms are two variable scatterplots. Thirty one percent of the students thought age should be on X axes and salary should be on the Y axis. Other similar mistakes were salary on X and Age on Y; age on X and frequency of salary on Y. Some students also have misconception that histograms are displays of raw data, and individuals should be on X axis while salary on Y axis.

PURPOSE OF THE STUDY

The purpose of the study was to determine preservice middle school mathematics teachers' misconceptions for constructing histograms.

METHOD

In order to determine histogram misconceptions of the preservice middle school mathematics teachers, a previously collected data used. The data was originally collected as a part of the thesis project (Mercimek, 2013) that is conducted to assess content knowledge and pedagogical content knowledge of preservice middle school mathematics teachers. An item in this thesis project constructed to measure histogram knowledge of preservice mathematics teachers.

This item requires preservice teachers to construct a histogram from an extra ordinary data. Data presented in item was consisted of values that had one decimal point. Our experience with statistics textbooks indicated that histogram construction examples generally use data that are consisted of integers. Since the procedures in these examples described for integers, this item requires preservice teachers to think thoroughly the logic behind histogram construction, and to extend their histogram knowledge for the data that includes decimal points. The translated version of the Item presented in Figure 1.

A teacher wanted students to collect data to construct histogram. A student wanted to use the weights of students in her classroom as data so she brought a digital scale from her house. Then she measured weight of 30 students using this digital scale. The table shows the measurements of these 30 students. (unit is kilogram)

16,1	16,5	16,6	16,7	16,8	17,6	17,6	17,8	18,0	18,1	19,5	19,8	20,0	20,1	21,8
21,9	22,0	22,1	22,1	22,2	22,4	22,7	22,7	23,5	23,5	23,6	24,5	24,5	24,7	26,8

Using this data, construct a histogram that has 5 intervals.

Figure 1. Translated version of the histogram item

Participants of the thesis project are third and fourth year preservice mathematics teachers who will be eligible to teach in middle schools from fifth grade to eighth grade. All of these preservice teachers also took Statistics and Probability course in their first semester of third year in the mathematics teacher program. Even though 489 preservice middle school mathematics teachers from eight different public universities replied this item in thesis project, only answers that have clear indication of histogram misconception selected for the analysis of this study.

RESULTS

Qualitative analysis preservice teachers' answers revealed several important findings. Some of these preservice teachers constructed a graph that is completely different from histogram. For example, some students draw a scatterplot that shown at Figure 2. These students interpreted data as bivariate and used one axis for data presented in Item. They used another axis either for the data point itself or for the order of corresponding data point. This interpretation resulted in a data that looked similar to $\{(16.1, 16.1), (16.5, 16.5), \dots, (26.8, 26.8)\}$ or $\{(16.1, 1), (16.5, 2), \dots, (26.8, 30)\}$

Figure 2. Interpreting data as bivariate

Another group of preservice teachers used regular frequency table for their graphs. Some of them draw line graphs that presented in Figure 3. Some of them draw bar graphs that presented in Figure 4, and some of them draw adjacent rectangles that was similar to histogram, which presented in Figure 5.

Figure 3. Frequency polygon without intervals

Figure 4. Separate bars without intervals

Figure 5. Adjacent bars without intervals

Another group of zero scoring preservice teachers grouped measurements that had same integer parts. This resulted in a frequency table with 11 intervals where the interval length was “1”. Graphs of these preservice teachers also had different patterns. One of them draw a graph that was similar to greatest integer function graph which presented in Figure 6. Another two preservice teachers presented this information using a graph that was similar to histogram that presented in Figure 7

Figure 6. A graph that is similar to greatest integer function

Figure 7. Frequency polygon and separate bars (interval length=1)

Majority of zero scoring preservice teachers had an idea that constructing a histogram with five intervals requires dividing data (30 measurements) into five equal parts (so every part should have had 6 measurements). After dividing data into five equal groups, they draw graphs in several ways. Some preservice teachers draw rectangles (adjacent as in Figure 8.a or separate as in Figure 8.b) that height of each rectangle increased, and some preservice teachers switched the axis and used y-axis for intervals (Figure 8.c). Most preservice teachers, who divided data into five equal groups, draw graphs looked similar to histograms. Their graphs consisted of same level of rectangles that were separate as in Figure 8 (d) or adjacent.

(a) Increasing separate bars with equal measurement in each interval

(b) Increasing adjacent bars with equal measurement in each interval (intervals at vertical scale)

(c) Increasing bars with equal measurement in each interval (Error 3)

(d) Equal separate bars with equal measurement in each interval

Figure 8. Different answers that divide data into five equal parts.

CONCLUSION AND DISCUSSION

Analysis of the histogram related content knowledge item revealed that most Turkish preservice mathematics teachers, who subject to teach histogram to middle school students, couldn't construct a histogram and some of them have clear misconceptions for histogram concept. However, this result does not conflict with results reported for other nations (Bruno & Espinel, 2009; Lee & Meletiou-Mavrotheris, 2003).

Time Impact on Training Effectiveness of Physics Teachers in Saudi Arabia

Yousef Alhaggass^{a*}

^aPostgraduate student, Victoria University, Melbourne, Australia

Abstract

Teachers' professional development is a vital component of any educational system. Therefore, the policy of education in addition to the legislation of civil service in Saudi Arabia confirmed that training of teachers is a continuous process and considered as a part of their jobs both during working hours and out of working hours. The Ten-Year Plan of the Ministry of Education also included the improvement of male and female teachers' quality (*General Directorate of Planning, 2005*).

Although there is a large number of professional development activities for teachers, students' achievement in physics are not satisfied according to the Department of Educational Supervision (2010). Poor practice of physics education is still dominated in schools and consequently, the desired outcomes of learning physics are not achieved properly.

This situation generated the need to evaluate the effectiveness of the actual professional development practices as a first step to identify improvement strategies for physics teachers, and ultimately improve outcomes for students.

Keywords. In-service teacher education, Andragogy

LITERATURE REVIEW

Research shows that learners' achievements can be affected by the duration of professional learning program. For example, from a database consisting of 446,000 student enrollments at Santa Monica College, students enrolled in the 6-week compressed sections had higher success rates than those enrolled in the same courses during a 16-week semester as reported by Logan and Geltner (2000). In addition, Austin, and Gustafson (2006) investigated the link between course length and student learning using a database of over 45,000 observations and they found that intensive courses do result in higher grades than traditional 16 week semester length courses and that this benefit peaks at about 4 weeks. Furthermore, Shaw, Porter and ten Brinke, (2011) evaluated the effectiveness of one-day training on a deception detection task attended by 42 legal and mental health professionals and they found that participants' overall performance increased significantly from 46.4% to 80.9%.

On the other hand, for the same course taught in both intensive and traditional formats within the same year, Kucsera and Zimmaro (2010) affirmed that intensive courses did not significantly differ from traditional courses in overall "instructor" ratings on learner evaluations.

Research also shows that memory in addition to attention levels are affected by the instruction period throughout the day (Klein, 2001) and hence, impact learners' achievement. For example, the result of a study carried out by Barron, et al. (1994) indicated an overall increase in mean scores for the below-grade-level students' mastery of reading skills for afternoon instruction as compared with morning instruction. In addition, according to Spickler, Hernandez-Azarraga and Komorowski (1997), science teachers achieved many desired outcomes during the after-school hands-on science program. Furthermore, in order to examine the influence of time-of-day on elementary students' accuracy in computing mathematical algorithms, a study was conducted by Sjosten-Bell (2005) and an examination of the mean scores showed a trend toward higher scores in the morning followed by the mid-morning then the afternoon. Ray (2009) also, investigated the interactive effect of class time-of-day on students' academic performances of Basic Statistics-I course in Liberal Arts College and the results showed that the afternoon hours impacted academic performance significantly and in a negative manner.

Based on what research has revealed, it can be noticed that short-term memory is better in the morning, while long-term memory is better in the afternoon (Jensen, 2000). As a result, learning activities involving short-term

memory such as mathematics and science may be better to run in the morning (Brewer, and Campbell, 1991) while learning activities involving long-term memory such as art, problem solving techniques and hands-on activities may be better to run in the afternoon (Brewer, and Campbell, 1991) and (Stanciu, 2007).

Finally, the scheduling of professional learning should be considered. For example, in a study conducted by Karagiorgi and Symeou (2007), the results showed that the majority of Cypriot teachers prefer to involve in their in-service training activity during working days followed by holidays and weekends respectively.

Methods

The research reviews data from a relevant sample (N=62) of physics teachers at secondary and intermediate boy schools in the city of *Onaizah*, Saudi Arabia.

Written survey research was used in the study to determine Teachers' experiences of the effectiveness of their in-service professional learning activities.

As well as open-ended questions, closed questions have been used so that teachers respond through the indication of the extent to which they agreed with specific statements on a Likert-type scale (from 1 to 5, with 1 indicating strong agreement and 5 strong disagreements).

Findings

Teachers who responded to this survey were asked to identify their personal opinions on the most helpful duration, period and scheduling of their in-service professional learning. The results derived from the statistical analysis of teachers' responses to the questionnaires as following:

For the duration of physics teachers' professional learning activities, descriptive analysis indicated that the more than half (51.6%) of participants preferred 1-4 days duration, followed by 1-4 hours (24.2%), 1-4 weeks (16.1%), while five teachers preferred other duration (8.1%).

Furthermore, frequency analysis for the period of professional learning activities for physics teachers indicated that the majority (88.7%) of participants preferred morning courses, followed by afternoon courses (6.5%), evening courses (3.2%), while only one teacher preferred other period courses (1.6%).

Regarding to the scheduling of physics teachers' professional learning activities, descriptive analysis indicated that approximately half of teachers (46.77%) preferred their activities to be run at the beginning of semester, followed by the end of semester (22.58%), summer holiday (20.97%), while few teachers preferred to be trained at the middle of semester (9.68%).

Discussion

The teachers preference (51.6%) recorded regarding to the 1-4 days duration, is not surprising due to the advantages of such intensive courses compared with traditional courses. This has been supported by some researchers such as Logan and Geltner (2000), Austin, and Gustafson (2006) and Shaw, Porter and ten Brinke, (2011).

As a result, physics teachers are more likely to learn professionally when they involve in short duration such as 1-4 days.

Furthermore, the preference found the majority (88.7%) regarding to the morning courses is an expected result due to the advantages of this period. Such finding supports the notion that short-term memory is better in the morning, while long-term memory is better in the afternoon (Jensen, 2000). Consequently, by the run of training activities in the morning period, physics teachers are more likely to improve their teaching skills effectively.

Finally, the teachers' preference (79%) to involve in training activities during the working days is not surprising due to the advantages of such date. This has been supported by the finding of a study conducted by Karagiorgi and Symeou (2007) which is showed that the majority of Cypriot teachers prefer to involve in their in-service training activity during working days followed by holidays and weekends respectively.

Teaching an EAP Course in a Synchronous Videoconferencing Platform: Technological, Pedagogical and Administrative Reflections

Elif C. Onat^a Nuri Kuruoglu^b Tufan Adiguzel^{c*}

^{a b c} Bahcesehir University

Abstract

Given the latest developments in technology and Internet infrastructure, synchronous videoconferencing (SV) can be seen as a very important platform for delivering distance classes because of its collaborative and interactive functions. This study aims to evaluate the experience of an undergraduate course about English for Academic Purposes (EAP) taught in the SV platform during a single semester. This study used qualitative action research design and included semi-structured interviews with students in Berlin who were taught in a SV room where local students were also taught at the same time. The evaluation considered quality, reliability, user-friendliness and cost-efficiency factors from instructor, student, educational technologist and administrator perspectives, in which course preparation, classroom interactions, course structure, instructional materials, teaching style, and feedback were discussed. The findings showed that students were overall satisfied with learning via SV and its management and requirements.

Keywords. Synchronous Video Conference, Distance Education, EAP, Language Education

INTRODUCTION

For some time now, universities/higher education institutions have been using technologies such as synchronous videoconferencing (SV), online courses, and other technological innovations to deliver language course instruction for a part of their curriculum. This is an opportunity, which is increasingly relevant to the fast-growing need for students to become competent in using high-tech applications and understand the role of learner-centered engagement in language learning (Hoven, 2006). With support of such technologies, most of these language-related courses have started being delivered online by mainly emphasizing oral skills.

EAP is a challenging and multi-faceted area within the wider field of English Language Learning and Teaching (ELT), and is one of the most common forms of English for Specific Purposes (ESP). It entails training students in a higher education setting to use language appropriately so that students can improve their ability to study effectively on an undergraduate or postgraduate program in English (Hutchinson & Waters, 1987). Like other ESP, it is characterized by working out what students' needs are, and then creating a syllabus and program of study to meet them. This particular English for Academic Purposes (EAP) course in this study, an undergraduate course taught in the SV platform during a single semester, aims to develop students' knowledge and skills in the following areas: reading and understanding extracts from academic texts, writing sentences and paragraphs, participating in group discussions, improving study skills such as note-taking and recognizing and using academic grammar and vocabulary. In this study it is aimed to evaluate quality, reliability, user-friendliness and cost-efficiency factors of the EAP course taught in SV platform from technological, pedagogical and administrative perspectives.

LITERATURE REVIEW

Despite the development of language education with technological improvements, most language teachers still do not prefer interaction in distance education classes. They claim that videoconferencing is not interactive completely, because of the possible problematic nature of the medium itself: the sense of distance, delays causing participants lose the rhythm of communication, poor image quality so that unclear facial expressions, not enough content, less error correction, less active teachers, and slower speaking speeds (Hsieh, Luo, & Breed, 2010). Motamedi (2001) states that the teacher needs to address technical problems immediately so they use up class time. The most common problem, connection instability can have a negative effect on teaching although, the Sloan Consortium (Allen & Seaman, 2006) reports that the online courses are equivalent or even superior to

their face-to-face counterparts in terms of quality. According to Blake (2007), the most important barriers to the implementation of online courses and programs referred to were the acceptance of faculty, “the demands of learning teaching methods, and lack of student discipline in the online learning environment.”

Literature on the subject mainly focuses the problems such as instable connection, unclear image, sound clarity, poor sense of mutuality, and less error correction than in traditional classes (Kember, 1989; Motamedi, 2001). On the other hand, literature also suggests strategies to cope with the issues, including giving immediate feedback, reducing student anxiety or feelings of isolation, and making the class feel more mutual (Hsieh, Luo, & Breed, 2010). It is a fact that technology cannot replace the richness of face-to-face interaction; however, the communication functions of the digital world are increasingly considered as beneficial for the development of learners’ language skills. Many researchers view electronic mediated communication as an effective medium for the development of learners’ intercultural competence in language learning (O’Dowd, 2005; Thorne, 2003; Ware & Kramsch, 2005). In addition, many other researchers claim that this new medium and tools help foster collaborative learning through social engagement and construction of L2 knowledge (Belz, 2002; Lee, 2004a, 2004b).

Three interactive models for distance education were proposed by Moore (1989): (1) Learner-Content Interaction: the development of a conversation between the learner and new ideas in the text, (2) Learner-Instructor Interaction, individualized feedback and support students receive, and (3) Learner-Learner Interaction, the creation of mutual learning resource. Young learners can get more motivated when they interact with their peers. Videoconferencing more closely reflects the educational features of traditional classroom than any other form of distance education (Moore & Kearsley, 1996) and can meet the needs of university students who are required to develop their language proficiency especially in terms of communication, one of the five components of the International standards for Foreign Language Learning in the 21st Century, based on the Common European Framework of Reference for Languages: Learning, Teaching, Assessment Guidelines (2007). Therefore, genuine oral interaction that aims to foster negotiations of meaning (Long, 1996) through constructive feedback is essential.

There is also a debate which has been carried by the field critics of learning language at a distance that distance-learning curriculum and traditional classroom one are contrary to each other and their designs are not the same. Blake (2007) states that the real issue is to find ways to make learners get used to the idea of distance-learning (DL) offerings integrated into the overall language curriculum to meet the needs of learners without compromising quality. That is to say, Foreign Languages (FL) departments can use DL language courses to meet different needs of their students including study abroad opportunities. This suggestion needs to be considered as one of the most considerable ideas related to instructional and curriculum design and today’s university students’ language learning motivation. It is a fact that DL classes start to play a significant role at least respect to oral proficiency, in foreign language curricula. Many universities offer DL courses these days and the number seems to be increasing because these courses’ convenience is unquestionable in terms of allowing opportunities to learning a language from basic level to advanced proficiency by requiring roughly 700 to 1.350 hours of instruction (Bialystok & Hakuta, 1994).

The usefulness of distance education related to oral skills is highly accepted in the field of language teaching; however, teaching writing skills is still controversial. Most language instructors are skeptic about DL and need strong evidence before accepting any online implementations. Chenoweth, Jones, and Tucker (2006) found that students were generally weak in the use of transitions and general essay organization in language courses whether they were in an online class or in a traditional class. Similarly, the results did not register any significant statistical differences between the groups taking the language course separately in those two settings in terms of students’ listening comprehension, grammar knowledge, and reading comprehension (Chenoweth, Jones, & Tucker, 2006). As it is stated in Banados’s (2006, p. 539) framework, not only teachers and but also students are about to adopt new roles in the upgraded learning environment and technologically facilitated classrooms. While students need to be more autonomous and establish a participatory status, teachers have to play the role of guides and collaborators.

Regarding the reviewed research, there are a few studies on the purpose of teaching a second language at an academic level for freshmen in SV platform, which considers all related factors from all technological, pedagogical and administrative perspectives together. Our aim was to evaluate the reflections of freshmen students taught an EAP course in Berlin from a synchronous videoconferencing room where local students are

taught at the same time in order to obtain a better understanding of the student experience related to learning in the synchronous videoconferencing platform. The main considerations addressed in the study were: quality, reliability, user-friendliness and cost-efficiency factors, course preparation, classroom interactions, course structure, instructional materials, teaching style, and feedback.

METHOD

Study Design

A qualitative descriptive design was used because the evaluation's scope included quality, reliability, user-friendliness and cost-efficiency factors from instructor, student, educational technologist and administrator perspectives, in which course preparation, classroom interactions, course structure, instructional materials, teaching style, and feedback were discussed. Qualitative descriptive inquiry was chosen because we desired to describe learning and also teaching in the synchronous videoconferencing platform from the current experiences of students.

Participants and Setting

Participants were freshmen students —from Berlin office— ($N = 11$) enrolled in a core EAP course which was given via synchronous videoconferencing in the 2013 academic fall semester at Bahcesehir University. Of the 11 participants, one was male went from Istanbul, his hometown, to Berlin for one-semester study; the rest were 10 females who are the residents of the city of Berlin and have German high-school education background. Their ages ranged from 19 years of age to 26 years of age. Their departments were heterogeneous, but majority is studying architecture.

The classroom, called “Meta-Smart Classroom”, is equipped with the latest technological devices which perform real-time video-based communication between two campuses (Istanbul and Berlin). This miscellaneous communication enables interactive teaching by allowing both sides to participate to the lesson. CISCO video conference system, which enables this communication, has two cameras that shoot the lecturer and the students at the same time. There are also two IP cameras positioned as CISCO cameras to record lessons. These records are accessible for the registered students after the lessons. There are two data projectors reflected to the scene; one of which shows the screen of interactive wacom tablet, the other one shows the students in the visitor campus (Berlin). The students in the visitor campus can see the lecturer, whiteboard, the screen of the tablet and also the students in this classroom (Istanbul). While the classroom is equipped with advanced technology, it also supports traditional methods as having a classic whiteboard. Lecturers are free to use digital interactive wacom tablet or traditional white board. There are six omni directional microphones which can be enabled by the lecturer when any student wants to talk so that the visitor campus can hear the conversation. There are also hand and lapel microphones which are used by the lecturer. Two TVs are located at the rear of the classroom for the students who don't see the whiteboard clearly. Meta-Smart Classroom is also capable of streaming lessons real-time over Internet. So anyone around the world can attend to the course in this classroom.

Data Collection

After the institutional review process (IRB) at Bahcesehir University was completed and final approval obtained at the very beginning of the semester, recruitment of participants for the research were completed and followed by data collection in two sources: (1) records of the tutorials done weekly after each lesson via synchronous videoconferencing through 14 weeks during the one whole fall semester, and (2) two semi-structured interviews conducted a week after the lessons finished at the end of the semester. Potential participants were notified for the interviews in the last lesson via synchronous videoconferencing and later appointed the interviews by providing the Adobe Connect link contact information via e-mail communication by the researchers.

All students were tutored and interviewed by the researchers on two occasions, for between 50 and 60 minutes. All the tutorials and interviews were recorded, with the permission of the subject students. After the tutorials and interviews, the recordings were transcribed by the researchers carefully to assure the respondents that they and the place of them would not be identifiable in any subsequent report. Once the final research report was written, the recordings of the tutorials and interviews were archived by the researchers.

Data Analysis

Inductive content analysis was implemented for this study. Data were systematically and thoroughly analyzed; all of the transcripts were read by the researchers and put into a table. The answers were coded in the style of a grounded theory approach to data analysis (Altheide, 1996; Atkinson, 1992; Ezzy, 2002; Feldman, 1994; Phillips & Hardy, 2002) to label each condensed meaning and analyzed for words or phrases with the same meaning in order to categorize the responses under the same emerging themes. In other words, the answers were analyzed for words or phrases with the same meaning in order to determine meaning units. Codes were used to label each condensed meaning unit, and categories were grouped into patterns with the final development of themes (Graneheim & Lundman, 2004).

The tutorial and interview texts were sorted into five areas; experiences of having lessons via synchronous videoconferencing in terms of technical, learning issues and teaching issues; and ideas related to improve this course and taking the following course via synchronous videoconferencing. The texts were read through several times to obtain a sense of the whole. Three theme headings related to technology, pedagogy, and administration, were generated from the data and all of the data that were coded took part under these themes. Two independent researchers were asked to verify the accuracy of the categorization and after that it was finalized.

FINDINGS and DISCUSSION

Three themes were identified at the end of the data analysis that reflects the participant's reflections related to their synchronous videoconferencing experience: technology, pedagogy and administration.

Technological Reflections

Students' expressed their experiences related to synchronous videoconferencing classroom as being a virtual classroom with communication quality in understanding, satisfaction, and communication breakdown. This was a consideration related to the overall communication quality between the instructor and participants' location. But, as synchronous videoconferencing and face-to-face instruction are not exactly the same, there is always a room for new technological experiences for students that may go beyond what exists in traditional classroom settings.

Communication

There is no control of the students over tardiness and attendance when there are technical challenges. Students reflected that they had experienced almost no communication breakdowns during the lessons. One student reported, "I think it was a good experience; it was a little bit difficult at the beginning of the semester as it was not easy to follow the lesson because the connection was not so good. But after a while I think it was really nice to have lessons."

Quality

Students all agreed on that the quality of the sound and tablet—an electronic screen showing the entire course related documents and the page the instructor was writing on while teaching— was good and had no problems in understanding the instructor. Students felt comfortable with watching the instructor and following the lesson on the screen via synchronous videoconferencing, as they were familiar with computers and technology from their educational background. They noted that this was not the first online course taken, but this experience was a better one compared to the videos that they had watched before in their previous courses in terms of understanding and satisfaction resulted from the mutual communication quality. They reported that the instructor's voice and the image was high-quality. One student reported a problem with the clarity of the voices of the students in Istanbul and stated that the voices of the students in Istanbul were flat and what they said could not be heard exactly from Berlin, but the AV technicians fixed the problem.

Improvement

Transitioning from face-to-face learning environment to online was challenging for students, putting them at more of a disadvantage due to the need to hold different skills than the ones in a traditional classroom. Students stated that it would be useful if they could participate in an orientation prior to the beginning of the semester that prepared them to attend class successfully in terms of using technology such as headsets with a microphone possible to use in the classroom (Hallford, 2012). Apart from that, students commented that participation in synchronous videoconferencing course did not require a different technological skill set in terms of hand rising, note-taking, and laughing (Hallford, 2012). Another student noted that it would have been great for him if he had seen the instructor's eyes like the instructor were physically there like in the traditional classroom. The technology systems could be improved to offer interactive webcams which show the other students during synchronous class time. The interaction technology could be improved to allow for more technology and more communication to be delivered to students that are challenged by the instructor. From the instructor's point of view, students have always been enjoying themselves with the possibilities of new technologies while learning.

Pedagogical Reflections

Students' expressed their learning experiences related to synchronous videoconferencing classroom with course content, exams, tutorials and feedback, and classroom atmosphere. This was a consideration related to the overall pedagogical objectives of the course. Students' perspective of their learning experience is valuable information that can improve synchronous videoconferencing delivery practices and offerings. Instructors who teach synchronous videoconferencing courses need to use their interpersonal skills to understand visual cues, body language, and facial expressions to create an environment for learning, which is an important task of the instructors' profession (Hallford, 2012). They need to find ways to make a connection and to see the students to form relationships either in a real or a virtual classroom. Discovering what provided meaningful learning experiences for these students can contribute to the field of synchronous videoconferencing delivery. It may also help finding out the unique needs of students and determine the expectations of them in synchronous videoconferencing classes.

Course Content

Students reported that they learned many new things in this format. They reported gaining knowledge and applying it to their education. One student reported, "I like it because I have a feeling of that we learn really academic English and learn maybe some terms [like] cohesion. I [haven't] really heard about this word anywhere [before] and I learned [it] in your class and I have really feeling of that we learn academic English." All of the students referred to synchronous videoconferencing delivery as an enhanced autonomous learning environment that had essential requirements for prerequisite academic skills such as note-taking which was not cared so much in the traditional classroom. One student also commented, "I think we have to understand you. We need academic English skills and you know listening skills are one of them. We had to work harder to improve our academic English. In normal lessons you know professors answer you when you want them to repeat but we have no chance to ask many questions in your lesson while you are teaching. But I know when we listen to you carefully there is no problem actually." Online learning provides skills with raising students' ability to concentrate on the lesson content and corresponds well with the students' learning expectations in this EAP course (Hui et al., 2008). One student noted, "I like visual things and technology. I learned more because you are away and I do not feel anxious so I comprehend more this way." Another student stated, "I'm keeping both vocabulary and grammar journals and while listening to you. I'm adding new things into my journals to use them in my other lessons." She discovered a way that they could apply the knowledge they learned to their departmental courses. This is considered the highest outcome of the course for the instructor.

Exams, Tutorials and Feedback

Students had one mid-term and final examination during the semester which was observed via synchronous videoconferencing. All of them agreed on that the exams they had in this format was fair as the questions were about what was taught to them. They reported that they felt as if the instructor was there and her authority was felt there even she was many kilometers away. They noted that when they did not understand the exam instructions they could ask her. One student stated, "It was okay, when we have questions, and you were all there with your web cam, and nobody copied." One student commented that he learned a lot better in the exams and also in the online feedback sessions of this course because they were to the point because there was a certain time allocated for them. Another student noted, "I learned about the midterm exam so I know what I have to learn for the final." Exams and feedback sessions need to be done in a way that students get encouraged to learn more in cooperation with what is thought based on the objectives of the course in the lessons in a motivating

environment and timed scheduled manner especially if they are taking the course in a virtual classroom. Students know the value of purposeful feedback sessions because these sessions make them prepare themselves for the exams with the instructor, and they have no chance to see the instructor whenever they want as they are in a virtual campus.

Classroom Atmosphere

Students reported that the instructor guided and tried to use an interactive teaching style while leading the tasks. Although students thought that there was less interpersonal interaction between their synchronous videoconferencing class and Istanbul class, they stated that students in Istanbul class and the instructor were very approachable. Mutuality needs to be specially taken care of by the instructor in synchronous videoconferencing classes (Banados, 2006). Activities which are aimed to be done in a synchronous videoconferencing lesson where students share the same textual, audio and visual information on a common tablet are not different than the traditional classroom but needs the instructor's special attention to the joint efforts to achieve common purposes by sharing the same lesson time. Most of the students also felt that they have gotten to know the other students and meet and form new friendships. Many of them reported that they knew each other from the Preparatory School and this class helped them a lot to improve their relationships with their classmates. One student said, "I think it is a good idea to leave the connection open between the break so we can ask questions to each other." Leaving the connection on can provide more opportunities for conversation, and feedback among students. This could be achieved by carrying out connection during break time across both classes for interpersonal interaction. The use of the microphones, remote controls, and the tablet may be promoted to students to use. Many times conversations are about the content of the lesson between students who have difficulties of understanding what is going on in the class and what is expected to be done for the next lesson or homework. Allowing and encouraging them to use the technological facilities in the classroom may help build their own learning communities (Hallford, 2012). It may also help students who want to get together outside of class to study. They can have their classmates' cell phone numbers and e-mail addresses to contact, and use the social media platforms to comment on what they are learning, which may motivate them to a great extent.

Administrative Reflections

Students' expressed their opinions about how the synchronous videoconferencing course is administered by referring to attendance, and assessments. This is a consideration directly related to the overall management and the requirements of the course. Students were responsible for attending the lessons —2 hours in synchronous videoconferencing class, 2 hours on *itslearning* platform during the semester. Those who did not attend class more than 10 hours in 14 weeks were not allowed to take the Final Examination. Students were to bring to class and study the material weekly as referred to in the syllabus by accessing *itslearning*, making full use of all materials and taking clear and complete notes of all the work covered during the semester. Instructors who design a synchronous videoconferencing course need to create principles which include a comprehensive attendance policy and provide a clear map of learning process as the course can be considered easy due to the practicality of the technological facilities that are used (Comas-Quinn, 2011). Students may assume that they can catch the tests any time and attendance is not a problem. The acceptance of the online classroom as a medium of language learning seems to be taken for granted by most students. In fact, attendance, tests and homework are the crucial components of a language learning class.

Attendance

Students reported that the instructor took attendance at every lesson, which was necessary because it made them feel as a university student. They noted that it would be very difficult for them to do the tests on *itslearning* and answer the questions in the mid-term and final examination if they did not attend the lessons. Students also reported that when they learned that the instructors in their other synchronous videoconferencing courses did not take attendance in their lessons, they would decide not to go to the class. One student noted, "My project teacher does not take attendance so I do not go to lesson and I cannot learn a lot." Actually, attendance should be a must not only in language learning but also some other courses which require continuous application.

Assessments

Students were satisfied as there was no one walking around or giving the feeling of annoying close attention in the exams. They reported that they did not feel disturbed with the observation from Istanbul during the mid-term and final examination although they knew that there was an intense invigilation with the help of many cameras located to provide clear visibility. Most of the students thought that they had been examined with very

well-designed questions in a fair situation and. One student commented, “in my other online courses, there are simply notes online, there are online tests, no one is invigilating so many students are cheating. It is not fair.” Feedback about the administration of the assessments can provide evidence that whether synchronous videoconferencing enables students to really feel themselves in a true learning environment or not. Most importantly, instructors need to give them the trust they need from many kilometers away. Instructors need to realize the importance of assessments in students’ life and they need to begin to show an awareness of some of the instructional design aspects gained very much importance these days.

This qualitative descriptive study with its inductive content analysis findings explores the learning experiences of freshmen students who have taken the core EAP course via synchronous videoconferencing. The students in this study help bring out the experiences and needs of synchronous videoconferencing classrooms. The change from traditional classroom delivery to online delivery was welcomed with most students. Students were overall satisfied with learning in a course given via synchronous videoconferencing and its management and its requirements. However, the purposeful sample of students is the limitation of this study. The students may be reserved to be totally honest with the researchers because one of the researchers is also their instructor, and they also have invested money into their education. Because of this, students were asked to answer the questions once in the tutorials and interviews. A larger sample size would be more appropriate to draw conclusions.

CONCLUSION

This study of transforming a traditional language course to online delivery points out the importance of meaningful learning experiences with the help of the advanced technology, opportunities for creating a learning environment and interpersonal communication between students as well as the instructor, and the significance of the administrative issues to build trust between students and the institution. The results of this study indicate that students have some insight into their own learning experiences that may contribute to the field of online learning. Online learning provides learning and opportunities for students that may not be available in a traditional classroom setting. Although, there is an urgent need for understanding the real expectations of students in terms of advanced technology features used in a language course, shared experiences can contribute to the offerings of online delivery of language courses in the future. Accordingly, students’ considerations can be addressed in lesson plans and instructional design with the improvements in technology features.

Uzaktan İngilizce Öğretmeni Yetiştirmede Uygulama Derslerinin Yönetim ve Organizasyonu: AÖF İÖLP E-Portfolyo Uygulaması

Sedat Demirel^a Ekrem Meriç^{b*}

^{a,b} Anadolu Üniversitesi, Açıköğretim Fakültesi

Özet

Öğretim programlarının etkinliği, öğretmenlerin iyi yetiştirilmesine bağlıdır. Tarihi açıdan bakıldığında, öğretim gereksinimin ortaya çıkması ile öğretmenlerin belli nitelikleri taşımasının gerekliliği ortaya çıkmış ve nitelikli öğretmen yetiştirme çalışmaları başlamış olup, günümüzde de yoğun olarak devam etmektedir.

Türkiye’de sekiz yıllık eğitime geçilmesi ile birlikte mevcut İngilizce Öğretmeni açığının kısa sürede giderilemeyecek boyutlara ulaşması üzerine, Milli Eğitim Bakanlığı ve Anadolu Üniversitesi arasında yapılan protokolle Açıköğretim Fakültesi bünyesinde İngilizce Öğretmenliği programı açılmıştır. Program, fakülte-okul işbirliği anlayışında harmanlanmış bir öğrenme modeli uygulamasıdır. Öğretmen adayları kuramsal bilginin yanı sıra Bakanlığa bağlı okullarda uygulama yapmaktadırlar.

Günümüzde, değişen teknolojik koşullar ve eğitim gereksinimlerinin farklılaşması, başta İnternet olmak üzere çağdaş iletişim teknolojilerinin yoğun olarak kullanıldığı ve uzaktan eğitimi klasik işlevlerinin ötesine taşıyan yapılanmalarla birlikte yeni bir dönem başlatmıştır.

Programda e-portfolyo uygulaması ile öğrenenler ve öğretenler arasındaki etkileşimin etkili hale getirilerek, gerçekleştirdikleri uygulamaları tartışmaları amaçlanmıştır.

Bu çalışmada Programın işleyişinde e-portfolyo uygulaması, uygulamanın yararları ve uygulamanın geliştirilme aşamaları açıklanmaya çalışılmıştır.

Anahtar kelimeler: Uzaktan eğitim, öğretmen yetiştirme, uygulama dersleri, e-portfolyo

ÖĞRETMEN EĞİTİMİ

Öğretmen, insan yetiştirme işlevini üstlenen, eğitim sisteminin vazgeçilmez ögesidir. Öğretim programlarının etkili bir şekilde uygulanabilmesi, uygulayıcı öğretmenlerin iyi yetiştirilmesine bağlıdır. (Işık ve Evin 2005, s.30)

Tarihsel süreçte, eğitim öğretim gereksiniminin ortaya çıkması ve eğitim öğretim konularında düşünce üretimine başlanması izleyen dönemlerde, belli nitelikleri taşıyan öğretmenlerin yetiştirilmesi gereği ile birlikte öğretmen yetiştirme çabaları başlamıştır. (Keçik, 2012, s.5)

Rönesans sonrasında ahlaki değerlere sahip bilimsel bilginin deney yoluyla öğretilmesi önem kazanmış, daha sonraları J. Dewey’in de belirttiği gibi eğitim-öğretimin amacı düşünmeyi öğretmek olmalı fikrinden hareketle öğretmen, öğrencilere sadece bilgi aktarmak yerine onlara düşünmeyi ve öğrenmeyi öğretmeyi amaçlayan bir birey olmalı görüşü benimsenmiştir.

Günümüzde geliştirilen öğretmen eğitimi programları öğretmen adayına alan ve meslek bilgisi vermenin yanı sıra genel kültürü artırıcı dersleri ve uygulama çalışmalarını kapsamaktadır. (Okçabol, 2005, s.13-17)

1973 yılında yürürlüğe giren Milli Eğitim Temel Yasası her öğretim basamağındaki öğretmenlerin en az ön lisans düzeyinde yükseköğrenim görmesi zorunluluğunu getirmiş, 1982 tarihli Yükseköğretim yasası da öğretmen yetiştiren kurumları yükseköğretim bünyesine almıştır. 1989 tarihli YÖK kararı ile öğretmenlerin en az lisans mezunu olmaları karara bağlanmıştır.

1982’de üniversite yapısına dâhil edilen eğitim fakülteleri, 1996’da Yükseköğretim Kurulu tarafından yeniden yapılandırılmıştır. (Gültekin, 1993) Bu kapsamda YÖK -Dünya Bankası- Milli Eğitimi Geliştirme Projesi kapsamında gerçekleştirilen öğretmen yetiştirme programlarına yönelik çalışmalarda, öğretmen eğitiminde kuramsal temel oluşturma çalışmalarının yanı sıra, uygulama çalışmalarının önemi ve katkısı da göz önüne alınmıştır. (Keçik, 2012, s.7)

Fakülteler ve eğitim kurumları, öğretmen adaylarının günümüzde okullarda uygulanan yöntem, teknik ve yaklaşımları öğrenmelerine ve geliştirmelerine olanak sağlayacak, karşılıklı işbirliği ve etkileşim olanakları geliştirerek, yeni yöntem ve teknikleri uygulama imkânı sağlamalıdır. Bu amaçla, e-portfolyo, net-folyo uygulamaları gibi işbirliğine dayalı stratejiler ve teknoloji etkili bir biçimde kullanılarak, (Barbera, 2009, s.342-

357) arařtırmacı bir yaklařım gerekleřtirilmelidir. Byle bir yaklařım, dzenli dřnce sistematiđini ve uygulamalarını yansıtan, bunların zerine dřnen đretmenlerin geliřimine katkı sađlayabilecektir. (Keik, 2012, s.7)

Aık đretim Fakltesi İngilizce đretmenliđi programı, bu geliřmeler ve faklte-okul iřbirliđi anlayıřı temel alınarak 2000 yılında Milli Eđitim Bakanlıđı ile birlikte đretmen aıđını kapatmak amacı ile bařlatılmıř bir harmanlanmıř đrenme (blended learning) modeli uygulamasıdır. İngilizce đretmenliđi adayları kuramsal bilginin yanı sıra 3 ve 4. sınıfta Milli Eđitim Bakanlıđı'na bađlı okullarda uygulama yaparak đretmenlik deneyimi kazanmaktadırlar. (Hakan, zgr, Kara, Krm & zkanal, 2004, s.2)

2009 yılında programda e-portfolyo uygulaması bařlatılarak, uygulama đretmeni, uygulama đretim elemanı ve đretmen adayları arasındaki etkileřim etkili hale getirilerek, đretmen adaylarının yansıtmaya yapmaları ve đretmenleri ve arkadařları ile duygu, dřnce ve gerekleřtirdikleri uygulamaları tartıřmaları amalanmıřtır. (Keik, 2012, s.7)

UZAKTAN ĐRETMEN EđİTİMİ

đretme ve đrenme tekniklerinde ve teknolojiye yařanan ilerleme đrenme programlarının daha verimli ve etkin kullanımı iin geleneksel yntemlerden farklı ve basit yeni olanaklar sunmuřtur. (Hickman, 2007)

20. yzyılın ortasından sonra yařanan teknolojik geliřmeler eđitim ve đretim alanında da yeni aılımlara nderlik etmiř ve đretmen yetiřtiren programlar da bu aılımların etkisinde kalarak geleceđin đretmenlerini yetiřtirmede ađın teknolojik geliřmelerinden faydalanmaya bařlamıřtır. Bu teknolojik geliřimlerin eđitim alanındaki uygulamalarından birisi de uzaktan eđitim yntemlerinin yksekđretimde kullanılmaya bařlamasıdır.

En yalın tanımıyla uzaktan eđitim, zaman ve mekn aısından đretmen ve đrenci arasında fiziki bađı en aza indirirken, diđer iletiřim aralarından en yksek dzeyde yararlanılması yoluyla daha fazla sayıda kiřinin eđitimini sađlayan bir sistemdir. Uzaktan eđitimin en temel zelliđi zaman ve kullanılan ortam aısından sađladıđı esnekliktir. Gnmzde uzaktan eđitim internet ve bilgi iřlem teknolojisi kullanımına da ađırlıklı olarak yer vermektedir. (Caner, M. 2012, s.13) Uzaktan eđitim uygulamaları tarihsel sre ierisinde beř ařamadan oluřmaktadır. (Somuncuođlu, 2005, s.89)

Birinci nesil uzaktan eđitim uygulamaları 1700'li yıllardaki mektupla eđitim ile bařlamıřtır. (Rautenbach, 2007) İkinci nesil uzaktan eđitim uygulamaları 1950 ve 60'lı yıllarda kitle iletiřim aralarındaki geliřmelere bađlı olarak radyo ve televizyon yayıncılıđından da yararlanarak (Cambre, 1991, s.267-295; ve Davey, 1999) eđitim dnyasındaki yerini almıřtır.

20.yzyılın sonlarında hayatımıza giren internetin kullanımı ise uzaktan eđitim alanında yeni bir dnemi bařlatmıřtır. İnternet ađlarının ve bilgi teknolojileri odaklı,

- İřitsel ortamda konferans (Audiotele-conferencing)
 - Grntl konferans (Video-conferencing)
 - Audiographic Communication
 - Televizyon yayınları ve radyo yayınları (Broadcast TV/Radio and Audio-teleconferencing)
- (Somuncuođlu, 2005, s.89)

gibi eđitim aralarının yaygınlařmasıyla 90'ların bařında 'nc nesil uzaktan eđitim' (Holmberg, 1995) uygulamalarına geilmiřtir. İzleyen dnemde,

- Etkileřimli (evrimii) oklu Ortam (Interactive multimedia (IMM) online)
- İnternete Dayalı Kaynaklar (Internet based Access to WWW resources)
- Bilgisayar Ortamında İletiřim (Computer Mediated Communication)

kullanımı ile esnek đrenme modeli olarak da adlandırılan drdnc nesil uzaktan eđitim uygulamaları kullanılmıřtır. (Somuncuođlu, 2005, s.89)

2000 yılına gelindiđinde artık 'beřinci nesil uzaktan eđitim'(Taylor, 2001) olan harmanlanmıř đrenme (blended learning) ortamları kendi geliřimini srdrmeye bařlamıřtır. Bu kapsamda drdnc nesilde yer alan,

- Etkileřimli (evrimii) oklu Ortam (Interactive multimedia (IMM) online)
- İnternete Dayalı Kaynaklara (Internet based Access to www resources) ek olarak
- Otomatik yanıtlama sistemi kullanılan bilgisayar ortamlı iletiřim,
- Kurumsal kamps portalına eriřim,
- Sre ve kaynakların etkili kullanımı uygulamada yer almaktadır. (Somuncuođlu, 2005, s.89)

Moore ve Kearsley uzaktan eđitimin ařamalarını tarihsel aıdan beř dneme ayırmakta, birinci dnemi mektupla iletiřim, ikinci dnemi radyo ve televizyon yayıncılıđı, nc dnemi aık niversiteler, drdnc dnemi telekonferanslar, beřinci dnemi ise internet / web uygulamaları olarak sıralamaktadır. (Moore ve Kearsley, 2012)

Son yıllarda yapılan çalışmalar, yüz yüze eğitim ile uzaktan eğitimin öğrencilerin öğrenme ve başarısı ile eğitimden aldıkları memnuniyet ve doyum açısından benzer sonuçlara ulaşıldığını ortaya koymuş ve uzaktan eğitime ilginin artmasına yol açmıştır. (Barry ve Runyan, 1995; Schulman ve Sims, 1999; Gagne ve Shepherd, 2001; Hiltz, Zhang ve Turoff, 2002; Russell, 1999; 2001)

Uzaktan eğitim alanındaki bu öğretim yaklaşımı dünyada ve Türkiye’de yükseköğretim alanında yerini almış ve öğretmen yetiştiren kurumlar da bu teknolojiyi etkin olarak kullanmaya başlamışlardır.

Uzaktan öğretim alanında Türkiye’deki öğrenci sayısı 2013 yılı itibariyle yaklaşık 1.400.000 civarındadır ve bu rakam sistemi ilk kullanmaya başlayan Anadolu Üniversitesi dışında diğer üniversitelerin de uzaktan eğitim programları açmasıyla her yıl artmaktadır.

Teknoloji destekli uzaktan eğitimde, teknolojik gelişmelerden yaygın ve yoğun olarak yararlanılmaya başlanması ile öğretim kurumlarının dersleri zaman ve mekân ile sınırlı sınıf ortamlarından farklılaşmıştır. Günümüzde İnternet, uzaktan eğitim uygulamaları içinde ekonomik ve demokratik öğrenme ve öğretme ortamlarından birisi durumuna gelmiştir. (Khan, 1997)

Uzaktan eğitim uygulamalarının, özellikle teknoloji destekli uzaktan eğitim uygulamasının öğretmen yetiştirme alanında da kullanılmaya başlanması hem dünyada hem de ülkemizde oldukça yeni ve gelişmekte olan bir uygulamadır. Bu nedenle, uzaktan eğitimin öğretmen yetiştirme alanında kullanımıyla ilgili kuramsal çalışmalar çok olsa da öğretmenlik uygulamaları ile ilgili deneysel çalışmalar oldukça sınırlı sayıdadır. (Caner, 2012, s.14)

Wittenburg ve McBride (1998) e-posta ile sağlanan danışmanlık ve dönüt verme sürecinin etkili bir iletişim sağladığı ve öğretmen adayları üzerinde olumlu katkılarının olduğunu ortaya koymuştur.

King (2002) Amerika’daki bir üniversitede yüz yüze öğretim ile uzaktan eğitimin birleştirildiği “harmanlanmış öğrenme” (blended learning) ortamında öğrenme ortamlarının, öğretmen adayları için interaktif ve katılımcı bir ortam sağladığını ve yüz yüze yapılan öğretmenlik uygulaması derslerinin olumsuz yönlerini en aza indirdiğini gözlemlemiştir.

Whipp (2003), öğretmen adayları arasında oluşturulacak e-posta merkezli bir tartışma grubunun bireysel yansıtma raporları hazırlamaları ve bunları birbirleriyle paylaşmalarının sonucunda öğretmen adaylarının daha etkili mesajlar paylaştıklarını ortaya koymuştur.

Khine ve Lourdasamy (2003) bir web sayfası yoluyla öğretmen adaylarına İnternet üzerinden ulaştırılan ders içeriği, katılımcılara ulaştırılan çoklu ortam destekli CD’ler ve çevrim-içi tartışma platformu yoluyla bir sınıf ortamı oluşturmuştur.

DeWert, Babinski ve Jones (2003) bir eylem araştırması desenleyerek İnternet üzerinden çevrim-içi bir ortam yoluyla profesyonel destek sağlamış ve bu ortamın onlara öğretmenlik sürecindeki katkısını belirlenmeye çalışmıştır.

Jung ve arkadaşları (2006) uzakta eğitimle yetişen öğretmen adaylarına çevrim-içi video konferans yoluyla dönütler vermiş ve bu ortamın öğretmenlik uygulaması sürecine katkılarını incelemiştir.

Bangel, Enersen, Capobianco ve Moon (2006) öğretmen adaylarına bir çevrim-içi destek ortamı oluşturmuş, öğretmen adaylarının verilen çevrim-içi eğitimden yararlandıkları, videoya kaydedilmiş kendi uygulamalarını analiz etmelerinin uygulama sürecinde olumlu katkılar sağladığını ortaya koymuştur.

Young ve Levis (2008) Amerika Birleşik Devletleri’nde uzaktan eğitim yoluyla öğretmen yetiştiren yedi ayrı kurumda öğrenim gören öğretmen adaylarının uzaktan öğretim ile ilgili görüşlerini ve onların programlarından memnuniyetlerini değişik boyutlarda ele alarak incelemiş ve uzaktan eğitim alan öğretmen adaylarının aldıkları eğitimden memnun olduklarını ve olumlu tutumları olduklarını ortaya koymuştur.

Barnett (2006) web tabanlı profesyonel bir destek sistemi geliştirilmiş ve örnek ders videolarını web üzerinden ulaştırarak, incelemeleri ve derslerle ilgili görüşlerini çevrim-içi tartışma ortamı yoluyla birbirleriyle paylaşmalarını istemiştir. Çalışmada öğretmen adaylarına sağlanan İnternet destekli profesyonel destek sisteminin öğretmen yetiştirmede bir değişim ve reform için olumlu katkıları olduğu ortaya koyulmuştur. (Caner, 2012, s.14-17)

Aydın (2011, s.219-230) yabancı dil öğretiminde senkron sınıfların kullanımının öğrencilere ve farklı örnekler sunma ve öğreticilere farklı etkileşim ortamları yaratmada kolaylık ve avantaj sağladığını belirtmiştir.

Altunay (2011, s.231-246) uzaktan İngilizce Öğretiminde e-öğrenme uygulamalarının öğrenmenin sürekliliğine katkı sağladığını ortaya koyarken, (Şakar, 2011 s.247-261) harmanlanmış öğrenme modelinde Web tabanlı e-öğrenme uygulamalarının çevrim-içi eşzamanlı olmayan uygulamalar ile desteklenmesinin önemini ortaya koymuştur.

İstifçi (2011, s.263-279) ise Anadolu Üniversitesi İngilizce Öğretmenliği Lisans Programı son sınıf öğrencilerinin e-öğrenme ortamı olarak Web 2.0 araçlarını kullanmalarının öğretimde başarının artmasına yol açacağını ortaya koymuştur.

Bir başka çalışmada İngilizce öğretmenliği öğretmen adaylarının öğretmenlik uygulaması sürecinde daha etkili bir dönüt uygulaması ve adaylar arasında etkili bir iletişim sağlayabilmek için harmanlanmış bir öğretmenlik uygulaması modeli oluşturularak, katılımcıların bu ortamla ilgili görüşleri ve uygulaması sürecinde karşılaşılan sorunlar incelenmiştir. Çalışmada bir web sayfası tasarımı yapılarak öğretmen adaylarının hazırladıkları günlük ders planları ve uygulama okullarındaki ders anlatım videoları İnternet üzerinden katılımcı öğretmen adaylarına ulaştırılmış, öğretim üyesinin ve sınıftaki diğer öğretmen adaylarının ders planları ve kaydedilmiş ders uygulamalarıyla ilgili dönütleri de çevrimiçi tartışma platformu yoluyla paylaşılması sağlanmıştır. Çalışmanın bulguları ışığında ve çalışmaya katılan öğretmen adaylarının bu ortamdan edindikleri memnuniyet ve doyum dikkate alınarak İngilizce öğretmenliği öğretmen adayları için hazırlanan bu ortamın gerek uzaktan öğretim, gerekse yüz yüze (örgün) öğretim öğrencileriyle kullanılmasının öğretmen adaylarının mesleki gelişimleri açısından olumlu katkılar sağladığı bulgusuna ulaşılmıştır. (Caner, 2010, s.14)

Örnekleri verilen uygulamalarda, uzaktan eğitim yoluyla öğretmen yetiştirmede kuramsal derslerde çevrim-içi destekli tartışma platformları kullanma, web sayfaları yoluyla ders videolarını öğretmen adaylarına ulaştırma, internet yoluyla dönüt sağlayarak destek sağlamanın, önemli katkılar sağladığı görülmektedir. Bu nedenle, uzaktan eğitim yoluyla yetiştirilen öğretmen adaylarına öğretmenlik uygulamaları sürecinde çevrim-içi tartışma platformları ve bilgi teknolojileri aracılığı ile profesyonel destek sağlanması, meslek yaşamlarında sıklıkla İnternet ve çoklu ortam araçlarını kullanması beklenen öğretmen adaylarının yetiştirilmesinde önemli katkılar sağlayacaktır. (Caner, 2012, s.14)

AÇIKÖĞRETİM FAKÜLTESİ İNGİLİZCE ÖĞRETMENLİĞİ LİSANS PROGRAMI

Ülkemizde 1982 yılından itibaren öğretmen yetiştirme görevini üstlenen eğitim fakülteleri bir yandan sistemin ihtiyacı olan öğretmenlerin yetiştirilmesine katkı sağlarken diğer yandan gerek nicel gerekse nitel yönden istenilen düzeye ulaşmakta zorlanmıştır. Bunun sonucu olarak bazı alanlarda ihtiyaçtan fazla öğretmen yetiştirilirken, bazı alanlarda ihtiyaç duyulan sürede karşılanması mümkün olmayan öğretmen açığı ortaya çıkmıştır.

1990'lı yılların sonlarında gerek sekiz yıllık kesintisiz ilköğretim uygulamasının başlatılması gerekse ilköğretim 4. ve 5. sınıflarına yabancı dil dersinin konulmasıyla var olan İngilizce öğretmeni ihtiyacı daha da artmıştır.

Bütün olanakların kullanılmasına karşın İngilizce ve Okul Öncesi öğretmeni ihtiyacının karşılanamaması Milli Eğitim Bakanlığını yeni arayışlara yöneltmiştir. Ülke gerçekleri göz önüne alındığında kaliteden ödün vermeden istenilen sayıda ve en kısa sürede İngilizce ve Okulöncesi Öğretmeni yetiştirilebilmesi için en rasyonel çözümün uzaktan öğretim sistemi ile yapılacak eğitim programı olduğuna karar verilmiştir.

Bu nedenle 2000-2001 öğretim yılından itibaren Milli Eğitim Bakanlığı ile Anadolu Üniversitesi arasında yapılan protokol ile Açık Öğretim Fakültesi bünyesinde İngilizce Öğretmenliği Lisans Programı (İÖLP) kurulmuştur.

Programın amacı, eğitim sistemimizde ihtiyaç duyulan İngilizce öğretmeni açığının giderilmesine donanımlı mezunlar vererek katkı sağlamaktır.

AÖF İNGİLİZCE ÖĞRETMENLİĞİ LİSANS PROGRAMININ GENEL YAPISI

İngilizce Öğretmenliği Lisans Programı Anadolu Üniversitesi Açıköğretim Fakültesine bağlı dört yıllık bir öğretmen yetiştirme programıdır. Milli Eğitim Bakanlığı ile Anadolu Üniversitesi arasında imzalanan protokol gereği başlatılan bu program, halen ülkemizdeki Eğitim Fakültelerinde uygulanmakta olan örgün İngilizce Öğretmenliği Lisans Programlarına eşdeğer bir programdır.

Programda hem örgün hem de uzaktan öğretimin birleştirildiği bir “karma eğitim (blended) modeli” uygulanmaktadır. Programın ilk iki yılı kısmen örgün (yüz yüze eğitim) son iki yılı ise tamamen uzaktan öğretim sistemi sağlanmakta, mesleki ve teorik bilgiler internet üzerinden çevrimiçi derslerle desteklenmektedir. Milli Eğitim Bakanlığı (MEB) ile Anadolu Üniversitesi arasındaki protokole göre ilk iki yıl dersleri yüz yüze öğretim ile 16 ilde yürütülmüştür. Milli Eğitim Bakanlığı ile yapılan protokolün sona erdiği 2007-2008 öğretim yılından bu yana öğretim Anadolu Üniversitesi ile diğer üniversiteler arasında yapılan protokollere göre 8 ilde (Adana, Ankara, Balıkesir, Edirne, Erzurum, Eskişehir, İzmir, Konya) yüz yüze öğretim yürütülmektedir. Programın son iki yılında ise öğrenciler öğrenimlerine uzaktan öğretim sistemiyle istediği ilde devam etmektedirler.

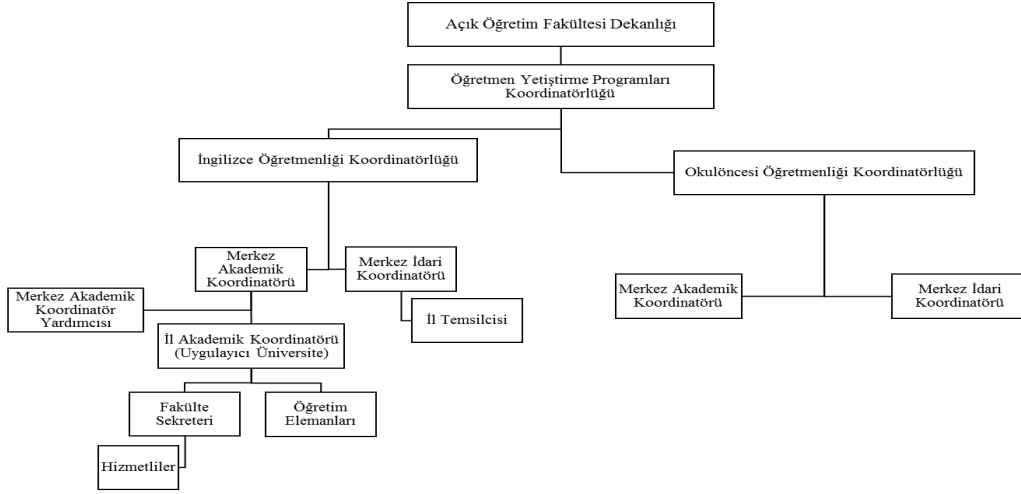

Programda öğrenciler lisans düzeyindeki dört yıllık eğitimlerini başarıyla bitirdiklerinde “İngilizce Öğretmeni Lisans Diploması” almaya hak kazanmakta ve Milli Eğitim Bakanlığı'nın mevzuat hükümlerine göre ihtiyaç oranında İngilizce öğretmeni olarak atanmaktadırlar. Öğrenciler dilerlerse ilk iki yılı başarıyla tamamladıktan sonra kayıtlarını sildirmek koşuluyla “Önlisans Diploması” almaya hak kazanabilirler. Önlisans diploması alan

öğrenciler veya önlisans diploması almayıp üçüncü sınıfa (alttan dersi kalmamak koşuluyla) başarıyla geçen öğrenciler, isterlerse öğretmen olarak mezun olmamalarına karşın, gereksinim oranında Milli Eğitim Bakanlığı'na bağlı okul ve kurumlarda ücret karşılığında İngilizce okutma görevi alabilmektedirler.

AÖF İNGİLİZCE ÖĞRETMENLİĞİ LİSANS PROGRAMININ YÖNETİM VE ORGANİZASYONU

Farklı coğrafi bölgelere yayılmış yüz yüze eğitim merkezleri ile uygulama eğitim merkezlerinin tek merkezden yönetilmesi amacıyla programın yönetim ve organizasyon faaliyetleri Fakülte bünyesinde oluşturulan "Koordinasyon Birimi" tarafından yürütülmektedir.

İngilizce Öğretmenliği Lisans Programı'nda karma eğitim (blended) modeli uygulandığından, öğrenciler ilk 2 yılda bazı dersleri protokolle belirlenen illerdeki yüz yüze eğitim merkezlerinde örgün olarak almaktadırlar. 2000-2001 öğretim yılından bu yana Programda öğrencilere yüz yüze ders veren Milli Eğitim Bakanlığı Formatör Öğretmenleri ve Anadolu Üniversitesi ile diğer üniversitelerin öğretim elemanı sayısı 2.313'tür.

Şekil 1: Öğretmenlik Programları Organizasyon Şeması

Ayrıca programın idari ve akademik işlerinin yürütülmesinde Eskişehir'de Merkez Akademik ve İdari Koordinatörlüğü yer alırken diğer il merkezlerindeki yüz yüze ders verilen fakültelerde il akademik koordinatörleri, fakülte sekreterleri, hizmetliler, ders veren öğretim elemanları ile Açıköğretim Fakültesi Bürolarında görevli AÖF il temsilcileri de görev almaktadırlar.

Kurulduğundan bugüne programa toplam 14.613 öğrenci alımı yapılmış olup, 10.553 öğrenci mezun olmuştur. Mezun öğrencilerin Milli Eğitim Bakanlığı'na bağlı okullarda kadrolu ya da ücret karşılığı atanma oranı yaklaşık %85 düzeyindedir.

UYGULAMA DERSLERİNİN YÖNETİMİ

İngilizce Öğretmenliği Lisans Programı'nda yer alan uygulama dersleri;

- Topluma Hizmet Uygulamaları I (3.Sınıf – Güz Dönemi – 5. Yarıyıl)
- Topluma Hizmet Uygulamaları I (3.Sınıf – Bahar Dönemi – 6. Yarıyıl)
- Okul Deneyimi (4.Sınıf – Güz Dönemi – 7. Yarıyıl)
- Öğretmenlik Uygulaması (4.Sınıf – Bahar Dönemi – 8. Yarıyıl)

olmak üzere 4 tenedir. Dersler 14 haftalık programda uygulanmaktadır. *Okul Deneyimi* ve *Öğretmenlik Uygulaması* dersleri Eğitim Fakültelerinin yeniden yapılandırılması kapsamında hazırlanan Fakülte-Okul İşbirliği kılavuzuna göre yürütülmektedir.

Yükseköğretim Kurulu Başkanlığı onayı ile Fakültelerin öğretmen yetiştiren bölümlerinde yürütülen ders programlarında yapılan değişiklik uyarınca Programa 2008-2009 öğretim yılından itibaren *Topluma Hizmet Uygulamaları dersi* konulmuştur. Topluma Hizmet Uygulamaları dersinde, öğretmen adaylarının topluma hizmet etmeye yönelik çalışmalarının ilköğretim okullarında uygulanmasına yönelik temel bilgi ve becerileri kazanabilmeleri amaçlanmıştır.

Milli Eğitim Bakanlığı ile Anadolu Üniversitesi Rektörlüğü arasında Topluma Hizmet Uygulamaları Dersinin yürütülmesi ile ilgili 11.07.2008 tarihinde imzalanan protokol gereği, İÖLP öğrencilerinin tam gün eğitim veren ilk ve ortaöğretim okullarındaki öğrenciler ile okul bitiminde etüt çalışması şeklinde yapılması öngörülmüştür.

Bu kapsamda, öğretmen adayının etüt çalışmalarının temel amacı olarak öğrencilerin ev ödevlerinde anlamadıkları konulara yardımcı olmak, onay alınması ve zamanın uygun olması durumunda, ilköğretim öğrencilerine İngilizceyi sevdirmeye amaçlı etkinliklere de yer verilmesidir. (Özcan, 2011) Toplum Hizmet Uygulamaları dersi uygulamasının yapılacağı okullar Anadolu Üniversitesi ve İl Millî Eğitim Müdürlükleri ile yapılan yazışmalarla öncelikle sosyal gelir seviyesi düşük semtlerdeki okullar arasından seçilmektedir.

Programda yukarıda adı geçen uygulama derslerinin ülke genelinde yürütülmesi ve koordinasyonu için Program Koordinatörlüğünde bir bilgi sistemi oluşturulmuş ve bu amaçla da “Uygulama Dersleri Yönetim Sitesi” kurulmuştur. MS Windows Server 2003 (IIS 6.0), Office Yazılımları, MS VS Interdev 6.0, MS VS Visual Basic yazılımları kullanılarak hazırlanan bu site “Program Uygulama Koordinatörlüğü” yönetici ve çalışanları tarafından kullanılmaktadır.

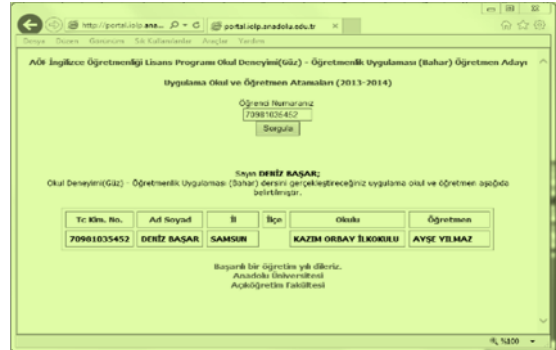

Programda verilerin saklanması amacıyla Anadolu Üniversitesi, Bilgisayar Araştırma ve Uygulama Merkezi (BAUM) tarafından sunucu hizmeti verilmekte, Program Uygulama Koordinatörlüğü çalışanları ve akademik danışmanlık hizmeti veren diğer Anadolu Üniversitesi personeli bu sunucuya Yerel Alan Ağı (LAN – Local Area Network) üzerinden erişim sağlarken, İÖLP öğrencileri ile Anadolu Üniversitesi kampüsü dışından bağlanan MEB personeli il uygulama koordinatörleri, okul müdür ve koordinatörleri ve rehber öğretmenler (WAN – Wide Area Network) üzerinden erişim sağlamaktadır.

Şekil 2: Uygulama Dersleri Yönetim Sitesi

Uygulama Dersleri için oluşturulmuş bu bilgi sisteminin fonksiyonları;

- Öğrenciler ve Uygulama derslerinde görev alanların gerekli bilgilerini Veri Tabanı Yönetim Sisteminde saklamak ve güncellemek,
 - Öğrenci kimlik bilgileri,
 - Öğrenci uygulama dersi atama bilgileri,
 - Uygulama dersi görevli bilgileri,
 - Uygulama dersi yapılacak il, okul ve rehber öğretmen bilgileri
- Öğrencilerin uygulama dersi il, okul, okul koordinatörü, öğretmen, öğretim elemanı atamalarının yapılması, duyurulması
- Öğrencilerin uygulama dersi atama değişikliklerin yapılması, izlenmesi ve raporlanması şeklinde sıralanmaktadır.

Şekil 3: Uygulama Dersleri Yönetim Sitesi Duyuru ve Atama Arayüzleri

UYGULAMA DERSLERİNİN ORGANİZASYONU

Uygulama derslerinin organizasyonu *İÖLP Uygulama Koordinatörlüğü* tarafından Türkiye’de 81 il merkezi ve bazı ilçeleri ile KKTC’de yapılmaktadır. İÖLP Uygulama Koordinatörlüğünün her öğretim yılı Güz Dönemi öncesinde uygulama dersleri ile ilgili olarak yürüttüğü işlemler;

- Bilgisayar Araştırma ve Uygulama Merkezinden uygulama derslerini alan öğrenci sayılarının elde edilmesi,
- Öğrencilerin kendi belirledikleri adres illerine göre dağılımının yapılarak o ildeki uygulama okulu, okul koordinatörü ve öğretmen ihtiyacının belirlenmesi,
- Belirlenen ihtiyaca göre İl Milli Eğitim Müdürlükleri ile yapılacak yazışmalarla uygulama yapılacak okul, okul yöneticileri ve rehber öğretmenlerin belirlenmesi,
- Anadolu Üniversitesi Yabancı Diller Yüksekokulu ve Eğitim Fakültesinden, öğrencilere uygulama derslerinde danışmanlık yapacak öğretim elemanlarının belirlenmesinin istenmesi,
- Gelen bilgiler doğrultusunda öğrencilerin uygulama yapacakları uygulama okulu, uygulama öğretmeni ve uygulama öğretim elemanı atamalarının İnternet üzerinden yapılarak duyurulması,
- Atama listelerinin ilgili uygulama öğretmeni ve öğretim elemanlarına, e-posta aracılığıyla iletilmesi ve uygulama dersleri yönetim sitesi aracılığıyla duyurulması,
- Uygulama dersleri atamalarının her bir uygulama dersi için oluşturulan *Uygulama Dersleri Veri Tabanına* işlenmesi

Yukarıda sıralanan işlemlerin organizasyonu her öğretim yılı başında güz dönem için bir kez yapılır ve takip eden bahar dönemini de kapsar. Olağanüstü durumlar dışında öğrenciler güz dönemi öncesinde belirttiği adres dışında başka bir ilde uygulama dersini yürütemezler.

Ders Adı/Öğrenci Sayısı	Topluma Hizmet Uygulamaları I & II	Okul Deneyimi & Öğretmenlik Uygulaması
Uygulama Öğretmeni Başına Düşen Öğrenci	4 - 6	4 - 6
Uygulama Öğretim Elemanı Başına Düşen Öğrenci	50 - 70	6 - 8

Şekil 4: Uygulama Dersleri Öğrenci Sorumluluk Sayıları

Programda görevli uygulama rehber öğretmenler Topluma Hizmet Uygulamaları I ve II dersleri ile Okul Deneyimi ve Öğretmenlik Uygulaması derslerinde 4 – 6 arasında öğrenciye rehberlik yapmaktadır.

Diğer taraftan programda Anadolu Üniversitesinde görevli uygulama öğretim elemanları ise Topluma Hizmet Uygulamaları I ve II derslerinde 50 – 70 arasında, Okul Deneyimi ve Öğretmenlik Uygulaması derslerinde 6 – 8 öğrenciye danışmanlık yapmaktadır.

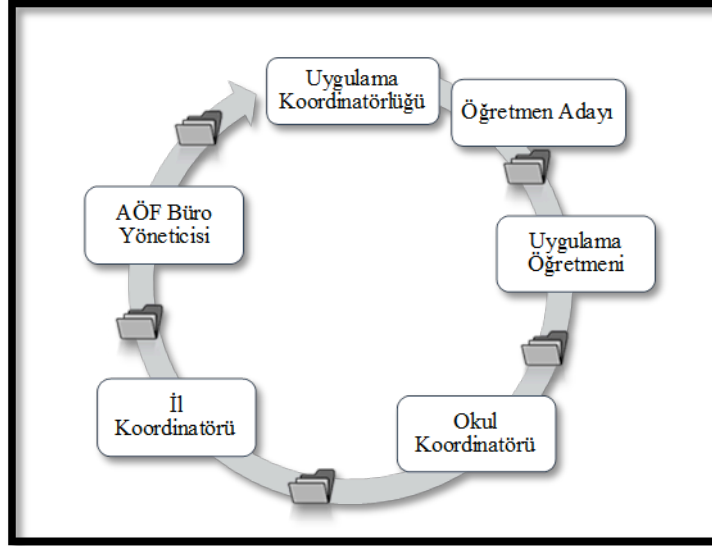

İngilizce Öğretmenliği Lisans Programı Uygulama Dersleri	Öğretim Yılı	Öğrenci Sayısı	Milli Eğitim Bakanlığı				Anadolu Üniversitesi Öğretim Elemanı
			III Uygulama Koordinatörü	Uygulama Okul Müdürü	Uygulama Okul Koordinatörü	Uygulama Öğretmeni / Rehber Öğretmen	
Okul Deneyimi & Öğretmenlik Uygulaması	2003-2004	199	46	121	121	86	69
Okul Deneyimi & Öğretmenlik Uygulaması	2004-2005	1023	66	92	92	273	106

Şekil 5: İngilizce Öğretmenliği Lisans Programı Yıllar İtibariyle Sayısal Veriler

Türkiye genelinde toplam 81 ilde Programın kurulduğu günden bugüne Topluma Hizmet Uygulamaları I-II derslerini 4.907 öğrenci alırken, 11.653 öğrenci ise Okul Deneyimi ve Öğretmenlik Uygulaması derslerine katılmışlardır. Adı geçen uygulama derslerinde günümüze kadar görev alan Milli Eğitim Bakanlığı idareci ve öğretmenliği ile Anadolu Üniversitesi öğretim elemanlarının toplam sayısı ise 9.294'tür.

UYGULAMA DERSLERİNİN GELENEKSEL SİSTEMLE YÖNETİMİ

İngilizce Öğretmenliği Lisans Programı'nda 2008-2009 öğretim yılında e-portfolio sistemine geçilmeden önce uygulama dosyası değerlendirme süreci geleneksel olarak yürütülmüştür. Bu dönemde öğrenciler aldıkları her uygulama dersi için öğretim yılı sonunda o derse ait uygulama dosyasını hazırlamışlardır. Geleneksel sistemde öğrenciler dönem sonunda uygulama dosyasını sorumlu olduğu uygulama öğretmenine teslim etmekte, uygulama öğretmeni de dosyayı inceleyip not verdikten sonra görevli olduğu okulun koordinatörüne teslim etmekteydi. Uygulama dosyaları, daha sonra sırasıyla o ildeki Milli Eğitim Müdürlüğü'nde görevli il uygulama koordinatörü ve AÖF Büro Yöneticiliği aracılığıyla kargo ile Uygulama Merkez Koordinatörlüğüne iletilmekteydi. Gelen uygulama dosyaları Koordinasyon Merkezince Anadolu Üniversitesi öğretim elemanlarından oluşturulan komisyonlar tarafından tekrar değerlendirilmekte ve öğrencinin uygulama dersinden aldığı not ikinci değerlendirmeden sonra belirlenerek, öğrenciye ilan edilmek üzere Bilgisayar Araştırma Uygulama Eğitim Merkezi'ne iletilmekteydi.

Şekil 6: Geleneksel Sistemde Uygulama Dosyası Okuma Süreci

Dosya okuma sürecinde geleneksel sistem bazı yönetsel ve örgütler sorunları da beraber getirmiştir. Bunları;

- Uygulama dosyalarının iletiminde oluşabilecek fiziksel yıpranma, kayıp ve olası mağduriyetler,
- Otokontrol olmaması, denetimin güçlüğü,
- Zaman ve emek kaybı,
- Denetim alanının büyüklüğünden dolayı iş takibinin güçlüğü,
- Bilgiye erişimde ve güncellemedeki zorluklar,
- Kırtasiyeciliğin ve bürokratik işlemlerin çokluğu,
- Portfolyoların saklanmasıyla ilgili güçlüğü,
- Uygulama dosyalarının koordinatörlüğe iletilmesindeki yüksek maliyetler,
- Görevlilere ilişkin bilgilerin güncellenmesinde yaşanan aksaklıklar ve
- İşlem adımlarının uzunluğu şeklinde özetlenebilir.

UYGULAMA DERSLERİNİN E-PORTFOLYO SİSTEMİYLE YÖNETİMİ

Uygulama derslerinin geleneksel sistemde değerlendirilmesi sürecinde yaşanan sorunların ortadan kaldırılması amacı ile İngilizce Öğretmenliği Lisans Programı'nda 2008-2009 öğretim yılı ile birlikte e-portfolio sistemine geçilmiştir.

E-Portfolio Uygulaması ve Öğretmen Eğitimi

Teknoloji alanındaki gelişmeler ve internet, ölçme-değerlendirme konusunda yeni seçenekler yaratmış, ürün dosyalarının elektronik ortamlarda oluşturulmasına ve sunulmasına olanak sağlamıştır. Bütün bu gelişmeler e-portfolio uygulamasını ortaya çıkarmıştır. Öğrenciler tarafından oluşturulan özgün ürünlerin, elektronik ortamda dijital olarak bir araya getirilerek, kaydedilip saklanması “Elektronik Ürün Dosyası” (e-portfolio) olarak adlandırılmaktadır. Diğer bir ifade ile e-portfolio, bireysel ürünlerin web tabanlı koleksiyonudur. E-portfolio, öğrencilerin kazanımlara ulaşma düzeyinin değerlendirilmesi, dönüt verilmesi ve öğrencilerin geleceğe dönük çalışmalarında yönlendirilmesi gibi farklı amaçlarla kullanılabilir. (Gülbahar ve Köse 2006, s.75-93)

Öğrenmenin ölçülmesinde ve değerlendirilmesinde süreç değerlendirmenin önem kazanması, geleneksel değerlendirme yöntemlerini destekleyecek ya da geleneksel yöntemlere alternatif olabilecek farklı değerlendirme yaklaşımlarını gündeme getirmiştir. Bu alternatif değerlendirme yöntemleri arasında yer alan portfolyolar teknolojiye gelişmelerden de etkilenmiş, hayatımızın ve günlük yaşantımızın pek çok alanında olduğu gibi kişisel ürün dosyaları da elektronik ortama taşınmıştır. Böylece kişisel ürün koleksiyonlarının yaratılması ve sunulması amacıyla ortaya çıkan portfolyolara istenilen zaman ve mekândan erişilmesi de mümkün olmuştur. E-portfolio uygulama alanlarının yaygınlaşması, kişisel çalışmalarını elektronik ortamda bir araya getirebilme becerilerinin de önem kazanmasına neden olmaktadır. Web tabanlı uygulamaları mesleki gelişim sağlamak amacıyla kullanan bireyler kişisel gelişimlerini de bu şekilde destekleme olanağı bulmakta ve çağın gereklerine uyum sağlama açısından da avantaj sağlamaktadır.

Eğitim alanında giderek yaygınlaşan e-portfolio uygulamalarının etkili bir şekilde kullanılması, eğitim-öğretim sürecinin kilit noktası olan öğretmenlerin bu konuda bilgilendirilmeleri ile mümkündür. Bu bağlamda öğretmenlerin özellikle hizmet öncesi eğitimleri kapsamında e-portfolio vb. alternatif değerlendirme yöntemlerini kullanmaları teşvik edilmektedir. (Kaya, 2013 s.62)

Uygulama Dersleri E-Portfolio Sistemi

Eğitimin her kademesinde teknolojinin sağladığı imkânlardan, özellikle bilgisayar ve internet teknolojilerinden yararlanılarak İngilizce Öğretmenliği Lisans Programı uygulama dersleri için e-portfolio sistemine geçilmiştir.

İÖLP’de uygulama dersleri için e-portfolio sistemine geçilme nedenlerini;

- Uygulama dersine yönelik olarak öğrenciler tarafından hazırlanan dosyaların iletilmesi, saklanması, değerlendirilmesi süreçlerinde yaşanan güçlükler,
- Öğrencilerin hazırladıkları ders planlarına sadece uygulama okulundaki rehber öğretmenlerin dönüt vermesi,
- Üniversite öğretim elemanlarının sürece sadece dosya değerlendirme aşamasında katılması, dönem ya da öğretim yılı içerisinde öğrencilere dönüt verememesi,
- Öğrenci ya da uygulama rehber öğretmenlerin olası hatalarına dönüt verilememesi nedeni ile yapılan hatalarda düzeltme olmaması, hataların dönem sonuna kadar devam ettirilmesi,
- Geleneksel sistemde etkin ve sağlıklı bir uygulama yapılmasının güçleşmesi ve
- Geleneksel sistemde dosya değerlendirme sürecinin çok uzun olması nedeniyle değerlendirme notlarının öğrencilere geç bildirilmesi

şeklinde sıralayabiliriz.

İngilizce Öğretmenliği Lisans programı E-Portfolio Sisteminin İşleyişi

Anadolu Üniversitesi Açıköğretim Fakültesi, İngilizce Öğretmenliği Lisans Programı Web Tabanlı E-portfolio Sisteminin oluşturulmasında, karşılıklı belge paylaşımına olanak tanıyan Windows SharePoint Services 3.0 ve Asp.Net 2.0 temelleri üzerine kurulu SharePoint yazılımı kullanılmıştır.

SharePoint Portal Server uygulamasının temel taşları;

- Bilgi Paylaşımı,
- Belge Yönetimi,
- Geliştirilmiş Arama Özellikleri,
- Form Destekleri,
- Hesap Tablosu Destekleri ve
- Kurum Veri Kataloğu (BDC-Business Data Catalog) olarak sıralanabilir.

Bunlara ek olarak kurum içi tüm bilgilerin, son kullanıcı için kullanımı basit arama motorları ve kategorileştirilmiş görünümle yardımcıyla kolayca ulaşılabilir hale getirmesi Microsoft Office SharePoint Server’ın sağladığı yararlar arasında sayılabilir.

E-portfolio sisteminin işleyiş aşamaları şu şekildedir;

Hazırlık Aşaması

- Tahmini öğrenci sayılarının, veri tabanındaki bilgiler ve istatistiki yöntemler yardımı ile belirlenmesi

- Uygulama dersleri için Türkiye genelinde ihtiyaç duyulacak uygulama okulu, okul müdürü, okul koordinatörü ve uygulama rehber öğretmen sayılarının belirlenmesi,
- Milli Eğitim Bakanlığı İl Müdürlükleri ile yapılan (genellikle online) yazışmalar ile uygulama okulu ve görevlilerin belirlenmesi,
- Belirlenen görevliler için görevlendirme yazışmalarının yapılması,
- E-portfolio sisteminin yeni dönem için hazırlanması.

Uygulama Dönemi

- Ders dönemi başında derslere kayıt yaptıran öğrencilerin bilgilerinin veri tabanından alınması,
- Öğrencilerin uygulama dersini yapacakları okul ve uygulama rehber öğretmenlerin belirlenmesi,
- Öğrencilere uygulama dersi yapacakları okulların sistem üzerinden duyurulması,
- Uygulama okul müdürü, okul koordinatörü, uygulama rehber öğretmen ve akademik danışmanlara sorumlu oldukları öğrencilerin sistem üzerinden duyurulması,
- Uygulama okul müdürü, okul koordinatörü, uygulama rehber öğretmen, akademik danışman ve öğrenciler için sistem giriş şifrelerinin oluşturulması,
- Sistem giriş şifrelerinin ilgililere e-posta yolu ile iletilmesi,
- Öğrencilerin haftalık olarak yaptıkları çalışmalarını e-portfolio sistemine yüklemeleri,
- Uygulama rehber öğretmenlerin çalışmalarını dönüt vererek değerlendirmesi,
- Akademik danışmanların çalışmalarını dönüt vererek değerlendirmesi,
- Öğrencilerin dönütler üzerine düzeltme kayıtlarını girmeleri,
- Öğrenci devamının izlenmesi,
- Dönem içerisinde oluşabilecek hata ve düzeltmelerin koordinatörlük personeline giderilmesi.

Dönem Sonu İşlemleri

- Öğrencilerin uygulama rehber öğretmenlerce verilen notların kontrolü, eksik ya da hatalı değerlendirmelerin koordinatörlük tarafından ilgililerce düzeltilmesinin sağlanması,
- Öğrenci portfolyo dosyalarının akademik danışmanlarca ikinci kontrolünün sağlanması,
- Koordinatörlük tarafından her iki değerlendirme sonucunun ağırlıklandırılarak puanlandırılması,
- Öğrenci dönem sonu notlarının ECTS sistemine göre harf notlarına dönüştürülmesi,
- Öğrenci dönem sonu notları ve harf notlarının sistem üzerinden ilan edilmesi,

Şekil 7: İÖLP Uygulama Dersleri e-Portfolio Sistemi ve Okul Deneyimi e-Portfolio Sitesi

E-Portfolio Sisteminin Faydaları

Türkiye genelinde 81 ilde 2008-2009 öğretim yılından itibaren İÖLP uygulama derslerinin e-portfolio sistemi ile yürütülmesiyle yönetsel ve örgütsel sorunların çoğu ortadan kaldırılmıştır. Sistemin kullanım kolaylığı ile uygulama dersi dosyalarının hazırlanması ve değerlendirilmesi süreçlerinde gerek öğrencilerin gerekse uygulama öğretmenleri ile danışmanlarının (üniversite öğretim elemanları) yaşadıkları birçok sorun ortadan kalkmıştır. Bunlardan bazıları şöyle sıralayabiliriz.

- E-portfolio platformunda güvenle saklanan portfolyolara kullanıcılar her zaman ulaşabilirler ve kaybolma gibi tehlikelerle karşılaşmazlar.
- Uygulama dersi dosyalarını çevrimiçi olarak oluşturan öğrenciler internetin olduğu her ortamda hesaplarına şifreleri ile girerek portfolyolarını sürekli olarak geliştirebilirler.

- Sistemde oluşturulan portfolyolar, öğretmen ve danışmanlar tarafından incelenerek öğrencilerinin performansı belli ölçütlerle değerlendirebilmekte ve öğrenciye iletilebilmektedir. Böylece öğrencilerin portfolyolarını bu dönütlere göre düzeltmeleri ya da değiştirmeleri sağlanmaktadır.
- Sistemin öğrenciler açısından getirdiği en önemli fayda, uygulama dersi ile ilgili hazırladıkları *ders planları* konusunda ders anlatımı öncesinde online olarak öğretmenleri ve danışmanlarından olumlu ya da olumsuz dönüt alabilmeleridir. Böylece *ders anlatım* süreçlerini daha etkin ve verimli gerçekleştirebilmektedirler.

SONUÇ ve ÖNERİLER

Öğrenmenin ölçülmesi ve değerlendirilmesinde süreç değerlendirmenin önem kazanması, geleneksel değerlendirme yöntemlerine destek ya da alternatif olabilecek değerlendirme yaklaşımlarını gündeme getirmiştir. Bu değerlendirme yöntemleri arasında yer alan portfolyolar teknolojik gelişmelerden etkilenecek, elektronik ortama taşınmıştır. Böylece kişisel ürün koleksiyonlarının oluşturularak, sunulması amacıyla ortaya çıkan portfolyolara istenilen yer ve zamanda erişilmesi de mümkün olmuştur.

Eğitim alanında giderek yaygınlaşan e-portfolyo uygulamalarının etkili bir şekilde kullanılması, eğitim-öğretim sürecinin kilit noktası olan öğretmenlerin bu konuda bilgilendirilmeleri ile mümkündür. Bu bağlamda öğretmenlerin özellikle hizmet öncesi eğitimleri kapsamında e-portfolyo vb. alternatif değerlendirme yöntemlerini kullanmaları teşvik edilmektedir.

Öğrenci portfolyolarının oluşturulmasında geleneksel sistemin yarattığı iletim sıkıntıları ve olası kayıplar, zaman ve emek kaybı, iş takibinin güçlüğü, erişim ve güncelleme sorunları, kırtasiyeciliğin ve bürokratik işlemlerin çokluğu ve saklama sorunları e-portfolyo uygulaması ile giderilmiştir. Özellikle Türkiye genelinde uygulama yürüten İngilizce Öğretmenliği Lisans Programı gibi organizasyonlarda ortaya çıkan yüksek iletim maliyetleri, bilgi güncellemede ortaya çıkan sorunlar ve işlem adımlarının uzunluğu gibi aksaklıklar yine e-portfolyo sistemi ile aşılmıştır.

Bunlara ek olarak e-portfolyo uygulamasının güvenli saklama olanağı sağlaması, kullanıcıların her zaman portfolyolarına ulaşabilmeleri, portfolyolarını sürekli olarak geliştirebilmeleri, uygulama öğretmeni ve danışmanlar tarafından öğrencilerinin performansının kolaylıkla değerlendirilerek öğrenciye iletilebilmesi, öğrencilerin portfolyolarını bu dönütlere göre düzeltmeleri ya da değiştirmeleri e-portfolyo sisteminin artıları olmaktadır.

E-portfolyo kullanımının öğrenciler açısından sağladığı en önemli yarar ise, dersin aktarımı öncesinde uygulama dersleri ile ilgili hazırladıkları *ders planları* konusunda çevrimiçi olarak öğretmenleri ve danışmanlarından olumlu ya da olumsuz dönüt alabilmeleridir. Böylece *ders anlatım* süreçleri daha etkin ve verimli gerçekleştirebilmektedir.

Sistemde öğrencilerin yer aldıkları guruplarda yer alan diğer öğrencilerle paylaşım yapabilmeleri, diğer öğrencilerin hazırladıkları çalışmalarını inceleyebilmeleri, öğretimin etkili ve verimli olmasına yol açmaktadır. Ders sırasında çekilen videoların paylaşılması uygulaması verimliliği daha da arttırmıştır.

Windows SharePoint Services 3.0 ve Asp.Net 2.0 ile oluşturulan "*sistem ara yüz*"ünün gelecekte "*uygulama dersleri yönetim sitesi*" ile entegre edilmesinin, veri tabanının etkin yönetimini sağlayacağı ve minimum düzeye inen iletişim ve organizasyon sorunlarının çözümüne katkı sağlayacağı düşünülmektedir.

Buna ek olarak kullanıcı şifrelerinin koordinatörlük tarafından oluşturularak, kullanıcılara e-posta ile iletilmesi yerine, kullanıcılar tarafından oluşturulması uygulamasına geçişin, koordinatörlük iş yükünü azaltarak verimi arttıracığı düşünülmektedir.

Transformation of Teacher Education in the 21ST Century: Enhancing Physics Teacher Quality for National Development in Nigeria

Jonathan Ogbeide Idialu^{a *}

^a PhD, Department of Physics Education, College of Education, Agbor

Abstract

Transformation of teacher education in any Nation is achievable if education is given its rightful place in the scheme of things. Transformation of teacher education in Nigeria can be realised if the teachers are equipped with the needed knowledge, attitude, behaviours and skills with good policies and well designed procedures. No system of education can rise above the quality of its teachers. Therefore, this paper looked at the present physics education curriculum, physics education graduates in Nigeria and the way forward in developing physics teacher quality by repositioning physics Teacher education programmes for the 21st century. Among the recommendations was that B.Sc physics education should be reviewed to increase the capacity of the physics education graduates.

Keywords.

INTRODUCTION

To bring about radical change (transformation) in teacher education in the 21st century globally is a herculean task that requires determination and adequate teacher preparation. Teacher education refers to the policies and procedures designed to impact prospective teachers with the knowledge, attitudes, behaviour and skills that they require to perform their tasks effectively in the class room, school and in their community. Teacher Education is a tool for national transformation since it is the teachers who produce members of the teaching profession and the quality human resources for national economy. The current state of Nigerian nation and the present standing of education graduates can only be squarely addressed if teacher preparation strategies are given the seriousness it deserves.

The Federal Government of Nigeria under President Goodluck Ebere Jonathan is currently pursuing “Transformation Agenda” in all the sectors of the national economy but nothing seems to be working. Though Nigeria is in the 4th position in terms of oil wealth worldwide; 70% of Nigerians live on less than \$1 per day; Nigeria is considered as one of the poorest countries of the world; about 9million primary aged children are not in school (Nwabudike, 2011). Many youths have no access to quality education and many who went to school are unemployed. Insecurity, kidnapping, robbery, unsteady power supply, lack of infrastructure, and discipline and corruption have helped to cripple the economy.

The questions one may ask include:

- a) What serious planning and practical orientation are we putting in place to achieve first and foremost vision 20:2020?
- b) How will Nigeria achieve the change needed in teacher education when our educational institutions are constantly interrupted with warning strikes or total strike?

Transformation of teacher education is achievable in Nigeria if we can critically reflect on the current state of the Nigerian nation and then analyze the trust of teacher education provision capable of bringing the desired change. In fact, no system of education can rise above the quality of its teachers. It is the teachers who produce the members of the teaching profession and other professions. Physics Teachers Education is an integral part of the teacher education and physics as a subject is regarded as the most fundamental of the natural sciences. Today, physics is taught in Nigeria in other to expose students to knowledge mastery for the purposes of passing examination without adequate skill acquisition that will make the graduates employable. For a realistic change, Physics teacher education should be driven with good policies and curriculum implementation through adequate training, induction, entrepreneurship and Continuing Professional Development (CPD) or Teacher Development.

To translate teacher education *visa – vise*, Physics teacher education in the 21st century, all aspects of physics education must be revisited.

Present Physics Education Curriculum

The current failure of students in physics (Idore, 2011) at the West Africa School Certificate Examination (WASSCE) and National Examination Council (NECO) suggests that teachers do not know how to impact learning experiences to the learners. Similarly the rate of Physics graduate unemployment (Idialu and Okereke 2010) calls to question the quality of Physics education graduate from tertiary institution in Nigeria. The educational system has not been able to produce Physics teachers who should possess the skills and ability to manipulate the resources of the land to generate wealth for economic growth and development. The inability of Physics Teachers to produce those who can exploit our Natural resources for development is an indicator that the curriculum is not adequately implemented. How can one implement the curriculum when it is overloaded and the school time table overcrowded? All that the teachers do is to rush the syllabus and get students certificated. Whether the products of the curriculum have the skills for competence is not their concern. More questions that one needs to ask are:

Is Physics curriculum knowledge based?

Does it prepare students for global competitive world?

Is the curriculum theory oriented?

Is acquisition of entrepreneurial workforce skills stressed?

Can the graduates function effectively in the fast changing scientific and technologically globalized world.

Of course if the curriculum is functional, the graduates of Physics education will not be among the unemployed.

Nigeria as a Nation has great potentials and Nigerians are ready for change. The way forward is quality education. Quality education broadens people's outlook; it contributes maximally to economic, political, scientific and technological growth of any nation. If the teacher education is transformed, the nation in turn will be transformed. It is not a surprise that the National Policy on Education (FRN, 2004) stated that, no educational system can rise above the quality of the teacher. Competent qualified professional Teachers (quality teachers) is an indices of transformation. Therefore, the Physics education curriculum should be restructured and its implementation properly monitored to ensure quality physics teachers production since the quality of civil servants, politicians, Medical doctors, Lawyers, Professionals in other sectors depends generally on the quality of the teachers.

Physics Education Graduates in Nigeria Today

A recent national survey by Okebukola (2012) on teacher quality revealed the following weakness in the education graduates in Nigeria. They include:

Shallow or poor knowledge of subject matter;

Inadequate exposure to teaching practices;

Poor classroom management and control;

Poor computer literacy skills;

Inability to communicate effectively in English;

Lack of professionalism;

Lack of self-reliance and entrepreneurial skills; and

Poor attitude to work.

According to Obama's (2009) declaration, America's future depends on its teachers. I see this statement to mean the quality of teachers. Hence Nigeria as a nation must strive to achieve transformation of her teacher education. If good preparation strategies are put in place to address the above shortcomings quality physics teachers can emerge to remedy the present standard of education graduates in the country.

Developing Physics Teacher Quality for the 21st Century

Transformation of teacher education in the 21st century requires general overhaul of the teacher education and Physics teacher education in particular if the desired physics teacher quality can be achieved. Quality teachers come from quality curriculum and quality professional development. A quality physics teacher is a globally competitive worker with saleable knowledge and skills for gainful employment by government or to be self employed. The era of teaching for knowledge mastering just to passing examination without adequate skills

acquisition is obsolete (Makwuegbe, 2012). A shift from one-way to two-way process of communication between the teacher/lecturer and learner/student involving three channels of communications: information, behaviour and feedback should be explored. Physics being the most fundamental of the natural sciences should be able to expose perspective teachers to excellent, analytical, quantitative and problem solving skills so that no physics education students remains unemployed after graduation. The teacher of the 21st century needs knowledge, professional skills and personal qualities (www.unicef.org/teacherteacher.html). The use of creative and inspirational method of teaching is paramount for this century (www.school-teacher-students-motivationresources-courses.com/goodteachers.html). This view points to the use of modern teaching strategies like concept making, constructivist approach, scaffolding, process based teaching and learning. The use of materials in our environment to produce materials similar to the imported ones brings learning closer to the learner. Training given to physics education students in education institutions should be improved by giving quality supervision to the teaching practice. Staff exchange programmes with foreign Universities to ensure conformity with international standards and development should be encouraged with teacher education institutions, collaboration research between teacher institutions should also be encouraged.

To ensure transformation of teacher education visa-vise, Physics teacher education and enhance physics teacher quality, the following areas among others were discussed in this paper.

Physics education curriculum for the 21st century

Functional physics teacher preparation programme

Information and Communication Technology

The essence of Entrepreneurial education

Repositioning Physics teacher education programme

- Admission process

- Finance and funding
- Motivation, monitoring and evaluation
- Recommendation

Physics Education Curriculum for the 21st Century

The present Physics education curriculum needs to be restructured to meet the requirement of the 21st century. The curriculum should make students active participants, practical oriented, self-reliant and self-employed. According to Okobia (2010) and Omuegbele (2011), the Teacher science curricula in Nigeria should be redesigned to enable students graduate in scientific career options. Physics students should graduate in maintenance services, production of simple machines, Energy production, solar panels, Transistors, optical fibers, optical mirrors and lenses, microscopes and simple telescopes, Thermometers, Hydrometer, Capacitors, Resistors, Meter Rule, Transformers e.t.c. It then means that more emphasis should be geared towards practical processes in these areas in the curriculum. The teaching and learning in physics education programmes should equip students with entrepreneurial skills so as to make them more relevant in the 21st century.

Functional Physics Teacher Preparation Programmes

The 21st century requires more than a single organ or commission coordinating the activities of the teacher education at any given level. One of the ways to enhance the quality of Physics teacher in Nigeria is by ensuring that the National University Commission (NUC), National Commission of Colleges of Education (NCCE) and the National Business and Technical Education Board (NABTEB) Jointly organize workshops to which the department of curriculum, Assessment, Teacher preparation, ICT, private sector industries and businesses, parents and community groups, professional organization and unions, NGOs, Donors, Universal Basic Education Council(UBEC) and the National Educational Research and Development Council (NERDC) are invited to brainstorm and identify areas of growth and development in the national economy – manufacturing, Construction, Technology, engineering e.t.c. These should be developed and incorporated into the existing courses and taught to Physics education students in teacher preparation institution in the country who on graduation will teach same to their students in the primary and secondary schools. Indeed one of the indicators of quality Education in any nation is the proportion of the country's graduates who are employed in various fields (Gbenedio, 2011).

Information and Communication Technology (ICT)

The world is changing globally from industrial society to information and communication technology (ICT). It is ICT that has transformed the world into a global village. Therefore transformation of the teacher education in the 21st century would require ICT skills for the teachers own development, for administrative purposes, for their daily use in the classroom settings. ICT should become as important component of teacher professional development curricula so as to create opportunities for them to participate in the global knowledge based economy. Today the nation of Estonia ties teacher promotion to ICT skills while Chile, England, and France, among other nations, now link ICT competencies to teacher licensing requirements. (Silvermail, 2009). Nigeria must not be left out of implementing this trend, therefore, the teachers/lecturers implementing the physics education curriculum should be able to use ICT to impact knowledge. In this respect, all physics students and physics lecturers in teacher preparation institution should have their own laptops provided by government; and computer training should be a mandatory course for student's teachers. Therefore, physics education curriculum should focus on creativity, innovation, research, acquisition of ICT skills and production of new wave of entrepreneurs.

The Essence of Entrepreneurial Education

Being employed as a physics education graduate is good but being an employee only is not good enough. Furthermore, one cannot create wealth as an employee only. Thus, entrepreneurship offers a stronger base for wealth creation and for solving unemployment and poverty problem. Implementing teacher education inclusive of entrepreneurial education will be a major innovation for the transformation. The longitudinal study by Izedonmi (2011:121), summarized 100 employees aged 20 -25years who worked for 40years when many of them had retired at the age of 65years as follows: 54% of them ended up broke and depending on people for livelihood; 30% died before the retirement age of 65years; 10% were looking for livelihood through contracts; 5% were comfortable to eat well; only 1% was rich in the sense of it. This findings gives a picture of education without provision for entrepreneurship. Izedonmi (2011) seems to have informed the decision of the Federal Government of Nigeria to the effect that all Universities, polytechnics and colleges of Education in the country were mandated to run entrepreneurial education with effect from 2007/2008 session. One may want to know the number of institutions that has complied to this directives. Out of 73 Federal and State Universities, 63 Federal and States Colleges of Education and 59 Federal and State Polytechnics, only three Universities, two Colleges of Education and three polytechnics have entrepreneurial education in their programmes. Okebuola (2012) has queried the inability of most institution to comply with the directive. In fact, the relevance of this provision to physics teacher education, being the fundamental natural science cannot be over emphasized. Entrepreneurial education certainly:

- Will equip physics teacher with the capacity needed to produce goods, render services and add to the country's Gross Domestic Product (GDP) with a significant index of a country's economic standing;
- Has the potential for lowering poverty level and raising living standard of physics education graduates and Nigerians by promoting self employment and self reliance, thereby raising the family income;
- Provide for job creation which will lower crime rate ("419", cyber crime 'yahoo – yahoo' business, kidnapping, human trafficking) as young men and women will be gainfully employed.
- Will help to keep unemployed young graduates economically sustained, even in old age
- Improve the relevance and public responsibility of our educational institutions, as overtime physics education graduates will be out of gainful employment.
- Develops the small and medium scale enterprises (SME) sector. In USA, SME sector provides 84%, Federal and state government providing 6%, big corporations providing 8% of the total employment in the country. Nigeria as a nation can reach this level in the 21st century if entrepreneurial education is properly implemented in her teacher education programmes.

Repositioning Physics Teacher Education

To guarantee the best from Physics teacher preparation programmes in Nigeria, the following guidelines should be considered so as to improve on the quality of the physics teacher graduates

Admission Process

The students admitted into Physics education programme should have the aptitude, attitude and interest in physics education (Nwanbudike, 2010). Low intellectual ability who will find physics academic tasks difficult

should not be admitted into the programme. Like other profession courses, physics education programme should be increased to 5years. That is, 5years B.A/B.Sc. Education. This is to enable the students embark on six months internship in teaching practice and six months entrepreneurial training. The teaching practice and entrepreneurial training should be structured for effective supervision and monitoring. Any student that fails the teaching practice and the entrepreneurial training should not be registered with the Teachers Registration Council of Nigeria (TRCN)

Quality of Candidates Admitted for the Physics Education Programme

The University admission Policy gave entry requirement for the following courses to be the same: Medicine, Pharmacy, Sciences, Engineering and Education. But individual Universities have different cut off points with higher cut off points for other courses except Education Courses (Nwanbudike, 2011). This means that, brilliant students opt for other courses leaving education courses with less cut off point. Therefore, less intelligent students find their way into Education courses at the Universities or Colleges of Education. The point being stressed here is that those that enter into physics education are those who cannot cope with other courses or those who could not gain admission into those so called “superior courses”. Consequently, the trained physics teachers are of lower quality without interest, positive attitude and disposition expected of a quality physics teacher (Idialu and Okereke, 2009).

The admission process and the quality of candidates admitted for physics education programme and teacher education generally in Nigeria should be improved upon to reflect the 21st century teacher education. To ensure enhanced quality of teachers (Physics teachers) education graduates, high selection criteria should be applied:

5 credits at a sitting in WAEC or NECO Senior School Certificate Examination. (6 credits at two sittings should be abolished)

Reliable written examination and interview should be introduced.

The same cut off point should be applicable for all the courses irrespective of the University so that admission into education courses will no longer be a matter of shopping exercises.

Quality of Academic Personnel and Support Staff

The academic personnel and the support staff in most educational institutions lack commitment in the discharge of their duty (Omuegbele, 2010). Poor remuneration makes it difficult to retain top quality academic personnel needed to produce quality physics graduate teachers. Consequently, incompetent physics teachers who cannot impart meaningful knowledge to students or gainfully employed are all over. Many of those in the class room setting:

- cannot prepare good lesson plan
- are unable to manage the class room
- have no good knowledge of the subject matter
- cannot employ good teaching methods
- have ineffective use of the language
- cannot improvise materials
- cannot match theory with practice (Omuegbele, 2010)

Finance and Funding

The quality and quantity of Physics teachers/graduates depend largely on the financial resources available to the educational institutions (the producers). Underfunding has in no small measure contributed to the decline in the quality of physics graduates because most of our educational institutions lack well equipped laboratories, facilities, equipment and other relevant tools (Okoba, 2010). Therefore, the students are not adequately exposed to skills and competences needed to teach the subject or to be self employed. The problem expressed here is that, the funding of educational institutions in Nigeria is not commensurate with the level of expansion in the educational sector. To cope with the demand of teacher education in the 21st century in Nigeria, the budgetary allocation of 26% or above in the National Annual Budget should be released to education sector as recommended by UNESCO. This calls for increased funding to cater for the provision of in service training, especially on ICT to serving teachers, equipping physics education laboratories with materials and facilities, infrastructural facilities that can boost the quality of the teachers.

Motivation, Monitoring and Evaluation

In order to realistically cause a change in teacher education in the 21st century, the physics education teachers/lecturers and the prospective teachers must be lifted up. Their condition of service has a great impact on the productivity. So, adequate remuneration is needed to make them give quality service. Institution based

management committee as recommended by Omebe's (2010) should be applied to monitor and evaluate the physics curriculum implementation, staff development, instructional facilities, learning environment, teaching and learning, research and government intervention. The report of this committee is vital to the productive and responsible products that can compete with other nations and demonstrate high quality competence. Omebe (2010) research finding of regular monitoring, motivation and evaluation should be utilized to enhance quality teaching.

CONCLUSION

Transformation of Teacher Education (Physics Teacher Education) is achievable in Nigeria in the 21st century if teacher preparation programme is focused on the acquisition of cross domain 21st century skills such as creativity, critical thinking, problem solving, collaboration, entrepreneurial education and ICT literacy. Quality teacher are products of well implemented quality curriculum and quality professional development. The present Physics Education Curriculum if restructured, it will make physics education students active participants, practical oriented, self reliant and self – employed. In addition, overhauling, the admission process, quality of the academic personnel, funding, motivation of academic personnel, supervision and other preparation and teaching strategies will bring about the desired reformed teacher education for national development in the 21st century.

Recommendation

The following recommendations if implemented will assist to bring about the needed change in the teacher education in Nigeria and subsequently lead to the production of competent quality physics graduates in the 21st century.

- The teacher education (physics teacher education) curriculum should be reviewed jointly by all the organs or commissions co-ordinating teacher education activities at all levels. All stake holders, interest groups and professional bodies should be invited to the review workshops.
- To key into the growing global economy, teacher preparation programmes should focus on the acquisition of the cross domain “21st century skills, such as creativity, critical thinking, problem solving, ICT literacy and collaboration.
- High selection criteria of 5 credits at a sitting in WAEC or NECO Senior School Certificate Examination should be introduced and used for selection of education candidates for admission in all education institutions across the country. (6 credits at two sittings should be abolished).
- Teacher Education institutions should give quality supervision to teaching practice through regular and effective monitoring and evaluation.
- Staff exchange programmes with foreign Universities should be enforced to ensure conformity with international standards and academic staff development.
- Teacher Education should be well funded. The Federal and State Governments should release the 26% budgetary allocation as recommended by UNESCO to educational sector from their annual budgets.
- To retain and boost the morale of physics education personnel, adequate remuneration should be provided by the government (Federal and State)
- ICT training should be made compulsory for all physics education teachers/personnel; both serving and those on training. Recruitment of teachers should be tied to ICT skills and competence.
- Education Institutions should be provided with well equipped workshops or multipurpose science workshops where production of materials can be made for commercial gain.
- B.Sc Physics Education Programmes in all Education Institutions should be increased to five years like other professional courses and only quality candidates should be admitted for the programme
- Physics Education related factories like Cable Manufacturing Companies, Electrical Appliance Companies, Scientific and Laboratory Equipment Companies e.t.c. should fund researches and partner with Education Institutions in the training of students.
- The use of locally available resources and improvised materials in teaching of physics education students should be emphasized and encouraged.
- Researches by physics education students and lecturers should be funded by the various levels of government and NGOs to tackle the problems in teaching and learning at the education institutions
- Two-way process of communication between the teachers/lecturers and students/learners involving three channels of communications: information, behaviour and feedback should be used in teacher education programmes.

- Teachers' Registration Council of Nigeria (TRCN) should be the only body to register and determine the eligibility of teachers in education institution and the TRCN should review teachers licenses every five years with written examination and interview
- Teacher education should be inclusive of entrepreneurial education to provide for wealth creation and solve unemployment and poverty problem for physics education graduates in Nigeria.

Quality Assurance in Secondary Education: Implications of Teaching Strategies and Students' Attitude on Academic Achievement in Basic Technology

Jonathan Ogbeide Idialu^{a *}

^a PhD, Department of Physics Education, College of Education, Agbor

Abstract

Quality Assurance and Quality Control are both important in the application of management procedures to ensure qualitative education to the satisfaction of the stakeholders. This paper investigated the effect of teaching strategies and students' attitude on academic achievement in Basic Technology as a quality assurance process for the teaching and learning of the subject. Teaching strategies investigated were the interactive, independent and dependent teaching strategies.. Three null hypotheses were tested at $P < 0.05$ using two instruments; Basic Technology Achievement Test (BTAT) and Students' Attitude Questionnaire (SAQ). The data were analyzed using ANCOVA. Results showed that teaching strategies and students' attitude have significant effect on students' achievement; the joint effect of teaching strategies and students' attitude was significant on students' achievement. The interactive teaching strategy was recommended for teaching the subject and the students should be exposed to practical, computer e.t.c. to stimulate interest, attitude, and curiosity to enhanced quality.

Keywords.

INTRODUCTION

In Nigeria, there is growing dissatisfaction over students' academic achievement in many of the school subjects especially in the sciences and Basic Technology subjects. These subjects are the foundation on which further learning are built, hence it has become necessary to investigate some critical variables which enhances teaching learning processes in Basic Education (UBE). There is need therefore to put in place Quality Assurance to guide the educational delivery and bring it in line with national goals, global expectation and changes in science and technology. Basic Education in Nigeria is 6years primary school (Lower Basic Education) and 3years junior secondary school JSS 1 – 3 (Upper Basic Education).

Quality assurance focuses on all aspects of the education process namely, teacher factor, students factor, and environmental or organizational factor. This is with a view to determining the level or quality of input necessary to achieve the desired output. Obamanu (2001) has identified factors which affect students academic achievement in school subjects to include students factor, teacher factor, societal factors, efforts have not been made to investigate the potency of these factors on students' academic achievement in each of the subjects. Idialu (2013) and Uwameiye (2011) have equally identified gender factor, students' factor and environmental factor on students' academic achievement. These should form a basis of quality assurance in the teaching and learning of each subject. With the absence of appropriate teaching and learning variables put together, the results have been ineffective teaching, poor students' academic achievement and in the case of basic technology, poor students' attitude and lack of students' interest in the subject. Quality assurance in education seeks to achieve the most cost effective variables put together for the attainment of the stated educational objectives. It looks at different teacher – student factors, how they affect quality individually and their combined effect on educations. This study investigated the teaching strategies and students' academic achievement in basic technology as a means of quality assurance in Univerasal Basic Education (UBE). Basic Technology (BT) is a preliminary phase of Technology. Basic Technology according to the National Policy on Education (FRN, 2004) involves the academic and practical study of materials, sources of energy and natural phenomena with ultimate intention of applying these to the services of man.

Basic Technology is a part of the general education for all students in the JSS 1 – 3 irrespective of their future career desire. The teaching and learning of basic technology like other subjects require knowledge, skills and appreciation. The objectives of BT as a subject in UBE is to enable the student have orientation and exploration of the world of work through appreciation of technology in the use of tools and materials. It is one of the pre-vocational subjects intended to develop the skills and knowledge necessary for employment, self reliance and opportunity for admission for further studies in tertiary institutions (FRN, 2004). Needless to say that these objectives have not be met and that students dislike the subject and develop negative attitude towards it (Idialu,

2013). So far, there is no serious effort by Nigerian Government and researchers towards using quality assurance to guide the teaching and learning of the subject. Thus, no findings to suggest ways of improving the teaching and learning of the subject.

Quality Assurance

The concept of quality assurance has its origin in manufacturing. It is a system of procedures, checks, audits and corrective actions to ensure that all design environmental monitoring, research sampling and technical reporting activities are of the highest achievable quantity (Wikipedia, 2007). According to the commonwealth of learning cited by Okebukola and Shabani (2001), quality assurance is an approach to organizing works that:

- Ensure the institution's mission and aims are clear and known to all;
- Ensure the systems through which work will be done are well thought, full proof and communicated to everyone;
- Ensures everyone's responsibility are clearly understood;
- Define and document the institution's sense of quality;
- Set in place system to check that everything is working according to plan; and
- When things go wrong, there are good ways of putting them right (pg. 24)

Quality assurance focuses on the process while quality controls is concerned with the product. In Upper Basic Education (JSS 1- 3), the definition above also apply; that means, the application of management procedures to ensure qualitative education to the satisfaction of the stakeholders. The pre – vocational subjects (Basic Technology, Business studies, Agricultural Science and Home Economics) are key components of the curriculum of Upper Basic Education.

In the case of Basic Technology, quality assurance should be a procedure, checks or audits, which will ensure that the subject is effectively taught and learned. It is a procedure aimed at realizing the objectives of the subject, which include exposure of students to career awareness by their exploration of useable options in the world of work, and stimulation of their curiosity and creativity in industrial and technological concepts. It is a means of ensuring that students develop positive attitude to things of technology by using tools and equipment to make simple products, which they can use. Quality assurance ensures customer satisfaction, since it leads to a product that fits the purpose, and making of the product according to pre-determined standards (Dashen and Jacob, 2002). The question now is whether or not the objectives of Basic technology are met as pre-determined in the National Policy on Education (FRN, 2004), whether the “customers” (Stakeholders) are satisfied with the teaching and learning of the subject.

Statement of the Problem

In spite of governments “huge budgetary to education” the public is generally not satisfied with students academic achievement as evident in massive failure and unemployment of school leavers and their inability to secure admission for further studies in the tertiary institutions. Accordingly, there has been persistent calls on teachers by parents to have another look at their teaching approaches with a view to evolving strategies and methods that will stimulate student's interest, attitude and curiosity, which are characteristics capable of improving academic achievement. The problem of poor academic achievement of students is even more serious with Basic Technology. This is so because since the introduction of basic technology curriculum in the Nation's secondary education, it has not been accepted by all because many see it as education for the “dropouts” or for “low achievers” (Beal, 2000 and Akpan, 2002). This has lead to students' negative and lack of interest in the subject, coupled with other fundamental management problems. It is the view of this paper that these problems can be addressed by instituting quality assurance parameters and standards/benchmarks on teachers' competence, teaching strategies, instructional resources (tools, machines and materials), infrastructural facilities and evaluation.

Purpose of Study

The purpose of this study was to investigate the effect of teaching strategies (dependent teaching strategy (DTS), independent teaching strategy (ITD) and interactive teaching strategy (INTS) and students' attitude on students' academic achievement in basic technology. Specifically, the objectives were to:

- Determine the effect of teaching strategies (DTS, ITS and INTS) on students' academic achievement in

basic technology;

- Assess the effect of students' attitude on their academic achievement in basic technology
- Determine the joint effect of teaching strategies (DTS, ITS and INTS) and students' attitude on their academic achievement in basic technology

Research Question

This study was aimed at investigating the effect of teaching strategies (DTS, ITS and INTS) and students attitude on students' academic achievement in basic technology.

- To what extent does students' academic achievement in basic technology differ when they are exposed to DTS, ITS and INTS teaching strategies?
- To what extent does students' academic achievement in basic technology differ with respect to their attitude to the subject?
- To what extent does the joint effect of teaching strategies and students' attitude affect students' academic achievement in basic technology.

Hypotheses

Three hypotheses formulated and tested at 0.05 level of probability guided the study.

- Ho₁ : There is no significant difference in academic achievement of students taught with INTS on basic technology and those taught with DTS and ITS teaching strategies
- Ho₂: There is no significant difference in academic achievement of students with positive attitudes and those with negative attitudes towards basic technology
- Ho₃: there is no significant joint effect of teaching strategies (INTS, ITS and DTS) and students' attitudes on academic achievement of students' in Basic Technology.

LITERATURE REVIEW

Teaching Strategy and Students' Achievement

With several studies (Udofot, 2000 and Mbaba, 2006), have shown a relationship between teachers' teaching strategy and students' achievement in many school subjects. According to Mbaba (2006) teaching Strategies which involves the students directly in the learning process are more beneficial than the traditional modes of instruction used in colleges. Ibe – Bassey (2000) identified four teaching strategies as dependent strategy, independent teaching strategy, interactive teaching strategy and initiatory teaching strategy. Ibe – Bassey (2000) further stressed that the dependent teaching strategy is used when the students greatly depend on the teacher for guidance – a sort of teacher – dominated classroom, while the independent strategy is used when the students tend to work on their own with little or no guidance from the teacher. The initiatory strategy is one in which the Student or teacher formulates or initiates communication concerning instruction which is sent across either by the student or teacher, there is no serious feedback in this strategy. The interactive strategy however, is one in which the students and teachers communicate reciprocally such that there is interactive behaviour in support of the instructional situation. Ugwuanyi (2005) showed that students who were taught by discovery performed significantly better than students taught by expository method, and female students performed better than their male counterparts. This is in line with Anderson and Block (2000), who suggested the learners – centered instructions that enable students to take a major share of responsibilities from their learning and participate actively in it. They indicated that when students are involved physically and mentally in the learning experiences, their level of learning and achievement are significantly higher. However, Effiong (2004) did not see any relationship between teaching strategies and the pupils style. According to Akinsola (2009), the instructional strategy employed by the teacher appeared overbearing because it is most easily manipulated.

Students' Attitude and Academic Achievement.

According to Adekunle (2001), the wide spread low level achievement and negative attitude towards basic technology in schools have largely been ascribed to teaching problems. In support of this position, Mbaba (2006) asserted that, occupational skills development depends greatly upon one's personal ability, interest, ideal, appreciation, attitude and orientation. Idialu (2013), reported that gender, age, parent's procession and

technological climate at home correlated with students' attitude and concept of technology. According to Kpangban (2004), attitude is a readiness of the individual to react towards or against a psychological object to a particular degree. Bolaji (2003) had shown a strong relationship between students' attitude and their academic achievement in various subjects. However, Uwiamieye (2004) have shown little or no relationship between students' academic achievement and their attitude in Basic Technology.

METHODOLOGY

Design of the Study

The study was a quasi – experimental study as three intact classes in three secondary schools were used. The design was the randomized pre – test, post – test control group with two experimental and one control group.

Population for the Study

The study has implications for all the secondary schools offering basic technology. However the 14 secondary schools in Ika Land of Ika South Local Government Area of Delta State with a JSS 3 student population of 9,441 were used for the study.

Sample and Sampling Technique

One hundred and twenty JSS 3 students from three intact classes in three different schools were used for the study. Though there were more than 40 students in each intact class who were allowed to participate in the study, 40 students' papers were randomly selected per class and graded for the study amounting to 120 students.

Instrument for Data Collection

Two instruments were used for the collection of data for the study. They were:

- Basic Technology Achievement Test (BTAT) and
- Students Attitude Questionnaire (SAQ)

The BTAT consisted of 60 questions which were covered during the six weeks of the instruction using the three teaching strategies, the BTAT was administered as pre – test before the study commenced. The SAQ consisted of 20 items which sought to determine students' attitude to the subject. Students were requested to indicate their response on a four point scale of Strongly Agree (SA = 4), Agree (A = 3), Disagree (D = 2) and Strongly Disagree (SD = 1). Scores from 1 – 49 were considered negative while 50 – 80 were considered as constituting positive attitude for the total items.

Validity and Reliability of Instrument

Both instruments were subjected to face and content validation by experts. The BTAT was validated by two secondary BT teachers and two lecturers at the department of Educational Foundation in the Faculty of Education while the SAQ was validated by four lecturers from the department of Educational foundation (Measurement and Evaluation). Their comments and suggestions helped to modify the instrument in terms of ambiguous questions, excessive wordiness, number of items, difficult vocabulary, e.t.c. The reliability of the BTAT was established using Kuder – Richardson 20 (KR – 20) because the BTAT was a multi – choice test that was scored dichotomously (correct or wrong). The reliability of the SAQ was established using Cronbach Alpha formula. Cronbach Alpha is a useful means of estimating reliability when items are not scored dichotomously (when items are not scored as right or wrong). The SAQ was trial – tested using 40 students that were not used for this study but with similar characteristics with the subjects used for study. The coefficient reliability was calculated and it yielded 0.96.

PROCEDURE

Three intact JSS 3 classes in Ika land of Ika south Local Government Area in Delta State were used for the study. First, the SAQ was administered to the three groups namely: Experimental group 1, Experimental group 2 and control group simultaneously using basic technology teachers and research assistants. Secondly, the BTAT was administered as pre – test to all the three classes. Thirdly, the INTS was used in the experimental group 1

for six weeks (2 periods per week of 40 minutes a period), the ITS was used in experimental group 2 for same six weeks while DTS was used for the control group for the same period simultaneously. Fourthly, the BTAT was administered as post – test to all the three classes simultaneously and data collected were analyzed.

Procedure for Interactive Teaching Strategy (INTS). It involves:

- a) Introducing the lesson topic
- b) Brief review of previous but related knowledge
- c) Stating the objectives of the new lesson
- d) The teacher presents the new task
- e) Students (in group) discuss the task among themselves highlighting possible solutions and areas of weaknesses
- f) The teacher review major ideas with students by referring to specific instructional materials to be used
- g) Students help one another over aspects of specific learning tasks which appear difficult and over testable materials
- h) Provision of progress evaluation/test until students reach the mastering standard set.
- i) Students are given feedback on the test by the teacher.
- j) Students' individual scores are pooled and average, the average score represents the score of each student in a group.

Procedure for the Independent Teaching Strategy (ITS). This involves:

- a) Introducing the lesson topic
- b) Brief review of previous but related knowledge of the topic
- c) Stating the objectives of the new lesson
- d) Students are shown different tools equipment components and process connected to the topic, to explain what, how where and why things are done the way they are done.
- e) A few demonstration are first done by the teacher
- f) Students are not guided but allowed to work by themselves to master and discover facts, theories methods and practices
- g) Progress evaluation

Procedure for the Dependent Teaching Strategy (DTS). This involves:

- a) Introducing the lesson topic
- b) Brief review of previous knowledge
- c) Stating the objective of the new lesson through direct teacher interaction with students
- d) Some use of questioning is made
- e) Class exercises decided by the teacher
- f) Progress evaluation.

RESULTS

Research Question 1

To what extent does students academic Achievement in basic technology differ when they are exposed to INTS, ITS and DST teaching Strategies.

Table 1: Students' Pre – test and Post – test Scores of INTS, ITS & DTS taught Students

TS		Pre –Test	Post –Test	Mean Gain
INTS	X	20.90	38.97	18.07
	N	40	40	
	S	5.47	7.39	
ITS	X	17.20	22.40	5.20
	N	40	40	
	S	3.38	5.39	
DTS	X	19.35	26.07	6.72
	N	40	40	
	S	5.33	6.11	

	X	19.15	29.15	10.00
TOTAL	N	120	120	
	S	5.02	9.52	

Table 1 shows the mean achievement of INTS students in the Pre – test as 20.90 and 38.97 for the Post – test with a mean gain of 18.07. It shows the mean of the ITS students as 17.20 and 22.40 for the pre – test and post – test respectively, with a mean gain of 5.20. It further shows the mean of DTS students as 19.35 and 26.07 for the pre-test and post – test respectively, with a mean gain of 6.72. The results clearly shows some difference in the mean achievement of students taught with the three strategies with an order of facilities of INTS > DTS > ITS

Research Question 2

To what extent does students academic achievement in basic technology differ with respect to their attitude to the subject when exposed to INTS, ITS, and DTS?

Table 2: Student's Pre – test and Post – test Scores with respect to SAQ

TS		Pre – Test	Post – Test	Mean Gain
Negative	X	17.74	25.98	8.24
	N	50	50	
	S	4.89	7.69	
Positive	X	20.15	31.41	11.26
	N	70	70	
	S	4.89	10.09	
Total	X	19.15	29.15	10.00
	N	120	120	
	S	5.02	9.52	

Table 2 shows that 50 students with negative attitude to the subject had mean achievement of 17.74 and 25.98 in the pre – test and post – test respectively with mean gain of 8.24, while the 70 students with positive attitude had 20.15 and 31.41 on the pre – test and post – test respectively and a gain of 11.26. This means that students' academic achievement in BT increases as their attitude to the subject tends towards positive.

Testing of Hypotheses

Ho₁: Hypothesis one stated that there is no significant difference in academic achievement of students taught with INTS in BT and those taught with DTS and ITS

Table 3: Analysis of Co – Variance (ANCOVA) of Students Academic Achievement (BTAT) taught with INTS, DTS & ITS

Sources of Variance	Df	SS	Ms	f	sig. of F
Covariates(Prestest)	1	727.65	727.65	21.11	.00
TS	2	4540.42	2270.21	65.87*	.00
Error	116	3998.69	34.46		
Total	120	112754.00			

*Significant at P = .05

The analysis on Table 3 shows an F_{cal.} of 65.87 being significant at an alpha level of .05. This means that students' academic achievements are significantly different in the three teaching Strategies.

Ho₂: hypothesis two states that there is no significant difference in academic achievement of students with positive attitudes and those with negative attitudes towards basic Technology.

Table 4: ANCOVA of Students' Academic Achievement (BTAT) with respect to their positive and attitude to BT

Sources of Variance	Df	SS	Ms	f	sig. of F
Pretest	1	133.04	133.04	27.74	.00
SAQ	1	345.20	345.20	4.93*	.00
Error	117	8192.91	70.02		
Total	120	112754.00			

*Significant at P = .05

The analysis of Co – variance in Table 4 indicates a significant F – ratio (4.93) at an alpha of .05. The implication is that students’ attitude significantly affects their academic achievement in the subject

Ho₃: There is no significant joint effect of teaching strategies (INTS, ITS and DTS) and students’ attitudes on academic achievement of students in basic technology.

Table 5: A 3 x 2 ANCOVA of Students’ Academic Achievement by TS and SAQ Variables

Sources of Variance	Df	SS	Ms	f	sig. of F
Pretest	1	486.84	486.84	16.13	.00
SAQ	1	363.67	363.67	12.05*	.00
TS	2	3964.25	1982.12	65.68*	.00
SAQ = TS	2	235.15	117.57	3.89*	.02
Error	113	3409.86	30.17		
Total	120	112754.00			

*Significant at P = .05

R squared = .684

Table 5 shows a significant joint effect (F = 3.89) of TS and SAQ on students’ achievement leading to a rejection of the null hypotheses.

Discussion of Findings

Results of the study show that teaching strategies significantly affects students’ academic achievement in BT. Teaching strategy having effect on academic achievement is in line with Mbaba (2006) and Ugwuanyi (2005). The implication here is that BT teachers have to select and use appropriate teaching strategies if they want to have high students’ achievements. The fact that instructional strategies will also dictate instructional resources such as machines, tools and other equipment cannot be over emphasized. In this study the interactive teaching strategy (INTS) performed best followed by the dependent teaching strategy (DTS) and independent teaching strategy (ITS). The INTS has some element of students’ interaction with one another and with the teacher coupled with the feedback mechanism which allows students to know their progress. Students’ attitude has also been seen in this study to affect their achievement significantly (F = 4.93, P = .05). This supports the findings of Bolaji (2003). However, this result is contrary to Uwameiye (2004), who argued that students’ attitude makes little or difference in their academic achievement.

The study further showed a significant joint effect (F = 3.89) of teaching strategies and students’ academic achievement. This is in line with Anderson and Block (2000) and the implication is that if effective teaching strategies are combined with positive students’ attitude, their academic achievement could be extensively improved.

Conclusion

Quality assurance in BT is a procedure for meeting the curriculum objectives and giving satisfaction to the stakeholders. The procedure requires instituting benchmarks/standards on the teaching and learning parameters such as teaching strategies, students’ attitude, funding, equipment, evaluation and instructional resources. This study has shown, that teaching strategies and students’ attitudes have significant effect on students’ academic achievement in basic technology. Therefore there is urgent need to put in place quality assurance process by manipulating teaching strategies and students’ attitude for effective learning of the subject and as a measure of stimulating students’ interest which has already dwindled towards BT. Teaching strategies, methods, teaching aids, educational media as some of the quality assurance parameters, should enhance teachers’ and students’ full participation if high academic achievement is to be expected. The starting point in the quality assurance process for the study of BT is a conducive learning environment (which include tools, machines, books etc) and qualified teachers that understand the philosophy and psychology of basic technology principles and who are capable of stimulating students’ attitude toward the subject.

Recommendation

- The interactive teaching strategy and technology friendly activities should be employed by BT teachers in the teaching and learning of the subjects to enhance students' attitudes towards the subject.
- Quality assurance in the teaching and learning of BT should properly align Students' attitudes, effective administration, evaluation and supervision, teacher's factors e.t.c.
- Activities aimed at stimulating students' interest and curiosity should be generated by the BT teacher since this will give the students the opportunity to be fully involved in the learning process.
- Government should provide the needed tools, machines, textbooks, materials and other laboratory facilities as part of a conducive environment to enhance quality teaching and learning
- Learning activities should include hands – on – experience, visits for technology oriented organizations, quiz on science and technology, exhibitions on BT products and application of computer for the solution of problems in BT.

Preparing Initial Teacher Education Students for a Culturally Diverse World: Case Study

Lungi Sosibo^{a *}

^aFaculty of Education, Cape Peninsula University of Technology, Cape Town, South Africa

Abstract

Globally, experienced and novice teachers struggle to handle learners from diverse cultural backgrounds. South African teachers also deal with learners who differ based on factors such as race, socio-economic status, religion and culture. Hence, it is necessary to equip student teachers with knowledge of cultural diversity. While this might be happening on the ground, there is dearth of research investigating incorporation of cultural diversity in teacher education curriculum. Yet, during teaching practice and when they become certified, students are expected to function effectively and to put cultural diversity into practice in multicultural schools. This qualitative case study investigated the incorporation of cultural diversity in a teacher education curriculum, using interviews with teacher educators and students. Diversity pedagogy theory informed this study. Results revealed that although implementation presented challenges, teacher educators incorporated theory of cultural diversity. The study recommends that teaching of cultural diversity should become a global teacher-education imperative.

Keywords. Incorporation, cultural diversity, student teachers, contexts, curriculum

INTRODUCTION

In both developed and developing worlds, teachers who serve diverse communities during the 21st century face a plethora of cultural-diversity related challenges that create social and professional demands on them (Clandinin, Downey & Huber, 2009). South African teachers are not immune to this situation. Like their global counterparts, they also grapple with issues such as gender disparities, as well as racial and socio-economic inequalities in education left by the legacy of the apartheid system. In addition, they deal with learners infected or affected by the HIV and AIDS pandemic and orphaned learners who have become caregivers or heads of households (Department of Education (DoE), 2000; United Nations (UN), 2011). These social ills represent shifting responsibilities, which require them to have skills of dealing with cultural diversity. Consequently, there is a need to explore the manner in which teacher education curricula incorporate cultural diversity; so that student teachers (or students, as referred to in this article) could be able to deal with these challenges effectively during teaching practice and after they become certified. Yet, existing research illustrates that the extent to which South African teacher education curriculum incorporates cultural diversity has not been adequately investigated.

This study investigated, from the perspective of teacher educators and students, the manner in which cultural diversity was incorporated in the curriculum of a selected teacher education programme (TEP). The TEP was located in a higher education institution (HEI) within a Faculty of Education. It consisted of Black, White, Coloured (mixed-race) and Indian students. The study objectives were (i) to establish the extent to which the TEP equipped students with skills of functioning effectively in classrooms with learners from diverse contexts, and (ii) to uncover the ways in which this was done and the impact this had on the students. In this study it is argued that children are brought up in culturally diverse environments and thus bring different value systems, norms, beliefs and attitudes into the classrooms. So too are their teachers. Hence, for learners' maximal cognitive development to occur, cultures within which their cognition develops should take precedence in the classrooms. It is further argued that the best possible way of enhancing the cognitive development of learners from diverse backgrounds is by incorporating situational knowledge that deals with contexts, diversity, and needs of diverse learners (Department of Higher Education and Training (DHET), 2011; Feiman-Nemser, 2001; Morrow, 2007; Shulman, 1987) in teacher education curriculums.

Hopefully, this study will influence teacher educators and policy makers nationally and globally to prioritise cultural diversity in the area of teacher education. It will also add new knowledge to the less chattered territory

of cultural diversity in teacher education curriculums, especially in the context of South Africa where these terms are relatively new.

LITERATURE REVIEW

Conceptual definitions of culture and cultural diversity

A discussion of cultural diversity inextricably links with an explanation of culture. Culture denotes the people's way of living. According to Pretorius and le Roux (2009, p.104) culture refers to,

The universal, distinguishing characteristics, products, values, traditional customs, symbols and acquired aspects of a specific human society. Material culture includes objects, technology and the arts, while non-material culture refers to language and other symbols, knowledge, skills, values, beliefs and customs.

Teerikangas and Hawk (2002) define culture as the worldview of a group and a means of communication and behaviour patterns shared by the members of that group. According to Handwerker (2002), culture consists mainly of the knowledge used by a group of people to live their lives and the way in which they do so. While these definitions portray culture as having common or homogeneous elements that are shared by groups of people, the other view depicts culture as having intracultural and intercultural variations (Handwerker, 2002). In short, cultures are heterogeneous and differences exist within and between them. Intracultural variations imply cultural differences among people who use the same social identity and cultural equivalence, while intercultural variations manifest themselves among people who use different social identities. Common elements and differences manifest themselves in, for example, styles of negotiation, communication, expectations and structure (Teerikangas & Hawk, 2002). Bandura (2002) distinguishes between individualistic and collective cultures or a mixture of both.

The cultural variations discussed above are what constitute cultural diversity. Mazur (2010, pp. 5-6) posits that:

Diversity is a subjective phenomenon, created by group members themselves who, on the basis of their different social identities, categorise others as similar or dissimilar.

To frame the context of cultural diversity in South Africa, the DoE (2000, np.) states that:

The economic and social challenges facing our nation – characterised most importantly by rich cultural and linguistic diversity, deep inequities, high levels of poverty and unemployment, and slow economic growth – largely frame the education challenge within South Africa.

Diversity is multifaceted and has many dimensions. Mazur (2010) cites Loden and Rosener (1991), who define diversity as factors that distinguish people along primary and secondary dimensions. Loden and Rosener (*ibid*) claim that primary diversity dimensions exert primary influences on people's identities and shape their self-image and fundamental worldviews. Primary dimensions include factors such as gender, ethnicity, race, sexual orientation, age and mental or physical abilities and characteristics. Secondary dimensions are described as less visible and impact people's self-esteem and self-definition. They include educational background, geographic location, religion, first language, family status, work style, work experience, military experience, organizational role and level, income and communication style. Rijamampinina and Carmichael (2005, cited in Mazur, 2010) add the tertiary dimension, which they claim is the core of individual identity.

Cultural diversity implies that cultures in which learners grow up are heterogeneous. Children grow up in socio-cultural environments that differ in terms of values, norms, mores, beliefs and attitudes. Cultural diversity is borne out of this multiplicity of cultures, and, as was highlighted earlier, it is from this multiplicity that human cognitive development occurs. Teachers' cultures, like their learners', are equally heterogeneous. So too are school cultures in which learners learn and teachers teach. Consequently, the learners' family cultures (including those of parents, grandparents, siblings) may or may not match those of the school and teachers' cultures. The result may be a dissonance between teachers and learners as well as family and school. Hence, it is vital that teachers and student teachers be thoroughly prepared for dealing with learners' diverse cultures. That is why this study investigated whether this was happening in a teacher education curriculum.

Cultural diversity in the context of teacher preparation

The importance of exposing students to cultural diversity is raised in international literature (Athanasé & Martin, 2006; DHET, 2011; Downey & Cobbs, 2007; Hollins & Guzman, 2005; and others). The idea behind this exposure is preparation of students to meet the ever-changing social demands of the teaching profession. In South Africa, the new policy framework on the Minimum Requirements for Teacher Education Qualifications

(MRTEQ) (DHET 2011, p. 15) stipulates that institutions offering teacher education programmes should create environments that enable students to acquire “concrete experiences of the varied and contrasting contexts of schooling in South Africa”, thereby equipping them with the knowledge and skills to function in diverse school contexts. The stipulations of this framework are in line with the principles of social justice. Similarly, the Council on Higher Education (CHE) (2006) emphasises the need for student teachers to develop professional competence of the diverse range of authentic South African school experiences. Feiman-Nemser (2001) advocates an understanding of learners, human development and diversity as vital in assisting beginner teachers to question their taken-for-granted assumptions and stereotypes about their learners. What could be deduced from these statements is that teaching practice sites are the most convenient contexts for students to learn to practise cultural diversity. It is important for students to acquire the skills of handling cultural diversity at an early stage as, although they may wish for this, there is no guarantee that when they become certified, they will be placed in schools environments with which they are familiar. Situations vary and students may find themselves having to adapt to teaching in school contexts that are completely alien to them. That is why it becomes vital for them to acquire these skills. Robinson and Zinn (2007) point out that in South Africa, White students generally resist teaching-practice placements in black schools. Ronfeldt (2010, p. 4), reiterating the same view, highlights the benefits of immersing students in different cultural school contexts thus,

[N]ew teachers, who are typically white and often from non-urban backgrounds, will benefit from guided immersion experiences with students from different backgrounds during professional preparation, especially since many of these teachers will eventually work in urban schools and with diverse student populations.

Nevertheless, views on the impact of teaching-practice placements in these school contexts vary. For instance, some studies report that students immersed in culturally diverse school contexts develop a positive attitude (Athanasé & Martin 2006; Downey & Cobbs 2007). Hollins and Guzman (2005, p. 512) support this view, arguing that students placed in schools with diverse students “acquire more complex understandings and awareness of cultural and experiential differences than do their peers placed in suburban settings”, a fact further supported by Gurin (2002). On the contrary, other studies illustrate that placements of students in these schools can present challenges for them to learn to teach (Buehler, Ruggles-Gere, Dallavis & Shaw-Haviland, 2009). Goodlad (1990, p. 61) appears to disagree with the latter view, pointing out that “fieldwork in clinical sites where family backgrounds and educational resources almost ensure success are programs that disadvantage future teachers and short change society”, as they do not match the realities of diverse school contexts. Hence, like Ronfeldt, Goodlad calls for the placement of students in both affluent and impoverished school contexts so that they can be exposed to both contexts and learn to deal with learners from diverse contexts. I argue that the source of the students’ problems with functioning effectively in these school environments may be rooted in their lack of theoretical knowledge of cultural diversity. Practice without theory is futile. So, without the theoretical knowledge and understanding of cultural diversity, students might find it difficult to put it into practice.

In his work, Morrow (2007) distinguishes between material and formal elements of teaching. Formal elements are skills that help teachers to organise learning systematically, such as programme design, assessment and other functions. Material elements of teaching involve contexts, facilities, resources, conditions and so forth. Morrow (2007, p. 100) criticises teacher education programmes for “repeatedly defin[ing] the work of teachers in terms of its material elements” that are context-bound. He argues that material elements limit students to specific contexts and preclude them from functioning in contexts that do not comply with what they were taught. So, while material elements of teaching are emphasised in teacher education literature, as shown earlier, teacher educators should guard against overly emphasising them at the expense of the formal elements of teaching.

THEORETICAL FRAMEWORK

The study is grounded in diversity pedagogy theory (Sheets, 2009). Sheets (2009, p. 1) describes diversity pedagogy theory as “a set of principles that point out the natural and inseparable connections between culture and cognition”. This theory stresses that teachers need to traverse certain steps in order to acquire cultural competence, and that success to do so relies on (a) one’s capacity to perceive diversity as a norm, and to view it as fundamental to all aspects of the teaching-learning process, and (b) one’s willingness to gain knowledge about the diverse cultures represented in one’s classroom. This knowledge sets the stage for the teacher’s practice, that is, how she or he will handle or impart knowledge, how he or she will deal with learners from diverse cultures, his or her expectations of the learners, as well as the attitudes he or she will exhibit in classes with learners from diverse backgrounds.

According to Sheets (2009), the diversity pedagogy theory connects culture, cognition and schooling in a single unit. She states as follows:

[Diversity pedagogy theory] unites classroom practice with a deep understanding of the role culture plays in the social and cognitive development of children. Diversity pedagogy theory views the natural connectedness of culture and cognition as key to incorporating multiple factors of diversity in the teaching-learning process. It acknowledges the indissoluble, joint-role of culture and cognition in the human development process (p. 11).

Eight two-paired, side-by-side dimensions of the diversity pedagogy theory that guide teacher and student behaviours can be distinguished (Sheets, 2009). In this theory, an assumption is held that the teachers' behaviours on the left hand side of the table can influence the learners' behaviours on the right hand side of the table. The dimensions are illustrated in Table 1.

Table 1: Dimensions of the Diversity Pedagogy Theory. Source: Sheets (2009, p. 13)

	Teacher Pedagogical Behaviours	Student Cultural Displays
#1	Diversity	Consciousness of Difference
#2	Identity	Ethnic Identity Development
#3	Social Interaction	Interpersonal Relationships
#4	Culturally Safe Classroom Context	Self-Regulated learning
#5	Language	Language Learning
#6	Culturally Inclusive Content	Knowledge Acquisition
#7	Instruction	Reasoning Skills
#8	Assessment	Self-Evaluation

The current study situates cultural diversity as an important element in the discourse of teacher education curriculum. Theoretical knowledge is inextricably linked to the social contexts in which it has to be applied. In short, theory cannot be implemented in a vacuum but in the social context of those who are being taught. The diversity pedagogy theory is relevant for this study as it acknowledges the role that the teacher's knowledge of learners' cultures influences cognitive development and the teacher's teaching practice.

METHODOLOGY

The design was a qualitative case study of a single teacher education program (TEP). Information was sought from seven of the nine teacher educators who taught pedagogical teacher knowledge (or subject didactics) and professional studies, as well as from 34 racially diverse students. Participants were selected purposely as they were considered capable of providing information that the researcher sought on the inclusion of cultural diversity in teacher education curriculum. Students constituted four focus groups, each of which consisted of seven to ten students from first to fourth year levels of study. The sample of participants was considered representative of the small population in the respective TEP. Although factors of race, culture and gender were considered in the selection of the participants so as to obtain diverse perspectives, analysed data were not categorised according to these factors.

Each of the individual and focus-group interviews lasted for approximately 40 minutes. During the interviews, probing was done in order to clarify any misconceptions. Interviews were tape-recorded and transcribed *verbatim*. Data were triangulated with open-ended questionnaires that were sent to three different students from each of the four levels and two subject didactics educators, all of who were not participants in the study. After the data were analysed, these students and educators were requested to validate the truthfulness of the data presented by the participants. Data were transcribed and analysed using the highlighting approach (Cohen, Manion & Morrison, 2000) in order to uncover the thematic aspects. Phrases or sentences that stood out in the text were colour-coded and classified into themes that were further organised into sub-headings.

Participants were informed about the confidentiality of information gathered and the voluntary nature of their participation. Ethical clearance was obtained from the institutional ethics review board of the Faculty of Education from which the research participants were drawn. Pseudonyms were used in order to maintain the anonymity of the participants.

RESULTS

Activities promoting incorporation of cultural diversity in teacher education

Data from teacher educators and students indicated that miscellaneous activities and strategies were employed to equip students with theoretical and practical knowledge and skills of dealing with cultural diversity in class. Dr Pampallis, a subject didactics educator, cited assignments as one strategy he used to expand his students' repertoire of theoretical and practical knowledge of cultural diversity. He gave the following example to illustrate how he challenged his students to incorporate cultural diversity in their classrooms, using theoretical knowledge acquired from his subject:

After teaching them about Vygotsky's socio-cultural theory, I give my students an assignment to plan, develop and teach a lesson using scaffolding in their respective areas of specialisation. The main criterion of the assignment is the extent to which it addresses learners' cultural diversity. This is good as we find that learners don't learn the same way, so differentiation should occur and the teacher should understand how to handle slow learners and those who may come from disadvantaged backgrounds.

Ms Peers reported that she approached cultural diversity differently by incorporating it as a module in her subject. She explained that the module prepared students to teach diverse South African learners in a variety of learning contexts, as stipulated in the various TEP policies. She further mentioned that students' evaluations of her module demonstrated that they had undergone perspective transformation and that they were well-prepared to face diversity-related challenges in schools. Nevertheless, she acknowledged the criticism that she said some of her critics levelled against this module, that teaching it to final-year students was too little too late.

Teacher educators were not the only ones to comment on the efforts made to equip students with knowledge and skills in this area. Students echoed their educators, explaining that they studied inclusive education from which they learnt about dealing with different disabilities in class. They further explained that the practical component that helped them to link theory and practice, included placements in inclusive classroom contexts in which were learners with disabilities. These placements are similar to the one reported by Doody and Connor (2012) in their study in which a student reflected on his experiences of being placed in a school of learners with intellectual disabilities. In this study, the student teacher reported to have found the experience "worthwhile, enlightening, rewarding and educational" (p. 117), as well as "rewarding and beneficial" (p. 116) to his growth, development, and attitudes towards teaching learners with disabilities. Similarly, Melanie, one of the participants in the current study, described her experiences of being placed in a school of learners with disabilities as having:

... helped me to deal effectively with disability in the school classrooms. Even when I do teaching practice with 'ordinary' learners I can handle those few with disabilities such as ADHD and slow learners well.

The approach to cultural diversity employed by Prof. van Jaarsveldt, a mathematics educator, appeared to be relevant to the context of South Africa in which some teachers in impoverished schools are either unqualified or under-qualified. He described his approach thus:

Before students go out to teach to schools, I highlight the plight of disadvantaged schools, such as impoverished schools and those with unqualified or underqualified teachers. It is important for lecturers to equip student teachers with the knowledge and skills of dealing with teaching and learning in these environments. I also explain the classroom realities of disadvantaged schools to the student teachers, such as poor mathematics content knowledge among teachers, lack of resources in these classroom contexts and rote learning, which is a common phenomenon in disadvantaged mathematics classrooms.

As can be seen above, teacher educators made efforts to incorporate cultural diversity in the teacher education curriculum in question. Nonetheless, concerted efforts appear not to exist in the teacher educators' approach to this subject. Based on the contentions raised earlier about White student's resistance towards being placed in Black schools for teaching practice, I contend that teaching practice should be used as the main vehicle for strengthening incorporation of cultural diversity in teacher education curriculums.

Barriers to incorporation of cultural diversity

Internationally, placements of students in schools are hailed as an integral component in initial teacher education; as it is in teaching practice that students get an opportunity to link the theory they learnt in university with practical experiences in real classroom contexts. However, as stated earlier, before students can be in a position to put theories into practice, they must have a sound theoretical background. The analysis above has focused on what happens in university classrooms in terms of incorporating cultural diversity in the teacher

education curriculum. What transpired from both teacher educators and students' accounts was that cultural diversity was incorporated in the teacher education curriculum. Nevertheless, in the analysis presented in this section, it became clear from some students' utterances that there was a disjuncture between the theoretical and practical knowledge taught in the teacher education curriculum. Factors such as culture, language, socio-economic status and race appeared to act as barriers to the practical implementation of cultural diversity in real classroom situations. Most of the students' challenges with implementing cultural diversity seemed to be rooted in ineffective inclusion of cultural diversity in the teacher education curriculum.

As with other studies on teaching-practice placements of students in culturally diverse contexts mentioned earlier, some students in this study sounded apprehensive about being placed in these schools. Some of the experiences reported in this study echo those found in Sosibo's (forthcoming) study, in which some Black first-year students found placements in culturally diverse schools challenging. In this study, Mazwai described the source of their problem as emanating from the fact that,

We [Black students] are thrown in the deep end in these schools because, although we study theories of teaching and learning, there is no theory that teaches us to operate in White or Coloured schools where they teach through English or Afrikaans and where the culture is different. We should first be prepared for this experience before we are sent out for teaching practice.

Ayanda expressed the same sentiment, arguing that the theory she had acquired from the teacher education curriculum had not prepared her to deal with the negative attitudes and stereotypes exhibited by learners, as well as alienation and discrimination by teachers in the White school in which she had been placed. She criticised the university theory for not being contextualised to suit racially different school contexts.

Besides linguistic and cultural disharmonies expressed above, structural and situational barriers appeared to adversely affect effective incorporation of cultural diversity in the teacher education curriculum. For instance, Sello observed that university theory failed to emphasise situational learning that taught them about inequalities among different cultural and racial communities. Yet, as he stated, he felt that classroom context was key to a student's growth and development as a teacher. Like Ayanda, he suggested that teacher educators should contextualise the theories rather than teach them one-size-fits-all. He concluded by stating that,

At university the way we are taught is as if we are all going to teach in better equipped schools, yet some of us have to go and teach where there are not enough learning facilities for learners. Most of the classrooms in these schools are overcrowded. One-size-fits-all approach has a tremendous negative effect on us when we get into poor schools.

Tyra reiterated the same point, stressing that when students encountered a situation in which computers were dysfunctional in impoverished schools, the theory acquired in university went out the window, leaving them disoriented and embarrassed. She called for theories that were relevant to diverse school contexts, to which Morrow (2007) refers as formal elements of teaching, as they prepare students to function in any context regardless of school conditions.

The students' accounts made it evident that issues of race, racial identity and cultural diversity were not addressed sufficiently in the teacher education curriculum. They claimed that this situation left them wondering about their future careers as teachers in the new democratic South Africa. Beverley expressed her sentiment as follows:

It's as if we [White students] in the new South Africa are going to remain in our White schools and Black students in their Black schools. What will happen if the only available job for me is in a Black township school? I won't have the vaguest idea of how to teach there because I have never been taught how to function effectively in those schools.

Mahmoed had a somewhat similar view, citing the university classroom as not representative of cultural diversity and as failing to set a tone for cultural diversity. His view was that:

In our [university] classrooms we barely ever practice diversity. We don't mingle but we sit in groups according to our races. Even when we do group work we stick to our own. Lecturers don't care to integrate us and those who try find it difficult to split us. When we go to schools with diverse learners we encounter the same problems but we can't do anything about it because we were never taught how to handle them in the first place.

The first section of the results showed effective incorporation of cultural diversity in the teacher education curriculum. However, this section has highlighted tensions and disjuncture between what happens in teacher education classrooms and teaching-practice contexts, which could be an indication that theory taught in teacher education curriculum is not in sync with phenomena in school classrooms. This might point to the need for lecturers to contextualise cultural diversity. It also shows that students should be equipped with theoretical knowledge of cultural diversity before they are plunged to swim or sink in school contexts with learners from diverse cultural backgrounds. Placements of students in culturally diverse contexts cannot and should not happen in a vacuum where theoretical knowledge has not been taught.

DISCUSSION

This study investigated the incorporation of cultural diversity in a teacher education curriculum. Evidence from the participants' accounts attested to the fact that teacher educators made efforts to link these aspects. However, the analysis showed that the efforts made are incoherent, additive and lacking comprehensiveness. There was no evidence of a theoretical basis that informs the processes that are followed in incorporating cultural diversity in a comprehensive manner that will enhance students' theoretical understandings and practical implementation of this aspect. The findings revealed the fragmented nature of the approach used in the teacher education curriculum under study. They also highlighted a symptomatic neglect of situational teacher knowledge in the teacher education curriculum, a fact highlighted by Sosibo (2012) in her study on the privileged teacher knowledge domains in teacher education programmes. Similarly, issues raised by students on the perpetual disregard of cultural diversity and transformation in teaching practice placements appear to confirm Sosibo and Kwendas' (2013) findings on their study of the views of culturally diverse students on teaching-practice placements. These issues may be an indication of a need to develop a theoretical framework that will serve as a basis for incorporation of cultural diversity.

The literature revealed that differences exist among learners and learners, and learners and teachers as they all bring with them varying cultures, traditions, beliefs and so forth into the teaching-learning situation. Therefore, it is important for students to be equipped with theoretical knowledge and practical skills of handling cultural diversity in the classroom. As was shown in the literature, since learners' cultures are a vehicle for cognitive growth and development, it stands to reason that students should be equipped with skills of handling learning environments with cultural diverse learners. The eight dimensions of the diversity pedagogy theory (Sheets, 2009) are critical as they demonstrate that a teacher's pedagogical behaviour influences a certain cultural display by a learner. This statement is critical as it might imply that if a teacher behaves in a manner that disrespects or disregards a learner's culture, the learner might be influenced to display reactions that the teacher may consider culturally inappropriate, unaware that she or he is the cause of that learner's cultural reaction. Without theoretical knowledge of these issues, students may commit flaws in implementing cultural diversity. Students are teachers-in-the-making who are being prepared to become socialising agents of learners who bring diversity into the classrooms. Without thorough preparation, they might find it difficult to develop the cognition of those learners who come from backgrounds that are different from theirs, and to implement the teaching and learning approaches that would enhance those learners' cognitive development. Therefore, for student teachers, acquiring the skills of putting cultural diversity into practice should be made an educational imperative.

In his progressive education, John Dewey (1939) argued that for learners to understand democracy, they must live it. The same applies to cultural diversity. For students in this study to understand cultural diversity, they must live it in their everyday teaching and learning encounters and in every aspect of their teacher education curriculum. In other words, it must be integrated in the whole curriculum and in all the classroom phenomena. This includes seating arrangements, group activities and assignments, which in this study were reported to reinforce separation rather than integration among students from different cultural backgrounds. If these divisions continue to happen, student teachers might experience difficulty with understanding cultural diversity fully, let alone practising it.

CONCLUSION

In this study it became evident that teacher educators made strides in ensuring that student teachers were equipped with this knowledge using a variety of strategies. Nonetheless, it was disconcerting to note that although this aspect is incorporated, it is done in a fragmented manner that does not help students to effectively apply it in contexts with learners from different cultural and racial backgrounds. In South Africa and globally, it might help if teacher education policy makers establish partnerships with teacher educators in order to ensure

that cultural diversity is fully and effectively incorporated in teacher education curriculum. Cultural diversity is the norm in the South African education arena. Therefore, it should be strengthened and made a national imperative in teacher education. This could be done by teaching cultural diversity across teacher education curriculum or as a stand-alone module. It is also important to not assume that teacher educators are equipped with skills of imparting this knowledge. Retraining them on cultural diversity is vital and might empower them with the knowledge and skills of equipping their students with theory and practice of cultural diversity. More studies need to be conducted in the area of teacher education and cultural diversity.

Wave Motion Leadership for Private Schools in the Philippines

Rommel E. Pelayo^{a *}

^a Dr. ,The National Teachers College, Philippines, Al Itqan American School – Sharjah, UAE

Abstract

This dissertation ushered researcher to the concept of wave motion in the context of educational leadership in a private school setting. The concept was drawn from the use of mixed research method from the three fundamental elements of empowerment – structural empowerment (SE), psychological empowerment (PE) and participation to decision making (PDM). From the numerical data drawn from cross sectional survey (Owen, 2003) to arbitrary grounding using the 3C (Glasier and Strauss, 1977); four empowerment structures were drawn – milieu, ecological, cultural and social system. The interplay of these system grounds the wave motion concept, which was patterned after that naturalistic hypothesis of ocean motion that will propel leadership in school.

Keywords.

INTRODUCTION

Although the word empowerment lacks universal definition (Grieves, 2003); it is a driving force, which does not only attempt to extend the argument of excellence movement but seeks to solve problems of alienation. Empowerment is the determinants of continuous organization improvement and job satisfaction of the manpower in which, when these conditions are strategically built-in an organization, will construct an organization climate of excellence. In an educational setting, teachers are the working force towards achieving educational aims. They are prime movers of the school's vision and align actions to its mission. If their actions are built on poorly structural foundation, then the school's expectations will always be in its unrealizable status. This dissertation grounds a concept that will propel people in an educational setting to move towards its strategic direction of success.

Theoretical Framework

This dissertation rests on the following theories, which become the foundation in probing the structure of empowerment based on the school's organizational climate and will turn out to be the basis in grounding the wave motion leadership in the context of Space-Change-Time. The structure of empowerment is conscripted from the organizational climate concepts of Owens (1995). These dimensions are the ecology, milieu, social system and culture.

Ecology refers to the physical and material factors in the organization. In this study, architectural size, building conditions and designs, and available facilities comprise the architectural cluster of this dimension while technology utilized in the school complete its ecological dimension. Milieu refers to the social dimension in the organization. This includes virtually everything relating to people in the organization. Social System refers to the organizational and administrative structure while culture refers to the values, belief systems, norms and ways of thinking that are characteristics of the people in the organization. These dimensions are the backbone of the empowerment structure under study. To outline the empowerment structure from these four dimensions, pertinent information was drawn from the two models of empowerment --- **Structural and Psychological Empowerment**.

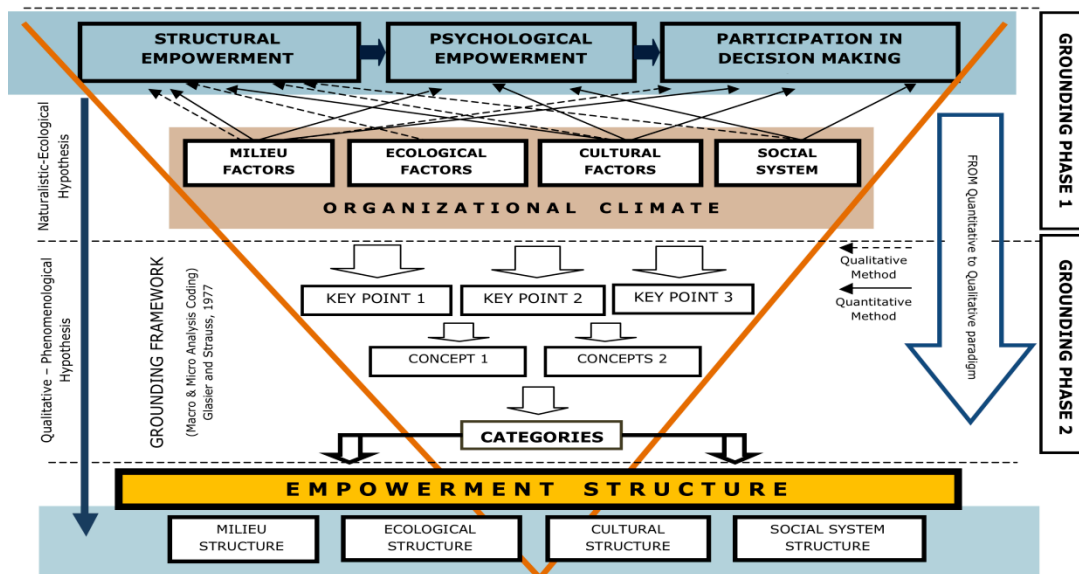

Structural Model of Empowerment (SE). According to Kanter (1977; 1993), employees' work behavior and attitudes are shaped by different social/organizational structures. She proposes three structural determinants: (1) power, (2) opportunities and (3) proportions. These three concepts have the potential to explain a majority of employee's responses to organization. However, in this dissertation, only **opportunity and power** were studied.

Opportunity represented the potential for advancement (Kanter, 1977, 1993). It could be determined by the promotion rate. According to Kanter (1993), high promotion rate from some certain positions did not come with the career paths automatically but come with the exposure, visibility and connections associated with that position. Power as defined by Kanter (1977, 1993) as “the ability to get things done, to mobilized resources, to get and use whatever it is that a person needs for the goals he or she is attempting to meet” (p.166). For Kanter (1977), power was closer to mastery or autonomy. There are three important lines of power: the access to information, support and resources (Kanter, 1977). According to Laschinger, Sabiston, and Kutzcher (1997), lines of information are related to the formal or informal possession of early information about organizational decisions and policy. Lines of support are associated with the ability to bring in materials, money, rewards or other needed resources. Lines of support are related to having allowance for innovative activities without going through a multilayered approval process.

Psychological Model of Empowerment (PE). From the socio-psychological perspective, empowerment is mainly viewed as the result of an employee’s perception of her/his personal state or interpersonal interaction (Chiles & Zorn, 1995). According to Spreitzer (1995), there are four cognitive dimensions of psychological empowerment: meaning, competence, self-determination and impact. *Meaning* refers to the value of a work goal judged in terms of an individual’s own values, beliefs and standards. *Competence* is an individual’s capacity and ability required for his/her work. *Self-determination* is an individual’s ability to initiate a work-related action or behavior. *Impact* is the extent to which an individual can have influence on work outcome. Since psychological empowerment is influenced by employees’ work environment, it can be seen as a logical outcome of SEP (Laschinger et al., 2001b) and as an important mediator between the SEP and empowering behavior (Laschinger et al., 2001b; Thomas & Velthouse, 1990).

Empowerment Element Theory. According to Matthes (1986), there are three elements that are considered indispensable to effective schools. These elements are the status, knowledge and decision making. Status, vis-a-vis with the idea of resources by Kishor (2000), refers to the conditions under which empowerment likely to occur. They are the potentially critical inputs to foster an empowerment processes, rather than as part of the empowerment per se. Knowledge element is likewise refers to resources that provides staff or personnel of any institutions the ability to formulate strategic choices and to control resources that will affect expected outcomes (G, Senm, 1993; Mehra, 1997). Decision-making element refers to the access of the teachers or staff to institution’s decision making. Their involvement to this process shapes a kind of leadership, which is essential in building high levels of satisfaction to work place (Taylor and Tashakkori, 1997). Anderson (2002) cited in that high levels of satisfaction leads towards high level of student achievements. It was also cited in clearly by Maeroff (1988) that these aforementioned elements should manifest change over time to ensure the enhancement of the levels of empowerments implemented in the institution.

Figure 1: Conceptual and Research Framework

METHODS AND PROCEDURE

Mixed method was used to expand the scope of the study and empirically ground the empowerment structure, which is crucial in grounding the wave motion concept. Specifically, concurrent strategy was utilized to collect both qualitative and quantitative data at the same time during the study to provide a comprehensive analysis. The quantitative component of the study includes the use of Cross-sectional survey correlation research while qualitative uses primarily the grounded theory whose procedure for grounding was based on the proposed coding and categorizing model of Glacier and Strauss (1967). Data analysis includes use of mean, standard deviation, kurtosis, paired t-test, Pearson-r moment of correlation and multi-regression analysis using SPSS (Statistical Package for Social Sciences).

RESULTS

The researcher's profound exploration of the thoughts and actions of empowerment structure flavored by his savory intercourse with structural, psychological, participation to decision making and cultural dimensions in an organizational climate in the light of his academic discourse of Time-Space-Change has finally ushered him into the concept of wave motion; thus, his leadership model is born: Wave Motion Leadership for Private Schools in the Philippines.

Specific Findings. Such dissertation on wave motion leadership has been the brainchild of the following specific findings:

1. The moderate structural and psychological empowerment of the basic education teachers has been shaped by its existing organizational climate.
2. Primarily, the actual level of participation to decision making (PDM) is administration propelling leaving little or no space for teachers to participate.

Table 1: Actual and Preferred Level of Participation to Decision Making

Variables	Actual Mean	SD	Description	Preferred Mean	SD	Description
Unit Staffing	1.44	0.57	Administration only	2.16	0.80	Primarily Administration – some teachers input
Quality of Professional Practice	2.03	0.53	Primarily Administration – some teachers input	2.51	0.30	Equally shared by administration and teachers
Professional Recruitment	1.32	0.20	Administration only	1.69	0.32	Primarily Administration – some teachers input
Area Governance and Leadership	1.26	0.25	Administration only	2.03	0.88	Primarily Administration – some teachers input
Collaboration Activity	1.44	0.30	Administration only	2.37	0.74	Primarily Administration – some teachers input
Total	1.49	0.37	Administration only	2.15	0.61	Primarily Administration – some teachers input

3. An administration-propelled decision-making has yielded significant influence on teachers' decision making, but such significance may have spelled out negative, more than positive effect on empowerment.

Table 2: Table of Significant Difference Between Two types of PDM

Variables	Mean Actual	Mean Preferred	Mean Difference	t	P (2-tailed)	Decision	Interpretation
Unit Staffing	1.44	2.16	0.64	3.93	0.001	Reject Ho	Significant
Quality of Professional Practice	2.03	2.51	0.48	4.41	0.000	Reject Ho	Significant
Professional Recruitment	1.32	1.69	0.37	4.14	0.000	Reject Ho	Significant
Area Governance and Leadership	1.26	2.03	0.77	4.63	0.000	Reject Ho	Significant

Collaboration Activity	1.44	2.37	0.93	5.46	0.000	Reject Ho	Significant
Total	1.498	2.152	0.382	4.51	0.000	Reject Ho	Significant

4. There is evidence of the presence of intimacy and disengagement cultural dimensions but spirit dimension is at uncertain level.
5. The ecological structures of the organization support the needs of the basic education teachers.
6. Using in the inter-correlation matrix, SEP negligibly related with background factors; however, it showed strong positive correlation between formal and informal power; on the other hand, background factors have negligible relationship with the participation to decision making as well as power factors with participation to decision making. Lastly, SEP has negligible relationship with PE while SEP and PE have negligible relationship with the PDM.

8. The communication structure is from top to bottom and down to top structure while the administrative structure is a combination of functional and divisional organizational set up.
9. The empowerment structure consists of adequate levels of milieu, social and cultural dimension and high levels of ecological component. These four provided the needed structural and power levels, effective feed-back system to relay information, functional organizational set-up that provided full understanding of the roles played by each member of the organization and adequate space and enough technologies that supports effective teaching and learning performance of the basic education teachers.

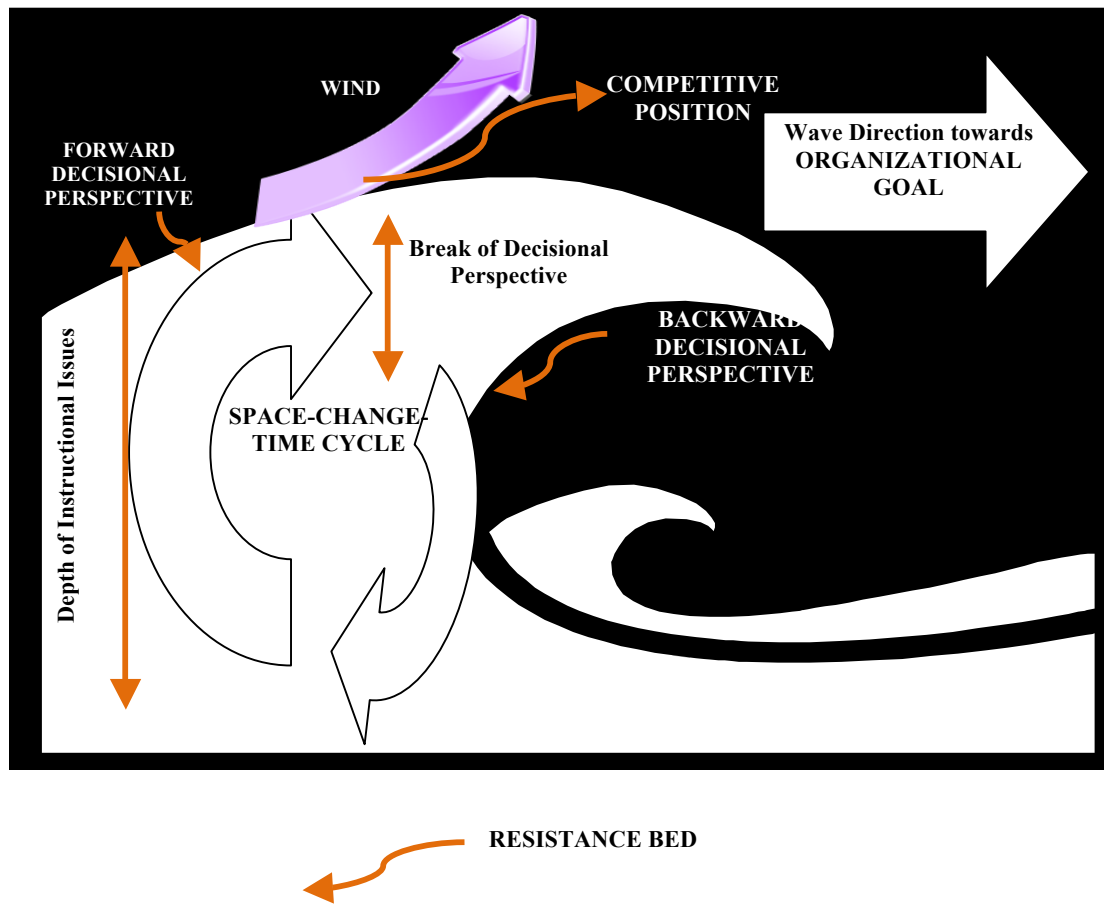

General Findings. From the preceding specific findings come the general findings. From one setting, the empowerment concept of the organization is characterized by the interplay of milieu, ecological, cultural and social system structures. Generally, these structures have led to the birth of external commitment where internal commitment has likewise emerged. Although the changes taking place has slowed down as noted in the previous years, its gradual progressive movement has continuously been observed. The changed program has brought inner contradictions, which fail to foster the behavior that is meant to inspire, but the steps to surface these contradictions have correspondingly inhibited the destructive force of unacknowledged and unaddressed concerns that are expected to sap the organization's efficiency.

Though the school management controls and regulates empowerment for people to unleash internal rather than external commitment, teaching performance has become a factor in quantifying performance as the penultimate of morale that propels inner self to strive to bring forth the entire school organization into heights. To direct people towards instructional change, concept of space-change-time cycle has the potency to unravel for deep understanding of the theory of ocean wave production. By practice, this wave motion principle has the potency to bring about the entire organization to cascade a wave with ripple effect under the control of the less backward but more forward perspectives. Ultimately, such wave motion catapults an organization in a forward linear direction of wave movement towards the shore of educational success – the new phenomenon of change.

CONCLUSION

The new phenomenon in educational leadership has emanated from the lattice of three elements: Space, Change and Time. Space refers to the organizational setting where the change takes place; change refers to the issues of reality – instructional practices that require change to further meet organizational direction while time refers to the sequence of moments in a linear order (Brubacher, 1978) where change happens. This is a step to inquiry seeking to understand organizational life and to create a spirit on inquiry that invites others to collaboratively do the same. Below is the concept of wave motion pattern drawn from the facts of this research.

Figure 2: Wave Pattern for Concept of Space-Change-Time

The concept of Time-Space-Change is grounded model draws its force, mechanisms and shape from the nature’s production of ocean wave. Nature propels the production of wave, which is initiated by the friction of the wind that passes over the water surface, which eventually forces the water to ripple. The strength of the wind, the distance of the wind blows (fetch) and the length of the gust (duration) determine how big the ripples will become. With enough friction, the water would cause to ripple to take effect, which move the water towards the shore. In relation to the ocean wave motion theory, school leadership may propel its organization towards its organizational goal if it has the desired structures necessary to bring about success in the context of time-space-change. These structures include the adequate levels of milieu, social, cultural and ecological dimensions

(Structural and Psychological Empowerment), which make up the space required to move the organization to its desired direction. The people must be equipped with adequate level of power (Structural and Psychological Empowerment) and participation to decision-making that will provide the friction within a the adequate range of competitive distance (fetch) that will create change in the space. The interplay of these structures both structural and psychological will create a circular motion brought by the interaction between the forward and backward motion (the cultural context vs. the school's strategic direction). These interactions should happen in a gradual sequential moment (gust) to absorb both its forward and backward movement allowing forward movement to overcome the backward system. This will propel the organization to move towards its strategic direction in a more productive way. The school's ability to assess its competitive position is critical to weigh the driving forces, pressures and anticipated move of resistance to maintain the extent of ripple effect adequate to move the organization towards its desired outcome.

RECOMMENDATIONS

As the school organization has restructured through downsizing, faculty have been increasingly required to work in teams. As a result, they need to develop new skills such as decision-making, problem solving and personal skills which include listening, resolving conflict, negotiating and leadership. Team and manpower effectiveness have therefore become a critical issue for the development of the organization (Grieves, 2003). For this reason, the school is required to develop critical instructional leadership skills.

There are different ways to strengthen the empowerment structure of the basic education teachers based on existing organizational climate. Different considerations must be noted in the construct most especially in the level of understanding the demographic determinants and the work performance of the faculty. These are the fundamental ingredients for work as need analysis phase for constructing suitable programs to enhance empowerment. The proposed empowerment strategies are enumerated below:

- (a) Developing functional and operational faculty development program that includes enhancing intellectual, social, cultural and spiritual dimensions. Stakeholders should require the participation of all the stakeholders either full participation or sectorized representation to voice out the majority's needs and aspirations vis-à-vis with the school's philosophy vision and mission. This program should develop functional instructional leaders that will transform school organization through personal and management development.
- (b) The activities of the faculty and staff development program should be planned out carefully through annual action plans. These action plans must be operational and functional which includes internal and external strategies for effective implementation. The executional strategies must be identified and planned out well by the assigned committee.
- (c) The action plans must be formatively and annually assessed to gauge the success rates of each activity. The evaluation should include not only the activities but also the manpower that implements and supports the activities. Feedback has, therefore, become a necessary condition of organizational learning. Being at the center stage, the students (clientele) have increased demands on employees to become acquainted with the concepts of quality, benchmarking and continuous improvement.
- (d) Conduct regular in-service and off-campus training to improve professional competence of the faculty not only in the pre-instructional level but also in the instructional and post-instructional level. Updating them with political, environmental and multi-cultural educational issues increases their horizons necessary to improve the nature of work and decisional power.
- (e) Improve the internal commitment using external commitment practices as a spring board. Engaging them to activities that allow them to trust themselves as well as the people around them to build confidence will eventually lead to shared responsibilities.
- (f) Improve communication feedbacks by increasing information dissemination strategies through memos, daily announcements, updating bulletin boards regularly, and accept instances for open discourses about issues and situations concerning them.
- (g) Utilize leadership that complements their followership style, and provide equal opportunity to lead organization.
- (h) Provide frequent supervisory conferences with teachers helping them meet expected instructional standards within the context of professionalism.
- (i) Provide teachers access to resources to identify and solve problems related to the classroom in order to ensure they can help all students to learn.

- (j) Create opportunities for teachers, both formal and informal to influence, design, create and implement school policies and procedure.
- (k) Encourage teachers to attend and complete graduate programs by supporting them financially especially those that manifest greater enthusiasm for career improvements and require teachers to earn graduate degree as a way to strengthen their career horizons.
- (l) Impose participation of the faculty to intellectual discourses and repartee concerning educational issues or teacher's competencies during faculty and staff meeting or assembly. This step will force them to prepare for the required undertaking but will inevitably acquire learning.
- (m) Promote a culture of research in the institution and provide avenues of research congress among teachers. This increases the productivity and their participation to solve issues or problems concerning the school.
- (n) Provide teachers time to reflect and prepare professionally through appropriate loading schedules.

Abstract

In view of the need to address all problems bedeviling youth in Nigeria and beyond, this study was conducted on causes and effects of Drug abuse on the academic pursuit of students in selected Secondary Schools in Nigeria. The study had six specific objectives, and, as a guide, six null hypotheses were raised. Descriptive survey design was adopted for the study. The researchers targeted 3879 parents and teachers that attended Parents, Teachers Association (PTA) meetings in selected five secondary schools in Nasarawa state, which is one of the 36 states in Nigeria. The sample size of the respondents was 776 (20% of the target), which comprises 622 parents and 154 teachers. Data were generated through four rating structured questionnaire. SPSS was used to analyze the data collected using regression analysis to test null hypotheses one, two and three, while t-test was used to test null hypotheses four, five and six. All the null hypotheses were tested at 0.05 level of significance. The study reveals, among other findings, that 88% of the deviance in academic pursuit of secondary school students in Nigeria is attributed to drug abuse. Among the recommendations provided to address the situation are that: (i) parents should monitor the activities of their children while in school (through constant visits and appointment of trusted guardians among staff in the school) and (ii) parents should guide the type of friends their children move with (in and outside the school system). These would help to protect the students from undue influence of friends/peers on their attitude towards the use/abuse of unauthorized drugs.

Keywords. Parental Perceptions, Drug Abuse, Academic Pursuit, Secondary School students, Unauthorized Drugs

INTRODUCTION

The misuse and abuse of drugs by adolescent school children is a global issue, and Nigeria is not exempted. The rapid increase in the prevalence of this behaviour among school age children has remained a prominent concern in the country. Most of school age children first try drugs out of curiosity, to have a good time or ease another problem, such as stress, anxiety, or depression. This was affirmed by Nevadomsky (1985) who reported that students take stimulants to remain alert while studying and for reducing tension during examinations. The implication of this is that many of the students use drugs without knowing the consequences of the attitude on their school attendance, academic performance and other suspicious behaviours.

In Nigeria, medical doctors and scholars have recognized that drug and alcohol use/abuse have negative effects on schooling and educational achievements of students (Nevadomsky, 1985; Ifabumuyi, 2007; Atoyebi and Atoyebi, 2013). In fact, Atoyebi and Atoyebi (2013) reported that most of inappropriate classroom behavior, such as aggression and impulsivity; academic failure are attributed to drug abuse. This is also in line with Mayo (2013) who argued that drug abuse lead to low self-esteem or poor social coping skills and academic failure among the youth. As a result of this ugly incidence, the federal and state agencies in Nigeria have responded to problems of substance abuse by introducing health tips and guidance services in the curriculum of secondary schools. It, therefore, follows that schools have become the major focus of drug and alcohol abuse education and prevention activities of youth in Nigeria.

Despite the interference of drug abuse on students' ability to think clearly, exercise good judgment, and academic pursuit, misuse of drugs has become a common thing among students. In Nigeria, drug abuse among students is at increasing rate, shifts in the pattern and types of drugs abused among school age children have

been reported and increasing female involvement and multiple drug use pattern have also been noticed (Ifabumuyi, 2007). As a result, these interdisciplinary researchers investigated the causes and effects of Drug abuse on academic pursuit of students, using some secondary schools in Nasarawa State of Nigeria. Based on this the researchers aimed at determining the:- (i) influence of peer groups on secondary school students' involvement in drug abuse in Nigeria; (ii) influence of parental behaviour on secondary school students' involvement in drug abuse in Nigeria; (iii) Effect of drug abuse on academic pursuit of secondary school students' involvement in drug abuse in Nigeria; (iv) difference between male and female parents on effect of drug abuse on academic pursuit of secondary school students' involvement in drug abuse in Nigeria; and (v) difference between male and female teachers on effect of drug abuse on academic pursuit of secondary school students' involvement in drug abuse in Nigeria; and (vi) difference between parents and teachers perceptions on effect of drug abuse on academic pursuit of secondary school students' involvement in drug abuse in Nigeria.

To achieve the above set objectives, the following null hypotheses were raised and tested:

HO₁ Peer groups have no significant influence on secondary school students' involvement in drug abuse in Nigeria

HO₂ Parental behaviour has no significant influence on secondary school students' involvement in drug abuse in Nigeria

HO₃ Teachers behavior has no significant influence on secondary school students' involvement in drug abuse in Nigeria

HO₄ There is no significant difference between male and female parents' influence on the academic pursuit of Nigerian secondary school students and their involvement in drug abuse

HO₅ There is no significant difference between male and female teachers' influence on the academic pursuit of Nigerian secondary school students and their involvement in drug abuse

HO₆ There is no significant difference between parents and teachers perceptions on effect of drug abuse on academic pursuit of Nigerian secondary school students.

LITERATURE REVIEW

This study is hinged on two theories: the Classic Theory of Festinger (1954) and Social Psychology Theory of Bruce, Aria, Denise and Keith (1990). The Classic theory, the older, argued that peer groups conspire to move individuals to perceive their world as the groups do, to adopt peer group attitudes. Such factors include friendship affiliation needs and social comparison processes and pressures toward peer group conformity (Asch, 1951), and the formation and acquisition of reference group norms (Newcomb, 1943; Sherif, 1936; Newcomb & Wilson, 1966; 1972). The social psychology theory views that problem behaviors are contagious youth culture of academic negativism and misconduct can thwart learning and disrupt the school routine. The theory believed that most school age children conceived drug abuse as the means of easing the transition and improve their social and academic life in schools. This belief leads to increases in prevalence of drug abuse occurrences among both males and females students in all socioeconomic groups (Dryfoos, 1990; Johnston et al., 1994).

This, therefore, means that students who drink or use drugs are much more likely to have problems in their schools than those who do not use substances. Supporting this theory, East (2006) maintains that there is association between drug use deviant behaviour among adolescent students. Based on this philosophy, it then follows that if drug abuse causes misbehavior among students, then policies designed to reduce it may succeed to promote the interest and academic pursuit of school age children. In Nigeria, this theory was supported by Atoyebi and Atoyebi (2013) who opined that the use of drug among students would lead to memory and learning, distorted perception, trouble with thinking and problem solving and loss of motor coordination.

Ekpenyong (2012) conducted an empirical study on drug abuse in Nigerian schools, selecting secondary schools in Bayelsa state, Nigeria, as samples. The respondents to the research questionnaire were drawn from four public secondary schools: Southern Ijaw Secondary School (Oporoma), Community Secondary School (Eniwari), Government Secondary School (Amassoma), and Community Secondary School (Angiama), all in southern Ijaw Local Government Area of Bayelsa State, Nigeria. Data were collected through a structured questionnaire administered on the students and interview conducted on the teacher-counselors in the selected schools. The data collected were organized, tabulated and analyzed using descriptive and inferential statistics. Frequencies and percentages tables were used and the presentation of data was done through summary graphs. Gender differences on perceptions of drug abuse were analyzed with the t-test at the 0.05 level of significance. The Statistical Package for Social Sciences (SPSS) Version 16 for Windows assisted in the data analysis. The data from the interview schedule for teacher-counselors were also analyzed using descriptive statistics. The

study established, among others, that Nigerian secondary school students have a positive perception of drug use/abuse. It was recommended, among others, that behaviour modification techniques should be employed by secondary school authorities or the secondary school owners (the state governments) to rehabilitate students found to have been involved in drug abuse.

Moses and Oriahi (2012) conducted a study on Causes and Effects of Drug Abuse among Secondary School Adolescents in Esan West Local Government Area of Edo State, Nigeria. Cross-sectional descriptive survey design among senior secondary school adolescents in public schools was employed for the study. The population of that study comprised of 2500 students, sample size was achieved using the simple random sampling technique from 5 public secondary schools choosing 30 students from each of the selected schools, giving a sample size of 150. Responses were elicited using a structured self-administered questionnaire on knowledge, causes and effects of drug abuse. Data collected were analyzed using the chi-square(X^2) method ($p < 0.05$). The outcome of the study was that adolescent students are influenced by peer group on the use/abuse of drugs (51.3%) and are influenced on use of drugs by parents (48.6%). The researchers recommend that, since majority of drug use/abuse among youths start in schools, the school environment is the best place for early detection and prevention of the attitude of drug abuse and, so, the administrators of the school system should not fail the youth and the economy, as a whole, in this regard.

James and Omoaregba (2013) conducted a research on Nigerian Medical Students' Opinions about Individuals who Use and Abuse Psychoactive Substances. The population of the study was 210 students and 200 (95% of them were used in the study. A structured Likert scale questionnaire was used for data collection. Data collected were analyzed using the Statistical Package for Social Sciences (SPSS), Version 16 (IBM SPSS Inc., Chicago, IL). Descriptive statistics were used to summarize the data and the summaries were presented in tables. The study reveals, among others, that drug use/abuse among youth was associated with family history and attitude. The researchers recommend, among others, that the family of an individual school child should be involved in addressing the identified problem of drug abuse in a child.

The current research effort focuses on causes and effects of drug abuse on psychological characteristics of students and the academic implications. This is an area where research is still limited particularly in Nigeria and other developing African economies. The study specifically addresses issues bordering on the effects of drug abuse on the academic pursuit of secondary school drug abusers in Nigeria.

METHODOLOGY

This section describes the sampling procedure and method of data collection for the study. To investigate the Teachers and Parental Perceptions on effect of Drug abuse on Academic pursuit of students, descriptive survey research design was used. The population of the study was 3879, comprised of 3112 parents and 767 teachers in the five selected secondary schools from Nasarawa State of Nigeria. 20% of the population was taken out as sample of the study. The sample size was, therefore, 776, comprising of 622 parents and 154 teachers.

Four rating structured questionnaire titled "Effect of drug abuse on students" (EDAS) was used to generate data from the respondents. Validation of the instrument was done through consultations with professors in the faculty of education and faculty of medicine of Ahmadu Bello University, Zaria, Nigeria. A pilot test was carried out with 40 respondents that attended Parents teachers Association (PTA) meeting at Government Girls Secondary School, Abaji, Federal Capital Territory (FCT), Abuja.. The reliability co-efficient of the instrument was 0.73. This shows that the questionnaire verified is adequate and appropriate for this study.

Two groups of respondents were targeted during Parents Teachers Association (PTA) meetings held in the selected 5 secondary schools. A teacher is selected from each of the selected secondary schools that assisted the researchers in data administration. 542 copies of the questionnaire administered were retrieved and used in the study. Data collected were coded using SPSS and subjected to statistical analysis using Logistic Regression (LR) to test null hypotheses one, two and three, while t-test was used to test null hypotheses four, five and six. All the null hypotheses were tested at the 0.05 level of significance. In the test of the null hypotheses, if the calculated value is less or equal to the critical value, the null hypothesis is retained. On the other hand, if the calculated value is greater than the critical value the null hypothesis is not retained.

FINDINGS

Test of null hypotheses

HO₁ Peer groups have no significant influence on secondary school students' involvement in drug abuse in Nigeria

Result of analysis regarding null hypothesis two is as presented in Table 1.

Table 1: Influence of Peer groups on secondary school students' involvement in drug abuse in Nigeria

Model	B	Std. Error	T	Sig.	R-crit	R-cal	R-cal ²	Adjusted R ²
Drug Abuse	3.011	2.232	1.349	.122				
Peer groups	0.029	.014	2.071	.164	0.088	0.91	0.83	0.041

Analysis of data used to determine the influence of peer groups on students' involvement in drug abuse shows the Beta (constant) value of 3.011. R calculated value was 0.091 > 0.088 R-critical value of 0.088. The R² value is 0.83, indicating that 83% of the Nigerian secondary school students' attitude towards drug abuse was influenced by peer groups. The null hypothesis was not retained, as it was proved wrong.

HO₂ Parental behaviour has no significant influence on secondary school students' involvement in drug abuse in Nigeria

Result of analysis regarding null hypothesis two is as presented in Table 2.

Table 2: Influence of Parental behaviour on secondary school students' involvement in drug abuse in Nigeria

Model	B	Std. Error	T	Sig.	R-crit	R-cal	R-cal ²	Adjusted R ²
Drug Abuse	3.011	2.362	1.275	.122				
Parental Behaviour	0.028	.021	1.333	.172	0.088	0.89	0.79	0.032

The summary of regression analysis used to test null hypothesis two showed R calculated value of 0.089 which is greater than the R-critical value of 0.088. The calculated R-value (.089) is significant. The value of Beta (constant) is 3.011. The R² value is 0.79, indicating that 79% of the Nigerian secondary school students' involvement in drug abuse is determined by parental behavior and influence on the students. Hence, the null hypothesis is not retained, as it was tested wrong.

HO₃ Teachers behavior has no significant influence on secondary school students' involvement in drug abuse in Nigeria

Result of test of null hypothesis three is as presented in Table 3.

Table 3: Influence of Teachers behaviour on secondary school students' involvement in drug abuse in Nigeria

Model	B	Std. Error	T	Sig.	R-crit	R-cal	R-cal ²	Adjusted R ²
Drug Abuse	3.011	2.362	1.275	.122				
Academic Pursuit	0.23	0.16	1.438	.188	0.088	0.94	0.88	0.48

The result in Table 3 revealed that the value of Beta (constant) is 3.011. The calculated R value is 0.94, which is greater than R critical value of 0.088. The R² value is 0.88 indicating that 88% of the Nigerian secondary school students' involvement in drug abuse is determined by teachers behavior and influence on the students. Hence, the null hypothesis is not retained, as it was tested wrong. The calculated R-value (0.94) is significant. Therefore, the null hypothesis is not retained, as it is tested wrong.

HO₄ There is no significant difference between male and female parents' influence on the academic pursuit of Nigerian secondary school students and their involvement in drug abuse

The result of test of null hypothesis 3 is presented in Table 3

Table 4: Test difference between male and female parents on effect of drug abuse on academic pursuit of secondary school students' involvement in drug abuse in Nigeria

Status	N	Mean	SD	Df	t-cal	t-crit	P
Male parents	384	2.99	1.01				
Female parents	194	3.05	1.06	576	1.77	1.96	0.53

T-test analysis was used to test null hypothesis four. Table 4 shows mean score of 2.99 and 3.05 for male and female parents. Their standard deviation were 1.01 and 1.06, respectively. n score of those in private schools is 3.15, with standard deviation of 0.78. The t-cal is 1.77, less than t-critical value of 1.96. Thus the null hypothesis is retained. Therefore, both male and female parents agreed that drug abuse significantly affects academic pursuit of secondary school students' involvement in drug abuse in Nigeria. The null hypothesis is retained.

HO₅ There is no significant difference between male and female teachers' influence on the academic pursuit of Nigerian secondary school students and their involvement in drug abuse

Analysis of t-test used to test null hypothesis five is as presented in Table 5.

Table 5: Differences between male and female teachers on effect of drug abuse on academic pursuit of secondary school students' involvement in drug abuse in Nigeria

Status	N	Mean	SD	Df	t-cal	t-crit	P
Male teachers	89	3.08	1.03				
Female teachers	54	3.03	1.01	141	1.83	1.96	0.04

Table 5 presents the analysis of data relating hypothesis five. The result showed a mean score of 3.08 and standard deviation of 1.03 for male teachers. Female teachers had mean score of 3.03 and standard deviation of 1.01. The t-calculated value was $1.83 < 1.96$ critical value. The hypothesis which states that there is no significant difference between male and female teachers' influence on the academic pursuit of Nigerian secondary school students and their involvement in drug abuse is retained.

HO₆ There is no significant difference between parents and teachers perceptions on effect of drug abuse on academic pursuit of Nigerian secondary school students.

The result of test of difference in null hypothesis six is as presented in Table 6

Table 6: Test of difference between parents and teachers perceptions on effect of drug abuse on academic pursuit of secondary school students' involvement in drug abuse in Nigeria

Status	N	Mean	SD	Df	t-cal	t-crit	P
Parents	578	3.02	1.04				
Teachers	143	3.06	1.02	719	1.72	1.96	0.00

Analysis of respondents' opinion used to test null hypothesis six shows mean score of 3.02 and standard deviation of 1.04 for parents. Teachers had mean score of 3.06 and standard deviation of 1.02. The calculate t was 1.72, less than t-critical value of 1.96. Thus the null hypothesis is retained. Therefore, the null hypothesis of no significant difference between parents and teachers perceptions on effect of drug abuse on academic pursuit of Nigerian secondary school students is retained.

Discussion of the Findings

The research work reveals, among others, that peer groups and parental behaviour have significant influence on students' involvement in drug abuse in Nigeria. The result is line with that of U.S. Department of Education,

(1986) and Towers, (1987) who shows that peer pressure plays the largest role in causing children to begin using drugs. Acceptance by peers becomes especially important when children leave elementary schools and begin junior high school level. In Nigeria, this study, as earlier noted by a study conducted by the Daily Times Newspaper (2001), has established that genetic and innate factors, as well as learned and acquired habits could be mentioned as creators of dependence on psychotropic drugs among secondary school students. Faupel (1996) opined that most young drug users/abusers were first turned on by close experienced users. Affirming this view, Omokhodion and Pemedede (2005) reported that adolescent often try their first drug at the urging of their friends. Moses and Oriahi (2012) further confirmed that majority of adolescent students were influenced by peer group (51.3%) on the use of drugs and (48.6%) were influenced by parents. Lonnie, Lukoye, David and Paula (2012) further reported that the strength of the addiction to drugs, the dual role that peers and family play in substance use, and how the social, cultural, and economic context influence or impede cessation are issues that need stringent actions from those in position of authority.

The result of the current study further reveals that 88% of the deviance in academic pursuit of secondary schools students is attributed to drug abuse. Thus drug abuse has significant effect on academic pursuit of drug abusers. Wagner (1984) earlier reported that drug users skip school or arrive late to class. U.S. Department of Education (1986) reported that drugs abuses distort memory, perceptions, sensation and caused brain damage. The study by Towers (1987) reveals that regular drug users/abusers are twice as likely as their classmates to receive low grades. Hawkins, Catalano and Miller (1992) report that persistent substance abuse among school age children leads to declining grades, absenteeism from school and other activities, increased potential for dropping out, and other school-related problems. Both parents and teachers regardless of their gender had the same opinion that drug abuse has negative effect on academic pursuit of secondary school students in Nigeria and beyond.

CONCLUSIONS AND RECOMMENDATIONS

Conclusions

Based on the outcome of the study, the following conclusions were reached:

- That the type of friends secondary school children associate and relate with could lead then to partake in drug abuse. Hence peer is one of the most influential factors causing drug abuse among the school children.
- That parent serves as role model to their children. Hence their attitudes, behaviours and actions have significant influence on their children's behaviour.
- That students tend to use drugs to keep them alert while they are studying, however the reaction of such drugs distort memory, perceptions, sensation and causes brain damage of the users.

Recommendations

To address the situation, the researchers hereby recommend that:

- The stakeholders (school authorities, government and PTA) should introduce the use/abuse of drugs as a general course in the curriculum of secondary schools in Nigeria.
- Nigerian Federal and state government should organize public enlightenment programme on use/abuse of drugs in the best interest of school age children. This would assist in orientating the school age children and the general public on the dangers of drug abuse in the society.
- Parents should be exemplary to their children by avoiding any behaviours or action that will influence their children attitudes and actions towards drug abuse.
- Parents should monitor the activities of their children and guide the type of friends they move with. This will help to protect them from undue influence of friends on their attitude towards the use of unauthorized drugs.

Open Access, Open Opportunity: Using Universal Course Design to Help International Students Succeed in the American College Classroom

Graham Van Leuven^a Danielle Newton^{b *}

^aJ.D., Chief Executive Officer, American College Writing

^b M.F.A., English Faculty, Bellingham Technical College, Washington

Abstract

It can be Mission Impossible - Meeting the needs of ALL students, including those facing challenges in language and new cultures. This case study uses qualitative and quantitative research methods, including interviews, assessment data, and discourse analysis, to analyze pedagogical frameworks and dialogues between U.S. English instructors and international students in a Washington community college. Under the Universal Course Design (UCD) framework, instructors can engage with a variety of student learning styles, such as auditory, visual, and kinesthetic. UCD is an effective, flexible blueprint based on neuroscience in terms of differences in how we learn; that is, because learners differ in the ways they see and understand information that is presented to them, students with language and/or cultural differences especially need different ways of approaching content. Student success depends on increasingly sophisticated teaching and learning skills and UCD creates decentralized practices, resulting in new contexts and styles of instruction.

Keywords.

INTRODUCTION

As international students are recruited to in institutions around the world, many instructors face challenges in teaching from multiple perspectives of culture, language, and learning styles. This study explores how “best practices” is being shaped with tools to reach multiple learning styles, including the Universal Course Design framework that creates syllabi, instructional strategies, and assessments toward equity and excellence in higher education. Given the huge variety of interests, skills, and needs that international students bring into classrooms, we are especially interested in exploring UCD as a flexible blueprint that is based on neuroscience in terms as differences in how we learn; that is, because learners differ in the ways the see and understand information that is presented to them, students with language or cultural difference often need different ways of approaching content.

This case study uses qualitative and quantitative research methods, including interviews, assessment data, and discourse analysis, to analyze pedagogical frameworks and classroom dialogues between U.S. English instructors and new international college students coming to a Washington community college.

According to CAST (2014) and other research projects, UCD is based on three primary brain networks from three different brain areas:

RECOGNITION NETWORKS, the “what” of learning. This part of the brain involves fact-gathering and how we group what we hear, see, and read. To reach learners with multiple means of representation, instructors must present information and content in different ways in recognition tasks, such as identifying letters and words. Guidelines: Provide options for perception, language/expressions/symbols, and comprehension. Examples: Offer ways to customize the display of information, alternatives for auditory information, and alternatives for visual information.

STRATEGIC NETWORKS, the “how” of learning. This part of the brain involves how we organize and express our ideas, including the planning and performing of tasks. To reach learners with multiple means of action and expression, instructors must differentiate the ways that students can express what they know. Guidelines: Providing options for physical action,

expression and communication, and executive functions. Examples: Offer assistive technologies, different ways to tell stories, and scaffolded lower and higher level skills.

AFFECTIVE NETWORKS, the “why” of learning. This part of the brain involves how learners get engaged and stays motivated, including affection dimensions of how they are excited, challenged, or interested. To reach learners multiple means of engagement, instructors must stimulate student interest and motivation for learning. Guidelines: Provide options for recruiting interest, sustaining persistence and effort, and options for self-regulation. Examples: Include ways that reflect the important individual differences between learners, building self-regulation and motivation skills.

In the United States college classroom, this is especially relevant because instructors must not create barriers for any students (complying with federal mandates) and also creates accessible, level learning spaces. Our research question: Using the seven principles of Universal Course Design, does increased attention to general and blended instruction and delivery provide a unique opportunity to address the needs of diverse student populations? Specifically, as the UCD principles are applied to education, do instructors see a shift in equity, flexibility, simplicity, and tolerance to the learning process for all students?

METHODS and PROCEDURES

Using multiple research methods, the researchers applied the principles of Universal Course Design (and resulting four assumptions about teaching and learning responsibilities) to the refashioned classroom of international students. While UCD proponents note that the factors were created to follow accessible principles found in architecture and other fields for people of varying abilities and interests, we wanted to test the framework within the educational institution setting to see how it fits within various formats (online, hybrid, and traditional classroom spaces). The following list is of the seven principles.

- 1) **Equitable Use:** This principle focuses on instruction designed for the usability by a broad range of learners. When every student is provided the same means of use, including online platforms with accessible and clear design features, all users have a more level learning environment (Scott, Loewen, Funckes, & Kroeger, 2003).
- 2) **Flexibility in Use:** The design accommodates a wide range of individual preferences and abilities.
- 3) **Simple and Intuitive Use:** Use of the design is easy to understand, regardless of the user's experience, knowledge, language skills, or current concentration level.
- 4) **Perceptible Information:** The design communicates necessary information effectively to the user, regardless of ambient conditions or the user's sensory abilities.
- 5) **Tolerance for Error:** The design minimizes hazards and the adverse consequences of accidental or unintended actions.
- 6) **Low Physical Effort:** The design can be used efficiently and comfortably and with a minimum of fatigue.
- 7) **Size and Space for Approach and Use:** Appropriate size and space is provided for approach, reach, manipulation, and use regardless of user's body size, posture, or mobility. (Universal Course Design, 2013)

While the above seven principles are applicable to a myriad of uses, the application to education, particularly education focused on helping international students succeed in the American college classroom, brings “equity, flexibility, simplicity, and tolerance to the learning process for all students” (Center for Applied Special Technology, 2013).

About the Object of Study: International Students at Bellevue College

Located in Bellevue, Washington, Bellevue College (www.bellevuecollege.edu) is the third largest institution of higher learning in Washington State, serving more than 37,000 students each year. Bellevue College is best known for its innovation in areas of information technology and for expanding its degree programs to include four Bachelor of Applied Sciences degrees and a Bachelor of Science degree in Nursing. The college operates on the quarter system, with a 10-week instruction period and students who are not enrolled in the 4-year degree programs generally complete their transfer or certificate studies within two years.

Annually, the college enrolls an estimated 1,800 international students, representing more than 70 countries. Typically, international students arrive on the Bellevue College campus one week before the instructional quarter begins, to participate in college-sponsored orientation activities. The most critical of these activities is

the Computer-Adaptive College Placement (COMPASS) assessment, for which all new students at Bellevue College must sit, both domestic and international. The COMPASS is an entry level placement test designed by the American College Test program, and offers untimed computer-adaptive exams in reading, writing skills, mathematics, and ESL. The COMPASS has two purposes: 1) to determine whether students have the skills to succeed in college-level courses; 2) to place students in courses they are ready for, either college-level courses or courses to prepare them for college-level courses. Every community college in Washington state administers an assessment to entering students, including international students. The majority of the state's community and technical colleges use the COMPASS, including Bellevue College.

At Bellevue College, as at many colleges, the English reading and writing strand is a traditional ladder model, in which students work their way "up", depending upon their starting point, and students, based on their COMPASS results, can place into any given part of the strand: ESL – basic skills – developmental education – college-level writing, known as English 101, a requirement for all students for graduation from any community college in Washington. When sitting for the COMPASS, Bellevue College students, including international students, strive to place into English 101 for three practical reasons: 1) to avoid what is known as getting "stuck in the pipeline" of the English strand (which can take up to two years to complete, if a student is persistent in his/her studies, totaling an average of 4 years to degree completion at this primarily two-year college), 2) to complete their English requirement before moving to their degree-specific courses or to courses at the college for which English 101 is a pre-requisite, and 3) to graduate from Bellevue College within a two-year timeframe, from start to completion.

More and more, colleges (and universities) in Washington state are enrolling record numbers of international students for the financial and cultural benefit these students bring to an American campus. At Bellevue College, specifically, international student enrollment – which has increased dramatically at the college in the past decade – has sparked a continuing debate at the campus about how to best serve these students, many of whom are under the age of 20 and away from their home country for the first time – from both a student services and instructional lens. A particular emphasis in this debate – same as the emphasis in this paper – is placed on reading, writing, and communicating in English, fundamental skill-sets necessary to succeed in the American college classroom.

Often, international students arrive at the Bellevue College campus with what can best be described as a "tourist's knowledge" of English; that is, the students know enough to get to and from the campus, to navigate the campus itself, and to ask for help. Combine this language barrier with the inherent difficulties that international students face (homesickness, culture shock, and problems integrating with the campus as well as local community culture, to name a few) and the task of helping these students succeed at Bellevue College, and, particularly, to succeed in their critical English courses, broadens in scope – and urgency.

About the Researchers and Partnering Organization: American College Writing

American College Writing (ACW) was borne in the fall of 2012 from the notion that an external entity could successfully partner with faculty in higher education – specifically in English 101 classroom – to develop and deliver dynamic writing support for international students. This support is designed to improve students' immediate and long-term writing skills and ensures their success in the American college classroom. In order to support student achievement, instructors and their partners must be fully committed to collaborating on the development of curriculum that is result-oriented, student-centered, with writing support that builds efficacy, and which is pedagogically rooted in the principles of Universal Course Design, as outlined at the start of this paper, and which alternately subscribes to adult learning theory, which holds that adult learners:

- Are internally motivated and self-directed
- Bring life experience and knowledge to learning experiences
- Are goal oriented
- Are relevancy-oriented
- Are practical
- Like to be respected

To facilitate learning for international students, it's important to understand what motivates them to learn, and how their barriers to learning have occurred. International students have their own life stories, their own educational values, and their own perceptions of success in the classroom. For instance, while international

students may appear to lack domestic students' self-confidence in the classroom, our experience bears out that these students are often excited and willing to participate and desire to be successful in the classroom, to achieve passing grades and English language proficiency.

American College Writing approaches educating the international student this way: English 101 is a critical gateway (or complete barrier) course to the full American college experience. It is a formal pre-requisite for many other courses, and an essential foundation for students to succeed in any course requiring writing or a research assignment. Students cannot move forward in their academic career without successfully completing English 101. International students face unique challenges in meeting this critical requirement, but it is not – and shouldn't be – an insurmountable barrier. After all, international students are no different than any other student: their most pressing concern is communicating effectively, in their writing and in their speaking. They want to earn the grades that will allow them to persist in their studies, transfer to a 4-year university, or find employment.

But international students are drowning in the English 101 classroom. Experience with international students tells us that these students want to comprehend and work within the rigorous American curriculum (designed for English-speaking students); they want to understand what faculty are saying, what it means, and to respond intelligently, particularly in front of a classroom of their peers; and students want convey their learning in their assigned work, as a mark of comprehension and achievement. Yet, consider the difficulties international students have at the most base level: understanding lectures while simultaneously adjusting to American culture, American English (its idioms and nuances) and the American college classroom, where the culture of learning – the give and take between instructor and student – can be starkly different from their own personal educational experience – and creates barrier to education, what American College Writing defines as three research statements.

- 1) Test placement is critical to international student success. ACW addresses the most significant of student skills: college-level writing. English 101 is a critical gateway course to the full American college experience. The course is a formal pre-requisite for many other college-level courses and an essential course for students to succeed in any class requiring writing or a research assignment. ACW helps students place into English 101 at the start of their college experience and supports them once they are placed in the course.
- 2) Instruction meets student skill-development need. ACW recognizes that students must have access to the instruction model that best suits their individualized needs. We offer several different instruction tracks for students, and while each is different in format and time, the material remains comprehensive and is developed to address several goals important to international student success:
 - ✓ Improve English reading and writing skills for success in the U.S. classroom through a competency-based curriculum that blends Universal Course Design concepts with college-level reading and writing competencies, applies a multiple entry and exit point structure; students get the help they need at the time they need it, and provides for frequent, on-going assessments and feedback to identify student progress and build on student strengths.
 - ✓ Receive interactive instruction with activities that simulate U.S. college classroom and workplace environments:
 - ✓ Infuses collaborative activities throughout to increase vocabulary base and foster conversational and interpersonal skills.
 - ✓ Develops skills in problem-solving, critical thinking, teambuilding, and negotiations with others in the context of the American workplace and college experiences.
 - ✓ Requires student participation: asking questions in class about material without prompting, responding to instructor questions, contributing to classroom discussions without prompting, student self-assessments of progress.
 - ✓ Relies on student collaboration: active in and engaging in small group work.
- 3) Contextualized instruction works. The ACW difference is instruction with a focus on skill-building and acquisition of competencies. ACW instructors help students with the skill-building necessary to score high on the COMPASS (grammar, sentence structure and clarity, paragraph development, reading comprehension, and analysis of information) and to earn the grades they desire from their English 101 course. Additionally, ACW instructors work with students to diagnose problems areas and provide specialized resources and tutoring so students master the information necessary to earn not only the grades

they want but also – importantly – the competencies they need to persist in their studies and complete their degree programs.

Working with Bellevue College English faculty in winter 2013, ACW’s approach was to assist international students throughout their English 101 gateway experience, from COMPASS test preparation to initial course enrollment to course completion. Our goal was to provide international students with a support system unavailable to them at the college. Issues of capacity, training, and lack of funding often prevented the college from assisting its international students beyond systems already in place on campus, such as the Academic Support Center. To match the college’s accreditation standards, ACW instructors are credentialed experts in ESL instruction, and therefore are able to respond to all student inquiries and help students address the concerns they may have about the elements of successful English 101 writing (punctuation, parts of speech, verb agreement, parts of a sentence, sentence structure and clarity, and paragraph development, citing sources, and integration of others’ ideas with their own) – much like their classroom instructors. American College Writing tutors are ESL trained and certified. All tutors teach in their field of expertise. Because tutors are also working faculty, they do not paper fix; they diagnose problem areas in writing and tutor international students with a focus on skill-building and mastery in English 101. American College Writing tutors also do not replace English faculty on the college campus. Tutors neither intervene on the students’ behalf with campus faculty nor do they confuse ‘teaching’ with ‘tutoring’, defined as providing additional, remedial support. American College Writing tutors simply provide extra learning support for the student during his/her English 101 experience. Further, ACW instructors committed to work with students to diagnose problems areas in their writing and to provide specialized resources and support strategies so international students master English 101 competencies. We approached international students and the English 101 classroom at Bellevue College from entry (COMPASS) to persistence (the College Success Academy and the Tutoring Support Program).

Literature Review Sampling

The research literature supplies much evidence for effectiveness of strategies to build on prior knowledge, with direct instruction on background knowledge improving relevant reading comprehension (North Central Regional Educational Laboratory, 2014). For instance, “Students learn more effectively when they already know something about a content area and when concepts in that area mean something to them and to their particular background or culture (Moses, 1990). We found such strategies especially relevant in the context of international students, such as the Queensland Government’s New Basics Project that links learning outcomes with identities, world knowledge, and experience (Queensland, 2002). Connecting to prior knowledge also includes text prediction strategies, which is especially helpful in reading comprehension strategies (Intervention Central, 2014; Lewin, 2003).

In addition to such existing scholarship, much has also been written about curriculum planning and delivery. One recognized process includes four steps as illustrated in the figure below, which substitutes UDL (Universal Design for Learning) that is basically the same as Universal Course Design:

Set Goals: Establish context and align to standards. This sets the stage for instruction as driven by state standards and goal design.

Analyze Status: Identify methods, materials and assessment identify barriers. Studying current procedures acknowledges potential learning barriers.

Apply Universal Course Design: Identify UCD materials and methods, write plan, collect and organize materials. This course creation grounds learning goals with assessments and materials in a cohesive collection.

Teach Lesson: After instruction, evaluate success and revise lesson/unit. Student assessments can help instructors improve the lesson to assure student success and access.

Figure 1. Strangman et al, 2004.

FINDINGS: EXPERIENCES, EXAMPLES, AND REFLECTIONS

One author and researcher of this study, Danielle Newton, began work as an English instructor at Bellevue College in the fall of 2012. That quarter, she was assigned three English 101 courses and one English 271 course, an advanced English course with a focus on writing to inform. In each of the English 101 courses, the ratio of international student enrollment far exceeded that of domestic student enrollment, while she had zero international students enrolled in her English 271 course. It's important to note that the English 101 courses at Bellevue College are capped at 26 students, maximum. In each course that fall, her international student enrollment was in the double digits. And, while English 101 is a course in basic composition, she designs curriculum to mirror professional settings, in order that students might achieve college *and* workplace readiness. That is, beyond the core competencies necessary to complete and submit assignments, this instructor expected students to work and think independently, to be prepared for peer and instructor inquiry, and – when necessary – to collaborate on writing projects. These are all elements of workplace preparedness. According to other studies, experience is that many international students are interested in finding work in the United States, in an effort to integrate into their communities, to earn extra cash, or to simply meet new friends and have new experiences.

That fall, she quickly realized that the COMPASS - about which she had only passing knowledge at the time – is not a diagnostic test in any sense. While it assesses student competencies, at the moment the student is taking the COMPASS, it does not indicate areas of student struggle(s) with the writing process. In fact, when she visited the Testing Center on campus and sat for the assessment herself (to better understand what international students were talking about when they said they could ‘game’ the test), she was surprised to learn that the COMPASS assessment at Bellevue College focused entirely on reading comprehension and did not include a student-writing component. Not surprisingly, a majority of international students were taken aback to learn that English 101 is a writing course – not a reading course – focused on the fundamentals of basic composition.

To that end, such an assessment, one that does not gauge a student's complete reading and writing skill-set, can be disconcerting. For instance, some international students who, in preparation for the American classroom, have studied English in their home country, may need only a brush-up writing skills module to succeed in English 101; others may need more intensive support while in English 101 (that was more often the case than not); others still may need to begin at the start of the English strand, in ESL classes. In short, too often, international students assess into English 101 without the foundational skills needed to succeed. And the college has an expectation that faculty are prepared for, trained for, and ready to provide that support. It's not always the case.

Prior to teaching at Bellevue College, Newton had never taught international students and was not trained to teach ESL learners. Her professional and educational background is focused on workplace writing and communications and her MA degree in English and MFA in writing includes academic theory and creative writing. When she accepted a teaching job at Bellevue College, she envisioned what perhaps many people envision when they prepare to teach college-level English: that the classroom will have a focus on the humanities, the great works of literature, with a side of college-readiness writing. But classrooms of so many types of students were the opposite. If students were going to succeed – if the instructor was going to succeed – she had to put uncertainties about “qualifications” aside, trust her instincts, and be nimble. The fact is, this instructor saw so much opportunity (and room) for creative thinking that first quarter: international students cannot instantly or effortlessly transition from one academic culture to another.

For instance, students acclimatized to highly ordered, deferential classrooms may pushback against asking even those questions for which they desperately need answers, about the material. And, because of an instructor's own cultural assumptions (one person's frame of reference *must be* everyone's frame of reference), it didn't take long for her to realize that international students had no idea what she was talking about in terms of the culturally-specific background material she would often include in her lectures. American football? Curious stares. Local news stories? More curious stares. American television? Curious stares. From this, she found it helpful to give a brief overview of particularly relevant culturally-infused material, and by assigning some introductory readings to international students to help them come in with a basic understanding of American culture. This helped domestic students too. Further, recording and posting a PowerPoint lecture not only preserved classroom time for the more important material, but also gave international students a chance to hear an authoritarian voice within a different cultural context and to listen for inflection, sound, and vocabulary. And again, this helped domestic students as well; however, these small, but important steps weren't enough to ensure success for international students.

For example, a consistent piece of feedback received regularly from international students, particularly Chinese students, was that her own speech was rapid, that she used phrasing unfamiliar to them (for example, ‘memorandum’ or ‘peer review’), and that she moved around the classroom while talking, which both confused students and caused them to lose focus on the material at hand. Also of student concern was that she asked students to independently participate in class, without raising their hands; that is, to speak when they wanted to speak and to collaborate freely in groups. As outlined in best practices, including international students in class discussion is vital to keeping them engaged and understanding material – they may simply not know this as an instructor might. Students may simply need more time and different kinds of encouragement from faculty and classmates to participate. There are many proven ways to draw participation from international students without coercing or embarrassing them.

In particular, she found that paired-student and small-group discussions that are reported out to the class as a whole is one way of doing this. Calling on students unexpectedly is not. Nor is correcting grammar or pronunciation in a lecture setting. Do that, just once, and the faculty has lost the most valuable class resource: the student voice. What she didn’t know that first quarter at Bellevue College was that Chinese education, deferential at its core, positions the instructor at the head of the classroom as the first and final authority. This conceptualization is vastly different from the Western classroom, which can be interactive, relies on student participation for its dynamic structure, and requires the student to think and work independently, of both peers and instructors. Because of her own knowledge gap regarding cultural differences, she underestimated what international students needed to succeed in the classroom.

It was difficult to draw them out in classroom discussions, and their fear of “not knowing” English and the customs of the American classroom only exacerbated the divide. Not surprisingly, international students wanted to talk after class, away from their domestic peers, to ask clarifying questions about the material, and to ask to review their writing before they submitted it for a grade. Their uncertainty about coursework and their understanding of it was palpable – and genuine. All of this created questions how they were doing in their other classes. After all, lecturing clearly in understandable English does help international students, but it’s simply not enough. It was equally important to keep in mind that international students had to work all that much harder at their courses to get to the same results as domestic students, because of linguistic and cultural barriers. Finally, it was critical to the learning environment to not assume that non-native English speaking international students are somehow less intelligent for being that. But how to help them, once they are in the American college system?

Under the framework of Universal Course Design, we designed all efforts with a variety of pedagogy strategies within a menu of services. First, we built a variety of workshop/institute formats to mirror the American classroom setting that were focused on specific learning goals. As noted below, the Boot Camp helps students prepare for placement tests, while the College Success Academy offers ongoing support for students enrolled in English 101. In addition, we found students greatly benefited from more unique instruction delivery forms such as:

- Supplemental Instruction: Guided Tutoring
- Supplemental instruction strategies are determined by instructor’s assessment of student progress through the unit. Strategies are personalized to student need and instructors present supplemental instruction materials, face to face, as needed.
- Instructional Podcast (Website-based)
- Students receive a unique code to the ACW website, which gives them access to a robust library of resources. For instance, an instructional podcast reviews the daily lesson, highlighting critical information, so that students have 24/7 access to the instructional material for review and self-guided practice.
- Instructional Tip Sheets (Website-based)
- One-page, content-specific ‘tip sheets’ are available for students for the purpose of further practice on the information presented in daily lesson. Tip sheets are accompanied by weekly Q & A FORUMS, designed so the instructor answers the most commonly asked student questions.

The following list of ACW services is a sampling of services designed to help international students pass placement tests and succeed in the U.S. classroom.

Before the Classroom Service: Boot Camp for Placement Test Preparation

Designed to complement the college’s Orientation Week activities, this ‘boot camp’ is derived from instructional material used in an English 101 course at Bellevue College and is mandatory for all new, incoming

international students, prior to sitting for the COMPASS. Boot Camp instructional units are delivered in a 50-minute, 5-day format, with integrated formative self-assessment and summative assessment components as units progressed. Units focus on the fundamental elements of college-level writing and reading comprehension, and each integrates content from preceding units, with the goal of skill-building and mastery of material. A brief overview of the COMPASS instruction components includes this summary of learning modules, the design of the unit, and example of curriculum:

UNIT 1: Basic English Grammar

- Parts of Speech: Words placed into categories based on function
- Parts of a sentence: Words that make up the two main parts of a sentence: subject and predicate
- Agreement: Verbs
- Punctuation and Mechanics: Using correct punctuation and mechanics to clarify the meaning of a sentence
- COMPASS sample assessment (Unit 1)

UNIT 2: Reading Strategies and Keyword Identification

- Word Choice Mastery: Identification of specific words over general words
- Categorizing Phrases: Headings, Introductions, Conclusions, Summaries
- Make predictions: View pictures, table of contents, chapter headings, maps, diagrams, and visual features, and determine meaning
- Active Reading: Emphasizing necessary information
- Search Strategy: Scan contents for keywords and visuals
- COMPASS sample assessment (Unit 1 and Unit 2)

UNIT 3: Topic Sentence and Support Sentence Development and Meaning

- Controlling idea or claim: Main topic identification
- Organization of information: Building one idea to the next
- Sentence Structure and Clarity: Complete and clear thoughts
- Transitions: Keyword identification for connecting ideas
- Signposts: Keyword identification for reading comprehension
- COMPASS sample assessment (Unit 1, Unit 2, Unit 3)

UNIT 4: Paragraph Development: Key Identification (2 weeks)

- Describe the topic: Starting with what you know
- Analyze the topic: Interpretation of topic parts
- Examples and Illustrations: Specifics support the general narrative
- Verbal Bridges: Keywords, synonyms, transition words
- Key Data: facts, statistics, evidence, details
- Compare and contrast: Similarities and differences
- Cause and Effect: Why things happen (causes) and what happens as a result (effects)
- Chronology of event: time segments
- COMPASS sample assessment (Units 1 – 4)

UNIT 5: COMPASS sample placement test

- Students will sit for a complete COMPASS assessment that scores their reading comprehension and writing skill knowledge

While the above daily schedule illustrates the scaffolded learning of this boot camp model, it is also helpful to see how each unit is designed and the time allotted for a sample unit. The table below is an example of classroom structure followed by instructors to help international students learn and practice elements of Basic English grammar, such as punctuation and parts of speech.

How a COMPASS Prep Unit is Designed: Sample Basic English Grammar Schedule

LENGTH: MINUTES	INSTRUCTION DETAILS – Punctuation and Grammar
30	'Define and use' instruction: overview of common punctuation used in standard English writing: periods, question marks, commas, apostrophes
15	Skill-Drill: correctly punctuate an instructor-prepared paragraph

COMPASS Prep Instruction Example: Parts of Speech (Identifying and using NOUNS correctly)

For a deeper dive into the curriculum overview and schedule, here is an example of how an instructor approaches teaching about the parts of speech, which is a critical piece of international student comprehension. Each instructional unit offers a variety of teaching and learning strategies, as outlined earlier in the Universal Course Design definition.

- Students are able to define the role and use of a noun (lecture/discussion)
- Students are able to identify the nouns in a sentence (student activity)
- Students are able to create a list of nouns on their own (student activity and self-reflection)

The teaching demonstration focuses on three key learning elements:

1. The definition and role of a noun as used in the English language: The noun is a most basic ingredient in the English language. Every complete, grammatically correct sentence in the English language must include a noun.
2. How to use nouns correctly in the English language
3. How to identify nouns in the English language

Instruction is delivered in a lecture/discussion/competency format, with in-class student activities to assess basic understanding of the role of nouns in the English language. Printed materials and a series of graphics during the teaching demonstration help guide students in their learning.

Expected outcomes include:

- Students are able to define the role and use of a noun (lecture/discussion)
- Students are able to identify the nouns in a sentence (student activity)
- Students are able to create a list of nouns on their own (student activity and self-reflection)

Enrolled Student Service: College Success Academy for Success in the English 101 Classroom

While the Boot Camp focuses on helping students score higher on placement tests that determine which English class matches their skill level, the College Success Academy is designed for students who test high enough to be placed into English 101 but need supplemental instruction for classroom success.

During the spring and summer 2013 quarters at Bellevue College, American College Writing hosted its first 10-week College Success Academy in an English 101 classroom. The College Success Academy for international students is a competency-based academic enhancement initiative scaled to help international students advance their grammar, basic writing, and conversational skills at an accelerated pace. The Academy mirrors the English 101 classroom in curriculum but differs from regular classroom programming with coaching that helps international students acclimate to the interactive U.S. college classroom experience. This coaching is comprised of a series of collaborative, hands-on methodologies that reinforce academic learning for international students while simultaneously developing their interpersonal skills (essentials for workplace and U.S. college success). The Academy's learning standards are mapped to college-level English 101, instruction relies on the concepts of Universal Course Design, and master's-qualified instructors teach all coursework. The program's philosophy is: "What a student learns at the College Success Academy one day, that student should be able to apply to his or her work or college life the next day." (American College Writing, 2014)

College Success Academy Program Goals and Learning Outcomes

To mirror the goals, objectives, and accreditation standards of the host institution, ACW established these goals for international students enrolled in the spring and summer 2013 College Success Academy:

Improved English reading and writing skills for success in the U.S. classroom through a competency-based curriculum:

- ACW blended Universal Course Design concepts with college-level reading and writing competencies.
- ACW applied a multiple entry and exit point structure; students got the help they need at the time they need it.

- ACW provided frequent, on-going assessments and feedback to identify student progress and build on student strengths.

Received interactive instruction with activities that simulate U.S. college classroom and workplace environments:

- Instruction Infused collaborative activities throughout to increase vocabulary base and foster conversational and interpersonal skills.
- Students developed skills in problem-solving, critical thinking, teambuilding, and negotiations with others in the context of the American workplace and college experiences.
- The Academy required student participation: asking questions in class about material without prompting, responding to instructor questions, contributing to classroom discussions without prompting, student self-assessments of progress.

Finally, the overall success of the Academy relied on student collaboration, especially being active in and engaging in small group work.

In terms of learning outcomes, college pedagogy recognizes outcomes as identifying what students know, are able to do, or demonstrate when they have completed the College Success Academy. These outcomes were expressed in the English 101 classroom as measurable gains in knowledge and skills and the successful integration of values and attitudes into the educational experience and aligned with those used by Bellevue College's Intensive English program. For this case study, sample learning outcomes included:

- Read with Understanding
 - ✓ Recognize unfamiliar and some specialized words using word analysis or inference.
 - ✓ Scan newspapers and periodicals for current events articles to share during class.
 - ✓ Comprehend texts at an appropriate pace to independently accomplish structured reading activities.
 - ✓ Use word analysis or inference to recognize unfamiliar and some specialized words.
 - ✓ Understand and use the concepts of reading strategies to further language acquisition.
- Convey Ideas in Writing
 - ✓ Use note-taking skills to comprehend and retain material in lectures and presentations.
 - ✓ Be able to compose a message and provide ideas and information suitable to the topic, purpose, and audience.
 - ✓ Write well-constructed, complete sentences easily and with few errors to independently accomplish well developed, clear writing that meets the standards of English 101.
 - ✓ Write well-constructed paragraphs easily and with few errors to independently accomplish organized, clear, and effective writing that meets the standards of English 101.
- Solve Problems and Communicate Effectively
 - ✓ Read, write and interpret a variety of common information, including print articles, websites, and texts.
 - ✓ Communicate the solution to a problem orally or in writing.
 - ✓ Use written, oral, and electronic methods for effective communication.
- Speak So Others Can Understand
 - ✓ Recall and use a range of vocabulary including words related to a student's degree program.
 - ✓ Determine the purpose for and value in communicating in both class discussion and class presentation contexts.
 - ✓ Be able to organize and relay information to effectively serve the purpose, context, and listener during class discussions and class presentations.
 - ✓ Be able to recall and use a range of vocabulary including words related to the English 101 classroom, the student's degree program, communication between student and instructor, and interpersonal relationships to promote a collaborative college and workplace environment.
- Active Listening
 - ✓ Be able to listen in order to comprehend information, critique and evaluate a message, show empathy for the feelings expressed by others, and/or appreciate a presentation.
 - ✓ Be able to repeat, paraphrase, clarify, and summarize what is heard in the classroom and the workplace.
 - ✓ Ability to be self-reflective in the written and oral communication process.

Enrolled Student Service: Tutoring Support Program as a Safety Net

During the spring/summer partnership between ACW and international students at Bellevue College, students benefited from more individualized tutoring efforts. While this produced mixed results largely due to time management issues, it was an effective assessment of learning progress and also highlighted core differences between previous student success in their home countries as opposed to the different styles and expectations of the U.S. college classroom.

First, students were paired with the instructor. ACW tutors and international students worked together to set up weekly contact times, negotiated based on the students' schedules. Students were given tutor contact information before the start of their English 101 course. Alternately, ACW personnel collected student emails and Skype addresses so that ACW tutors could contact their students prior to the start of the English 101 course to introduce themselves and discuss with the students reciprocal expectations for the quarter.

Interaction between the student and instructor followed a consistent schedule. For of each week of the quarter, tutors contacted students once per week, conducting a 'check-in': inquiring about current essays and upcoming writing assignments, inquiring about any difficulties focused on the elements of English 101 writing, and establishing a friendly, trust-based rapport with students.

Once the tutor and student 'met' over email, the tutor sent the student a 'get started questionnaire', asking the student to provide a brief writing sample focused on what the student believed were his or her strengths and weaknesses when writing, and the student's goals for their writing. This writing sample served as first assessment for the tutor. From this, the tutor and student outlined a plan of action for the quarter to meet the student's goals and address problem areas. The plan was in writing and submitted to the ACW administrator. As the quarter moved forward, the plan was updated as needed and used to assess student progress at the 5th week mark.

By week 2, students were expected to have worked with their tutor on at least one piece of writing from their English 101 course. This ensured tutors actually annotated and diagnosed a student's work early in the quarter to assess it for problem areas, to work on continuing difficulties in skill-building, and to use this first piece of writing as an assessment tool for progress benchmarks.

Instructional Sessions

Students received 45 minutes per week of focused time with their tutor, to work on issues identified for that week. Students and tutors negotiated how writing support sessions occur. Options included: email; Skype; phone contact. As an example, an ideal student/tutor contact looked like this:

- Prior to as scheduled Skype session, a tutor reviewed a student's essay and prepared his/her comments on diagnosed areas of improvement (for example, identifying and repairing run-on sentences).
- Based on session diagnostics, a tutor prescribed ACW specialized support resources for the student, such as written practice modules and video vignettes that focus on problem areas and remedies. When ACW tutors reported that many students are struggling with the same problem area(s), ACW provided brief instructional webinars for student groups to access at the convenience of their schedules.
- The student then contacted the tutor again, to discuss progress and remaining questions.

Before, During, and After Each Program: Summative and Formative Assessment

AWC created a standardized Writing Feedback Form that allowed tutors to streamline their work with students to diagnose problems areas in writing. The directive form identifies areas of student strengths (e.g., comma usage) and areas needing improvement (e.g., articles usage). These forms accompanied all annotated drafts returned to students, and American College Writing administrators also received the feedback forms.

All students enrolled in the College Success Academy and the Tutoring Support Program participated in a 5th Week progress assessment, using a standardized rubric designed by American College Writing to gauge students' responses to instruction and tutoring. This rubric is pedagogically sound, and designed to be a summative assessment of student progress. American College Writing also implements an end-of-quarter program evaluation, to gather student and tutor feedback for program improvement.

Additionally, Benchmark Assessments comprise the formative assessment of the student experience. Three benchmark dates are intended to monitor student progress as it is made. The benchmark dates are scheduled throughout the quarter, during which student work is assessed by ACW program administrators and tutors to identify strengths and weaknesses in writing at the English 101 level and to target continued problem areas.

For example, the following three benchmarks indicate a rubric to gauge student success in meeting the learning goal about conveying ideas in writing. This sequence follows a traditional pre/post test methodology but also includes a mid-point assessment and uses a common rubric throughout the assessment process.

Benchmark 1 (WEEK 3): Student submits a brief writing sample (one paragraph), from a diagnostic-based prompt given by the tutor. For test preparation instruction, this prompt echoes common themes and patterns from previous tests and is a consistent measurement of student progress throughout the program.

Benchmark 2 (WEEK 6): Student submits a brief writing sample (two paragraphs), from a diagnostic-based prompt given by the tutor. Using a similar prompt, the student expands the writing sample to two paragraphs and displays a wider range of skills learned during the previous sessions.

Benchmark 3 (WEEK 9): Student submits a brief writing sample focused on identifying his/her writing strengths and areas of improvements as the quarter closes. This self-reflection proved to be instrumental in not only student assessment but also feedback about the program's design and instructor effectiveness.

In addition, we incorporated student evaluations of instruction including factors embedded in the IAS System, a course evaluation standard created by the University of Washington and used at many other institutions to measure the impact of courses, instruction, and the student experience (IASystem, 2014). . Student feedback forms included scoring factors such as: Course content; instructor's contribution and effectiveness; organization; clarity of instructor's voice; instructor's ability to present alternative explanations when needed; quality of questions raised by instructor; encouragement given students to express themselves; availability of extra help when needed; use of time; instructor's interest in whether students learned; relevance and usefulness of content; effectiveness of evaluative techniques; reasonableness of work; and clarity of student responsibilities and requirements.

Overall, this project indicated a comprehensive 30% gain in student skills relating to the learning outcomes of reading with understanding, conveying ideas in writing, problem-solving and effective communication, speaking so others can understand, and active listening. By embedding Universal Course Design guidelines within the programs, we provided:

- Guideline 1, Recognition Networks, such as multiple mean of information, such as key information through different modalities, adjustable formats, and other accessible formats to accommodate international student effort.
- Guideline 2: Options for language and symbols, such as clarifying vocabulary, syntax and structure, understanding across languages, and illustrate through multiple media.
- Guideline 3: Options for comprehension, such as supplying background knowledge, highlighting patterns and relationships, guiding information processing and visualization, and maximizing transfer and generalization.

OPEN ACCESS, OPEN OPPORTUNITY: CONCLUSION

These findings suggest that UCD frameworks helps meet the common assumption While this case study is focused on international students taking English courses at one community college, we believe that the principles of UCD could successfully be adopted across learning environments to reach all of our students. Although it is often tempting to rely on more traditional frameworks, UCD allowed international students to

access information with easier access (including executive functions), and also build internal skills including self-regulation and motivation.

Compared to other frameworks for curriculum design, including the many ESL guidelines that include TOEFEL and other placement test requirements, we found Universal Course Design practices to be consistent, well-researched, and approved by multiple national centers, state education departments, and school districts. While this case study reports on a pilot project, we anticipate that outside organizations such as ACW could help strengthen school networks in systemic change about meeting student challenges. For instance, early involvement with families of students considering colleges abroad would strengthen inclusive educational environments. In discussions with international student directors and other college administrators, there is agreement that short informational presentations that highlight how UCD within U.S. classrooms would help faculty, families, and other communities in understanding components and features.

Future scholarship should consider building on existing research and development efforts by CAST and other initiatives; for instance, the U.S. Department of Education often funds special education and other grants for instructors “to provide all students, regardless of ability, with a high-quality education (U.S. Department of Education, 2006). While such opportunities often designate goals relating to improving results for students with disabilities, we found that many UCD accessibility guidelines fit the needs of international students. Considering factors such as accessible textbooks, response-to-instruction, and other approaches to assisting students can help reach every student, regardless of language or cultural context.

Finally, our study is limited in that analysis of a small sampling of international students at a U.S. college cannot show if the adoption of UCD principles becomes important only in times of transition to classrooms or if such efforts might be magnified with initiatives before students leave their homes. This kind of renewal, especially with faculties facing increasing numbers of diverse learners, keeps student focus as a powerful subtext that open up education to more successful performances of all students.

Advantages and Disadvantages of Bilingual Education

Alina María Signoret Dorcasberro^{a*}

^a Centro de Enseñanza de Lenguas Extranjeras, Universidad Nacional Autónoma de México

Abstract

We examine various typologies of bilingualism and propose that, depending on its features, it may have positive or negative consequences on the psycholinguistic development of students.

In coordinate bilingualism, the user develops two independent language systems, while the two systems are fused in compound bilingualism. In complete bilingualism, the bilingual masters the two languages, whereas in incomplete bilingualism, he has reinforced only one of them. In egalitarian bilingualism, the two languages share the same status, while in unequal bilingualism, the status of a given language is subordinated to that of the other language. Additive bilingualism occurs when bilingualism is considered as a cultural enrichment, and subtractive bilingualism, when it is seen as a risk of loss of identity.

The coordinate, complete, additive and egalitarian bilingualism is the one recommended by psychologists and psycholinguists, since it is the one that allows a complete psycholinguistic development of the bilingual.

Supported by a theoretical and linguistic analysis, this participation allows to understand the development of bilingual competence, as well as to reflect on the best way to manage it in the education classroom.

Keywords.

INTRODUCTION

Bilingualism—which, according to Jakobson (1963, p. 35), is the fundamental problem of linguistics—is a topic that has recently gained interest in the fields of psycholinguistics, neurolinguistics, sociolinguistics, education, and language planning. It is a topic of utmost importance since bilingualism affects the development of the whole human being. As proposed by Vygotsky (2000, p. 348), not only his intellectual development, but also the formation of his character, emotions, and personality as a whole depend directly on speech. Speech development in connection with bilingualism or monolingualism will thus have to be revealed in one degree or another.

It is the responsibility of researchers, educators, and language and education planners to reflect on bilingualism and know the most recent theoretical approaches of it, in order to offer the best possible conditions for the development of a good bilingualism in the classroom.

DEFINITION OF BILINGUALISM

In order to define the types of bilingualism, we will focus on typologies based on linguistic, neurolinguistic and psychosocial variables. Each of these propositions is explained in depth below.

COORDINATE vs. COMPOUND BILINGUALISM

In 1953, the linguist U. Weinreich postulated the existence of, among others, two types of bilingualism: *coordinate* and *compound* bilingualism. This typology remains valid in the 21st century (De Groot, 2011). As shown in the following table, in coordinate bilingualism the person develops two parallel language systems: for any one word, he or she has two signifiers and two signifieds. This type of bilingualism is that of an individual who speaks each of the two languages as well as a person for whom it is the sole mother tongue, and this at all levels of the linguistic structure, without any interference or mixing (Paradis, 1987, p. 433).

L1	L2
Organization of L1 semantic units	Organization of L2 semantic units
Organization of the sentence according to L1 syntax	Organization of the sentence according to L2 syntax

Organization of the words according to L1 morphology	Organization of the words according to L2 morphology
Organization of the syllables according to L1 phonology	Organization of the syllables according to L2 phonology
Organization of the phonemes according to L1 phonetics	Organization of the phonemes according to L2 phonetics

Table 1. Coordinate bilingualism (modified from Paradis, 1987, p. 435)

Alternatively, compound bilingualism develops in an environment where the two languages are mixed, where "two languages are spoken interchangeably by the same people and in the same situations" (De Groot, 2011, p. 131). As a result of this linguistic environment, the bilingual mixes the two languages and interlingual interferences occur, from and toward each language. He or she is thus not able to detect the important conceptual differences between the two languages, and needs to use both linguistic systems for thinking and communicating.

As shown in Table 2, the lexicon of a compound bilingual includes, for each linguistic level, a store for the native language (L1), a store for the foreign language (L2), and a mixed store.

L1	COMPOUND BILINGUALISM L1 + L2	L2
Organization of L1 semantic units	Organization of L1 + L2 semantic units	Organization of L2 semantic units
Organization of the sentence according to L1 syntax	Organization of the sentence according to L1 + L2 syntax	Organization of the sentence according to L2 syntax
Organization of the words according to L1 morphology	Organization of the words according to L1 + L2 morphology	Organization of the words according to L2 morphology
Organization of the syllables according to L1 phonology	Organization of the syllables according to L1 + L2 phonology	Organization of the syllables according to L2 phonology
Organization of the phonemes according to L1 phonetics	Organization of the phonemes according to L1 + L2 phonetics	Organization of the phonemes according to L2 phonetics

Table 2. Compound bilingualism (based on Paradis, 1987, p. 438)

Here are some examples of compound bilingualism:

- Organization of L1 + L2 semantic units: **J'ai mal à mon ojo* instead of "oeil", in French-L2 from Spanish-L1. The user avoids the diphthong [oe + j] and uses the L1 term.
- Organization of the sentence according to L1 + L2 syntax: **Étudie français* instead of "J'étudie le français", in French-L2 from Spanish-L1. The user omits the personal pronoun and the article of L2 syntax.
- Organization of the words according to L1 + L2 morphology: **la troca* instead of "truck", in English-L2 from Spanish-L1. The user uses the root word in English-L2 (*truck*) and the morphology of the feminine of Spanish-L1 (-a).
- Organization of the syllables according to L1 + L2 phonology: **torabajo* instead of "trabajo", in Spanish-L2 from Japanese-L1. The user inserts vowels in the syllables of Spanish-L2 that combine two consonants (tra/tre/tri/tro/tru).
- Organization of the phonemes according to L1 + L2 phonetics: **la troca* instead of "truck", in English-L2 from Spanish-L1. The user uses the phoneme /o/ of Spanish-L1 instead of the phoneme /ə/ of English-L2.¹

Ronjat (1913) stated that coordinate bilingualism will be achieved provided that the "one person-one language" scheme is followed in the user's environment. In this way, the bilingual develops two clearly distinct systems and skillfully manages them. With such an organized practice, he or she becomes a true bilingual with double communicative competence (Hymes, 1975) as well as a good translator who clearly distinguishes between the two systems (Ervin & Osgood, 1954).

Relevant studies in the field of neurology confirm the existence of these two types of bilingualism. The Canadian psychoneurologist Michel Paradis (1981, 2004) reports, indeed, two types of cerebral storage systems. The first system is large and "extended", and contains the components of both languages. Thus, both linguistic systems function based on the same neuronal mechanisms and, in case of aphasia, both are affected. This type of storage supports the hypothesis of compound bilingualism. On the other hand, Paradis describes an independent and "dual" storage system in which both languages are located in the same language area of the brain, but each language has mechanisms of its own. In this case, aphasia affects only one language. This type of storage would correspond to coordinate bilingualism.

COMPLETE vs. INCOMPLETE BILINGUALISM

The proficiency level of each language is also a criterion for classifying bilingualism. In this sense, Weinreich (1953) describes a *subordinate* bilingualism which indicates an imbalance in the development of the two

languages: while the mother tongue has been reinforced, the second language is still developing. Bilingualism is thus incomplete. As can be seen in the following table, the subordinate bilingual "views the world" from his mother tongue, as does a monolingual person.

L1	L2
Organization of L1 semantic units	Organization of L2 semantic units
Organization of the sentence according to L1 syntax	Organization of the sentence according to L2 syntax
Organization of the words according to L1 morphology	Organization of the words according to L2 morphology
Organization of the syllables according to L1 phonology	Organization of the syllables according to L2 phonology
Organization of the phonemes according to L1 phonetics	Organization of the phonemes according to L2 phonetics

Table 3. Subordinate bilingualism (based on Paradis, 1987, p. 436)

As can be seen in the examples below, subordinate bilingualism exhibits unidirectional transfers from L1 (Spanish) to L2 (English or French):

- Transfer of the semantic content of the word in Spanish-L1 *discusión* [argument] to the word in English-L2 "discussion", using the latter with a negative connotation it does not have in English, in which it simply means "exchange of ideas".
- Omission of the auxiliary verb in interrogative sentences, like in Spanish-L1: *¿Vives aquí?* or *¿En dónde vives?*, resulting in English-L2 in *"You live here?" or *"Where you live?" instead of "Do you live here?" or "Where do you live?".
- Use of the morphology of the masculine in the article **le voiture*, from Spanish-L1 *el coche*, instead of the morphology of the feminine in French-L2 *la voiture*.
- Omission of the production of rising vs. falling intonations in tag questions: "You work in Mexico, don't YOU?" (rising final intonation, expresses doubt) vs. "You work in Mexico, DON'T you?" (falling final intonation, expresses certainty).
- Omission of the production of different sounds nonexistent in Spanish-L1, like /t/ (as in "tree") vs. /θ/ (as in "three").

As shown below, Weinreich's proposition can prove to be more complex than a three-way classification of bilingualism: in some individuals, each linguistic level can be organized according to the logics of a particular type of bilingualism—coordinate, compound, or subordinate. According to Paradis (1987, p. 433), it is indeed theoretically possible for a speaker to have a coordinate system at the levels of syntax and semantics, while having a subordinate phonology. A bilingual can also be coordinate when it comes to decoding, and subordinate when it comes to coding.

L1	L2
Organization of L1 semantic units	Organization of L2 semantic units
Organization of the sentence according to L1 syntax	Organization of the sentence according to L2 syntax
Organization of the words according to L1 morphology	Organization of the words according to L2 morphology
Organization of the syllables according to L1 phonology	Organization of the syllables according to L2 phonology
Organization of the phonemes according to L1 phonetics	Organization of the phonemes according to L2 phonetics

Table 4. Variability in the types of bilingualism at the different linguistic levels (based on Paradis, 1987, p. 436)

We should then think of bilingualism as organized among the various linguistic levels into different degrees of a continuum that includes, at one end, the pole of coordinate bilingualism, and at the other end, that of compound bilingualism. Such a structure is dynamic and changes over time, as the individual acquires new experiences.

EGALITARIAN AND ADDITIVE BILINGUALISM vs. UNEQUAL AND SUBTRACTIVE BILINGUALISM

Some 20th-century typologies based on psychosocial factors continue to serve as a basis for research in this century. It is the case of Hagège's proposition (1996). This typology distinguishes between *egalitarian* and *unequal* bilingualism, depending on the social status of each language in the symbolic representations of a particular society. The relation between both languages can thereby be one of equality or subordination, depending on the social and geopolitical circumstances prevailing at a certain point in time in the two cultures associated with those languages.

Lambert's typology (1974), for its part, makes a distinction between *additive* and *subtractive* bilingualism (De Groot, 2011). The first occurs when in the speaker's social environment, bilingualism is considered as a cultural enrichment, and the second, in the opposite case: when the surrounding society sees bilingualism as a risk of loss of identity.

Hagège considers that for bilingualism to develop in an ideal way, there should be no conflict in the user's mind: bilingualism should be egalitarian and additive. For a student to be willing to make the laborious, long-term cognitive effort necessary to acquire both languages, it is important that the two linguistic systems be presented as a capital of interesting and valuable concepts and references.

The coordinate, complete, additive and egalitarian bilingualism is the one recommended by psychologists and psycholinguists, since it is the one that allows a suitable development of the bilingual's cognition and metacognition.

IMPACT OF THE TYPES OF BILINGUALISM ON THE HUMAN BEING

What cognitive processes and mechanisms can be affected by bilingualism? What have been the theoretical and empirical contributions of psycholinguistics and cognitive psychology to understanding the link between bilingualism and cognition, and what models and controversies have they generated? Since the beginning of the 20th century, contributions have alternated between studies questioning and criticizing bilingualism, and those highlighting its benefits for the human being's cognitive development. This latter perspective has been reinforced since the 1960s (De Groot, 2011).

One of the first psycholinguistic studies of bilingualism, now a classic, was conducted by the above-mentioned Ronjat (1913). The author comes to the conclusion that bilingualism, and the contact with different languages, promotes cognitive and linguistic development. Bilingualism even favors the development of the mother tongue. Ronjat's observations are based on empirical research on his own son, who was raised in a bilingual French-German family under the "one person-one language" scheme. The author mentions that the child thus simultaneously developed two phonetically, grammatically and stylistically independent linguistic systems, that is, a *coordinate* bilingualism. He reports that there was no confusion or interference between the two languages, and no slowing down of his linguistic development. In addition, the child developed a very early linguistic awareness: he was conscious of his bilingualism. Ronjat noted, however, that he achieved fluency at a slightly older age than monolingual children.

Contrary to the view of Ronjat on bilingualism at an early age is that of Epshtein, cited by Vygotsky ([1935], 2000). By its logic and early place in the chronology of this discussion, Vygotsky considers this research to be important for psycholinguistics. Epshtein's study is based on surveys, personal observations, and some experiments related to the teaching of several languages in Switzerland. For this author, the psychic basis of language is a process of associative relationship that is established between a phonetic complex and its corresponding signified (the object or idea), the name of which is precisely "phonetic complex" (in Vygotsky, 2000, p. 341). Bilingualism thus consists in establishing this system of relationships twice.

In experimental psychology, various associative links generated from a single point can inhibit each other. When an idea simultaneously relates to two phonic designations, the tendency of both words is to emerge to our consciousness *after* that idea. The two associative tendencies compete with each other and, as a result, the strongest and more usual associative nexus prevails. But this fight goes hand in hand with a slowing down and alteration of the associative process (in Vygotsky, 2000, p. 341). It should be noted, however, that Epshtein's description corresponds to what was referred to in the above section as *compound* bilingualism.

According to Epshtein, even when no nexus are established between the two languages in the child's psycholinguistic structure, they inhibit each other through an antagonistic relationship. Besides associative inhibition, the bilingual experiences interference between the two languages: he or she mixes the two languages

and sees both his or her mother tongue and second language become impoverished. Mixing the two languages leads to difficulties of expression, insecurity, stylistic errors, and confusion.

The same author suggests that bilingualism also affects thinking. Each language has its own syntactic, phonetic and semantic cutting planes. These differences complicate the multilingual's thinking, giving rise to a conflict of ideas, and inhibition and confusion of the connections between them. In the extreme, bilingualism can cause language pathologies.

Epshtein thus considers that the use of a single language—a monoglottism of expression—combined with the passive use of the others, based on receptive abilities—a polyglotism of impression—is the least damaging multilingualism. The damage caused by polyglotism also depends on the person's age: he or she would be more vulnerable in early childhood, when the nexus between thinking and language are not yet consolidated.

Many studies conducted before the 1960s call the linguistic and cognitive benefits of bilingualism into question. However, it should be pointed out that most pre-1960s authors studied bilingual subjects in an immigration context, under conditions unfavorable to the development of an optimal bilingualism. Due to the related social, economical and psychological factors, indeed, the bilingualism dealt with was usually compound, incomplete, subtractive, and unequal. In addition, rigour of the research design is often questioned in these studies because of the lack of control of a range of variables, such as socio-cultural group (Romaine, 1995).

It is essentially since the 1960s, with a paper entitled "The Relation of Bilingualism to Intelligence" (Peal & Lambert, 1962), that the positive perspective on bilingualism has been reinforced. Numerous authors currently highlight its benefits (De Groot, 2011; Cook & Bassetti, 2011). It is worth noting that the research context of these studies is not that of immigration, but rather a middle-class one where the two languages and related cultures are not in conflict. This context more easily allows a coordinate, complete, additive and egalitarian bilingualism to develop. Such a bilingualism has a positive impact on verbal and non-verbal intelligence, thinking (decentering, mental and symbolic flexibility, divergent and creative thinking, imagination), and linguistic development (concept formation; semantic development; awareness of language as an object and an abstract system, of the **arbitrariness** of the linguistic sign, and of how it interacts; word identification).

Lambert & Tucker (1972) believe that learning two languages from childhood leads the bilingual to practice a form of "incipient contrastive linguistics". Indeed, being bilingual involves awareness of the existence of languages in general, and of two systems in particular, and also involves making the effort to distinguish them and to avoid interference. According to Pinto (1993, p. 128), the attention given to avoid transfers between languages makes the bilingual twice as careful with its lexical, syntactic, phonetic, and pragmatic choices, which explains his or her sharper intuition for the principles governing each language, and language in general.

Authors such as Pinto (1993) and Tummer & Myhill (1984) consider that a balanced proficiency in the two languages has a positive and decisive effect on linguistic awareness and cognition. The latter authors argue that "fully fluent bilingualism results in increased metacognitive/metalinguistic abilities which, in turn, facilitate reading acquisition which, in turn, leads to higher levels of academic achievement" (1984, p. 176). In the same line, Bassetti & Cook (2011, p. 163–164) report that bilingualism accelerates the child's development of syllable awareness and of distinction between word and referent. It also accelerates the development of logical-mathematical intelligence and the acquisition of a theory of mind.

Numerous 20th and 21st-century authors have thus concluded that bilingualism generates benefits for the individual's intellectual, cognitive, and psycholinguistic development (Cook & Bassetti, 2011; De Groot, 2011).

CONCLUSION

It is the responsibility of the education sector to reflect on the type of bilingualism susceptible to be developed at school since, from the teacher's point of view based on educational practices, features of the two perspectives described above—some beneficial to cognition, and others detrimental to it—could be found in class. It would also be relevant to ask ourselves how to help develop an ideal bilingualism in the curriculum and the classroom.

A suggestion could be to conceive bilingual programs that apply Ronjat's "one person-one language" approach and promote the ideal **coordinate** and **complete** bilingualism—"equilingualism" or balanced bilingualism—recommended by psychologists and psycholinguists. As pointed out by Deprez (1994, p. 23), the equilingual individual speaks both languages just as well, has no preference for one language over the other, and never mixes them up. This bilingualism, in turn, favors a well-organized cognitive structure. A teaching program could be conceived where the two languages coexist and are vehicles of cultural, scientific and academic information, highlighting national language and identity.

The teacher in the classroom can organize his or her teaching around an immersion system to help achieve **coordinate** bilingualism; he or she can refer to level C1 of the Common European Framework of Reference for Languages to help attain **complete** bilingualism; he or she can work with appealing, varied texts that reflect a diverse, pluralistic culture of the second language to develop **additive** bilingualism; and he or she can create a culturally contrastive teaching approach where both the native and second language have the same status, thereby achieving **egalitarian** bilingualism

It is relevant and urgent to study and reflect on bilingualism since it has become the norm for the majority of mankind and, and such, is currently a factor promoting social and professional mobility. Bilingualism can also be a driving factor for pluralism and tolerance in the world. Learning, grasping and understanding "the other's" symbolic system is actually a good start to respecting it. Bilingualism can help spread a culture of peace and the spirit of "otherness" (Hagège, 1996). According to Siguan (2001, p. 357), bilinguals, because they are familiar with several languages, are precisely those who can rise above conflicts among those who speak them, opening pathways of mutual understanding. It will thus be up to bilingual or multilingual teachers, thinkers and rulers to build a world of tolerance and solidarity.

Intuitive Leadership and Effectiveness of Secondary School Principals in the Eight City Divisions of Negros Occidental

Janette C. Magalona^{a*}

^a Ph.D., Philippine Normal University

Abstract

This study aimed to determine the extent manifestation of intuitive leadership of secondary school principals in the eight city divisions of Negros Occidental as it relates to principals' effectiveness as perceived by themselves and as perceived by their teachers. This study made use of descriptive correlational method with fishbowl technique for its sampling procedure. To explore possible correlations on the intuitive leadership and principal effectiveness the following variables were used: age, gender, type of school, educational qualification, and tenure. A research instrument was formulated to gather information on the profile of the respondents using the selected variables. Questionnaire adapted from Jerry W. Valentine and Michael Bowman was used by the secondary school teachers in intuitive leadership skills. The data were then analyzed using the Statistical Package for the Social Sciences Software (SPSS), specifically Mean, One Way ANOVA, Pearson Product Moment of Correlations, and t-test for independent means. Findings revealed that the principals in the eight city divisions of Negros Occidental are intuitive as perceived by themselves and by their teachers when grouped as to selected variables. However, there was a significant differences in the level of intuitive leadership as perceived by themselves when grouped as to age but there was no significant relationship in the level of intuitive leadership as perceived by themselves and by their teachers when grouped as to selected variables. In conclusion, principals in the eight city divisions of Negros Occidental are intuitive and effective leaders as perceived by themselves and by their teachers when they are grouped according to selected variable.

Keywords.

INTRODUCTION

Highly intuitive leaders see themselves as open to new opportunities, innovations, and creative approaches which are essential for future school progress. Agor (1998:22) cited that educational leaders are making difficult decisions amidst challenging time, thus, intuition is very effective because it enables one to see the "big picture" and to consider the possibilities beyond those offered by traditional decision-making styles. According to Harper (1988:33) intuition helps executives come up with answers before anyone else knows the question. As a leader of an educational organization, an executive must possess certain qualities in order to promote a cohesive organization to improve the quality of education. A Principal's decision plays a vital role in improving the quality of life. He facilitates the identification of educational mission, help in the formulation of broad policies and supervises their implementation. (Rossow, 1990:18) Holder, (1992:16) believed that "strong leaders create strong schools". Both research and common sense suggest that administrators can do a great deal to advance school reform" Their behavior influence the teachers and student-clientele through their leadership. They can have effective schools which would lead to exemplary performance in the attainment of educational goals. Leaders of the educational world must possess certain qualities in order to promote a cohesive organization able to improve the quality of education. Thus principals' decision play a vital role in improving the quality of life. They facilitate educational mission, help in the formulation of broad policies and supervise their implementation. Managers should combine intuitive and analytical-based judgment even if they come from the same person. Evidence suggests that intuition is commonly employed and can be quite accurate. The most reliable guidance comes from one's inner voice, not from books or experts. Bradshaw (1998) stated that intuition is an important aspect of effective control, We would be better off and truer to our nature if we tried to identify what triggered our external alarm. Thus, principals use intuition and rely on it and even enhance their intuitive skills in their management styles.

A successful organization must be managed by a principal who possesses the abilities and traits of a good leader who is responsible in achieving the goals of the institution. The principal is the most influential individual

in the life of the students and teachers in school for the quality of their inputs are affected to a great extent by how much attention he gives them. potential leadership of the principal as well as his skills have a great influence on his subordinates towards the attainment of a school's specified goal or goals (Paez 2003). Secretary Armin A. Luistro entrusts to the school principal the responsibility of providing the instructional support system. EDCOM also stressed that the school principal is the key variable in the unending search for quality education in the basic educational system. The principal's leadership potential creates the condition that helps teachers find satisfaction in their work, confront challenges, and enable them to have self-fulfillment and accomplishment of their tasks (Andres 1992). The researcher having been assigned as head in Education Department that supervises teacher in the Center for Teaching and Learning of PNU which deals with the principals wonders if indeed the intuition of principals in the different schools affects their effectiveness. It is in this context that the researcher intends to assess the intuitive ability of secondary school principals, specifically, the relationship between their intuitive ability and principal effectiveness in the attainment of educational goals.

Statement Of The Problem

The main purpose of the study is to determine the extent of manifestation of intuitive leadership of secondary school principals in the thirteen cities of Negros Occidental as it relates to principal effectiveness.

Specifically this study aimed to answer the following questions:

1. What is the extent manifestation of intuitive leadership of secondary school principals in the eight city divisions of Negros Occidental as perceived by themselves when they are taken altogether and when grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure
2. Is there a significant difference in the extent of manifestation of intuitive leadership among secondary school principals in the eight city divisions of Negros Occidental as perceived by themselves when they are grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure
3. Is there a significant relationship in the extent of intuitive leadership among secondary school principals in the eight city divisions of Negros Occidental as perceived by themselves when they are grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure. Age
4. What is the extent of manifestation of intuitive leadership of secondary school principals in the eight city divisions of Negros Occidental as perceived by their teachers when they are taken altogether and when they are grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure. Age
5. Is there a significant difference in the extent of manifestation of intuitive leadership of secondary school principals in the eight city divisions of Negros Occidental as perceived by their teachers when they are grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure Age, Gender Type of School, Educational Qualification, Tenure
6. Is there a significant relationship in the extent of manifestation of intuitive leadership of secondary school principals in the eight city divisions Negros Occidental as perceived by their teachers when they are grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure
7. What is the level of effectiveness of secondary school principals in the eight city divisions of Negros Occidental as perceived by themselves when they are taken altogether and when grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure
8. Is there a significant difference in the level of effectiveness of secondary school principals in the eight city divisions Negros Occidental as perceived by themselves when they are grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure
9. Is there a significant relationship in the level of effectiveness of secondary school principals in the eight city divisions Negros Occidental as perceived by themselves when they are group according to: Age, Gender, Type of School, Educational Qualification, Tenure Age, Gender, Type of School, Educational Qualification, Tenure
10. What is the level of effectiveness of secondary school principals in the eight city divisions of Negros Occidental as perceived by their teachers when they are taken altogether and when grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure
11. Is there a significant difference in the level of effectiveness of secondary school principals in the eight city divisions of Negros Occidental as perceived by their teachers when they are taken altogether and when grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure. Age
12. Is there a significant relationship in the level of effectiveness of secondary school principals in the eight city divisions of Negros Occidental as perceived by their teachers when they are taken altogether and when grouped according to: Age, Gender, Type of School, Educational Qualification, Tenure

a.3. Is there a significant relationship in the extent of manifestation of intuitive leadership of secondary school principals in the eight city divisions of Negros Occidental and their level of effectiveness as perceived by teachers.

14. Is there a significant difference in the perception of teachers and principals on principal's Intuitive leadership.

METHODOLOGY

Research Design

The present study utilized the descriptive method of research. Fraenkel and Wallen (2003) define the descriptive research as a given state of affairs that summarize the characteristics of individual as groups or physical environment.

The Subjects/Respondents

Principals

TABLE 1. Table of Distribution of Subjects Principals

DIVISION	PUBLIC	PRIVATE	TOTAL	%
Bacolod City	15	14	29	41%
Bago City	5	1	6	8%
Cadiz City	6	2	8	12%
Kabankalan City	5	4	9	12%
La Carlota City	1	1	2	3%
Sagay City	5	1	6	8%
San Carlos City	3	4	7	10%
Silay City	3	1	4	6%
TOTAL	43	28	71	100%

Table 1 The total of 71 principals- respondents were used in this study : 43 from public secondary schools and 28 from private secondary schools .

Teacher

TABLE 2. Table of Distribution of Teachers Population Per Division

DIVISION	PUBLIC	SAMPLE	PRIVATE	SAMPLE	TOTAL POP	TOTAL SAMPLE
Bacolod City	920	112	415	52	1335	164
Bago City	219	27	20	3	239	30
Cadiz City	239	30	36	4	275	34
Kabankalan City	131	16	88	11	219	27
La Carlota City	47	6	24	3	71	9
Sagay City	207	26	32	4	239	30
San Carlos City	146	18	96	12	242	30
Silay City	180	22	40	5	220	27
TOTAL	2089	257	751	94	2840	351

Table 2 The total respondents of 351 teachers were used in this study. 257 from public secondary schools and 94 from private secondary schools of the eight cities divisions of Negros Occidental for school year 2010-2011 were the respondents of the study

TABLE 3. Distribution of Subjects Principal Group as to Variables

Variables	N	Percentage %
-----------	---	--------------

Age			
	Young (33-46)	33	46
	Old (47-64)	38	54
Gender			
	Male	16	23
	Female	55	77
Type of Schools			
	Public	43	61
	Private	28	39
Educational Qualification			
	Bachelor's Degree	28	40
	Master's Degree	35	49
	Doctorate Degree	8	11
Tenure			
	Shorter	37	52
	Longer	34	48
	Total	71	100%

Table 3 shows the grouping of the respondents according to age, the median was used. The ages of the principal - respondents spanned from 33 years old to 64 years old. For gender male were 16 and female were 55. The type of school of the principal - respondents from public secondary schools are 43 and from private secondary schools are 28. For educational qualification Bachelors degree 28, with Masters' degree 35 and with doctorate degree 8. Respondents' tenure as leaders ranged from 2 years to 6 years for shorter tenure and 7 years to 30 years for longer tenure.

TABLE 4. Distribution of Teacher-Respondents Group as to Variables

	Variables	N	Percentage %
Age			
	Young (21-40)	171	49
	Old (41-63)	180	51
Gender			
	Male	87	25
	Female	264	75
Type of Schools			
	Public	258	74
	Private	93	26
Educational Qualification			
	Bachelor's Degree	284	81
	Master's Degree	63	18
	Doctorate Degree	4	1
Tenure			
	Shorter	178	51
	Longer	173	49
	Total	351	100%

In grouping the teacher-respondents according to age, the median was used. The ages of the spanned from 21 years old to 63 years old . For gender male were 87 and female were 264. For the type of school from public secondary schools are 258 and from private secondary schools are 93 . For educational qualification Bachelors degree 284, with Masters' degree 65 and with doctorate degree 4 . Teacher respondents tenures ranged from 1 year to 12 years for shorter tenure and 13 years to 38 years for longer tenure. Respondents' tenure 178 for shorter tenure and 173 for longer tenure.

Research Instrument

Part I of the research instrument was formulated for the purpose of gathering information pertaining to the profile of the respondents. Which includes the respondents age, gender, educational qualification, educational qualification, and type of schools. Part II was the principal's effectiveness questionnaire by Jerry W. Valentine and Michael Bowman to be used by the secondary school teachers in evaluating their principals effectiveness. Part III was the researcher made instrument based from Agor Intuitive Management Survey to be used in evaluating the intuitive leadership skills of secondary school principals in the thirteen cities of Negros Occidental. Using the five - point scale technique , the respondents answered the items using the following alternative responses: "Very Effective" (VE), "Effective" (E) , " Moderately Effective" (ME) , "Least Effective" (LE) , "Not Effective" (NE).

Data Analysis and Statistical Technique

The data analysis conducted to answer the research questions was performed using Statistical Packages for the Social Sciences Software (SPSS). A combination of descriptive and inferential statistics were used for this purpose. The following statistical techniques were utilized to address the research problems: Frequency and percentage were used to identify the number of participants of the study. Frequency distribution is defined as the arrangement of the gathered data by categories, plus the corresponding frequencies. In quantitative research, the scores were summarized with tallies to indicate the characteristics of the respondents which describe their personal, professional and demographic background. These characteristics include the following: For Problems 1,4,7,10. the gathered data will be analyzed with the use of the mean. For problems 2, 5, 8, 11 and 14 Levene's t-Test for Equality of Means was employed to test the significance of the difference and One Way ANOVA. For problems 3, 6, 9, 12 and 13 Pearson Product Moment of Correlations was used. The coefficient of correlation of the Intuitive leadership is based at 0.01 alpha.

RESULTS

Table 5. The Extent of Manifestation of Intuitive Leadership of Secondary School Principals in the Eight Cities of Negros Occidental as Perceived by Themselves When Grouped According to the Selected Variables

CONCLUSIONS

From the Findings of the Study the following Conclusions are drawn:

- Generally, the principals in the eight city divisions of Negros Occidental manifest an intuitive leadership. Remarkably, principals are intuitive regardless of age, gender type of school educational qualification, and tenure.
- There is no significant difference in the extent of manifestation of Intuitive Leadership of Secondary School Principals in the eight city division of Negros Occidental as perceived by the principals and teachers when grouped according to age, gender, type of school, educational qualification, and tenure.
- All principals in the eight city divisions of Negros Occidental are very effective leaders when applying intuition in the school they manage.
- There is a correlation between the intuitive leadership and principals effectiveness of secondary school principals in the eight city divisions of Negros Occidental.
- There is a correlation in the perception of teachers and principals in the intuitive leadership of secondary school principals when grouped according to age, gender, type of school, educational qualification, and tenure.

RECOMMENDATIONS

The following are the recommendations drawn from the findings and conclusions of this study.

- Data findings from this study indicates that secondary school principals are intuitive leaders.
- It is recommended that periodic evaluation on the effectiveness of secondary principals by their teachers in the areas explored in this study. This will help enhance the intuitive leadership skills and effectiveness in the performance of educational services.
- It is recommended that not only teachers and principals but superintendents and higher officials in the field of education as well should coordinate in order to arrive at a fair evaluation for secondary school principals. After all best secondary school principals help a lot in establishing effective schools.
- That intuitive leadership skills seminar will be conducted to teachers, principals and administrators to enhance intuitive leadership skills.
- That education sector should encourage the use of intuition to help enhance the effectiveness of educational leaders.
- That school principals should strive to decide intuitively in the service to meet the challenges of the new millennium.
- Further researches on a wider scope and involving subjects, respondents, and variables not covered in the present study are recommended.

How Do Students Learn History? The Problem With Teaching History as Part of an Integrated or Interdisciplinary Cross Curricular Pedagogical Approach

Yosanne Vella ^{a*}

^a Prof, Faculty of Education, University of Malta

Abstract

Interdisciplinary/cross-curricular teaching involves a conscious effort to apply knowledge, principles, and/or values to more than one academic discipline simultaneously. The disciplines may be related through a central theme, issue, problem, process, topic, or experience (Jacobs, 1989). This approach is often seen as a panacea to various problems facing education today; from opening up more space and time on overcrowded school timetables to cutting down fragmentation and giving a more holistic, relevant and modern education. Unfortunately while undoubtedly having various positive aspects, like most cures, an interdisciplinary approach does not come without a number of negative side-effects.

This paper will attempt to show how at times effective history teaching does not sit comfortably with interdisciplinary approaches; indeed, in some instances they are incompatible.

Keywords.

INTRODUCTION

Interdisciplinary/cross-curricular teaching sometimes also called an integrated approach involves a deliberate attempt to apply knowledge and principles to more than one academic discipline concurrently. This approach is also linked to project work, topic or thematic teaching which incorporate the integration of different curricular areas around a particular topic, a central theme, issue, problem, process, or experience. This teaching approach is highly favoured in many Primary schools (5 to 11 years-olds) in Europe and to a lesser extent in Secondary schools too. In the Secondary sector (11 to 16 year-olds) it is more difficult to infiltrate as a method because it is harder to remove the subject barriers, however because of the attractiveness of cross curricular advantages, attempts occur here too. Thus in the case of humanities such 'umbrella' titles as Citizenship Education, Social Studies and Environmental Studies may replace separate academic subjects such as Geography, Sociology, Home Economics, Physical and Social Education, Religious Studies and History. These are now often taught as one subject.

This approach is seen as a panacea to various problems facing education today; from opening up more space and time on overcrowded school timetables to cutting down fragmentation and giving a more holistic, relevant and modern education. Unfortunately while undoubtedly having various positive aspects, like most cures, an interdisciplinary approach which mixes history with civics or with any other subject does not come without a number of serious negative side-effects. There are three particular challenges presented by an interdisciplinary/cross-curricular approach to history teaching and learning which I feel need to be addressed. These are less history teaching and learning time, loss of independence for history as a school subject and the nature of history as an academic subject and its pedagogy may not be reconcilable with citizenship education and interdisciplinary approaches.

PROBLEMS OF TEACHING HISTORY WITHIN AN INTERDISCIPLINARY/CROSS-CURRICULAR APPROACH

Less history teaching and learning time

First of all interdisciplinary/cross-curricular approaches compound the already existing problem of very little history time on school timetables, as Van der Leeuw-Roord (2001) found "the time allocated to history in

schools is under pressure everywhere in Europe with a tendency to further decrease” (p.22) The situation of the dwindling history lesson is made worse because within an interdisciplinary/cross-curricular approach history stops being the focus and has to merge with all the other subject areas.

Loss of independence for history as a school subject

This leads to the second difficulty that is, that history ceases to exist in its own right. This was already a worry in 1992 when the top concern of most western European History Teachers’ Associations was a possible loss of the independent position of history in the curriculum Van der Leeuw-Roord (2006). By 2001 a considerable change in European school history curricula was noted by Stradling (2001) and according to Van der Leeuw-Roord (2001) referring to Stradling’s work “There is now far more emphasis on recent and contemporary history, and a growing focus on strengthening European consciousness, human rights and civil society through the teaching of history and civics.”(p.22).

The nature of history as an academic subject and its pedagogy may not be reconcilable with citizenship education and interdisciplinary approaches.

Citizenship education has become very popular in the last 15 years and many interdisciplinary curriculums are now tailored to include history and other humanities within the citizenship umbrella, and this leads me to the third and to me the most worrying aspect of an interdisciplinary/cross-curriculum. A concern that by far transcends both the two previous concerns, that is, the decrease in the time allotted to proper history teaching and that history stops being a separate subject on the school timetable. It is important to point out that in the case of history there is the added problem that history and citizenship do not always sit comfortably together; indeed, in some instances they are incompatible. Whereas, citizenship is concerned with developing certain attitudes and values which currently prevail in a society, history is about questioning evidence. Citizenship is essentially an initiation process while history is not designed for this.

History teachers know that there are various problems when it comes to historical explanation. One does not need to be a postmodernist to realize that ‘truths’ uncovered by history are imperfect. The questions historians ask are determined by the questions of their society, reflecting the same apprehensions or optimism of the time rather than the historical period the historian is studying and all this casts serious doubt on the objectivity of history.

All our historical knowledge comes to us in an indirect way. This is true both for evidence coming from primary historical sources and for evidence coming from secondary historical sources. When working with primary sources we are dealing with what survives; other material which did not survive might have produced an entirely different picture. There will always be the possibility of sources being forged and the information they are giving is entirely false. This can also happen through mistakes occurring while the historian is working with the sources, for example mistakes during translations or while deciphering calligraphy. But even if one were to give allowance to these human errors, there exist even more serious problems when dealing with historical material. A truly untouched authentic piece of evidence cannot be said to exist. What we have, all comes to us second hand, even documents, which are often regarded as sacrosanct where facts are concerned, were written by fallible human beings; even if they were actual eyewitnesses of the events they are reporting, their memory can be faulty. The account is influenced by the eyewitness’s prejudices and biases, which may cause him or her, even if perhaps unconsciously, to exaggerate or modify certain things.

Furthermore even when correct facts can be established, they only start to have meaning once the historian has gone to work on them. Facts are only the raw material, history is a continual process of interaction between the historian and his or her facts. To illustrate this point Carr (1964) states that: “To praise a historian for his accuracy is like praising an architect for using well-seasoned timber or properly mixed concrete in his building.” (p.10) It is a necessary function but not the main *raison d’être* of a historian. Ultimately the job of a good historian is to rigorously check, compare and question all known facts and information about the topic he or she is researching. Then the evaluation process starts, which includes interpreting evidence, explaining, attributing causes, criticism, tracing results and using the imagination. And it leads not to truth – historians can come to different conclusions – but rather to a valid interpretation.

However, this means that with secondary sources there are now even more concerns since besides the bias to be found in the original source of information there is also the writer’s bias to contend with. History teachers

know that facts become facts when historians decide to make them so, even when not expressing any judgements or opinions historians are being selective by the very choice of the subject they have picked to work on. As Tosh (1984) says:

“The facts are not given, they are selected. Despite appearances they are never left to speak for themselves. However detailed a historical narrative may be, and however committed its author to the re-creation of the past, it never springs from the sources ready-made; many events are omitted as trivial, and those which do find a place in the narrative tend to be seen through the eyes of one particular participant or a small group.” (p.113)

For a long time historians thought the history of kings, nobles and great men only was important and therefore our history only dealt with such topics, leaving out whole chunks of the population who because of their race, class or sex did not fit this paradigm. This is especially obvious when it comes to women’s history. Women have been for a long time to coin Sheila Rowbotham’s (1973) famous phrase ‘hidden from history.’ With the advent of more and more women historians, women’s history began to be written and our perspectives on whole historical periods have since changed.

It is also the historians who decide in what order and context to place the facts and as any good journalist knows to influence opinion in one direction you merely have to select and arrange the appropriate facts. Historians are products of their own culture and the society and subject to their own prejudices and values.

History teachers today are aware of the very real difference between ‘the past’ and ‘history’ which are often taken to mean by non- specialists as one and the same thing, when in fact they are not. It is important to accept that history is merely a discourse about the past but not the past itself and to a certain extent what Jenkins (1991) says is correct:

“History as discourse is thus in a different category to that which it discourses about, that is, the past and history are different things. Additionally, the past and history are not stitched into each other such that only one historical reading of the past is absolutely necessary. The past and history float free of each other, they are ages and miles apart” (p.5)

For the past 40 years history pedagogy has been developing and today it is dramatically different from the traditional history teaching of fifty years ago. The main objective in history teaching is today the teaching of history thinking skills and concepts within a historical context rather than mere memorisation of facts, and pupils are made aware of the main characteristics of the discipline. It is important to teach in history not just the factual knowledge, but what Bruner (1966) called the ‘structure’ of the subject. Historical method involves historical thinking and it is the analyses of sources in particular, that provide the practice for a mode of thinking similar to what the historian goes through. This approach in history teaching is in fact based on constructivist teaching methods.

Historical thinking is best described as a form of speculation, highly investigative in nature so many of the learning theories are not immediately satisfactory approaches to history teaching. For example Dewey’s problem-solving model perhaps so useful in subjects like science and mathematics might be inadequate for as Watts (1972) says “...because the material of history is uncertain and debatable, it is difficult, if not literally impossible, to solve problems in history...history is much more concerned with problem-raising than problem-solving” (p.33)

Lee, Dickinson and Ashby showed that children’s thinking in history is far more sophisticated than previously imagined. After analysing children’s ideas on testing explanations in history, Lee, Dickinson and Ashby (1996) said that:

“From the point of view of day-to-day classroom history teaching, our analysis so far suggests that we need to recognise that quite young children can begin to make sophisticated distinctions and develop powerful intellectual tools. We may need both to match such ideas with greater precision in our teaching objectives, and to increase our awareness of assumptions which hold some children back.” (p.19)

One of the best descriptions of what constitutes good history teaching today is given by Christine Counsell (2004 a) and her characteristics of what make good history teachers are summed up below:

1. They consider learning as highly structured and very risky – (children need all kinds of structures to think at high level – text one minute, picture the next, activity one minute –teachers need time to learn to teach)
 2. They consider variety – (by using many resources to compare sources and interpretations, to access the past and to construct history in different ways)
 3. They value knowledge – (critical thinking and reflection do not mean forgetting the importance of knowledge. We have to connect knowledge and skills)
 4. They establishing a critical, informed and open discipline of history – (by its practises, its processes, its values. This to practice casual reasoning and to construct casual explanation.)
 5. They select the right stuff – (by supplying a framework of thinking about the kinds of questions we ask about the past and the kinds of historical enquiry)
 6. They put emphasis on evidence and interpretation – ((the processes of the discipline) this to establish and examine the truth claims that historians make)
 7. They give joy - (by historical enquiry which establishes curiosity amongst students)
 8. They make possible various encounters to learn all the time – (such as to encounter the other, otherness, the strange and the familiar)
- (p. 18 – 56)

This is a very rewarding, effective but difficult kind of pedagogy of history. A pedagogy that can be very successful when delivered by excellent experienced history teachers but if it is to occur, it has to happen in a subject-centred curriculum and not in an interdisciplinary cross-curriculum one, where the possibility of untrained non- specialist teachers is very high.

As can be seen the debate regarding the nature of history and on the best approach to teach it, is quite complex, so considering how volatile history is, how can this be used to pass across the accepted values of a society? Citizenship is concerned with educating pupils on how to become citizens. But what does that mean? Definitely learning values but whose values? In one society citizenship might mean passing across particular dominant religious values, in another it might be ethnic or cultural values and often the top priority of citizenship is to accept the underlying political values of the time. Pushing forward any one set of values no matter how noble they might be is the antithesis of history education.

I accept what Cajani (2007) said that “on the methodological level, the comparison of controversial interpretations and the analysis of documents, fundamental in history teaching, provide students with essential skills for the exercise of citizenship”(p.7) and indeed I have at times used history teaching to target citizenship (Vella, 2006; Vella, 2013). But one has to be very careful, history pedagogy researchers such as Rosalyn Ashby and Peter Lee never claimed history skills necessarily change a person’s point of view. For example when discussing their findings on children’s understanding and the skill of historic empathy Ashby and Lee (1987) advise against making “simple-minded and grandiose claims – that prejudice against cultures or ethnic groups will be dispelled by empathy exercises in history at school. People’s views are in large part based on material interests, fear, and their social relations with others: the presentation of rational alternatives in education is often almost powerless against all this.” (p.65) I would like to think that Ashby and Lee are not totally correct and there is truth in Cajani’s statement and I personally definitely believe that history teaching can indeed create people that think on a higher level. With the right history teaching one can get pupils to query the source of their information and its reliability, a trait which is very useful for citizens of a democracy however the objective of history can never be, as it is in citizenship, to uphold any one system of government even if that system of government is democracy.

CRITICISM OF THE ‘BENEFITS’ OF AN INTERDISCIPLINARY/CROSS-CURRICULUM APPROACH

History teaching is hard work and requires the right type of pedagogy which is focused and in depth, unfortunately it is very difficult if not impossible to practice this within an interdisciplinary framework which puts pressure on the very elements that make this possible. But perhaps the benefits of an interdisciplinary approach are worth the effort. So what are these benefits?

Morris (1970) as cited in Ingram (1979) argues that integration is an administrative device, a way of organising the timetable to cope with the expansion of knowledge. But should we abandon good practice for logistical reasons?

A stronger argument in favour is that given by Ranke (1968) who said it is child centred and by Kelly (1982) who explained that “demands that the curriculum be made relevant, meaningful and so on have been the most potent factor in the development of the idea of the curriculum integration”(Kelly, p.60). These studies point out that thematic interdisciplinary approaches help pupils to understand day to day life and place learning in a context and they do not compartmentalise a child’s life.

There is a huge assumption behind these arguments that subject-centred curriculum resembles one which is authoritarian and where the teacher is the giver of knowledge and the pupils mere recipients, a method which would fall under an Essentialist philosophy, and one which does not take into consideration the child’s needs and interests. But this is a false assumption, a history teacher can use a constructivist, child centred method in a subject- centred curriculum as exemplified by such brilliant history pedagogy as advocated by the work of numerous history teaching researchers (Nichols, J & Fines.J., 1997; Counsell, C., 2000, 2003, 2004a, 2004b, 2008, 2011; Dickinson, A. 1978, 1984; Lee, P. 1996; Shemilt, D., 1987; Blyth, J. 1995; Phillips, R., 2002) while respected peer reviewed journals on history pedagogy such as *Teaching History* and the *International Journal of Historical Learning, Teaching and Research* continually showcase good practice in history teaching within a subject-centred curriculum.

This assumption that better learning occurs in an interdisciplinary curriculum than in a single-subject one is a very strong one, however there does not seem to be any solid empirical evidence which backs the theory. The only research study on the effectiveness of cross-curricular teaching versus subject teaching I managed to find is a study conducted almost 20 years ago by Yorks and Folio (1993). This study states that students learn better from thematic, interdisciplinary instruction than from a traditional, single-subject curriculum. This conclusion is drawn from testing the engagement rates of 254 students learning social studies, reading and math in a mixed age classroom of 3rd and 4th graders. By observing these rates, it was demonstrated that there was a higher engagement rate during thematic tuition rather than during single-subject lessons. This may be correct, higher engagement may be occurring more in cross curricular activities but this does not necessarily translate in better understanding and learning on the parts of the students. What kind of engagement is really happening?

Is interdisciplinary teaching improving quality of history teaching? It is difficult to say when empirical evidence is missing, however one source of information is the British Education Department, for Britain is one place where integrated approaches have long been advocated and practiced in classrooms. As early as 1967 the Plowden report was praising this method. “Integration is not only a question of allowing time for interests which do not fit under subject headings; it is as much a matter of seeing the different dimensions of subject work and of using the forms of observation and communication which are most suitable to a given sequence of learning” (Plowden Report, p.199).

In Education it takes time before one can see whether a method is producing good results or not, and it was in fact by 1980 that quite unsavoury comments against interdisciplinary teaching methods began surfacing in various reports by school inspectors. One strong criticism was that there was often no organisation of subject matter and teaching was being done in a random way, thoughtful planning in advance was not occurring. The report of the Scottish Education Department (1980) was very unfavourable. It states that less than half the projects seen were of any real significance where learning was concerned and in an article in the Times Educational Supplement ‘projects’ which had become synonymous with integrated thematic teaching were highly criticised. J.Eggleston (1980) argued that topic teaching lacks learning objectives, individual pupil needs are not met and reduces practice to very basic skills. Eight years later T.Yendoll described thematic approaches as “confused thinking, discontinuity, a lack of coherence and progression, suspect classroom organisation, mismatch and weaknesses in assessment and evaluation” (Yendell, 1988 p.39)

More recently Annual Reports of HM Senior Chief Inspectors of Schools reported even more alarming results of ‘hybrid’ integrated courses. In seven of the ten schools visited between 2008 and 2010 in which curriculum changes had been made towards integrated approaches, history, with other foundation subjects, had greatly suffered. For example, as stated in one *Ofsted Report* “a series of themes was created and history teachers were required to make artificial links to them...so the history curriculum lacked coherence and undermined progression”

“schemes of work and lessons were created in which subject specialists had limited or even no input; the result was superficial and simplistic teaching and learning; feedback to students was of limited value because it lacked subject-specific comments about how they might improve”

“the work set was not as challenging as when students were specifically taught history in discrete lessons...with students saying the work was too easy” Ofsted Report (2011)

Worrying reports indeed and ones which shouldn't be ignored if the effective history teaching methods achieved in the last 20 years are not to be lost.

CONCLUSION

Some 14 years ago I was supportive of incorporating history within an interdisciplinary integrated approach (Vella 2000) but the gap between the rhetoric and the practice has long since made me rethink the validity of this method and I advised great caution when it was recommended that history in Malta's New National Curriculum became one of five subjects that make up one subject, that is, Citizenship Education (Vella 2009).

Undoubtedly one of the foremost pioneers and advocates of interdisciplinary approaches is Heidi Hayes Jacobs, an American educational consultant on interdisciplinary methods since the early 1980s, it is interesting that even she detects that there can be a problem. She said “Without a commitment to *when* a skill will be taught, there is no commitment. Furthermore, skills are not taught in a vacuum. They are addressed in application to content, and they are evidenced in a product or performance by the learner” (Hayes Jacobs, 1997, p.4) In explaining the procedures for curriculum mapping Jacobs makes it clear that to be successful a interdisciplinary/cross-curricular method needs to combine content, skills and performance assessment. She gives detailed and complex case studies that build up learning activities step by step in a developmental fashion. But does this happen in our European schools? All experts agree that when implementing such an approaches teaching staff need a lot of support if interdisciplinary approaches are to be successful, unfortunately in many cases there is no guarantee that such support is available. Therefore in the case of history one should proceed with extreme caution when implementing an interdisciplinary cross-curriculum approach, rather than gaining the much hoped for benefits it might in fact prove to be the complete destruction of effective history pedagogy.

Günümüz Klasik Türk Musikisi Öğretiminde Meşk Yöntemi: Samsun İli Örneği

Senem Arslan^{a*}

^a Arş. Gör., Samsun Ondokuz Mayıs Üniversitesi, İlahiyat Fakültesi

Özet

Türk musikisinde meşk sistemi, hoca ve talebesinin, usta-çırak ilişkisi içerisinde birlikte çalışmalarını suretiyle sözlü ve sazlı eserler repertuarının asırlar boyu nesillere intikalini sağlamış bir eğitim ve öğretim metodudur. Bir eserin, çalgının ve musiki icra tekniğinin, hocanın tarz ve üslubu ile öğrenilmesiyle o hocanın “tavır”ının devam etmesini sağlayan meşk yönteminde iki ana unsur bulunmaktadır. Bunlardan birisi defalarca tekrar ettirilmek yoluyla eseri hafızaya naksetmek, diğeri ise usul vurmaktır. 19. asrın ilk çeyreğine kadar Türk musikisi öğretimi bu sisteme dayalı olarak uygulanmış, daha sonraları bazı sakıncalar içerdiği gerekçesiyle nota ile öğretime geçilmiştir. Ancak geleneksel Türk musikisinin nüansları, üslup özellikleri notada gösterilemediğinden meşk usulü tamamen terk edilememiştir. Belli ölçüde tekrar, taklit ve bilhassa usul vurma günümüze değin kullanılagelmiştir. İşte bu şekilde nota destekli meşk yöntemini uygulayan meşkhanelerden biri Samsun’da musikişinas Dr. Turgut Tokaç’ın muayenehanesidir. Bu çalışmada da Samsun örneği üzerinden bu meseleler hakkında bilgi verilecektir.

Anahtar kelimeler: Meşk, Türk musikisi, nota, meşkhane, Samsun

Bundan takriben bir buçuk asır öncesine kadar Klasik Türk musikisi, tarihi seyri itibarıyla sözlü gelenekle kendini üreten, gelişerek varlığını devam ettiren bir sanat olarak var olmuştur (Behar, 2012, s.15). Geleneksel Osmanlı kültürünün temel ayırt edici vasıflarından biri olan “sözlü aktarım/şifahilik”, musiki sanatında *meşk* denilen yöntemi geliştirmiş bulunmaktadır (Güntekin, 2002).

“Yazı örneği”, “yazı alıştırması” anlamında Arapça bir kelime olan meşk; hüsn-i hat sanatında, bir hocanın, talebesine taklit ederek öğrenmesi için verdiği ders ve örnekler hakkında kullanılmıştır (Behar, 2012, s.15; Serin, 2004, s.372). Ancak usta-çırak ilişkisi içerisinde yürütülmesi, taklit ve tekrar üzerine kurulu olması ve uzun bir eğitim sürecini gerektirmesi gibi hat sanatının öğretimine ait önemli özellikleri aynıyla ihtiva ettiği için musiki sanatının eğitim-öğretim metodu olarak da meşk terimi kullanılır olmuştur. Beş yüzyıllık Osmanlı/Türk musikisi öğretim geleneğinde meşk, bir yandan ses ve çalgı öğretimini ve icra tavırlarını şekillendirirken diğeryandan sözlü ve sazlı eserler repertuarının nesiller boyu intikalini ve zamanla yenilenip değişmesini de sağlamıştır (Behar, 2012, s.12).

Musikide bir sözlü eserin meşki şu şekilde yürütülür: Önce geçilecek eserin güftesi talebeye yazdırılır, doğru telaffuzu ve manasının anlaşılması sağlanır. Eserin usulü bellidir ve bu usul birkaç kez vurulur. Öğrenci bu usulü sağ ve sol eliyle dizlerini kudüm farz ederek vurur. Sonra eser usul vurularak hoca tarafından kısım kısım ve bir bütün olarak öğrencinin hafızasına iyice ve eksiksiz yerleşinceye kadar defalarca okunur ve okutturulur. Bu ilk meşkten sonra gelecek derse kadar öğrenciye eseri tekrar etmemesi tembih edilir ki, kendi başına ilave yapıp besteyi bozmasını önlemek için bu uyarı gereklidir. İkinci derste –varsa şayet- yanlışlar ve tereddütler giderilinceye kadar eser tekrar ettirilir ve meşk tamamlanır (Özcan, 2004, s.374).

Bu öğretim tarzında dikkat edilmesi gereken mühim noktalardan biri; *hafızanın*, *ezbere almanın* sisteme egemenliği ve sözlü eserlerin güfte metinleri hariç tutulmak suretiyle meşk süresince yararlanılabilecek hiçbir yazının bulunmayışıdır. Musikimizde beş asır boyunca eserler ancak ve ancak hafıza yoluyla kuşaktan kuşağa aktarılmıştır. Öyle ki bir müzisyenin, sistem içerisinde yeteneğini göstermek zorunda olduğu ilk alan, hafızasındaki eserlerin çokluğu nispetinde meşk ve aktarım zincirlerinde yer alabilmesi olmuştur. Bu yapı içerisinde müzisyenin bestelerinin çokluğu ya da yorum yeteneği ise sonra gelmektedir (Behar, 1987, s.40). Günümüzde bile artık yazının/notanın kullanılmasına rağmen ezberden yapılan bir musiki icrası daha muteber görülür. Zira eserin hafızadan çalınması, besteye uygun yorum ve tavır zenginliğinin de iştirakini mümkün kılmaktadır. Haddizatında yalnız musikide değil, Osmanlı/İslami geleneğe dini ilimleri bir üstdan, onun dizi dibinde hıfz ederek almak önemli ve gereklidir.

Müzik eserlerinin meşkinde meşk edilen eserlerin hafızaya yerleşmesini kolaylaştıran en önemli unsur *usûl vurma*dır. Çünkü her melodi parçası veya sessizlik (es), usûl kalıbının bir yahut birkaç darbına tekabül eder. Usûl vurulduğu zaman ise usûlün düşey dengi olan melodinin hatırlanması ve icrası kolaylaşır (Behar, 2012, ss.20-21). Ayrıca her bir eserin kendine özgü olan usûlü, o eserin adeta organik bir parçası olmaktadır. Eserin melodik yapısının başlangıç ve bitişine, duraklamalarına anlam kazandıran, güftenin arasına noktalama işareti gibi girip ona derinlik katan usûl, meşk için teknik kolaylık sağlamanın yanında icraya da estetiklik kazandırmış olmaktadır (Behar, 2012, s.25).

Bu şekilde yürütülen sözlü eser meşkinde talip bir öğrenci için gerek güfte metni gerekse usûl vurma gibi hafızaya yardımcı unsurlar öğrenime hayli kolaylık sağlamaktadır. Fakat aynı durum enstrüman öğrencisi için geçerli değildir. Bir kere enstrüman öğrencisi, ciddi olarak eser meşk edip kendine hem ses hem de saz eserleri edinmeden evvel enstrümanın yapısından kaynaklanan teknik güçlüklerin asgarisinin üstesinden gelmek, “sazını yenmek” zorundadır. Sonrasında, eser meşkinde hoca tarafından tercih edilen bir saz eseri ile başlayan talebenin, eseri hafızasına almak için başvuracağı yardımcı bir vasıta da yoktur. Takip edebileceği bir nota yazısını zaten meşk sistemi kabul etmezken, melodiye taksim edilen güfte hecelerinin hatırlatıcı işlevinden de sözlü eser olmaması sebebiyle yoksun kalmaktadır. Ayrıca enstrüman talebesinin icra esnasında usûl vurma ise imkansız olmasa bile çok zordur. Dolayısıyla bir saz eseri meşki sözlü eser meşkinden daha uzun, daha zor ve meşakkatli olmaktadır ki bu sebepten 19. yy. sonlarına doğru porteli notanın kullanımının yaygınlaşmasıyla birlikte onu icraya yardımcı olarak ilk kullananlar ses sanatçıları değil saz sanatçıları olmuştur (Behar, 2012, ss.40-43).

Klasik Türk musikisinde meşk sistemi işte bu şekilde, yazısız bir anayasa olarak 19. yüzyıla kadar belirleyici bir disiplin biçiminde varlığını sürdürmüştür. Ancak musiki repertuarımızın nesiller boyu intikali sırasında aktif bir şekilde yazı/nota kullanılmamış olunması kimilerince büyük bir eksiklik olarak görülmüştür. Bu fikrin temel hareket noktasını ise tarih içinde “unutularak kaybedilen eserler” ve sözlü olarak aktarılırken eserlerin orijinalinin sürekli değişikliğe uğrayarak “farklı versiyonların türemesi” meselesi oluşturmaktadır (Güntekin, 2002).

Nota kullanılmamasına yönelik söz konusu eleştirileri meşkten yana taraf olan görüşler bir dönem bertaraf etmişlerdir. Notalı musiki eğitiminin uygulandığı günümüzde de bazı müzisyenler meşkin notasızlığını sistemin kendi karakterinden kaynaklanan bir doğallık olarak görmektedirler. Bu müzisyenlere göre; asırlar boyunca sistematik bir biçimde intikal fonksiyonunu yerine getirmiş, genel kabul görmüş bir meşk kurumu yaşamışsa, sistemin kendisi zaten, eserlerin zamandaki yolculuğunun “değişerek” gerçekleşmesini öngörmüş demektir. Bir başka ifadeyle bu sistem, eserlerin, kuşaklar arasında devredilirken üretilen farklı versiyonlarını peşinen meşru kabul etmiştir (Güntekin, 2002). Aslında bu durumu gelenek açısından olumsuz bir şey gibi değil, hayatiyet ve dinamizm belirtisi olarak görmek gerekir. Kaldı ki çeşitli süslemelerle anlık icra yorumlarına özgürlük hakkı tanınmışsa da eserin iskeleti denebileceği makamı, usûlü, uzunluğu vb. nitelikleri asla değişmediği için orijinal bestenin melodik çizgisi korunmuş olmaktadır (Behar, 2012, s.93).

Öte yandan, şifahi bir kültürde her eser kaybı aynı zamanda bir eser seçimi, eleme ve yenilenme anlamına gelmektedir. Eserin meşk edileceği birisinin bulunamaması, eserin uzun yahut zor olmasından ötürü çok sayıda talebeye meşk edilememesi veya üstadın kişisel seçimi, beğenisi sonucu bir eseri meşk vermektan kaçınması gibi birçok sebepten bazı eserler zamanla unutularak repertuardan çıkmış olabilir (Behar, 2012, s.162). Fakat zaten Osmanlı/Türk musikisi repertuarı zamana karşı en sağlam durabilmiş, klasikleşmiş eserler istisna edildiğinde, sabit bir depo değil, kayıpları kadar yeni eserlerin de sürekli dahil olduğu dinamik bir arşivdir (Behar, 2012, s.169).

Şunu da belirtmek gerekir ki, musikimizde yazıya dökme teşebbüsleri hiç olmamış değildir. Farklı dönemlerde olmak üzere birkaç nota yazısı icad edilmiştir. Hatta Hamparsum denilen bir nota çeşidi uzun bir müddet kullanılmıştır (Behar, 1987, s.25). Buna rağmen musikide ekseriyetle ümmî kalmak tercih edilmiş, notaya da fenn-i musiki düşmanı olarak bakılmıştır (Behar, 1987, s.20). Çünkü özelde nota diyebileceğimiz yazının kullanılacak olması bazı kaygılara yol açmıştır: Her şeyden önce nota, öğrenciyi tembelliğe sevk ederek meşk geleneğinin başlıca unsuru hafızayı köreltecektir. Ayrıca musikimiz, usta-çırak ilişkisi yoluyla repertuar aktarımı boyunca yenilenen zengin üslup zincirlerine, çeşitli musiki icra tekniklerine sahip olmakta iken, öğretim sistemine nota dahil edilip ona bağımlı kalındığında, hoca-öğrenci ya da usta-çırak bağı eskisi kadar kuvvetli olamayacağı gibi eserler icra esnasında nesnelleşecektir (Behar, 2012, s.188). Böylece bir musiki icrasında yapılabilecek yorumlar sınırlanmış olacak ve üslup zenginliği kaybolacaktır. Oysa eseri bir fem-i muhsinden defalarca dinleyerek hocanın icra üslubunu, tavrını kapmak ve zamanla, o eser üzerinde dönemin sanatsal zevkleriyle uyumlu, kendi ruh dünyasını da yansıtacak yeni bir tavır geliştirmek meşk sisteminin önemli özelliklerinden biridir (Gerçek, 2008).

Notaya karşı bu geleneksel direnişe rağmen, 19. yy. sonlarına doğru meşk sistemine yönelik eleştirel sesler giderek yükselmiş, musiki öğretiminde notanın sağlayacağı faydalardan artık mahrum kalınmaması gerektiğine dair kanaat baskın gelmiştir. O dönemdeki yaygın Batılılaşma hareketinin de tesiriyle Avrupa’nın porteli nota

düzeni benimseyerek meşk sistemi içerisine kaynaştırılmıştır. İfadeden anlaşılacağı üzere meşk usûlü tamamen ortadan kaldırılmadan, nota yalnızca takviye edilmiştir. Zira sistemi eleştirenlerin kendileri dahi temelde bu usûlün devam etmesi gerektiğini kabul etmekte ve istemektedirler (Behar, 2012, s.182). Çünkü musiki, tabiatı icabı bir kulak işidir, nağmeleri bütün nüanslarıyla işitmek, dinlemek lazımdır. Nota yazısı ise eserin tüm inceliklerini barındıramayacağı için yalnızca yardımcı bir unsur olabilir. Fakat asla eserin kendisi değildir (Behar, 2012, ss.118-119). İşte bu anlayıştan hareketle bazı musiki ustaları, notadan faydalanmaya başlamakla birlikte günümüze kadar meşk sistemini kısmen de olsa öğretimde uygulaya gelmişlerdir (Özcan, 2004, s.374). Bu üstadlardan biri de çalışmamda konu edindiğim Dr. Turgut Tokaç'tır (d. 24 Nisan 1942, Çakmak, Ünye). Dr. Turgut Tokaç, musiki öğretiminde geleneksel meşk ile notalı yeni öğretim yöntemi arasında orta yolu benimsemiş bir müzisyendir.

Emekli albay hekim olan Turgut Tokaç, Samsun şehrinin tanınmış Klasik Türk musikisi hocası, neyzen ve bestekârdır. Dr. Tokaç, İstanbul'daki eğitim hayatı esnasında emekli yarbay, eczacı ve İstanbul Yüksek İslam Enstitüsü dini musiki hocası, neyzen, bestekâr, Halil Can başta olmak üzere, dönemin önde gelen müzisyenleri ile tanışmış, özellikle hocası Halil Can'dan ney ve musiki nazariyatı konusunda çokça faydalanmıştır. Kendisi de, fakülteden mezuniyetinden sonra doktor olarak Anadolu'yu dolaşmaya başlayınca, her gittiği yerde yüzlerce musikiye bağlı kişiler yetiştirmiştir. Yine görevi icabı gittiği Samsun'da ise uzun süre kalıp yerleşen Dr. Tokaç, bu şehri Türkiye çapında Klasik Türk musikisi alanında önemli merkezlerden biri konumuna getirmede çok önemli katkılarda bulunmuştur.

Dr. Tokaç, Samsun'da hem Belediye Konservatuarı'nda hem de kendi özel muayenehanesinde özellikle ney meşklerini 1977'den beri sürdürmüştür. Ayrıca 1985-1995 yılları arasında on yıl süreyle Ondokuz Mayıs Üniversitesi İlahiyat Fakültesi'nde, rektörlüğün isteği ve valiliğin tasvibiyle din musikisi eğitimi vermek üzere öğretim görevlisi olarak çalışmıştır (SD Dergi, 2009). Ancak bu resmî eğitim kurumları haricinde kesintisiz olarak musiki eğitim ve öğretimini uyguladığı tek mekan, onun özel muayenehanesidir. Bu sebeple muayenehanesinin bir bölümünü tamamen musikiye hasrederek bir meşkhane şeklinde düzenlemiştir. Meşkhanesinde, Türk musikisine dair çok sayıda dergi, kitap, ses kayıtları, nota arşivi, çoğu kendi yapımı neyler, usûl/ritm aletleri (kudüm, bendir, daire, zil gibi), başka klasik Türk musikisi sazları ve diğer birçok şey bulunmaktadır. Dr. Tokaç, bu muayenehanede hastası geldiğinde ayrı bir muayene odasında onun tedavisiyle ilgilenmekte, diğer zamanlarda ise musikiyle meşgul olup, öğrencilerine meşk vermektedir. Bu şekilde bir muayenehanenin ya da herhangi bir mekanın aynı zamanda meşk için de kullanılması, Osmanlı dönemindeki uygulamada da mevcuttur. O dönemde musiki öğretimi saray, ev, konak, cami, tekke, kahvehane gibi mekanlarda yapılmaktadır. Bu mekanlar haricinde musiki meşkine ait hususi mekanların olmaması ise şöyle açıklanabilir: Osmanlı kentlerinde musikişinasların büyük çoğunluğu, musiki konusunda bir meslek erbabı değil, bir uzman niteliği taşımışlardır. Asıl meslekleri ya da geçim kaynakları başka olmuştur. Mesela bir musikişinas aslında bir hekim, şeyhülislam veya tarikat ehli, taşçı, çömlekçi yahut bir padişahdır. Bugünkü gibi konservatuarlar, korolar vb. kurumlar olmadığından sadece musikiyle uğraşıp geçimini musikiyle sağlayan icracı, hoca ve besteciler ise azınlık olarak kalmıştır (Behar, 2012, ss.66-67). Böyle olunca da bir musiki meşki için kullanılan mekan, neyzen Dr. Tokaç'ın muayenehanesi örneğinde olduğu gibi hocanın mesleğine göre cami, tekke, ev, saray vb. yerler olmuştur.

Bu duruma paralel olarak dönemin musikişinası, geçim sıkıntısı gibi istisnaî haller dışında, musiki meşki için hiçbir maddî ücret de kabul etmemiştir. Zira meşk vermek sanatın zekatından sayılmıştır. Hatta bazı çalgıların – bilhassa ney'in- meşkinde maddî çıkar beklentisi özellikle ayıp ve edebe aykırı görülmüştür (Behar, 2012, ss.69-71). Bu anlayışa neyzenler arasında bugün dahi rastlamak mümkündür ki Dr. Tokaç bu neyzenlerden bir tanesidir. Kendisi de bu âdet ve gelenek üzere musiki eğitimi almış olan neyzen Dr. Tokaç, muayenehanesine gelen hiçbir öğrenciden ücret kabul etmemektedir. Onun öğrencilerden tek beklentisi, emeklerin zayi olmaması adına sabırla, gayretle istikrarlı bir çalışmadır. Zira musiki yetenekle ilgili olsa bile devamlı çaba göstermeyi de gerektiren bir sanattır. Hele ki enstrüman öğrencisi için daha fazla ilgi ve alaka söz konusudur. Çünkü daha önce de bahsedildiği gibi herhangi bir sözlü ya da sazlı esere başlayabilmesi için öğrencinin, enstrümanını belli oranda çalabilmesi gerekir. Bu kıvama da ancak onunla sürekli meşgul olarak gelebilir. Özellikle enstrümanın tekniğini kavrama döneminde gereken ihtimam ve özen gösterilmeyip, çalışmaya uzun aralar verildiğinde ise, genellikle musiki hocalarının tabiriyle *sazın küsmesi* durumuyla karşılaşılır. Bu da enstrümanda/sazda ulaşılan aşamayı kaybetmek, gerilemek ve dolayısıyla ilerleme yönünde gereksiz zaman kaybı demektir.

Meşk usûlünde hocalar meşke kabul edecekleri öğrencilerde musiki kabiliyeti yanında, sabır, istek, istikrar, saygı, tevazu, sadakat vb. nitelikler de aramışlardır. Usta-çırak ilişkisi içerisinde ilerleyecek olan zorlu, uzun bir meşk süreci için bu özellikleri taşıyor olmak önemlidir. Mesela bazı eserleri geçmek bazen haftalar hatta aylar alabilecektir ve bu esnada öğrencinin, hocasının sözünden çıkmadan derslere devam edebilmesi beklenmektedir. Geçmişte bazı hocaların uzun uğraşlara rağmen musiki kabiliyeti veya bu gibi niteliklerin eksikliğinden ötürü pek fazla ilerleme kaydedemeyen öğrencilerin meşkine son verdikleri bilinmektedir (Behar, 2012, ss.58-59).

Dr. Tokaç üstadın bu husustaki tavrı ise şöyledir: Kendisine daha çok ney yahut ud çalmayı öğrenmek için gelen talebelerin ne işle meşgul olduklarını sorarak musikiye gerekli vakti ayırıp ayıramayacaklarını tahmin eder. Söz gelimi talep eden kişi üniversiteye hazırlık gibi Türkiye’de hayli önem arz eden bir dönemde ise, bu yoğun dönemi atlattıktan sonra gelmesinin daha iyi olacağını, çünkü bu eğitimin anlık heves değil ciddi gayret ve zaman istediğini belirtir. Sonrasında öğrenmek istediği enstrümanı tanıtır; ney ve udun, geçici olup sanatsal değer taşımayan pop, arabesk vb. müzik türlerinin değil, ancak klasik yahut klasik olabilecek nitelikte bestelenen eserleri ihtiva eden Türk musikisinin enstrümanı olduğunu, bunun haricinde kullanılmaması gerektiğini anlatır. Böylelikle istekli görünen kişinin, kendi içinde gerçekten isteyip istemediğine dair muhasebe yapmasını sağlar. Talebe eğer başlamaya karar verirse, haftanın belirli bir gününde, ilerlemiş olan öğrencilerle birlikte toplu olarak yapılan fasla yaklaşık bir ay kadar yalnızca dinleyici olarak katılmasını ister ve hoca için aslında o andan itibaren ders başlamaktadır. Bu ilk dersle de öğrencinin ne kadar istekli olduğunu, sabrını ölçmektedir. Nihai olarak Tokaç Hoca, işin başında önemli açıklama ve uyarıları yaptıktan sonra gerekli musiki kabiliyeti ve başta bahsedilen vasıfların eksikliği nedeniyle öğrenciye ders vermeyi reddetme gereği duymamaktadır, çünkü bu tip zayıf öğrencilerin, bir zaman sonra işin zorluğunu, zahmetini anladıklarında kendi istekleriyle dersi bırakacaklarının farkındadır.

Neyzen Dr. Tokaç’ın, ney enstrümanını öğrenmek için gelen öğrencileri çoğunlukta olmakla birlikte ud için gelen talebeleri de hayli fazladır. Hoca, öğrencisine evvela enstrümanı çalma tekniğini öğretmektedir. Öğrenci enstrümanına gerekli ölçüde alışıp düzgün ve pürüzsüz sesler çıkartana kadar herhangi bir esere başlatmaz. Ancak kısa nota alıştırmaları yaptırarak hem nota okuyabilmesini yani solfeji hem de enstrümanda notaların yerlerini göstermektedir. Belli bir mertebeye gelebildiğinde ise basit düzeyde olan bir saz eserinin notasını öğrencinin önüne getirir ve o nota kağıdında bulunan yazı ve işaretlerin ne anlama geldiğini açıklar. Her Türk musikisi notasında eserin çeşitli usüller arasından hangisiyle çalınacağı belirtilmiştir. Daha önce de ifade ettiğimiz gibi melodiler, nağmeler bu usul darplarının üzerine giydirilmektedir ve bir Türk musikisi eseri bu şekilde bestelenmektedir. Hoca evvela iki tokmaklı bir usul aleti olan kudümde esere ait usulün vuruluşunu gösterir. Öğrencisine de elleriyle dizlerine vurmak suretiyle aynısını taklit ettirir. Öğrenci defalarca şaşırmadan vurmaya alıştıktan sonra bu kez, eserin notasının bir kısmını okuyarak usulün vuruluşunu gösterir ve doğru düzgün okuyabilinceye kadar tekrar ettirir. (Sözlü bir eser olduğunda ise, buna ilaveten, yine usul vurulmak suretiyle eserin güftesini okur ve okutturur). Bu şekilde eserin okunan kısmı öğrencinin kulağına iyice yerleştikten sonra artık enstrümana (ney/ud) geçiş yapılır. Eserin çalışılan kısmını hoca kendisi çaldıktan sonra aynı şekilde öğrencinin de taklit etmesini ister. Bu şekilde kısım kısım eserin bütünü öğrenciye çaldırır ve bir dahaki derste öğrenciden bu eserin usulünü vurarak solfej yapmasını ve enstrümanı çalmasını bekler. Öğrencinin bu eseri kavradığına kanaat getirilmeden de ikinci bir esere asla geçiş yaptırmaz.

Bu musiki meşkinin neticesinde öğrenciye herhangi bir sertifika verilmemektedir. Geleneksel meşkte de olduğu gibi musiki eğitiminin sonu yoktur haddizatında. Öğrenci beklenen bir seviyeye geldiğinde Tokaç Hoca bunu ifade etmekte ve bir nevi asistanı gibi beraberinde musiki icra etmek üzere bazı programlara götürmektedir. Yani sertifika denilen şey, Tokaç Hoca’nın öğrencisinden memnuniyetini ifadesidir bir nevi.

Görüldüğü gibi Tokaç Hoca, geleneksel meşkin ve tabii musikimizin önemli bir unsuru olan *usul vurmaya* aynı şekilde devam ettirmektedir. Ancak bunun yanında yazıyı/notayı da aktif bir şekilde kullanmakta ve öğretmektedir. Notaya oldukça önem veren Tokaç Hoca, kendi notalarına, o notaların ait oldukları eserlerin geçildiği tarihi atar ve öğrencilerine de bunu alışkanlık haline getirmelerini öğütler. Böylelikle kendisi, notayı, musiki sanatının olmazsa olmazı niteliğindeki yazılı bir belge olarak gören müzisyenlerden olmakla birlikte içinde bulunduğu dönem de, nota hakkında olumsuz kanaatlerin geride bırakıldığı, daha çok faydaları üzerinde yoğunlaşıldığı bir zaman dilimidir. Artık nota, musiki eğitim ve öğretimini eski sisteme nazaran kolaylaştırdığı gibi unutmaya ya da şaşırma gibi durumlarda imdada yetişip eserin doğru çalınabilmesini garantilemektedir. Ayrıca günümüzün kalabalıklaşmış saz heyetinin, icra esnasında noktası virgülüne aynı şeyi çalmasını disipline ederek, bir nevi koordinasyon işlevi görmektedir (Behar, 2012, ss.182-183).

Tokaç Hoca’nın uyguladığı bu öğretim yöntemi sayesinde nota kullanımından kaynaklanabilecek evvelce bahsedilmiş bazı olumsuzluklar nispeten giderilmiş olmaktadır. Şöyle ki; her ne kadar nota, musiki derslerinin vazgeçilmezi olsa da, usul ve adabıyla meşk edilip iyice hazmedilmeden öğrenilmiş bir eserin icrasının hatalı, yetersiz, ruhsuz olacağı inancı yine temelde yer almaktadır. Birçok müzisyenin tartışmasız kabul ettiği, ezberden icranın, notaya bağımlı kalarak yapılan icradan üstünlüğü yargısını Dr. Tokaç Hoca derslerinde yeri geldikçe vurgulamaktadır. Dolayısıyla Hoca’nın öğrencileri geçtikleri eserlerin önemli bir kısmını ezberden icra edebilecek seviyeye gelebilmektedir.

Ayrıca daha önce de bahsi geçtiği gibi musiki bir kulak meselesidir ve notalardaki işaretler musiki nağmelerini gerçek anlamıyla göstermeye yetmez. Bu sebeple nota bilinse dahi daima bir fem-i muhsinden dinleyerek musikimizin inceliklerinin elde edilebilmesi gerekir. Bu bilinç üzerine yürütülen bir musiki öğretim faaliyetinde ise hoca ile öğrenci arasındaki bağ zannedilenin aksine zayıflamayacaktır. İşte neyzen Dr. Tokaç

Hoca'nın derslerinde de bu özellik fark edilebilmektedir. Zira onun öğrencileri haftada en az bir kez derse gelmelidir ki üslup, icra tavrı gibi yetenekler gelişebilsin. Kaldı ki Dr. Turgut Hoca'nın muayenehanesine düzenli devam eden öğrenciler, yalnızca musiki dersleri değil, kitaplarda kolayca bulunamayacak olan kendisine ait önemli tecrübeleri, geçilen eser güftelerinin manalarını, bestekarlarına dair hikayeleri de bizzat Hoca'dan dinleme fırsatı bulabilmektedirler. Derslerin genellikle böyle sohbet havasında geçmesi ise öğrencilerin ilgisini daha çok çektiği için onları, neredeyse her gün muayenehaneye gitmeye sevk etmektedir.

Böylelikle genel hatlarıyla bilgi vermeye çalıştığımız Dr. Tokaç'ın musiki eğitim ve öğretim metodu, nota ile meşkin sentezlenmiş bir biçimdir. Nota okuma yani solfejle birlikte geleneksel meşkin ana unsurlarında bahsettiğimiz, her eseri hafızaya alarak ilerleme bu methoda uzun olmayan eserler için geçerli olabilmektedir. Usûl vurma ise aynı şekilde devam etmektedir. Diğer benzer yönler de göz önünde bulundurulduğunda neyzen Dr. Tokaç sayesinde günümüzde meşkin hala bir ölçüde canlı tutulduğu açıkça görülmektedir.

Using Technology and Media Education to Enhance Learning and Teaching in KS2

Livia Klein Marques da Cunha^{a*}

^a

Abstract

The aim of my research is to use technology and Media Education to enhance learning and teaching in KS2 and this work is part of a post graduated course in Education, at Bishop Grosseteste University, Lincoln, UK.

My study aims to answer three questions: Media-Education: what does it mean? Why technology resources and media should be used in school? Teaching and learning: with media or through media? In order to answer these three questions, I have researched various authors related to this topic.

To develop my work I had also visited some schools in the UK to observe how they dealt with technology and media and had compared with my practice as a teacher in an international school in Rio de Janeiro, Brazil.

Nowadays the use of technology should be part of the curriculum and it must be used in schools as an important way not only to increase the quality of teaching and learning process but also to develop children's independence.

As a result, I tried to provide a critical evaluation of my observations in order to discuss and relate it to my research and to my school practice. Finally, I proposed proactive ways forward in my school practice, implementing the use of a blog in an year three class, to try to enhance learning and teaching in KS2 in the school I work in Brazil.

Keywords.

INTRODUCTION

We are living in a world where technology is present in everyday life. From withdrawing money in a bank to watch the news on TV, we are facing the changes and impacts that it brings to our lives. The school could not stay out of these changes and many classrooms had been transformed, from privileged spaces for the reading of literary texts, to multimedia spaces, where the use of information and communication technology had achieved great importance.

But, according to some authors, why technology resources and Media should be used in school?

This question takes place because in our time the young people are gleaning even more information from media than from books, and we need to discuss it and encourage schools to use media on a daily basis.

The dizzying revolution that is occurring in the so-called information and communication technologies (ICTs) in the last century and beginning of this has changed society. To absorb, follow and enjoy these revolutions, people have started to organise, produce and entertain themselves in different ways. There have been changes in all levels, including social, economic, cultural...

This technological revolution had also altered the level of communication around the world. Nowadays, it is almost possible to know what happens in the world in near real time and to talk and even to see people who are very distant from us. The physical boundaries have been easily transposed with the advent of the internet, of the webcams and of programs such as Skype, for example.

Particularly regarding media and its messages, the idea that every child is entitled to an education on Media has already spread. The UNO Convention on the Rights of Children and Youth, (1989: article 13) gives the child the right of freedom expression, including the freedom to seek, receive and impart information of all kinds, regardless of frontiers, either, oral, written or printed. Furthermore, research, conferences and seminars that involve media and Education have contributed to this idea that an oriented Media Education is necessary and urgent nowadays.

With so many changes, the school must revise its role. As a social institution responsible for the formal education of individuals, this space has also changed over time, or at least should be changing. The teaching and

learning are different from other times, with a particular concern regarding the formation of a new type of individual and worker required by this new information and communication society. Today, it is expected that the school form individuals endowed with different technical skills, able to work in a cooperative, flexible and adaptable to a wide range of situations, and especially capable of learning to learn.

The school as a place where individuals spend much of their time and as the responsible for the formation of identities and subjectivities cannot leave out of their practice an education for information and communication. Beyond that, we are talking about culture and the school is, par excellence, the place of social transmission of this legacy.

The school is characterised to transmit the written culture and to appreciate the book as a major means of communication and cultural transmission. However, with the booming advancement of technology and its entry in people's lives, the idea that the school works with these different ways of communication became essential. The communication and messaging no longer has its main source in the books, it started to involve a visual language more than a verbal one. With this, we do not want to say that the school should abandon the books and act only on practices that use new technologies, but it should open their doors to something that is already part of students' lives outside the educational environment. As Buckingham says (2003:35) "Literacy today, it is argued, is inevitably and necessarily, **multimedia** Literacy ..." (emphasis added by the author)

In this work I hope to answer, after all the research and observations, two more questions:

- 1) Media-Education: what does it mean?
- 2) Teaching and learning: with media or through media?

Besides that, I will discuss the use of a blog in KS2 and how it could promote learning.

MEDIA EDUCATION: WHAT DOES IT MEAN?

I believe that discussing the concept of Media Education is really important, so the reader could have a glimpse of its meaning and importance nowadays. I decided to use the media-education proposal defended by David Buckingham, who is a known English author and researcher in the area, as an important statement and guide for my research. According to Buckingham "Media education is a concept of education for critical and reflective aspects of media, including not only their analysis and interpretation, but its production." (2003:10).

The term Media Education comes from the researchers who are in the field of intersection between the areas of communication and education, in an attempt to better define its subject and its field. World organizations like UNO and UNESCO tried to disclose the term Media Education through official documents (UNO Convention on the Rights of Child and Youth, 1989 and UNESCO, 1984) and meetings with experts in the field, which not only spread the concept, but also concrete experiences that were being held in different countries.

Media Education would then be the process of teaching and learning from/through media, which should never be confused by teaching with media. The difference in the use of the words may seem subtle at first, but looking at it more carefully, we realize how important this idea is. In regards to the studied authors, teaching with media is related to practices using media as technological tools, or even just using them to illustrate certain content, which is very different from a media educational practice. Media Education should never be confused with educational technology. It includes these features, but it exceeds them, to the extent that it aims the development of something else, which would be in this case production and processing.

Regarding Media Education, we have to be focused in working with the students in a way they can use it for express themselves in an independent and critical way. They should be able to use the media language as a way to express ideas and feelings as well as to "read" and "write" it. These would bring major benefits for teaching and learning because the study would be more interesting and creative, rich in details and images, and also closer to the culture of the students, besides enabling them living with the technologies of communication and information, key issue in our contemporary world.

Buckingham specifically tells us about "Media Literacy" (2003:4) and defines its characteristics, as the necessary ones to involve the essential skills and abilities to any process of Literacy - reading and writing.

Since reading involves understanding of what is read and a critical judgment about it, and writing involves an effective production of something, the students involved in a Media Educational practice should be held to "read and write" media, in order to understand in a critical way what is seen, heard or read, as well as actively participate in its production. It's a dual path, where those who can consume, should also produce. This aspect has sometimes been neglected by people who restrict themselves to the process of "reading" media, leaving the "writing" aside. Importantly, it is not only to provide skills and competencies to use technically certain medias, but the knowledge to interpret them, including analysis, evaluation and critical reflection.

Therefore, Media Education could be a rich resource to promote student's independence and students who will develop the ability for enquiry and critical evaluation. Essentially in using Media Education as a way to

promote independence, teachers could encourage and enable students to become self directing in their own learning experiences and to have more autonomy and control over their learning.

TEACHING AND LEARNING: WITH MEDIA OR THROUGH MEDIA?

I have decided for this question because I believe it is important to explain to the readers how technology and media have been used in schools. According to Belloni (2001), we would basically have two aspects in regards to the accomplished work with media and technology in schools: the first one – with media - linked with the proposal of educational technology, where students would use the equipment such as electronic tools. The second one – from/through media - linked with an education focused on the communicative aspects of the media, beyond the possibilities of assigning meanings and new sensitivities generated by them, the so called Media Education.

With respect to the first usage mode, the technological resources would be used within schools only as a pedagogical tool, as a teaching material. This use of Media and technology in schools has been part of the educational process for a longtime and it is very common all over the world.

With respect to the second mode of use, the Italian researcher Pier Cesare Rivoltella (2004) indicates in his Studies, in the field of Media Education, three action points:

- 1) An education for Media, that would be an attempt to develop critical analysis of the contents found in the Media with the students;
- 2) An education with Media, which would represent the use of Media as a pedagogical tool, as a teaching material;
- 3) An education from/through Media, that would be a proposal based on mastery of languages and codes present in the Media processes, enabling the students to communicate through Media, playing an active role in this process.

Therefore, nowadays, it would be important that technology and Media were regarded and used within the school Media Educational perspective, aiming to a social transformation. Thereby, the objectives of working with this proposal would be: the formation of critical and creative users that more than just viewers could use different technologies as means of expression; democratization, education for citizenship, and the expansion of languages, enabling the resumption of the school as a center of knowledge.

USING A BLOG TO PROMOTE LEARNING, TEACHING AND INDEPENDENCE

In order to establish good strategies in using technology and a blog to encourage student's independence in KS2, I decided to focus on finding out more about how to use a blog and how technology could promote independence as a starting point. It is important to mention that the use of blogs has always intrigued me, but I never got around to actually having one, until this project.

Basically, a "blog" is a website where an individual writes entries in a chronological order, which are displayed in reverse chronological order. The term "blog" can also be used as a verb, meaning to add content to a blog. Blogs have a variety of uses and objectives. They can provide commentary on a specific subject or serve as a personal, online journal. Most blogs combine text, images, and links to other blogs, websites, and related media. Moreover, blogs provide their readers with the capacity to leave comments and remarks.

First of all I tried to create a classroom atmosphere in which children feel comfortable and secure. As my school does not have any tradition in using blogs in KS2 this may be the child's first experience of using it in school. The idea is to have a place where they can express themselves in a fun and dynamic way, using an appropriate language for them.

Besides that, being responsible for their entries and comments in the blog could show them that they should act with responsibility in other areas as well, helping to promote an independent and confident environment.

After observing my year group for more than one month, I decided to implement the use of the blog with my 21 students – 10 boys and 11 girls. Based on my study visit in England and also in my literature review I got some interesting ideas, which I believe would help me to achieve my objectives implementing the use of the blog in my classroom.

I took about three lessons, of 50 minutes each, to explain the students how the blog would work. We discussed about some possible topics, about the possibility of its use by home and about the participation of other students and of people from outside the school. It was decided that only students from the school and parents would be able to comment in the blog and that I would moderate every comment. It was also decided

that at least once a week we would go to the ICT lab to post comments in the blog, but every time the children wanted to they could use it (during playtime, from home or using the laptops when they were available in class).

As part of the school vision and philosophy, the head of section informed the parents about the blog, by a note sent home, and asked for their authorization regarding the children participating in the project. All the parents had agreed.

To encourage children in this new experience, I suggested as a first target, that the initial topic of the blog should be a self-presentation, where they should write about them and about their preferences. With this first step I could notice which children were more familiar with the use of technology and how they behave and work in a different environment from the classroom.

The children asked many questions and were really excited with the possibility of having a blog. Some of them were very familiar with the use of computers and others needed help. This first activity showed me how children can be supportive with their friends and how some of the students feel more comfortable and confident when working in pairs.

According to Race (1994), regarding motivation, it is important to say that if students have sufficient motivation (want) to learn they will take on responsibility for learning independently.

Independent learning also depends on learning by doing. Students need to do things with the materials to get their learning under way and ensure them the sort of practice that will help their learning to be successful.

It is also important to value feedback. It means that students need to know how their learning is going, so they can improve even more their knowledge or choose a different way to follow.

The use of the blog as well as other activities using technology, such as the use of the smart board, and the use of the laptops, revealed how students can take active part of their learning process as well as participate lively in the activities proposed. According to Mouza (2008), technologic tools help teachers to create authentic learning environments, which are meaningful to students. Project-based learning activities engage students in complex tasks rather than recitation or drill. He found students using laptops acquired a sense of pride and empowerment. They displayed increased intrinsic motivation and persistence in completing schoolwork and often went beyond the requirements of assignments, therefore improving the quality of the finished product they turned in. I had the opportunity to use laptops in my classroom, which, for me, was really useful because they allow students and teachers to be most free than when using an ICT lab. The laptops give us an excellent opportunity to start something, stop, discuss, and restart it with new ideas. Moreover, it promotes independence and respects each child's pace. As the laptops were available in the classroom, every time a child had finished a task, he/she could get the laptop and blog. The use of the laptop also contributes to everybody starts from where they had previous stopped.

Another aspect that has to be mentioned is the writing of the children. Technology has proven to be an efficient tool not only to raise the children's interest and motivation but also to enhance children's writing and to promote writing opportunities through the use of fun activities. However, it is important to say that a good result depends not only of the use of technology but on a carefully planned lesson that combines a well-structured writing session with this use. Bennett (2004:42) suggests in his book some ICT-based activities that offer considerable potential for the development of children's writing abilities. Some of these ideas include:

- Using drill and practice programs to enhance specific writing skills and knowledge, such as punctuation and spelling;
- Using specific programs to reinforce correct letter formation;
- Communicating electronically with others via e-mail, web-chat etc.
- Using ICT tools to assist with the writing process.

In England, I could see teachers using technology very wisely through the use of films, animation, internet and different softwares combined with a well-planned writing lesson.

With the blog experience it was evident for me that the children were much more careful about their writing and trying to improve it, as it would not only be shown to their teacher but to their parents and friends. Aspects as spelling, use of capital letters and punctuation were taken into consideration by them and improved a lot.

It became clear to me that with the use of technology together with a well-structured writing lesson, a teacher can not only enhance the quality of writing, but also engage every single child in the proposed activities. Finally, I could say that it was visible for me the motivation and engagement of all pupils in class activities. The use of technology and media educational practices could then be a powerful tool for developing learning and promoting independence.

FINAL CONSIDERATIONS

I could see it is really important to show consistency working with children. The routines and teacher actions as models support children to act independently and reinforce responsibility. By analyzing the difference of culture associated with the way technology and media is used, I had a better understanding after visiting some schools in the UK and comparing my work in Brazil. The cultural difference affects the way we act, we behave, we think and the manner in which we expect things.

In my opinion, not only the use of the blog but the use of smart boards, laptops and any other kind of technology could show me how different resources can be used to encourage independence and motivate children to enhance their learning and take active part on it. This is a very important issue that came out during my practice throughout this year: children need to be part of the planning process. As stated by Collette Drifte, the children need to:

- Understand the importance of information;
- express their feelings;
- participate in discussions;
- indicate their choices.

During my experience using the blog, these issues above sustained my practice and provide me that even young kids have appropriate and significant information about themselves and their vision of their situation. I gave them the information and support needed, I offered a supportive environment. I listened to them.

Once again I see I could promote an environment where children could work independently, feeling that they have some control over their learning. Besides that, it is vital to say that, motivated, children enhance their learning especially regarding their writing skills.

I can conclude that the use of the blog and the good practices I saw in England, regarding the use of technology in the classrooms, are able to enhance teaching and learning.

Özet

Son yıllarda bütün sektörlerdeki değişim ve gelişimler, eğitimle ilgili konularda da zorunlu dönüşümlere neden olmuştur. Bu dönüşümler öğretmen adaylarını da etkilemiş, baş döndürücü ilerlemelere uyum sağlama konusunda onları çeşitli mesleki kaygılara itmiştir. Bu kaygıların meslek öncesinde tespit edilmesi ve Eğitim Fakültelerindeki öğrenme-öğretme sürecinin bu kaygılar dikkate alınarak şekillenmesi, eğitim sistemine daha donanımlı ve kaliteli öğretmenlerin girmesini sağlayacaktır. Araştırmanın çalışma grubunu 2012-2013 eğitim öğretim yılında Kastamonu Üniversitesi Eğitim Fakültesi Okul Öncesi Eğitimi Ana Bilim Dalında eğitimine devam eden (1,2,3 ve 4. sınıf) öğretmen adayları oluşturmuştur. Araştırmanın verileri öğretmen adaylarıyla yapılan görüşme formu ile elde edilmiştir. Görüşme formunda öğretmen adaylarına 5 açık uçlu soru, ayrıca bazı demografik bilgileri (sınıf, cinsiyet, mezun olduğu lise, not ortalaması, öğretmenlik mesleğini ve branşını isteyerek seçip seçmediği, vb.) sorulmuştur. Araştırma nitel bir araştırma olup 269 öğretmen adayının sorulara verdikleri cevaplar betimsel analiz yöntemiyle analiz edilip yorumlanmıştır. Araştırmanın analizi sonucunda; öğretmen adaylarının % 49.8'inin sınıf yönetimi; % 46.1'inin veli iletişimi; % 26.8'inin çocuklarla iletişim; % 61'inin çocukların okula oryantasyonu ve % 43.9'unun çocukların bakımları konularında kaygılarının olduğu belirlenmiştir.

Anahtar kelimeler: Okul Öncesi Eğitim, Öğretmen Eğitimi, Mesleki Kaygı

GİRİŞ

Araştırmalar öğretmen adaylarının öğretmenlik mesleğine dair çeşitli kaygıları olduğunu göstermektedir. Son yıllarda bütün sektörlerdeki değişim ve gelişimler, eğitimle ilgili konularda da zorunlu dönüşümlere neden olmuştur. Bu dönüşümler öğretmen adaylarını da etkilemiş, bu ilerlemelere uyum sağlama konusunda onları çeşitli mesleki kaygılara itmiştir. Öğretmen adayları mesleğe başladıklarında verecekleri eğitimin daha sağlıklı olabilmesi için bu kaygıların meslek öncesinde tespit edilmesi önemlidir. Ayrıca Eğitim Fakültelerindeki öğrenme-öğretme sürecinin bu kaygılar dikkate alınarak şekillenmesi, eğitim sistemine daha donanımlı ve kaliteli öğretmenlerin girmesini sağlayacaktır.

Hızlı gelişim ve değişimin yaşandığı günümüzde tüm ulusların en büyük çabası, bu değişim sürecine ayak uydurabilecek yeterlilikte donatılmış, nitelikli bireyler yetiştirmektir. Bu amacı gerçekleştirmede en etkili araç eğitimidir ve öğretmenler bu etkili aracın önemli bir ögesini oluşturur. Öğretmenlik mesleğini yapan kişilerin kendilerinden beklenen sorumlulukları istenilen düzeyde yerine getirebilmeleri ve başarılı olabilmeleri, önemli ölçüde öğretmenlerin sahip oldukları niteliklere bağlıdır. Öğretmen olacak kişilerinde nitelik ve yeterlilikleri kişisel özellikleri ile ilgili olduğu kadar öğretmen adaylarına sunulan eğitim programları ve eğitim ortamları ile de ilişkili olabilir. (Aydın ve Tekneci. 2013: 2)

Okul öncesi eğitim; çocuğun doğduğu günden temel eğitime başladığı güne kadar geçen 0-6 yaş arasındaki dönemi kapsar. Çocukların daha sonraki yaşamlarında çok önemli bir yeri olan; bedensel, motor, sosyal-duygusal, zihinsel ve dil gelişimlerinin büyük ölçüde tamamlandığı, bu doğrultuda kişiliğin şekillendiği gelişim ve eğitim süreci olarak tanımlanabilir. (MEB, 2013)

Çocukların keşfetmek ve öğrenmek için doğal bir eğilimleri vardır. Öğrenme çok erken yaşlarda başlar ve hayat boyu devam eder. Çocuklar dünyaya geldikleri ilk andan itibaren, daha okula başlamadan çok önce öğrenmek ve keşfetmek için büyük bir heves duyarlar. Etkin bir şekilde çevrelerini keşfederler, iletişim kurmayı öğrenirler ve çevrelerinde gördükleri şeylere dair fikirler oluşturmaya başlarlar. (MEB, 2013)

Okul öncesi eğitim süresince çocuklar ilköğretime hazırlanırken, paylaşmayı, dayanışmayı, sosyalleşmeyi ve birlikte çalışmayı öğrenirler. Bu dönemde uygun fiziksel ve sosyal çevre koşullarında ve sağlıklı etkileşim ortamında yetişen çocuklar, daha hızlı ve başarılı bir gelişim gösterirler. Bu ortamların oluşabilmesinde aileden sonra en önemli kişiler okulöncesi öğretmenleridir. Okul öncesi eğitimin amacı çocuklarda öğrenmeye ilgi uyandırmak ve çocuğun var olan yeteneklerini daha üst seviyeye çıkarmaktır. Bunun için de okulöncesi öğretmenlerine büyük bir görev düşmektedir. (MEB, 2013)

Sağlıklı ve istenilen davranışlara sahip çocuklar yetiştirmek, onların gelişim özelliklerini ve bu özellikler doğrultusunda gereksinimlerinin neler olduğunu bilmeye bağlıdır. Erken çocukluk dönemindeki gelişmelerle, okul öncesi eğitim artık anne babanın yalnız başına başarabileceği bir konu olmaktan çıkmış durumdadır. Eğitim, öğretmen-ebeveyn işbirliği gerektirir. Bu işbirliği ne kadar bilinçli ve sağlıklı olursa, çocuklarımızda o oranda sağlam bir kişilik kazanırlar. (MEB, 2013)

Eğitim, toplumun varoluşundan günümüze dek oluşan kültürel değerlerin yeni kuşaklara aktarılmasını sağlarken; araç gereç, programlar gibi alt yapının yanında; öğretmenin niteliği de en önemli unsur olarak görülmektedir. Öğretmenlik ise bir meslek olarak, devletin eğitim ve öğretim ile ilgili görevlerini üzerine alan özel bir uzmanlık mesleği olarak tanımlanmaktadır. (Dursun ve Karagün, 2012: 94)

Sosyal, ekonomik ve bilimsel gelişmeler ile dünya sürekli değişmektedir. Ulusların bir taraftan bu değişime ayak uydurabilmelerinin bir taraftan da bazı zamanlar bu değişimin öncülüğünü yaparak modernleşmede ön sıralarda yer alabilmelerinin, eğitim sistemine diğer bir deyişle insanlarına yaptıkları yatırımla doğru orantılı şekilde gerçekleşebileceği düşünülebilir. Saracaloğlu'na (1991) göre, değişimin öncülerini eğitim sistemi yetiştirecektir. Söz konusu bireylerin yetiştirilmesinde ise, öğretmenlere ve öğretmen yetiştiren kurumlara büyük sorumluluklar düşmektedir. Özellikle öğretmenin öğrenci ve eğitim programlarını etkileme gücü diğerlerine göre daha fazladır. Bu nedenle eğitim hedefleri, eğitim programları, derslerin içeriği vb. ne denli iyi hazırlanırsa hazırlansın, bu programların uygulayıcısı olan öğretmenler iyi yetiştirilmezse, yapılan çalışmalar ve çabalar amacına ulaşamayacağı açıktır. (Saracaloğlu, Kumral ve Kanmaz, 2009:39)

Türkiye'nin gelişmiş ülkeler arasında yer alabilmesi için iyi yetişmiş, nitelikli insan kaynağına sahip olması gerekmektedir. Kuşkusuz nitelikli insan yetiştirebilmek ülkenin eğitim sistemi ile yakından ilişkilidir. Günümüzde bilimsel ve teknolojik ilerlemeler eğitim gören bireylere öğrenmeyi kolaylaştıran birçok imkân sunmasına rağmen, öğretmen eğitim-öğretim ekseninde yeri doldurulamayan temel öğe olma özelliğini her zaman korumaktadır. Öğretmenler her zaman eğitim sisteminin odak noktası olmuşlardır. Çağımızın eğitim-öğretim alanına sunduğu bütün olanaklar ancak nitelikli öğretmenler ve nitelikli öğretmen adayları sayesinde yararlı ve başarılı olabilir. Bu durumda öğretmenin kişiliği, mesleki yeterliliği ve öğrencilere yönelik tutumu büyük önem taşımaktadır. (Atmaca, 2013: 68)

Bazı eğitimciler, öğretmenlerin sınıf içinde davranış yansımalarının, ruh sağlığı ve kişilik yapısının; öğretim tekniği ve öğretmen bilgisinden daha önemli olduğunu ifade etmişlerdir. Yine gelecek kuşakları yetiştirecek olan öğretmenlerin ayakları üzerine sağlam basarak mesleklerine başlamalarının büyük oranda mesleklerine karşı hissettikleri mesleki kaygılarından arınmış olmalarına bağlı olduğu ifade edilmiştir. (Dursun ve Karagün, 2012: 94)

Kaygı düzeyinin yüksek olması, bireyin daha katı, daha basit davranışlara gerilemesine, endişeli olmasına ve memnun etmeye aşırı odaklanmasına neden olmaktadır. Bununla birlikte orta düzeydeki kaygının organizmayı uyarıcı, koruyucu ve motive edici özelliği vardır. Kaygı iyi yönetildiğinde, bireyin başarılı olmak için daha fazla çalışmasına, yaşanacak olumsuzluklara karşı önlem almasına yardımcı olmaktadır. Bu bağlamda, öğretmen adayları için yaşanan kaygının mesleğe yönelik olumlu tutum geliştirici, motive edici, harekete geçirici bir uyarıcı olarak kullanılmasına dikkat edilmelidir. (Doğan ve Çoban, 2009: 160).

Işık (1996) kaygıyı tehdit edici bir durum karşısında birey tarafından hissedilen huzursuzluk ve endişe durumu olarak tanımlamıştır. Kaygının sözlük anlamları ise; “üzüntü, endişe duyulan düşünce, tasa”, “bireylerin, toplumsal kümelerin herhangi bir güçlü istek ya da güdülerinin gerçekleşmemesi olasılığı karşısında duydukları tedirginlik”, “güçlü bir istek ya da dürtünün amacına ulaşamayacak gibi gözüküğü durumlarda beliren tedirgin edici bir duygu” (TDK, 2009: 1115) olarak karşımıza çıkmaktadır.

Öğretmen adaylarının mesleğe ilişkin kaygıları belirli zamanlarda belirli noktalarda yoğunlaşır. Fuller'e (1969) göre, bu kaygıları ben-merkezli kaygılar, görev-merkezli kaygılar ve öğrenci-merkezli kaygılar olmak üzere üç grup altında toplamak mümkündür:

Ben-merkezli kaygıların odak noktasını, bireyin kendisi oluşturur. Ben-merkezli kaygıları taşıyan bir öğretmen adayı, öğretmenlik mesleğini başarı ile sürdürüp sürdüremeyeceği endişesini taşır ve bu nedenle de sürekli olarak yoğun bir stres altındadır. Görev-merkezli kaygıların odak noktasını, bireyin öğreticilik görevi oluşturur. Görev-merkezli kaygıları taşıyan bir öğretmen adayı, iyi bir öğretici olabilme kaygısı içindedir ve bu nedenle de alanında kullanabileceği yeni öğretim yöntemlerini, materyallerini ve araç-gereçlerini araştırmaya

başlar. Öğrenci-merkezli kaygıların odak noktasını ise, öğrenciler oluşturur. Öğrenci-merkezli kaygıları taşıyan bir öğretmen adayı, öğretim ile ilgili düşüncelerinde ve tasarımlarında daha çok öğrenci merkezlidir. Böyle bir öğretmen adayı her öğrencinin zihinsel, duygusal ve sosyal ihtiyaçlarını en iyi nasıl karşılayabileceğini merak etmeye ve araştırmaya başlar. (Cabı ve Yalçınalp, 2013: 86)

Öğretmenlik mesleği kapsamında ele alındığında, ben – merkezli kaygıların odağında yer alan bireyin öğretmenlik mesleğindeki başarı durumuna ilişkin kaygıları daha çok şu sorularda odaklanmaktadır: “ 1) Acaba öğretmenlik bana göre bir meslek mi?, 2) Acaba öğretmenlik mesleğini her gün nasıl yapacağım?, 3) Acaba sınıfımda gürültü olduğunda okul müdürü ve okuldaki diğer öğretmenler hakkımda ne düşünecek? Yine aynı kapsamda görev – merkezli kaygılara ilişkin olarak da birey; 1) Acaba farklı sınıf ortamlarında eğitim ve öğretim nasıl olmalıdır?, 2) Acaba öğretim konusunda alanımdaki yeni materyalleri, teknikleri ve fikirleri nasıl elde edebilirim?, 3) Acaba öğretmenlik görevimde başarılı olabilmem için bana en iyi kim yardım edebilir? Sorularının yanıtını aramaktadır. Öğrenci – merkezli kaygıların odak noktasını oluşturan öğrencilere ilişkin kaygıları bakımından da birey (öğretmen adayı – öğretmen) daha çok; 1) Acaba her öğrenciye nasıl yardım edebilirim ki onun için öğrenmek mümkün, kolay ve çabuk olsun?, 2) Acaba her öğrenciye nasıl yardım edebilirim ki onun için hayat boyu öğrenmek önemli ve vazgeçilmez olsun?, 3) Acaba özel öğretime muhtaç veya yüksek düzeyde potansiyelli öğrencilere nasıl yardım edebilirim ki bu çocuklar öğrenmelerini okul dışında da başarı ile sürdürebilsinler sorularını kendine sorabilmektedir. (Köse, 2006: 82)

Öğretmenlerin ve öğretmen adaylarının mesleğe yönelik yeterlik algılarının yanında yine mesleğe yönelik kaygılarının da ortaya çıkarılması önemli olacaktır. Kaygı, nedeni bilinmeyen bir korku durumudur. İnsan her an belirsiz bir tehlike ya da bir felaket ile karşılaşacağını düşünüp kendini tedirgin, gergin, sıkıntılı bir bekleme içine sokmasıyla oluşmaktadır. Davranışçı ekole göre kaygı; koşullanma ve genellemeler sonucu oluşurken, bilişsel ekole göre bilişsel faktörlerin bir sonucudur. Kişi durumu ne kadar kontrolü dışında ve kapasitesi üstünde algılıyorsa, o kadar kaygı yaşamaktadır. (Saracaloğlu, Kumral ve Kanmaz, 2009:40)

Öğretmen adayları yeterliliklerin önemli bir kısmını lisans dönemlerinde edinirler. Bu dönemde öğretmen adayları alan bilgisinin yanında meslekle ilgili değer ve tutumlar kazanırlar. (Lasek ve Wiesenbergova, 2007). Öğretim programlarının içeriklerinin yanı sıra, öğretmenin derse, öğretmenlik mesleğine, alana ve okula karşı farklı tutum ve davranışları; öğretmen adayının başarısı, derse ilgisi, motivasyonu ve tutumunu etkilemektedir (Işık, Yaman ve Soran, 2005:110-116). Başka bir deyişle öğretmenler sadece alanlarındaki bilgileri öğrenmiş kişiler olarak görülmemektedir. Bu nedenle, öğretmen adaylarının nitelikli bir hizmet öncesi eğitim programından geçirilmeleri meslekteki başarıları için gereklidir. (Aydın ve Tekneci. 2013: 2)

Bu araştırmada okul öncesi öğretmen adaylarının öğretmenlik mesleğine dair kaygılarının olup olmadığı ana problemi kapsamında aşağıdaki alt problemlere cevap aranmıştır:

- Öğretmen adaylarının sınıf yönetimi konusunda kaygıları nelerdir?
- Öğretmen adaylarının veli iletişimi konusundaki kaygıları nelerdir?
- Öğretmen adaylarının çocuklarla iletişim konusundaki kaygıları nelerdir?
- Öğretmen adaylarının çocukların okula oryantasyonu ile ilgili kaygıları nelerdir?
- Öğretmen adaylarının çocukların öz bakımı konusundaki kaygıları nelerdir?

METOD

Bu bölümde araştırmada yer alan çalışma grubu, araştırmanın veri toplama araçları, verilerin toplanma süreci ve analizi yer almaktadır.

Çalışma Grubu

Araştırmanın çalışma grubunu 2012-2013 eğitim öğretim yılında Kastamonu Üniversitesi Eğitim Fakültesi Okul Öncesi Eğitimi Ana bilim dalında eğitimine devam eden (1,2,3 ve 4. sınıf) öğretmen adayları oluşturmuştur. Çalışma grubu ile ilgili ayrıntılı bilgiler Tablo 1’de gösterilmiştir:

Tablo 1. Öğretmen adaylarının demografik bilgilerinin dağılımı

		f	%
Sınıf	Sınıf	91	33.8
	Sınıf	106	39.4
	Sınıf	48	17.8
	Sınıf	24	8,9
	Toplam	269	100.0
Cinsiyet	Bayan	236	87.7
	Erkek	33	12.3
	Toplam	269	100.0

	0-2.25	16	5.9
	2.26-2.50	27	10.0
	2.51-2.75	72	26.8
Not ortalaması	2.76-3.00	80	29.7
	3.01-3.25	46	17.1
	3.26-4.00	28	10.4
	Toplam	269	100.0
	Genel (Düz) Lise	68	25.3
Mezun olduğu lise	Anadolu öğretmen lisesi	27	10.0
	Anadolu Lisesi	83	30.9
	Meslek lisesi/Teknik lise	91	33.8
	Toplam	269	100.0
Meslek seçimi	İsteyerek	238	88.5
	İstemeyerek	31	11.5
Bölüm seçimi	Toplam	269	100.0
	İsteyerek	234	87.0
Bölüm seçimi	İstemeyerek	35	13.0
	Toplam	269	100.0

Veri Toplama Aracı

Araştırmada veri toplama aracı olarak görüşme formu kullanılmıştır. Görüşme formu iki bölümden oluşmaktadır. Birinci bölümde katılımcıların demografik bilgileri ile ilgili sorular, ikinci bölümde ise öğretmen adaylarının mesleki kaygıları ile ilgili 5 açık uçlu soru bulunmaktadır. Görüşme formunun birinci bölümünde katılımcıların sınıf düzeyi, cinsiyeti, mezun oldukları lise türü, not ortalaması, öğretmen mesleğini ve branşını isteyerek seçip seçmedikleri soruları yer almaktadır. İkinci bölümde öğretmen adaylarının sınıf yönetimi, velilerle iletişim, çocuklarla iletişim, çocukların okula uyumları ve çocukların bakım ihtiyaçlarının karşılanması konusundaki mesleki kaygıları ile ilgili açık uçlu sorular yer almaktadır.

Görüşme formu geliştirilmeden önce öğretmen adaylarıyla ön görüşmeler yapılmış ve bu görüşmeler sonucunda veri toplama aracındaki sorular şekillendirilmiştir. Geliştirilen görüşme formunun geçerlik ve güvenilirlik çalışması için alan uzmanı ve eğitim bilimci öğretim elemanlarının görüşü alınmış, uzmanlardan gelen dönütler sonucunda bazı maddeler çıkarılmış bazı maddelerde ise düzenlemeler yapılmıştır.

Verilerin Toplanması

Araştırmacılar, geliştirdikleri görüşme formunu 2012-2013 eğitim öğretim yılında Kastamonu Üniversitesi Eğitim Fakültesi Okul Öncesi Eğitimi Ana bilim dalında eğitimine devam eden (1,2,3 ve 4. sınıf) 269 öğretmen adayına uygulamışlardır.

Verilerin Analizi

Araştırma nitel bir araştırma olup 269 öğretmen adayının sorulara verdikleri cevaplar önce betimsel analiz yöntemiyle ortaya çıkarılmış, daha sonra bu betimsel analizler SPSS programına aktarılıp yüzdelerle frekans tabloları çıkarılarak analiz edilmiştir.

BULGULAR

Sınıf Yönetimi ve Kaygı

Yapılan araştırmada öğretmen adaylarına sınıf yönetimi ile kendilerini yeterli hissedip hissetmedikleri sorulmuş ve toplam 269 öğretmen adayının % 50.2'si bu soruya evet cevabını vermiştir. Geri kalan % 49.8'i ise sınıf yönetimi ile ilgili kendilerini yeterli hissetmediklerini ifade etmişlerdir.

Öğretmen adaylarının bu soruya yönelik verdikleri cevaplar tablo 2'de gösterilmiştir:

Tablo 2. Öğretmen adaylarının sınıf yönetimi konusundaki kaygıları

		Frekans	Yüzde (%)
Evet	Yeterli deneyim	23	8.6
	Yeterli bilgi	10	3.7
	Yüksek öz yeterlik	105	39.0
Toplam		135	50.2
Hayır	Yetersiz deneyim	49	18.2
	Yetersiz bilgi	28	10.4
	Düşük öz yeterlik	46	17.1

	Staj uygulamalarının yanlış ve yetersiz olması	8	3.0
Toplam		134	49.8
Toplam		269	100.0

Yukarıdaki tablo incelendiğinde sınıf yönetimi ile ilgili kendilerini yeterli hissettiklerini söyleyen öğretmen adaylarının büyük bir çoğunluğunun (% 39.0) kendilerini yeterli hissetmelerinin sebebinin yüksek öz yeterlik olduğu görülmektedir. Örneğin 89 numaralı öğretmen adayı sınıf yönetimi konusunda kendisini yeterli hissetmesinin sebebini, çocukları ikna etme ve sınıf düzenini sağlayabilme konusundaki yeteneğine bağlamıştır:

“Yeterli hissediyorum. Dediğimi yapmak istemeyen bir çocuğu ikna edebileceğimi ve sınıf düzenine uyumunu sağlayabileceğime inanıyorum.”

Benzer şekilde 98 numaralı öğretmen adayı sınıf yönetimi konusunda kendisini yeterli hissetmesinin sebebini çocukların istemediği bir etkinlikte bile onları ikna edebileceği şeklinde açıklamıştır:

“Evet. Çocuklar bir etkinliği yapmak istemediği anlarda bile onlara çekici hale getirebilirim.”

Katılımcı öğretmen adaylarından 23 kişi yeterli deneyim sahibi olduklarını düşündüklerinden dolayı sınıf yönetimi konusunda kendini yeterli hissetmektedir. Örneğin 99 Numaralı öğretmen adayı sınıf yönetimi konusunda kendisini yeterli hissetme sebebini meslek lisesinde staj yaptığı için deneyim sahibi olduğu şekilde açıklamışlardır:

“Evet. Meslek lisesi mezunu olduğum için bu konuda deneyimim var.”

Sınıf yönetimi konusunda kendilerini yeterli hissettiklerini söyleyen öğretmen adaylarının küçük bir kısmı (% 3.7) cevaplarını yeterli bilgi sahibi olmalarına dayandırmışlardır. Örneğin 134 Numaralı öğretmen adayı sınıf yönetimi konusunda kendisini yeterli hissetme sebebini bu konu ile ilgili olan derste yeterli bilgi sahibi olduğu şeklinde açıklamıştır:

“Aldığımız sınıf yönetimi dersi teorik olarak yeterince bilgi sahibi etti. Aynı dönem yaptığımız staj da bunu pekiştirdi...”

Buna karşılık toplam 269 öğretmen adayının 134’ü (% 49.8) sınıf yönetimi konusunda kendilerini yeterli hissetmediklerini söylemişlerdir.

Sınıf yönetimi konusunda kendilerini yeterli hissetmediklerini söyleyen öğretmen adaylarının büyük bir çoğunluğunun kendilerini yetersiz hissetme nedenleri yetersiz deneyim (% 18.2) ve düşük öz yeterlikten (% 17.1) kaynaklandığı tespit edilmiştir. 28 öğretmen adayı ise bu durumun yetersiz bilgiden kaynaklandığını ifade etmişlerdir. Bunlarla ilgili öğretmen adayı ifadeleri sırasıyla şu şekildedir:

“Çok yeterli hissetmiyorum. Çünkü henüz bir sataj deneyimim ya da çalışma hayatım olmadı. Fakat bir senelik bir deneyim sonucu kendimi bu konuda geliştireceğime inanıyorum. (101 nolu öğretmen adayı)

“Kendimi yeterli hissetmiyorum. Çocuklarla iletişim kurmayı beceremiyorum.” (188 nolu öğretmen adayı)

“Bu konuda yeterli bulmuyorum. Henüz bilgili değilim. Sınıfı nasıl idare edebilirim, çocukların yönetimini nasıl sağlarım bilemiyorum. Daha bunun eğitimini almadık tabi ki. Ama yine de yeterli olabileceğimi düşünmüyorum.” (21 nolu öğretmen adayı)

Öğretmen adaylarının çok küçük bir kısmı (% 3.0) ise kendilerini yetersiz hissetmelerinin nedenini lisans eğitimindeki staj uygulamalarının yanlış ve yetersiz olmasına bağlamışlardır. Örneğin 108 numaralı öğretmen adayı sınıf yönetimi konusunda kendisini yeterli hissetmemesinin sebebini lisans eğitimi boyunca stajların az ve geç olması şeklinde açıklamışlardır:

“Hayır hissetmiyorum. Şu ana kadar sadece teorik dersler gördük. Ama hiç okulöncesi öğrencileri ile vakit geçirmedi. Üçüncü sınıfta staj var ancak çok geç bence.”

Veli İletişimi ve Kaygı

Yapılan araştırmada öğretmen adaylarına mesleğe başladıklarında velilerle iletişim konusunda herhangi bir kaygı taşıyıp taşımadıkları sorulmuş ve toplam 269 öğretmen adayının % 46.1'i bu soruya evet cevabını vermiştir. Geri kalan % 53.9'u ise bu konuda herhangi bir kaygı taşımadıklarını ifade etmişlerdir.

Öğretmen adaylarının bu soruya yönelik verdikleri cevaplar aşağıdaki tabloda gösterilmiştir:

Tablo 3. Öğretmen adaylarının veli iletişimi konusundaki kaygıları

		Frekans	Yüzde (%)
Evet	Düşük öz yeterlik	53	19.7
	Eleştirilme kaygısı	10	3.7
	Yanlış anlaşılma kaygısı	22	8.2
	Aile katılımı kaygısı	11	4.1
	Ailelerin sosyo-kültürel yapısı	15	5.6
	Ailelerin çocuk yetiştirme tutumu	9	3.3
	Ailelerin erkek öğretmene karşı tutumu	2	0.7
Toplam		124	46.1
Hayır	Yüksek öz yeterlik	85	31.6
	Güçlü iletişim becerisi	58	21.6
	Velilerin olumlu tutumu	4	1.5
Toplam		145	53.9
Toplam		269	100.0

Yukarıdaki tablo incelendiğinde veli ile iletişim konusunda kaygı taşıdığını söyleyen öğretmen adaylarının büyük bir çoğunluğunun (% 19.7) bu kaygılarının nedeninin düşük öz yeterlikten kaynaklandığı görülmüştür. Örneğin 171 Numaralı öğretmen adayı veli ile iletişim konusunda taşıdığı kaygının sebebini kalabalık karşısında konuşma becerisinin eksik oluşu şeklinde açıklamıştır:

“Biraz tereddüt yaşıyorum. Çünkü kalabalık önünde konuşmak beni kaygılandırıyor.”

Araştırmaya katılan öğretmen adaylarının % 8.2'si veliler tarafından yanlış anlaşılma kaygısı taşıdıklarını ifade etmişlerdir. Örneğin 13 numaralı öğretmen adayı velilerle iletişim konusunda yaşadığı kaygının sebebini velilerin çocukları konusundaki hassasiyetlerinden dolayı onu yanlış anlayabilecekleri şeklinde açıklamışlardır:

“Veliler çocukları hakkında olumsuz şeyler söylenmesinden pek hoşlanmıyorlar. Çocukları ile ilgili olumsuz bir durum olduğunda beni anlayıp anlayamayacakları konusunda kaygılanıyorum...” (13 nolu öğretmen adayı)

Öğretmen adaylarının % 5.6'sı veli ile iletişim konusunda taşıdıkları kaygının ailelerin sosyo-kültürel yapılarıyla; % 4.1'i aile katılımıyla; % 3.7'si eleştiri kaygısı ile; % 3.3'si ise ailelerin çocuk yetiştirme tutumuyla ilgili olduğunu belirtmişlerdir. Örneğin; 72,89, 201, 7 numaralı öğretmen adayları bu kaygıların sebebini aşağıdaki şekilde açıklamıştır:

“Evet, bir kaygı taşıyorum. Çünkü çalışacağım okulun bulunduğu çevrenin sosyo-ekonomik durumu, aile yapısı ve çocuğa verdikleri değer, benim velilerden talep ettiğim şeylere verecekleri tepki veya tepkisizlik durumu bende kaygı yaratıyor.” (72 nolu öğretmen adayı)

“Evet, öyle bir kaygım var. Çünkü ailelerin bilinçli olup olmaması, bazı etkinliklere katılıp katılmamasıhakkında endişelerim var.”(89 nolu öğretmen adayı)

“Kaygı yaşıyorum. Çünkü veliler tarafından mesleğe yeni başlayan bir öğretmen deneyimsiz görülür. İşime karışmaya çalışmalarını düşüncesi beni korkutuyor...” (201 nolu öğretmen adayı)

“Bazı ailelerin aşırı korumacı olduğunu çevremde gördükçe aynı şekilde korumacı ailelerle karşılaşmaktan korkuyorum...” (7 nolu öğretmen adayı)

Katılımcı öğretmen adaylarının küçük bir kısmı da (% 0.7) veli ile iletişim konusunda yaşadıkları kaygıyı erkek okulöncesi öğretmene karşı tutuma bağlamıştır. Örneğin 24 numaralı öğretmen adayı velilerle iletişim konusunda yaşadığı kaygıyı velilerin erkek öğretmene karşı ön yargılı olabileceği şeklinde açıklamışlardır:

“Küçük bir kaygım var. Bu da erkek olduğum için velilerimin bunu nasıl karşılayacağını kestiremediğim için.” (24 nolu öğretmen adayı)

Öğretmen adaylarının % 53.9'u veli ile iletişim konusunda herhangi bir kaygılarının olmadığını belirtmişlerdir. Kaygı taşımayan öğretmen adaylarının 85'inin bu tutumunun yüksek öz yeterlilikten kaynaklandığı belirlenmiştir. Örneğin 182 numaralı öğretmen adayları velilerle iletişim konusunda kaygı taşımadıklarının sebebini tüm velilerle ayrı ayrı iletişime geçebileceği şeklinde açıklamışlardır:

“Hayır. Her öğrencinin velisi ile tek tek iletişime geçmek için elimden geleni yaparım.” (182 nolu öğretmen adayı)

Araştırmaya katılan öğretmen adaylarının 58'i ise veli iletişimi konusunda kaygı taşıyama nedenleri olarak güçlü iletişim becerilerine bağlamışlardır. Örneğin 169, 193 numaralı öğretmen adayları iletişim becerilerine güvendikleri için herhangi bir kaygı taşımadıkları şeklinde açıklamışlardır:

“Hayır. Veli iletişimi konusunda kendime güveniyorum.” (169 nolu öğretmen adayı)

“Hayır, taşıyorum. Ben onlara karşı saygımı koruyup, iletişimimi doğru tuttuğum sürece aramızda bir problem olacağını düşünmüyorum.” (193 nolu öğretmen adayı)

Katılımcı öğretmen adaylarının küçük bir kısmı ise (% 1.5) veli iletişimi kaygısı taşıyama nedenlerini velilerin olumlu tutumu olarak açıklamışlardır. Örneğin 174 numaralı öğretmen adayı bu durumu şu şekilde açıklamıştır:

“Veliler artık çok bilinçli oldukları için böyle bir kaygı taşıyorum.”

Çocuklarla İletişim ve Kaygı

Yapılan araştırmada öğretmen adaylarına mesleğe başladıklarında çocuklarla ilişkileri hakkında bir kaygı taşıyıp taşımadıkları sorulmuş ve toplam 269 öğretmen adayının % 26.8'i bu soruya evet cevabını vermiş; geri kalan % 73.2'si ise bu konuda herhangi bir kaygı taşımadıklarını ifade etmişlerdir.

Öğretmen adaylarının bu soruya yönelik verdikleri cevaplar aşağıdaki tabloda gösterilmiştir.

Tablo 4. Öğretmen adaylarının çocuklarla iletişim konusundaki kaygıları

		Frekans	Yüzde (%)
Evet	Düşük öz yeterlik	44	16.4
	Yetersiz deneyim	13	4.8
	Yetersiz hoşgörü	6	2.2
	Bireysel farklılıklar	10	3.7
Toplam		72	26.8
Hayır	Yüksek öz yeterlik	60	22.3
	Güçlü iletişim becerisi	93	34.6
	Çocukları sevme	36	13.4
	Yeterli deneyim	7	2.6
Toplam		197	73.2
Toplam		269	100.0

Yukarıdaki tablo incelendiğinde çocuklarla ilişkiler konusunda kaygı taşıdığını söyleyen öğretmen adaylarının 44'ünün bu kaygılarının nedeninin düşük öz yeterlilikten kaynaklandığı görülmüştür. Örneğin 111 numaralı öğretmen adayı çocuklarla ilişkiler konusunda taşıdığı kaygının sebebini çeşitli ek çalışmalar yapsa da kendini bu konuda yetersiz hissedeceği olarak göstermiştir:

“Bu konuda kendimi geliştirmek için kitap okuyor, konferansları dinliyorum ama yine de yetersiz kalacakmışım gibi hissediyorum.”

Çocuklarla ilişkiler konusunda kaygı taşıdığını ifade eden öğretmen adaylarının geri kalanının % 4.8'i bu durumun yetersiz deneyimden; % 3.7'si çocuklardaki bireysel farklılıklardan; % 2.2'si ise yetersiz hoşgörüden dolayı olduğunu belirtmişlerdir. Örneğin; 126,174, 26 numaralı öğretmen adayları bu kaygıların sebebini sırasıyla şu şekilde açıklamıştır:

“Biraz taşıyorum çünkü bir sınıfta çocuklarla hiç iletişim tecrübem olmadı. Nasıl iletişim kuracağımı pek bilmiyorum.” (126 nolu öğretmen adayı)

“Bazı çocuklar çok özel özelliklere sahip olabiliyor. Hepsiyile aynı anda, aynı iletişim bağı kurabilir miyim diye düşünüyorum...” (174 nolu öğretmen adayı)

“Evet taşıyorum. Çünkü sabır yönünden pek dirençli değilim. Bu yüzden çocuklarla gerektiği gibi ilişki kuramayabilirim.” (26 nolu öğretmen adayı)

Çocuklarla ilişkiler konusunda herhangi bir kaygısı olmadığını belirten öğretmen adaylarının 93’ü bu durumu güçlü iletişim becerilerine bağlamışlardır. Örneğin; 88, 193 numaralı öğretmen adayları çocuklarla iletişim konusunda şu ana kadar bir problem yaşamadıkları ve kendilerine bu konuda güvendikleri için herhangi bir kaygı taşımadıklarını ifade etmişlerdir:

“Hayır, çocuklarla iyi anlaşırım, uyum sorunu çekmem. Çocukların doğru konuda, doğru zamanda ilgisini çekmek onlarla iletişimi kolaylaştıracağına inanıyorum.” (88 nolu öğretmen adayı)

“Taşıyorum. Çok çocukla ilgilendim ama bir ilişki kuramama problemi yaşamadım. Onlara nasıl yaklaşacağımı bilirim.” (193 nolu öğretmen adayı)

Kaygı taşımayan öğretmen adaylarının 60’ı bu tutumunun yüksek öz yeterlilikten kaynaklandığı belirlenmiştir. Örneğin 119 numaralı öğretmen adayı çocuklarla ilişkiler konusunda herhangi bir kaygısının olmadığını şu şekilde açıklamıştır:

“Bu konuda herhangi bir kaygı taşıyorum. Çünkü mezun olunca bilgim tam olacak. Bu da çocuklarla olan ilişkiyi olumlu yönde etkileyecek.” (119 nolu öğretmen adayı)

Öğretmen adaylarının 36’sı çocuklarla ilişkiler hakkında kaygı taşımamalarını çocukları sevmelerine bağlamışlardır. Örneğin 149, 9 numaralı öğretmen adayı çocuklara olan sevgilerinden dolayı bu konuda bir kaygı yaşamadıkları şeklinde açıklamışlardır:

“Taşıyorum. Çocuklara eşit davranacağımı düşünüyorum. Çocukları sevdiğim için aramızda iyi bir iletişim olacağını düşünüyorum.” (149 nolu öğretmen adayı)

“Taşıyorum. Çocukları hep severim, onlarla oynamayı, koşmayı, ilgilenmeyi severim. Bu yüzden çocuklarla ilişkilerimin iyi olacağına inanıyorum.” (9 nolu öğretmen adayı)

Kaygı taşımadığını belirten öğretmen adaylarının geri kalan küçük bir kısmı ise (% 2.7) bunun nedeni olarak yeterli deneyimlerinin olduğunu göstermişlerdir. Örneğin 130 numaralı öğretmen adayı çocuklarla ilişkiler konusunda bir kaygısının olmayışını daha önce yapmış olduğu staj deneyimine bağlayarak aşağıdaki şekilde açıklamıştır:

“Staj deneyimime dayanarak, çocuklarla ilişkilerim hakkında bir kaygı taşıyorum.”

Çocukların Okula Oryantasyonu ve Kaygı

Yapılan araştırmada öğretmen adaylarına mesleğe başladıklarında sınıflarında bulunan çocukların okula uyumları ile ilgili bir kaygı taşıyıp taşımadıkları sorulmuş ve toplam 269 öğretmen adayının % 61’i bu soruya evet cevabını vermiş; geri kalan % 39’u ise bu konuda herhangi bir kaygı taşımadıklarını ifade etmişlerdir.

Öğretmen adaylarının bu soruya yönelik verdikleri cevaplar aşağıdaki tabloda gösterilmiştir:

Tablo 5. Öğretmen adaylarının çocukların okula uyumları konusundaki kaygıları

		Frekans	Yüzde (%)
Evet	Çocukların aileden ilk kez ayrılmaları	34	12.6
	Bireysel farklılıklar	39	14.5
	Düşük öz yeterlik	77	28.6
	Ailenin çocuk yetiştirme tutumu	8	3.0
	Kaynaştırma öğrencileri	1	0.4
	Yetersiz hoşgörü	4	1.5
Toplam		164	61.0
Hayır	Yüksek öz yeterlik	89	33.1
	Güçlü iletişim becerisi	11	4.1
	Yeterli hoşgörü	6	2.2
Toplam		105	39.0
Toplam		269	100.0

Yukarıdaki tablo incelendiğinde çocukların okula uyumları ile ilgili kaygı taşıdığını söyleyen öğretmen adaylarının 77’sinin bu kaygısının düşük öz yeterlilikten kaynaklandığı görülmüştür. Örneğin 107 numaralı

öğretmen adayı bu konuda taşıdığı kaygının öğretmenlerin tutum ve davranışlarının çocuk üzerindeki etkisinden dolayı çocukları olumsuz etkilemekten kaynaklandığını ifade etmiştir:

“Benim yanlış bir tutumum yüzünden öğrenciyi okuldan uzaklaştırmaktan kaygı duyuyorum.”

Benzer şekilde 120 Numaralı öğretmen adayı bu konuda taşıdığı kaygıyı çocukların aileden ilk kez ayrılıyor olmaları nedeniyle zorlanabileceği şekilde açıklamıştır:

“Evet, taşıyorum. Çünkü ailesinden yeni ayrılan çocuklar okul ortamına alışmakta güçlük çekecekler ve bunları aşmalarını sağlamak büyük sorumluluk istiyor. Bunu yaparken zorlanacağımı düşünüyorum.”

Katılımcı öğretmen adaylarının 39’u bu kaygının çocuklardaki bireysel farklılıktan; 34’ü ise çocukların aileden ilk kez ayrılıyor olmalarından kaynaklandığını belirtmişlerdir. Örneğin 5, 101,44, 112 numaralı öğretmen adayları bu konuda taşıdıkları kaygının sebeplerini sırasıyla aşağıdaki şekilde açıklamışlardır:

“Her çocuğun birbirinden farklı olması nedeniyle evet. Hangisine nasıl yaklaşacağımızı en başından kestirmek ve hepsine olan ilgiyi eşit tutmak durumundayız. Bu da çok kolay olmasa gerek...” (5 nolu öğretmen adayı)

“Evet, çünkü her çocuk farklı olacak ve iletişim her biriyle farklı olacak.”(101 nolu öğretmen adayı)

“Evet, taşıyorum. Çünkü çocuk ilk kez evinden ayrılmış olacak ve okuldan korkacağı için byle bir kaygı taşıyorum.” (44 nolu öğretmen adayı)

“Çok fazla. Sonuçta hepsi ailesinden ayrılıp gelecek ve bu durum onların üzerine stres, ağlama, bağırma şeklinde olacak...” (112 nolu öğretmen adayı)

Çocukların okula uyumları ile ilgili kaygı taşıdıklarını ifade eden öğretmen adaylarının % 3’ü ailenin çocuk yetiştirme tutumundan; % 1.5’i yetersiz hoşgöründen; % 0.4’ü ise kaynaştırma öğrencilerinin bu süreci zorlaştıracağından dolayı bu kaygıyı taşıdıklarını söylemişlerdir. Örneğin 14, 98, 172, 41 numaralı öğretmen adayları bu konuda taşıdıkları kaygının sebeplerini açıklarken şu ifadeleri kullanmışlardır:

“Çocukların yetiştiği ortamı, aile düzenini tam anlamıyla bilemediğimiz için nasıl yetiştirildiğini, nasıl davranılması gerektiğini bilemediğimiz için endişeliyim.” (14 nolu öğretmen adayı)

“Evet, çünkü çoğu çocuk korumacı bir aile tarafından ya da fazla serbest bir aile tarafından yetiştiriliyor.” (98 nolu öğretmen adayı)

“Taşıyorum. Sınıf kuralları, tuvalet eğitimi, etkinliğe katılım esnasında isteksizlik gibi konularda kaygı taşıyorum.” (172 nolu öğretmen adayı)

“Eğer sınıfta engelli bir çocuk olursa kaygılanabilirim. Çünkü bu konu hakkında yeterli bilgiye sahip değilim.”(41 nolu öğretmen adayı)

Çocukların okula uyumları konusunda bir kaygı taşımadıklarını belirten öğretmen adayı oranı ise % 39 olarak belirlenmiştir. Bu konuda kaygısı olmayan öğretmen adaylarının 89’unun bu görüşünün yüksek öz yeterlikten kaynaklandığı saptanmıştır. Örneğin 166 numaralı öğretmen adayı kaygı taşımama nedenini gerekli desteğin sağlanması halinde uyum problemi yaşamayacağı şeklinde açıklamışlardır:

“Hayır, ilk zamanlarda yeterli oryantasyon sağlarsa çocuğun okula karşı olumlu tutum geliştirmesi desteklenirse böyle bir problem yaşanmaz.” (166 nolu öğretmen adayı)

Geri kalan öğretmen adaylarının % 4.1’ bu durumu güçlü iletişim becerisine bağlarken; % 2.2’si de yeterli hoşgörüyü sağlamıştır. Örneğin 135 ve 179 numaralı öğretmen adayları kaygı taşımama nedenlerini sırasıyla şöyle açıklamışlardır:

“... ilk haftalar drama, oyun, serbest zaman etkinlikleri ile etkileyici bir tanışma yaparsam bir sorun çıkmayacağını düşünüyorum.”(135 nolu öğretmen adayı)

“Çocukların bazıları mutlaka uyumda sorun yaşayacaktır. Ama onlara zamanla ve sıcakkanlılıkla alışmasını öğretebilirim.” (179 nolu öğretmen adayı)

Çocukların Bakımı ve Kaygı

Yapılan araştırmada öğretmen adaylarına mesleğe başladıklarında çocukların bakım durumu (tuvalet, yemek yeme vb.) ile ilgili bir kaygı taşıyıp taşımadıkları sorulmuş ve toplam 269 öğretmen adayının % 43.9’u bu soruya evet cevabını vermiş; geri kalan % 56.1’i ise bu konuda herhangi bir kaygı taşımadıklarını ifade etmişlerdir.

Öğretmen adaylarının bu soruya yönelik verdikleri cevaplar aşağıdaki tabloda gösterilmiştir:

Tablo 6. Öğretmen adaylarının çocukların bakımı konusundaki kaygıları

		Frekans	Yüzde (%)
Evet	Yetersiz deneyim	10	3.7
	Düşük öz yeterlik	72	26.8
	Yardımcı personelin olmaması	16	5.9
	Yetersiz bilgi	13	4.8
	Yetersiz hoşgörü	4	1.5
	Ailelerin erkek öğretmene karşı tutumları	2	0.7
Toplam		118	43.9
Hayır	Çocukları sevmeye	8	3.0
	Yüksek öz yeterlik	119	44.2
	Çocukların öz bakım becerilerini kazanmış olmaları	6	2.2
	Çocuk bakımı ve sağlığına önem verme	3	1.1
	Yeterli deneyim	10	3.7
	Yeterli hoşgörü	6	2.2
Toplam		151	56.1
Toplam		269	100.0

Yukarıdaki tablo incelendiğinde çocukların bakım durumu ile ilgili kaygı taşıdığını söyleyen öğretmen adaylarının büyük bir çoğunluğunun (% 26.8) bu kaygısının düşük öz yeterlikten kaynaklandığı görülmüştür. Örneğin 130 Numaralı öğretmen adayı bu konuda taşıdığı kaygının sebebini sağlık konusunda kendini yeterli hissetmemesi şeklinde açıklamıştır:

“Çocukların sağlıklarıyla başa çıkma ile ilgili ciddi kaygılarım var. Soğukkanlı bir insan değilim. En büyük sıkıntım bu.”

Öğretmen adaylarından çocukların bakımı konusunda kaygılanma nedenini yardımcı personel olmayışına bağlayanların oranı % 5.9’dur. Örneğin 5 Numaralı öğretmen adayı bu konudaki kaygısını yardımcı personel olmadığı durumlarda birçok çocukla aynı anda ilgilenmenin zor olabileceği şeklinde açıklamıştır:

“En büyük korkularımdan biri bu aslında. Yardımcısı olmayan anaokullarında ilk mezun olan birisi için 20-25 çocuğu idare etmek zor...”

Benzer şekilde 165 Numaralı öğretmen adayı bu konuda taşıdığı kaygının sebebini kalabalık sınıflarda yardımcı personel olmazsa çocukların bakım ihtiyaçlarını karşılamakta güçlük çekeceği şeklinde açıklamıştır:

“... Yardımcım olmadığında çocuk sayısı çok olduğunda diğer çocukların sınıfta karışıklık çıkarması biraz kaygılandırıyor.”

Çocukların bakımı konusunda kaygı taşıyan öğretmen adaylarının % 4.8’i bu konuda yeterli bilgi sahibi olmadıklarından; % 0.7’si ise ailelerin erkek öğretmene karşı olan tutumlarından dolayı kaygı taşıdıklarını ifade etmişlerdir. Örneğin 39 ve 24 numaralı öğretmen adayları kaygı taşıma nedenlerini sırasıyla şu şekilde açıklamıştır:

“Tuvalet eğitimi almamış olmalarından ve yaralanmalarından korkuyorum. Çünkü bize henüz ilk yardım dersi verilmedi...” (39 nolu öğretmen adayı)

“Sadece kaygım kız öğrencilerimin tuvalet alışkanlığını kazanmamış olmasıdır. Ben görevim olduğu için en iyi şekilde yapmaya çalışırım ama velilerin düşünceleri bakımından kaygım var.” (24 nolu öğretmen adayı)

Öğretmen adaylarının % 1.5'inin kaygı taşımalarına bu konuya karşı yeterli hoşgörülerinin olmamasının neden olduğu belirlenmiştir.

Çocukların bakımı konusunda kaygı taşımayan öğretmen adaylarının 119'unun kaygı taşımama nedenlerinin yüksek öz yeterlikten kaynaklandığı görülmüştür. Örneğin 162 numaralı öğretmen adayı bu konuda kaygı taşımama nedenini şu şekilde açıklamıştır:

“Her düzeyde kendimi yeterli sayıyorum. Bütün sorunlarla başa çıkabileceğimi düşünüyorum.”

Benzer şekilde 166 Numaralı öğretmen adayı bu konuda kaygı taşımama nedeni olarak her konuda çocuklara yardım edebileceği şeklinde açıklamıştır:

“Hayır, bu konuda onlara istedikleri kadar yardımcı olabileceğimi düşünüyorum.”

10 öğretmen adayı çocukların bakımı konusunda kaygı taşımama nedenlerinin yeterli deneyim; 8 öğretmen adayı ise çocukları sevmek olduğunu belirtmişlerdir. Örneğin 98, 119 numaralı öğretmen adayları bu konuda kaygı taşımama nedenlerini daha önceki staj tecrübeleri ve çocukları seviyor olmaları şeklinde açıklamıştır:

“Hayır. Lisede staj gördüğüm zaman tecrübe kazandım.” (98 nolu öğretmen adayı)

“Hayır, çünkü onların bana ihtiyacı olduğu düşüncesi ve onlara olan sevgim onlarla ilgilenmeyi ve başa çıkmayı zor olarak göstermiyor.” (119 nolu öğretmen adayı)

Katılımcı öğretmen adaylarının geri kalan kısmı kaygı taşımama nedenlerini çocukların öz bakım becerilerini kazanmış olmaları(% 2.2); yeterli hoşgörü (% 2.2); çocuk bakımı ve sağlığına önem verme (% 1.1) olarak sıralamışlardır.

SONUÇ VE ÖNERİLER

Bu araştırmada 2012-2013 eğitim-öğretim yılında Kastamonu Üniversitesi Eğitim Fakültesi Okulöncesi Eğitimi Ana Bilim Dalında eğitimine devam eden (1, 2, 3 ve 4. Sınıf) öğretmen adayları yer almıştır. Araştırma nitel bir çalışma olup 269 öğretmen adayı ile görüşme gerçekleştirilmiştir. Bu görüşmeler çerçevesinde genel olarak aşağıdaki sonuçlar ortaya çıkmıştır:

- Öğretmen adaylarının % 39'unun sınıf yönetimi konusunda kendilerini yeterli hissettikleri görülmüştür. Öğretmen adaylarının sınıf yönetimi konusunda kendilerini yeterli hissetme nedenleri ise yeterli deneyim (% 8.6), yeterli bilgi (% 3.7) ve yüksek öz yeterliğe (% 39) bağlı olduğu belirlenmiştir. Buna karşılık sınıf yönetiminde kendini yeterli hissetmeyen öğretmen adaylarının oranı ise % 49.8'dir. Öğretmen adaylarının kendilerini sınıf yönetimi konusunda yetersiz hissetme nedenleri ise yetersiz deneyim (% 18.2), yetersiz bilgi (% 10.4), düşük öz yeterlik ve staj uygulamalarının yanlış ve yetersiz olmasına bağlanmıştır.
- Öğretmen adaylarının % 46.1'i veli ile iletişim konusunda kaygılarının olduğunu belirtmiştir. Bu kaygıların sebebinin ise düşük öz yeterlik (% 19.7), eleştirilme kaygısı (% 3.7), yanlış anlaşılma kaygısı (% 8.2), aile katılımı kaygısı (% 4.1), ailelerin sosyo-kültürel yapısı (% 5.6), ailelerin çocuk yetiştirme tutumu(% 3.3) ve ailelerin erkek öğretmene karşı tutumu(% 0.7) olduğu görülmüştür. Veli iletişiminde kaygısının olmadığını belirten öğretmen adayları ise çalışma grubunun % 53.9'unu oluşturmaktadır. Bu öğretmen adayları kaygı taşımama nedeni olarak da yüksek öz yeterlik (% 31.6), güçlü iletişim becerisi (% 31.6) ve velilerin olumlu tutumu (% 1.5)'nu göstermişlerdir.
- Öğretmen adaylarının % 26.8'inin çocuklarla iletişim konusunda kaygı taşıdıkları ve bunun sebeplerinin ise düşük öz yeterlik (% 16.4), yetersiz deneyim (% 4.8), yetersiz hoşgörü (% 2.2) ve bireysel farklılıklar (% 3.7) olduğu belirlenmiştir. Geri kalan öğretmen adaylarının ise (% 73.2) bu konuda bir kaygı taşımadıkları bunun sebeplerinin ise yüksek öz yeterlik (% 22.3), güçlü iletişim becerisi (% 34.6), çocukları sevmeye (% 13.4) ve yeterli deneyim (% 2.6) olduğu belirlenmiştir.
- Öğretmen adaylarının % 61'inin çocukların okula uyumları konusunda kaygı taşıdıkları bunun nedenlerinin ise çocukların aileden ilk kez ayrılıyor olmaları (% 12.6), bireysel farklılıklar (% 14.5), düşük öz yeterlik (% 28.6), ailelerin çocuk yetiştirme tutumları (% 3.0), kaynaştırma öğrencileri (% 0.4) ve yetersiz hoşgörü (% 1.5) olduğu belirlenmiştir. Buna karşılık öğretmen adaylarının % 39'unun bu konuda herhangi bir kaygı taşımadıkları belirlenmiştir. Bunun nedenlerinin ise yüksek öz yeterlik (% 33.1), güçlü iletişim becerisi (% 4.1) ve yeterli hoşgörü (% 2.2) olduğu görülmüştür.
- Çalışma grubundaki öğretmen adaylarının % 43.9'unun çocukların bakımları konusunda kaygı taşıdıkları

belirlenmiştir. Buna neden olarak ise yetersiz deneyim (% 3.7), düşük öz yeterlik (% 26.8), yardımcı personel olmaması (% 5.9), yetersiz bilgi (% 4.8), yetersiz hoşgörü (% 1.5) ve ailelerin erkek öğretmene karşı tutumları (% 0.7) gösterilmiştir. Öğretmen adaylarının % 56.1'inin ise bu konuda kaygı taşımadıkları bunun nedenlerinin ise çocukları sevme (% 3.0), yüksek öz yeterlik (% 44.2), çocukların öz bakım becerilerini kazanmış olmaları (% 2.2), çocuk bakımı ve sağlığına önem verme (% 1.1), yeterli deneyim (% 3.7) ve yeterli hoşgörü (% 2.2) olduğu belirlenmiştir.

Araştırma sonuçları dikkate alınarak aşağıdaki öneriler getirilebilir:

- Öğretmen adaylarının büyük bir kısmı deneyim yetersizliklerinin onlarda çeşitli kaygılara neden olduğunu belirtmişlerdir. Bu yüzden okul öncesi öğretmenliği programında yer alan sınıf yönetimi, anne baba eğitimi gibi doğrudan uygulamaya referans veren derslerin profesyonelce yürütülmesi, öğretmen adaylarının bu derslerde uygulama yapmalarına fırsat veren yöntemlerin tercih edilmesi gerekmektedir.
- Türkiye'de eğitim fakültelerindeki öğretmen adaylarının staj ve okul uygulamaları ana sınıfları ve anaokullarının açılmasından sonra gerçekleştiği için öğretmen adayları özellikle okulla ilk defa tanışan çocukların bu uyum sürecini gözlemleyememektedir. Halbuki bir çok öğretmen adayı çocukların oryantasyon dönemine ilişkin kaygılarını belirtmişlerdir. Bu yüzden staj ve okul deneyimleri eğitim fakülteleri tarafından bu durum dikkate alınarak planlanmalıdır.
- Bazı okul öncesi erkek öğretmen adaylarına karşı velilerin tepkilerinin önüne geçilmesi için toplumun okulöncesi erkek öğretmenlere karşı bakışı konusunda bilinçlendirme çalışmaları yapılmalıdır.
- Eğitim fakültelerinde öğretmenlik uygulaması ve okul deneyimi derslerinin saatleri artırılmalı, öğrencilerin çocuklarla daha fazla uygulama ve deneyim yapmalarına fırsat verilmelidir.

University of Costa Rica: Relevance, Quality and Equity of Higher Education

Ana Luisa Guzmán H.^{a*}

^aM.Sc, Costa Rica

Abstract

The University of Costa Rica is one of the five public universities of Costa Rica. This university opened its doors in 1942 with the objective to form and develop professionals in all areas with a focus on quality, equity and relevance, specially providing personal and social development to the different populations served: indigenous groups, young people who have a disability, older people, women and men who want to improve their professional skills.

Keywords.

The University of Costa Rica provides a comprehensive education covering six main areas: Ethical, Social, Cultural, Scientific, Technological and Economic Development. This educational center works on the basis of academic excellence: learning to know, learning to do, learning to live together and learning to be. Management is focused on the development and learning application of new knowledge and human resources. Strengthen research and its links with national and international society, designs and implements social action projects, according to the needs identified in the Costa Rican population and global. Its goal is the development of students. It has been recognized with international quality standards. The University of Costa Rica's curriculum has been internationalized and organized to provide response to the training needs worldwide.

Global Objectives

From political and economic system, the State shall promote:

- 1 - Education as a human right: from primary to higher education. (Social Action).
- 2 - The relevance of higher education as a dynamic concept that varies across contexts and populations with economic vulnerability, social, health, education, personal skills and emerging educational demands. The relevance can only be the result of dialogue between national education authorities and minority groups and with greater social and economic disadvantage.
- 3 - Higher Education Quality considered a multidimensional concept of multi-level dynamic that relates to the contextual elements of an educational model, with the mission and institutional goals and specific standards within a system, institution, program or discipline determined. Also with highest international standards that provide response to the need for experts in all areas of practice and are able to work anywhere in the world. The quality focuses on the change that must occur through the educational process: the transformation refers to improvement and empowerment of students and the development of new knowledge.
- 4 - The Equity, based on the construction of a model of inclusion and solidarity that does not allow any discrimination in creed, race or ethnicity, language or socioeconomic background. The same characterization for environmental sustainability and prosperity improve the quality of life for all people and the dignity to human beings. It also promotes access to education and formal technology to optimize personal and professional skills. The equity is based on the principle of strengthening and creation of every opportunity to promote access, retention and success of students to higher education.

DESCRIPTORS: Relevance, Higher Education Quality, Equity, Sustainability.

Costa Rica has an area of 52.000 km, with a population of approximately five million people, the climate is tropical and humid, and the people are very friendly with the foreign person.

The University of Costa Rica has offices throughout the country, the Costa Rican population, according to their geographical location, has access to higher education.

The University of Costa Rica has six major areas of knowledge: Arts and Humanities, Basic Sciences, Agro Science, Social Science, Health and Engineering.

In each of them we have authorities that are responsible for coordinating the academic activities. This authorities can be call as Dean, Principal, and Faculty Assembly (professors) and they represent the higher collegial body grouped. In most cases, faculties are composed of schools, which are the units that implement education, research and social action. Around 100 careers are given under this first mode, culminating with university degrees (undergraduate and graduate), or, undergraduate to graduate programs and certificates of specialization in special programs.

The Social Action examines the needs and social and higher education demands of the Costa Rican population, in contact with people and the environment, complements and enriches their work through institutional programs, cultural processes, continuing education, extension teaching, community work and the media. This Social Action is one substantive activity that integrates and continuously fed back the university work with the national and international community in order to achieve, together, the changes required to improve the quality of life.

The highest authority for Social Action is the promoter that results in research and teaching projects, in coordination with communities and population that provide the training and knowledge sharing, from a vision of cooperation, access and support.

Social Action programs are made up of a set of projects that provide an approach articulately planned medium and long term, working with a transdisciplinary form with different populations in different geographical areas. They are characterized by accompanying processes that link the university with different

social actors in different spaces that respond to the particular needs and demands, through capacity building that contribute to the improvement of living conditions. Social Action programs seek to influence through collective and respectful dialogue that not only promote self-sufficiency and independence of social actors, but feeds the work of the substantive activities of the University of Costa Rica.

Regarding equal opportunities and access to education, there are the University of Costa Rica regulations, guidelines, institutional regulations, policies, agreements that believe that the Costa Rican population is entitled to receive higher education. Also, confirm the principle of "promoting actions to reduce and eliminate any inequality in the university community in order to contribute to consolidate a culture of justice, fairness and respect for people.

All acts in the institution are based on the understanding of individual and collective rights and duties, as well as recognition, appreciation and valuing differences of individuals and Institutions of Higher Education State University.

University of Costa Rica is committed to provide scholarships, residences , dining and other services to the students who require them. In short, this program is intended to provide scholarship opportunities and benefits to students from socially disadvantaged areas and those who are known for their leadership in the academy area.

The University of Costa Rica:

1. Promotes and ensures the benefits of scholarship opportunities and services for the student population, agile, accessible, timely and consistent with the mission of the University.
2. Contributes to attraction, admission, retention and graduation of students, under principles of quality, solidarity, equity, diversity and social justice.
3. Provides support to students with disabilities, who come from areas with limited opportunities in socio-economic, geographical or cultural background. Also, provides support in areas as: academic, arts and sports and leadership programs.
4. Promotes the participation of students in the process of international scholarships.
5. Encourages participation of trainees in programs, projects and academic activities that develops in the institution, to be important areas for personal and professional grow.
6. Provides opportunities of training in and out the country.
7. The university try the comprehensive development of the fellows, in coordination with various university departments and academics units.

The University of Costa Rica promotes ethical principles in:

Promoting decent work, mystical, equity, commitment, the exercise of human rights and excellence in the university, in accordance with the implementation and promotion of the values .

Also affirms the principle of university autonomy as a fundamental pillar of the model of public, democratic and humanistic university in the constant pursuit of achieving the common good.

Promoting actions to reduce and eliminate any inequality in the university community, in order to help consolidate a culture of justice, fairness and respect for people.

Drives the technological, intellectual honesty, cultural, artistic, scientific interaction in all the members of the community. Promote the support to programs and projects that strengthen and educate the general public on the rational use of available resources.

Stimulates the formation of a creative and critical awareness in the people within the Costa Rican community, enabling all sectors of society to participate effectively in the various processes of national activity.

Train professionals in all fields of knowledge, integrating a humanistic culture with its special or vocational training. Contribute to the advancement of the sciences, arts, humanities and technologies, reaffirming its interface and applying the knowledge of the Costa Rican reality and the international community.

Promote and develop with relevance and high level the teaching, research and the social action, influencing the growth and development not only in Costa Rica, also the Latin American region.

“Every human being has the right to grow and develop within an environment that provides the resources to achieve.” Ana Luisa Guzmán.

In a Crucible of Hygiene and Puberty: A Proposed Instructional Strategy

June Rose L. Dela Torre^{a*}

^a Master of Arts in Speech Communication student from the University of the Philippines- Diliman

Abstract

The paper reflects the outcome of a tried out proposed teaching strategy that can be employed for a large class. The instructional plan was implemented to sixty learners, both male and female and is in first year high school last August, 2012. The main topic of the instructional strategy is about hygiene and puberty and how these two are related to each other. The proposed teaching strategy recommends the execution of a workshop type of learning for a large class specially for general education topics. It aims to keep the attention span of the young learners at a high level while enjoying and learning at the same time. The primary evaluation procedures utilized by the researcher are observation and assessment of the written feedback from the participants. Results of the instructional strategy projects that the nature of workshop type of learning is an effective pedagogical method for young learners situated in a large class. It was proven that the said strategy can keep the learners pro-active and attentive.

Keywords. Workshop type of learning, hygiene and puberty, large class, attention span.

Background of the Study

Puberty is the phase of life where changes happen rapidly, and surprisingly. Teenagers may or may not have any idea about these changes on why and how these changes occur. A lot of school boys and girls are wondering how to go about the changes they experience. In line with this, hygiene becomes an issue or rather a major construct that they have to familiarize with. Hygiene is an essential matter in every adolescent. It permeates the adolescents into a better esteem that is significant in their holistic growth. The researcher believes that inculcating basic knowledge on puberty and hygiene to teenagers shall aid them into a deeper understanding of what they are going through in that particular stage of their life. These physiological changes are brought about by the body's preparation to adulthood.

The purpose of this strategy is to utilize participative methods in order to invite initiative from the students. "A happy and relaxed learner is a successful learner" (British Council, 2011). One importance of this strategy is that the learners are teenagers and that these age bracket belongs to those who starts to be more outgoing and those that socializes more. In order to become "socially accepted", they have to present themselves in such a way that is acceptable to the society. Filipino setting finds good grooming important. Soon these adolescents will become adults too therefore this time of their lives should prepare them on how to deal with such necessities in the future. I believe that the learners should be aware and give much attention to their needs related to puberty and hygiene. Hygienic products and tools will be introduced too to aid awareness in the learners. Hygiene is important in terms of health also, by knowing how to properly be groomed, one's overall well being is taken care of. Peers making fun of an adolescent is inevitable; this has an impact to one's perspective of self. With proper hygiene, this can be avoided resulting to the presentation of one's best self. By deepening their understanding on puberty and hygiene they are being encouraged to be responsible from within too and this will affect their attitude. Imparting change will only be successful if change indeed has transpired, and this is the main goal of the proposed strategy. Lastly, it is imperative that an adolescent attend to his/her well being.

Salyers and McKee (n.d.) stated that the puberty or the teenage years of adolescent learners are the phenomenal years that are challenging for educators. It was also mentioned in their article entitled "The Young Adolescent Learner" that these learning years are crucial and necessitates a pedagogical design that incorporates full range of sensory motor experiences. It was deemed from their study that engaging these experiences to their learning will increase their attention span. The researcher believes that the teenage years are those with a short attention span and requires a more demanding teaching style.

Lastly, a workshop type of learning is proposed to prolong the attention span of learners and to secure that the learning is heightened even in a large class. Since the typical problem encountered by a large class is classroom management and achieving the learning objectives, a workshop way of learning is believed to be the most effective teaching method.

Related Literature

Workshop way of learning

Kelley (1951) wrote a book entitled "Workshop Way of Learning". He enumerated the purposes of a workshop type of learning. Here are some of the list 1.) To put teachers in situations that will break down the barriers between them so that they can more readily communicate. 2.) To give teachers experience in a cooperative undertaking. 2.) so that teachers will learn methods and techniques that they can use in their own classrooms 3.) so that teachers will have collaboration with others and that they may produce materials that will be useful in their teaching.

In a workshop way of teaching, Kelley (1951) identified resources needed in preparations such as the staff, the reading materials, the outside resource person, visual and auditory aids. He also defined some procedures used to break the barriers or reducing barriers between learners. A very notable procedure he mentioned is to engage in a considerable amount of activity in the workshop that is designed to coax them out of their shells and to make them comfortable outside their shells. For some students, it might be more difficult to participate in workshop activities than any assigned book lesson. Participation is encouraged from the learners not plainly because it is fun and enjoyable but because the more a student hates to participate the more that he needs to since barriers should be reduced. As cited in the book, the use of first names is encouraged to break or reduce the barrier too. Two way communication or asking the students to participate and answer workshop questions is also a way to reduce the barriers since this will build confidence among the students and will increase their ability to contribute.

As written in the book, "effort is made to cause the learner to direct his attention to his own state of mind, and his own role in the total workshop. He thinks about himself and tries to see himself, to consider whether he is doing his part as well as possible" (Kelley, P.87)

When it comes to outcome of a workshop type of learning, there were several concepts listed. First is that we see changes in attitudes, as stated to translate knowledge into actual power, it takes energy. Attitude reveals how different a person is. Another outcome of this method is that we can observe changes in teaching methods, reports say that there is better relationship between teachers and students. Teachers coin the term "democratic teaching" related to workshop way of teaching, they said that they have a more relaxed attitude towards teaching as compared with their former teaching styles which they dread because it is full of tension. Next outcome is that there are signs of personal growth, this is the purpose of all education as teaching is the primary business of creating a safe environment where growth may take place and a bigger understanding of other humans. Another outcome for a workshop type of learning is that human relations are improved. Change in the human being's feeling and attitude is the ultimate and most important outcome. There should be a change in order to prove that learning took place. One important factor that workshop outcomes has is that friendships are formed. The fellowship formed in a workshop is very important in providing faith and courage with one another. In a workshop type of learning, we see prejudices reduced too. In the setting that a workshop facilitates is where open mindedness is conducive. Finally, we see appreciation for and understanding of democracy. School settings somehow give learners an undemocratic experience in an authoritarian method of teaching. In workshops, the learners are under a democratic condition of being able to contribute actively. (Kelley, 1951)

Harman (1990) described the workshop way of teaching as a routine and freedom to a healthier climate. From her study, she cited the instructional design of Grace Pilon where it was mentioned that workshop way of teaching encourages high students involvement. These involvement is highly beneficial for a large class population. The workshop way of teaching according to Pilon (as cited by Harman, 1990) is a procedure that attends and serves also the students with short attention span. Intelligent involvement is also one of the advantages of this kind of teaching procedure since it encourages high involvement not just by mere writing and reciting because this approach invites the students to focus, concentrate, think, share, and judge too. Meeting diverse needs is another positive contribution for this type of approach since it can cater even to the insecure, belligerent and those who are slow to grow. The principle of promoting learning living truths is another highlight for this approach since it stirs reinforcements to students to work hard at their right of own time to think. Lastly, Pilon's model suggests that workshop way is respecting dignity at all costs. It explores the possibility to see the positive potentials and the essential goodness in a student.

St. Martin Tour Academy website described the workshop way (as taken from their website) as:

“Through Workshop Way, the required diocesan curriculum is organized and taught in a way that instills self-confidence, intelligence and a life-long love for learning in each student. With Workshop Way students become successful learners because all students learn they can make mistakes and be wrong while learning, but that making mistakes does not diminish their intelligence. Students become self-aware and experience their own thought and growth. Workshop Way works because teachers set up and maintain an environment that motivates students to full participation in both workshop and full-class learning sessions..” (St Martin Tours Academy, 2012)

This only means that workshop way is designed to cater diversities in such a way not constraint to the traditional way of learning. Workshop way fosters a learning environment that sees the skills of the learners as positive and trying to improve it with the interactive experience.

Group Dynamics

Kelley wrote that “cooperation as a technique and as a way of life is superior to competition” (1951, p. 6). When people are cooperating with one another they also learn from each other. they develop dependence and confidence with each other. Human relations is utilized when people are situated to cooperate.

Klep, Wisse and Flyer (2010) studied on the dynamics of group affect which yields several effects on their performance of tasks. There were 70 three participant work groups who participated. The results show that the groups performed better on tasks that are creative in nature when they are on a positive mood and performed better in analytical tasks when they are on a negative mood. It also pointed out on one essential construct which is group belongingness that refers to the human motivation to be a member or an affiliate with others, this is to avoid loneliness and alienation. Also, it involves feelings of companionship, connectedness and affiliation. (Baumeister & Leary, 1995 as cited by Klep et al., 2010)

Sniezek (2007) in her blog pointed out that:

“Groups allow for critical support mechanisms that increase the chance of survival for all group members. For this reason it is only natural that humans today either unconsciously or consciously form or flock towards groups. Groups, however, do not possess these survival benefits without important costs such as inter and intra group competition, inter and intra group conflict, and social shielding from others outside of the group. Group dynamics is based on group processes that develop within a group that is not present in a random collection of individuals“.

By this, Sniezek defines group dynamics as a tool to learn and socialize at the same time. Also, with group dynamics, ideas are shared, processed and assessed thereby promoting a change in an individual. The group is consists of different people which is why the output of a group is different with the output of an individual alone. The collaboration of ideas depicts a positive notion that is why as cliché as it is two heads are better than one..... and so more is better.

Large Class

In a single cohort, a large class may include 50-70 students. Burnett and Krause (n.d.) stated that it is effective that the learners of the large class are thinking about their topic and are engaged with the information being taught to them. A few of the strategies suggested by Burnett and Krause (n.d.) are as follows:

- 1) Be motivated and enthusiastic by capturing student’s attention.
- 2) Keep it lively by moving around.
- 3) Encourage interaction and engage with students during lectures.
- 4) Utility of several interactive activities to apply the learning from the lecture.
- 5) The need to regularly monitoring students’ understanding.

Furthermore, UNESCO (2006) defined large class as a class of more than 50 learners and as relatively perceived by teachers. It was stated from the booklet they produced that the students can benefit from large classes also. Since there is an extensive variety from their group, they can learn and share different ideas from each other. In their research about teaching strategies for a large class, UNESCO (2006) suggested to involve the students in facilitating the lessons, that is to make them feel that they can also contribute.

Profile of Learners

The learners were first year high school students of Brainshire Science School in Airport road Pasay city There were sixty learners, or the total population of the first year high school students of the said school. The age

bracket of these learners is from 12- 14 years of age. They are a mixed of girls and boys in terms of sex. These learners are deemed to be undergoing major changes in their body which is believed to be part of puberty.

Objectives

The primary objectives of the proposed teaching strategy include:

- 1) To be able to make the learners familiar and know the importance of basic hygiene tools in terms of dental/oral, facial and over all bodily hygiene.
- 2) To exhibit interaction within the large class.
- 3) To invite active participation from the learners.

Target Thinking Skills

The proposed teaching strategy targets the following thinking skills from the 16 habits of mind summarized by the Association for Supervision and Curriculum Development (2000):

1.)*Persisting*- there were three main activities in the workshop, each is crafted to make the learners want to win.

2.)*Taking Responsible Risks*- the students were exposed to activities that will test their risk taking behaviours and immediate decision making skills.

3.)*Thinking Interdependently*- Since the proposed teaching strategy is designed for a large class, decisions are expected to be done in collaboration, this thinking skill will enhance the interpersonal skills of the learners too.

4.) *Applying past Knowledge to new situations*- this skill was targeted on the pre-requisite of the workshop to somehow test the prior knowledge that the learners have.

5.) *Responding with wonderment and awe*- since the objective of the instructional plan is to invite active participation, activities were created in such a way that all students will participate and will engage themselves.

Procedure of implementation/Methods

The instructional plan was designed for a two hour workshop on hygiene and puberty. It is divided into three activities which addressed the objectives of the instructional plan.

The activities designed are interactive, promotes group dynamics and team work and are reward based. The instructional plan is designed in a workshop type of learning. The pedagogical approach is more democratic and invites active participation from the learners. It was also designed to heighten then attention span of the learners.

For the prerequisite, the teacher assessed prior knowledge of the students through question and answer. This is done to recall information on hygiene and puberty. The teacher facilitated brainstorming among the learners to explain why hygiene in puberty is important. The teacher asked the learners to identify the changes that they encounter in their body in the stage of puberty. The teacher provided several hygiene practices among different cultures too. She presented some ancient hygiene practices and compared it to the recent and the conventional for our society. The teacher explained how to deal with the changes that takes place in an adolescent's body. She also explained why these changes happen to them. The next paragraphs are the three main activities of the workshop conducted.

I SHALL REMEMBER

The first part was head started by an introduction; basically the teacher asked how the learners define the concepts hygiene and puberty. It was then followed by a memory game. In this part of the try out, the learners were divided into five groups, consisting of twelve members each. The memory game had two parts the first part required six members only. For the first part of the memory game the six learners per group were asked to pick a paper in a box. Each paper signifies one dental hygiene tool. They will tell the next learner what they have picked by whispering and the second learner will pick a paper too, bearing another dental hygiene tool and will now relay two dental tools until the sixth learner picks a paper. The sixth learner should relay the six dental tools to the first learner in any order, to complete the basic dental kit that an adolescent should have. The first team who gets the complete kit first to enumerate with the facilitator wins. The dental tools marked in the kit are tooth brush, tooth paste, mouthwash, floss, breath spray and breath mints.

The second part of the first activity is for facial care. The other six members for each group were tasked to do the same memory relay game. The facial kit to be completed consists of facial wash, facial toner, facial moisturizer, facial powder, oil blotter and facial scrub.

The first game was ended by integration of what they have learned. The facilitator came around and asked selected learners what they have learned from the activity. Of course, points were given to the winning groups.

IF THE TIME IS RIGHT

The second game is about general knowledge on basic hygiene. The groups were asked to form a circle. Basically, the second activity is like a quiz bee but with a twist. The title of the second activity is “if the time is right”. Each group will be given 100 minutes as a “time fund”. Before each question, each group should bid a certain number of minutes from their fund. The group with the highest bid shall be given the chance to answer the question. In case of a tie, the group who bid first shall be given the slot to answer. In case the group gets the question correctly, the minutes they bid shall be added to their minute funds but in the case that they will have a wrong answer, the minutes they have bid shall be deducted from their total funds. The questions are descriptive in nature, the facilitator will describe a hygienic tool that the learners shall answer after 10 seconds or less.

This part of the workshop provided the learners an avenue to make critical decision making as they have to be careful on how they will conduct every bid and every answer. With the constraint of time, they shall decide as a group as well that is why this part of the activity has promoted a great sense of group dynamics. It wrapped up with a q and a portion wherein the facilitator asked several questions from the learners on the things that they have realized in making a critical decision that greatly affects a team, not just themselves.

WHERE IT BELONGS

The last part of the workshop is about choosing the best possible answer. In this part of the activity, each group was given a moderator who holds one box containing different hygiene tools of all sorts. The group shall be allowed to go back to the box ten times only, allowing ten members of their team to get one each. They will be asked to pick the seven most used bath tools. After the time allotted to do the choosing (5 minutes), they shall be provided with a two minute sorting and decision making as a group on which seven most bath essential will be their final answer. The group may or may not utilize the maximum time allotted as the determinant of the winning group is as to whoever gets the seven most correct answer in the least possible time.

The final part of the workshop is an integration of all the realizations and learning encountered by the learners. Two members from each group were asked to share what they have learned. A summative assessment was conducted by asking for a brief answer on what some of the learners grasp from the entire workshop.

Results

As a result, all objectives were addressed from the activities conducted. The targeted thinking skills were also satisfied. As seen and heard in feedback provided by the students, they truly enjoyed the workshop. As part of personal observation, learners actively participated in all activities. The first objective is to be able to make the learners familiar with basic hygiene tools in terms of dental/oral, facial and over all bodily hygiene, at the integration of the first activity learners were able to grasp the list of these tools and they were able to know why these tools are important to their overall well being. The second objective was to know the importance of the concepts hygiene and puberty. They were able to give an in depth description of why the two concepts are essential in their lives. The last objective was conspicuously observed as all learners were able to participate actively, with awe, wonderment and enthusiasm. Selected feedback from the students are shown as follows:

My evaluation during our personal hygiene workshop is fun and exciting. There are many games and we've learned a lot about personal hygiene. - Jhaira Lanugan

My comment about the program is that it was awesome I've learned a lesson how to have a proper caring and maintaining our body clean - Jerald Soltes

It was fun and exciting because it had many games and I have learned about personal hygiene; tools and equipments for grooming. - Angelo Tayag

My evaluation is that the seminar was very enjoyable because there's a lot of activities. She taught us how to take care ourself and told us the different tools to take care of our body like shampoo and lotions. - Edrian Vizcarra

I had fun and I learned so many things about personal/proper hygiene. I like the activities. It's very related in the topic and it was so fun! That I cannot forget it, even though we didn't win I had fun. - Coleen Andres

The Personal Hygiene led by Ms. June Rose was great experience because I learned a lot of things from her in keeping our body clean. She explained the tips for us to be clean. Most of all, it was fun to know different tips and advices that she had given us in the seminar. - Louise Alpanta

The personal hygiene workshop was so fun because Ms. June is full of energy to teach us about personal hygiene and how to take care of ourselves to prevent sickness cause of any bacteria and because of that seminar. Now, I know how to take care of myself. - Millet Briones

The target thinking skills were also met. Persisting was met since the learners were able to maintain their determination to win and get the reward. Their drive to win was established and maintained until the end of the workshop. On taking responsible risks, learners were able to accomplish this on the second activity where they have to bid for time. The consequences of their decisions affect their performance as a group and to their overall score for the activity. On thinking interdependently, students were able to make critical decisions as a group. At a limited time, they were able to consolidate their decisions and rationale behind every suggested option that will work for the group performance. The fourth targeted thinking skill was achieved since they were able to apply past knowledge from their lessons to the quiz bee contest. Since the quiz bee has a twist, critical decision making was tested and hastened. The fifth targeted thinking skill is probably the most satisfied. The learners responded with so much enthusiasm. They played fairly, actively and happily. This is physically seen from how they responded to all the activities.

Finally, the result of the motivation is effective since it drove the learners' enthusiasm and persistence in order to actively participate and learn from the workshop. The reward system is said to be efficient in this manner of inviting participation from the learners.

Conclusions and Recommendations

As a conclusion, the proposed strategy is sufficient to handle a workshop for hygiene and puberty and other general education topics. It can carry out an interactive discussion between a teacher and her learners. The strategy proposed is good enough as a standalone workshop next time it will be implemented. Based on the results of the try out, the activities were fun and related to the topic. The employed method was done in such a way that it utilized the allowable time efficiently for a large class kind of teaching. A set of martial was provided for the teacher in order to manage the large class and since the teacher is not part of the organization (a resource speaker for that matter) the need to utilize martial is high. The martial are familiar with the students and vice versa. This way, they know how to handle the free riders and social loafers in the group.

The peer collaboration also helped increase the attention span of the learners. Even if they belong in a large class type of learning, the interactive activities which incorporated a lot of their motor skills paved an avenue to heighten the learning levels of the learners.

If the proposed instructional strategy is to be implemented, more time allotted is highly recommended since it could pass through the targeted thinking skills longer and better. Next time also, the teacher should make sure that the number of members per group is not very large in order to control and encourage the groups more. One part of the activity that should be carefully assessed is the giving of instructions since the learners are large in number it takes time to give instructions sacrificing the quality of information transferred to the learners. It should be consciously and cautiously handed over to make sure that each learner has a good grasp of the instructions. One of the most essential requirements for conducting an interactive workshop is to ensure the holistic understanding of the learners that they comprehended well what the whole workshop is all about. The problem with a fun filled workshop is the possibility of sacrificing the understanding of the main objective which is to educate and transfer knowledge. This workshop made sure that the activities bring along learning to the participants. One of the considerations to make in providing rewards to the learners as a means of motivation is to make it worthy of their persistence to win. It provided ease of pedagogical approach since it is made fun in a safe environment of also boosting their confidence

L2 learning of non-native speakers: Comparing Malaysia and the United Kingdom

Parilah M. Shah ^a Aminuddin Yusof ^b Aidah A. Karim ^c Rosseni Din ^d *

^a Faculty of Education, National University of Malaysia, 43600 UKM Bangi, Selangor, Malaysia

^b Faculty of Educational Studies, Universiti Putra Malaysia, 43400 UPM Serdang, Selangor, Malaysia

^c Faculty of Education, National University of Malaysia, 43600 UKM Bangi, Selangor, Malaysia

^d Faculty of Education, National University of Malaysia, 43600 UKM Bangi, Selangor, Malaysia

Abstract

This study examined the perceptions about second language (L2) or English language learning held by the students at the Universiti Kebangsaan Malaysia (UKM) and Sheffiled Hallam University (SHU). It further analyzed the respondents' views as related to language learning attitudes and language academic perceptions. Comparisons were made in the responses elicited from UKM and SHU students, as well as from the male and female subjects. A survey questionnaire was adapted from the one designed based on the works of Sparks, Ganschow and Javorsky (1993), Argaman and Abu-Rabia (2002), and Bell et al (2008). The instruments were used to gather the data from students taking the English language courses at both universities. The results revealed variations in response with respect to learners' perceptions about L2 learning. There were significant differences between UKM and SHU students with respect to some of the items related to language learning attitudes and academic perceptions. The paper also addressed the practical implications of the results.

Keywords: L2 learning; Non-native speakers

Introduction

Learning a second language (L2) is one of the significant experiences encountered by a student in an institution of higher learning. This is especially so if a particular second language, for instance the English language is used as the language of instruction in the institution/university or is used widely in reading and referencing tasks. If majority of the reading materials available in the university library are in the English language, then there is a great need for the university students to master their second language and improve their language competence. The learning or acquisition of another language is a complex and an intriguing process. It would take an individual a considerable period of time to acquire the target language, other than his/her own native tongue. Some second language acquirers would be more successful than others in acquiring a second language. This is dependent on the variables available to or exhibited by the learners; one of these which is crucial is the attitude-motivation factor. Educationists seem to frequently contribute views and suggestions that could increase the rate of second language acquisition or design materials that would enhance second language learning and mastery. Nevertheless, seldom would educationists investigate and document learners' perceptions and beliefs about their second language learning, experiences and world view. Investigations on students' perceptions should be conducted for several reasons: (i) educators would be aware about language learning from the learners' perspectives, (ii) learners' perceptions guide the way they behave and these can impact their learning outcomes, (iii) educational institutions can provide empowerment to the learners, and (iv) learners' views could lead to an improvement in the system of education.

Furthermore, investigations seem to be centred on learners of one particular setting and country. There is no research conducted comparing L2 learners in Malaysia and the United Kingdom (UK). The investigator believes that this research would provide a compelling contribution to the field of applied linguistics. A study of learners' perceptions would present a better understanding of students' performance and competence. According to O'Shaughnessy (1992) "perception is an experience" (p. 226) that assists and provides physical actions. Thus, learners' perceptions are learners' experiences that impact their actions and behaviour. A study of learners' perceptions would enable researchers to gain access into the learners' world view as well as into how they interpret their learning and learning experiences. The aim of this research is to examine the perceptions about

second language learning (L2) or English language learning held by non-native speakers of English in Malaysia and the United Kingdom (UK). It further examines the subjects' views as related to language learning attitudes and language academic perceptions. This study compares the responses elicited from the Malaysian subjects and the UK subjects, as well as from the male and female respondents. This investigation addresses the following research questions (RQ): RQ (1) Is there a significant difference between the UKM and SHU non-native speakers with respect to language learning attitudes and academic skills?; and RQ (2) Is there a significant difference between the male and female non-native speakers with respect to language learning attitudes and academic skills?

Review of Literature

Two theoretical perspectives of second language learning and acquisition that form the basis of this study. The first one is Gardner's Socio-Educational Model and second, it is Cummin's Model of Academic Language. Previous studies related to this investigation were also discussed. Gardner's Socio-Educational Model (1985) asserts that second language acquisition takes place in a social and cultural context. It proposes that the cultural beliefs and the community that the individuals are in, may influence the general language proficiency. For instance, if the cultural belief is that second language learning is difficult, then there would be low level of achievement. The model also indicates that there are four different kinds of individual differences, for instance intelligence, language aptitude, motivation and situational anxiety. Attitudes and personality would have their effect through one of these four components. Cummin's Model of Academic Language (Cummins, 1992 cited in Short, 2002; Snow, Met & Genesee, 1992) considers the integration of language and content instruction. According to Snow, Met and Genesee (1992), Cummins posits a paradigm in which the language tasks may be characterized as context reduced or context embedded and in which the tasks addressed through language may be cognitively demanding or undemanding. This model is based on the basic interpersonal communication skills (BICS) and cognitive academic language (CALP) distinction. BICS refers to the language proficiency in everyday communication context while CALP concerns the manipulation of language in decontextualized academic situations (Cummins, 1992, 2003).

Related literature generally agrees that a measure of attitudes and motivation toward L2 learning would relate to achievement in that language (Gardner, 1985). In general, positive attitudes towards the L2, its speakers, and its culture can be expected to improve and enhance learning. (Ellis, 1994; Gardner, 1985). Tremblay and Gardner (1995) found positive language attitudes orient Canadian students toward developing specific learning goals and thus improved achievement in French courses. Among the results found by Shah (1999; 2002) was that the research subjects showed lack of positive attitude and low motivational intensity due to minimal effort put on L2 learning; this led to low English as a Second Language (ESL) achievement and academic achievement.

Sidek and Maher (2009) conducted a study on language learning attitudes and English language proficiency of first year Quranic students at KUIM. The research aimed to identify language learning attitude and its relationship with English Language proficiency amongst second language learners of English in KUIM. The results indicated that the learners showed less favourable language learning attitude as portrayed by the inclination of personality traits towards the less favourable attitude zones. It could be inferred that language learning attitude did influence the subjects' performance in their English language examination as pointed out by their final English examination results at the end of the first semester of their freshman year. The researchers recommended cooperative learning strategies in the English language activities conducted in the classroom as to improve the students' language learning attitude.

A study on motivation and attitude in learning English among UiTM students was carried out by Bidin, Jusoff, Aziz, Salleh and Tajudin (2009) in the northern region of Malaysia. The purpose of the investigation was to describe the relationship between the students' motivation and attitude and their English language performance. The questionnaires were distributed to the part two students from three UiTM campuses in the northern part of Malaysia. It was found that:

...the mean scores analysis of the motivation and performance revealed that the students were more extrinsically than intrinsically motivated when learning English. Nevertheless, the one-way ANOVA test indicated no significant differences. To test the students' attitudes and their performance, the Spearman Rho Rank-Order Correlation Coefficient was used and the analysis revealed a significant correlation between attitude

and achievement. The one-way ANOVA also showed that there is a significant difference. The mean scores was used to find out whether there is any difference between the respondents of different gender and their attitude in learning English. The results showed the existence of significant difference (p. 16).

Further, “the mean for the male participants was 2.95, while the mean for the female respondents was 3.01. When comparing the two means, “the female respondents’ mean is slightly higher than the male respondents’. Therefore, the female respondents have slightly better attitude in learning English compared to the male respondents” (p. 18).

Another study was conducted by Hansheng Yan (2009) on relations between gender difference and English vocabulary and the overall proficiency level. The aim of the study was to compare the cognitive CET-4 vocabulary, applied vocabulary and CET-4 scores of male group of English learners with that of female group of English learners in the Qufu Normal University in China. The results of the study showed that there were obvious differences in the students’ CET-4 cognitive vocabulary, applied vocabulary and CET-4 scores, and that the female group always excelled the male group in terms of both vocabulary and CET-4 scores. Thus, it can be concluded that in second language learning in the university, “there exist obvious gender differences among males and females, and that female have language advantages. Finally, it is pointed out that these conclusions are just exploratory due to limitations of this study, and more research is required to make clear relations between gender and second language learning” (p. 109).

An interesting research was conducted by Ladegaard (2007) in a rural community in Denmark. He analysed the language attitudes and linguistic behaviour among adolescents of both sexes. The results concluded that the traditional pattern of boys/men speaking in a significantly more non-standard way than girls/women is reproduced in the present context. The male informants express more genuinely positive attitudes to the language and culture of the local community than the female informants.

There is another study conducted by Shah and Ng (2005) which investigated on the reasons as to why international students from China and Indonesia did not perform well in the English Improvement Programme (EIP) available at Inti College, Malaysia. It addressed the students' attitudes towards Acrolect Malaysian English and their motivation to learn the language. Survey questionnaires were utilized to gather the data from the EIP students. The findings revealed that the students showed negative attitudes towards Acrolect Malaysian English. The preferred models were the native English speaker models, for instance Standard American English and Standard British English. In terms of motivation, the students were instrumentally motivated than integratively motivated. It was also found that despite high motivational intensity or effort, students' language performance was poor. This shows that high degree of effort alone without language desire or positive attitude is not sufficient for language learning success.

Shah, Yusof, Al-Bataineh, Yusop, Haron, Ong and Ahmad (2007) addressed the L2 learning beliefs the Malay students in a Malaysian university. The study examined the subjects’ beliefs in terms of the nature of second language learning, difficulty of second language learning, and second language learning aptitude. Survey questionnaires that were issued to the subjects were adapted from Horwitz’s (1987) Language Learning Beliefs Inventory. One of the most important findings was that majority of the respondents felt that it is not necessary to know about the English-speaking culture in order to speak English. They just would like to learn the English language per se. Over two-third of the respondents judged that vocabulary and grammar to be the most important for language learning. The participants seemed to believe that producing utterances with accurate vocabulary and correct grammar would enhance one’s credibility. They did not seem to believe in experimenting with the second language at the initial stage of learning. Over half of the participants considered some languages are easier to learn than others, while 43% indicated that English is a difficult language. English language is far from similar to the subjects’ first language (Malay language) in terms of language structures and rules. Majority of the respondents were not sure about having special language learning ability. This could impede their second language learning process and acquisition could be delayed.

In another related study Shah, Yusof, Sulaiman, Kudus, Yusof and Latiff (2009) compared the responses from the male and female subjects. One of the results revealed that both the males and females believed that learners who already acquired the L2 would face less difficulty in learning the third one. Both gender groups probably felt that these learners would inevitably employ the language learning strategies that they used to acquire the L2 in their attempt to acquire any subsequent languages. The subjects also resorted to translation throughout their learning process. Being in a climate where the Malay language was a dominant language, translating, word borrowing, code-switching and making associations between the two languages were the best options for the learners as they believed that these activities could hasten their pace of learning another language

Methodology

This research employed a survey and quantitative approach in the process of examining the perceptions of experiences held by the university students in Malaysia and the United Kingdom. A survey instrument designed by well-known researchers was adapted and used to obtain the participants' L2 learning experiences. The participants were students from Universiti Kebangsaan Malaysia (UKM), Malaysia and Sheffiled Hallam University (SHU), United Kingdom who were non-native speakers of the English language. Random selection approach was employed in choosing the respondents. The data were collected from one hundred and sixty-one students (n=161); out of the one hundred and sixty-one subjects, eighty-nine (n=89) were UKM students and another seven-two (n=72) were from SHU. The age range of the sample was 19-24 years, and there were 74 males and 87 females who responded to the survey instruments. Thirty-three (n=33) males and fifty-six (n=56) females were from UKM participated, while forty-one (n=41) males and thirty-one (n=31) females from SHU responded to the questionnaires. A survey questionnaire was adapted from the one designed based on the works of Sparks, Ganschow and Javorsky (1993), Argaman and Abu-Rabia (2002), and Bell et al (2008). T-test was conducted to analyze the data.

Results of the Study

The results of this investigation are presented in terms of answering two research questions. The questions are: (RQ1) Is there a significant difference between the UKM and SHU non-native speakers' with respect to language learning attitudes and academic skills?; and (RQ2) Is there a significant difference between the male and female non-native speakers with respect to language learning attitudes and academic skills?

To address RQ1 – “Is there a significant difference between the UKM and SHU non-native speakers' with respect to language learning attitudes and academic skills?”, t-test was conducted to compare differences between UKM and SHU students with respect to the mentioned aspects. Under L2 learning attitudes, fourteen items were analyzed, and in which there are four items each for “motivation” and “anxiety,” and three items each for “attention” and “self-confidence,” as shown in Table 1.

Table 1: English Language Learning Attitudes

No.	Question Items	UKM	SHU	p-value
1.	I define being successful for my English language course as an A scale.	2.27	2.22	.784
2.	I want to learn the English language.	2.28	2.15	.426
3.	I feel I should have studied harder for my English language courses.	2.15	2.31	.187
4.	I feel I have spent too much time studying for my English language courses.	3.46	3.74	.064
5.	I feel my attention wanders more easily in my English language course than my other courses.	3.28	3.85	.000*
6.	I feel I fall asleep more easily in my English language course than my other courses.	3.4	3.89	.003*
7.	I am more easily distracted when I study an English language course than my other courses.	3.2	3.79	.000*
8.	I have not gotten nervous and tense when studying for my English language course.	3.27	2.43	.000*
9.	I do not worry about my English language course.	3.45	2.86	.002*
10.	I feel anxious about my English language exams.	2.47	3.72	.000*
11.	I feel nervous and afraid about participating in class discussion during my English language course.	2.53	2.96	.028*
12.	I do not feel capable of studying my English language course.	3.36	3.65	.086
13.	I feel that I am not in control of my grades in my English language course.	2.87	3.79	.000*
14.	I will never be successful in an English language course.	4.18	4.00	.333

(* indicates significance)

Under the “motivation” aspect, all the four items indicated no statistically significant difference between the two universities, even though the means for UKM and SHU seemed to indicate differences. For instance, for the item “being successful in the English language is an ‘A’ scale,” the mean scores of UKM and SHU students were 2.27 and 2.22 respectively; this difference is not significant because $p > .05$. Other items that showed no significant difference were “I want to learn the English language” (UKM = 2.28; SHU = 2.15), “should have studied harder for my English language course” (UKM = 2.15; SHU = 2.31) and “spent too much time studying for my English language courses” (UKM = 3.46; SHU = 3.74). Although there was significant difference in

English language attitude between the two universities, the students in both universities seemed to exhibit positive attitude towards target language learning.

All of the items under “attention” showed significant differences in the means between the two universities. As can be seen, the items are “my attention wanders more easily in my English language course” (UKM = 3.28; SHU = 3.85), “fall asleep more easily in my English language course” (UKM = 3.4; SHU = 3.89) and “easily distracted when I study the English language course” (UKM = 3.2; SHU = 3.79). The SHU participants disagreed more to all these item than the UPM subjects; this means that the UKM students were less focused in their L2 learning than their SHU counterparts

Like the aspect on “attention”, all the items on “anxiety,” exhibited significant differences in the means. They are “I have not gotten nervous and tense when studying for my English language course” (UKM = 3.27; SHU = 2.43), “I do not worry about my English language course” (UKM = 3.45; SHU = 2.86), “I feel anxious about my English language exams” (UKM = 2.47; SHU = 3.72), and “I feel nervous and afraid about participating in class discussion during my English language course” (UKM = 2.53; SHU = 2.96). The data showed that the UKM students were more anxious than the SHU students during English language learning. They were more nervous, worried and afraid than the SHU participants. It can be inferred that the United Kingdom English speaking setting made it more conducive and less threatening to the international students learning English as another language.

With regard to self-confidence, only one item revealed significant difference in the means; the item is “I am not in control of my grades” (UKM = 2.87; SHU = 3.79). The SHU students tended to disagree more to this item than the UKM learners; this means that they exhibited a greater confidence than the UKM participants. The insignificant items are “I do not feel capable of studying for my English language course” (UKM = 3.36; SHU = 3.65) and “I will never be successful in the English language course” (UKM = 4.18; SHU = 4.00).

As can be seen in Table 2, nine items of L2 academic skills were analyzed.

Table 2: English Language Academic Skills

No.	Question Items	UKM	SHU	p-value
1.	I learn the rules of grammar in my English language easily.	3.64	3.26	.036*
2.	I learn the vocabulary of the English language easily.	3.19	2.33	.000*
3.	I have difficulty spelling words in the English language.	3.16	3.68	.001*
4.	I have difficulty in conversing/speaking in the English language.	2.67	3.15	.014*
5.	I have difficulty in listening to and understanding the English language as it is spoken.	3.07	3.74	.000*
6.	I read in the English language course easily.	3.07	2.25	.000*
7.	I write in the English language easily.	3.71	3.58	.452
8.	I have difficulty in translating the English language into my first language.	2.91	2.36	.001*
9.	I translate from my first language to the English language easily.	3.6	3.53	.679

(* indicates significance)

Seven items that revealed significant differences in mean scores between the two universities are: (i) “I learn the rules of grammar easily” (UKM = 3.64; SHU = 3.26); (ii) “I learn the vocabulary easily” (UKM = 3.19; SHU = 2.33); (iii) “I have difficulty spelling words” (UKM = 3.16; SHU = 3.68); (iv) “I have difficulty in conversing/speaking in the English language” (UKM = 2.67; SHU = 3.15); (v) “I have difficulty in listening to and understanding the English language as it is spoken” (UKM = 3.07; SHU = 3.74); (vi) “I read in the English language easily” (UKM = 3.07; SHU = 2.25); and (vii) “I have difficulty in translating the English language into my first language” (UKM = 2.91; SHU = 2.36). Compared to the SHU subjects, the UKM respondents showed a higher disagreement about the grammar and vocabulary learning being easy. The UKM students also felt it was difficult listening, understanding, speaking, reading and spelling in the English language; the SHU subjects did not feel such skills being very difficult. The higher agreement about the difficulty of translating from their first language to the English language was shown by the UKM participants more than the SHU subjects.

Two items that showed no significant differences in mean scores between the two universities are: (i) “I write in the English language easily” (UKM = 3.71; SHU = 3.58); and (ii) “I translate from my first language into the

English language easily” (UKM = 3.6; SHU= 3.53). Although there were no significant differences between the two university students, both groups seemed to encounter difficulty writing in another language and translating from their mother tongue into the English language.

To answer RQ2: “Is there a significant difference between the male and female non-native speakers with respect to language learning attitudes and academic skills?”, t-test for was conducted to compare differences between male and female students with respect to the mentioned aspects. Under L2 learning attitudes, fourteen items were analyzed (refer to Table 3).

Table 3: English Language Learning Attitudes

No.	Question Items	Male	Female	p-value
1.	I define being successful for my English language course as an A scale.	2.22	2.28	.735
2.	I want to learn the English language.	2.45	2.03	.009*
3.	I feel I should have studied harder for my English language courses.	2.27	2.17	.404
4.	I feel I have spent too much time studying for my English language courses.	3.68	3.51	.257
5.	I feel my attention wanders more easily in my English language course than my other courses.	3.51	3.55	.807
6.	I feel I fall asleep more easily in my English language course than my other courses.	3.39	3.82	.011*
7.	I am more easily distracted when I study an English language course than my other courses.	3.59	3.36	.175
8.	I have not gotten nervous and tense when studying for my English language course.	2.55	3.18	.001*
9.	I do not worry about my English language course.	2.95	3.39	.016*
10.	I feel anxious about my English language exams.	3.19	2.9	.121
11.	I feel nervous and afraid about participating in class discussion during my English language course.	2.86	2.6	.178
12.	I do not feel capable of studying my English language course.	3.53	3.46	.699
13.	I feel that I am not in control of my grades in my English language course.	3.24	3.31	.698
14.	I will never be successful in an English language course.	3.99	4.2	.249

(* indicates significance)

The four items that indicated statistically significant differences of mean scores between the males and females are: (i) “I want to learn the English language” (male = 2.45; female = 2.03); (ii) “fall asleep more easily in my English language course” (male = 3.39; female = 3.82); (iii) “I have not gotten nervous and tense when studying for my English language course (male = 2.55; female = 3.18) and (iv) “I do not worry about my English language course” (male = 2.95; female = 3.39). It can be seen that the males showed higher agreement than females about wanting to learn the English language. In terms of attention, the males tended to show lack of attention during target language learning. The females disagreed more towards not being nervous and tense and therefore seemed to experience more anxiety. In addition, the females seemed to be worried more about their L2 learning than the males. The other ten items that showed no significant differences are: (i) “being successful in my English language course is an ‘A’ scale”, (male = 2.22; female = 2.28); (ii) “should have studied harder for my English language course” (male = 2.27; female = 2.17); (iii) “spent too much time studying for my English language” (male = 3.68; female = 3.51); (iv) “I feel my attention wanders more easily in my English language course” (male = 3.51; female = 3.55); (v) “easily distracted when I study an English language course” (male = 3.59; female = 3.36); (vi) “I feel anxious about English language exams” (male = 3.19; female = 2.9); (vii) “I feel nervous and afraid about participating in class discussion during my English language course” (male = 2.86; female = 2.6); (viii) “I do not feel capable of studying for my English language course” (male = 3.53; female = 3.46); (ix) “I am not in control of my grades” (male = 3.24; female = 3.31); and (x) “I will never be successful in an English language course” (male = 3.99; female = 4.2).

As shown in Table 4, for L2 academic skills, nine items were analyzed.

Table 4: English Language Academic Skills

No.	Question Items	Male	Female	p-value
1.	I learn the rules of grammar in my English language easily.	3.86	3.14	.000*
2.	I learn the vocabulary of the English language easily.	2.92	2.71	.222
3.	I have difficulty spelling words in the English language.			

		3.31	3.46	.360
4.	I have difficulty in conversing/speaking in the English language.	2.86	2.91	.825
5.	I have difficulty in listening to and understanding the English language as it is spoken.	3.38	3.36	.899
6.	I read in the English language course easily.	2.77	2.64	.432
7.	I write in the English language easily.	3.65	3.66	.968
8.	I have difficulty in translating the English language into my first language.	2.41	2.89	.003*
9.	I translate from my first language to the English language easily.	3.92	3.26	.000*

(* indicates significance)

Three items that revealed significant differences in mean scores between the males and females are: (i) “I learn the rules of grammar easily” (male = 3.86; female = 3.14); (ii) “I have difficulty in translating the English language into my first language” (male = 2.41; female = 2.89); and (v) “I translate from my first language into the English language easily” (male = 3.92; female = 3.26). With respect to language rules, the males tended to feel the mastering of grammar as being difficult to achieve. The males more than the females felt that translation was a difficult process.

Six items that showed no significant differences in mean scores between males and females are: (i) “I learn the vocabulary easily” (male = 2.92; female = 2.71); (ii) “I have difficulty spelling words” (male = 3.31; female = 3.46); (iii) “I have difficulty in conversing/speaking in the English language” (male = 2.86; female = 2.91); (iv) “I have difficulty in listening to and understanding the English language as it is spoken” (male = 3.38; female = 3.36); (v) “I read in a English language course easily” (male = 2.77; female = 2.64); and (vi) “I write in the English language easily” (male = 3.65; female = 3.66).

Discussion and Implications

Since the subjects were from different language setting and circumstances, the data revealed different participants’ responses and a variation of subjects’ perceptions about L2 learning. Among the important results in the aspect of attitude/motivation were that majority of the subjects from both UKM and SHU wanted to learn English and most indicated paying attention in class. Despite this, not much of their time was allocated outside class towards the learning of the English language. Almost half of the respondents were worried about target language learning even though majority believed that they had the capability and would be successful. Quite a majority felt that they should have studied harder; this gave the indication that they had not been putting on a maximum effort in the learning of ESL. The results did not indicate that a great majority of the subjects giving maximum attention to L2 learning. This low motivational intensity indicated that the degree of attitude toward the learning of another language exhibited by the students was not very high. One of Shah’s (1999, 2002) findings revealed that underachievers exhibited lack of positive attitude and low motivational intensity towards L2 learning; similarly this study indicated that these research subjects of mixed ability and staying in two different settings, showed lack of positive attitude and also somewhat low motivational intensity towards the learning of L2. With respect to academic skills, majority admitted facing difficulty in learning the rules of grammar. About half of the respondents encountered difficulty in spelling, speaking, writing and reading. Nevertheless, quite a large number of the learners found translation a difficult process and this means that they need aid in this area. The UKM and SHU students also held different perceptions with respect to L2 learning. Some of their responses were significantly different from each other. The male and female respondents also exhibited different perceptions with respect to L2 learning; again, some of the items were significantly different from each other.

This research provided useful insights on participants’ perceptions on L2 learning. Majority of the respondents would like to learn another language, and hence implying that they were aware on the importance of being bilingual and the significant position of the English language in the global setting. But, there was lack of effort and energy put on the learning of an additional language; this effort should be increased and this means increasing the time of learning. The administrators from UKM and SHU should allocate more time and exposure to teaching of English, and in the case of UKM, a more formal and authentic English language situation should be created. The structures of a language should be emphasized and effective instruction of grammar should be employed. In the analysis of gender differences, the results revealed that more females than males gave more attention towards L2 learning, and also more males than females faced difficulty in areas such as anxiety and

translation. Results such as these provide educationists with reliable evidences with respect to which sex group need more coaching in L2 learning.

Since most participants need the translation skill, the language programs in both universities could be improved in terms of providing more translation coaching. Although this could be quite difficult to be conducted in SHU due to the presence of international students of differing mother tongues, avenues should be provided so that extra help could be forwarded in non-formal setting, for instance obtaining extra aid from students' own nationalities who are both competent in the English language and their first language. As in the case of Malaysia what the Ministry of Education, Malaysia could embark on, at the macro level is the introduction of a bilingual program, emulating the two-way bilingual program existing in the United States. The present language policy should perhaps be changed; a bilingual language policy would be more appropriate. More school subjects should be taught in the English language. Thirty to fifty per cent of the school hours should be reserved for the use of English in the teaching of some other subjects. To ensure that Malaysians could function effectively globally and internationally, this practice should be introduced; this could prevent further drop among Malaysians in L2 competency and fluency.

Human Resource Management in the Implementation of Universal Basic Education in Nigeria: A Case Study of Some Selected Junior Secondary Schools

Bashir Maina^a Michael Omotayo Dare^{b*}

^aDR (Ph.D), Department of Educational Foundations and Curriculum, Ahmadu Bello University Zaria, Nigeria

^bDR (Ph.D), Department of Educational Foundations and Curriculum, Ahmadu Bello University Zaria, Nigeria

Abstract

The study investigated the level of human resource management in the implementation of Universal Basic Education in Nigeria. The study specially examined the adequacy and competency of teachers in the teaching/learning process in selected Junior Secondary Schools in Kaduna, Nigeria. A total of ten (10) randomly selected junior secondary schools and fifty (50) randomly selected teachers were used for the study. Questionnaire was used to gather data from respondents. Data was analysed using frequencies and percentages. The findings revealed that most teachers are not adequately trained to teach in secondary schools in Nigeria. It was therefore recommended among others, that teachers and educational managers need to be provided with opportunities to improve their knowledge, skills, competency and understanding in their subject matters. Furthermore, in order to achieve the fundamental objective of the Universal Basic Education Programme which is to provide free, compulsory, uninterrupted nine year basic education to all school age children in every community in Nigeria, there is need to put in place a well planned and organised programme to train and re-train teachers regularly to boost their morale and enhance their performance.

Keywords:

Introduction/background of the study

Human resource management is an integral part of any organisation. It is crucial to maintaining and furthering the relevance, effectiveness and productivity of an organisation. An organisation refers to any complex institution such as government department, school system or company. The survival of an organisation is largely dependent on the quality of management or administrative services available.

Human resource management in the context of this research refers to the availability and adequacy of personnel for the implementation of the universal basic education programme.

Anaka and Anaekwe (2001) assert that there is population explosion across all levels of education without a corresponding increase in number of teaching staff. This has resulted in high student-teacher ratio which can jeopardize quality. For instance, pupils' population increased from six million to twelve million within four years UBE scheme. Soaring students' population should necessitate recruitment of more teachers.

It has often noted that no educational system can rise above the quality of its teachers. Obanya (2000) lamented that many educational initiatives gave dailed mainly because they did not take due account of the "teacher factor". Teachers are no doubt the pivot on which educational growth, development and quality hangs. The enrolment explosion rising from the implementation of the UBE programme necessitate the need for the production of quality teachers. Oyewobi (2002) while emphasizing that establishing new teacher education colleges as a means of providing teachers for the UBE programme within the shortest time might be too involving financially, recommended that the existing colleges of education can be expanded for the production of more teachers. Obanya (2000) suggested that teachers' association, universities, colleges of education, the National Teachers' Institute for Educational Planning and Administration (NIEPA) should be fully mobilized to develop a more systematic career improvement oriented and hands-on-skills targeted at continuing education programmes for all categories of teachers. All these are expected to enhance the productivity of teachers as well as guaranteeing quality assurance in the UBE programme.

The present study aims at assessing the availability, adequacy and management of human resources in the implementation of the Universal Basic Education Programme using some selected Junior Secondary Schools as case studies.

Review of related literature

Universal Basic Education (UBE) in Nigerian is a policy that is designed to cater for all children of school age (6 – 11years) nomadic population, urban slums, adult illiterates, school drop-outs and migrant people in physically isolated settlements, as well as people that may be considered as learners with special needs (Aboyi 2004). It is a programme which Ocheta and Olele (2009) says is a compulsory educational policy for Nigerian children irrespective of such bottle necks and handicaps associated with location, occupation, religion race and gender. This indicate that cultural differences, social economics, religions and location factors should not be an excuse (hindrance) to accessibility to basic education to the Nigerian child. This clearly shows that UBE's main objective is to eradicate illiteracy out of Nigeria, in order to achieve education for all (EFA), this also shows a step towards realization of millennium Development Goal (MDGs) and a step in making all Nigerian children reap the dividends of national and global technology breakthrough. As Mkpa (2005) said "the critical issues that requires the attention of UBE are access equity and quality basic education". This can be achieved via efficient and effective human resources management.

The purpose of Universal Basic Education in Nigeria as highlighted by Universal Basic Education hand book (2007) include:

- Developing the entire citizenry a strong consciousness for education and the commitment to its vigorous promotion.
- The provision of free Universal Basic Education for every Nigerian child of school age.
- Drastically the incidence of drop-out from the formal school system (through improved relevance, quality and efficiency).
- Catering for young persons who for one reason or another, have had to interrupt their school as well as other out-of-school children/adolescents through appropriate forms of complementary approaches to the provision and promotion of basic education.
- Ensure the acquisition of the appropriate levels of literacy, numeracy, manipulative, communicative and life skills as well as the ethnic, moral and civic values needed for laying a strong foundation for life-long learning.

UBE programme has the potential to make the citizens productive and useful to themselves the country and the world at large if well implemented by human resource. Effective human resource management according to Wokocha (2006) is the key to the provision of high quality educational experiences.

The objectives of the UBE point to the fact that Nigeria wants all her citizens not just to have access to basic education but quality basic education, whether they are in Urban or Rural areas, primary or junior secondary schools. The above goals can be attained through effective human resource management. In view of this, the need for this study cannot be overemphasised.

Objectives of the study

To determine the availability, adequacy and management of human resources for the implementation of Universal Basic Education in selected Junior Secondary Schools in Kaduna State.

Research Question

To what extent are the human resources available, adequate and properly managed for the implementation of Universal Basic Education in Junior Secondary Schools in Kaduna State?

Methodology

The study adopted a descriptive survey design. Oppenhein (1992) described a survey as a study that involves a planned collection of data over a large area for the purpose of description. Cressey (1982) described it as a study that examines a situation as it is without any attempt to manipulate the dependent variables. The study population comprised all the 393 Junior Secondary Schools in Kaduna State and 175,655 students enrolled in such schools. A total of ten (10) schools and fifty (50) randomly selected teachers were used for the study. The

instrument used to collect data for the study was questionnaire. The data collected was analysed through the use of frequency counts and percentages.

Table 1: Availability of Human Resources (teachers) in ten (10) selected schools in Kaduna.

S/N	School	Number of teachers available	Number of teachers required
1	01	34	15
2	02	36	6
3	03	35	12
4	04	33	10
5	05	60	11
6	06	21	10
7	07	19	13
8	08	32	12
9	09	43	11
10	10	35	10

The data on table 1 indicates that the number of teachers available are not adequate for the successful implementation of the UBE programme in Kaduna.

Table 2: Availability of Human Resources (non-teaching staff) in ten (10) selected schools in Kaduna.

S/N	School	Number of non-teaching staff available	Number of non-teaching required
1	01	Nil	5
2	02	Nil	6
3	03	Nil	5
4	04	Nil	5
5	05	Nil	6
6	06	1	4
7	07	2	4
8	08	Nil	5
9	09	Nil	5
10	10	Nil	5

Table 2 indicates that most schools do not have non-teaching staff. The few schools that have non-teaching staff still require more. Both teaching and non-teaching staff are necessary requirement for the success of the UBE in Kaduna.

Table 3: Qualification of teachers in ten (10) selected schools

S/N	School	Number of teachers qualified		Total number of teachers unqualified		Total number of teachers
1	01	20	58%	14	41%	34
2	02	26	72%	10	27%	36
3	03	21	62%	13	38%	34
4	04	24	73%	9	27%	33
5	05	49	82%	11	18%	60
6	06	12	57%	9	43%	21
7	07	11	58%	8	42%	19
8	08	22	69%	10	31%	32
9	09	31	72%	12	28%	43
10	10	21	60%	14	40%	35

Table 3 above indicates that some teachers are not qualified to teach in Junior Secondary Schools in Kaduna. Most of the teachers who are not qualified are ND, HND or graduates without teaching qualification. The quality of teaching staff in the JSS is important for the success of UBE. Table 3 indicates their qualification in compliance with the minimum standard of NCE teaching qualification at the basic education level. Given the expectation that product at this final basic educational level are supposed to achieve sound measure of self attainment at their chosen vacations, it is absolutely necessary for teachers to attain the minimum standard qualification required to function effectively at this level. The Universal Basic Education Programme requires qualified teachers for its successful implementation. The success of any organisation is a resultant effect of quantity and quality of its working force.

Table 4: Students' Enrolment

S/N	School	Enrolment		Total
		Male	Female	
1	01	0	1022	1022
2	02	763	1798	1798
3	03	0	1022	1022
4	04	444	482	926
5	05	0	1974	1974
6	06	931	0	931
7	07	452	598	1050

8	08	470	505	975
9	09	463	300	763
10	10	1000	0	1000

The enrolment figures in Table 4 indicates that the teacher pupil ration in some of the schools is above 1:30 as recommended by the National Policy on Education.

Conclusion

In any educational system, the teacher is an important variable whose functions can enhance or deter the realization of her goals. The success or failure of such a system therefore, to a large extent, will depend on the teacher's effectiveness for no educational system can rise above the quality of teachers. Human resource management is therefore, expected to occupy a prominent place in the educational system. Nigeria is still far from having the calibre of teachers who can actually effect the kind of change desired in children and cater for the individual differences that exists among the children.

The shortage of teachers found in this study in Junior Secondary Schools implies that adequate planning might perhaps not have taken place in Kaduna State for the recruitment of teachers to the schools. Enrolment of students which is always on the increase implies the need for effecting planning for future supply of teachers to schools.

The findings of this study has led to the conclusion that teacher availability has not been fully embarked upon in the state. This is evident in the findings of the study which shows that teaching manpower was not adequately available in the schools.

The success of the UBE programme depends on the availability and effect management of relevant human resources, because quality education depends on the quality of teachers and other relevant staff available. It is obvious from this study that the relevant human resources for the survival of UBE are not adequate.

Consequently, implementation of the programme will continue to suffer very serious setback if the required human resources are not provided urgently.

Recommendations

- Based on the findings of this study, it was recommended that the state government should recruit more teachers on annual basis into Junior Secondary schools in the state in order to meet up with the influx of students into the schools. This is necessary in order to achieve the objectives of the Universal Basic Education which includes, among others, to enable pupils achieve permanent literacy and numeracy and to build in them the ability to communicate effectively.
- State Universal Basic Education Board, Kaduna and Local Government Areas should monitor and surprise teachers regularly to ensure they stay on the job. State Universal Basic Education should recruit non-teaching staff in the schools where they are available in short supply.

Dil Derslerinde Sözcük Öğretme Yöntemlerinin Yeterliliği-Türkiye Örneği

Şükran Dilidüzgün^{a*}

^a İstanbul Üniversitesi

Özet

İletişimin tam olarak gerçekleşebilmesi göndericinin düşüncelerini alıcıya tam olarak aktarabileceği sözcükleri bilme/kullanma yeterliliğini gerektirir. Sözcük dağarcığı ne kadar genişse insanın kendini anlatma ve iletileri anlayabilme yetisi o kadar gelişmiştir. Günlük yaşamda hayatı devam ettirebilecek sayıda sözcük kullanılır. İnsanlar; bilişsel gelişimleri ve entelektüel düşünebilmeleri için kurumsal boyutta, kavram alanlarını genişletici bir eğitime gereksinim duyarlar. Dil derslerinde ders kitaplarındaki sözcükler ve sözcük öğretim yöntemleriyle sınırlı kalmaktadır. Bu nedenle, ders kitaplarında sözcüklerin, uzun süreli bellekte depolanıp istendiğinde geri çağrılmasını sağlayacak yöntemler olmalıdır. Araştırmanın amacı, Türkçe ders kitaplarındaki sözcük öğretim yöntemlerinin yeterliliğini sorgulamak ve bulgular ışığında önerilecek çalışmalarla alana katkı sağlamaktır. Önce, örneklem olarak alınan 6. Sınıf Türkçe ders kitabındaki sözcük öğretim yöntemleri betimsel olarak sınıflandırılmıştır. Daha sonra, bu kitabı bir sene önce okuyan, Türkiye'nin farklı bölgelerinden örneklem olarak alınan 180 7. Sınıf öğrencisine, bu kitaptan seçkisiz yöntemle belirlenen sözcüklerin anlamlarının irdeleneceği sözcük testi uygulanarak öğrencilerin sözcükleri hatırlama düzeyleri saptanıp bu yöntemlerin etkililiği sorgulanmıştır. (Proje, İÜ. BAP birimince 39371 no ile desteklenmiştir.)

Anahtar kelimeler:

Giriş

Dil; dünyanın, farklı kültürlerce yapılan sınıflamalar ve değerlerle yorumlanıp ses imgeleriyle kodlanmış şekli olduğundan dil öğrenme de aslında bir kod çözme eylemidir. Her dil dünyadaki nesnelere, olguları, olayları farklı işlevlerle ve değerlerle sınıflandırır ve farklı dil öğeleri (sözcükler) ile adlandırır, kodlar. “Dilin iskeleti dil yapılarından oluşuyorsa, sözcük dağarcığı en önemli organı ve etini temin etmektedir” (Harmer, 1997, s. 153). Bireyler, dillerinin geliştiği oranda, yani ne kadar çok sözcük bilirlerse, dünyayı o kadar çözümler, kavram alanlarını genişletip olgular arasındaki ilişkileri çözme ya da farklı ilişkileri görme yetilerini geliştirebilir, kısaca düşünebilirler. Apaydın'ın (2007), Lewis (1981)'tan aktardığı gibi, “Zengin ve dinamik bir sözcük hazinesi kadar kuvvetli bir silah yoktur.” Anlama ve anlatma becerisi sözcük dağarcığı ile doğru orantılı bir ilişki içindedir. Öğrenilen sözcükler boyutunda hayatla hesaplaşılır, başarı kazanılır; ayrıca ağızdan çıkan sözcüklerin niteliği insanların eğitim ve kültürlenme düzeyini ve sosyal statüsünü açığa çıkarır.

Aksan (2000, s. 55)'in tanımına göre dil, “düşünce, duygu ve isteklerin, bir toplumda ses ve anlam yönünden ortak olan öğeler ve kurallardan yararlanılarak başkalarına aktarılmasını sağlayan, gelişmiş bir dizge”dir. Bu dizgeyi oluşturan öğeler birbiriyle ilişkilidir, bu nedenle de tek başlarına bir anlamı yoktur, dizge içindeki diğer öğelere göre bir anlam ve değer kazanırlar. Aksan (1997, s. 46) bunu Wittgenstein'in “Sözcüğün anlamı onun dil içinde kullanımınıdır,” tümcüsüyle ifade eder. Dil, iletişim ve düşünme süreçleri için kullanılan üzerinde uzlaşmalar sonucu ortaya çıkmış göstergeler bütünüdür. Bu göstergelerin büyük bir çoğunluğunu ise kavramlar oluşturmaktadır (Apaydın, 2007). Bir dil göstergesi, ses imgesi olan bir “gösteren”le, “gösterilen” olan bir anlamdan oluşmakta ve böylece ortaya çıkan sözcükler kavramları adlandırarak dünyadaki nesne ve olgulara gönderimde bulunmaktadır. “Bir şeyin adı dil belleğimizde yoksa bizim için o şeyin kendisi de yoktur. ... İnsan, varlıkları adlandırarak kendine bir yaşama ortamı oluşturmuştur, bu ortamdaki tüm ilişkilerini, edimlerini hep adlarla, adlandırmalarla sürdürebilmiştir” (Özdemir, 2011: 51). Sever (2000, s. 16)'in de belirttiği gibi “Sözcükler birer kavramdır ve düşünmenin temel öğeleridir”. Özbay ve Melanhoğlu (2008, s. 31)'nin ifadesi ile de “İnsanın kelime ve kavram yönünden zengin bir birikime sahip olması, düşüncede de zengin olmasını sağlar.”

Sözvarlığı iki türde olabilmektedir: Etken sözvarlığı ve edilgen sözvarlığı. Bireyin tanıdığı, anlamını bildiği ve iletişimde kullanabildiği, yani anlatma becerisi bağlamında bilişsel süreçler işleterek zihninde yapılandırabildiği sözcüklerin tümü etken sözvarlığını oluştururken edilgen sözvarlığı bireyin tanımını ve

anlamını bildiği ancak anlama becerisi bağlamında bilişsel süreçler işlettiği, kendisinin kullanmadığı sözcüklerden oluşmaktadır. Bununla birlikte Sever (2000, s. 24), “Anlama becerisindeki gelişme, sözcük dağarcığını zenginleştirerek öğrencinin anlatma becerisini de iyi yönde etkilemektedir,” sözleriyle etken ve edilgen sözcükler arasındaki ilişkiye de gönderimde bulunmuştur. Özbay ve Melanlıoğlu (2008), Göğüş (1978)’ün “Kelime bilgisi; derinlik (kelimelerin çeşitli anlamlarını bilmek), genişlik (çeşitli konularda kelimeler bilmek), ağırlık (bir konuda oldukça çok kelime bilmek) olmak üzere üç boyutta tanımlanmaktadır.” sözünden yola çıkarak Özbay’ın (1997) yapılan araştırmalarda kelime bilgisinin derinlik boyutunun ihmal edildiği düşüncesini yinelemektedirler.

Günay (2007)’in açıklamasına göre, “Dildeki bir sözcüğün üç temel özelliği vardır ya da her sözcük üç biçimde tanımlanıp değerlendirilebilir: Biçim, anlam ve dilbilgisel ulam” Anlam alanı açısından, kavramsal durumu ve birleştirme ile ilgili özellikler açısından sözcüklerin anlamlarında bir bulanıklık söz konusu olabilir. Apaydın (2007)’in, Croft ve Cruse (2004)’dan alıntılıdığı gibi herhangi bir dilsel anlatım sonuçta gönderimlerinin ulamını yansıtmaktadır, dil genelleme ya da ulam koşulları ile işlemektedir. “Aynı sözcük farklı anlamsal kesitlerde yer alması nedeniyle çokanlamlı olarak değerlendirilir” (Günay, 2007, s. 13). Dilbilgisel ulam ise sözcüğün tümcedeki görevine göre farklı biçimde (ad, sıfat, belirteç, adil, ilgeç, bağlaç, ünlem ve eylem) tanımlanmaktadır. Sözcüklerin dilbilgisel ulamları da kullanılan bağlam içinde belirginleşir ve anlam oluşturmada bu ulamlar çözümlenir. “Güzel” sözcüğünün ad, eylem ya da sıfat mı olduğu kullanıldığı tümce içinde anlaşılır.

Apaydın (2007)’a göre bellekte kavramlar üç şekilde gruplandırılır: Yapısal niteliğine göre (adlar, adılar, eylemler, ilgeçler ...), konu açısından (yiyecekler, hayvanlar, insanlar...) ve sesbilimsel yapıya dayalı olarak (aynı sesle başlayanlar/aynı sesle bitenler...). Ülper ve Karagül’ün (2012) belirttiği ve Blachowicz, vd. (2006)’ten alıntılı oldukları gibi sözcük öğretimi aynı zamanda kavrama süreciyle ilgili olduğu için sadece sözcüklerin anlamlarını belletmeye yönelik etkinlikler kavramaya yeterli olmamaktadır. Sözcük öğretiminde sözcüğün tanımından çok, öğrencilerin sözcüğün kullanıldığı bağlamdaki anlamını yapısal, konusal ve sesbilimsel olarak değerlendirmesini sağlayan bilişsel süreçler sonucu çıkarsamalarını odaklayan çalışmalar önemlidir. Apaydın (2007) kavramsal ulamlamaya dikkat çekmiş ve araştırmasında sözcüklerin ve kavramların bellekte kalıcılıklarını sağlayabilmek için, birbirleriyle ilişkilendirilmiş, ulamlılandırılmış görünüm sergilediği biçimleriyle sunumunun öğretim-öğrenim süreçlerinde etkililiği, verimliliği arttıracığı düşüncesini benimsemiştir.

Bilgi işleme modeline göre öğrenmede zihinsel yapılar yoluyla (duyusal kayıt, kısa süreli bellek, uzun süreli bellek) çevreden gelen uyarıcılar algılanır, anlamlı bilgilere dönüştürülür, bilgiler bellekte saklanır, yeniden kullanılmak üzere geri çağırılır ve davranışa dönüştürülür. Birey görme, işitme yoluyla oluşturduğu duyusal kayıttaki gerekli bilgiyi kısa süreli hafızaya gönderir. Kısa belleğin iki sınırlılığı ise süre sınırlılığı ve kapasite azlığıdır. Kısa süreli belleğe gelen bilgi anlamlandırılarak doğrudan tepki üreticilere (davranış) gönderebileceği gibi, kodlanıp uzun süreli belleğe de gönderilebilir (Senemoğlu, 2000, s. 276). Buradaki kontrol mekanizmalarıyla uzun süreli belleğe geçirilen bilgiler unutulmaz. Belleklerde kodlama, depolama, ara-bul-geri getir aşamaları vardır. Depolanmış bir bilginin geri getirilebilmesi için uygun ara-bul-geri getir ipuçlarının olması gerekir. Kısa süreli bellekte (işleyen bellek) algısal kodlama (görsel, işitsel...) önemliken uzun süreli bellekte “anlamsal kodlama” önemlidir. Anımsama, kodlama anı ile ilişkilidir. Kodlamanın anlam odaklı yapılması, kodlama anındaki çevre ve kişinin ruh durumu anımsamayı etkilemektedir. Resim, koku sözcük, geçmiş yaşantılarla ilgili bir olgu anımsamanın ipucu olabilir. Geri getirme ipuçlarını sağlayan iki mekanizma, ipucu ile bellek izi arasındaki benzerlik olması ya da sunulan ipucunun depolanan bilgi ile ilişki içinde olmasıdır. Apaydın (2007), Cüceloğlu (1998)’nin etkili ve verimli öğrenme süreci için tara, sor, oku, tekrar et ve gözden geçir aşamalarını hatırlatarak öğrenmenin koşullanma yerine bilişsel bir süreç içinde gerçekleşmesinin bellek kullanımının tam ve doğru olarak gerçekleşmesinin önemini vurgulamakta olduğunu söylemiştir.

Sözcük anlamlarının kalıcılığını sağlayabilme bilginin bellekte depolanması sırasında bellek işlemlerini işlevsel hale getiren, bilginin geri çağırılmasında anımsama işleminin işlevsel olabilmesini sağlayan uygun yöntem, teknik ve ders malzemelerinin kullanıldığı sınıf içi etkinlikler gerekmektedir.

Bir “sözcüğü bilmek” olgusunun farklı boyutları vardır. Bu; sözcüğün nasıl sesletildiği, nasıl yazıldığı, hangi biçimbirimlerden oluştuğu, nelere gönderimde bulunduğu, yerine hangi sözcükler kullanılabileceği, dilbilgisel işlevinin ne olduğu, hangi sözcüklerle (eşdizimlilik) ve nerede/ne zaman/ne sıklıkta kullanıldığı bilgisini gerektirir. Böyle bilgiler zenginleştirilmiş sözcük öğretimi etkinlikleri doğrultusunda edinilebilir (Nation, 2001). Ülper ve Karagül (2012)’e göre, bu etkinlikler; **tanımsal bilgi** (eşanlamalıları öğretmek, karşıt anlamlıları öğretmek, yakın anlamlıları öğretmek, değişmece anlamını öğretmek, öğrencilerin kendilerinin sözcüğün anlamını söylemesi/yazması, ulamlara ayırmak, biçimbilgisel özellikleri öğretmek, örnek sözcükler sağlamak, örnek olmayan sözcükler sağlamak), **bağlamsal/kullanımsal bilgi** (sözcüğü kendi tümcesi içinde kullanmak, aynı sözcüğün farklı tümcelerdeki anlamını tartışmak, sözcükle ilgili senaryo oluşturmak, sözcük/sözcüğün

anlamı çerçevesinde karşılıklı konuşma yapmak, önemli konular ya da yaşantılar çerçevesinde karşılıklı konuşma yapmak) ve **çoklu karşılama** olarak sıralanabilmektedir. Çoklu karşılama bağlamında Çetinkaya (2002), Ataüenal (2000)'in "Aralıklı ve farklı biçimlerde yapılan tekrar kalıcılığı artırır," sözünden yola çıkarak anlamı bilinmeyen sözcüğün başka bir metinde bir daha geçmemesi veya üzerinde durulmamasının olumsuzluğunu dile getirmektedir. Schmitt (2007), bu konuda Nagy (1997)'nin öğrencilerin bir defa gördükleri sözcükleri % 5-14 oranında hatırladıkları ve Nation (1990)'in bir sözcüğün öğrenilebilmesi için 5-16, hatta daha çok karşılama gerektiğini bulguladığı araştırmalara işaret etmiştir.

Özbay ve Melanlıoğlu (2008), Akdoğan'ın 1999'da yaptığı araştırmasında, Türkiye'de ana dili eğitiminde kullanılan ders araç gereçlerinde öğrencilere öğretilen kelime ve kavram sayısının diğer ülkelere oranla oldukça düşük olduğunu bulguladığını belirtmişlerdir. Buna koşut olarak, ilköğretim birinci kademedeki bir çocuğun 2000 sözcük kullanması gerekirken, Gürtürk'ün 1986'da yaptığı araştırmaya göre, ülkemizde bu kademedeki öğrenciler 200-500, ikinci kademe öğrenciler 2000, lise öğrencileri ise 2500 dolaylarında, düşük seviyede sözcük bilmektedirler (Çetinkaya, 2002; Ülper, 2010). Yıldız ve Okur (2010), bu durumu Güzel (2006, s. 323)'in, "Ülkemizde ilköğretim çocuklarının sözcük hazinesini nicelik yönünden ölçecek bir araştırma yapılmamış ve öğrencilerin sözcük hazinesi gelişimi rastlantıya bırakılmıştır" ve Yıldız vd. (2006, s. 315)'nin, "Var olan sözcük hazinesi sayıları ise tahminlere dayanmaktadır," sözleriyle belirtmektedirler. İlköğretim ikinci kademe Türkçe Dersi Öğretim Programı [6-8. Sınıflar (MEB, 2006)]'nda bu konuya Genel Amaçlar içerisinde yer verilmekte ve öğrencinin, "Okuduğu, dinlediği ve izlediğinden hareketle söz varlığını zenginleştirerek dil zevki ve bilincine ulaşmaları; duygu, düşünce ve hayal dünyalarını geliştirmeleri amaçlanmaktadır," ifadesi yer almaktadır. Bununla birlikte yukarıda belirtilen sonuçlara göre de; Türkçe öğretiminde sözcük dağarcığını genişletme kazanımının tam olarak gerçekleştirilmediği, öğrencilerin ne edilgen ne de özellikle etken sözcük dağarcıklarının yeterli olduğu düşünülmektedir. Bununla beraber Mert Lüle (2012)'nin belirttiği gibi, alanda çoğunlukla yabancı dil olarak Türkçe öğretiminde sözcük öğretimi üzerine sayılı araştırma vardır.

Bu düşünceler doğrultusunda geliştirilen bu araştırmanın amacı, Türkçe derslerinde kullanılan sözcük öğretme yöntemlerinin öğrencilerin sözcükleri edinmelerinde, diğer bir deyişle etken /edilgen sözvarlıklarına katmalarında ne kadar etkili olduklarını bulgulamak ve bu bağlamdaki eksiklikleri tespit edip öneriler geliştirerek Türkçe öğretimi alanına katkı sağlamaktır.

Yöntem

Karma yöntem araştırmanın benimsendiği bu çalışmada, temel olarak, nicel sonuçlara ulaşılabilecek tarama yöntemi uygulanarak, araştırmanın evreni olarak alınan ortaokul öğrencilerinin bir yıl önceki öğretim yılında okutulan Türkçe ders kitabında yer alan sözcükleri ne oranda hatırladıklarını bulgulamak hedeflenmektedir. Araştırmanın nitel yönünü de doküman analizi yapılarak Türkçe ders kitaplarındaki sözcük öğretme yöntemlerinin belli kategoriler altında sınıflandırılması ve devamında aşama boyunca karma model araştırma uygulanarak bu yöntemlerin nicel olarak oranlarının belirlenmesi oluşturmaktadır. Bu nedenle önce, 7. Sınıf ortaokul öğrencilerinin bir önceki öğretim yılında Türkçe dersinde hangi yayınevine ait kitabı okudukları Türkiye genelinde araştırılmış ve iki yayınevine (Evren ve Doku) ait kitaplar olduğu tespit edilmiştir; Doku Yayınevi'nin (Bıyıklı ve Özataş, 2012) okutulduğu okullara daha çok sayıda ulaşıldığı için bu kitap nitel araştırmanın örneklemini oluşturmuştur. Sözcükleri hatırlama düzeylerinin saptanacağı nicel araştırmada ise çalışma evrenini oluşturan 5 ilde bulunan 6 ilköğretim okulundan [Erzurum, Sakarya, İzmit, Eskişehir, İstanbul (2 okul)] her sınıftan 30'ar öğrenci olmak üzere toplam 180 7. sınıf öğrencisi seçkisiz, basit tesadüfi yöntemle örneklem olarak alınmıştır. Öğrencilere 6. Sınıfta okudukları Türkçe ders kitabı kapsamında hazırlanan sözcük testi uygulanarak öğrencilerin sözcükleri hatırlama düzeyleri saptanmıştır.

Veri Toplama Aracı

Veri toplama aracı olarak kullanılan "Sözcük Testi"ni hazırlayabilmek için 6. Sınıf Türkçe ders kitabında doküman analiziyle belirlenen sözcük öğretme yöntemlerini oluşturan kategoriler temel alınmıştır. Her sözcüğün, anlamının ders kitabında öğretildiği kategorinin altında değerlendirilebileceği bir şekilde, mecaz/yan/terim anlamlarıyla beraber toplam 60 sözcük/deyim (bulgular kısmındaki listelerde kalın harflerle yazılan) seçkisiz olarak, örneklem olarak alınan 6. sınıf Türkçe ders kitabından seçilmiştir. Bu durumda, araştırmada, ders kitabındaki etkinlik kategorileri bağlamında, öğrencinin metinden anlamını bilmediği sözcükleri belirlediği birinci kategori dışında, üzerine sözcük etkinlikleri hazırlanan toplam 380 sözcükten %15,78'i hedef almıştır.

Öğrencinin bir önceki sözcükleri hatırlama düzeylerini ölçmek için hazırlanan "Sözcük Testi" yedi bölümden oluşmaktadır: 1. Verilen tanımları kullanarak çengel bulmacayı doldurma, 2. Sözcüklerin eş anlamlılarını yazma, 3. Sözcüklerin zıt anlamlarını yazma, 4. Verilen sözcüklerle istenen anlamda (gerçek, yan,

mecaz, terimsel) tümce yazma, 5. Verilen deyimlerin anlamlarını yazma, 6. Verilen sözcüklerle tümce kurma, 7. Verilen tümcelerde altı çizili sözcüğün anlamını tahmin etme. Araştırma için geliştirilen bu envanterin Cronbach alpha güvenirlik faktörü ,743 ile “oldukça güvenilir” bir düzeydedir.

Verilerin Analizi

Önce, hangi sözcüklerin hangi yöntemlerle öğretildiğini saptamak amacıyla yapılan doküman analizini nicel sonuçlarla ifade edebilmek için betimsel analiz uygulanarak frekans ve yüzde hesapları yapılmıştır. Öğrencilerin sözcükleri hatırlama düzeylerini ölçmek için de öğrencilerin sözcük testi sonuçları excell programına işlenmiş ve okulların sözcük testini oluşturan bölümlerdeki başarılarını tespit etmek için ortalama puanları, daha sonra da genel ortalamalar hesaplanmıştır. Daha sonra okullar arasındaki başarı farkının anlamlı olup olmadığını belirlemek için Mixed ANOVA testi (6 [okul] x 7 [testteki bölüm sayısı]) ve başarının cinsiyete göre farklılaşp farklılaşmadığını saptamak için de yine Mixed ANOVA testi (2[cinsiyet] x 7 [testteki bölüm sayısı]) yapılmıştır. Testte 7 bölüm olduğu için .05’lik p değeri 7’ye bölündüğünden anlamlılık ifade eden p değeri .00714 bulunmuştur.

Bulgular

6. Sınıf Türkçe Ders Kitabındaki sözcük öğretme yöntemleri

6. Sınıf Türkçe Ders Kitabındaki sözcük öğretme yöntemleri ve oranları araştırıldığında Tablo 1’de özetlenen aşağıdaki sonuçlara ulaşılmıştır:

- Metinde anlamı bilinmeyen sözcükleri tespit etme, anlamını tahmin etme ve sözlüğe bakıp kontrol etme: Kitapta 6 metin için bu çalışma istenmiştir. Sözcük testinin 7. Bölümünü (Verilen tümcelerde altı çizili sözcüğün anlamını tahmin etme) oluşturan tümceler bu metinlerden seçilmiştir.

- Sözcük, deyim ve kalıplaşmış sözcüklerin anlamlarını tahmin etme: Bu kategoride yalnızca sözcüklerin anlamları tahmin edilebildiği gibi bazılarında bunlarla tümce kurmaları da istenmiş; bazılarında sözcüklerin harfleri karışık olarak verilmiş, anlamı ve tümce kurmaları istenmiş; bazılarında da sözcükler karışık harflerin bulunduğu tabloda sunulmuş ve öğrencilerin bunları bulup tümce kurmaları beklenmiş; bir etkinlikte de bağlamdan kopuk olarak harflerin bulunduğu bulmacada metindeki bazı kelimeleri (*felaket, zulüm, his, hırçınlık, cemiyet, darbe, hoyrat, muamele, tesadüf, mevcut, apartman, kudret, razı, ruh, yapıt, vefat, mahkûm, dayanak, teselli, mukadder*) bulmaları, sözlükten anlamları ve tümce kurmaları istenmiştir.

Bariş, uygarlık, eli boş dönmek, ağzını kapamak, canına tak etmek, yük olmak, çam sakızı çoban armağanı, ilgisini çekmek, sorumluluk, kanun, önlem almak, mağlubiyet, hak, hürriyet, görev, ehemmiyet, vatandaşı, borç, yöre, ilkel, işlemek, devlet, emanet, eser, zümrüt, reçine, çorak, konak, engin, sağanak, acı çekmek, kuş sütü eksik olmamak, kanı çekilmek, can vermek, sudan çıkmış balığa dönmek, ziyafet çekmek, kafasından geçmek, feryadı basmak, beti benzi solmak, küll gibi olmak, soluk soluğa kalmak, kusura bakmamak, eksik olsun, akıldan kalmak, dikkat çekmek, kaşlarını çatmak, başını derde sokmak, dalga geçmek, akıl sır erdirememek, dirlik düzenlik, alt üst olmak, alnını karışlamak, Allah etmesin, sancı, haber, serüven, önder, devrim, bütçe, güncel, ileriye görmek, galaksi, simülatör, yörünge, Orion, bulutsusu, gaz, küresel, çevre kirliliği, kaliteli, planlı, sorun, yapboz, baş döndürmek, uzay, gökyüzü, yeryüzü, gezegen, güneş, ay, boyut, saat, dünya, hava, vicdan azabı, geleneksel, bir aralık, gözü takılmak, rastgele, aşırı, sabah şekerlemesi, uykusu kaçmak, başını çevirip bakmamak, ekme parası peşine düşmek, sınırını bozmak, eli boş dönmek, kap, bilmece, ortanca, pati, sakınca, yumak, küpeşte, güverte, sevecen, felaket, cesaret, kutsal, ihanet, hayran, şiddet.

-Sözcükleri anlamlarıyla ya da örneklerle eşleştirme: Sözcük/deyim ve anlam eşleştirmesi (*işi bitmek, işe yaramak, altından kalkmak, Allah etmesin, kuşatmak, zemin, düş gücü, kale, başından geçmek, pay, dürtüklemek, anımsamak, eyvan, avlu, sarmak, başından geçmek, hesap sormak, hatırını kırmamak, eline su dökmemek, duru dil, iki gözü iki çeşme, küplere binmek, başına gelmek*), sözcükleri alfabetik sıraya sokup verilen anlamlarla eşleştirme (*Kovan, aksama, dirlik, tırtıl, salgi bezi, balmumu, kıvam, alnını karışlamak, enerji, depo*), tümceleri verilen deyimlerle doldurma (*tatlı dil, kara yazgı, el bebek gül bebek, soluk soluğa, yüzü kızarmadan, canından bezdirmek, yan gelip yatmak, bin dereden su getirmek, yüzüne vurmak, can kulağıyla dinlemek, kulu kölesi olmak, bir dediğini iki etmemek*), paragraflarda anlatılan durumları atasözleriyle eşleştirme (*Acıkan doymam susayan kanmam sanır, acıkmış kudurmuştan beterdir, gülme komşuna gelir başına*), tümcelerde metinde geçen deyimlerden hangisinin olduğunu bulma (*aklına gelmek, hak vermek, canı sıkılmak*) bu kategorinin altındaki etkinlik biçimlerindedir.

-Zıt anlamlarını bulma: Verilen sözcüklerin zıt anlamlarını yazma (*zengin, geri, çok, küçük, eski, sonra, yakın, dert, ilk, iyi, acı, kolay, ak, geniş, yitirmek, az, ön, büyük, kapalı, doğru, kazanmak, geri, gitmek, gerçek, birleşmek, yeni, yaklaşmak, soru, sevinmiş, güzelmış, eksik, acı, şişman, ağlamak, kederli, içeri, çift*) ve

sözcükleri zıt anlamlarıyla eşleştirme (*sabah, gitmek, dolu, dışarı, geri, son, yalan, sonra*) başlıca etkinlik türleridir.

- Eş anlamlarını bulma: Eş/yakın anlamlı sözcükleri birbirleriyle eşleştirme (*şüphe, tanıdık(aşına), güç, ilgi, gayret, yürek, mecbur, rastlantı (tesadüf), devir, duygu, şehir, gereksiz, yabancı, sohbet, cemiyet, konuk, mana, zaman, muhit, idadi, rüştiye, tesir, istikamet, esir, asır, inkılap*), sözcükleri bulmacada gizlenen eş/yakın anlamlarıyla eşleştirme (*ulus, önder, kuvvet, süre, bilgin, yurt, uygarlık, milli, kuşak, orta, çevirmek, usanmak, korumak, süslemek, oturmak, civıldaşmak, küsmek, kurak, ödev*), paragrafta altı çizili kelimelerin yerine anlamdaşlarının koyarak paragrafı yeniden yazma (*mecmua, sarf etmek, münasebet, şahıs, hakiki, ecdat*) ve kelime çiftlerini eş anlamlı/yakın anlamlı olarak sınıflama (*Eş: diyar-ülke, dil-lisan, rivayet-söylenti, pabuç-ayakkabı. Yakın: metot- teknik, üzüntü-gem, bitmek-tükenmek*) etkinlikleri bulunmaktadır.

- Eş sesli sözcükleri tümcede kullanma: *Doğru, oyalanmak, bol, yüz.*

- Anlamı verilen sözcükleri bulmacaya yerleştirme:

A, iş, anı, faks, memur, kongre, cephane, internet, anıtkabir, cumhuriyet, telgrafhane, olanaksız, cumhurbaşkanı, teleskop, rota, Satürn, Mars, uydu, roket, astronot, dünya, su, kraliçe, tasarruf, nakit, pelte, arı, düzen, Ural, devinim, ilke, basket, seyrek, tutum, ahenk, şikâyet, arp, şüphe, ot, bot, şaka, çanak, doktor, fisilti, şekerleme, inandırma

- Gerçek/mecaz/terim anlamı bulma: Tümcelerde altı çizili sözcüklerin gerçek/mecaz/terim anlamda olduğunu söyleme (*bozuk, dar, fırtına, karar, baba, kök, ince, soğuk, sert, eski*), tümcelerde altı çizili sözcüklerin anlamını yazma (*yıkmak, parlak, koyu, sıcak, taşkın, açılmak, dayanmak, denemek, yargı, sivri, sarsmak, kara, derinlik, kuru, çökmek, süzülme, bakmak*), sözcükleri gerçek/mecaz/yan anlamda tümcede kullanma (*düşmek, derin, uyumak [+temel anlam], hasta etmek, ışıldamak, kirlenme, paylaşmak, taşıyıcı, öldürmek*) bu kategorinin etkinlikleridir.

- Aynı kavram alanına giren sözcükleri bulma: Metinde aynı kavram alanına giren sözcükleri bulma (*orman*), bir sözcüğün çağrıştırdığı sözcükleri yazma/işaretleme (*vatan, gökyüzü/bayram*) etkinlikleridir.

- Paragraf oluşturma: Verilen sözcüklerin anlamlarını öğrenme ve bunları kullanarak bir paragraf yazma etkinliği bulunmaktadır (*dostluk, arkadaşlık, birlik, dayanışma/hak, görev, vatandaş*).

Tablo 1. 6. Sınıf Türkçe Ders Kitabındaki Sözcük Öğretme Yöntemleri ve Oranları

Sözcük etkinliği	Sözcük sayısı	%
Metinde anlamı bilinmeyen sözcükleri bulma, anlamını tahmin etme ve sözlüğe bakma	-	-
Sözcük, deyim ve kalıplaşmış sözcüklerin anlamlarını tahmin etme	131	34,4
Sözcükleri anlamlarıyla ya da örneklerle eşleştirme	51	13,4
Zıt anlamlarını bulma	37	9,7
Eş anlamlarını bulma	65	17,1
Eş sesli sözcükleri tümcede kullanma	4	1
Anlamı verilen sözcükleri bulmacaya yerleştirme	45	11,8
Gerçek/mecaz/terim anlamı bulma	36	9,4
Aynı kavram alanına giren sözcükleri bulma	4	1
Paragraf oluşturma	7	1,8
Toplam	380	100
Araştırmada kullanılan sözcük sayısı	60	15,78

Sözcük testinde öğrencilerin başarıları

Öğrencilerin sözcük testi bölümlerinden aldıkları ortalama puanlar (Tablo 2) arasında dengeli bir oranlamanın olmadığı görülmekle beraber doğru olarak bilinen sözcüklerde de böyle bir dengesizlik bulunmakta, belirli sözcükler üzerine yoğunlaşmaktadır.

Tablo 2. Sözcük Testini Oluşturan Bölümlerde Not Ortalamaları

Sözcük Testi Bölümü	İstanbul \bar{X}	Erzurum \bar{X}	Eskişehir \bar{X}	İzmit \bar{X}	Sakarya \bar{X}	İstanbul2 \bar{X}	Genel \bar{X}
1. Çengel bulmacayı anlamları verilen sözcüklerle doldurun.	20,6	29,3	22	54,3	21,3	25,6	28,8
2. Verilen sözcüklerin yanına eş anlamlılarını yazınız.	11,3	10,3	17	25,6	21,3	32,3	19,6
3. Verilen sözcüklerin yanına zıt anlamlılarını yazınız.	70,6	63,6	57,3	76,6	68,6	75	68,6
4. a. Verilen sözcüklerin gerçek anlamlarıyla tümceler yaz.	80	77,7	80	87,7	91	93,3	85
4.b. Sözcüklerin mecaz anlamlarıyla tümceler yazınız.	24,4	33,3	48,8	40	48,8	66,6	43,70
4.c. Verilen sözcüklerin yan anlamlarıyla tümceler yazınız.	5,5	3,3	6,6	4,4	17,7	32,2	10,92
4.d. Sözcüklerin terimsel anlamlarıyla tümceler yazınız	20	10	30	23,3	30	60	28,88
5. Verilen deyimlerin anlamlarını yazınız.	8,6	20,6	22,6	15,3	19,3	39,3	21

6. Verilen sözcüklerle tümce kurunuz.	28,6	32	49,3	40	50,6	72	45,44
7. Tümcelerde çizili sözcüklerin ne anlama geldiğini yaz.	7	10,6	16,6	18,3	18,6	35,6	17,83

Çengel bulmacanın tamamlandığı ve genel not ortalamasının 28,8 olduğu testin birinci bölümünde sözcükler en çok bilinen en az bilene doğru, bilen öğrencilerin yüzdelerine göre şöyle sıralanabilir: *tasarruf* (% 59,4), *imkânsız* (%52,2), *şüphe* (%51,6), *pay* (%41,6), *uydu* (%36,6), *arp* (% 26,1), *şikâyet* (%17,1), *tutum* (%2,7), bütün bulmacayı tamamlayabilen yalnızca bir öğrenci tarafından bilinen *devinim* (% 0,5) ve *kongre* (% 0,5).

Sözcüklerin eş anlamlılarının yazıldığı ve genel not ortalamasının 19,6 olduğu bölümde ise sözcükler, bilinme yüzdelerine göre şu şekilde sıralanmaktadır: *asır* (%41,1), *cemiyet* (%36,6), *istikamet* (%30,75), *tesadüf* (%24,4), *sarf etmek* (%17,7), *devir* (%15), *rivayet* (%12,7), *ecdad* (%7,7), *muhit* (%5,5) ve *aşına* (%5). Sözcüklerin eş anlamları yerine eşdizimsel örüntüleme içinde beraber kullanıldıkları sözcüklerin tüm okullardaki çoğu öğrenci tarafından yazılması ilginçtir (Sayıları düşük olan illerde cevaplayan sayısı da düşüktür.): *Tesadüf* = *karşılaşmak* [2 Er, 3 İst1, 10 İz, 3 Sak, 6 İst2, 11 Es]; *sarf etmek*=*çabalamak* [3 Er, 5 İst1, 9 İz, 5 Sak, 5 İst2, 5 Es]; *emek* [4 İst2, 2 İst1]; *istikamet*=*yol* [3 İst1, 1 Es]; *ileri* [1 İst1, 1 Es, 2 Er, 2 İst2]; *yer* [1 İst1, 2 Es]; *harita* [1 Sak]; *gitmek* [1 Es, 1 Er]; *salt*= *salt okunur* [1 İst2]; *devir*=*teslim* [1 İst2]; *emanet*=*teslim* [1 İst2]; *korumak* [1 Es] Ses benzerliklerinden ötürü de eş anlamların yanlış verildiği görülmektedir: *sarf etmek*=*israf etmek* [2 Er, 5 İz]; *muhit*=*mucit* [2 Er, 1 Es]; *buluş* [2 Es]; *rivayet*=*il* (vilayet) [1 İst1]; *ayet* [1 İst1]; *hidayet* [1 İst2]; *mukadder*=*kadir* [1 İst1]; *hoyrat*= *hayrat* [2 İst2]; *halay* [1 İst1]; *ecdad*=*vicdan* [1 İst2].

Zıt anlamlı sözcüklerin yazıldığı bölümde ise genel not ortalaması 68,6 olmakla beraber *yitirmek* (%9) ve *kederli* (%25) sözcüklerinin zıt anlamlarında öğrenciler sorun yaşamaktadır. “*Yitirmek*” ya “*kazanmak*” sözcüğünün (4 İst1, 4 İz, 9 İst2, 6 Sak, 5 Es) ya da “*yaşamak*” sözcüğünün (1 Es, 7 İz) zıt anlamlısı olarak verilmektedir. Diğer zıt anlamları bilinen sözcükler ise *dolu* (%89,4), *çift* (%87,2), *geniş* (%85,5), *yalan* (%83,8), *eksik* (%80), *son* (%78,8), *kazanmak* (%76,1) ve *birleşmek* (%71,1)’tir.

Sözcük testinin, sözcüklerin gerçek, mecaz, yan ve terimsel anlamlarının değerlendirildiği dördüncü bölümünde gerçek anlam kategorisinde öğrencilerin ortalamaları 85 olduğu gibi sözcük yüzdeleri de (*düşmek* [%86,6], *kök* [%81,1], *derin* [%87,2]) dengeli olarak yüksektir. Öğrencilerin, 43 not ortalamasıyla *düşmek* (%44,4), *kök* (%42,7) ve *derin* (%43,8) örneklerinde görüldüğü gibi normal dağılımla sözcükleri mecaz anlamlarıyla kullanmada başarılı olmadıkları saptanmıştır. 11,6 gibi düşük bir not ortalamasıyla öğrencilerin yan anlam hakkında bilgi sahibi olmadıkları, gerçek ve mecaz anlamı ayırt edebildikleri kadar yan anlamı ayırt edemedikleri *düşmek* (%9,4), *bakmak* (%11,6), *derin* (%13,8) örneklerinde de görülmektedir.

Deyimlerin anlamlarını yazma bölümünde öğrencilerin başarıları çok düşük olup not ortalaması 21’dir. En az yüzde ile bilinen *sudan çıkmış balığa dönmek* (%12,2) deyimini öğrencilerin büyük çoğunluğu “*çok ıslanmak*” olarak algılamaktadırlar. *Baş döndürmek* (%16,1) deyimini genellikle boş bırakılmış ya da “*yorulmak*” olarak almıştır. *Kanı çekilmek* (%18,2) deyimini de cevaplanmayan deyimler arasındadır. *Bin dereden su getirmek* (%20,5) çoğunlukla “*Bir derede su bulamayınca diğerine gitmek/birçok dereden su almak*” şeklinde düz anlamlarıyla değerlendirilmiştir; bununla beraber, bir sınıfta bu deyim aynı ve doğru anlamın yazılması, yüzdesini yükseltirken öğrencilerin bu deyim anlamını bir yerden aldıklarını düşündürmektedir. *Alt üst olmak* (%37,7), anlamı en çok bilinen deyimdir.

Not ortalamasının 45,44 olduğu, verilen sözcüklerle tümce oluşturma bölümünde öğrencilerin *hoyrat* (%7,2) sözcüğünün anlamını bilmedikleri görülmüştür. *Kudret* (%40,5) daha çok Atatürk’ün “Muhtaç olduğun kudret damarlarındaki asil kanda mevcuttur” vecizesiyle verilirken *güncel* (%50) sözcüğü yoğun olarak bilgisayarın güncellemesi örneğiyle verilmiştir. En çok *ihanet* (%64) ve *emanet* (%65) sözcükleriyle tümce kurulmuştur.

Tümcede geçen sözcüğün anlamını bilme bölümünde ise not ortalaması (17,83), yan anlamdan sonra gelen en düşük değerdir. Bununla beraber, sözcükler en çok bilinen bilinmeyene doğru *umursamamak* (%52), *mevkii* (%27,2), *bellemek* (%21,1), *mukadder* (%16,6 [bu sonucun bir sınıftaki öğrencilerden birinin adının Mukadder olmasından kaynaklandığı düşünülmektedir.]), *simülasyon* (%16,1), *prensip sahibi* (%10), *salt* (%7,2), *müspet* (%6,1) ve *telkin etmek* (%4,4) olarak sıralanmaktadır.

Ayrıca tüm bölümlerde genellikle ortalamaların en düşük olduğu iki ilde öğrenciler yönergeleri de anlamamakta, derslerde sıklıkla yapılan eşleştirme sorularının sonucu olarak “Sözcüklerin eş anlamlılarını yazınız” dediği halde ilgisiz sözcükleri sırf karşılıklı yazdıkları için eşleştirmektedirler; bu, derslerde etkinliklerin bilişsel değil motor süreçleri işletmeye yönelik yapıldığının bir göstergesidir.

Okullara göre öğrenciler karşılaştırıldığında, 6 okul arasında anlamlı bir fark bulunmuştur (p=.000). İstanbul 1’in puanları İzmit (p=.005) ve İstanbul 2 (p=.000) den daha düşüktür. Erzurum’un ve Eskişehir’in puanları İstanbul 2 (p=.000) den daha düşüktür. İzmit’in puanları İstanbul 1(p=.005) den daha yüksektir. İstanbul 2’nin puanları İstanbul 1 (p=.000), Erzurum (p=.000) ve Eskişehir (p=.000) den daha yüksektir. Cinsiyetlere göre karşılaştırıldığında, kızlar ve erkekler arasında anlamlı bir fark bulunmadığı görülmektedir (p=.064). Her iki

cinsiyetin de en başarılı oldukları bölüm sözcüklerin zıt anlamlarının bulunması iken en başarısız oldukları bölüm ise deyimlerin anlamlarının yazılmasıdır.

Sonuç ve Öneriler

Türkçe ders kitaplarındaki sözcük öğretme çalışmaları incelendiğinde kısa süreli hafızada algısal kodlamaya dayalı belletmeye yönelik etkinliklerin olduğu, ancak uzun süreli hafızaya yönelik anlamsal kodlama yapılmadığı gözlemlenmiştir. Anımsama, kodlama anı ile ilişkili olduğundan yeni bir sözcüğün anlamının tahmin edilmesi gerektiği durumlarda yapısal (ad, sıfat, zarf vb.) ve konusal (bağlama dayalı anlam) analizlerin yapılmasını sağlayan kodlama anlarını oluşturan etkinliklere yer verilmelidir. Bununla birlikte, Türkçe öğretiminde zenginleştirilmiş sözcük öğretme etkinliklerinde tanımsal bilgi düzeyinde odaklanıldığı ve bağlamsal/kullanımsal bilgi ve çoklu karşılaştırma aşamalarının atlandığı gözlemlenmiştir. Bilgi düzeyinde eş anlamları bulma (%17,1), sözcükleri anlamlarıyla eşleştirme (%13,4), bulmacayı anlamı verilen sözcüklerle doldurma (%11,8), zıt anlamları bulma (%9,7) ve gerçek/mecaz/terimsel anlam (%9,4) etkinliklerinin bağlama dayalı anlam etkinlikleri olan paragraf oluşturma (%1,8), aynı kavram alanı sözcükleri belirleme (%1) ve sesbilgisel düzeyde eşsesli sözcükleri tümcede kullanma (%1) etkinliklerinden fazla olması bunu kanıtlar niteliktedir. Sözcüklerin anlamlarını tahmin etkinliklerinin oranı (%34,4) fazla olmakla beraber bağlamdan yola çıkmaktan çok sözlük anlamlarıyla sonuçlandırıldığı için bunlar tanımsal bilgi düzeyine girmektedir. Oysa, Hashemzadeh (2012) tarafından yapılan araştırmada, öğrencilerin sözcükleri hatırlama oranlarının okuma parçalarından sonra yapılan, bağlama göre anlamı düşünmeyi sağlayıcı boşluk doldurma etkinliklerinde en fazla olduğu bulgulanmıştır; açıklama, eşleştirme ve sözlük çalışmaları sırasıyla bunu izlemektedir. Oysa, Türkçe ders kitaplarında başarının en alt düzeyde olduğu eşleştirme ve sözlük çalışmalarının yoğun olduğu görülmektedir.

Öğrencilerin sözcüklerin gerçek anlamlarıyla tümceler yazmada (%85), mecaz (%43,70), terimsel (28,8)/eş (%19,6)/yan (10,92) anlamlarıyla yazmadan daha başarılı olmaları öğrencilerin sözcük bilgilerinde derinlik boyutunun yetersiz olduğunu göstermektedir. Dilidüzgün'ün (2013) yaptığı araştırmada da öğrencilerin kompozisyonlarını yazarken hep aynı sözcükleri yinelemelerini bulgulaması bunu desteklemektedir. Öğrencilerin çengel bulmacayı anlamları verilen sözcüklerle doldurma (%28,8) ve tümcelerde altı çizili sözcüklerin ne anlama geldiğini yazma (%17,83) etkinliklerindeki düşük başarıları ne tanımsal ne de bağlamsal düzlemde başarılı olduklarını gösterdiği gibi edilgen söz varlıklarının yetersizliğini de göstermektedir. Testin, verilen sözcüklerle tümce kurma (%45,44) bölümü, bu etkinliğin ders kitabında fazlaca uygulanmış olmasına karşın etken söz varlığı bağlamında gerekli katkıyı sağlamadığını göstermektedir. Öğrencilerin deyimlerin anlamlarını yazmada da (%21), çoğuna hiç cevap vermemeleri ve “sudan çıkmış balığa dönmek” deyimini için “sırılsıklam ıslanmak”, “bin dereden su getirmek” deyimini için “bir dereye su bulamayınca diğerine gitmek/birçok dereden su almak” anlamlarını yazmaları yetersiz olduklarını göstermektedir. Dilidüzgün'ün (2012) Türkçe ders kitaplarındaki görseller üzerine yaptığı araştırmada bulguladığı gibi örneğin, başına çorap örülen bir adam görseli ile “başına çorap örmek” ya da ayaklarından kökler, kafasından dallar çıkan bir adam görseliyle “beklemekten ağaç olmak” deyimlerini eşleştirme etkinliklerinin ne tanımsal ne de bağlamsal bilgiyle bir ilgisinin olması bu araştırmadaki sonuçları da desteklemektedir.

Sonuç olarak, Türkçe ders kitaplarında sözcük öğretme yöntemlerinin öğrencilerin “sözcüğü bilmesi” için yeterli değildir, Benzer (2013)'in, öğrencilerin 119 sözcük içinden 27'sinin anlamını bilip 36 tanesinin anlamını yanlış bildikleri, 57 tanesinin anlamını hiç bilemedikleri ve başarının %22,6 olduğu araştırmanın sonuçları da bu bulgularla paraleldir.

Ders kitaplarındaki sözcük öğretim yöntemlerini nicel ve nitel bağlamda geliştirmek için bu alanda yapılan araştırma ve uygulamalardan yararlanılmalıdır. Aksan ve Uçar (2012) yaptıkları çalışmada yakın anlamlı ve eşsesli sözcüklerin öğretiminde dil derlemi kullanarak, sözcük anlamı ilişkilerinin öğretimini çeşitlendirecek, kolaylaştıracak ve veri güdümlü öğrenmeyle anlamlı bir biçime dönüşebileceği etkinlik örnekleri sunmuşlardır. Eş sesli sözcüklerin sözlük tanımlarını derlemeden elde edilen bağımlı dizinlerdeki anlamlarıyla eşleştirmek, bağımlı dizinlerde eş sesli sözcükten önce ve sonra kullanılan sözcükleri belirleyerek benzer yapıları keşfetmek, bağımlı dizinlerde boşlukları bir sözcüğün eşseslileri ile doldurmak, bağımlı dizinlerde yakın anlamlı sözcüklerle kullanılan ortak sözcükleri belirleme, bir sözcüğün en çok hangi anlamının kullanıldığını belirleme bu örneklerden bazılarıdır. Dil derlemi kullanarak düzenlenen etkinlikler, gerçekleşmiş dil verisi kullanmasıyla, sözvarlığı ve dilbilgisi öğeleri arasındaki ilişkiyi / ortaya çıkan örüntüleri göstermesiyle ve öğrencilerin keşfetme, farkına varma yoluyla öğrenme sürecine aktif katılmalarını sağlamasıyla, Türkçe çalışma kitaplarından çok farklıdır (Aksan ve Uçar, 2012, s. 111). Arica Akkök (2011) de yaptığı araştırmada eğretileme ve adlandırma kullanılarak oluşturulan deyimlerin öğretilmesinde kavramsal ipuçları ile sunulan bağlamların çok etkili olduğunu bulgulanmıştır, deyimlerin bilişsel özelliklerinin farkındalığı deyimlerin yorumlanmasını

kolaylaştırmıştır. Özellikle deyimlerde görülen başarısızlığın giderilmesinde bu araştırmanın yönteminin ders kitaplarına yansması önemlidir. Çetinkaya (2002), tümcede altı çizili sözcüğün yerine hangi sözcük getirilirse tümcenin anlamı bozulmaz, hangi tümcede sözcük verilen anlamda kullanılmıştır, aşağıdaki tümcelerin hangisinde sözcük verilen tümcedeki anlamıyla kullanılmıştır, anlamları sözcükleri eşleştiriniz, verilen sözcükleri tümcelerdeki uygun boşluklara yazınız vb. alıştırmalarla gerçekleştirdiği deneysel çalışmasında öğrencilerin öğrendikleri sözcüklerle tekrar tekrar karşılaşmalarının sözcükleri öğrenme düzeylerini yükselttiğini bulgulamıştır. Acat (2008) tarafından kavram haritaları üzerinde durulurken Yıldız ve Okur (2010) yaptıkları çalışmada serbest okuma etkinliklerinin de sözcük dağarcığını genişlettiği sonucuna varmışlardır.

Sözcük etkinliklerinin yanı sıra Türkçe ders kitaplarına seçilen metinlerin, öğrencinin seviye ve ilgisine uygun olması, günlük hayatta kullanabileceği, kullanım sıklığı yüksek sözcüklerden oluşması da önemlidir. Ayrıca anlamı bilinmeyen kelimelerin diğer metinlerde de geçmesine dikkat edilmelidir. Çünkü yeni kelimelerin öğrenilmesi için uzun bir süreç gerekir. İlk duyulduğunda kısa süreli belleğe alınan kelimeler, uzun süreli belleğe aktarılmazlarsa çabuk unutulurlar. Apaydın (2007) ulamsal sözcük öğretimi düzenlenerek sunumu yapılan bilginin algılanmasının ve bellekte kalıcı olmasının, düzensiz sunulan bilgidan daha başarılı olacağını, kavramsal ve çağrışımsal ilişkilendirmeler eşliğinde yapılan ulamsal sözcük öğretiminin hem kodlamayı hem de geri çağırmaı olumlu yönde etkilediğini belirtmiştir.

Öğretmen Adaylarının Öğretmenlik Mesleğinin Tercih Sebepleri

Feyza Gün^a Tuğba Turabik^{b*}

^a Hacettepe Üniversitesi

Özet

Türk Milli Eğitiminin genel amacı, bireyleri, Türk milletinin milli, ahlaki, insani, manevi ve kültürel değerlerini benimseyen, Türkiye Cumhuriyetine karşı görev ve sorumluluklarını bilen ve bunları davranış haline getirmiş, geniş bir dünya görüşüne sahip yapıcı, yaratıcı ve verimli yurttaşlar olarak yetiştirmek, onları hayata hazırlayıp ilgi ve yetenekleri doğrultusunda kendilerini mutlu kılacak bir meslek sahibi olmalarını sağlayarak ülkenin refah ve mutluluğunu artırmak, ekonomik, sosyal, kültürel kalkınmayı destekleyerek Türk Milletini çağdaş uygarlığın yapıcı, yaratıcı, seçkin bir ortağı yapmaktır. Bu amaçların gerçekleştirilmesinde en büyük pay eğitim sistemlerinin temel unsurlarından olan öğretmenlere düşmektedir. Öğrencilerin istenilen amaçlar doğrultusunda yetiştirilebilmesi için öğretmenlerin iyi niteliklere sahip olmasının yanında mesleğini severek, isteyerek ve geleceğe yön verecek bireyleri yetiştirdiğinin de farkında olarak yapması gerekmektedir. Üstlenilen sorumluluk, toplumsal beklentiler ve kazanılması gereken özellikler dikkate alındığında öğretmenliğin herkes tarafından yapılamayacak bir meslek olduğu kolayca anlaşılmaktadır (Şimşek, 2003). Dolayısıyla öğretmenlerin bu mesleği tercih sebepleri ile mesleğe yönelik algı ve tutumları oldukça önem taşımaktadır. Bu çalışmada da öğretmen adaylarının, öğretmenlik mesleğini tercih sebeplerinin araştırılması amaçlanmıştır. Hacettepe Üniversitesi Eğitim Fakültesi, İlköğretim Bölümü'nde eğitim görmekte olan birinci sınıf öğrencilerinin görüşlerine başvurularak anket formu ile toplanan veriler nitel araştırma deseni kullanılarak değerlendirilmiştir.

Anahtar kelimeler: Öğretmen adayları, öğretmenlik mesleği, meslek tercihi.

Giriş

Eğitim sistemlerinin en önemli girdilerinden biri de öğretmenlerdir. Öğretmen, öğrenmeyi kılavuzlayan ve davranış mühendisi olarak da anılan, hem kendi alanında hem de eğitsel açıdan yeterli kişidir (Pehlivan, 2006: 93). Öğrencilerin milli eğitimin hedefleri doğrultusunda yetiştirilebilmesini sağlamak için öğretmenlerin yalnızca iyi niteliklere sahip olması yetmemekte, aynı zamanda mesleğini severek, isteyerek ve geleceğe yön verecek bireyleri yetiştirdiğinin de farkında olarak yapması gerekmektedir. Üstlenilen sorumluluk, toplumsal beklentiler ve kazanılması gereken özellikler dikkate alındığında öğretmenliğin herkes tarafından yapılamayacak bir meslek olduğu kolayca anlaşılmaktadır (Şimşek, 2003). Dolayısıyla öğretmenlerin bu mesleği tercih sebepleri ile mesleğe yönelik algı ve tutumları oldukça önem taşımaktadır. Öğretmen adaylarının öğretmenlik mesleğini tercih etme nedenlerini ele alan bazı çalışmalar (Boz ve Boz, 2008; Çermik, Doğan ve Şahin, 2010; Hacıömeroğlu ve Şahin Taşkın, 2009; Kartal ve Taşdemir, 2012; Tataroğlu, Özgen ve Alkan, 2011) bulunmaktadır. Bu çalışmalarda öğretmen adaylarının mesleği tercih sebebi olarak; öğretmeyi ve çocukları sevmeye, saygın bir meslek olduğunu düşünme, bazı anabilim dallarında o branşı sevmeye ve iş olanağının fazla, çalışma şartlarının uygun olması, kendilerini yetiştiren öğretmenlerden etkilenme, meslek tatminliği, eğitimle topluma faydalı bireyler yetiştireceğini düşünme, üniversite sınavından alınan puan, ekonomik sebepler, daha iyi fırsatlar sunan bir iş bulana kadar kendini güvence altına alacağı bir meslek olması, ailenin teşvik etmesi, kendine uygun bir meslek olarak görme gibi etkenler belirtilmiştir.

Papanastasiou ve Papanastasiou (1997)'nin ABD ve Kıbrıs'taki öğretmen adayları ile yaptığı karşılaştırmalı çalışmada ise ABD'li öğretmen adaylarının öğretmenliği tercih sebeplerinde öğretmeyi sevmeye, çocuklarla uğraşmayı sevmeye, öğretmenliğin doğuştan gelen bir yetenek olması inancı gibi içsel motivasyon kaynaklarının etkili olduğu; Kıbrıslı öğretmen adaylarının ise mezuniyetten sonra hemen iş bulma olanağı, güvenli bir olması, öğretmenlik mesleğinde çok çeşitli iş imkanları olması, tatilinin çok olması gibi sebeplerle öğretmenlik mesleğini tercih ettikleri belirtilmiştir. Elde edilen bu bulgularla da, gelişmekte olan ülkelerde öğretmenlik mesleğini tercih sebeplerinin daha çok ekonomik ve dışsal faktörlere, gelişmiş ülkelerde ise bu sebeplerin daha çok içsel motivasyon kaynaklarına bağlı olduğu sonucuna ulaşılmıştır. Yurt dışında yapılan benzer çalışmalarda, toplumda ve öğrencilerde fark yaratma isteği, öğretmenlerin öğrenciler için bir rol model olduğu düşüncesi,

öğrenci ve öğretmen arasında karşılıklı bilgi ve deneyim paylaşımı yoluyla ortak bir gelişme ve sürekli bir öğrenme ortamı oluşturma, olumlu bir öğrenme ortamı yaratma, çocuk sevgisi, öğretmenliğin yaratıcılığı geliştiren bir meslek olması, eğitimle topluma yarar sağlanması gibi faktörler öğretmenlik mesleğini tercihte gösterilen diğer sebeplerden olmuştur (Stiegelbauer, 1992; Hayes, 1990; Weiner, 1993).

Bu çalışmada ise Hacettepe Üniversitesi'nde eğitim görmekte olan öğretmen adaylarının öğretmenlik mesleğini tercih sebeplerinin araştırılması yoluyla öğretmen adaylarını mesleği tercihe iten motivasyon kaynaklarının daha çok hangi yönde yoğunlaştığı saptanmaya çalışılmıştır.

YÖNTEM

Bu çalışmada nitel araştırma desenlerinden durum çalışması kullanılmıştır. Durum çalışması, “nasıl” ve “neden” sorularının sorulduğu, güncel bir olguyu kendi gerçek yaşam çerçevesi içinde çalışan, olaylar üzerinde araştırmacının kontrolünün az olduğu, olgu ve içinde bulunduğu içerik arasındaki sınırların kesin hatlarıyla belirgin olmadığı ve birden fazla kanıt veya veri kaynağının mevcut olduğu durumlarda kullanılan bir nitel araştırma desendir (Yin, 2009).

Örneklem

Araştırmanın örneklemini, 2013-2014 öğretim yılı güz döneminde Hacettepe Üniversitesi, Eğitim Fakültesi, İlköğretim Bölümü, Okul Öncesi Eğitimi, Fen Bilgisi Eğitimi, İlköğretim Matematik Eğitimi Anabilim Dalları'nda eğitim görmekte olan birinci sınıf öğrencileri oluşturmaktadır. Araştırmaya katılan grubun farklı niteliklere sahip olması göz önünde bulundurularak amaçlı örnekleme yöntemlerinden maksimum çeşitlilik örnekleme kullanılmıştır. Maksimum çeşitlilik örnekleme, çeşitlilik gösteren durumlar arasında herhangi ortak ya da paylaşılan olguların olup olmadığını bulmaya çalışmak ve bu çeşitliliğe göre problemin farklı boyutlarını ortaya koymaktır (Yıldırım ve Şimşek, 2011:109). Araştırmaya 79 (%83,16) kadın, 16 (%16,84) erkek olmak üzere toplam 95 öğretmen adayı katılmıştır. Örnekleme yer alan öğretmen adaylarının anabilim dallarına göre dağılımı Tablo 1'de sunulmuştur.

Tablo 1: Örnekleme yer alan öğretmen adaylarının cinsiyet ve anabilim dallarına göre dağılımı

Bölüm Cinsiyet	İlköğretim Matematik Eğitimi		Okul Öncesi Eğitimi		Fen Bilgisi Eğitimi		Toplam	
	f	%	f	%	f	%	f	%
Kadın	39	82	12	86	28	82,35	79	83,16
Erkek	8	18	2	14	6	17,65	16	16,84
Toplam	47	100	14	100	34	100	95	100

Veri Toplama Aracı ve Veri Analizi

Veriler, araştırmacılar tarafından hazırlanan anket formu ile toplanmıştır. Anket formu iki kısımdan oluşmaktadır. Birinci kısımda, öğretmen adaylarının demografik özelliklerini belirlemeye yönelik sorular yer alırken; ikinci kısımda öğretmenlik mesleğini tercih nedenlerini 5 madde halinde en önemli olandan daha az önemli olana doğru sıralamalarının istendiği ve öğretmenlik mesleğini tekrar tercih edip etmeyeceklerini sorgulayan iki adet açık uçlu soru yer almaktadır.

Öğretmen adaylarının sorulara verdikleri cevaplar nitel araştırma yöntemiyle analiz edilmiştir. Bu kapsamda sorulara verilen cevaplar detaylı bir şekilde incelenerek kategorilendirilmiştir. Sorulara verilen cevaplar tekrar incelenmiş, hangi ifadenin hangi kategoriye girdiği saptanarak frekans ve yüzdeleri hesaplanmıştır.

BULGULAR

Aşağıda toplanan verilerden elde edilen bulgular ayrıntılarıyla sunulmuştur.

1. Öğretmen adaylarının anabilim dallarına göre yaşlarının dağılımı

Öğretmen adaylarının yaşlarına göre dağılımları Tablo 2 de sunulmuştur. Buna göre öğretmen adaylarının %57,89'u on sekiz yaş grubuna dâhildir. Bunu %30,53'lük bir oranla on dokuz yaş grubuna dâhil olan öğrenciler takip etmektedir.

Tablo 2: Örnekleme yer alan öğretmen adaylarının anabilim dallarına göre yaşlarının dağılımı

Yaş	İlköğretim Matematik Eğitimi		Okul Öncesi Eğitimi		Fen Bilgisi Eğitimi		Toplam	
	f	%	f	%	f	%	f	%
17	3	6,4	0	0	1	2,94	4	4,21
18	24	51,06	8	57,15	23	67,65	55	57,89

19	17	36,14	5	35,7	7	20,59	29	30,53
19 üzeri	3	6,4	1	7,15	3	8,82	7	7,37
Toplam	47	100	14	100	34	100	95	100

2. Öğretmen adaylarının anabilim dallarına göre mezun oldukları lise türlerinin dağılımı

Öğretmen adaylarının yaşlarına göre dağılımları Tablo 3 de sunulmuştur. Tabloya göre Anadolu öğretmen lisesinden mezun olanların %45, 26'lık bir oranla en fazla paya sahip olduğu görülmektedir. Anadolu öğretmen liselerini, %30, 53'lük bir oranla Anadolu liseleri takip etmektedir. Bu şekilde bir sonuç çıkması beklenen bir durumdur. Çünkü Anadolu öğretmen liseleri öğretmen adayı yetiştiren kurumlardır ve üniversiteye girişte eğitim fakültesini tercih etmek isteyenlere ek puan verilmektedir.

Tablo 3: Örnekleme de yer alan öğretmen adaylarının anabilim dallarına göre mezun oldukları lise türlerinin dağılımı

Lise Türü	İlköğretim Matematik Eğitimi		Okul Öncesi Eğitimi		Fen Bilgisi Eğitimi		Toplam	
	f	%	f	%	f	%	f	%
Anadolu Lisesi	9	19,15	3	21,44	17	50	29	30,53
Anadolu Öğretmen Lisesi	37	78,72	5	35,71	1	2,94	43	45,26
Genel Lise	1	2,13	0	0	13	38,24	14	14,74
Fen Lisesi	0	0	1	7,14	0	0	1	1,05
Meslek Lisesi	0	0	5	35,71	0	0	5	5,26
Diğer	0	0	0	0	3	8,82	3	3,16
Toplam	47	100	14	100	34	100	95	100

3. Öğretmen adaylarının anabilim dallarına göre bölümlerini tercih sıralarının dağılımı

Öğretmen adaylarının anabilim dallarına göre bölümlerini tercih sıralarının dağılımı Tablo 4'te sunulmuştur. Buna göre, her üç bölümü de adaylar en çok 1-5 arasındaki tercih sırasında göstermişlerdir. Toplama bakıldığında bu oran %72,62 gibi büyük bir paya sahiptir.

Tablo 4: Örnekleme de yer alan öğretmen adaylarının anabilim dallarına göre bölümlerini tercih sıralarının dağılımı

Tercih Sırası	İlköğretim Matematik Eğitimi		Okul Öncesi Eğitimi		Fen Bilgisi Eğitimi		Toplam	
	f	%	f	%	f	%	f	%
1-5	33	70,21	12	85,71	24	70,59	69	72,62
6-10	6	12,77	2	14,29	6	17,65	14	14,74
11-15	3	6,38	0	0	3	8,82	6	6,32
16-20	4	8,51	0	0	0	0	4	4,21
21-25	1	2,13	0	0	1	2,94	2	2,11
26-30	0	0	0	0	0	0	0	0
Toplam	47	100	14	100	34	100	95	100

4. Öğretmen adaylarının anabilim dallarına göre ailelerinin aylık gelir dağılımı

Öğretmen adaylarının anabilim dallarına göre ailelerinin aylık gelir dağılımına ilişkin bilgiler Tablo 5'te sunulmuştur. Tabloda yer alan bilgilere bakıldığında, aileleri düşük gelir grubunda bulunanların oranının daha yüksek olduğu görülmektedir. Aylık geliri 2500 TL ve altı olan ailelere sahip olan öğretmen adaylarının yüzdesi toplam 77,89 olmuştur.

Tablo 5: Örnekleme de yer alan öğretmen adaylarının anabilim dallarına göre ailelerinin aylık gelir dağılımı

Aylık Gelir	İlköğretim Matematik Eğitimi		Okul Öncesi Eğitimi		Fen Bilgisi Eğitimi		Toplam	
	f	%	f	%	f	%	f	%
1000 TL ve Altı	16	34,04	3	21,43	3	8,82	22	23,16
1001 TL - 2500 TL	22	46,81	10	71,43	20	58,83	52	54,73
2501 TL - 4000 TL	8	17,02	1	7,14	10	29,41	19	20
4001 TL ve üzeri	1	2,13	0	0	1	2,94	2	2,11
Toplam	47	100	14	100	34	100	95	100

5. Öğretmen adaylarının anabilim dallarına göre ailelerinin eğitim durumlarının dağılımı

Öğretmen adaylarının anabilim dallarına göre ailelerinin eğitim durumlarına ilişkin bilgiler Tablo 6'da sunulmuştur. Tablo 6 incelendiğinde, öğretmen adaylarının annelerinin daha çok ilkököl mezunu (%50,53); babalarının ise çoğunlukla lise mezunu (%33,68) olduğu görülmektedir.

Tablo 6: Örnekleme de yer alan öğretmen adaylarının anabilim dallarına göre ailelerinin eğitim durumlarının dağılımı

Aile Eğitim Durumu	İlköğretim Matematik Eğitimi		Okul Öncesi Eğitimi				Fen Bilgisi Eğitimi				Toplam					
	Anne		Anne		Baba		Anne		Baba		Anne

6. Öğretmen adaylarının öğretmenlik mesleğini tercih etme sebebi ile ilgili kategoriler

Öğretmen adaylarının öğretmenlik mesleğini tercih etme sebebi ile ilgili kategoriler Tablo 7’de gösterilmiştir. Buna göre öğrencilerden alınan veriler 23 farklı kategoride toplanmıştır. Öğretmen adaylarının öğretmenlik mesleğini seçme nedenleri arasında ilk sırada %12’lik bir oranla *kendini öğretmenlik mesleğine uygun görme* yer almaktadır. Bunu 11,17’lik yüzde ile *öğretmekten mutluluk duyma* ve 10,08’lik yüzde ile *eğitimle topluma fayda sağlayacağını düşünme* takip etmektedir.

Tablo 7: Öğretmenlik Mesleğini Tercih Etme Sebebi İle İlgili Kategoriler

Kategoriler	Frekans	%
Kendini öğretmenlik mesleğine uygun görme	44	12
Öğretmekten mutluluk duyma	41	11,17
Eğitimle topluma fayda sağlayacağını düşünme	37	10,08
Öğretmenlik mesleğine olan sevgi	30	8,17
Branşını sevdiği için	30	8,17
Çocuk sevgisi	27	7,36
Ailesi istediği için	23	6,27
Öğretmenliğin kutsal ve değerli bir meslek olması	22	6
Puanı okuduğu bölüme yettiği için	20	5,45
Tatilin fazla olması	15	4,09
Rahat bir meslek olması	14	3,81
Kadınlar için uygun bir meslek olması	13	3,54
Nitelikli öğretmen eksikliğinin eğitimde yol açtığı sorunlar	9	2,45
Ailesindeki ve çevresindeki öğretmenleri örnek alma	9	2,45
Öğretmenlik mesleğinin getirisi fazla	7	1,91
Gelirinin iyi olması	6	1,63
Okul ortamının sevilmesi	4	1,09
Eğlenceli bir meslek olması	4	1,09
Atama durumunun ve iş olanaklarının diğer mesleklere göre daha iyi olması	4	1,09
Öğretmenliğin yeniliğe açık bir meslek olması	3	0,82
Çevredekiler öğretmenlik mesleğini kendisine uygun gördüğü için	3	0,82
Öğretmen-öğrenci ilişkilerine imrenme	1	0,27
Üniversitenin saygınlığı	1	0,27
Toplam	367	100

“Kendini öğretmenlik mesleğine uygun görme” kategorisine giren ifadeler, kendimi öğretmen olarak düşündüğümde doğru mesleği seçtiğimi düşünüyorum, yapabileceğim tek mesleğin öğretmenlik olduğunu düşünüyorum, diğer mesleklere göre daha kolay yapabileceğini düşündüğüm için, el becerim ve herhangi bir şeye yeteneğim olmadığı için, kendime yakıştırdığım meslek türünün öğretmenlik olması, bu meslekte başarılı olabileceğimi düşünüyorum, öğretmenlik mesleğinde kendimi buluyorum, kendimde bir öğretmende olması gereken özelliklerin(sabırlı olma, etkili iletişim becerisi, konuşkan olma, iyi bir anlatıcı olma vb.) bulunduğunu düşünüyorum şeklinde çeşitlenmiştir. “Öğretmekten mutluluk duyma” kategorisine giren ifadeler ise birilerine bir şeyler anlatmak hoşuma gider, insanlara bildiğimi anlatmak ve öğretmek isterim, öğretmeyi seviyorum, bilgi aktarımı gerçekleştirmenin verdiği haz, bilgi paylaşmayı seviyorum, anlatmayı seviyorum, eğitmeyi seviyorum, bilgilerimi başkalarına aktarmaktan ve onları bilgilendirmekten gurur duymak, öğretme arzusu, öğretmek işinin benim için eğlenceli olması ve beni mutlu etmesi olarak ifade edilmiştir. “Eğitimle topluma fayda sağlayacağını düşünme” kategorisinde ise topluma faydalı olmak, bir öğretmen bir toplumun eğitimcisidir, toplumun belli değerler etrafında toplanmasını sağlamak, öğrencilere yalnızca ders hakkında bilgi vermek istemeyip hayatın içindeki güzel şeylerden de bahsetmek istemem, doğru olanı öğretmeyi ve yanlışlığı değiştirmeyi hedeflerim, gelecek için iyi bir nesil yetiştirmek, yaşadığımız topluma katkı vermek için, düzeni sağlamak istiyorsam gençlerden başlamalıydım, eğitimin toplumun yapı taşı olduğuna inanmam, gelecek neslin temellerini öğretmenler atar ve ben bu temelleri sağlam atmam istiyorum, hayata yeni başlayan, bilgiye ve eğitime muhtaç bireyleri yönlendirmeyi ve onlara doğruyu göstermeyi isterim, ülkemizde yaşanan terör olaylarında halkı az da olsa bilgilendirerek aza indirmek gibi cümlelerle ifade edilmiştir.

Öğretmenlik mesleğini tercih sebeplerinde bölümlere göre farklılıklar da gözlenmiştir. Örneğin matematik eğitimi bölümünde öğrencilerin çoğu tercih sebebi olarak matematik branşını sevmelerini belirtmiştir. Yine okul öncesi eğitimi bölümünde ise öğretmen adaylarının neredeyse tamamı tercih sebepleri arasında çocuk sevgisini göstermiştir. Öğretmenlik mesleğinin rahat bir meslek olduğu ve tatillerinin fazla olduğu inancı adayların öğretmenlik mesleğini tercihlerinde % 8 oranında etkili olmuştur. Özellikle eğitim sisteminin bir gereği olarak yapılmakta olan üniversiteye giriş sınavında alınan puanlar da adayların %5,45’ini öğretmenlik mesleğini seçmeye itmiştir. Öğretmen adaylarının %6,27’si ailesi istediği için mesleği tercih ettiklerini vurgulamıştır. Bu araştırmada da toplumda var olan öğretmenlik mesleğinin kadınlar için ideal meslek olduğu görüşü ile ilgili

ifadeler %3, 54'lük bir oran ile yer almıştır. Aday öğretmenlerden %2,45'i nitelikli öğretmen eksikliğine yönelik problemleri çözmeyi istedikleri için bu mesleği tercih ettiklerini belirtmişlerdir.

7. Öğretmen adayları tarafından öğretmenlik mesleğini tercih etmede birinci sırada ifade edilen sebepler

Öğretmen adayları tarafından öğretmenlik mesleğini tercih etmede birinci sırada ifade edilen sebepler Tablo 8'de gösterilmiştir. Tabloya göre öğretmen adaylarının mesleği tercih sebepleri arasında birinci sırada gösterdiği nedenler sırasıyla; ilköğretim matematik eğitimi bölümünde “branşını sevme”, okul öncesi eğitimi bölümünde “eğitim ile topluma fayda sağlayacağını düşünme”, fen bilgisi eğitiminde ise “kendini öğretmenlik mesleğine uygun görme” olarak belirtilmiştir. Toplamda ise adaylar ilk sırada %14,74'lük bir oranla “kendini öğretmenlik mesleğine uygun görme” kategorisine uygun ifadelerde bulunmuşlardır.

Tablo 8: Öğretmen Adayları Tarafından Birinci Sırada İfade Edilen Tercih Sebepleri

Kategoriler	İlköğretim Matematik Eğitimi		Okul Öncesi Eğitimi		Fen Bilgisi Eğitimi		Toplam

Toplam	47	100	14	100	34	100	95	100

8. Öğretmen adaylarının anabilim dallarına göre mesleği yeniden tercih etme durumlarının cinsiyete göre dağılımı

“Okuduğunuz bölümü yeniden seçme şansınız olsaydı öğretmenlik mesleğini tekrar tercih edip etmeyeceğinizi gerekçeleriyle açıklayınız” sorusuna verilen cevaplar değerlendirilerek öğretmen adaylarının anabilim dallarına göre mesleği yeniden tercih etme durumları analiz edilmiştir. Anabilim dallarına göre mesleği yeniden tercih etme durumlarının cinsiyete göre dağılımı Tablo 7’de gösterilmiştir. Buna göre, kadın öğretmen adaylarının % 65,82’si, erkeklerinse %68,75’i mesleğini tekrar tercih edebileceklerini belirtmişlerdir. Ayrıca araştırmaya katılan toplam katılımcıların %66,32’si öğretmenlik mesleğini tekrar tercih edebileceklerini ifade etmişlerdir.

Tablo 9: Mesleği Yeniden Tercih Etmede Cinsiyet Faktörü

Mesleği Tercih Etme Durumu	Bölüm		İlköğretim Matematik Öğretmenliği				Okul Öncesi Öğretmenliği				Fen Bilgisi Öğretmenliği				Toplam	
	Kadın		Erkek		Kadın		Erkek		Kadın		Erkek		Kadın		Erkek	
	f	%	f	%	f	%	f	%	f	%	f	%	f	%	f	%
Evet	23	58,98	5	62,5	7	58,33	2	100	22	78,58	4	66,7	52	65,82	11	68,75
Hayır	16	41,02	3	37,5	5	41,67	0	0	6	21,42	2	33,3	27	34,18	5	31,25
Toplam	39	100	8	100	12	100	2	100	28	100	6	100	79	100	16	100

Soruya “hayır” şeklinde cevap veren adaylar iki durumda kategorize edilmiştir. Adaylardan bazıları eğitim görmekte olduklarından farklı bir branşta öğretmen olmak istediklerini, diğerleriyse öğretmenlik mesleğini hiç tercih etmek istemediklerini belirtmişlerdir. Farklı bir branşta öğretmen olmak isteyenlerden bazıları özellikle rehberlik ve psikolojik danışmanlık ya da görme engelliler öğretmenliği okumak istediklerini belirtmiş bazıları ise sadece “farklı bir branşta öğretmen olmak isterdim” şeklinde ifadelerde bulunmuşlardır. Öğretmenlik mesleğini hiç tercih etmek istemeyenler ise gerekçeleri arasında atanamama sorunu, öğretmen maaşlarının düşük olması, puanının hayalindeki mesleğe yetmemesi gibi sebepleri göstermiştir. Adaylar öğretmenlik mesleği yerine tıp, diş hekimliği, beslenme ve diyetetik, fizik tedavi ve rehabilitasyon, eczacılık, mühendislik, veterinerlik, hukuk gibi alanları tercih etmek istediklerini belirtmişlerdir.

SONUÇ ve ÖNERİLER

Bu çalışmada Hacettepe Üniversitesi Eğitim Fakültesi İlköğretim Bölümü’ne yeni başlamış olan birinci sınıf öğrencilerinin yani geleceğin öğretmen adaylarının öğretmenlik mesleğini tercih sebepleri araştırılmıştır. Bu araştırmanın yapılması gelecek nesilleri yetiştirecek olan öğretmenlerimizin bu mesleği tercih etme sebeplerini

belirlemek açısından önem taşımaktadır. Öğretmenlik mesleğinde emek verilen kişinin insan olması mesleği tercih etme sebeplerinde maddi faktörlerden çok manevi faktörlerin etkisinin fazla olmasını gerektirmektedir. Bu araştırmanın sonuçları da bu görüşü destekler nitelikte olmuştur. Öğretmen adaylarının büyük bir kısmı öğretmenlik mesleğini tercih sebepleri arasında daha çok *kendini öğretmenlik mesleğine uygun görme, öğretmekten mutluluk duyma, eğitimle topluma fayda sağlayacağını düşünme, öğretmenlik mesleğine olan sevgi* gibi manevi faktörleri göstermişlerdir. En az ise *atama durumunun ve iş olanaklarının diğer mesleklere göre daha iyi olması, çevredekiler öğretmenlik mesleğini kendisine uygun gördüğü için, gelirin iyi olması* gibi daha dışsal olan sebepleri göstermişlerdir. Bu sonuç Türk eğitim sistemimiz açısından oldukça sevindiricidir.

Araştırmanın sonuçlarını detaylandırdığımızda, öğretmen adaylarının daha çok Anadolu öğretmen liselerinden mezun olması bu liselerin öğretmen yetiştirme amacına ulaştığını göstermektedir. Bunun yanında bu lise türünden mezun olmuş adayların eğitim fakültelerini seçecek olması halinde ek puan olanağı sağlaması adayların öğretmenlik mesleğini tercih etmesini kolaylaştıran bir etkidir. Zaten öğretmen adaylarının bölümlerini daha çok ilk beş sırada tercih etmiş olmaları da bu görüşü destekler niteliktedir. Öğretmen adaylarının ailelerinin eğitim durumu ve gelir düzeyine bakıldığında düşük sosyo-ekonomik düzeyde oldukları göze çarpmaktadır. Bu durum öğretmen adaylarının aile isteği doğrultusunda öğretmenlik mesleğini tercih etmiş olabileceğini akıllara getirmektedir. Araştırma bulgularına bakıldığında ailesi istediği için bu mesleği tercih ettiğini söyleyenlerin yüzdesi azımsanmayacak düzeydedir.

Araştırma ilköğretim bölümünden üç anabilim dalında gerçekleştirilmiştir. Anabilim dalları bazında öğretmenlik mesleğini tercih sebeplerinde ilk sıradaki ifadeye baktığımızda ilköğretim matematik eğitimi anabilim dalındaki öğretmen adaylarının en çok branşlarını sevdiğileri için mesleği tercih ettiklerini görmekteyiz. Bunu puanı okuduğu bölüme yettiği için ve öğretmenlik mesleğine olan sevgi faktörleri takip etmiştir. Okul öncesi eğitimi anabilim dalındaki öğretmen adayları ise ilk sırada eğitimle topluma fayda sağlayacağını düşünme faktörünü, daha sonra eşit oranlarla kendini öğretmenlik mesleğine uygun görme ve öğretmenliğin kutsal ve değerli bir meslek olması faktörlerini öğretmenlik mesleğini tercih sebebi olarak belirtmişlerdir. Fen bilgisi eğitimi anabilim dalındaki öğretmen adaylarının mesleği tercih etme sebeplerinin sıralamasına bakıldığında ilk sırada kendini öğretmenlik mesleğine uygun görmenin yer aldığı, bunu sırasıyla öğretmekten mutluluk duyma, eşit yüzdelerle de öğretmenlik mesleğine olan sevgi ve eğitimle topluma fayda sağlayacağını düşünmenin takip ettiği görülmektedir.

Öğretmen adaylarının büyük bir kısmının öğretmenlik mesleğini tercih sebebi olarak puanı okuduğu bölüme yettiği için, tatilin fazla olması, rahat bir meslek olması, kadınlar için uygun bir meslek olması, nitelikli öğretmen eksikliğinin eğitimde yol açtığı sorunlar gibi ifadeler kullanması oldukça dikkat çekici ve düşündürücüdür. Öğrencilerin üniversite sınavlarından aldığı puanların, onları beklide hiç istemedikleri bir mesleğe yönelmek zorunda bırakması ve bunun sonucu olarak da öğretmenlik mesleğini tercih etmeleri mesleğin doğasına aykırı bir durumdur. Bu durumdan hem öğretmen adaylarının hem de ileride onların yetiştireceği nesillerin büyük zarar göreceğini tahmin etmek zor değildir. Nitekim öğretmen adaylarından puanlarının yetmesi durumunda öğretmenlik mesleğini tekrar tercih etmeyeceklerini ve sağlık alanlarına veya hukuk, mühendislik gibi diğer alanlara yöneleceklerini söyleyenler olmuştur. Öğretmen adaylarının eğitim süreçlerinin sonunda “keşke”lerle dolu olarak mezun olup eğitim sistemine dâhil olması ileride olumsuz sonuçlara sebep olabilir. Öğretmenlik mesleğinin rahat, tatili bol, kadınlar için ideal bir meslek olarak görülmesi geçmişten günümüze kadar hala etkisini gösteren yanlış bir algı olarak genç öğretmen adaylarının ifadelerinde de yer almaktadır. Öğretmen adaylarının günümüz eğitim sisteminde nitelikli öğretmen eksikliğinin yol açtığı sorunların farkında olması ve bunu değiştirmek amacıyla öğretmenlik mesleğini tercih etmeleri araştırmada ortaya çıkan olumlu sonuçlardandır. Bu düşünceye sahip öğretmen adaylarının sisteme dâhil olması Türk eğitim sistemi açısından sevindiricidir.

Çalışmada elde edilen bu sonuçlar giriş kısmında sözü edilen diğer araştırmacıların bulguları ile paralellik göstermektedir. Bu da bize yurt içi ve dışındaki öğretmen adaylarının benzer sebeplerle mesleği tercih ettikleri sonucuna ulaştırmaktadır. Araştırmanın sonuçları değerlendirildiğinde bazı önerilerde bulunulabilir. Öncelikle öğrencilere lisede aldıkları eğitim süresince, ilgi ve yeteneklerini tanımaları ve mesleklere olan farkındalıklarını artırmak amacıyla çeşitli rehberlik hizmetleri verilmeli, bu doğrultuda tutum- ilgi-beceri testleri yapılmalı ve bunun sonuçları öğrenci ve velileri ile paylaşılarak gerekli yönlendirme yapılmalıdır. Aileler öğrenciyi meslek tercihinde özgür bırakmalı, çeşitli baskılar sonucunda öğrencinin zorla eğitim almasının önüne geçilmelidir. Öğretmenlik mesleğinin toplumda rahat bir meslek olarak nitelendirilmesinin sebepleri araştırılarak bunların çözümüne yönelik önlemler alınmalıdır. Öğretmen adaylarının kafasında bundan sonrası için “keşke”lerin olmasını istemiyorsak lisans eğitimle süresince her türlü destek verilerek, onlara ileride yapacakları mesleğin önemi ve değeri hissettirilmelidir.

Using of the Vig in the Preparation of Student Teachers

Eva Šírová^a Ilona Gillernová^{b*}

^a PhDr., Charles University in Prague, Faculty of Arts, Department of Psychology

^b Doc. PhDr., CSc., Charles University in Prague, Faculty of Arts, Department of Psychology

Abstract

The article deals with using of the video interaction guidance (VIG) in the education of teachers to support their professional development – above all in the area of social skills. The VIG is primarily focused on communication. Nevertheless, with the increase of the amount of teachers-students successful interactions, the efficiency of the whole teaching process grows. A quantitative research and an illustrative case-study are presented. Results of the research suggest that the positive video feedback provides a valuable opportunity for personal, professional and social development for both teachers and pupils across a range of contexts. These investigations have shown that this approach improves the communication skills and self-esteem of student teachers, therefore enhancing effective learning and teaching and minimising negative contact, e.g. misunderstanding, inattention, conflict. The student teachers have started fully enjoy the teaching, being energized by it.

Keywords: Video interaction guidance (VIG), social skills, communication skills, education of teachers

Introduction

Communication skills constitute highly important part of profession skills of teachers, enabling them to attach positive relationships with students and to create pleasant and effective atmosphere in teaching process (Gursimsek, Vural, Demirsoz, 2008). Many studies of Czech and foreign authors warn that above all student teachers have insufficiently developed their abilities to manage the class. According to Sükran Tok (2010), communication and behavioral management skills belong to the most substantial problems of the beginning teachers.

Facing up to this situation, the preparation of the student teachers should be concentrated on the development of social skills. The integration of this activities directly to the teaching practice could help them to bridge over the gap between the theory and real classwork. Video interaction guidance (VIG) enables to proceed such an integration with considerable efficiency.

Video interaction guidance

The VIG was developed in the Netherlands (e.g. Jansen & Wels, 1995, 1998) as a short – time intensive method helping to improve interactions between parents and children. It was being expanded into many other areas of a social contact - VIG is being used in a very wide range of contexts (education, health service, social-work, management etc.). VIG method is currently practiced in many different countries, including the Czech republic, Finland, Germany, Hungary, Poland, Sweden, Switzerland, the United Kingdom and the United States. The method of VIG has been inspired by a wide range of theoretical sources from several disciplines – some of the most important are human ethology (Trevarthen – theory of intersubjectivity, reciprocity, protoconversation; Papouschek and Papouschek – intuitive parenting), psychology (Bowlby – attachment theory, Vygotsky – zone of the proximal development, Bandura – social learning theory), research of communication (Jacobson - rituals of the contact, Watzlavik – common theories of verbal and nonverbal communication, videofeedback et al.), pedagogy (Tausch and Tausch, Rogers – humanistic pedagogy, Gordon – parental ability et al.).

Through the video-records, the method aims at increasing of the successful interactions, including verbal, nonverbal and paraverbal aspects of the communication. A unique feature of VIG is that trainees watch themselves from a distance and have time for selfreflection, with the possibility to stop, review or to slow down the recording. The records are then being analysed according to Principles of the contact – categories of observable elements of behaviour (Biemans, 1990). „Based on the social learning theory of Bandura (1997), VIG assumes that positive reinforcement of positive behavior increases the self-efficacy of learners. Using the

method of positive self-modelling (Dowrick, 1999), the VIG trainer therefore selects and labels exemplary interactions in order to strengthen positive teacher behavior“ (Fukkink, Tavecchio, 2010, p. 2).

The goal of VIG in schools is to help to teachers to develop their communication and self-reflection skills that would enable them to attach relationships with the students succesfully, to manage the class and the education efficiently and to support their self-confidence in the role of the teacher.

Material and Methods

Methodology of the VIG

The VIG process involves the negotiating the goals of the work, resulting from actual needs of the teacher. Then the videotrainer is filming the teacher, short (approximately 10 minutes) records are being created at agreed times. The crucial parts of the record are being selected and analysed by the videotrainer. These moments are then being watched and discussed with the teacher with the intention of revealing and strenghtening of his/her own communication sources - which seems to be more efficient than to point out and eliminate mistakes. This part of the VIG process leads into building of partial goals for the next work of the teacher – folowed by the next VIG intervention.

VIG implementation into undergraduate study of teaching

The pilot evaluation focused on the possibility of VIG implementation into undergraduate study of Teaching Psychology at Secondary Schools and colleges. 133 students of Teaching Psychology (130 females, 30 males) practising at 30 secondary schools and at 12 colleges of 10 regions of the Czech Republic for atleast 3 months. The data were collected from October 2003 till June 2009).

The study had two crucial aims: VIG implementation and evaluation. Three VIG trainers aimed at supporting and helping to develop social skills of students of Teaching Psychology by using VIG during the role playing (microteaching) and students' practices at real schools.

The evaluation focused on measuring the changes in the social skills of the student teachers over the VIG intervention period by video analyzing. In addition, the written student-teachers' reflection were analyzed.

Case-study

One of the parciipients of the research was selected to demonstrate the impact of VIG on the student teachers in more detail. The student was a 23-year woman who had been already working as a teacher at a gymnasium where she was subserving her practice as well. Despite of her advanced teaching skills she faced up to the insufficient attention of students (approximately 16-years), who were allowed to use notebooks during lessons (an important part of the school orientation). She needed to find out some efficiant ways how to activate the students more.

First recodring

The teacher seemed to be free-hearted and tolerant, well-prepaired, trying to involve all the students into the education. She tried to activate the students to infer examples, connections etc, but the notebooks created a barrier of the eye-contct and of the interactions generally.

In the following discussion, we were talking about the communication sources and strenghts of the teacher. We were observing the connection between the eye-contact with the teacher and the activity of the students. A possibility to limit of using the notebooks were discussed, but the teacher would like to attract attention and activate students without limiting them. The partial goals till the next intervention were: more equable eye-contact with all students, direct activations.

Second recording

The teacher tried to activate the students more directly, even in the connection with the notebooks („try to find this out“ etc.), but she was working hard herself, not giving enough space to reactions of students. She succeeded in activating students with the concrete examples.

In the discussion, the teacher was astonished that she had given so small space for the reactions. We were talking about different forms of teaching (if it is more efficient to lecture without a participation of students or to activate them and guide them trough the education). We were discussing the possibility to limit using of

notebooks occasionally, the teacher considered trying it, because she realized that she needed more of the eye-contact with students to attract their attention.

Third recording

In the last recording, there was a huge change in the organization – the teacher and the students were sitting in a circle together, the teacher succeeded in activating of the students more times, the students were paying more attention to the teacher and to themselves as well.

The teacher was very absorbed by the changes that seemed to increase the activity of students and the efficiency of the education. She was pleased that she had managed to attract the attention and realized how the changes reached thanks the VIG helped her to feel more satisfied with the education.

Results and Discussion

Chart 1 shows the teaching methods that student teachers used during their microteaching and practice. They used more student-centred and activating methods after the VIG intervention, the form of lecturing was changed also – with more questioning.

Chart 2 shows changes in social skills of the student teachers during their teaching practice – remarkable changes after first and second VIG feedback.

Chart 3 shows changes in working goals that student teachers set during VIG intervention. The goal „to activate students more“ remarkably raised after first real experience of teaching in a big class of students as well as the aim to be better attuned and to make better structure of the lecture and to have a better time-plan of

activities. Many of them worked on their voice (modulation, intonation, articulation, loudness, fluency,...) and on their appearance (dress, face expression, movement, gestures,...).

Chart 3: Working goals of students

Conclusion

The VIG provides an important tool to analyze and develop effective teacher-students interactions and to prepare and positively motivate student teachers for their future profession. There is a substantial positive impact of the VIG on the self-reflection processes of the students. The method helps to reduce insecurity and nervousness of the student teachers during their practice.

The student teachers rated very high the possibility to see themselves on the records and analyzed them together with positive and supported videotrainers and other students. They found helpful to see the records of other students as well.

In summation, the VIG has a positive effect on teacher-students' communication and perception: the student teachers used activating techniques more frequently, became more attentive, receptive and attuned to the initiatives of students. As a consequence, students were more involved into the education.

Virtual Gallery for Children as a Hypertext. How Art Training Influences Cognition and Stimulate the Children's Creativity?

Malgorzata Karczmarzyk^{a *}

^a PhD, University of Gdańsk, Early Education Department

Abstract

Nowadays everything has its counterpart on the Internet. Every company, all public or private institutions, each educational institution, or even the majority of individuals have their own websites, or belong to a social network. These are the portals such as: Nasza Klasa (Our Class), Facebook, Twitter, You Tube, Flickr or Fotka.pl. Also great art galleries and national museums in Poland and in the world have their own websites (Karczmarzyk, 2013).

Websites today constitute the great power of information. They are the source of information, but also tend to be an indispensable complement to activity of any public or private institution. They guide a potential receiver to important for him/her information about the activity, history or social and cultural background of the institution. Virtual museums and galleries are no exception to this rule. However, what makes them important is the fact that the offer of majority of them is directed especially toward children. In this article the online gallery for children will be analyzed in the perspective of new forms of communication and its impact on children's creative abilities.

Keywords:

The modern world as a multimedia reality

How is today's world different from what it was? What would the world be like without computers? The computer and the Internet has become an integral part of our life, the thing which we do not want to get rid of. Why? We all communicate through the Internet. We create own websites, participate in communication via social networks, talk with each other using the chat rooms such as Gadu Gadu or Skype. Thanks to it we communicate one another, participate in the community, create and follow particular tasks and objectives, our and others goals. We impact one another.

As Boguslaw Dziadzia noted, " Media along with other agencies of socialization influence who we are, what values we share, how we perceive the world, they help us in shaping our identity " (Dziadzia, 2008:5). What's more, technologization and computerization make changes not only to the human being but also to the language, which he uses. There are new words, expressions in speech and writing, which define the virtual world and communication through the media. We commonly know expressions such as an e-mail (a letter), a chat (an Internet meeting), a video conference (a web meeting via video) and text emoticons (stylized drawings indicating the emotional state of the sender (Ch. Vandendorpe , 2008:142). These emotive pictograms are the visual code which is an example of crossing the borders of speech and incorporating the iconic dimension into writing (Ch. Vandendorpe, 2008:142). As a result appears the very different kind of writing, which is a specific computer jargon.

An extremely important to this phenomenon is a new receiver - a man - child - recipient. He in fact reads the web page and at the same time creates it. Thanks to him/her the website begins to „be real ". The recipient is not a passive viewer, but an active participant who, through his activity gives some sense to a virtual world. This determines the multidimensionality of a website. Anyone can be the recipient of the page, regardless of age, gender, race, religion, etc. Therefore, despite the fact that some websites of art galleries are designed for a specific recipient, their actual receivers are all people on Earth. It is worth investigating the opportunities offered by a gallery website and think about its creative potential, hidden in the language of media.

Examples of selected gallery websites as a hypertext

Turning to the analysis of selected gallery websites and trying to show them as multidimensional, composed of many discourses unites, we should define the word hypertext. In English a hypertext is a plain text, in which some words are specially marked - emphasizing different forms by colors. The concept of a hypertext appeared in 1965, long before the computers era. Recently, however, it has been experiencing a dynamic growth and popularity. A term coined by Theodor Nelson – a sociologist, working on the computer device to perform various operations on the text, such as checking, comparing, binding and correlating texts with other documents. Hypertext is a new solution for the technology that has changed forever the way we traditional used to use texts. Inventing it caused a revolutionary change in the methods of collecting and sharing information. Today it is an inseparable element of any website (Karczmarzyk, 2013).

An important feature of a hypertext is its openness, or lack of any spatial framework and restrictions based on age, sex or a continent. Anyone with the Internet access can freely use the websites as well as impact on their quality (some websites offer the recipient the ability to edit the information that is missing). What is more, the content available on the website complement with other websites by sending the user to another page. Formed in this manner an unlimited information network is constantly changing - because some information is updated other content is enrich with for example videos, photographs, or readers posts. Websites for children, such as AFK, Artists for Kids, MoMa. Destination Modern Art, Tate Gallery in London, the Children's Gallery in London, the Louvre for children, The Metropolitan Museum of Art in New York or the Polish website " BALL " of the Ministry of Culture and National Heritage are examples of a multimedia hypertext, which uses on one hand visual messages and on the other hand verbal text referring the user to subsequent web pages with further information on the topic. Sometimes it is a simple formula and its structure resembles a computer game but sometimes it is an intricate network of information which refers to the following interesting information on the history of art, or the biography of the artist.

For example, the American website MoMa inspires children to activity aimed at creating, painting, writing new words, listening but also finding out information about the biography of artists and to perform own works of art, which can be later printed.

Although this kind of a hypertext is only partial open (because there is no possibility to take advantage of the further web pages linked with the major one) due to the use of multimedia language MoMa's website very strongly influences the activity of its recipient. An interactive message forces a little child to „play with art," which is both a lesson in art history as well as a factor developing creative activity of a child.

Also the Polish web side " BALL " is built on a similar principle, it is designed for the youngest children, who thanks to it can learn about Polish towns and get to know the most important monuments and interesting facts about the city its building, main characters, schools etc. Here, drawings and caption refer a child to texts, and again subsequent texts. This is a typical structure of a hypertext, which is built as a network of multiple dependencies and sub-dependencies in order to provide information to a given recipient.

In turn, the English website of the Tate Kids (Tate Modern in London) "tempts" a child with colorful and diversified headings, which are similar to advertisement of the next "enchanted worlds." When a child chooses one of them he/she may disappear in a thicket of possibilities that gives him/her a particular website.

Educational skills developed by gallery websites

The selected examples of gallery web pages for children (described in the book of M. Karczmarzyk, "Child in a virtual gallery") reveal a great diversity in terms of both content and form of a multimedia language. On the websites of the recipient can find the information stored in the form of text, video, sound, drawings, of a painting. It is important here, however, is that in addition to data on the work of art its author or the image, a child can also activate itself through his/her own creative activity .

Gallery web pages stimulate the creativity of children forcing them to constant exploration and investigation further places of the virtual world. It is also a play that teaches and also shapes the personality and emotional intelligence. Because a child while working at the computer experiencing many positive feelings such as joy, but also sadness, surprise, curiosity, excitement. According to Jane McGonigal, it develops: optimism, ambition, knowledge, joyful productivity and cooperation, e.g. by joining the online community playing in a given game, or conversing on the forum about the problem (McGonigal, Internet source). In this way, thus the linguistic and social competences are being shaped. With graphic software, the impression of reality and more and more advanced technologies such as 3D and 5D, the player is drawn ever deeper into virtual reality. He/she has a

power there as well as a sense of agency and control, the possibility of choice and planning. In this way a child shapes the process of self- education, identity, and knowledge how to cope with difficult situations. Thanks to the multiple possibilities of going back to the game, particular activity or a level, the player learns self-discipline and patience in gaining goals.

Even viewing an online gallery web page is becoming potentially creative, because it forces the viewer to seek further interesting information, and the „links " offer an endless exploration of different options that require a creative responses and become the kind of stimulus to induce activity that is associated with thinking (Pater - Ejjgierd, Karczmarzyk, 2010). Thus, the child learns how to develop either aesthetic or creative competences. This type of education is similar to self- education and e-learning (Pater - Ejjgierd, Karczmarzyk, 2010). It prepares the child to work independently and provides ability to concentrate on the task performed alone. Internet art galleries for children offer them both the knowledge of the history of art and a play with a work of art. Therefore, this kind of activity can be fully recommended for children and their parents who seek to enrich and stimulate the development of their children.

About the Peculiar Aspects of Relativity and Beyond: A Pedagogical Perspective

Paolo Di Sia^{a*}

^aFree University of Bolzano - Faculty of Education - Viale Ratisbona 16 - 39042 Bressanone, Italy

Abstract

In this paper a pedagogical, but rigorous introduction to the key concepts of relativity is presented. Starting by the notions of space and time, of fundamental importance for the evolution for the global knowledge of children already in the primary school, it arrives to indications about the teaching of relativity in the high school and university. Interesting considerations related to fascinating topics, like the evolution of the concept of spacetime and the unusual amazing peculiarities emerging by the extensions of relativity, will be done.

Keywords:

INTRODUCTION

The Einstein's theory of general relativity (1915) is a theory concerning space, time and gravity. Before 1905, the causal structure of space and time identified a notion of simultaneity: for a given event "A", i.e. a point in space at an instant of time, it is possible to define the future of "A", all events that, in principle, can be achieved by a particle which starts from "A" (Einstein & Lawson, 2012 - Einstein & Infeld, 1967 - Einstein, 2013). The same can be said for the past of "A". What is not in the past or in the future of "A" is the set of simultaneous events to "A". This implied the possibility of separating the study of space-time in separate studies of space and time. This is the pre-relativistic notion of the structure of space-time. The theory of relativity has aroused a great philosophical interest for its deep implications on crucial concepts, such as those of space, time, matter, absolute, relative, and for the assignment of physical meaning to non-Euclidean geometries, issues that have their roots and are inherent to the essence of the man, since his childhood.

Identifying space with gravitational field, physics becomes a real geometry, a doctrine of the possible forms in the space. Even this close link to the geometry leads to the early experiences of the child, relative to her/his orientation in space. Hans Reichenbach spoke of a theory that is based on a critique of the apodictic character of each "a-priori" concept, by means of the method of successive approximation of the principles to the experience, that is the main modality with which the child compares her/himself to the external world (Reichenbach, 1957 - Reichenbach, 2011).

For all that, the Einstein's theory becomes an important and precious contribution, described with high mathematics elegance, which is based on the fundamental concepts of space and time and has a large cross on the first child's activities, related to the knowledge and understanding of the world (Di Sia, 2013).

THE NOTIONS OF SPACE AND TIME IN PRIMARY SCHOOL

The theme of space and time leads to interesting proposals for cross activities as early as in the primary school. It is possible to consider:

- 1) the use of space as exploration of different environments and organization of spatial relationships;
- 2) the acquisition of the spatial orientation and the intuition of the first simple concepts of geometry and measurement (logic-mathematical area) (Polya, 1973);
- 3) to know how to manage the basis motor skills in different situations, in an increasingly and autonomous modality, through:
 - the self-knowledge,
 - the knowledge of the other (psycho-motor area),
 - the knowledge of the objects,
 - the knowledge of the space-time (Ausubel, Novak, & Hanesian, 1978).

The physical activity, especially for children, tends to turn on conscious and unconscious mental processes. This also stimulates the verbalization of experience, for translating the gestural code in verbal communication, enhancing not only the language skills, but also the exercise of listening, attention, observation and reflection skills (Piaget, 1986). When asked on what the word “space” brings to mind, the children’s responses are varied, but all oriented to an extension (Casasanto, Fotakopoulou, & Boroditsky, 2010), which can be:

- a) finite, local or global (space is my home, is a square, a pine forest, a farm, a forest, a big city, the earth, the world);
- b) it can tend to infinity (it is a thing, where you run.....and never ends, another land, the sky with many planets, one thing that never ends.....infinite, the sea that never ends) (Paivio, 1986).

About the concept of time, it is very important and normally it is better understood during the growth. When children, it is difficult to understand, but with the help of teachers and the continuing work following a process and a graduated path, starting by the primary school, children acquire very important skills for life and for living together in the society (Sandri, 2008).

For anyone it is important to respect times and to know an orientation in time, to be able to live and work with others, for example:

- realizing the flow of time,
- to give importance at the activities, which take place in time,
- living in the present,
- retracing the past,
- making advances on the future,
- dealing with the different types of time,
- becoming aware of the difference between cyclical time and the time of the temporal sequence,
- making explicit the relativity of historical documents (a class chooses what to remember, cannot remember everything).

The concept of “elastic” time, that can be deduced by relativity, definitely helps the child, which becomes an adolescent in his personal growth (Di Sia, 2001 - Boxenbaum, 1986).

THE NOTIONS OF SPACE AND TIME IN LOWER AND UPPER SECONDARY SCHOOL

Growing up in age, adolescents mature, think and approach also disciplines such as philosophy. The concept of space has been studied with considerable interest by philosophy, in particular in relation to its nature and its subjectivity or objectivity. The space was intended as the place of bodies or as containing them; in the first case the space is full, in the second it is necessary to admit the existence of the vacuum.

Aristotle supported the concept of space as a place; the space of a body is the limit in which it is contained. The space is for him finished and its maximum extension coincides with that of the celestial spheres. These concepts, starting from the Aristotelian tradition, formed a thought line that, passing through Descartes and Spinoza, reached Kant (Di Sia, 2013). The notion of space as a container, partially filled and partially empty, systematically formulated for the first time by the Greek atomists, became one of the foundations of classical physics through the work of Newton. He introduced the concept of “absolute space”, stating that the space is the “sensorium” of God, the reality through which God communicates with nature.

With contemporary philosophy, it has opened the question of jurisdiction in dealing with the problems inherent the nature of space, having to consider the new picture of the situation with the new changes starting from the theory of relativity, and considering the fact that the physical universe, for a properly description, requires the use of other geometries, different by the Euclidean geometry (Di Sia, 2000). All that puts the growing boys in front to new concepts and ideas, so as in front to a serious reflection, discussion and interdisciplinarity.

About the concept of time, philosophically it has been considered as a homogeneous flow, in which the changing things are “immersed”. The Greek thought considered that flow as circular (the symbol was the wheel).

Plato, in the work “Timeo”, studied the problem of time in the complete philosophical significance, defining it as “the moving image of eternity” which “proceeds according to the number” (Platone, 2000). Aristotle explicited the link between time and thought, which remained a constant of philosophy. He, in the work “Physics” (Aristotele, 2011), defined the time as “the number of movement according to before and then”.

By the Renaissance, the “scientific” conception of time appeared, which considers the time as a set of homogeneous instants, hence the Newtonian concept of “absolute time”. Newton spoke of time as an attribute of God, “absolute time” that can be measured such as “relative time” (Guicciardini, 2011). The modern physics has

challenged the classical notion of time; relativity requires the acceptance of different temporal sequences, depending by the speed of the various observers (Di Sia, 2000). The problem of the subjectivity and objectivity of the time is sure an issue of great emotional and intellectual impact by adolescents, who are walking toward adulthood, in particular in relation to the personal available amount of time, compared to the finite length of the human life (Stassen, 1996).

SPECIAL RELATIVITY

The special relativity changed the assumptions on the causal structure of space-time, leading to define the notion of “light cone” of an event, but not a notion of simultaneity. About the invariant structures of space-time, if in the pre-relativistic physics we had the time interval between each pair of events and the spatial interval between simultaneous events, in special relativity we find the “space-time interval”, defined as $ds^2 = c^2 dt^2 - dx^2 - dy^2 - dz^2$, where c is the speed of light in vacuum. The special relativity is a theory of Lorentzian flat geometry, with pseudo-euclidean metric.

GENERAL RELATIVITY

The general relativity saw its birth by the attempts to formulate a theory of gravity, which is “compatible” with the basis ideas of special relativity and the “equivalence principle”. This principle suggests that the “free-fall motion” in a gravitational field can be seen as analogous to the inertial motion of the pre-relativistic physics and special relativity (Einstein & Lawson, 2012 - Einstein & Infeld, 1967 - Einstein, 2013 - Schutz, 2009). The gravity can be interpreted as a change in the structure of space-time, that allows to an inertial observer an acceleration relatively to another. Einstein discovered that this idea could be implemented simply by generalizing the flat Lorentzian geometry in a “curve” geometry. General relativity is therefore a theory of space and time, taking into account of the physical effects of gravity in terms of curved geometry of space-time (Powell, 2011). The geometry of space-time is not fixed “in advance” (as in special relativity), but “dynamically evolving”.

PECULIAR INVOLVED BASIS NOTIONS AT ACADEMIC LEVEL

Introduced the notion of tangent vector for describing an infinitesimal displacement by a point P_1 to P_2 , the set of all tangent vectors in P_1 has the natural structure of vector space, but in a curved geometry a tangent vector at P_1 cannot be naturally identified with a tangent vector at a generic point Q different from P_1 . Therefore the more general notion of tensor in P_1 must be used, which generalizes the notion of four-vector. An illuminating example of a tensor field, i.e. of a tensor defined on all the points P_i of a space, is a “metric”, which is an inner product on the tangent vectors (Wald, 1992).

An elegant and mathematically clear way for defining a tangent vector is a “derivation”, i.e. a directional derivative operator acting on functions. The most intuitive way is to consider a curve, locally described by the coordinates $x(t)$ of the point on the curve as a function of the parameter of the curve “ t ”, and to identify the tangent to the curve at the point $x(t)$ with the set of n numbers $(dx^1/dt, \dots, dx^n/dt)$ to the point on the curve, labeled by the parameter “ t ”. About the need of having a mathematically precise notion of “set of points” constituting the space-time, the appropriate notion is that of “manifold”, which is locally seen like \mathfrak{R}^n . Defined the tensors, it is possible to define a tensor field of type (k, l) and to use the notion of “parallel transport” along a curve. The notion of curvature completes the essential mathematical material needed for the formulation of general relativity (Weinberg, 1972 - Di Sia, 2010).

ABOUT THE TEACHING OF GENERAL RELATIVITY IN UNIVERSITY

Preceded special relativity to general relativity, also at more qualitative level in the secondary school, decreases the obstacles of conceptual nature. It is important the knowledge of classical mechanics, as well as notions of electromagnetism; the even qualitative knowledge of electromagnetic waves sure helps for learning the concept of gravitational wave.

Approaching the special relativity, it is interesting to possibly give the appropriate emphasis at the geometric point of view. Even at qualitative level, are significant:

- 1) a clear explanation that the space-time in general relativity does not have the structure of a vector space;
- 2) the introduction of the notion of tangent vector to a curve;

3) the introduction of the notion of a space-time metric and its use for determining the “proper time” spent along a curve;

4) the introduction of the notion of “geodesic curve” as a curve that “extremes” this time.

For a course at the university level, it is believed that the known key thoughts are:

a) how to calculate the elapsed time along arbitrary “time-type” curves;

b) how to determine time-type geodesics (which represent the possible paths of “free-fall” particles) and null-geodesics (representing possible paths of light rays) in space-time (Weinberg, 1972 - Di Sia, 2010). If students do not possess the necessary tools for understanding the Einstein’s equation, it will be not possible the derivation of the solutions, so they will have to “accept” that space-time “births” as solution of the Einstein’s equation.

c) After that, it is possible to discuss the Schwarzschild solution, representing the external gravitational field of a spherical body, and the solutions of FLRW (Friedmann-Lemaître-Robertson-Walker), representing homogeneous and isotropic cosmologies.

d) In relation to the Schwarzschild solution, it is possible to solve the equations of the “null-“ and “time-type” geodesics, and then to derive predictions for the motion of planets and the “bending” of light, so as the nature of “black-hole” of the (extended) solution of Schwarzschild.

e) Other key issues are the gravitational radiation and the nature of black-hole, all fascinating topics for the students minds and that open the way to the unified theories (Ellis, 2000).

THE FASCINATING TOPICS OF UNIFIED THEORIES

The recent theories about the unification of the fundamental forces include other dimensions, that our senses do not see or feel, hidden extra-dimensions (Di Sia, 2000). Students can think about simple everyday situations, so as the picture of a point on a sheet; it is actually a three-dimensional object, not without dimensions, because of the ink of the pen. It is the “representation of a point”, not “a point”. For the same reason, the sheet of paper on which we have drawn the point, however subtle may be, has still a thickness (Di Sia, 2013). We identify normally a hair with a line, but on fact it has a thickness; we identify normally the tip of a pin with a point, but on fact it is a sphere, and so on. This enables the students to understand that in the reality there is always some insignificant size, if compared to the others, relatively to the context in which we are.

The simplification in mathematical and physical modelling research led to the classical physics, relative to the real world, easily observable with the available tools, but if we try to understand more about the “ultra-small and ultra-big world”, we do not have many available tools, nor the nature provides obvious evidence.

The superstring theories are one of the attempts to explain all the fundamental forces of nature and known particles in a single comprehensive framework, considering the vibrations of tiny supersymmetric (special symmetry of physics) strings (one-dimensional objects) (Di Sia, 1994 - Di Sia, 1995). The strings are the basis constituents of such theories, one-dimensional objects instead of entities to zero length (points). At each point of the visible space it would exist therefore six (or seven) new dimensions, strongly wrapped to form geometric objects.

The quantum geometry is a recent field of mathematics that introduces a new concept of space, unifying the methods of classical differential geometry with non-commutative algebras and functional analysis; it incorporates in geometry many ideas of quantum physics, works with quantum spaces and includes the classical concept of space as a special case (Di Sia, 2004 - Rovelli, 2010).

Differently by the classical geometry, the quantum spaces cannot be interpreted as a collection of points; there are non-trivial quantum fluctuations of geometry at all scales. A very interesting application of the quantum geometry in physics regards the mathematically consistent description of physical space-time at every scale, in particular at ultra-microscopic distances, i.e. of order of the Planck length (about $1,6 \times 10^{-35} m$, value defined with a standard uncertainty of $8,1 \times 10^{-40} m$).

All these innovations open the way to new amazing scenarios, such as the time travels, the multiverse, the discrete nature of space-time, the quantum computing, which until a few years ago were subjects of comic books and science fiction. These scenarios attracted always children, youngs and adults; this should be taken into account since primary school (Di Sia, 2013).

CONCLUSION

The study of relativity, one of the two pillars of the modern physics, and the evolution of this theory toward an unified picture of the universe, one of the objects of study and research for the current theoretical high energy

physics and advanced mathematics, can surely be used to help the child in the process of evolution, growth, self-knowledge and love for knowledge, which is one of the most important aspects of human life.

Transformational Leadership of Coaches and Sport Commitment of Iranian Football Players: Implications on Training and Selection of Teachers as Coaches

Aminuddin Yusof^a Hamidreza Saybani^b Parilah Mohd Shah^{c*}

^{a,b} Faculty of Educational Studies, Universiti Putra Malaysia, 43400 UPM Serdang, Malaysia

^c Faculty of Education, Universiti Kebangsaan Malaysia, 43600 UKM Bangi Selangor Malaysia

Abstract

The aim of this study was to investigate the relationship between transformational leadership style of Iranian high schools' coaches and sport commitment of Iranian high schools' football players. This study also examined the effect of age and playing experience on athletes' sport commitment. A total of 270 football players were selected from 31 high schools football teams in Iran using the simple random sampling procedure. Instruments of the study were Multifactor Leadership Questionnaire (MLQ) (Avolio & Bass, 1995) and Sport Commitment Model Scale (SCMS) (Scanlan, Carpenter, Schmidt, Simons, & Keeler, 1993). The results of the study indicated that there is a positive and significant relationship between transformational leadership style of coaches and sport commitment ($r = .419$, $\beta = .478$, $p \text{ value} = .001$). In addition, the results also showed that there are no significant differences in sport commitment of football players of different their ages ($F(2, 252) = 1.115$, $p \text{ value} = 0.330 > 0.05$) and years of football experience ($F(2, 252) = 0.053$, $p \text{ value} = 0.948 > 0.05$). Findings of this study suggest that transformational coaches that the transformational leadership style is effective in enhancing the sport commitment of Iranian high school football players.

Keywords: Transformational leadership style, Sport commitment

INTRODUCTION

Transformational leadership theory is relatively new in sport settings and it has proved to be useful (Bass & Riggio, 2006). With transformational leadership, the followers feel trust, administration, loyalty, and respect toward the leader, and they are motivated to do more than they originally expected to do. According to Bass (1985), the leader transforms and motivates followers by (1) making them more aware of the importance of task outcomes, (2) inducing them to transcend their own self-interest for the sake of the organization or team, and (3) activating their higher-order needs. In contrast, transactional leadership involves an exchange process that may result in follower compliance with leader requests but is not likely to generate enthusiasm and commitment to task objectives (Yukl, 2010).

By altering and influencing followers' beliefs and attitudes, transformational leaders motivate and inspire followers to exceed expectations. According to Bass & Riggio (2006) and Avolio (1999) transformational leadership factors are: (1) Idealized influence (attributed), (2) Idealized influence (behavior), (3) Inspirational motivation, (4) Intellectual stimulation and (5) Individualized consideration. Several studies examined the relationship between transformational leadership behaviors, commitment and satisfaction of subordinates (Amorose & Horn, 2000; Chen & Fahr, 2003; Louise & Robert, 2007; Andrew, 2008; Hallajy, 2009). Their findings revealed that transformational behaviors have influence on subordinates' outcomes such as commitment and satisfaction. In a sport setting, researchers showed transformational leadership style of coaches can predict and increase commitment of their followers (Golshani, 2001; Nikoofar, 2006; Andrew, Kim, Stoll, Cup & Todd, 2008; Hallajy, 2009).

Leadership styles and behaviors of coaches can motivate players to achieve goals, perform better, and become successful. Coaches can also influence their athletes to the highest performance based on their maximum capabilities (Ting Chen, 2007; Zardoshtian, 2008). In addition, the authors stated that coaches need to understand several skills for teaching athletes. Therefore it is critical for sport coaches to be knowledgeable about various things (such as planning, instructing, training, psychology needs of players), and be able to carry

out different tasks. Sufficient knowledge about leadership style of a coach as leader can make him or her successful or unsuccessful.

Several studies have been conducted about behaviors and leadership styles of leaders (managers) in sport organizations and coaches of sport teams in Iran. For instance, Golshani (2001) and Nikoofar (2006), evaluated relationship between transformational and transactional leadership styles of manager of physical education organization and organizational commitment of employees in two provinces of Iran (West Azarbayejan and Sistan and Baloochestan). They found that transformational leadership style of the manager of physical education organization increased the organizational commitment of employees. However, within the context of high school sports in Iran, several authors reported lack of commitment among Iranian high school students in sport participation. Specifically, Hashemi (2010) found out that only 48% of Iranian high school students participated in sports such as football, volleyball, and handball in 2010 as compared to a previous study by Hoseini (2009) that showed participation in sport activities was 67% in 2009. The decline in sport participation level among Iranian high school students may be due to a lack of sport commitment or the “desire and resolve to continue sport participation in a particular program, specific sport, or sport in general” (Scanlan et al, 1993, p. 6).

Reports of poor leadership of coaches and the declining commitment of Iranian high school athletes in sport participation suggest a new coaching model is needed in Iranian high schools that use the proposition of the transformational leadership theory to enhance the commitment and performance of athletes in Iranian schools. For this reason, this study seeks to examine the relationship between transformational leadership styles of Iranian coaches and sport commitment of high school football players. Using high school as the setting since this sport is the most popular sport in Iran (Ramezanijad, *et al.*, 2010), this study seeks to examine whether Iranian high school coaches who engage in transformational leadership behaviors are able to inspire and empower high school football players to a higher level of commitment than those coaches who do not engage in such leadership behaviors.

The following hypothesis were formulated for this study

H₁: There is no significant relationship between the transformational leadership style of coaches and the sport commitment of high schools’ football players in Iran.

H₂: There is no significant difference in sport- commitment of the high schools’ football players of different ages in Iran.

H₃: There is no significant difference in sport commitment of the high schools’ football players of different football playing experiences in Iran.

METHODOLOGY

This research employed the use of survey design and descriptive research. The function of the descriptive statistics was to illustrate and summarize the observations (Ary, Jacobs, Razavieh, & Sorensen, 2006). Furthermore, the intensity and direction of the connection between the leadership styles of coaches and sport commitment of high school football players was explored using a correlational approach. SEM was employed as a strong procedure to assess the relationship among the observed and the latent variables.

Instruments

The researcher used a standardized back-translation technique (Arbuckle, 2009) to translate the original English version of the two instruments (MLQ and SCMS) to Persian version. Then a pilot study was utilized to confirm the capability of the methodological procedure of the research and also to increase the validity and reliability of instrumentations of the study. Results of the pilot study showed that internal consistency of MLQ Rater Form (five transformational subscales) with ranges from 0.80 to 0.89, and SCMS (four subscales) from 0.81 to 0.85 were acceptable.

Participants

The researcher selected 15 provinces through Simple random sampling was used to choose 15 out of the sum total of 31 provinces in Iran (high school football teams) to strengthen the confidence level of the research results. 270 (15 teams × 18 players = 270 players) Iranian high school football players (mean age = 17.35 years, standard deviation = 0.78.) were ultimately chosen to participate, although 255 actually participated, as the result

of missing answers to some questions. Thus, 255 participants completed all of the questionnaires. The subjects ranged in age from 15 to 20 years (mean age = 17.35 years; standard deviation = 0.78). In terms of experience, the players' amount ran the gamut from 0 (inexperience) to 10 years (mean age = 2.66 years; standard deviation = 3.04). The age and experience of all of the participants (coaches and football players) were categorized into three groups.

Statistical Analysis

The main purpose of this study was to examine the relationship between transformational leadership style of coaches and sport commitment of Iranian high schools' football players, and to provide a direct model with two variables. The data was analyzed through Structural Equation Modeling (SEM) using AMOS 18 (Arbuckle, 2009) in order to investigate a model which reflects purposes of this study. In addition, the one-way ANOVA was utilizing to determine the sport commitment differences in age and football playing experience category.

Procedure

Permission was obtained from the Iranian Ministry of Education to gather the data, whereupon the researcher attended a meeting with high school coaches and administrators. The researcher elucidated the objectives and aims of the research and requested the cooperation of the coaches and administrators in carrying out the research. They were willing to assist the researcher in the gathering of data. The researcher handed out the coaches' demographic questionnaire to the 15 coaches and collected them after the coaches filled them out. The researcher met each team in its respective dormitory to delineate the objective of the study; the researcher gave the team members lucid instructions. Demographic, transformational (Rater form) and sport commitment questionnaires were distributed among football players, and then the completed questionnaires were collected by the researcher. It took about 30 minutes for the students to answer the questionnaires and they were requested to answer all questions.

RESULT

Structural model was used to analyze hypotheses 1. As illustrated in Table 1 there is a positive and significant medium correlation, $r = 0.419$ (Cohen, 1988) between the transformational leadership style of coaches and the sport commitment of high schools' football players in Iran at p value < 0.001 . Therefore, the null hypothesis can be rejected (reject H_{01} at $\alpha = 0.001$).

Table 1: Correlation Estimate among the Variables in the Measurement Model

Transformational	<-->	Sport Commitment	0.419*
------------------	------	------------------	--------

* Significant level at $\alpha < 0.001$

The result as shown in Table 2 showed that transformational leadership style of coaches significantly contributed toward the prediction sport- commitment of high schools' football players ($\beta = 0.478$, $B = 0.477$, S.E. = 0.092, C.R. = 5.185. $p = 0.000$). The result based on standard regression weight (β) indicated that when transformational leadership goes up by 1 standard deviation (SD), sport commitment goes up by 0.478 standard deviations. Thus, the H_{01} was supported by the data.

The unstandardized estimate (unstandardized regression coefficient) or B (0.477) indicated that when transformational goes up by 1 SD, sport commitment goes up by 0.477 standard deviations. The regression weight estimate, 0.477, has a standard error about 0.092. Critical Ratio (C.R.) calculated from dividing the unstandardized estimate (B) by the estimate of its standard error (S.E.) ($Z = 0.477 / 0.092 = 5.185$). In other words, the regression weight estimate is 5.185 standard errors above zero (Table 2). If an estimate has a critical ratio greater than two (in absolute value), the estimate is significantly different from zero at the 0.05 level (C.R. = 5.185 > 1.96 , $p < 0.05$) (Arbuckle, 2009). Thus, the table shows that the covariance between transformational and sport commitment is significantly different from 0 with $p = 0.000$ (at p level < 0.001).

Table 2: Standardized Regression Weights: Total Structural Model

DV	path	IV	Unstand Estimate	S.E.	Standard Estimate	C.R.	ρ^*
Sport Commitment	<---	Transformational	0.477	0.092	0.478	5.185	0.000

* Significant level at $p < 0.001$

One-way ANOVA was used to examine whether or not there were differences in sport commitment of football players with different football players ages. The results showed that there is no significant differences in sport commitment of football players of different their ages, $F(2, 252) = 1.115$, p value = 0.330 > 0.05, (Table 3). Therefore, the null hypothesis is not rejected (fail to reject H_{04} , at $\rho = 0.05$).

Table 3: Sport commitment and players' age

ANOVA				
	df	Mean Square	F	Sig.
Between Groups	2	0.476	1.115	0.330
Within Groups	252	0.427		
Total	254			

Another objective of the research is to determine the differences in sport commitment of the high schools' football players of different football playing experience (less than 3 years, from 4 to 6 years, and from 7 to 10 years) in Iran. The following hypothesis was formulated:

H_{05} : There is no significant difference in sport commitment of the high schools' football players of different football playing experiences in Iran.

Table 4: Sport commitment and Football playing experience

ANOVA				
	df	Mean Square	F	Sig.
Between Groups	2	0.023	0.053	0.948
Within Groups	252	0.430		
Total	254			

One-way ANOVA was used to examine whether or not there were differences in sport commitment of football players with different football playing experiences. The results revealed that there are no significant differences in sport commitment of football players of different football playing experience (three categories), $F(2, 252) = 0.053$, p value = 0.948 > 0.05. Therefore, the null hypothesis is not rejected (fail to reject H_{05} , at $\rho = 0.05$) (Table).

DISCUSSION

The results of SEM analysis revealed that $\beta = 0.478$, indicating that 47.8% of the variance of the sport commitment could be explained by transformational leadership style. Also, coaches adapting transformational leadership styles accounted for the variance in sport commitment with of football players 22.8% of accounted variance. The results are similar to the results of previous studies (e.g., Andrew, 2004; Antonakis, *et al.*, 2003; Bass & Riggio, 2006; Hallajy, 2009; Javdani, 2002) which found a positive relationship between transformational leadership behaviors and subordinates' commitment. The results of the current study demonstrated a positive and significant relationship between transformational leadership style of coaches and sport commitment of football players ($r = 0.419$, p value = 0.001). In addition, the results of path analysis and regression weight showed that of all dimensions of the transformational leadership style only inspirational motivation has significantly affected the sport commitment ($\beta = .210$, $p = 0.005$). Thus, it can be concluded that inspirational motivation as a dimension of transformational leadership style increased more sport commitment of the football players than the other dimensions of the transformational leadership style.

The findings showed that transformational leadership style of coaches would increase sport commitment of Iranian high schools' football players. On the basis of the research findings, it can be interpreted that a coach provides a desired level of transformational behavior; he is able to fulfill athletes' desire to resolve or maintain physical activity and to promote sport participation. The results may be due to transformational behavior abilities. Idealized influence (Attributed), Idealized influence (Behavior), and Inspirational motivation, as the three dimensions of transformational leaders, can increase the followers' self-confidence, create an excellent vision and strong beliefs among them for achieving shared goals (Antonakis, *et al.*, 2003; Bass, 1997). The result of the current study is supported by Antonakis, *et al.*, (2003) and Bass (1997). The findings of the current study showed that the most important dimension of the transformational leadership style of coaches was inspirational motivation, the main function of which was to increase sport commitment of the high school football players. This result may be due to the importance of young age (15-20 years) (Durand-Bush & Salmela, 2001) for improving their skills and performances in sport setting. Thus, it can be concluded that the high school coaches

have to use inspirational motivation dimension of transformational leadership style more than the other dimensions in order to increase sport commitment of the football players.

By engaging in those behaviors, transformational leaders clearly explain their goals and are able to motivate their followers to get their commitment toward achieving the goals (Bass & Riggio, 2006). In addition, Idealized influence (Behavior) component of transformational leaders has been reported to be positive in terms of developing emotional ties with their followers. These emotional ties are formed because followers believe that their leader has certain positive characteristics such as: perceived power, focus on higher-order values and ideals (Antonakis, *et al.*, 2003; Bass, 1997). Further, individual consideration dimension of transformational leaders also can communicate with their followers (Bass & Riggio, 2006). It has been reported that it creates positive communications between transformational leader and followers' commitment (Antonakis, *et al.*, 2003), and consequently, this characteristic of transformational behaviors of coaches can increase players' commitment. Therefore, the players are committed to the team's work.

Comparing the results of this study with those of other studies in the literature reveals that the results are consistent with the proposition of the transformational theory (Bass, 1985; Avolio, 1999; Bass & Riggio, 2006), which suggested that the transformational behavior of a leader increases the commitment of his or her followers. The results demonstrated that transformational leadership style is effective not only in business, industries, military, and education but also in sport settings. Specifically, the results support the proposition put forward by Hallajy (2009), which states that transformational coaches can effect and predict the sport commitment of handball players. Moreover, the effect of transformational behavior as a leadership behavior on sport commitment in this study is consistent with the result of the Andrew's (2004) study that showed positive feedback as a leadership behavior can influence athlete's sport commitment.

Javdani (2002) also found a positive relationship between transformational leadership style of managers and teachers' organizational commitment. The findings of the current research are also consistent with those of Klinsontorn's (2007) study which reported that transformational leadership style has a positive effect on organizational commitment and can increase it. The result of this study is also supported by other studies' findings (e.g., Doherty, 1997; Amorose & Horn, 2000; Chen & Fahr, 2003; Louise & Robert, 2007). These scholars stated that transformational leaders try to create incentive, insight and vision, so it would increase commitment of their followers. Similar to the findings of this research, Barling, Weber & Kelloway (1996) showed the effects of transformational leadership style on subordinate's commitment. These similarities among the findings of this study and those of previous studies might be due to applicability of MLQ in diverse cultures (Bass & Riggio, 2006).

However, the findings of this study are in contrast with those of Doherty & Danylchuk's (1996) findings who studied the transformational and transactional leadership style of coaches of athletic departments of universities in Ontario. In their report they have indicated that transformational and transactional leadership behavior of athletic administrators was not related to the commitment of coaches. In addition, Pruijn & Boucher's (1995) findings as cited by Yusof (2002b) of Dutch national sport organizations revealed that there is no significant relationship between transformational leadership behaviors and commitment of subordinates. Moreover, Javdani (2002) revealed that there is no relationship between transactional leadership style of managers and teachers' organizational commitment. In addition, on the basis of the path analysis, findings of this study are inconsistent with those of Andrew *et al.*, (2008) and (Andrew, *et al.*, 2010) who found that path coefficients between the three dimensions of transformational leadership behaviors charismatic, individualized consideration, and intellectual stimulation and commitment toward athletic director were positively significant, while only the path coefficients between intellectual stimulation and individual consideration and commitment toward athletic department were positively significant. Moreover, Kent & Chelladurai's (2001) found that only charismatic and individual consideration two dimensions of transformational leadership style of athlete directors have correlation with normative organizational commitment. These dimensions have a high influence on the organizational commitment of members (Bass, 1985).

There are some reasons for the inconsistency between the findings of this study and some of previous studies. Mujtaba and Sungkhawan (2011) stated that cultural, personal, and professional differences are parts of human life. These diversity influences individuals' senses and opinions. Further, Bass & Avolio, (1993) revealed that transformational organizational culture improves employee organizational commitment. In addition, transformational behaviors and culture predict and positively influence organizational outcomes such as commitment and satisfaction (Kathrins, 2007). In addition, Wallace and Weese (1995) found that organizational culture may have an impact on level of transformational leadership behavior in sport settings. Further, athletic experience (M. A. Eys, *et al.*, 2003) and other factors such as race and age (Bolikah & Terry 2001) may have impact on the relationship between transformational leadership and outcome variables.

This study did not find a significant relationship between sport commitment and age and also between sport commitment and football playing experience of football players. This may be due to low playing experiences. Young players may have less experience than older players. In other words, young less experienced players may do not have sufficient skills, and consequently their individual and team performance level may decrease. The players that have lower performance and skills than others cannot succeed. Therefore, their willingness to continue participating in sport activities may decrease. In addition, sport enjoyment and motivation of players for staying in the team may also decrease. Similar to the findings of this study, Lok and Crawford (1999) found that there was no significant relationship between experience and employees' commitment in non-sport settings. This similarity may be due to some similarities between the concept of organizational commitment and sport commitment such as tendency to work hard and constancy to stay in the organization.

IMPLICATIONS

The findings of the current study suggest the need for more transformational leaders in school settings and other sport settings. Iranian high school coaches who have transformational leadership style would be able to empower high school football players to higher levels of commitment, and hence higher participation in a particular program, specific sport, or sport in general as stated by Scanlan, *et al.*, (1993). The transformational leadership behaviors can be taught (Bass, 1990) through workshops and seminars (Bass & Riggio 2006). Training football coaches to become transformational leaders should be an important issue for the Sport Department of the Ministry of Education of Iran and the Ministry of sport of Iran. This department should select physical education teachers for coaching positions based on their potentials to become transformational leaders. Furthermore, the Football Federation of Iran is the main facilitator for teaching of coaches; it should provide lectures, courses and workshops whose primary focus is on following syllabi including transformational leadership principles with the goal of improving transformational leadership behaviors of coaches. The results will solve the problem that was mentioned earlier by Noroozi, *et al.*, 2012, who argued that a coach without an effective leadership style can neither increase commitment and satisfaction of players nor enhance the poor performance that was mentioned by Zardoshtian (2008). In addition, the problems of decreased commitment and satisfaction of Iranian high school football players and poor results of high school national teams (Hashemi, 2010) will be solved. Players, having improved their skills and performance by greater participation in training programs and competitions, can achieve better results in competitions.

Based on the results of this study, it is recommended that the policy of the Education Ministry and the Sport Ministry of Iran should be focused on the transformational leadership behaviors of coaches and its effects on football players' commitment by considering the following programs:

1- Identifying coaches who show more transformational behavior than others. It is important to identify coaches who pose transformational behavior, so that they can be involved in various coaching and education activities. This would improve football players' satisfaction and commitment. Coaches that have little or no transformational leadership behaviors can also be identified, so that they undergo an appropriate education and training program.

2- Workshop for teaching the transformational leadership behavior based on its dimensions: Transformation leadership behavior has many dimensions, and organizing workshops for coaches can enhance their leadership behavior practically, the end result of which would be higher satisfaction and commitment of high school football players.

3- Improving social and psychological abilities of the transformational behaviors of coaches considering the importance of athletes' ages in high school setting. Best time to learn for an individual is when he/she is at the school age, and coaches need to improve their social and psychological abilities, so that they can utilize these capabilities more effectively and specifically for the high school football players in that age group. This will enhance coaches' transformational leadership behavior and will lead to improved sport commitment and satisfaction of high school football players.

4- Improving motivational abilities of the transformational behaviors considering the psychological needs of athletes in high school setting.

5- Organizing meetings for knowledge and experiences sharing of coaches about the transformational leadership style. This will improve coach's transformational leadership behavior and will lead to increase sport commitment and satisfaction of high school football players.

6- Teaching coaches to identify and use appropriate methods of football instructions and trainings, considering the transformational behaviors, and consequently increasing athlete satisfaction and commitment.

7- Teaching coaches to identify and use appropriate strategies, techniques and tactics of football games and transfer this knowledge to football players, thereby increasing their athlete satisfaction and sport commitment.

8- Teaching coaches to improve individual and team performance of the football players, thereby increasing their athlete satisfaction and sport commitment.

Competencies of Student-Teachers in State Universities and Colleges (SUCs): Basis for Monitoring Strategies

Romulo T. Sisno^a Renante A. Egcas^b Florly M. Callojellas^{c*}

^{a,b} Ph.D. , Associate Professor – Northern Negros State College of Science and Technology, Sagay City, Negros Occidental, Philippines

^c Assistant Professor – Northern Negros State College of Science and Technology, Sagay City, Negros Occidental, Philippines

Abstract

This study aimed to determine the competence of SUCs student-teachers in Negros Occidental and the relationship existing between their competence and the variables in their profile. The descriptive-correlational method of research was employed in this study. The respondents were the 127 fourth year college students of the select State Universities and Colleges in Negros Occidental, Philippines. The data in this study were obtained using the modified instrument based from NCBTS. The mean, one-way ANOVA and Pearson r were the statistical tools used to determine the level, differences and the relationship existing between variables. Findings revealed that the level of competence of SUCs student-teachers was high as a whole and in almost all of the domains except in community linkages. No significant differences were observed in the level of competency of SUCs student-teachers as perceived by the respondent groups. Likewise, no significant relationship was observed between student-teachers level of competence and the identified variables in their profile. It was concluded therefore, that SUCs student-teachers were competent in terms of the seven domains except in community linkages. Likewise, respondent groups were almost the same in their perceptions of the competence of SUCs student-teachers in terms of the seven domains. Furthermore, SUCS student-teachers competence is not related to the variables in their profile. It was therefore recommended that student-teachers should continuously exert effort in doing their tasks as student-teachers. Furthermore, student-teachers are encouraged to strengthen their links to the communities, particularly as these links help in the attainment of the curricular goals.

INTRODUCTION

Today's educational scenario is plagued with many contentions about teaching and learning performance. These two variables are inseparable. Several researchers have shown that learning performance is related to the quality of education experienced by learners. According to Villamin as cited by Figueroa (2008) quality education lies in the hands of committed and effective teachers who dedicate the best years of their lives to the service of the youth. In building the foundation for tomorrow, no task can be more daunting than that held by educators of the land. In their hands, lie the responsibilities of shaping minds, molding character, and empowering the spirits of the youth. Teachers are provided with unique opportunities for influencing students. Thus, the task of producing quality graduates is dependent upon them.

Federico Mayor (2000), UNESCO General Director, also states that teachers have a pivotal role to play in preparing the young generation to help realize the country's hopes and aspirations; that the coming century will see a more socially just, more tolerant and more peaceful world because in many respects, teachers make the school. The excellence of a school is inseparable from the excellence of its teachers.

Rosas (2003) on the other hand, predicated that the growing complexity of running the educational system at a time when our country is moving towards the next millennium demand our foremost concern and dedication. He further reminds educators of the need to explore alternatives, particularly in the attainment of quality education through the teacher. He went on by saying that teachers play the most important role in the education of the youth who represent the greatest manpower resources in the achievement of the national vision for the 21st century.

It has been said that other than the learner, no other factor is as crucial for effective learning as the teacher. This is especially true in the Philippines, where the teacher plays multi-roles. The importance of the teacher in

learning was underscored by Hendricks (2005) when he pointed out that an effective teacher does not only know how to teach the content, but whom he teaches. Therefore, what are important are not what you do as a teacher, but rather what and how the learners are doing as a result of what you have done to them. Likewise, Lupdag (1997) opined that we could improve teaching only if we first think over why we teach, what to teach, how we teach and whom we teach.

The arguments presented above were also supported by the research conducted by the National Assessment of Educational Progress (NAEP) of which qualitative and quantitative analysis suggest that policy investments in the quality of teachers may be related to improvements in students' performance.

Quality teachers, therefore, are the single greatest determinant of student achievement. Teacher education, ability, and experience account for more variation in student achievement than all other factors. Studies have found that 40 to 90 percent of the difference in student test scores can be attributed to teacher quality (Hammond and Ball, 1997). Knowing the subject matter, understanding how students learn, and practising effective teaching methods translate into greater student achievement. Therefore, it is vitally important that teachers are well-prepared when they begin teaching and that they continue to improve their knowledge and skills throughout their career.

In the Philippines, the teaching profession has been struggling to keep pace with changes in society and the accompanying challenges of the technological world. With the notion that teacher education, which consists of pre-service education of teachers (PET) and the In-Service Education of Teachers (INSET), has been unable to bridge the growing gap between the needs and expectations of learners, and the knowledge and skill levels of both new and existing teachers, the Teacher Education and Development Program (TEDP) was conceived. This Program seeks to conceptualize a teacher's career path as a continuum that starts with the entry to a teacher education program and concludes when a teacher reaches retirement from formal service. One key element in the program is the establishment of a set of a National Competency-Based Teacher Standards (NCBTS) so that teachers, pupils and parents are able to appreciate the complex set of behaviors, attitudes and skills that each teacher must possess in order to carry out a satisfactory performance of their roles and responsibilities (TEDP, 2005).

Along with the Commission on Higher Education (CHED), Professional Regulation Commission (PRC), Civil Service Commission (CSC), and Department of Education (DepEd), the Northern Negros State College of Science and Technology (NONESCOST) as a Teacher Education Institution is not exempted in the implementation of TEDP in general and the NCBTS in particular. It is at this context that the researchers take initiative to conduct this investigation on the competency of the student-teachers in order to establish empirical evidence that would help the College Teachers Education Department set directions toward offering teacher education training in consonance to the thrust of the government and toward producing quality teachers.

STATEMENT OF THE PROBLEM

This study aimed to determine the level of competency of the student-teachers as perceived by themselves, the critic teachers and the intern supervisors of State Colleges and Universities in Negros Occidental, Philippines during the Academic Year 2009-2010 as basis for monitoring strategies.

Specifically, this study sought answers to the following questions:

1. What is the profile of the student-teachers in terms of
 - 1.1. Age and gender
 - 1.2. Socio-economic status of parents as to:
 - 1.2.1. Educational attainment of both mother and father,
 - 1.2.2. Occupation of both mother and father,
 - 1.2.3. Combined monthly family income,
 - 1.2.4. Size of the family, and
 - 1.3. Aptitude test result?
2. What is the level of competence of SUCs student-teachers as perceived by themselves, by the critic teachers and the intern supervisors in terms of the following domains:
 - 2.1. Social regard for learning,
 - 2.2. Learning environment,
 - 2.3. Diversity of learning,
 - 2.4. Curriculum,
 - 2.5. Planning, assessing and reporting,
 - 2.6. Community linkages, and

- 2.7. Personal growth and professional development?
3. Is there a significant difference in the perception of the student-teachers, critic teachers, and intern supervisors on the competency of SUCs student-teachers?
 4. Is there a significant relationship between the competency of the student-teachers and the identified variables in their profiles?
 5. Based on the findings, what monitoring strategy can be proposed?

HYPOTHESES

Based on the aforementioned research problems, the following were the hypotheses of the study:

Ho1. There is no significant difference in the perception of the student-teachers, critic teachers, and intern supervisors on the competency of SUCs student-teachers.

Ho2. There is no significant relationship between the competency of the student-teachers and the identified variables in their profiles.

THEORETICAL FRAMEWORK

This study is primarily anchored on the Teacher Education and Development Program's (TEDP) Teacher Performance and Development Framework that is based upon the core values of Filipino teachers and on the principles of effective teaching and learning. The framework is divided into seven (7) domains that represent the desired features of the teaching and learning process. These domains incorporate a series of strands of desired teaching performance statements which can be identified as performance indicators that are observable indicators of quality of a teacher's performance. The seven domains are: social regard for learning; learning environment; the diversity of learners; curriculum; planning, assessing and reporting; community linkages; and personal growth and professional development.

Each of these domains becomes a part of a set of Competency-Based Teacher Standards that leads to a National Teacher Performance and Development Framework. This framework allows teachers to self-assess their own performance against the competency standards in order to identify areas of strength as well as the areas that need to be developed further in order for them to function more effectively as facilitators of learning.

The seven domains

Social regard for learning. This domain focuses on the ideal that teachers and prospective teachers serve as positive and powerful role models of values in the pursuit of learning of different kinds of the effort to learn. The teacher's actions, statements, and different types of social interactions with students exemplify this ideal.

The teaching model is further described by Wagner and McCombs (1995) when they write, "teachers decide for the learner what is required from outside by defining characteristics of instruction, curriculum, assessment, and management to achieve desired learning outcomes". The teaching model seems to place much of its energy on the process of teaching and less concern on what is learned or how it is learned.

Learning environment. This domain focuses on importance of providing for a social, psychological and physical environment within which all students, regardless of their individual differences in learning, can engage the different learning activities and work towards attaining high standards of learning. The pre-service teacher is expected to understand the implication of providing sound learning environment. According to Astrand (2001), relationships, activities, and time define the learning environment.

Diversity of learners. This domain emphasizes the ideal that the teachers can facilitate the learning process in diverse learners by first recognizing and respecting individual differences, then using knowledge about students' differences to design diverse sets of learning activities to ensure that all students can attain desired learning goals. Such should be the focus of the prospective teachers in this domain.

Curriculum. In this domain, the teachers and prospective teachers will learn all the elements of teaching learning process that work in convergence to help students understand the curricular goals and objectives, and to attain high standards of learning defined in the curriculum. These elements include the teacher's knowledge of subject matter and the learning process, teaching-learning approaches and activities, instructional materials and learning resources.

Planning, assessing and reporting. The domain refers to the alignment of assessment and planning activities. In particular, the domain focuses on the (1) use of assessment data to plan and revise teaching-learning plans, (2) the integration of assessment procedures in the plan and implementation of teaching-learning

activities, and (3) reporting on learner's actual achievement and behaviour. The pre-service teacher should be made aware of the principles involved in planning, assessing and reporting and how they are applied.

Community linkages. This domain focuses on the ideal that classroom activities are meaningfully linked to the experiences and aspirations of the students in their homes and communities. Thus, the domain focuses on teachers' efforts directed at strengthening the links between schools and communities, particularly as these links help in the attainment of the curricular goals. In this domain, the mentee joins the mentor in the different community in the teaching-learning process. While the Performance Indicators are not applicable, the pre-service teacher had plenty of opportunity to be involved in community activities.

Personal growth and professional development. The domain emphasizes the idea that teachers value having a high personal regard for the teaching profession, concern for professional development, and continuous improvement as teachers. The pre-service teachers imbibe these ideals as the mentor models such characteristics.

On competencies in teaching

Short as cited by Natabio (2002) has classified the meaning of competence by describing the four common concepts. The first concept deals with competence as a form of behaviour or performance. In teaching, competence occurs in situation where purpose of interest obligates one to choose the most appropriate behaviour or performance as well as to put this into operation satisfactorily.

The second concept entails a command of knowledge and skills. Conceiving competence in this way implies something more than just doing some behaviour or performance. Competence denotes choosing and knowing why one does something or what one chooses to do. In this sense, competence involves the selection of a particular knowledge/skill to be used in a given situation, as well as for the purpose that a person has planned for the situation.

The third concept involves competence as a degree or level of capability deemed sufficient for the purpose. This view admits that a judgement of competence has been made using some public standards or criteria of excellence.

The fourth concept regards competence as a quality of a person or a state of being. The concept of competence in this view starts with a definition of a particular character holistically.

Holmes Group in their report on "Tomorrow's Teachers" stated that competent teachers possess broad and deep understanding of children, the subject they teach, the nature of learning and schooling, and the world around them. They exemplify the critical thinking they strive to develop in students, combining tough-minded instruction with a penchant for inquiry.

Teachers' competency in teaching consists of a set of knowledge, abilities and beliefs one possesses and brings to the teaching situation.

METHODS AND PROCEDURES

This study used the descriptive-survey method of research to describe the nature of the present situation and to interpret functional relationship between variables involved. The study was conducted to the Teacher Education Department of the three State Colleges in the province of Negros Occidental, Philippines.

RESPONDENTS

The respondents of this study were all the Fourth Year Bachelor of Secondary Education students during the Academic Year 2009-2010 qualified for student teaching and internship, the critic teachers, and the intern supervisors of the respective State Colleges and Universities.

INSTRUMENTS

The Hollingshead four-factor index of socio-economic status (SES) as modified by Barnett (2003) was utilized to determine the socio-economic status of the respondents. This scale, widely used in the social sciences (Cirino, Chin, Seveik, Wolf, Lovett and Morris, 2002), uses parents' education, occupation and income of parents to measure SES.

Also, this study utilized the Competency Checklists provided in the Teacher Education and Development Program (TEDP, 2005). These are checklists of the competency in teaching according to the strands of desired teaching performance and specific performance indicators in seven (7) domains such as: social regard for

learning, learning environment, diversity of learning, curriculum, planning, assessing and reporting, community linkages, and personal growth and professional development. For the purpose of this study, the instrument was modified by using numerical value to be encircled for ease in scoring. This was validated by experts.

PROCEDURES FOR DATA GATHERING

The researchers personally administered the questionnaire and checklists to student-teachers. Administration followed immediately after they are settled for classroom observations. The administration was supplemented with discussion to the respondents on how to properly answer the instruments.

TREATMENT OF DATA

To provide precise and objective presentation, analysis and interpretation of the qualitative and quantitative information of the study, the following statistical tools were employed:

1. To determine the profile of the respondents, frequency and percentage were used.
2. To determine the level of competency of the student-teachers in seven (7) domains, mean was used.
3. To test the significant difference in the perception of the respondent groups on the level of competency of SUCs student-teachers, One-Way ANOVA was used.
4. To test the significant relationship between SUCs student-teachers competency and the identified variables in their profile, Pearson Product Moment of Correlation Coefficient was used.

The data were treated accordingly using Window-based SPSS with the help of a qualified statistician.

SCORING PROCEDURE

Each specific performance indicator under the seven (7) domains of the TEDP Checklists was provided 3-point Likert-type scale with the following legend:

Scale	Interpretation
3	I can do this very well
2	I can do this but I need to learn more and improve
1	I am learning how to do this

The scores in each domain are added and the total is divided by the number of items (specific performance indicators) under the domain. To obtain the competency level by individual student-teacher, the score in each domain are added again and the total is divided by 7. The score is interpreted as follows:

Scale	Interpretation
3.25-4.00	Very Competent – satisfies most of the performance indicators
2.50-3.24	Competent – satisfies 75% of the performance indicators
1.75-2.49	Fairly Competent – satisfies 50% of the performance indicators
1.00-1.74	Poorly Competent – satisfies below 50% of the performance indicators

RESULTS

The results are presented according to the order of the Statement of the Problem as stated above.

1. Majority of the respondents of this study were female (70%) who are mostly 20 years old and below (63%). In terms of socio-economic status of parents, the profile showed that majority of the respondents' mothers and fathers are elementary(39%) and high school levels (35%), respectively, who are working mostly as unskilled or service workers. The family income reported by the respondents indicated that a great majority have a low annual family income (77%). The profile also revealed that most of the respondents belong to a family with six (6) members (74%). Moreover, majority of the respondents' aptitude in OLSAT is below average (44%); majority of the respondents have average aptitude in teaching (49%) and in English proficiency (57%), respectively.
2. The level of competence of SUCs student-teachers as perceived by respondents on the seven domains of the teaching and learning process when taken as a whole is high (see Tables 4, 5 and 6).

However, when each domain is considered separately, the respondents rated average only on the community linkages.

Table 4. Level of competence of SUCS student-teachers as perceived by themselves

Domains	Mean	SD	Interpretation
Social regard for learning	2.33	0.33	High
Learning Environment	2.35	0.33	High
Diversity of Learning	2.56	0.59	High
Curriculum	2.26	0.35	High
Planning, assessing and reporting	2.21	0.36	High
Community Linkages	2.10	0.43	Average
Personal growth and professional development	2.29	0.38	High
As a Whole	2.26	0.31	High

Table 5. Level of competence of SUCS student-teachers as perceived by critic teachers

Domains	Mean	SD	Interpretation
Social regard for learning	2.25	0.15	High
Learning Environment	2.22	0.46	High
Diversity of Learning	2.29	0.38	High
Curriculum	2.21	0.53	High
Planning, assessing and reporting	2.25	0.32	High
Community Linkages	2.13	0.43	Average
Personal growth and professional development	2.23	0.37	High
As a Whole	2.22	0.38	High

Table 6. Level of competence of SUCS student-teachers as perceived by their supervisors

Domains	Mean	SD	Interpretation
Social regard for learning	2.21	0.53	High
Learning Environment	2.25	0.15	High
Diversity of Learning	2.29	0.38	High
Curriculum	2.22	0.46	High
Planning, assessing and reporting	2.38	0.42	High
Community Linkages	2.15	0.37	Average
Personal growth and professional development	2.40	0.45	High
As a Whole	2.27	0.39	High

3. Results of the Analysis of Variance (ANOVA) showed no significant differences on the perception of the respondents on the level of competence of SUCs Student-Teachers (see Table 7):

Table 7. Significant difference in the perception of student-teachers, critic teachers, and intern supervisors on the level of competence of SUCS student-teachers

Domains	Levels of Educ. Attainment	Sum of Squares	df	Mean Square	F	P-value	Interpretation
Social regard for learning	Between Groups	0.40	2	0.20	1.82	0.17	Not Significant
	Within Groups	15.22	140	0.11

	Within Groups	13.65	140	0.10	0.26	0.77	Significant
	Total	13.70	142				

4. No significant relationships were found between the Student-Teachers' competency on social regard for learning, learning environment, diversity of learners, curriculum, planning, assessing and reporting, community linkages and personal growth and professional development and in their profiles such as age, gender, socio-economic status and aptitude (see Tables 8, 9, 10, 11, 12, 13, and 14).

Table 8. Significant relationship between competency in terms of social regard for learning and the identified variables in the profile of the student-teachers

Variables correlated	N	r	p	Interpretation
Social regard for learning and gender	127	-0.03	0.77	Not Significant
Social regard for learning and Age	127	-0.09	0.31	Not Significant
Social regard for learning and socio-economic status	127	0.09	0.32	Not significant
Social regard for learning and aptitude	127	-0.07	0.45	Not Significant

Table 9. Significant relationship between competency in terms of learning environment and the identified variables in the profile of the student-teachers

Variables correlated	N	r	p	Interpretation
Learning environment and gender	127	-0.07	0.43	Not Significant
Learning environment and Age	127	-0.13	0.14	Not Significant
Learning environment and socio-economic status	127	0.13	0.15	Not significant
Learning environment and aptitude	127	0.02	0.85	Not Significant

Table 10. Significant relationship between competency in terms of diversity of learning and the identified variables in the profile of the student-teachers

Variables correlated	N	r	p	Interpretation
Diversity of learning and gender	127	-0.01	0.93	Not Significant
Diversity of Learning and Age	127	-0.14	0.12	Not Significant
Diversity of Learning and socio-economic status	127	0.12	0.17	Not significant
Diversity of Learning and aptitude	127	-0.07	0.47	Not Significant

Table 11. Significant relationship between competency in terms of curriculum and the identified variables in the profile of the student-teachers

Variables correlated	N	r	p	Interpretation
Curriculum and gender	127	-0.05	0.59	Not Significant
Curriculum and Age	127	-0.07	0.46	Not Significant
Curriculum and socio-economic status	127	0.14	0.11	Not significant
Curriculum and aptitude	127	-0.06	0.48	Not Significant

Table 12. Significant relationship between competency in terms of planning, assessing and reporting and the identified variables in the profile of the student-teachers

Variables correlated	N	r	p	Interpretation
Planning, assessing and reporting and gender	127	-0.12	0.19	Not Significant
Planning, assessing and reporting and Age	127	-0.01	0.92	Not Significant
Planning, assessing and reporting and socio-economic status	127	0.11	0.24	Not significant
Planning, assessing and reporting and aptitude	127	-0.08	0.37	Not Significant

Table 13. Significant relationship between competency in terms of community linkages and the identified variables in the profile of the student-teachers

Variables correlated	N	r	p	Interpretation
Community Linkages and gender	127	-0.08	0.36	Not Significant
Community Linkages and Age	127	-0.10	0.28	Not Significant
Community Linkages and socio-economic status	127	0.06	0.47	Not significant
Community Linkages and aptitude	127	-0.03	0.75	Not Significant

Table 14. Significant relationship between competency in terms of personal growth and professional development and the identified variables in the profile of the student-teachers

Variables correlated	N	r	p	Interpretation
Personal Growth and Professional Development and gender	127	-0.15	0.10	Not Significant
Personal Growth and Professional Development and Age	127	-0.09	0.33	Not Significant
Personal Growth and Professional Development and socio-economic status	127	0.05	0.61	Not significant
Personal Growth and Professional Development and aptitude	127	-0.01	0.99	Not Significant

5. Based on the results of the study monitoring strategies were designed for student-teachers' evaluation guide.

CONCLUSION

Based from the findings of the study, the following conclusions were drawn out by the researcher:

1. Student-Teachers of the State Universities and Colleges in the Province of Negros Occidental who are mostly female with age bracket of 20 years old and below are mostly sons and daughters of parents who are mostly elementary and high school graduates who work as unskilled or service workers with an annual income which is low.
2. Student-teachers are perceived to be competent on the domains of the teaching and learning process. Community linkages, however, need to be improved.
3. There is no significant difference in the perception of the level of competence of the student-teachers by the respondents.
4. There is no significant relationship between the competency of the student-teachers and the identified variables in the profiles.

^c University of Warsaw, Faculty of Economic Sciences, Poland

Abstract

The article presents comparative analysis based on results of questionnaire survey of perceived usefulness and the role of different teaching tools such as national and EU regulations and legislations, practical applications in various accounting subjects (examples, exercises and case studies), a concise presentation of the material in the form of slides or text, links to electronic accounting databases, links to national and international accounting sites, and proposed further reading for various accounting subjects. Analysis revealed significant gap between assessment of usefulness of teaching tools in two different groups of users of e-learning platform: students without practical experience in accounting and people interested in vocational training who already have practical experience in accounting for both Slovakia and Poland. Differences in perceiving the role of such tools depends significantly on practical experience in accounting which help recognize indispensable tools used in the work of the accountant and skills necessary to use them.

Keywords:

INTRODUCTION

The article presents results of the questionnaire survey conducted among users of the e-learning platform FASTER for learning accounting in practice. Paper presents comparative analysis of perceived usefulness and the role of different teaching tools such as national and EU regulations and legislations, practical applications in various accounting subjects (examples, exercises and case studies), a concise presentation of the material in the form of slides or text, links to electronic accounting databases, links to national and international accounting sites, and proposed further reading for various accounting subjects. Analysis revealed significant gap between assessment of usefulness of teaching tools in two different groups of users: students without practical experience in accounting and people interested in vocational training who already have practical experience in accounting for both Slovakia and Poland.

E-LEARNING PLATFORM FASTER FOR LEARNING ACCOUNTING IN PRACTICE

Theoretical knowledge generated in higher educational systems is often not directly linked to the practical real-time work environment's needs. EU priorities area of Knowledge Society and Innovation with objectives such as improving the quality and intensity of investments in human capital for the upgrade of the education system, investing in the future, promoting reforms in the education system and improving access and basic skill levels for all (FASTER consortium, 2013). In that context the emphasis is put on linking the educational system with the labour market with focus on the adaptability of employees and businesses and the gradual increase of the participation in education and training so as to be equipped with the skills and abilities needed to cope with the ever-changing labour market while improving workload quality and productivity. Five educational institutions from five different EU member states: Athens University of Economics and Business (Greece), Sofia University "St. Kliment Ohridski" (Bulgaria), City University, London (United Kingdom), University of Warsaw (Poland), Technical University of Kosice (Slovakia) decided to promote project FASTER with idea of development of a European e-learning tool supporting European collaboration in the field of Finance and Accounting.

Concerning the objectives defined in Europe 2020 strategy, the outcomes of the project will support long term career advancement, international mobility of employees in accountancy branch, as well as graduates with

degrees in disciplines other than accounting, or people employed in business, with the foundation studies to become a professional accountant. Special attention is placed on mature and motivated student seeking a career in accounting for which no prior professional experience will be required. This group of people represents the group at risk due to their high unemployment (FASTER consortium, 2013).

The field of finance & accounting is a profession with a key role in strengthening national economies and the promotion of entrepreneurship. Based on the analysis of labour market, and European Commission documents and activities done in the field of education and accountancy the FASTER partnership defined main aims and objectives of the project (FASTER consortium, 2013):

- to produce a modern technological e-learning & knowledge-sharing environment on finance and accounting which allows both students and professionals in pursuit of lifelong learning to gain practical knowledge on their discipline, but not restricted to national borders. Apart from e-learning environment platform will propose a job seeking mechanism,
- to link studies & working environment and widen transnational pursuit of jobs in finance and accounting,
- to offer new incentives and produce a prototype ICT environment expandable to all languages and to all disciplines.

All project consortium countries (United Kingdom, Greece, Bulgaria, Poland and Slovakia) are countries with different types of economy and different taxation and accounting legislation systems. Therefore, engaging partners from these countries, guarantees that FASTER outcomes will meet multiple European Union (EU) needs in accounting education and employment. Another parameter the consortium meets is the geographical coverage of EU (North, Middle and South-eastern Europe), so it has potential in increasing employment mobility and integration of job markets within involved EU member states. (Palova & Vejicka, 2013)

The developed platform improve the quality and attractiveness of vocational education and training through the review of its primary structure and curricula qualification, setting professional rights and establishing a system of formal accreditation of learning at a Pan-European Qualifications Framework. Furthermore, FASTER aims at fostering long-term career advancement and international mobility, ensuring that the professional development of certified general accountants remains a lifelong experience which distinguishes graduates with any accounting qualifications in the job market while at the same time providing graduates with degrees in disciplines other than accounting, or people employed in business, with the foundation studies to become a professional accountant (FASTER consortium, 2012).

Modern information and communication technologies bring crucial changes into the educational system, including accounting courses. These technologies enable to obtain knowledge using more senses and without presence of a teacher. Slovak universities offer long distance education through self-instructive materials, educational technologies, Internet and tutor's help. In Slovakia Authors of educational textbook scripts share them in both paper and electronic version, while in Poland academics give access to educational materials through their own web page close to university web page. In Slovakia textbooks have a compact style, they separate crucial information from secondary data, and they specify entry knowledge necessary for the study of different chapters. Methodical instructions and system of tests and accounting examples are important components of the textbooks and they allow verifying of the accounting knowledge and skills. The new technologies change the entire educational process and they offer the education to the bigger amount of students. (Tusan & Stasova, 2008)

LITERATURE REVIEW

There was considerable debate in the accounting literature about a gap between competencies taught at universities and those needed in the workplace (Sundem, 1999; Brungardt, 2009) and opinion that students were not being prepared for the business world (Albrecht and Sack, 2000).

The accounting education follows the national legislation of the accounting and accounting procedures, furthermore it follows mandatory accounting chart in Slovakia and "model" accounting chart in Poland – each company obligated to conduct accounting books has to create their own accounting chart. When accounting education is focused on the transfer of the bookkeeping skills and knowledge, students are tempted to habitually match the accounts with the accounting transactions. (Tusan & Stasova, 2008)

Beginning accounting students struggle with the new terminology and the unfamiliar concept of accounting for transactions and using financial information for managerial decision making. Bryant and Hunton (2000), Farley and Ramsay (1998), and Krausz et al. (1989) found that learning is enhanced when students relate new knowledge to a previous experience, putting it in a context that can be used. Students did not think profoundly about the final impact of the business transaction on the financial situation of the accounting unit. This explains

why it is important to modify the system of the accounting education at the Slovak universities and start to teach accounting instead of bookkeeping. Students should be able to understand the accounting data and their structure, respecting the general accounting principles of the accounting reports, the billing, the valuation and its influence on financial situation and the disclosure of information according to the international instruments of the accounting regulations. (Tusan & Stasova, 2008) Muhamad et al. (2009) points that due to internship during the undergraduate programme students are able to gain practical experience while simultaneously being able to reflect on what they have learned in the classroom. According to Lam and Ching (2007) internship can assist students to bridge the gap between the academic learning process and the practical reality. Internship programmes are perceived as a valuable way to acquire broad competencies where the practical knowledge obtained supports and complements the theoretical studies learned in the classroom (Mihail, 2006). The author noted that interns have successfully developed their personal skills, particularly relating to information technology, time management, communication skills, teamwork, specialist knowledge and ability to prioritize tasks. Empirical research in cognitive psychology has established that prior experiences are able to enhance the performance in fairly complex learning and problem solving tasks (Britton & Tesser, 1982).

In 2007, the International Federation of Accountants issued the International Education Practice Statements 3 "Practical Experience Requirements – Initial Professional Development for Professional Accountants", which stresses the importance of integrating formal education and practical experience in enabling graduates to develop their professional knowledge and skills.

METHODS AND PROCEDURES

The present research paper analyzes the results collected by a survey conducted in June-October 2013 in Poland and Slovakia among users of online platform FASTER. The purpose of conducting this survey was at first to identify which teaching tools and methods are considered to be the most useful in the process of teaching accounting using the e-learning platform FASTER and secondly to test and estimate the progress in gained accounting knowledge, skills and abilities in practical accounting among students and people interested in vocational trainings from both Poland and Slovakia. Participants of testing courses were acquainted with FASTER platform which consists of eight e-courses (Financial accounting, Accounting plans, Accounting for public limited companies (S.A.) – limited liability companies (Ltd) – Groups of companies - Code for accounting books, Tax Accounting, Balance sheet issues, Analysis of financial statements - Business valuation, Accounting ERP, International Accounting Standards), links to books, journals, e-books, legislation and websites, as well as job seeking tools. Participants were invited to test educational modules with resources, glossary and job seeking part of the platform and then to fill the evaluation form. The main aim of pilot testing activities was to indicate the efficiency and the compliance of the application with the applied needs of end users, including student community and people interested in vocational training from SMEs, employers and accounting offices, financial services of governmental agencies and local authorities.

SAMPLE CHARACTERISTICS

The demographic characteristics of participants in testing the FASTER platform were as follows: 97 students from Poland and 55 from Slovakia, 16 people interested in vocational training from Poland and 37 from Slovakia. The practical aspects of educational material seems to be the most important for interested in vocational training, but learning by practice is the most needed by students especially considering their future worklife with finance and accounting. Almost all participants use PC everyday, but in Poland the use of computers is more common among students (in Poland – 70% - everyday, 29% - often) than among people interested in vocational training use computers (in Poland – 88% - everyday, 6% - often). It can be explained by characteristics of job and duties fulfilled in work time without PC. However, in Slovakia students use PC less commonly (70% everyday, 23% - often) than people interested in vocational training (84% - everyday, 13,5% - often). Students both in Poland (52% - everyday, 40% - often) and Slovakia (70% - everyday, 25% - often) are more familiar with Internet than people interested in vocational training (in Slovakia 84% - everyday, 8% - often, and in Poland 50% - everyday, 25% - often). The majority of participants in pilot testing activities took part in no more than 1-2 e-learning courses before. Moreover, 78% of Slovak and 25% of Polish people interested in vocational training and 74% of Slovak students and 40% of Polish students, were without any experience in using e-learning courses. In Poland 75% of people interested in vocational training and 1% of students have got practical experience in accounting. On the contrary, in Slovakia 5,5% of students and only 13,5% of people interested in vocational training have got practical experience in accounting. It is worth

mentioning that in Slovakia 35% of people interested in vocational training need the knowledge in the area of accounting in their career.

RESULTS

Influence of practical experience in accounting on assessment of efficiency of the platform

The assessment of accuracy of information on e-learning platform of accounting in practice differs more between students and people interested in vocational training from different countries than within these groups, $MS_B > MS_W$ (Tab. 1). People interested in vocational training from Poland appreciate the accuracy of information on e-learning platform of accounting in practice more than students as a result of longer and deeper practical experience in accounting of entities, while in Slovakia students assess accuracy of information higher than people interested in vocational training. There are fewer people interested in vocational training in Slovakia that have got practical experience in accounting and ability to recognize crucial information essential in real business than in Poland.

Table 1. Differences in mean significance of accuracy of information between and within groups by practical experience in accounting (students versus people interested in vocational training) and by country (Poland versus Slovakia)

Accuracy of information	Students PL	Students SK	Vocational PL	Vocational SK
average	4,208	3,727	4,438	3,541
variance	0,666	0,646	0,529	0,811
ANOVA	MSB	MSW	test F	p-value
	6,418	0,676	9,488	0,000*

* difference of means is significant ($p < 0.05$); MS_B - Mean Square Between groups; MS_W - Mean Square Within groups

Evaluation of clarity of layout and format of e-learning platform of accounting in practice depends more on individual characteristics than differences between practical experience in accounting and between countries, $MS_W > MS_B$ (Tab. 2). Students from both Poland and Slovakia assess clarity of layout and format higher than people interested in vocational training because their assessment bases on habits acquired during studies, not-confronted with the practice. They assess arrangement of educational content considering only the usefulness of particular issues in preparing for the exam, rather than focusing on the meaning of issues in practice and bookkeeping of real business.

Table 2. Differences in mean significance of clarity of layout and format between and within groups by practical experience in accounting (students versus people interested in vocational training) and by country (Poland versus Slovakia)

Clarity of layout and format	Students PL	Students SK	Vocational PL	Vocational SK
average	3,743	3,691	3,250	3,568
variance	0,893	0,884	1,000	0,808
ANOVA	MSB	MSW	test F	p-value
	1,249	0,884	1,414	0,240

The assessment of easiness to use e-learning platform of accounting in practice differ more between students and people interested in vocational training from different countries than within these groups, $MS_B > MS_W$, $p < 0.15$ (Tab. 3). Out of every target group, students from Poland appreciate the easiness to use e-learning platform of accounting in practice the most. On the contrary, people interested in vocational training from Poland evaluate it the least. The observation can be explain by fact that in Poland people interested in vocational training use computers and Internet less commonly than students (see Sample characteristics). In Slovakia students assess easiness to use e-learning platform lower than people interested in vocational training. The reason of difference is similar to the Polish situation, in general in Slovakia less students use PC (70% - everyday, 23% - often) than people interested in vocational training (84% - everyday, 13,5% - often). The difference in frequency of using PC between Polish and Slovakian students explains why the assessment differs more between countries than within the groups. ANOVA analysis points that the assessment of easiness to use e-learning platform of accounting in practice differs more between students and people interested in vocational training than within these groups, especially in Poland, $MS_B > MS_W$, $p < 0.05$ (Tab. 4) and together in Poland and Slovakia $MS_B > MS_W$, $p < 0.15$ (Tab. 4).

Table 3. Differences in mean significance of easiness to use between and within groups by practical experience in accounting (students versus people interested in vocational training) and by country (Poland versus Slovakia)

Easiness to use	Students PL	Students SK	Vocational PL	Vocational SK

* difference of means is significant ($p < 0.05$); ** difference of means is significant ($p < 0.15$)

Attractiveness of the graphics plays bigger role for students than for people interested in vocational training both in Poland and Slovakia, however the differences are not essential.

Table 5. Differences in mean significance of attractiveness of the graphics between and within groups by practical experience

Attractiveness of the graphics	Students PL	Students SK	Vocational PL	Vocational SK
average	3,743	3,509	3,750	3,595
variance	0,713	0,921	0,600	0,859
ANOVA	MSB	MSW	test F	p-value
	0,742	0,785	0,944	0,420

Comparative analysis of perceived usefulness and the role of different teaching tools

Differences in perceiving the role of legal regulations, financial indicators, links to national and international accounting sites, and case studies - examples of using accounting in practice depends significantly on practical experience in accounting which helps experienced users recognize indispensable tools used in the work of the accountant and skills necessary to use them. On the contrary, users without experience tend to perceive learning tools as an easy-way of passing their exams, rather than as a way of self-development that will help in future career.

EU and national regulations and legislations

On average the EU and national regulations and legislations in Poland are more important for people with practical experience in accounting than for students without any practice in real business. On the contrary, in Slovakia a role of legislations is more appreciated by students, but the differences on average are not big. ANOVA analysis points bigger differences within groups of students and people interested in vocational training than between these groups, especially for Poland and Slovakia together, however cannot reject null hypothesis because $p > 0.05$ (Means are the same).

Table 6. Perceived usefulness and the role of EU and national regulation and legislations in five-point Likert scale

EU and national regulations	Students PL+SK	Vocational PL+SK	Students PL	Vocational PL	Students SK	Vocational SK
average	3,538	3,528	3,515	3,625	3,582	3,486
standard deviation	0,946	0,973	0,976	0,885	0,896	1,017

Table 7. Differences in mean significance of regulations & legislations between and within groups by experience in accounting

ANOVA test F / p-value	0,004	0,947	0,180

Practical applications in various accounting subjects (examples, exercises and case studies)

Practical applications in various accounting subjects (examples, exercises and case studies) are more important for people with practice in accounting of real business than for students (Tab. 8). Skills and abilities to solve accounting issues, find solution of accounting problems in unusual circumstances are more needed in real life than during exams, because consequences of errors or misunderstanding in real business transaction are bigger for companies (penalty, taxes, bankruptcy) than failing an exam for students. ANOVA analysis of preferences of practical applications in various accounting subjects (examples, exercises and case studies) suggests bigger differences within groups of students and people interested in vocational training than between these groups separate in Poland and Slovakia and in Poland and Slovakia together as well (Tab. 9).

Table 8. Perceived usefulness and the role of examples with case studies in five-point Likert scale

Examples with case studies	Students PL+SK	Vocational PL+SK	Students PL	Vocational PL	Students SK	Vocational SK
average	4,250	4,264	4,356	4,375	4,055	4,216

ANOVA test F / p-value	0,013	0,911	0,880

Concise presentation of the material in the form of slides versus text

Concise presentation of the material in the form of slides is more preferred by the people interested in vocational training as they need more selective information without the necessity to go through long introduction of theory and conditioning, which makes access to crucial issues easier (Tab. 10). On the contrary, in Poland students prefer text than slides in order to limit the personal misunderstanding of particular issues by using full description of theory, procedures and processes of drawing a conclusion.

Table 10. Perceived usefulness and the role of educational material in form of slides in five-point Likert scale

Slides	Students PL+SK	Vocational PL+SK	Students PL	Vocational PL	Students SK	Vocational SK
average	3,981	4,000	4,059	4,250	3,836	3,892
standard deviation	0,791	0,734	0,822	0,683	0,714	0,737

Accounting databases with financial indicators and links to accounting sites

The importance of accounting databases with financial indicators and links to national and international accounting sites in conducting real business is appreciated by people interested in vocational training among whom majority have got practical experience in accounting more than by students with no experience (Tab.14 and 16). Bigger differences in assessment of usefulness of crucial accounting indicators (for instance rates of social insurance, income tax, minimum wage in economy, value added tax for given goods or services etc.) in real business are observed between groups of students and people interested in vocational training than within these groups in Slovakia and also in Poland and Slovakia all together, $MS_B > MS_W$, (Tab. 17 and Tab. 15 but for $p < 0.20$).

Table 14. Perceived usefulness and the role of accounting databases in five-point Likert scale

Proposed further reading for various accounting subjects versus accounting journals

Further reading for various accounting subjects is more useful for people interested in vocational training who are able to formulate their needs and choose proper source to solve their problem (Tab. 18). Such ability is a result of practical experience in real business, especially taxes, accounting and preparing financial statements.

On the contrary usefulness of accounting journals is mostly appreciated by Slovakian students, and secondly by people interested in vocational training from Poland (Tab. 20). It can be explained by kind of article publicised in accounting journals. In Poland all accounting journals are dedicated to professionals and search for solution of practical problems, interpretation of amended acts and explanation how to use regulation and legislation in practice. The practical experience in accounting, bigger in Polish group of interested in vocational training than Slovak one, also explains the observed differences.

Table 18. Perceived usefulness and the role of further reading in five-point Likert scale

Role of previous accounting experience in progress in learning process with use of online platform

We suppose that students without experience in accounting who self-assessed their knowledge as basic or low should achieve higher progress in learning process, rather than people interested in vocational training with experience in accounting who tends to strictly assess their progress in knowledge and gained skills. However, results show that in more complex issues from the area of accounting and finances people interested in vocational training courses achieved higher progress in their knowledge and practical skills than students. Progress in skills and abilities is calculated as positive difference between self assessment made by each respondent (testing of chosen e-course on FASTER platform) of their skills and abilities in practical accounting possessed before pilot use of the educational online platform FASTER and self-assessment of the same skills and abilities in practical accounting gained after completing e-course on the FASTER platform. For instance, higher increase in knowledge and practical skills of people interested in vocational training than students in both Poland and Slovakia was observed in areas of International Accounting Standards such as knowledge of the international requirements for assets and liabilities recognition and distinguishing the differences between consolidation and business combinations. However in an area of knowledge of various approaches for valuation of assets, liabilities and financial instruments higher progress was observed only in Slovakia. In Poland higher progress in this kind of knowledge was observed for students (Tab. 22) because Polish accounting standards known by accounting practitioners are used in rather conservative way.

Table 22. Increase in skills and abilities in practical accounting as result of pilot testing courses by target groups

Skills and abilities in practical accounting	target group	Poland			Slovakia		
		before	after	progress	before	after	progress
e-course: International Accounting Standards Know the international requirements for assets and liabilities recognition	Vocational	2,1	4	1,9	1,5	3	1,8
	Students	1,43	3,09	1,66	1,5	2,9	1,5
Distinguish the differences between consolidation and business combinations	Vocational	2,1	4	1,9	1,8	3,3	1,9
	Students	1,63	3,17	1,54	1,6	2,9	1,5
Know various approaches for valuation of assets, liabilities and financial instruments	Vocational	2,2	3,5	1,3	1,7	3	1,6
	Students	1,68	3,17	1,49	1,6	2,6	1,3
e-course: Tax Accounting Post the VAT of purchases and sales	Vocational	3,25	4,42	1,17	2,5	4	1,5
	Students	2,31	3,69	1,38	2,4	3,6	1,2
e-course: Balance sheet issues Define events after the reporting period and decide what should be present in the financial statements	Vocational	2,08	4,09	2,01	2,6	4,1	1,5
	Students	1,61	3,71	2,1	2,2	3,4	1,2

Polish companies rarely value assets and liabilities in fair value or amortized costs. Low per-cent of Polish enterprises prepare financial statement according to International Accounting Standards and even lower part of them use hedge accounting for financial instruments. In Poland students without experience in accounting achieve higher progress in learning process, rather than people interested in vocational training with experience in accounting in most e-courses, while in Slovakia people interested in vocational training with experience in accounting (lower than in Poland, 13,5% versus 75% of participants interested in vocational training) achieve higher progress in large part of skills and abilities in practical accounting (Tab. 23).

Table 23. Progress in skills and abilities of people with practical experience in accounting higher than students

Skills and abilities in practical accounting	Poland	Slovakia
Posting the VAT of purchases and sales		X
Calculating payroll list with the income tax and social insurance contributions, recording it in books of account		X
Distinguishing the tax revenues and tax deductible expenses determining the taxable income and appropriately determining the amount of the company income tax		X
Technical organization and procedures related to closing account books and preparing financial statements		X

Understanding the role of the Financial Module in an ERP system	X		
Orientating oneself in area of International Accounting Standards / International Financial Reporting Standards	X		
Assigning an international approach to accounting and reporting issues	X		
Knowing the international requirements for assets and liabilities recognition	X	X	
Distinguishing the differences between consolidation and business combinations	X	X	
Knowing various approaches for valuation of assets. liabilities and financial instruments			X

Regarding posting the value added tax (VAT) of purchases and sales (e-course: Tax accounting) ANOVA analysis shows essential differences between four groups of students from Poland and Slovakia and participants interested in vocational training from Poland and Slovakia (Tab. 24) than within these groups. The crucial differences are observed between groups of students and people interested in vocational training as whole (Polish and Slovakian together) and between groups of students and people interested in vocational training from Poland (Tab. 25). Observed differences between Poland and Slovakia can be explained by practical experience in accounting of real business (bigger among participants from Poland) where issues of value added tax are commonly present. The second reason are frequent changes and complexity of Polish law of value added tax which increase a gap between practice and theory.

Table 24. Obtained skills and abilities in value added tax accounting in five-point Likert scale

Post the VAT of purchases and sales	Students PL	Students SK	Vocational PL	Vocational SK
average	3,667	3,545	4,417	4,000
variance	0,865	1,073	0,811	0,800
ANOVA	MSB	MSW	test F	p-value
	2,122	0,881	2,408	0,074*

Table 25. Differences in mean skills in value added tax accounting between and within groups by experience in accounting

Post the VAT of purchases and sales	Students /Vocational PL+SK		Students /Vocational PL		Students /Vocational SK	
MSB /MSW	5,539	0,868	5,400	0,855	0,802	0,982
ANOVA test F / p-value	6,378	0,014*	6,317	0,015*	0,817	0,380

* difference of means is significant (p<0.05); MS_B -Mean Square Between groups; MS_w - Mean Square Within groups

Regarding defining events after the reporting period and deciding which should be reported in the financial statements (e-course: Balance sheet issues) ANOVA analysis points less essential differences between four groups of students from Poland and Slovakia and participants interested in vocational training from Poland and Slovakia, p<0.15 (Tab. 26) than within these groups. The essential differences are observed between groups of students and people interested in vocational training as whole (Polish and Slovakian together) and between groups of students and people interested in vocational training from Slovakia, p<0.05 (Tab. 27). Differences between Poland and Slovakia are observed, because in Poland only 5,3% of active companies are obliged to prepare financial statements, so such issue is quite new even for people with practical experience in accounting. In Slovakia mentioned problem does not seem to be so essential and it is easier for people interested in vocational training with lower experience in accounting to achieve progress in practical skills than for students (Tab. 22).

Table 26. Obtained skills and abilities in presenting events after reporting period in five-point Likert scale

Events after reporting period	Students PL	Students SK	Vocational PL	Vocational SK
-------------------------------	-------------	-------------	---------------	---------------

* difference of means is significant ($p < 0.05$); MS_B -Mean Square Between groups; MS_W - Mean Square Within groups

Summarizing, we can conclude that actual increase in skills and abilities in practical accounting depends essentially on the understanding of the role of accounting and law in real-life business. Such understanding should be more developed in groups which previously had experience in practical accounting. Our findings confirm such assumption in case of Slovakia in the areas mentioned in the Table 23 more frequent than in case of Poland. Previous experience in accounting profession gives students the practical opportunity to apply their knowledge in an industry context and to reflect on their personal learning journey (Boud & Costley, 2007). Accounting students with practical experience in accounting reveal learning pertaining to their workplace preparedness, understanding of accounting principles and taught concepts and are motivated to improve their generic skills and practical accounting skills (Cord et al., 2010). Practical experience in accounting of an enterprise, understanding the role of accounting documentation in an enterprise's organisation, ability to identify business processes and related accounting documents are crucial for higher benefits from learning accounting in practice, especially when using e-learning platform where contact with experienced teacher is limited.

CONCLUSION

We conclude that willingness to appreciate the importance of particular learning tools such as examples – practical applications in various accounting subjects (exercises, case studies), links to EU and national regulations and legislations and links to electronic accounting databases, depends on actual practical experience in accounting of enterprises. Further conclusion is that actual increase in skills and abilities in practical accounting depends essentially on the understanding of the role of accounting and law in real-life business. Such understanding should be more developed in groups which previously had experience in practical accounting. Students with job experience in accounting have an opportunity to apply their theoretical knowledge in a structured environment, take a deeper understanding of the role of accounting in real organization, appreciate accounting regulation and tax law, and understand the importance of documentation of business operation in a real enterprise. The practice in accounting area allows them to reflect on what to learn in order to be able to work in accounting, where to find necessary information and how to cope with accounting issues in future workplace. Moreover, students with practical experience are more likely to understand why do they have to acquire particular knowledge and skills. Students are more open to solving complex problems that may arise in their area of expertise and are able to act on time. Thus we can conclude that practical experience in accounting change students' perception of learning tools and their usefulness for gaining practical skills needed in financial and accounting departments of an enterprise.

Abstract

This study presents the perceptions of the students and teachers from kindergarten to tertiary level of the image of the 21st century teacher to provide basis in designing teacher development programs in Teacher Education Institutions (TEIs) in the Philippines. The highlights of the report are the personal, psychosocial, and professional images of the 21st century teacher in basic education and the teacher educators based on a survey done to 612 internal stakeholders of nine member institutions of the National Network of Normal Schools (3NS). Data were obtained through the use of a validated researcher-made instrument which allowed generation of both quantitative and qualitative descriptions of the teacher image. Through the use of descriptive statistics, the common images of the teacher were drawn, which were validated and enriched by the information drawn from the qualitative data. The study recommends a repertoire of teacher development programs to create the good image of the 21st century teachers for a better Philippines.

Keywords: Teacher image, 21st century teacher, teacher education, development program

INTRODUCTION

Teaching is viewed as the noblest profession in the world. It produces all other professions one could think of. According to Rand (cited in Wayant, 2003), teaching is one of the most crucial, responsible, and important professions since it requires communicating knowledge and guiding of the intellectual development of the human beings. Rand added that the purpose of teaching is the communication and spread of the right ideas and intellectual values, which means the creation of culture. Teachers can then help create a good culture particularly in the school, which is hoped to influence the home of their students and the society where they also belong. As explained by Zwell (2000), a successful culture provides an avenue for highly competent individuals to be engaged, challenged, and motivated to exercise their talents and impact their organization.

At the helm of the teaching profession are the teachers. In the Philippines, teachers in the Republic Act No. 9155 are referred to as “persons engaged in teaching at the elementary and secondary levels, whether on full-time or part-time basis including industrial arts and vocational teachers and all other persons performing supervisory, managerial and/or administrative functions in all schools and education offices at the district, division, regional and central levels and qualified to practice teaching under RA 7836 and/or those performing functions in support of education such as standards setting, policy and programs formulation, research and sector monitoring and evaluation” (DepEd, 2014). In the Republic Act 10533 or the K to 12 Law, the term teacher already includes those handling kindergarten (DepEd, 2013). Moreover, the Code of Ethics for Professional Teachers of the Philippines (Resolution Act No. 435, 1997) describes teachers as duly licensed professionals who possess dignity and reputation with high moral as well as technical and professional competence (DepEd, 2014).

Teachers, in general, are respected for their image as the source of information and facilitator of one’s intellectual development. As Cage (cited in Wayant, 2003) explained, teachers make a difference in each child’s life and affect each family and the future of every one. Given this responsibility of teachers, their preparation or formation, which is a responsibility of Teacher Education Institutions (TEIs) is critical.

Teachers, however, could have different images as viewed by different generations of learners from varied contexts. Traditionally, in the Filipino context, teachers are seen as straight, firm, and dignified who wear big eye glasses and A-cut skirt. Intellectually, some would say “*mag-teacher ka na lang (just be a teacher)*” if one is

not that bright to be a doctor, lawyer, or engineer. In this digital age, where people are liberated in their thinking and behavior, there could be a change in the image of a teacher. This change in the image of teachers as viewed by the community is partly influenced by how they were developed by the teacher educators or those who have trained them in TEIs.

There are a lot of expectations from teachers in this technology-driven 21st century society. According to Mac Meekin (2014), the image of the 21st century teacher is due to the emergence of social web and technology-driven classrooms. Mac Meekin listed 27 traits of the 21st century teacher, which include among others teachers who are techno savvy, those who facilitate students' learning, let them create, design, question, contribute, relate what they learn to the real world, and discern what is right from wrong. These traits have been supported by Resta (cited in Ledesma, 2011) who synthesized the characteristics of teacher educators that can better serve students in the 21st century as follows: 1) facilitate and inspire student learning and creativity so that all students achieve in the global society; 2) enable students to maximize the potential of their formal and informal learning experiences; 3) facilitate learning in multiple modalities; 4) work as effective members of learning teams; 5) use the full range of digital-age tools to improve student engagement and achievement; 6) work with their students to co-create new learning opportunities; 7) use data to support student learning and program improvements; 8) be lifelong learners; 9) be global educators; and 10) work with policy leaders as change agents.

The 21st century teacher could also be described by the professional standards set for teachers. In the Philippines, the National Competency-Based Teacher Standards (NCBTS) is usually referred to if the characteristics of an effective and efficient teacher are of interest. Domain 1 of NCBTS states that teachers serve as positive and powerful role models of the values of the pursuit of learning (TEC, DepEd & CHED, 2009). Being a role model implies setting good examples to others. Hence, the value to learning of the students may also reflect that of their teachers as facilitators of their intellectual development.

The foregoing characteristics of a teacher have to be developed by TEIs to both the pre-service and in-service teachers so that they could cope with the demands of this digital-age. Training programs for teachers and educators should be designed to orient them on the qualities desired of a 21st century teacher. Training programs such as those conducted by the Teacher Education Council (TEC) dubbed as Teacher Induction Program (TIP) set a good example of programs that make new teachers aware of NCBTS and conscious of the competencies they should be equipped with to meet the demands of the 21st century.

However, there is also a need for the development of personal, psychosocial, and professional aspects of the teacher based on what is viewed and acceptable in the present society. Hence, this study aims to determine the perceptions of students in different levels from kindergarten to those who would become teachers themselves and to those who already practice their profession including the educators that have developed them.

The perception of stakeholders about teachers' image can be considered as one of the most fascinating inquiries in the field of education. Educational experts, academicians, professionals, parents, and learners have unabashedly expressed their admiration for teachers who have made an impact on their lives. They speak of their favorite teachers' qualities and influence on their lives. A number of studies on the qualities and image have also been conducted over a period of time and across cultures.

One of the recent studies along this line was conducted by Ampadu (2012) which examined the students' views on their teachers' teaching practices in Mathematics, and how they had influenced their learning experiences. This study, involving 358 students from junior high schools, revealed that students' perceptions of their teachers' teaching vary since their teachers employed both teacher-centered and learner-centered approaches.

Other studies on teachers have presented a strong correlation between perception of teachers and students' learning; that is, a student is likely to learn well if s/he has a more positive image of his/her teacher. A case in point is Rawnsley's (1997) study which established that students develop a more positive attitude toward their mathematics lessons where the teacher is considered to be highly supportive and gives the students a chance to play an integral role in the teaching-learning process.

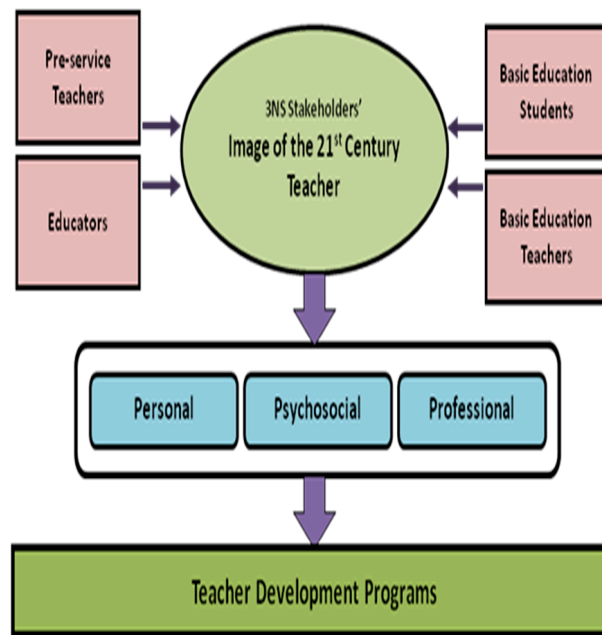

Figure 1: The Development of the “Image” of the 21st Century Teacher

Other studies on the image of teacher are capsulized in a book that essentially emphasized the importance of positive perception of students toward their teachers, which is generated from a cordial and friendly relationship between the students and their teachers (Middleton & Petitt, 2010). The students mentioned that their best teachers know them personally including their interests and strengths, smile at them, encourage them to participate in school activities, provide descriptive feedback on assignments, connect classroom learning to real life, apologize when they make mistakes, give meaningful activities, and show enthusiasm in what they do.

With the stakeholders’ perception of teachers comes the inquiry on the factors that might have influenced these points of view. Brok (2006) in his study identified several factors that influence students’ perception. These factors are student and teacher gender, student and teacher ethnic background, student age, teacher experience, class size, student achievement, and subject. Each of these factors produces distinct effect on students’ perception.

The 21st century learning contexts bring forth a revitalized interest on the image of teachers because face-to-face interaction in the classroom is now challenged by other modes of learning, e.g. web-based learning. This is also coupled with the seemingly growing number of teachers whose ethno identity, not to mention belief systems, is different from their own students. This new context in education gives a new dimension in the study of students’ perception of their teachers.

To contribute to how the 21st century teachers are perceived nowadays in the context of the Philippines, it is ideal to determine such perception from those who are directly exposed to them and those who wanted to become them, the teachers themselves including those that developed them. Thus, this study was conducted. It is hoped that the study will provide relevant input on how the TEIs in the Philippines should prepare future teachers in the era of the K to 12 Reform.

As shown in Figure 1, the image of the 21st century teacher is described in this study in three aspects, namely: personal, psychosocial, and professional. *Personal traits* initially refer to the appearance, behavior, manner of thinking, manner of talking, work ethics, social relation, student relation, and other personal traits. *Psychosocial traits* refer to teacher’s reaction to various situations happening in the workplace and in the society in general. *Professional traits* refer to those competencies expressed in terms of roles expected of a teacher mostly drawn from the NCBTS as the national document that defines standards for teachers observed in the Philippines. These traits reflect teacher’s roles as organizer, communicator, mentor, expert, motivator, classroom manager, evaluator, decision maker, leader, reflective practitioner, adviser, action researcher, agent of change, learner, community member, and role model. These teacher traits or “teacher image” were described by the internal

stakeholders of the 10 member institutions of the National Network of Normal Schools (3NS) and were used to recommend programs for teacher development in the Philippines.

METHODOLOGY

This descriptive research describes the image of the 21st century teacher based from a survey conducted in 2013 to 9 out of 10 TEIs belonging to the National Network of Normal Schools (3NS). Each TEI had respondents representing four sectors of stakeholders, namely: basic education students (kindergarten, elementary and high school); pre-service teachers with specialization in pre-school, elementary, and high-school education; basic education teachers; and teacher educators. These nine institutions are state universities situated across the three main islands in the Philippines (four in Luzon; three in Visayas; and two in Mindanao). There were 50 to 80 respondents from each TEI sampled, making it to a total of 612 respondents. The age of the respondents ranged from 4 to 71, with an average age of 22. Those respondents in the kinder and elementary levels were assisted by their teachers when they responded to the survey instrument as there was only one instrument that was used by all respondents. Most of the respondents were female (69%) and single (75%). There were 31 to 83 respondents per sector. A survey questionnaire was used which made use of forced-choice and open-ended formats. The survey questionnaire had four main parts: the *first* part asked for the respondents' personal and institutional information; the *second* part was a checklist of personal traits of teachers where each category requires selecting top two preferred among five given traits; the *third* part showed items reflective of the psychosocial traits presented using a Semantic Differential Scale; and the *last* part included professional traits categorized into 16 roles of a teacher where each had five statements expressed in the form of a four-point Likert Scale. The open-ended part of the instrument allowed the respondents to provide information or traits that were not captured by any of the parts of the instrument. The instrument underwent validation by experts and was tried out to the different internal stakeholders of one of the 10 member TEIs of the 3NS. All those involved in the tryout represented the sectors targeted as respondents of the study. The final instrument was based on the suggestions given by the expert validators and feedback from those who participated in the pilot testing. The instrument had two versions: one in English and another in Filipino. Data were analyzed using descriptive statistics. Responses provided in the open-ended format were consolidated based on common patterns and themes and they were used to validate and enrich the data generated from the forced-choice items.

RESULTS AND DISCUSSION

Personal Traits

This section focuses on the personal traits of teachers based on eight categories: appearance, behavior, stance or point of view, communication skills, work ethics, social relation, student relation, and other personal traits.

Teacher's Appearance. The kindergarten pupils perceived that their teacher should be "smart" (*ranked 1*) and "well-groomed" (*ranked 2*) among the five initial traits they needed to choose from. The other three traits include "cheerful" (*ranked 3*), "well-dressed" (*ranked 4*), and "healthy" (*ranked 5*). These descriptions of the appearance of the teacher were supported by the majority of the respondents from the basic education students, pre-service teachers in elementary and secondary levels, basic education teachers, and teacher educators themselves. Smartness and good grooming were then seen as the top two desirable appearances of the 21st century teachers. The results are attributable to the traditional view of a teacher, as the source of knowledge and role model including that in grooming, close to being omniscient in the eyes of the students. It is an expectation that every student especially in the basic education holds. A teacher departing from this image may turn out to be a major disappointment for students even in this era of technology-driven society. In addition, in the context of school, the teacher should be "smart," which could be synonymous to being intelligent, well-read, and well-informed considering teachers as the main giver or source of information. The school, in its most basic and ultimate role, is seen like a fountain of knowledge and the teacher as its main player.

Teacher's Behavior. Similar to teachers' appearance, the choice of the kindergarten pupils as to how their teachers should behave is that they should be "well-mannered" (*ranked 1*). This perceived image is the same as what the majority says from among the kindergarten teachers themselves, and the students and would-be teachers in the secondary schools, basic education teachers, and teacher educators. The second most popular response is that they like the teacher to be "disciplined" (*ranked 2*), which is also associated with proper behavior. Consistently, the results show the importance of social decorum among teachers. This perception can

be associated with the view of teachers as leaders and as implementers of rules. Other choices of the respondents included traits such as “honorable” (ranked 3), “humble” (ranked 4), and “proactive” (ranked 5). The perceived behavior of a teacher in the 21st century could then still be the same as the conventional image of a teacher as the cited traits were desired even by the teachers of the past.

Teacher’s Manner of Thinking. As regards manner of thinking, the 21st century teacher is perceived as “open-minded” (ranked 1). This was endorsed mostly by the elementary pupils, pre-service teachers at all levels, and teacher educators. The other traits on how the teacher thinks based on the weighted mean and ranks include being a “global thinker” (ranked 2.5) and “realistic” (ranked 2.5), “intelligent” (ranked 4), and “practical” (ranked 5). Apparently, the 21st century teacher needs to be open-minded to see the realities of the global society, which would require practical discernment as the society is fast-changing brought about by technological and environmental changes.

Teacher’s Manner of Talking. As regards manner of talking, the 21st century teacher is viewed as “confident” (ranked 1). This was endorsed mostly by the pre-service teachers in the kindergarten and secondary level, basic education teachers, and teacher educators. To other stakeholders, talking “with sense of humor” (ranked 2) matters as well including having “clear diction” (ranked 3), “polite” (ranked 4), and “honest” (ranked 5). Clearly, what matters at present is that teachers are able to convey their ideas with confidence and clarity for them to look credible and smart. These traits are consistent with the one of the desired qualities of 21st century learners, a good communicator (Partnership for 21st Century Skills, 2013). Teachers are likely to be listened to if they show a sense of humor. Display of politeness and honesty at all times makes them appear boring.

Teacher’s Work Ethics. When it comes to work ethics, the 21st century teachers are perceived “responsible” (ranked 1). This was endorsed mostly by the elementary pupils, pre-service teachers in the kindergarten and secondary level, basic education teachers and teacher educators. Other stakeholders value more a teacher who is “creative” (ranked 2), “organized” (ranked 3), “resourceful” (ranked 4), and “with initiative” (ranked 5). It can be inferred from the data that being “responsible” was prioritized among the five traits since a responsible teacher could also manifest traits of being “organized” and also working “with initiative.” Being “creative”, which is a characteristic that is truly reflective of the 21st century teacher, was chosen more than being a “resourceful” as the former also manifests the latter trait.

Teacher’s Social Relation. As regards social relations, the 21st century teacher is viewed as “fair” (ranked 1). This was endorsed by almost all sectors of stakeholders. Other respondents prefer a teacher who is “kind” (ranked 2), “caring” (ranked 3), “understanding” (ranked 4) and “friendly” (ranked 5). The results show that stakeholders across sectors preferred a teacher who is fair, kind, caring, or friendly when dealing with other people regardless of who they are. These traits are truly admirable of a teacher this 21st century and maybe across time.

Teacher’s Relation with Students. As regards relation with students, the 21st century teacher is perceived as “encouraging” (ranked 1). This was endorsed by almost all secondary school students, pre-service teachers at all levels, basic education teachers and teacher educators. Other respondents preferred a teacher who is “collaborative” (ranked 2), “respectful” (ranked 3), “authoritative” (ranked 4), and “lenient” (ranked 5). Looking at the results, one could infer that education stakeholders prefer the present teachers to be encouraging and collaborative. Being collaborative, in addition to being a good communicator, is a trait highlighted in the framework of the 21st century learner (Partnership for 21st Century Skills, 2013).

Other Personal Traits of a Teacher. When asked to name other personal traits the like 21st century teacher to possess, the majority of the stakeholder respondents identified. “God-fearing” (ranked 1.5) and “patient” (ranked 1.5). These traits are also desired of students in basic education level (DepEd, 2013). This means that both students and teachers value the virtue of patience and fear to God as these traits are expected in a country whose population is mostly affiliated with religious groups, like the Philippines. Consequently, the 21st century teacher is still expected to be “morally upright” (ranked 3), which is also defined in the Code of Ethics for Professional Teachers (RA 435, 1997). Other stakeholders also want the teachers to be “generous” (ranked 4) and “nationalistic” (ranked 5).

Psychosocial Attributes

This section presents the data and discussion of the psychosocial attributes of a teacher drawn from various situations testing his/her perception or possible behavior as a social being. These traits include teacher's reaction to: 1) a multicultural classroom; 2) a competition; 3) an external evaluation/accreditation; 4) school policies; 5) academic situation; 6) a diverse classroom; 7) social equality; 8) personal and organizational success; 9) environmental disasters; 10) bold expressions; and 11) societal concerns.

Teacher's Behavior in Multicultural Classroom. The respondents across all sectors in the study expressed a strong agreement, that when the 21st century teacher is assigned to handle a multicultural class, s/he views it as a good opportunity to enhance his/her teaching skills and not as threat that may force him/her to seek employment in another school. Given the situation, it can be gleaned that the respondents' image of a 21st century teacher is one that is highly motivated and open-minded rather than nearsighted or narrow-minded.

Teacher's Behavior in a Competition. The majority of the respondents (excluding basic education teachers and teacher educators) described the 21st century teacher as a person who is likely to "cheer up" when his/her coached team fails to win in a competition. The basic education teachers and the teacher educators chose "challenged" rather than "cheers up" as a preferred image of a teacher in a competition, a response that suggests depth and strong sense of maturity in dealing with situations related to teaching and learning as seasoned or professional teachers. Although the opposite response indicated by the rest of the respondents is widely acceptable, it may be viewed in a professional perspective as less scholarly. This clearly suggests that the respondents view the 21st century teacher not only as good sport but also as a highly motivated person. This perception was also supported by another item where all the respondents agreed that the 21st century teacher regards competition as a potent motivation to achieving excellent performance. Specifically in education, competition provokes students to obtain more marks, to exert more ideas, and to excel in their studies (Kaddour, 2011).

Teacher's Behavior in an External Evaluation/Accreditation. The majority of the respondents favored the situation that suggests that the 21st century teacher "reviews the weak areas, and helps in improving the school performance" when the school's overall performance in an accreditation or evaluation process fails. This means that all the respondents perceive the 21st century teacher as just and thorough rather than cynical in his/her dealings.

Teacher's Behavior to School Policies. The majority of the respondents visualized the 21st century teacher to have a strong sense of moral obligation rather than judgmental as most of their responses strongly favored "counsels the colleague" as an appropriate action the 21st century teacher should take when a colleague is found violating school rules and policies.

Teacher's Behavior in an Academic Situation. The majority of the respondents found that the 21st century teacher has the tendency to walk the path between consoling and defending. The question now is the manner of defending and consoling what they do. It is also a possibility that they defend their colleagues by talking to them and expressing their opinions but not actually taking concrete actions to defend them. An investigation on this matter is worth the time since it provides information on the dynamic relationship established by teachers and students in an academic institution.

Teacher's Behavior in a Diverse Classroom. The majority of the groups of respondents indicated agreement to the idea that the 21st century teacher views cultural differences or diversity as hindrance to the achievement of optimum learning among learners in a classroom. The responses suggest that the aforesaid differences, if not handled effectively, may pose as potential threat which keeps learners from achieving fully and optimally in the classroom. The proper handling may start from the curriculum which dictates the content of instruction, that is sensitive and at the same time responsive to needs of students of various ethnical backgrounds or orientations to the employment of methodologies which are appropriate to address such differences.

Teacher's Behavior in Promoting Equality. Social equality is desired in a diverse classroom and community. This was so evident in the study as all respondents agreed to the idea that the 21st century teacher views the promotion of equality as one of the most important and crucial concerns of teachers. This means that the respondents view the 21st century teacher as an ambassador in promoting ethnic equality so as to avoid conflicts that root from ethnic diversity and cultural differences. Likewise, Mourar (2007) states that fairness is a basic

element of ethics of the teachers. Giving everyone an equal opportunity to succeed in the society starts in the character building years of the children. Essentially, teachers should lead by example for children and show them how fairness works. Fairness is not merely treating everybody alike, it goes much deeper. Fairness rather means giving everybody the right tools to advance and grow which could be associated with social equality.

Teacher's Behavior in Organizational Success. With the exception of the basic education teachers and teacher educators, all the rest of the respondents indicated disagreement on the idea that the 21st century teacher regards organizational success as the sole responsibility of leaders or officials in an organization. Obviously, the majority of the respondents subscribed to the opposite idea, that is, they believe that the 21st century teacher should view that the success of an organization depends on the collective efforts of the individual members. This is consistent with their view of personal success as product not only of one's own making but also of the other people around him/her.

Teacher's Behavior to Environmental Disasters. All of the respondents agreed that the 21st century teacher views environmental disasters as a social concern rather than as a normal phenomenon. This suggests that the respondents perceive the 21st century teacher as a person and a professional who has a profound and broad understanding of the environment and of the critical environmental issues and problems.

Teacher's Behavior to Bold Expressions of Thoughts. Although the majority of the groups of respondents signified disagreement to the idea that the 21st century teacher views bold expression of thoughts, opinions and sentiments as a manifestation of defiance, the basic education teachers and the teacher educators indicated opposite response. This difference may be explained by the latter group of respondents' careful attention to the word "bold" in the statement that if one is careful or meticulous enough, the statement could mean strong defiance or violent or undiplomatic way of expressing sentiments or airing grievances to authorities, and it should not be practiced by the 21st century teacher.

Teacher's Behavior to Societal Concerns. All of the respondents viewed the 21st century teacher as one who believes that each citizen has his/her own responsibilities and accountabilities as a member of society. This is strongly supported by the respondents' unanimous agreement to the statement that the 21st century teacher views societal problems or issues as concerns of every individual. The respondents also thought of the 21st century teacher as a person who recognizes that social responsiveness starts with the social consciousness because social awareness is a key to informed and active involvement to social affairs. Finally, all of the respondents were in strong agreement to the statement that the 21st century teacher regards social awareness as everybody's responsibility. This means that the respondents perceive the 21st century teacher as a professional who asserts social awareness as the prime or vital responsibility of every individual in a society.

Professional Attributes

In this section, the 12 perceived roles of a professional teacher in the 21st century are presented and discussed.

Teacher as a Planner and Organizer. The respondents at all levels agreed that 21st century teachers should be thoughtful of the diversity of learners in his/her classroom. Also, the teachers must be able to set appropriate learning goals for all types of learners. In implementing so, they must pace the lessons with consideration of the needs and difficulties of the learners, giving equal importance to their cultural background when providing learning opportunities. Their teaching methods, learning activities and instructional materials and resources must be aligned with the lesson objectives and appropriate to learners, as well. According to Brown, Earlam, and Race (1995), an effective teacher also trains the students to be organized in everything including the management of their time and learning resources.

Teacher as an Effective Communicator. The respondent stakeholders at all levels recognized the importance of effective communication in the teaching and learning processes. All of them strongly agreed that teachers must use the language appropriate to the learners' level and background and to the subject area being taught. They likewise approved the use of mother tongue in the classroom. On the other hand, startlingly, all the basic education student respondents opposed the use of the students' lingo in classroom discourse when pre- and in-service teachers and teacher educators actually supported its use. The contradictions were probably due to either a misconception or lack of understanding of the term "lingo" by both parties. At one end, "student lingo" may have been construed by the teacher groups as language used by the students when they speak with their peers,

and therefore could facilitate learning processes. On the other end, the students probably thought of “student lingo” as too informal and inappropriate in the classroom setting, and may be difficult for the teachers to comprehend. Thus, students decided that their peer language should not be spoken while doing classroom activities. Given the valuable contribution of effective communication in the skillful delivery of teaching and learning processes, the inclusion of communication skills development in the training content and design of teacher development programs should be considered. Similarly, the inclusion of the Mother Tongue-Based Multilingual Education (MTB-MLE) in the K to 12 Curriculum necessitates the conduct of formal teacher training to help ensure the effective implementation of program.

Teacher as a Facilitator. The respondents at all levels strongly agreed to the idea that 21st century teachers should encourage learners to freely express their ideas while optimizing time and available learning resources and observing established routines and procedures. The respondents clearly recognized one of the key roles that teachers play—as facilitators of learning. Gleaning from the data, the 21st century teachers are expected to be skillful at creating a truly learner-centered learning environment, one that is non-threatening and able to get learners hooked at achieving despite of apparent academic diversities. While computer-based instruction is quite rapidly dominating teaching-learning processes, the stakeholders’ response on the issue of teaching without the black/chalkboard shows the appreciation of the importance of having a discussion board while teaching. It would be most helpful, therefore, to design the training curriculum of teacher training programs for knowledge and skills development, providing minds-on and hands-on opportunities to explore and learn various facilitative techniques, and development and utilization of technologies that support teaching and learning processes.

Teacher as an Expert. The stakeholder respondents at all levels strongly agreed that 21st century teachers should be knowledgeable not only of their specific field of expertise but also of other fields that may be directly or indirectly related to the content they teach. Data further reveal that the 21st century teachers are expected to integrate relevant scholarly works or ideas to enrich the lesson as needed, and not simply focus on the specific topic to be learned at a time. They should make learning meaningful and relevant by linking current content with lessons learned in the past and those that may be presented in the future, as well as to the learners’ actual experiences. Clearly, teachers must have a thorough understanding of content—what it is about and how it connects with other areas and to real life. It may be observed, however, that if compared with the basic education students, the pre- and in-service teachers and the teacher educators are more conscious of the need to connect specific content with those in other related fields. This is an evidence of the formers’ appreciation of one of the special features of the K to 12 Enhanced Basic Education Curriculum—the use of the spiral approach to ensure mastery of knowledge and skills after each level. The spiral curriculum is a technique often used in teaching where the basic facts of a subject are first learned. As learning progresses, the details gradually increase; its connections with concepts in other learning areas are established, and the basic and preceding concepts are emphasized many times. To support this expectation of 21st century teachers as experts, and in line with the teacher quality requirements of the K to 12 EBE Program, importantly, teachers are afforded learning opportunities that would keep them abreast with constantly evolving concepts and information in their fields, and how these are found to connect with the content of other learning areas. Teacher development programs, therefore, should not only constantly provide teachers with content updates, but also with learning opportunities to truly appreciate where and how concepts connect and should be viewed.

Teacher as a Motivator. The majority of the respondents agreed that the teacher as a motivator inspires students to study hard. As the teacher serves as motivator, s/he inspires the students to study hard, gives timely feedback to students for all given tasks, creates a stress-free environment, encourages students to join various school and class activities, and sets high standards of learning performance. According to Zulueta and Guimabatan (2012), motivation is central of learning. A motivated student obtains what he/she learns more compared with others who are not motivated. As teachers play an important role in the learning process of the students, teachers must be a motivator to each learner. Each learner is different from one another. Some learners who respond well to the challenge of mastering a complex task and subject are considered deep. Others are strategic learners who are motivated primarily with rewards. Some learners react well with competition. Another type is the surface learners who are motivated by a desire to avoid failure (Bain, 2004). Individual teachers have various types and levels of motivation to improve their teaching in ways that better enhance student learning (NCBTS, 2006).

Teacher as a Classroom Manager. Stakeholders believed that the 21st century teacher must be a classroom manager, who maintains a safe and orderly classroom for his/her students. S/he must check the condition of

his/her classroom from the materials s/he uses to the arrangements of chairs and tables and even the cleanliness of the rooms. Teachers need to monitor the situation of the learners inside the classroom. Teachers equally feel attached to and concerned about the children and are ready to offer their utmost effort and time even beyond the confines of the classroom (Salandanan, 2010). Classroom management is another significant factor for the learning of the students. Teachers play various roles in a typical classroom, but surely one of the most important roles they play is that of a classroom manager. Effective teaching and learning cannot take place in a poorly managed classroom (Manzano, Manzano and Pickering, 2003). Teachers must assure the proper management of classroom before the class starts. Learning environment is one of the domains identified in the NCBTS, which deals with providing social and physical environment within which all students, regardless of their individual differences in learning. It can also engage learners to different learning activities and work toward attaining high standards of learning.

Teacher as an Assessor/Evaluator. The views of the kindergarten learners, elementary students, and high school students, which are congruent with the view of the prospective teachers, 21st century teacher must not heavily employ traditional techniques when assessing learning. S/he prepares formative and summative tests regularly and uses assessment results to improve teaching and learning. Evaluation is very essential for the learners to realize and understand the ideas they need to improve on. Feedbacks on assessments are not only used for diagnostic and corrective measures but also to encourage and motivate the learners for further effort, to maintain and improve self-confidence as appropriate. Evaluation is the systematic determination of a subject's merit, worth and significance, using criteria governed by a set of standards. This evaluation helps to assess pupil's progress. Another important domain in the National Competency-Based Teacher Standards where in assessment is included. The domain of planning, assessing and reporting refers to the aligned use of assessment and planning activities to ensure that the teaching-learning activities are maximally appropriate to the students' current knowledge and learning levels (NCBTS, 2006).

Teacher as a Problem Solver/Decision Maker. As shown in the views by the kindergarten pupils, elementary students and high school students, which the prospective teachers at the same level also agreed with, teachers must take appropriate action to address teaching-learning difficulties and make outright decision when no other authority can decide in a problematic situation. Parents entrust their children to school since they know and believe that the teachers are the second parents to their children. Decision making involves giving consideration to a matter, identifying the desired end result, determining the options to get to the end result, and then selecting the most suitable option to achieve the desired purpose. Teachers make countless decisions all day long in an effort to promote student learning. Breakdown of decisions includes three categories: planning, implementing, and assessing. Some decisions are made at the desk when preparing lesson or unit plans, designing an instructional activity, or grading papers (Fuller and Pearson, 2011).

Teacher as a Reflective Practitioner. All stakeholder respondents were in agreement of the view that the 21st century teachers should be reflective practitioners. As such, 21st century teachers should have their personal philosophy, and evaluate their own teaching and its impact through self-evaluation and feedbacking. The results concur with what Brookfield (1995) suggests of a teacher as a reflective practitioner—one who needs to know oneself or one's autobiography as a teacher and learner and who recognizes students' eyes, colleagues' perceptions, as well as theoretical literature.

Teacher as a Leader. The data reveal that the majority of the stakeholders from kindergarten to teacher educators expressed agreement on the image of the 21st century teacher as a leader and his/her leadership should strongly manifest inside and outside the classroom by reinforcing and following policies and rules in the workplace and by initiating projects/activities that effect better learning and stimulating work environment.

Teacher as an Adviser. The majority of the stakeholders valued the need for a teacher as an adviser in the 21st century classroom. This image of a teacher as an adviser is one who sets up the venue for students' success, provides fruitful classroom experiences, and promotes rights, and justice. They agreed that classroom opportunities should not create fear and discomfort among learners. The teacher as an adviser also gives individualized guidance to students, conducts regular conferences with parents and teachers, involves parents to participate in school activities, and provides opportunities to realize and maximize students' potentials.

Teacher as an Action Researcher. The data reveal that stakeholders viewed the 21st century teacher as someone who uses and undertakes research to inform instruction. This finding strengthens the claim of many

institutions that research is an important or even integral component of instruction which means that the two are complementary. Other behaviors of a teacher as a researcher include creating knowledge, making a connection between teaching and research, getting research ideas based on students' performance, and doing extra reading and other learning activities. This indicates for a preference to do doing extra academic undertakings like research that could inform or further learning in the classroom.

PROPOSED DEVELOPMENT PROGRAMS FOR TEIS

This section presents suggested development program for pre-service and in-service teachers based on the findings of the study to get closer to bridging the gap between theory and practice and provide the students across levels with teachers whose qualities match with their expectations. The development programs are described in terms of scope and design.

Scope. Training of pre-service teachers, in-service teachers, and even teacher educators should be holistic to include development programs for the improvement of their personality as well as their psychosocial and professional image. The personality development training should expose them to techniques in projecting the following images of a teacher: smart, well-mannered, open-minded, confident, responsible, fair, encouraging, god-fearing, and patient. As explained by Magno & Sembrano (2006), personal characteristics have an effect on teaching efficacy as they lead to better teaching performance and effectiveness. This then suggests that a good training package for teachers should cover both personal and professional. Hence, teachers need also to be trained on the professional and psychosocial aspects as well. For the training on teachers' psychosocial skills, this should cover: how to deal with learners in a multicultural, competitive, or diverse classroom; how to cooperate to school rules and regulations and to external evaluations and accreditation; how to behave as a member of a school, organization, or society; and how to express oneself and respond to the academic concerns of the school and society. In terms of professional development, all the teachers at different career stages starting from pre-service level to being a teacher educator should undergo continuous training for their professional development to be better planner, organizer, communicator, facilitator, expert, motivator, classroom manager, assessor/evaluator, problem solver, decision maker, reflective practitioner, leader, adviser and action researcher.

Design. The training of teachers at all levels to develop their desirable images should be in a developmental manner where their preparation begins while they are still students in the basic education level. Teachers could develop among their students the same traits the students want of their teacher. As the saying goes, "the earlier the better." This means that the potential of students to become future teachers could be nurtured as early as they enter the school for formal training. Actual exposure to the teachers they want and their formation into individuals who possess these traits they want may serve as a good foundation for the creation of model teachers in the future. Likewise, kindergarten teachers should continue monitoring their pupils who are inclined to be like them and sustain this liking through role modelling. Considering that pupils may be handled by different teachers of different personalities in the same school, there must be articulation of students' preferred professions between the present and the former teachers to provide them with the right guidance to the profession where they will likely succeed in the future including that of becoming a teacher. These pupils who have initial aptitude to teaching detected as early as when they were in kindergarten should be continuously monitored in their basic education so that they really go into teaching and become the great teachers they envision themselves to be.

CONCLUSIONS AND RECOMMENDATIONS

The foregoing data have provided significant information on the image of the 21st century teacher that could provide lessons particularly to TEIs in the Philippines. *First*, regardless of the sector they represent, the stakeholders of TEIs perceive the 21st century teacher as smart, well-mannered, open-minded, confident, responsible, fair, encouraging, God-fearing, and patient. *Second*, in terms of psychosocial traits, the 21st century teacher is viewed as a professional who demonstrates a strong moral character, strong sense of moral obligation, and positive sense of the world. S/he is open-minded, highly motivated, just, thorough, obedient, humane, but is challenged to manage the requirements of diverse and multicultural classroom. S/he advocates equality, fairness, and compassion among the people and deems it his/her moral obligation and social responsibility to keep them morality sound. S/he also believes in peaceful and diplomatic way of resolving conflicts. Further, as a

professional, he/she is perceived to recognize that success is achieved collectively through unity and cooperation. S/he is thought of as person who has not only broad and profound understanding of the social and environmental issues and problems but also deep concern for the society and environment. *Lastly*, as regards professional traits, the 21st century teacher regardless of the level of learner s/he handles is a planner, organizer, communicator, facilitator, expert, motivator, classroom manager, assessor/evaluator, problem solver, decision maker, reflective practitioner, leader, adviser, and action researcher.

Given the personal, psychosocial, and professional images of the 21st century teacher, the TEIs should rethink on how they train the students who will be teachers. Pre-service teacher education programs should develop in them these roles of a professional teacher while continuing professional education programs should enhance teachers' capacity to elevate their practices in performing their various roles as they mature or grow in their profession so that they could always be looked up to as role models for other teachers who are younger than they are in the teaching profession. Teachers should all act as leaders, action researchers, reflective practitioners, and advisers; the difference lies in the manifestation and actualization of these traits. The TEIs, being focused on higher education, develop their students to be their own persons; however, there is a pattern of behavior or image that may or may not work in basic education. Eventually, the TEIs have to figure out and see how training addresses or departs from the expectations and the contexts in which the teachers will be in the future. The new teacher education curriculum should be sensitive to the development of the psychosocial attributes, that is, it should aim to develop the psychosocial social attributes the different stakeholders of education expect the 21st century teachers to possess and demonstrate. The congruence between what the stakeholders expect and how the 21st century teachers behave may facilitate a smooth relationship between the former and the latter. Smooth relation may result in positive image of the teachers and respect and support from stakeholders. With this, the 21st century teachers may develop positive self-concept and self-esteem and may take pride in the teaching profession. All these will enable the 21st century teachers to function in the classroom and in society with dignity and pride, efficiently and productively, and fully and optimally as individuals and professionals. The instructions provided by the TEIs in the country should deliberately develop the psychosocial attributes, especially those that are expected of them to possess and demonstrate, of the would-be teachers. Intervention programs of the same intention may also be implemented to attain the same purpose. Review of the curriculum of teacher education to check what is being taught in the pre-service is reflective of the requirements in the in-service. Retraining of tertiary teachers to enable them to have a full grasp and understanding of the basic education contexts as well as the players that compose such contexts is deemed very important

Improving the Quality of Vocational and Technical High Schools With Aircraft Maintenance Field

Serdar Dalkılıç^{a*}

^a *Anadolu University, Faculty of Aeronautics and Astronautics*

Abstract

As a consequence of the growth in global aviation market, aircraft operators in Turkey are to increase the number of aircraft that they operate. The MRO (Maintenance, Repair and Overhaul) companies in Turkey do serve not only to national airlines but also to foreign airlines. Furthermore they have an increasing share on the global MRO market. The demand to qualified and certified maintenance staff has been covered by approved Aircraft Maintenance Training Organizations such as the related departments of Universities. But the rapid growth of the MRO market and the increased costs lead MRO organizations to employ staff, who should be qualified but not necessarily certified (no Aircraft Maintenance License), for performing minor maintenance tasks.

The vocational and technical high schools with aircraft maintenance field in Turkey are approved neither by EASA (European Aviation Safety Agency) nor by national aviation authority, DGCA (Directorate General Civil Aviation). However the graduates of these schools are potential employees of MRO organizations seeking non-certified staff. With or without certification, quality is the major concern in aviation market. The improved quality of the students will result in their acceptance by the market and this could be achieved by improving the quality of the schools, therefore the teachers.

Keywords:

INTRODUCTION

As a consequence of global economic growth and increasing urbanization, air travel remains a growing market. The two biggest commercial aircraft manufacturers Boeing and Airbus market research between 2012 and 2031 predicts a continuing growth. For example 20 year world annual traffic growth of 4.7% is forecast by Airbus (Airbus S.A.S., 2012, s.12) and 5.0% by Boeing (Boeing, 2012, s.4). The number of passengers traveled by air was above 3 billion in 2011 and is forecast to be above 7.5 billion in 2031. Passenger aircraft fleet (only commercial aircraft with seats > 100) was 15,555 in 2011 and is predicted to be 32,551 in 2031 which means an increase of 109%. Similar increase in freighter aircraft (>10t) fleet is also predicted, i.e. 2938 aircraft in 2031. Aircraft need for both fleet growth and for replacement of older aircraft, which will be retired by 2031, will result in the delivery of 27,347 passenger aircraft and 851 freighters between 2012 and 2031 (Airbus S.A.S., 2012, s.12). Boeing reports that aircraft fleet including regional jets and freighters was 19,890 in 2011 and is forecast to be 39,780 in 2031. 34.000 new aircraft deliveries between 2102-2031 are predicted. The market value of these aircraft by 2010 catalog prices is \$4,470 billion (Boeing, 2012, s.3). It should be remembered that acquisition cost is only 25% of Life Cycle Cost of an airplane. In 2012 active aircraft fleet generated an MRO (Maintenance Repair Overhaul) spend of approximately \$53 billion, which is expected to grow to approximately \$76 billion by 2021 (Steward, 2012, s.36). New airplane deliveries by regions are summarized in the table 1 below.

Table 1. New airplane deliveries by regions (Boeing, 2012, s.3)

	Asia Pacific	North America	Europe	Middle East	Latin America	CIS	Africa	World
Large	320	40	200	190	0	30	10	790
Twin aisle	3,230	1,320	1,440	1,100	340	250	270	7,950
Single aisle	7,990	5,040	5,800	1,060	2,080	700	570	23,240
Regional jets	490	890	320	20	90	160	50	2,020
Total	12,030	7,290	7,760	2,370	2,510	1,140	900	34,000

As global economies continue to grow and thousands of new aircraft are delivered during the next 20 years, the demand for personnel to operate these airplanes will be unique. Boeing projects a need for approximately 601,000 new aircraft maintenance technicians (Boeing, 2012, s.26). The growth rate of aviation market in Turkey is above the world averages. Besides, Turkey makes important investments to become a regional MRO base which consequently brings qualified technician demand, predicted to be around 10,000 by 2023 (TOBB, 2012, s.65; TÖSHİD, 2012, s.10). New technician demand by region has been given in Table 2.

Table 2. New technicians by region (Boeing, 2012, s.26)

Regions	Asia Pacific	Europe	North America	Middle East	Latin America	CIS	Africa	World
Technicians	243,500	129,700	92,500	53,700	47,300	18,100	16,200	601,000

Meeting this demand will require airplane manufacturers and the commercial aviation industry to rely more heavily on new digital technology to meet the learning requirements of new generation. The growing diversity of aviation personnel also demands highly qualified, motivated and knowledgeable instructors with cross-cultural and cross-generational skills. Emerging markets that currently recruit maintenance technicians from outside the region will have to develop a foundation for training qualified personnel from within the local workforce (Boeing, 2012, s.26).

The demand to qualified and certified maintenance staff in Turkey has been covered by approved Aircraft Maintenance Training Organizations such as the related departments of Universities. But the rapid growth of the MRO market and the increased costs lead MRO organizations to employ staff, who should be qualified but not necessarily certified (no Aircraft Maintenance License), for performing minor maintenance tasks.

The vocational and technical high schools with aircraft maintenance field in Turkey are approved neither by EASA (European Aviation Safety Agency) nor by national aviation authority, DGCA (Directorate General Civil Aviation). However the graduates of these schools are potential employees of MRO organizations seeking non-certified staff. With or without certification, quality is the major concern in aviation market. The improved quality of the students will result in their acceptance by the market and this could be achieved by improving the quality of the schools, therefore the teachers.

In this study, first the current status of vocational and technical high schools with aircraft maintenance field is investigated than a training program to improve the theoretical and practical knowledge level of the vocational teachers of aircraft maintenance field is developed. The development of this program (managed by Anadolu University Faculty of Aeronautics and Astronautics, supported by the Ministry of National Education and funded by the Boeing Company), methods and procedures used are presented in the corresponding chapters of the study.

CURRENT STATUS OF VOCATIONAL AND TECHNICAL HIGH SCHOOLS WITH AIRCRAFT MAINTENANCE FIELD

In this chapter the current status of 9 vocational and technical high schools with aircraft maintenance field in Turkey is investigated. It has been found that only 3 of 9 schools have branch teachers, and their number is only 9. School E has 1 aircraft electronics branch teacher and 2 airframe and powerplant branch teacher, School G has 4 aircraft electronics branch teacher and 1 airframe and powerplant branch teacher and School I has only 1 aircraft electronics branch teacher. However total number of students registered in aircraft maintenance field is 1408 by September 2013, 452 in airframe and powerplant branch and 119 in aircraft electronics branch. (see Table 3) schools with no branch teacher is marked with a star. Within all 9 schools, approximately 150 students for 1 airframe and powerplant branch teacher and approximately 20 students for 1 aircraft electronics branch teacher (Ministry of National Education web site, 2013).

Table 3. Distribution of students registered in aircraft maintenance field

Schools	A*	B*	C*	D*	E	F*	G	H*	I	Total
Class 9	34	27	31	68	71	68	71	34	33	437
Class 10	---	26	25	50	72	46	72	30	32	353
Class 11	---	271	45	301/282	481/302	501	511/242/2	---	281	363
Class 12	---	---	251	---	521/162	461	641/212	---	311	255
Total	34	80	126	176	289	210	305	64	124	1408

1: Airframe and Powerplant Branch

2: Aircraft Electronics Branch

Vocational school teachers were graduated from the Technical Education Faculties until they were converted to Faculty of Technology in 2009. These new faculties are training engineering students. The graduates of these

faculties can also become teachers at the technical and vocational schools upon pedagogical courses. These Faculties of Technology have only departments of Electrics & Electronics Engineering, Mechanical Engineering, Mechatronics Engineering, Metallurgy and Materials Engineering, Automotive Engineering and Production Engineering. This means that no vocational teacher in aircraft maintenance field has been taught any more.

In the current status, vocational teachers from several fields have been lecturing courses special to aircraft maintenance field in the above mentioned 9 schools. They try to improve their teaching qualities with their own efforts, with the motivation of the schools management and with the aid of some MRO organizations. The success of these efforts and aids are based on the person and not sustainable. The best solution is thought to be a professional and corporate cooperation of the Ministry of National Education, Higher Education Institutions having DGCA approved aircraft maintenance departments and the industry.

DEVELOPED TEACHER TRAINING PROGRAM

As a result, a training program to improve the theoretical and practical knowledge level of the vocational teachers of aircraft maintenance field is developed. First a gap analyses between the EASA/DGCA approved aircraft maintenance syllabus and the ability of the current teachers to teach this syllabus is analyzed and the training needs of these teachers are determined. Interviews with 30 vocational teachers lecturing aircraft maintenance related courses and with the managers of vocational and technical high schools with aircraft maintenance field have been made. The complete approved aircraft maintenance technician training syllabus is presented and teachers are asked to mark the modules/sub modules with 0, 1 and 2, where 0 (zero) means the teacher can give courses including that sub-module without any personal improvement, 1 means the teacher can give courses including that sub-module after a short refreshment and 2 means the teacher needs a comprehensive training to give courses including that sub-module. An example of this analysis has been given in Table 4.

Table 4. Gap analysis for EASA Part 66 Module 8 Basic Aerodynamics

Sub-Module	0	1	2
8.1 Physics of the Atmosphere			
8.2 Aerodynamics			
8.3 Theory of Flight			
8.4 Flight Stability and Dynamics			

According to these results, subjects with high priority have been assessed and a 30 days pilot application is established. The program will be held by the academic and technical staff of Anadolu University Faculty of Aeronautics and Astronautics and will be delivered by face to face mode. Miscellaneous workshops, labs and Aircraft Maintenance Center of the Faculty will be used. Educational methods such as lecture, question & answer, demonstration, experiment, drill & practice will be used. Course level will be as defined by Commission Regulation (EU) No. 2042/2003 amended by 1149/2011 Appendix 1, published in the Official Journal of The European Union. Known as EASA IR Part 66. Level 3: A detailed knowledge of the theoretical and practical aspects of the subject and a capacity to combine and apply the separate elements of knowledge in a logical and comprehensive manner. At the end of the course the attendant will;

- (a) know the theory of the subject and interrelationships with other subjects.
- (b) be able to give a detailed description of the subject using theoretical fundamentals and specific examples.
- (c) understand and be able to use mathematical formulae related to the subject.
- (d) be able to read, understand and prepare sketches, simple drawings and schematics describing the subject.
- (e) be able to apply his knowledge in a practical manner using manufacturer's instructions.
- (f) be able to interpret results from various sources and measurements and apply corrective action where appropriate.

Course Syllabus

1. Physics of the Atmosphere: International Standard Atmosphere (ISA), application to aerodynamics.
2. Aerodynamics: Airflow around a body; Boundary layer, laminar and turbulent flow, free stream flow, relative airflow, upwash and downwash, vortices, stagnation; The terms: camber, chord, mean aerodynamic chord, profile (parasite) drag, induced drag, centre of pressure, angle of attack, wash in and wash out, fineness ratio, wing shape and aspect ratio; Thrust, Weight, Aerodynamic Resultant; Generation of Lift and

Drag: Angle of Attack, Lift coefficient, Drag coefficient, polar curve, stalls; Aerofoil contamination including ice, snow, frost.

3. Theory of Flight: Relationship between lift, weight, thrust and drag; Glide ratio; Steady state flights, performance; Theory of the turn; Influence of load factor: stall, flight envelope and structural limitations; Lift augmentation.

4. Flight Stability and Dynamics: Longitudinal, lateral and directional stability (active and passive).

5. Flight Controls: Operation and effect of: roll control: ailerons and spoilers, pitch control: elevators, stabilators, variable incidence stabilizers and canards, yaw control, rudder limiters; Control using elevons, ruddervators; High lift devices, slots, slats, flaps, flaperons; Drag inducing devices, spoilers, lift dumpers, speed brakes; Effects of wing fences, saw tooth leading edges; Boundary layer control using, vortex generators, stall wedges or leading edge devices; Operation and effect of trim tabs, balance and antibalance (leading) tabs, servo tabs, spring tabs, mass balance, control surface bias, aerodynamic balance panels.

6. Basic Aircraft Structures and Systems: Airframe structures-basic concepts; Construction of fuselage, wings, stabilizers, flight control surfaces and nacelles/pylons; Basic concepts of Air Conditioning and Cabin Pressurization, Instruments/ Avionic Systems, Electrical Power, Fuel Systems, Landing Gear.

7. Gas Turbine Engine: Potential energy, kinetic energy, Newton's laws of motion, Brayton cycle; The relationship between force, work, power, energy, velocity, acceleration; Constructional arrangement and operation of turbojet, turbofan, turboshaft, turboprop.

8. Workshop Practices: Basic equipment requirement for aviation (training) workshops; Safety precautions to be taken when working on aircraft and at workshops;

Avionics & Electrical workshop: AC generation, DC generation, transformers, motors, generators, electrical power distribution, electrical cables and connectors, avionic general test equipment, Instrument, communication and navigation systems;

Pneumatics & Hydraulics workshop: Hydraulic power system lay-out, hydraulic fluids, Hydraulic reservoirs and accumulators, pressure generation, emergency pressure generation, filters, indication and warning systems; Pneumatic system (including air conditioning and cabin pressurization) lay-out, system sources, component location, distribution, indications and warnings;

Structural Repair Workshop: Dimensions, tolerances, calibration of tools and equipment, precision measuring tools, fits and Clearances, limits for bow, twist and wear, shaft and bearings checking standards, riveting, pipes and hoses, sheet metal work, fasteners: (bolts, studs and screws, locking devices), pipes and unions, springs, bearings, transmissions (gears, belts and pulleys, chains, control cables).

Engine Workshop: inlet; compressors, combustion section; turbine section; exhaust; maintenance practices on miscellaneous engine systems; powerplant installation: configuration of firewalls, cowlings, acoustic panels, engine mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, engine monitoring and ground operation.

RESULTS AND DISCUSSIONS

As a consequence of global economic growth and increasing urbanization, air travel remains a growing market. Parallel to global growth, the aviation market in Turkey has been growing, even with a higher rate. Besides, Turkey makes important investments to become a regional MRO base which consequently brings qualified technician demand which also brings a demand to highly qualified, motivated and knowledgeable instructors.

The demand to qualified and certified maintenance staff in Turkey has been covered by approved Aircraft Maintenance Training Organizations such as the related departments of Universities. But the rapid growth of the MRO market and the increased costs lead MRO organizations to employ staff, who should be qualified but not necessarily certified (no Aircraft Maintenance License), for performing minor maintenance tasks.

The graduates of vocational and technical high schools with aircraft maintenance field in Turkey are potential employees of MRO organizations seeking non-certified staff. Since the population of young people in Turkey is relatively higher than that of European countries, this can be an opportunity for new technicians to find jobs in European countries. With or without certification, quality is the major concern in aviation market. The improved quality of the students will result in their acceptance by even the global aviation market and this could be achieved by improving the quality of the schools, therefore the teachers.

By September 2013, there are 1408 students registered in aircraft maintenance field but only 9 branch teachers. Furthermore 6 of 9 schools have no branch teacher. None of the 9 teachers graduated from an aviation related faculty, because no vocational teacher in aircraft maintenance field had been taught in Turkey and will

not be taught in the future by the formal higher education programs. This strengthens the in-service training of current and future branch teachers of aircraft maintenance field.

This improvement can be achieved by a professional and corporate cooperation of the Ministry of National Education, Higher Education Institutions having DGCA approved aircraft maintenance departments and the industry.

This study will initiate some other cooperation on other fields of vocational education in Turkey resulting with high quality graduates easily to be recruited by the market.

RESEARCH-BASED COURSE DESIGN AS THE IMPLEMENTATION OF QUALITY MANAGEMENT EVALUATION FUNCTION

Isti Hidayah
Mathematics Education Study Program Semarang State University
Central Java Indonesia
e-mail: isti.hidayah@yahoo.com

ABSTRACT

The purpose of this study was to produce Basics of Mathematics Learning Process as a reinforcement of personality and social competence from Mathematics future teachers. The benefits of this study were as well as the implementation of the quality management function on the learning evaluation function or reflection and the follow-ups. The course design development was accomplished with the following stages. (1) The study of Mathematics Education Study Program Curriculum, study of literature, (2) data achievement, (3) data analysis (4) discussion (5) course design arrangement, and (6) conclusion. The result obtained from data analysis was there were indicators of personality or social components which did not provide yet an optimal assessment of evaluation acquisition. There was consistency between student and output (alumni). Syllabus as a course design of Basics of Mathematics Learning Process was arranged by applying modeling approach (attention phase - retention-reproduction-feedback), and for at each phase, it had been selected the technique of individual and group assignment which demanded students activities as future teacher as adaptation or personality and social competence reinforcement.

Key word: quality management evaluation function, course design, personality and social competence.

INTRODUCTION

The challenge of future teachers, which brings consequences of education quality management implementation, has to get an attention. The enhancement of School Mathematics Curriculum has also become one of the references of the enhancement of Mathematics Education Study Program Curriculum in Educators and Educational Personnel Foundation (LPTK). The new curriculum in school is 2013 Curriculum, whereas Curriculum in Mathematics Education Study Program, Faculty of Mathematics and Natural Sciences, State University of Semarang as one of Educators and Educational Personnel Foundations (LPTK) is 2012 Curriculum. The main competencies of the graduate competence are ; (1) capable of mastering Mathematics and applying it intelligently and democratically in the mathematics education context ; (2) capable of organizing Mathematics learning in professional in an honest and intelligent way by applying innovative learning models, utilizing the latest technologies that are environmentally friendly, and being student centered in a democratic atmosphere; (3) capable of holding Mathematics workshop using innovative approaches, utilizing up to date technology which is environmentally friendly and upholding the principles of tolerance and responsibility ; (4) capable of providing guidance in Mathematics learning in an intelligent, religious, tolerant and responsible way (Mathematics Education courses, 2012). Moreover, with global life challenges, teacher are demanded to constantly perform various improvements and adjustments to the competencies mastery (Sudrajat, 2007).

Basics of Mathematics Learning Process course is one of the subjects with the study of creative and innovative mathematics learning, as well the technology and environment based learning practice in manifesting the graduate competencies. The course is intended to provide to the students the teacher candidate of Mathematics subject lesson, in order to be a teacher that has a pedagogic, personality, social, and professional competences (Government Regulation No. 7 of 2005). This course is a means of exercise for students doing classroom management. The reinforcement of the four competencies has actually been supported by the implementation of other courses, but the fact remains that the personality and social competence have not been achieved optimally. The reinforcement of both competencies is not only performed on certain subjects, but it may be accomplished on any existing course based on Curriculum. Social and personality competence that can be reinforced with character education has been designed in every course, but how this evaluation has not been detected. This is shown by the lack of the assessment tool and the evaluation results that could be reported. The main issue is how the learning draft of Basics of Mathematics Learning Process was able to facilitate teacher to be students to strengthen social and personality competence?

The purpose of this study was to produce Basics of Mathematics Learning Process as a reinforcement of personality and social competence from Mathematics Teachers to be. The benefits of this study are as well as

the implementation of the quality management function on the learning evaluation function or reflection and the follow-ups.

METHODS AND PROCEDURES

The course design development was accomplished with the following stages. (1) The study of Mathematics Education Study Program Curriculum, study of literature, (2) data achievement, (3) data analysis (4) discussion (5) course design arrangement, and (6) conclusion. The curriculum studied was 2012 Curriculum. The data source was Mathematics Education Study Program alumni graduated year 2012 and the students that had taken Basics of Mathematics Learning Process 1 course. Alumni data was in the form of personality test results (Center for the Professional Education of Teachers Semarang State University 2013). Student data was students' perception towards social and personality competence, where the instrument that was being developed is in reference to indicators of competence contained in Teachers and Lecturers Act (Hidayah, 2011). Both the data were analyzed in the form of percentage for each competency to describe competence mastery for each aspect or indicator as a whole as well as each respondent. Course design that was developed was syllabus format according ISO standards that exists in Semarang State University.

RESULTS

Mathematics Education Study Program vision is: a winning, meaningful, and dignified study program. While the goal are to produce graduates that: (1) have the characteristic and professional minimal having pedagogic, social, personality competence, and master Mathematics field of study, behave and act as an dignified scientist based on Pancasila and have an insightful knowledge; (2) able to develop Technology and Science and conform himself to the progress of times; (3) have high integrity in Mathematics education field, which is supported by English proficiency and mastery of information and communication technology (ICT); (4) are able to carry out research in the field of Mathematics education that is oriented on the development of science and technology based on the principles of conservation. (Agoestanto, 2012). Basics of Learning Mathematics Process 1 (odd semester) type of theoretical lectures and Basics of Learning Mathematics Process 2 (even semester) with the kind of practical and theoretical lectures.

Average earnings of personality data analysis result from 33 alumni of each aspect were as follows, intelligence aspect 77.32; The urge to achieve 67.10; the urge to work regularly 61.91; the urge to work together with others 74.88; The urge to help 62.53; The urge to work diligently 64.85; the urge to finish the assignment 61.30; and emotional maturity 60.20. Score acquisition category was 40-49 (low), 50-59 (rather low), 60-72 (medium), 70-79 (high enough), 80-89 (high), and 90-100 (very high) (Hidayah, 2014). From data achievement, it was stated that there were no alumni with very low or very high acquisition criteria. The distribution of many alumni in each personality aspect and criteria can be seen in table 1.

Table 1. The distribution of Many Mathematics Education Study Program Alumni PPG Candidates Semarang State University 2013 in every aspect of personality and criteria

No	Aspect	Number of Alumni with Score Acquisition						
		< 39	40-49	50-59	60-69	70-79	80-89	90-100
1	Intelligence			1	3	14	15	
2	The urge to achieve		2	2	16	11	2	
3	The urge to work regularly		2	8	21	1	1	
4	The urge to work together with others			1	6	17	9	
5	The urge to help		3	9	12	8	1	
6	The urge to work diligently			12	11	8	2	
7	The urge to finish the assignment			6	26	1		
8	Emotional maturity			8	25			
	Percentage							

Paying attention to personality test results above, it can be said that the results have not been optimal. This became a concern for the preparation of future teacher students at LPTK, in particular Mathematics Education Study Program. These data is a reflection for quality improvement of organizing courses that directly related to the competence of future teachers. One of them is Basics of Mathematics Learning Process course. This test was one of the determining factors for selection candidates of trainee teacher profession education (PPG), which was preceded by the devotion program in remote regions of Indonesia. This Education Program is one of the programs of the Directorate of Education and Educational Personnel (Diktekdik) in order to increase education quality in Indonesia, as well as the equity program of education quality. Devotion here means teaching in schools, which require appropriate fields of study. In duty place for one year, they are obliged to carry out the

task of being a teacher at the school that needs and interact with the community in which they live. The purpose of PPG Program is to produce future teachers who have competence in planning, executing, and assessing learning process; following up on assessment result, coaching, and training learners as well as conducting research, and are able to develop professionalism in a sustainable way (Rustad, 2013). This finding is reinforced by data results about perceptions of social and personality competence of the students who have taken course of Basics of Mathematics Learning Process. The results were summarized in the table 2.

Table 2. Future Mathematics Teacher Student Perceptions towards supporting factor of Teacher Personality and Social Competence Mastery

No.	Assessed Component	Average	Criteria
Personality Competence Indicator			
1	Acting in accordance with the norms of law, social, religious, and national culture	2.75	Good
2	Showing honored and mature personality	2.63	Good
3	Work ethic, high responsibility, pride on becoming a teacher	2.46	Average
Social Competence Indicator			
4	Acting inclusively, act objectively and not discriminatively	2.73	Good
5	Communicating with fellow students, lecturers, educational personnel, parents, and community	2.32	Average

Source : Hidayah, 2014

Paying attention to the results of student self-assessment against personality and social competences above, there was the personality or social component indicator, which still did not provide an optimal assessment. There was consistency between student assessments with output (alumni), connecting between the competence of students and graduates of teacher education is very important. There are three phase of teacher preparation and development, such as, Pre – Service Preparation phase, License phase, and Continuing Professional Development (Wise, 2001). Referring to the formulation of graduates competency of Mathematics Education Program Study and the existing social and personality competence condition facts, then it becomes a problem how the implementation of the study should be designed in order to be effective learning.

The result of this study is a reflection of further follow-up that is accomplished in order to improve the course quality referring to the competence of graduates. Teacher Profession Program with the participants was the output from Bachelor Degree Study Program, was carried out with two curriculums, they are Academic Curriculum which was conducted on campus and Dormitory Life Curriculum to develop the values of participants character related to personality and social competence. Nevertheless, the competence of Bachelor's degree educational graduates also included 4 competencies, namely Pedagogic, Social, Personality, and Professional Competence. Character values as reinforcement of personality and social competence were designed explicitly in course design in the form of syllabus-implementation-evaluated-followed up, thereby allowing the lecturers make improvements in a sustainable way.

Design and implementation integrating character values have been applied to each of the subjects, but the assessment towards character values to measure personality and social competence was not carried out yet. This brought the follow-up consequences do not refer to reflection result on the lecture implementation.

Personality and social competence reinforcement was manifested in the form of learning activities either individually or in groups. Selection of strategies or learning model also specifies the implementation of character values in learning.

Hidayah's research result (2003) suggested that to improve the ability of future teacher students in developing a learning draft and ability to do teaching practice can be done through modeling with phase: attention – retention – reproduction – motivation. Effective modeling is direct modeling from lecturers and friends, whereas VCD modeling was less helpful.

Attention Phase is the learning implementaton modelling by integrating characters values with particular strategy by lecturers and friends, later followed by questions and answers and discussion. (democratic, respecting students' opinions, have well manner in talking, dressing, and doing, providing students with a polite response, using oral and written Indonesian correctly and properly)

Retention Phase, the students are given the opportunity to develop learning plan as a closed loop and open loop that is done in small groups. Through this phase, future teacher students are required to share their experiences to friends, invite other students to observe the preparation of teaching practice in front of the class and give input, proven by friends observations on the observation sheets that have been signed by observer. Each time practice, the observer must be different.

Reproductionon Phase, i.e. student candidates conduct simulations to teach, as well as a model for other students. This phase carried out as a phase of demonstrating candidate's performance not only pedagogic and professional competence, but also personality and social competence. As well as modeling for other students.

Feedback Phase, i.e. giving feedback that made each completed performance by students, conducted by a lecturer or other students. Through this phase, the future teacher student is required to be mature in receiving input from friends or lecturers; required also for another student to give an opinion and input towards the assessment of apprentice performance that refers to a teaching practice observation instrument.

Thus, the activity of this lecture, which was expected to strengthen personality competence, was able to show a mature and honored role model, and has a work ethic and high responsibility, sense of proud to be a teacher. As for social competence capable of being inclusive, acting objectively, and not discriminatory, be able to communicate with fellow students, lecturers, educational personnel, and the community.

Alternative Implementations

Strengthening the personality competence can be designed as clearly stated in the course contract. Things that can be stated in the contract as the personality and social competence reinforcement, among others: (1) during attending the lectures, students has to keep the principles of Pancasila as ideology basis and students ethics as Indonesia citizens ; (2) Developing cooperation and maintaining togetherness in achieving accomplishments; (3) Having good manners of speaking and acting towards anyone; (4) keeping the good name of Almamater; (5) Going to College ontime; (6) Not attempting to cancel the lectures; (7) completing the task on time in accordance with the requirement.

Course contract is delivered at the beginning of the lecture become a mutual agreement between students and lecturers. Together committed to obeying all regulations that have been mutually agreed.

Lecture accomplishment is evaluated during the lecture for 1 semester. A student who disobeys contract regulation will directly get the consequences in accordance with requirement that have been mutually agreed.

Social competence indicators were integrated in the syllabus is contained in the strategy, methods, approaches, or learning models. Approaches and learning models for Mathematics school learning with a scientific approach that facilitates students to observe, ask, do, make a sense, conclude, and communicate (Curriculum, 2013). Any model centered on students, using a scientific approach, learning with cooperative learning. Through the application of the model, students are used to do cooperation in arranging problem solving, do cooperation in solving the problem, give each other and mutual acceptance. Through this routine, students will experience the wonderful togetherness.

The assessment was carried out in the process and product. The second form of assessment to measure the four of future teacher students' performance that includes four competencies used the instrument, both observation sheet and questionnaire. The course design was formulated in the following form of Syllabus (attached).

CONCLUSION

Based on the results and discussion of the studies that have been accomplished, it can be concluded that to strengthen social and personality competence of future Mathematics teacher students can be done by implementing quality management evaluation function. Lecturers design the course referring to the reflection result towards the process course results that are undergoing, supported by a study of data and information concerning the course results. Syllabus as a course design of Basics of Mathematics Learning Process was arranged by applying modeling approach (attention phase -retention-reproduction-feedback), and at each phase, it had been selected the technique of individual and group assignment which demand future teacher students activities as adaptation or personality and social competence reinforcement.

Problems and Countermeasures in Multicultural Education in Primary and Middle Schools in China

Yitong Liu^a Dae-Dong Hahn^{b*}

^{a,b} *College of Education, Pusan National University, Pusan, Korea*

Abstract

As globalization speeds up in the early period of the 21st century, multicultural education becomes more and more important in the world, especially in China which has 56 ethnicities and increasing number of students come from all over the world today. This paper starts with summarizing the present multicultural education situations in primary and middle schools in China, and then discusses the major problems in such areas as course design, curriculum, and instructional methods employed in multicultural education in primary and secondary schools, and finally proposes the possible pathways to solve those problems. It expected that special and effective models in multicultural education should be established in China in the future to fit for the rapid development of multicultural education and human society.

Keywords: Multicultural education, curriculum, teaching methods, primary and middle schools, China

INTRODUCTION

As a kind of value tropisms in world ethnic education development multicultural education began in the 1960s in the western countries. The multicultural education shaped during the period from the beginning of 20th century to 1980s, in which it developed in the direction of sequence and conventionality, and the importance was attached to the theories and practices of multicultural education as its value was presented gradually in the political and economic areas all over the world; and it progressed towards the institutional development 1980s later and extended deeply towards all fields in society as its researches advanced further as a result of its implemental and numeral value were embodied to some extent. The multicultural education refers to a process of comprehensive school reform and basic education for all students. It challenges and rejects racism and other forms of discrimination in schools and society and accepts and affirms the pluralism (ethnic, racial, linguistic, religious, economic, and gender, among others) that students, their communities, and teachers represent. Multicultural education permeates the curriculum and instructional strategies used in schools, as well as the interactions among teachers, students, and parents, and the very way that schools conceptualize the nature of teaching and learning. Because it uses critical pedagogy as its underlying philosophy and focuses on knowledge, reflection, and action (praxis) as the basis for social change, multicultural education promotes the democratic principles of social justice(Nieto,1996). Today, multicultural education is a progressive approach for transforming education that holistically critiques and responds to discriminatory policies and practices in education. It is grounded in ideals of social justice, education equity, critical pedagogy, and a dedication to providing educational experiences in which all students reach their full potentials as learners and as socially aware and active beings, locally, nationally, and globally. Even it was merely concerned with a certain esteem towards the culture of minority, and it wanted to actualize the equality of the basic rights of human beings.

Multicultural education has evolved both in theory and in practice, and formed in a broad international movement influenced world education development. It is one of the focuses with public concern in today's international education, which is a strong thought, and also a profound practice innovation. With the development of globalization, the internationalization and popularization of education brings about cultural diversity in the world today, which significantly enhances the development of multicultural education in various countries. China is a multi-ethnic country, with a rich and varied culture. The rise and development of multicultural education has provided new perspectives in researching on ethnic education of China. Multicultural education in China has been a special model in worldwide multicultural education. Under the guidance of Marxism ethnic theory and on the base of history and reality of multi-in-union social structure in the Chinese nation, historical development, character, policy, curriculum and practical effect of multicultural education are the main contents of constructing and perfecting multicultural education model with Chinese characteristics.

The purpose of the present review is to summarize the fulfillments of multicultural education, to show problems in multicultural education in primary and middle schools of China, and to suggest some possible ways of solving these problems in order to improve multicultural education and the whole education equality and quality of elementary and middle school education in China.

MULTICULTURAL EDUCATION SITUATIONS OF PRIMARY AND MIDDLE SCHOOLS IN CHINA

Multicultural education becomes more and more important in the 21st century as globalization speeds up. It is a trend to insist on the diversified development of the ethnic group's education in multi-ethnic countries. As a multi-ethnic country, China's ethnic groups have their distinguishing cultures and traditions. In the long-term historical development process, the frequent migration of minority nationalities, gradually formed a "big mixed, small settlement" ethnic residential characteristics, showed a "pattern of diversity in unity of social": diversity or multiple refers to the various ethnic minority culture; integration, refers to the Han nationality as the main body of ethnic culture of the Chinese nation (Wang et al., 2007) . Accordingly, in the aspect of education, China's education came into being "education pattern of diversity in unity of the Chinese nation". Historically, the harmonious development of culture not only maintains the mainstream culture education, and also keeps the development of multicultural education, namely all the minority nationalities have their own education form and education system. This is the foundation for multicultural education in China.

Based on the literature statistic method, the present authors find that since 1990 China started to introduce some information on western multicultural education and to publish papers on it. More papers have been published since 2008(Fig.1), suggesting that the multicultural education research has been enhanced in recent years in China. Chinese scholars have made efforts to study multicultural education, such as the comparison of

multicultural education between China and the western countries (Long, 2006; Zhang, 2013); curriculum model, curriculum construction and curriculum reform (Zheng, 2004; Ma, 2007; Wang & Li, 2009; Peng, 2010); teacher education and the teaching methods (Dai, 2010; Gao, 2013), etc. However, most of these papers belong to theoretical researches, although there are some empirical studies, action researches and even less reports on teacher education, research methods and cultural practices of multicultural education (Fig.2). And most of the research is superficial, with lower level compared with the western countries'. So actually, China just starts to formally and largely study its multicultural education topics in the whole education systems.

Since curriculum is the most important way of the multicultural education implementation, curriculum design the multicultural education is increasingly becoming the focus of attention in the academic circle in China. Taking as an evaluation basis the basic law in curriculum designing students' development should be the central task and the relationships between society, students, and knowledge should be kept in balance. The development of social modernization has greatly accelerated the process in China. At present, curriculum content in many of China's minority areas deviates from students' actual life and affects directly the nation's educational development.

Fig.1 Numbers of published papers on multicultural education in China since 2000

Fig.2 Proportion of the research topics of multicultural education in China since 1990

Thus, the study on curriculum content of minority areas under multicultural background becomes a current issue urgently to be probed. Based on the standpoints of both cultural eco-environment theory and multicultural education theory, an investigation on Tibetan traditional culture and primary school's curriculum problem in Danba County was carried out with the methods of literature review, in-depth interview, fieldwork, etc. (Ge, 2007). While the cultural imbalance of minority area's showed the lack of cultural adaptability in curriculum in some Mongolian-teaching junior middle schools in Tong Liao with the respects to curriculum aim, curriculum content, curriculum structure and teacher's quality (Chang, 2007). In addition, to develop ethnic culture, understanding multicultural is not only the important concept of new curriculum standard, but also an educational concept in the multicultural music education. The music course criterion for all-day compulsory education in China advocates through music teaching, makes student have aesthetic ability and music literacy to some extent, and enjoys music, understands music, appreciates music, manifests music, accepts and create music, and then molds student's temperament, personality perfect, and becomes a person with all-round development and physical and mental harmony.

It's been a century since Chinese local teaching materials appeared; it plays an important role in school education. The new promulgated basic education reform with the "three grade course" development and management regulations provide new opportunities for the local school's multicultural curriculum development; also provide a broad space and policy support for the development of local teaching materials. As the rich cultural city of Harbin in the north, has the obligation to play a role model in education reform (Gai, 2012). So a new reform in curriculum of elementary education has set a pattern of developing and managing curriculum at three levels, which has provided a wide space and system safeguard for multicultural education in ethnic minority regions.

Although some achievements have been made in multicultural education in China, more work needs to be completed to solve some problems in multicultural education and thus to fit for the requirement of education development.

PROBLEMS IN MULTICULTURAL EDUCATION OF PRIMARY AND MIDDLE SCHOOLS IN CHINA

Vacant construction of relevant laws and regulations of multicultural education

The construction of relevant laws and regulations of multicultural education are not complete and perfect in China. Though since 1950s, China's ethnic education laws and regulations construction have been partly established, but on the whole, the ethnic education laws and regulations construction are lagging behind the development of education itself, ethnic education legislation cannot satisfy the needs of the development of ethnic education, and this contradiction increasingly prominent. There have been no systemic and special ethnic education laws and regulations for multicultural education. Both central and local governments concentrated more to the right to education, especially for the minority ethnic groups into the mainstream society of the protection of the right to education, and ignored the ethnic education role in the inheritance and development of minority culture. This is the significant deficiencies in China's ethnic education legislation contents, and also the bias in the ethnic education legislation guiding ideology.

Slow development and implementation of multicultural curriculum

The development and implementation of multicultural curriculum resources in China started late, with a poor foundation and slow development. The promotion of local culture is short of vitality; the heritage of multicultural is sustained in superficial level and in a stagnation stage. Since the idea of guiding the ethnic education development in China is to cultivate talents of all types and at all levels in ethnic regions, the ethnic education from form to content copied main ethnic (Han) model. It is main ethnic dominating minority ethnic education. On the curriculum establishment, the inheritance of traditional culture was ignored. Ethnic education not formed their own characteristics, neglected the humanities education, and lacked local characteristics. For instance, there is lack of access to learn the Tibetan culture in the curriculum of social culture, the current text book in primary schools is not in accord with their cognitive experience, and the present curriculum content cannot arouses students' interest. As we know that the local curriculum should be multiple and authentic with multicultural education ideas. Inner Mongolia is a minority autonomous region, however, for a long period of time, the school curriculum has made more point of developing Han Chinese students' integration of knowledge. It has been neglected that Mongolian and other ethnic groups reflect the diversity of cultural and geographical characteristics of the knowledge system. The cultural adaptability in four Mongolian-teaching junior middle

schools in Tong Liao was lack in cultural adaptability in curriculum goal, curriculum model, curriculum development system and teacher's quality (Qi, 2006). So the ethnic education curriculum should be reset to implement multicultural education. However, the curriculum reform is facing two problems in China: one is the problem in curriculum resources development; the second is the course of the implementation of the problem, i.e. how to implement from theory to practice after the curriculum development and reform.

Backward teaching methods in multicultural education

There are few investigations on teaching methods of multicultural education in China. And the ordinary teaching and practice in multicultural education are traditional one, i.e. duck-stuffing teaching that is "banking education", in which students learn to regurgitate and passively accept the knowledge they are given. No critical education, so students and teachers view what they learn in a passive way, to regurgitate and passively accept the knowledge they are given. So the education efficiency is very low.

Less fund and few qualified teachers in multicultural education

The multicultural education is under shortage of fund and qualified teachers in China. Although great efforts have been made, various problems in multicultural education is still exists in primary and middle schools. For example, the shortage of fund is one of the main problems in fulfilling multicultural education due to the poor financial situation, especially in developing area. The teachers' sense of multicultural education outlook and teaching experience are weak, the teachers' personal quality is varying from each other, and lack of solid theoretical foundation. So the qualified teacher resources are very limited in China.

Inappropriate and old research methods in multicultural education

Literature review methods, questionnaire methods, interviewing methods, classroom observation, etc. are employed in investigating multicultural education in China. However, most of these research methods employed are simple and not novel. Chinese researchers ignored some differences in each focus point. In the research methods field, there is some same realization that qualitative research methods are the main methods in the research of multicultural education. This can prove the idea is not appropriate that the use of qualitative research methods in the study is not scientific enough. In the analysis of the reference, it is common to note the studies which are lack of academic rules and accumulation.

POSSIBLE PATHWAYS TO IMPROVE MULTICULTURAL EDUCATION IN CHINA

As we know that the aim of multicultural education is to pursue equality, difference and cooperation, to create a school environment with different cultures, to integrate different cultures into school lessons, to teach through multiple ways and by multiple means, cooperate with community and to evaluate students in real environment are necessary. While the following five countermeasures should be put into practice:

To speed up the pace of legislations of multicultural education

China should speed up the pace of ethnic education legislation to fit for the urgent requirement of administering education according to law, and further of reforming and developing ethnic education. China should draw lessons from the experience of western countries to promote multicultural education developments by means of the law. The government should pay more attention to the perfection of the policy of local laws and regulations, and improvement of the mechanism of evaluation and improvement.

To reform school to improve multicultural education

Due to multicultural education being a close relation to school innovation, the school reform should perform with a multicultural perspective, including how a school's policies and practices implicitly illustrate beliefs about who deserves the benefits of a high-quality education. So an antiracist and anti bias perspective is essential in schools. Schools should pay attention to all areas in which some students might be favored over others, including the curriculum and pedagogy, sorting policies, and teachers' interactions and relationships with students and their communities. Schools also need to examine how the curriculum may perpetuate negative, distorted, or incomplete images of some groups while exalting others as the makers of all history.

School reform should reflect an understanding and acceptance of all students as having talents and strengths that can enhance their education. A perspective that affirms the talents and experiences of students and their families can expand the people and roles included in the curriculum. School reform measures based on the assumption that children of all families bring cultural and community strengths to their education would go a long way toward providing more powerful learning environments for a higher number of youngsters. Besides, school reform should be considered within the parameters of critical pedagogy. A critical education expects that students will seek their own answers, be curious, and be questioning. Using critical pedagogy as a basis for school reform renders very different policies for school than do traditional models of school reform. Even more important than just increasing curricular options, critical pedagogy helps to expand teachers' and schools' perspectives about students' knowledge and intellectual capabilities.

To enhance teachers' preparation program to fit for multicultural education

In response to the diversified development of future society, it requires that the teacher not only has a solid professional accomplishment in multicultural education background, but also has the idea of multiculturalism and quality, with respecting different cultures and meeting the demand of the education of different ethnic and social class. In order to better achieve this goal, the reform of teacher education curriculum is one of the important ways. For example, ethnic history and culture, cultural anthropology can be added in the general course to deepen the teacher's understanding of the relationship between different culture and people, and between different culture and education development. In addition, local ethnic arts, regional geography, history, and local inspection courses can be set up to study the local history development, geographical environment, way of living, community groups, and cultural forms to enhance teachers' knowledge about multicultural and the corresponding local culture knowledge, to form the identification of the local social multicultural, acceptance and the sense of belonging, to develop the teacher's multicultural attitude, and to promote the understanding of the multicultural education. In the major of education courses, the multicultural education or the ethnic culture, local culture, community culture and education, etc, should be also added to train teachers' abilities of observing, collecting, and recording local culture, ethnic culture and turning it into curriculum teaching. Add the corresponding education research methods course; improve the future teachers' ability of observing and understanding the student class culture, the relationship between teachers and students, the class atmosphere, and dealing with cultural differences.

To create and apply innovation curriculum to multicultural education

It is very important that the government attaches great importance to multicultural curriculum development and implementation. So firstly, the governments should invest a lot of money; fully rely on the intelligence of intellectuals in the areas of ethnic, cultural figures and front-line teachers to develop the multicultural curriculum with region characteristics. Then, in the implementation stage after curriculum developed, the government will take effective measures to ensure that the course can be implemented.

The curriculum reform should not only be based on the ethnic main-body culture; but also be paid attention to the minority area's culture and its ethnic culture. So we should develop curriculum that adapts to the minority students and make them enjoy equal development opportunity. The selection of curriculum content ought to be close to life and adaptive to the characteristics of students and schooling. The primary curriculum content in China's primary and middle schools should be built with the base of curriculum resources, promoting the development of the school-based curriculum, and improving the art curriculum.

The future textbook should breaks the tradition that arranges the contents as subject-centered, and regards social concern as the center to organize the contents. When new primary curriculum(such as mathematics) established with the view to multicultural education, the four principles should be adopted: ① model principle ② the principle of situational, ③ the principle of acceptability, and ④ readable addition principle, and three elastic and flexible design ways: ① elements-additive, ② system-integrated, and ③ topic-expanding type(Sun, 2012). In addition, the following four curricula may be constructed to promote multicultural education:

(1) **Discipline curriculum** i.e. branched or subject course, is a kind of discipline centered to weave. Discipline curriculum has the advantage of helping systemically imparting human culture knowledge, and helping students form the systemic cultural knowledge. It will help students systemically understand and know their native cultural knowledge, objectively regard the national culture and other differences in national culture, through the discipline curriculum implementing multicultural education, and then to form the concept of multicultural education. For example, as to the language discipline, the school can combine the school

curriculum knowledge with the ethnic language, ethnic culture, folk religion, folk literature, ethnic history, and so on, helping cultivate students' national self-confidence.

(2) **Activity curriculum**, which is also called experience course or children's center courses, is based on students as the main body of the course. Through the activity curriculum, school let the students experience the existence of multicultural, build their own culture, and cultivate the students' creativity in the practical activities. Physical education and art course provided by the school, for example, let students to understand the ethnic long-term development of national sports by physical education, like horseback riding, archery and other activities. On art, through understanding of ethnic music, art, dance and sculpture art activities let the student experience and really feel the existence of multicultural, then improve the students' aesthetic ability and cultural accomplishment.

(3) **Integrated curriculum** is composed of two or more subject curriculum; its types mainly include the subject standard, social standard course and children standard courses. Integrated curriculum is formed under the multicultural development. Through the integrated curriculum study, student multiple intelligences and comprehensive quality should be much improved.

(4) **Optional course** is set based on the characteristics of different students and interests, in order to adapt to the students' individual differences. Therefore, implementing multicultural education concept in optional courses is very necessary. In the setting of optional courses, the school can provide ethnic folk dance, folk history, folk music, folk art, ethnic language and text, according to the different ethnic students, let the students free take the course according to their own needs. For instance, the student of Han nationality or other nationalities can also take Tibetan dance and music. Optional courses are helpful to cultivate students to adapt to the region or ethnic regions, and to promote the development of bilingual teaching.

To develop new teaching and researching methods and assessment systems for multicultural education

Firstly, the teaching methods should be shifted from "discipline-centered" to "capacity-centered" to guide teaching. To use critical pedagogy to help students become agents of their own learning so they can use what they learn in productive and critical ways. The knowledge they learn can be used to explore the reasons for certain conditions in their lives and to design strategies for changing them. Secondly, to strengthen digital and internet techniques in modern multicultural education. While digital technique gradually increases the speed of global cultural homogenization, modern distance education on the basis of digital technique is endowed with the most effective function of carrying out multicultural education in contemporary society. Because of its different history idiom and space time shackle on carrying out multicultural education, traditional education is always unable to construct the deep curriculum exhibition model on the different national culture. But the various dynamic digital text can invent quasi-real condition multidimensional educational environment which traditional education can't support on the aspects of multicultural education, such as equality of educational opportunity, national identity and cultural understanding, making distance learners to be with critical media literacy on the attitude and emotion in the field of their core value.

In addition, novel research methods, such as more completed mathematical models of multicultural education in elementary and middle schools may be established, and tested with some practical education measures in a long and exhaustive experiments.

CONCLUSION

The multicultural education has been closely linked to the societal development of humankind after experiencing a long process of evolution, and it shows its significance of existing extensively. Multicultural education serves a significant function undoubtedly in keeping peace of the world and stabilization of countries, spreading and creating various cultures, dealing with ethnic problems and promoting the education of states. Although China has made some progress in both multicultural education and its researches, there are many problems, such as lack of multicultural education laws and regulations, weak curriculum construction, little fund provided, and fewer qualified teachers in elementary and middle schools. So more countermeasures should be investigated and completed. The present authors propose firstly the multicultural education theory should be strengthened. From the methodology aspects, we point out that the ultimate goal of education is for everyone's happy life. From the practice aspects, we give schools two suggests: building multicultural education environment, schools should construct campus culture that has the minority characteristics, and also can implant multicultural into courses to achieve this goal; cultivating students a better sense of what their own national mean, school should construct the mutual recognition mechanism between nations and foster the students' intercultural communication ability.

It is necessary to perfect policies, regulations and institutional building make full use of various resources, strengthen the construction of teachers, building the modern of training system, strengthening evaluation and improvement mechanism in multicultural education. Especially, in China, the ethnic groups' education is an important part of the multicultural education and the development of the ethnic groups' education will go further in future; it is reasonable for us to study by the word "multicultural education" instead of "ethnic groups' education". On the other hands, promote the cooperation of family, school, and community, common to create a good learning atmosphere. To strengthen the government responsibility, the compulsory education in ethnic minority areas, taking as the biggest project for poverty alleviation. As a means to achieve this common goal, the multicultural education is gaining an increasing global attention, improving the understanding between different cultures and educating people to be citizens empowered with democratic awareness. Thus, it is expected that special and effective models in multicultural education should be established in China in the future.

İlköğretim Dersinde Yayımlanan Öğretmenlik Mesleği ile İlgili Makalelerin Değerlendirilmesi

Mustafa Güçlü^{a*}

^a Yrd. Doç.Dr. Erciyes Üniversitesi Eğitim Fakültesi Eğitim Bilimleri Bölümü Z-12 38039 Melikgazi KAYSERİ

Özet

Bu araştırmanın amacı, 1939 ve 1966 yılları arasında yayın faaliyetini sürdüren İlköğretim Dergisi'nde yayımlanan öğretmenlik mesleği ile ilgili makalelerin genel bir değerlendirmesini yapmaktır. Bu çerçevede dergide yayımlanmış makaleler incelenmiş, konuyla ilgili makaleler belirlendikten sonra amaca uygun olanlar içerik analizi yöntemiyle analiz edilmiştir. Araştırma sonunda dergide 1939 ve 1966 yılları arasında öğretmen yetiştirme ve öğretmenlik mesleğinin sorunlarına yer verildiği görülmüştür.

Anahtar kelimeler: Süreli yayın, öğretmen eğitimi tarihi, öğretmenlik mesleği, ilköğretim dergisi

GİRİŞ

Eğitim tarihinin en önemli amaçlarından birisi de geçmişten dersler çıkarmak ve gelecekte benzer hatalar yapılmayarak sorunlara kalıcı çözümler üretmektir. Eğitim tarihi bu amaçlara ulaşmak için farklı araçlar kullanır. Bu araçlardan bir tanesi de dergilerdir.

Dergiler içinde yaşanan zamanı canlı olarak aktaran araçlar olması bakımından önemlidir. Dergilerin yayın hayatına devam ettiği yıllarda ele aldığı sorunlar ve bu sorunlara karşı geliştirilen çözüm önerileri günümüz açısından önemlidir. Eğitim tarihinin en önemli araçlarından olan bu dergilerden birisi de İlköğretim Dergisi'dir.

İlköğretim Dergisi 1939 ve 1966 yılları arasında yaklaşık 27 yıl yayın faaliyetlerine devam etmiştir. Milli Eğitim Bakanlığı tarafından çıkarılan dergide dönemin çok farklı eğitim sorunları yanında ele alınan bir diğer sorun da öğretmenlik mesleği ile ilgilidir. Derginin yayın hayatına devam ettiği yıllar öğretmenliğin Türkiye'de meslek haline gelmesinde önemli yıllardır. Derginin yayımlandığı yıllar öğretmen okulları, eğitim enstitüleri, köy enstitüleri, yükseköğretmen okulları açısından önemli yıllardır.

Bu çalışmada İlköğretim Dergisi'nde yayımlanan öğretmenlik mesleği ile ilgili makaleler değerlendirilmiştir. Konuya uygun makaleler içerik özelliklerine göre iki başlık altında incelenmiştir. Bunlar; öğretmenlerin hizmet öncesi ve hizmetinde yetiştirilmesi, öğretmenlik mesleğinin özellikleri ve nitelikleri ile ilgilidir.

HİZMET ÖNCESİ VE HİZMETİÇİ ÖĞRETMEN YETİŞTİRMESİ İLE İLGİLİ MAKALELER

Dergide hizmet öncesi ve hizmet içi öğretmen yetiştirilmesi ile ilgili yer verilen makalelerde genel olarak Türk öğretmen yetiştirme tarihinde önemli yerleri olan eğitim enstitüleri, köy enstitüleri ve öğretmen okullarının tarihsel gelişimleri yanında oynadıkları roller hakkında da bilgiler verilmiştir. Bunun yanında dergide öğretmenin iş başında yetiştirilmesi ile ilgili konulara yer verildiği görülmektedir.

Cumhuriyet döneminde ilköğretim alanında yaşanan problemlerin en önemlilerinden birisi de yeterli sayıda öğretmenin bulunmamasıdır. 1964 yılında dergide yer alan bir yazıda ilkokullarda görev yapan öğretmenlerin 3391'inin vekil, 2605'inin eğitimci, 8810'unun eğitimci ve 62.083'ünün asil öğretmen olarak çalıştıkları ifade edilmektedir. Öğretmenlerin %1'inin türlü sebeplerle hizmetten ayrılacağı ve her yıl yeni okul yapılacak olmasından dolayı Öğretmen Okulları Genel Müdürlüğü planlarına göre 1972 yılına kadar 50.000 öğretmen yetiştirilmesi gerektiği (İlköğretim Dergisi, 1964).

1957-1958 eğitim-öğretim yılının başlaması münasebetiyle Maarif Vekili Tevfik İleri'nin radyoda yapmış olduğu konuşmalar dergide de yayımlanmıştır. Bakan konuşmasının bir bölümünü öğretmenlere ayırmıştır. Öğretmenlik mesleği ile ilgili alınacak en önemli tedbirin iyi öğretmen yetiştirme olduğunu ifade eden Tevfik İleri, bir yandan ilkokullara öğretmen yetiştirmek için farklı illerde yeni öğretmen okulları açarken bir yandan da artan ortaokul ve lise öğretmeni yetiştirmek için yeni arayışlar içinde olduklarını ifade etmiştir. Ortaokul

öğretmeni yetiştirmek için eğitim enstitülerinin sayılarını arttırarak artan ortaokul öğretmeni ihtiyacını karşılama, lise öğretmeni ihtiyacını karşılamak için de Ankara ve İstanbul'da üniversite dışında, üniversitede görev yapan öğretim üyelerinden de yararlanarak Yüksek Öğretmen Okullarının açılması bu arayışlar içinde düşünülmüştür. Bakan Tefik İleri, bu konuşmasında Yüksek Öğretmen Okullarına öğretmenlik mesleğini seçmiş lise mezunları ile geniş ölçüde yapılacak bir seçme sınavı ile İlköğretmen Okulları mezunlarının da bu alınacağını belirtmiştir. Yine farklı genel müdürlüklere bağlı olarak öğretmen yetiştirme yerine öğretmen yetiştirme işinin tek bir genel müdürlüğüne bağlanması ve böylece öğretmenlerin derecelerine göre aynı meslek esaslarına göre yetiştirilmeleri meselesi bu konuşmada ele alınan konulardan birisi olmuştur (İlköğretim Dergisi, 1957).

Yeterli sayıda öğretmen yetiştirememe sorunu yanında öğretmenlerin hangi kaynaktan yetiştirileceği yönünde de sorunlar bulunmaktadır. Güzdüzalp (1952c), günümüzde de çok fazla tartışılan, fen-edebiyat fakültesi mezunlarının öğretmen olma durumlarını tartışmaktadır. Ona göre fen-edebiyat mezunlarının eğitim enstitülerindeki fen, edebiyat ve yabancı diller bölümlerinin lağvedilerek ortaokul öğretmenliğinin kendilerine verilmelerini istemeleri haksız bir istektir. Çünkü Gündüzalp, fen –edebiyat fakültelerinin kuruluş amaçlarının öğretmen yetiştirmekten ziyade herhangi bir bilim alanında derinlemesine araştırma yapacak elemanlar yetiştirmek olması, ortaokullarda öğretmenlerin “Türkçe, tarih, coğrafya ve yurttaşlık bilgisi” yahut “matematik, fizik, kimya, tabiat bilgisi hatta ilave olarak tarım ve ticaret derslerinin” tamamını yüklenebilmelerine rağmen fen-edebiyat mezunlarının bu branş derslerinin tamamını okutmada yetersiz kalmaları, öğretmenliğin kendine özgü bazı özellikleri olan bir meslek olması ve eğitim enstitüsü mezunlarının ülkenin en ücra yerlerinde çalışmaya razı olurken fen-edebiyat mezunlarının çoğunluğunun buna razı olmayacağı gibi nedenlerle bu isteklerine karşı çıkmaktadır.

Dergide Türkiye’de öğretmen okullarının gelişimini tanzimattan itibaren inceleyen araştırmalar bulunmaktadır (Ayas, 1951; Doran, 1960; Güvenç, 1958; İnan, 1948; İnan, 1948; Kazmaz, 1958; Koryak, 1948; Köroğlu, 1946; Okuturlar, 1958; Öymen, 1948; Tuncor, 1958; Ülkümen, 1948; Üsterci, 1956). Bu okulların gelişimini tarihsel olarak anlatan makalelerde ayrıca 1946’dan sonra demokratik gelişmelerin ilköğretim hayatında da önemli etkiler yarattığı, daha önce köylüler tarafından yapılan okulların yapımının vilayet ve devlet bütçesine alındığı, öğretmen yetiştiren kurumlar arasında da birlik sağlandığı ve ilkokul öğretmenleri için intibak kanununun çıkarıldığı, Cumhuriyetle beraber öğretmen olmak isteyen kızların sayılarında önemli artışlar yaşandığı gibi bilgilere de yer verilmiştir.

Öğretmen okullarının programları günün ihtiyaçlarına göre zaman zaman değişikliğe uğramıştır. Alpan (1952), öğretmen okullarının 1952-1953 eğitim öğretim yılı başında yenilenen taslak programını değerlendirmiştir. Taslak programın eğitim-öğretim faaliyetlerinin aktif bir metotla işlenmesi, işin bir amaç değil araç olarak görülmesi, bütün faaliyetlerde öğrenci ilgi, ihtiyaç ve kabiliyetlerinin dikkate alınması, son sınıflara uygulama derslerinin konulması ve bu amaca ulaşabilmek için uygulama ilkokulunun bu kuruma bağlanması gibi yenilikler getirdiğini ifade eden Alpan, derslerle ve özellikle programa yeni giren derslerle ilgili ders ve yardımcı ders kitaplarının yazılması, psikolojik teknik araçlarının bulundurulması, öğretmenlerin yeni programlara göre yetiştirilmeleri gibi eksikliklere de değinmiştir.

Ayesbeyoğlu (1956), öğretmenliği meslek haline getiren asıl nedenin “metot” olduğunu anlattığı makalesinde yeni nesillere verilecek eğitimin temellerinin ilkokul öğretmenleri tarafından atıldığını vurgulamaktadır. Ona göre bu öğretmenlere yetiştirilmeleri sürecinde geniş bir felsefi kültür verilirse eğitim öğretim metotlarında daha başarılı olacaklarını ifade etmektedir. Bu nedenle ilköğretmen okullarının programlarında felsefeye özel bir önem verilmelidir.

Tonguç (1948), öğretmen okullarının toplum içinde önemli görevler yüklendiğini ifade etmektedir. Ona göre iş eğitiminin gelişmesine çok yardımcı dokunan kurumlar arasında öğretmen okullarının ayrı bir yeri vardır. Modern anlamda iş eğitiminin gelişmesi, halk arasında yayılması her şeyden önce ilkokul öğretmenlerinin iş ilkesine dayalı eğitim ve öğretim metotlarını benimsemelerine bağlıdır. Ona göre öğretmen okulları bu fikre kaynaklık yapmıştır. İş eğitimi fikri burada beslenmiş ve buradan etrafa dağılmıştır. Avrupa ve Türkiye’de bulunan öğretmen okullarında iş eğitimi çalışmalarını değerlendiren Tonguç, öğretmen okullarını batı kültürünün yarattığı bilimsel esaslara dayanarak işletme meselesinde geç kalmamış olsaydı Türkiye’de mecburi eğitim davası (7-16 yaş) kökten halledilmiş, modern pedagojinin ilkelerinin ilk ve orta dereceli okulların tamamını sarmış olacaktı.

Türkiye’de öğretmen yetiştirme tarihinde eğitim enstitülerinin ayrı bir yeri vardır. İlk kez 1946 yılında artan öğretmen ihtiyacını karşılamak amacıyla kurulan eğitim enstitülerinin sayısı ilerleyen dönemde 17’ye kadar ulaşmış ve ülkenin ortaokul öğretmen ihtiyacını karşılamıştır. Dergide eğitim enstitülerinin kurulmasının sadece ortaöğretim kademesinde değil aynı zamanda ilkokul öğretmenleri üzerinde de önemli yararlar sağlayacağı vurgulanmıştır. Eğitim enstitülerinin ilkokul öğretmenlerine sağlanacak yararlar şöyle ifade edilmiştir (Kurtça, 1947):

- İlkokul ve ortaokul öğretmenleri birbirlerini zayıf öğrenciler nedeniyle birbirlerini suçlamak yerine iyi ilişkiler geliştireceklerdir.
- Eğitim enstitüsünden yeni mezun olmuş birisi ilkokul ve ortaokul öğretmeni olabildiği gibi başarılı ilkokul öğretmenlerinin de ortaokul öğretmeni olabilmelerinin yolu açılmıştır.
- İlkokul öğretmenlerine ortaokul öğretmeni olabilmeye şansının verilmesi çevrede ilkokul öğretmenlerini küçümsemek gibi bir durumu ortadan kaldıracaktır.
- Eğitim enstitüleri özel yetenek gerektiren; müzik, resim, beden eğitimi yabancı dil gibi branşlara da öğretmen yetiştirmektedir. Bu öğretmenler ilkokul ve ortaokulun birleştiği yerlerde sınıf öğretmenlerinin girmekte zorlandığı bu derslerde görev alacaklardır. Böylelikle ilkokul öğretmenleri, vermekte zorlandıkları bu ders yüklerinden kurtulacaklardır.
- Eğitim enstitüsünden yeni mezun olan öğretmenler ile ortaokul öğretmenliği yapmaya hak kazanan ilkokul öğretmenleri, birinci sınıftan son sınıf olan 8. sınıfa kadar öğrencilerini daha iyi tanıma imkânına sahip olacaklardır. Böylelikle öğretmen e öğrencilerinin ilgi ve yeteneklerini daha yakından tanıma şansı bulacaktır.

Öğretmenlerin yüksek tahsil yapabilmeye imkânlarından yoksun olduğu ifade edilen dergide bu konuda tek açık kapının Eğitim Enstitüleri olduğu belirtilmektedir. Eğitim Enstitülerinin her yıl ortalama 350-370 öğrenci aldığı ve bunlardan dörtte birinin lise mezunu olduğu ifade edilen dergide bunun da ancak 33 bin ilkokul öğretmenin binde 8'inin yükseköğrenim görebilmeye şansı yakaladığı anlamına geldiği ifade edilmektedir. Dergiye göre ilkokul öğretmenlerinin yükseköğrenim görmeleri sağlansa bile mali, ailevi, yaşlılık ve bekâr olup olmama gibi nedenlerle öğrenime devam edememe gibi sorunlar da bulunmaktadır. Bu nedenle öğretmenlerin iş başında bu eğitimleri almaları sağlanmalıdır (Gündüzalp, 1952b; Türkyılmaz, 1955; Yıldırım, 1952). Dergide öğretmenlerin tıpkı doktor, avukat ve mimarlar gibi sürekli okumak, mesleklerindeki gelişmeleri takip etmek ve yeni kurslara katılmaları gerektiği belirtilmektedir. Öğretmenlerin mesleğe girdikten sonra yeni şart ve durumlara kendilerini uydurabilmeleri, bilgilerini arttırmaları ve öğretme becerilerini geliştirebilmeleri amacıyla düzenlenen faaliyetlere iş başında yetiştirme denilmektedir (Anderson, 1963; Arifoğlu, 1963; Aygün, 1964).

Dergide öğretmeni iş başında yetiştirme yöntemleri ve programları hakkında bilgilere de yer verilmiştir. Karagöz (1955), Amerika'da öğretmen eğitiminin hizmet öncesi ve hizmet içi olmak üzere iki şekilde gerçekleştirildiğini, bu iki eğitim işinin de üniversitelere bağlı kolejler tarafından gerçekleştirildiğini belirtmektedir. Songür (1957) ise Türkiye'de iş başında eğitimin farklı araçları olduğunu, bunların en önemlilerinden birisinin de öğretmenlerin meslek toplantıları olduğunu ifade etmektedir. Holmund (1963) dergide, Türkiye'de öğretmeni iş başında yetiştirme programlarının nasıl geliştirilebileceği ile bazı önerilere yer vermiştir. Bakanlık tarafından düzenlenecek olan kurs ve yaz etkinliklerine katılanlara kredi ya da akademik bir derece verme, kursları başarılı bir şekilde tamamlayan öğretmenlerin maaşlarında iyileştirmeler yapma, sadece yazın değil aynı zamanda akşamları da kurslar düzenleme, mahalli seviyede çok sayıda faaliyete girişme, mahalli okul idarecilerinin eğitim programlarının oluşturulma sürecine dahil edilmesi, öğretmenin ders programlarında bu kurslar için boş zamanlar bırakmak, büyükşehirlerdeki üniversite ve bazı enstitü uzmanlarından bu kurslarda yararlanmak bu kurumun başarılı olması ve geliştirilmesi için getirilen önerilerdendir.

Türkiye'de öğretmen yetiştirme tarihi içinde önemli kurumlardan biri tanesi de köy enstitüleridir. Köy enstitülerinin öğretmen yetiştirme tarihimizde önemli görevler yerine getirdiğine dair dergide çok sayıda makale bulunmaktadır (Aydın, 1939; Gündüzalp, 1949; Koca, 1949; Öymen, 1940a; Öymen, 1942; Öztürk, 1949; Tonguç, 1942; Uyanık, 1942). Karagöz (1950), köy enstitülerinin 10 yıl gibi kısa bir zaman içinde önemli hizmetler verdiğini dile getirmektedir. 10 yıl içinde köy enstitülerinden 15 bine yakın öğretmen ve sağlıkçı yetiştirilmiştir. Ona göre köy enstitülerinin kısa zamanda bu kadar ürün vermesinin nedenini tarihimizde aramak gerekmektedir. Cumhuriyetin kuruluşu ile beraber nüfusun büyük kısmının köylerde yaşaması ve halkın ancak %10'unun okuma-yazma bilmesi köy enstitülerini kısa zamanda daha fazla enerji harcayarak ürün vermeye zorlamıştır.

Koç (1961), iktidarların değişmesiyle etkilenmeyecek bir eğitim sistemi için 200 dolayında eğitimcinin eğitimin farklı dallarında neler yapılması gerektiği konusunda ilkeler geliştirdiğini belirtmektedir. Kendisinin de katılmış olduğu "Öğretmen Yetiştirme" komitesinde de bazı ilkeler geliştirildiğini ifade etmektedir. Bu ilkeler şunlardır:

- Hangi alan ve hangi seviyede olursa olsun öğretmenlik görevini yapacak kişilerin mutlaka öncelikle genel bir eğitimden, temel kültür ve bilgi veren lise seviyesinde bir eğitimden geçmesi gerekir.
- Genel kültürden sonra adaylara çalışacakları okulların yapısına uygun bir branş kültürü verilmelidir. Branş kültürü; ilkokul öğretmenleri için ilkokul dersleri ile birlikte ekonomik ve sosyal hayatımızda gerekli değişmeyi yapmaya yarayan tarım, sanat, sağlık gibi yardımcı branşlardır. Ortaokul öğretmenleri biraz daha derinlemesine bilgiye ihtiyaç duydukları için üniversite bilgilerin köklerini alarak yetiştirilmelidir. Branş

bilgisinden sonra, bütün öğretmen adaylarına öğretmenlik bilgisi ile ilgili teorik bilgiler ve uygulamalar yaptırılmalıdır.

ÖĞRETMENLİK MESLEĞİNİN NİTELİK VE ÖZELLİKLERİ İLE İLGİLİ MAKALELER

Dergide bu başlıkla ilgili olarak; öğretmenlik mesleğinin özellikleri, öğretmenlerin taşınması gereken nitelikler, öğretmenlerin karşılaşmış oldukları sorunlar, öğretmen-veli ilişkileri ve öğretmenlerde meslek heyecanının diri tutulması için yapılması gerekenler gibi konularda bilgiler verilmiştir.

Dergide öğretmenlik mesleğinin kendine özgü bazı nitelikleri olduğundan söz edilmektedir. Zor bir meslek olmasına rağmen manevi açıdan öğretmenleri diri tutması, her gün yeni bilgi ve görgü öğrenmeyi gerektirmesi, çevreye karşı iyi bir örnek olmanın gerekliliği bu özelliklerden bazılarıdır. Bunun yanında dergiye göre öğretmek demek, öğretilen üzerinde kontrol ve otorite sahibi olmak demektir. Fakat gerçek bir öğretmenin öğrencileri üzerindeki otoritesi sert ve kaba bir otorite olmaktan ziyade tatlı ve manevi bir tesir alma biçimindedir. Dergide öğretmenin bu tesir ve nüfuzunu iki biçimde kullandığını belirtmektedir. Bunlardan birincisi; eşya ve olayları ve onlara ait bilgileri mükemmel bir şekilde tanımak, diğeri bu eşya ve olayları ve onlarla ilgili bilgileri öğrencilere tam, kolay, çabuk ve istekle benimsetmek konusunda gösterilen istidat ve kabiliyettir (Aytuna, 1949; Baymur, 1942).

Öğretmenlik mesleğinin diğer mesleklere göre sağladığı bazı yararları da yer verilmektedir. Öğretmenlerin; toplum içinde saygı görmesi, çocuklar için sadece öğretmen değil anne, baba kısacası her şey olmaları, yetiştirdikleri öğrencilerin gelecekte önemli toplumsal görevlere gelmesi, toplumsal birçok sorunun çözümünde önemli anahtar rol durumunda olması, öğrencilerin gelişimlerini yakından görmesi, ders verirken izlenecek metot bakımından özgür olması, derse hazırlanırken ve ders verirken aynı zamanda kendisinin de gelişmesi, oldukça uzun bir tatili olduğu için istediği birçok işi yapabilmesi bu avantajlardan bazılarıdır (Dinçer, 1947).

Dergide özel yetenek gerektiren derslerin ilkökul öğretmenlerince uygulanması önemli problemlerden birisi olarak görülmüştür. Bu derslerden birisi de müzik dersidir. Müzik derslerinin diğer derslerden daha zayıf yürümesinin özellikle iki nedeni üzerinde durulmuştur. Bunlardan birincisi öğretmenlerin müzik bakımından yetersizliği, ikincisi ise okullarda çocuklara yönelik eser azlığıdır (Koray, 1947). Bu nedenle müzik öğretmeni yetiştirme meselesi Cumhuriyetin kuruluşundan itibaren ele alınan konulardan birisi olmuştur. Cumhuriyet dönemi müzik öğretmeni yetiştirme sürecinin Cebeci'de 1 Kasım 1924 yılında açılan Musiki Muallim Mektebi ile başladığı ifade edilen dergide bu okulun 15 yıl faaliyette kaldığı, belirtilmekte, 1 Eylül 1939 tarihinden sonra okulun sadece bir müzik bölümü olarak Gazi eğitim enstitüsü bünyesinde görevine devam ettiği ifade edilmektedir. Bunun yanında nitelikli müzik öğretmeni yetiştirmek için önerilere de yer verilmiştir. Okulu 6 yıllık bir okul haline getirerek öğrencilerini ortaokuldan alınması ve Devlet Konservatuarına birer pedagoji bölümü ekleyerek buralardan öğretmen yetiştirmek bu öneriler arasında yer almıştır (Tangör, 1962).

Okul-aile birliklerinin kurulması ilk kez 1947 yılında 415 sayılı Tebliğler Dergisi'nde yer almış ve bu kurumların bir an önce kurulması istenmiştir. Fakat Vural (1947), okul-aile birliklerinin sadece bir birlik olarak oluşturulmasının bir anlam taşımayacağını, bu kuruluşun başarılı olması, kendisinden beklenen katkıyı yapabilmesi için öğretmenlerin sorumluluk alması gerektiğini belirtmektedir. Fakat Göker (1962) okul-aile birliklerinin kuruluş amacından uzaklaştığını, okul müdürlerinin bu kurumu parama toplama amacıyla kullanmaya başladığını ifade etmektedir. Fakat Ayas (1950) her şeye rağmen öğretmen ve öğrenci velisinin çocukların istenmeyen davranışlarıyla ilgili ortak hareket etmelerinin gerekliliğine vurgu yapmaktadır.

Dergide kalabalık sınıfların dezavantajları yanında önemli yararlar sağladıkları belirtilmektedir. Çünkü sınıfın kalabalık olmasının olumlu sonuçlar verdiğini iddia eden araştırmacılar da bulunmaktadır. Bunlara göre sınıfın kalabalık olması sınıf ruhunun yapıcı ve düzenleyici havasını oluşturmada önemli etki yapmaktadır. Dergide, 50-60 kişilik sınıflarda görev yapan öğretmenlerin yakınmak yerine kalabalık psikolojisinin yapıcı, yaratıcı ve dayanışmacı atmosferinden faydalanmaları gerektiği belirtilmektedir (Güneşlioğlu, 1962).

Makalelerde tartışılan konulardan birisi de başöğretmenlik konusudur. Mickelson'un "Modern İlkokulda Başöğretmen" adlı eserinde başöğretmenliğin tekamül safhasını; öğretici, katip, idareci ve rehber biçiminde sıraladığını ifade eden Er (1950), iyi bir başöğretmenin bu dört fonksiyonu üzerine alması gerektiğini belirtmektedir. Diğer bir ifadeyle iyi bir başöğretmen hem öğretici, hem katip, hem idareci hem de iyi bir rehber olmalıdır. Salmagil (1941) ise başöğretmen olarak görevlendirilen kişilerin idari işler, eğitimle münasebetleri ve eğitim-öğretim işleri bakımından önemli görevler üstlendiklerini belirtmektedir. Öymen (1940b) ise gezici başöğretmenlerin eğitim sorunlarını yerlerinde görmeleri nedeniyle önemli görevler üstlendiğini ifade etmektedir.

Özgür (1948), Türkiye'deki gezici başöğretmen kurumuna karşılık Amerika'da gezici öğretmenlik kurumunun bulunduğunu, bunların görevlerinin ise ülkemizdeki başöğretmenlik kurumundan farklı olduğunu söylemektedir. Buna göre Amerika'da gezici öğretmenler, öğretmenler arasından seçiliyor ve bu seçimin

ardından üniversitelerden psikoloji, sosyoloji, ruh bilimi gibi derler alınıyor ve daha sonra da psikoloji kliniklerinde staj yapılmaktadır. Gezici öğretmenler okullarda ders okutmamaktadırlar. Sadece okul, aile ve toplumsal çevreye uyum sağlamada problem yaşayan öğrencilere yardım etmektedirler.

Dergide en fazla yer verilen alanlardan birisi de köy eğitimidir. Köy eğitimi ile ilgili ele alınan konulardan birisi de öğretmenlerdir. Bu makalelerde köyde görev yapan öğretmenlerin toplum kalkınmasında önemli görevler üstlenebilmesi için bazı önerilere yer verilmiştir. Köy öğretmenin köy kalkınmasında görev alabilmesi için öncelikle kendini köylüye sevdirmesi gerektiği ifade edilen dergide öğretmenlerin nazari bilgiler yanında köyü ilgilendiren pratik konularda da bilgi sahibi olması, toprağın nasıl daha iyi işletileceğini bilmesi, hayvan ve hayvan hastalıkları konusunda bilgili olması gerektiği belirtilmektedir (Kızıloğlu, 1940; Yarat, 1952). Dergide köyde görev yapan öğretmenlerin bazı sorunlarına da değinilmiştir. Köylerde görev yapan öğretmenlerin şehirde görev yapan öğretmenlere göre şartlarının daha ağır olduğu ifade edilen dergide köy öğretmenin sadece okuldaki eğitim-öğretim ile değil aynı zamanda köylün eğitimi ve mesleki işleriyle de ilgilenmek zorunda kaldığı söylenmektedir. Bunun yanında köy öğretmeni öğrencilerin eğitim-öğretimiyle ilgili yayınları da takip edememekte, dolayısı ile kendilerini geliştirememektedirler (Ağırmaslı, 1942; Tuğral, 1957; Yücel, 1949; Zeyrek, 1949).

Dergide tüm zorluklara rağmen öğretmenlerde meslek heyecanının diri tutulmasının önemine vurgu yapılmaktadır. Öğretmenlerin mesleklerinde diri, heyecanlı tutulmasının onları mesleki bilgilerle teçhiz etmekten daha önemli olduğu ifade edilen dergide bunun nedeni olarak da bilginin tek başına insanı harekete geçirmede yeterli olmaması, bilginin duygularla ve heyecanlarla beslendiğinde anlam ifade etmesi gösterilmiştir. Öğretmenlere bu meslek heyecanının kazandırılması için toplumun bazı sorumlulukları bulunmaktadır (Gündüzalp, 1952a).

Sungu (1942) ise öğretmenlerin vazifelerini anlattığı yazısında öğretmenlerin öğrencileri sadece derste değil ders dışında da çalıştırmaları gerektiğini belirtmekte, ders dışı çalışmalarının çocukların hayatlarına katkı sağlayan çalışmalar olmasını vurgulamaktadır. Bunun yanında öğretmen öğrencilerine ceza olarak ödev vermemeli, çocukların nasıl ders çalışmaları gerektiği konusunda aydınlatıcı olmalı, derste çevreden yararlanabilmeli ve öğrencileri derslerde aktif tutmalıdır.

Binbaşoğlu (1957), eğitim kavramının değişime uğraması ile öğretmenin görevinin de değiştiğini belirtmektedir. Daha önce sadece öğretmenin bilgi aktarması eğitim olarak anılırken artık bireyin değişen hayata uyum sağlaması eğitim olarak tanımlanmaktadır. O, öğretmenin iyi bir öğretim için çocuğu tanımmasının yanında çevrenin de tanınmasının önemi vurgulamaktadır.

Dergide öğretmenler için kurulan bazı örgütler hakkında da bilgiler verilmektedir. Tonguç (1944) köylerin şehirlere göre hastalığa yakalanma riskinin fazla olduğunu ifade etmektedir. Fakat buna karşı köy öğretmenin çaresiz kaldığını ifade eden Tonguç, 1943 yılında köy öğretmenleri sağlık ve içtimai yardım sandığı kurulduğunu ve bu kurumun önemli görevler üstlendiğini belirtmektedir. Sandık, kurulduğu andan itibaren köy öğretmenlerden 244 kişiye doğum, 29 kişiye evlenme, 2 kişiye kaza ve 9 kişiye ölüm yardımı olmak üzere 284 kişiye yardım etmiştir. Arman (1944) ise öğretmenlerin tek başlarına yeterli derecede para biriktirememeleri ve bu nedenle de ev sahibi olmamaları nedeniyle 1943 yılında 4357 Sayılı Kanun ile “Yapı Sandıkları”nın kurulmaya başlandığını ifade etmektedir.

Makalelerde öğretmenlik mesleği ile ilgili ele alınan konulardan birisi de nitelikli öğretmenlerin özellikleridir. Buna göre nitelikli öğretmen; bilmek, öğretmesini sevmek ve öğretmekten haz almak özelliklerine sahip olmalıdır. Başarısızlık öğrencilerin istidatsızlığından değil, öğretmenlerin bu istidatsızlıklarını bulup tanıyamamasından ileri gelmektedir. Bunun yanında nitelikli öğretmenin zaman zaman kendisini hesaba çekmesidir (Arıkan, 1957; Fenner, 1958).

Berklin (1962a), öğretmenlik mesleğinin özellikleri ve öğretmenlerden beklentilerini kaleme aldığı makalesinde Atatürk ve yabancı bilim adamlarının öğretmenlik mesleği ile ilgili düşüncelerine yer vermiştir. Bu düşüncelerde genellikle öğretmenlik mesleğinin faziletlerine yer verilmiştir. Aytuna (1950), ise zamanın en yeni pedagojik görüşlerin öğretmenin şahsiyetini eğitim-öğretim sorunlarının en başına koyduklarını ifade etmektedir. Pedagoji ile ilgili yapılan bu araştırmalarda başlıca şu sorulara cevap aranmıştır: Öğretmen nasıl bir şahsiyettir? Öğretmenlik mesleği için en gerekli olan nitelikler nelerdir? Öğretmenin nasıl bir mesleki değeri olmalıdır? Öğretmenin kültürü, nicelik ve nitelik olarak nasıl olmalıdır? Öğretime nasıl bir pedagojik ve didaktik hazırlık verilmelidir?

Berklin (1962b), F. H. Wart’ın lise öğrencileri üzerinde yapmış olduğu en iyi ve en kötü öğretmen özellikleri ile ilgili araştırmanın sonuçları hakkında da bilgiler vermektedir. Berklin bu konuda en iyi müfettişin öğrenciler olduğunu ifade etmektedir. Araştırma sonucuna göre en sevilen öğretmenler; okul görevlerine yardım eden, dersini iyi anlatan, şakacı ve neşeli olan öğretmenlerdir. En az sevilen öğretmen özellikleri ise; aksi ve huysuz olması, öğrencilerine yardım etmemesi, derslerini plansız olarak işlemesidir. Er (1950) ise makalesinde iyi bir öğretmenin mutlaka çocuğu iyi tanınması gerektiğini belirtmektedir. Öğretmenin rehberliği ancak onun

psikolojisini, büyüme ve gelişim safhalarını bilmesi ile mümkündür. Bilsel'e (1939) göre iyi bir öğretmen samimiyet, nezaket, neşe, sabır, kıyafet, intibak ve organize etmek kabiliyeti gibi özelliklere sahip olmalıdır.

Dergide iyi öğretmen niteliklerine ilişkin yurt dışı değerlendirmelere de yer verilmiştir. Bunlardan Amerika'da öğretmen yetiştirme problemini inceleyen Aslan (1953), Amerika'da sağlam bir genel ve mesleki eğitimi olan, insanlarla iyi iletişim kuran, beden ve zihni yönden sağlıklı durumda bulunan, eleştirel düşünen, insanlığın menfaatleri için mücadele eden ve demokratik hayatın gereklerine sahip öğretmenlerin iyi öğretmen olarak görüldüğünü ifade etmektedir.

Dergide öğretmenlerin güzel sanatlar alanında kendilerini yetiştirmelerinin yeri ve önemi hakkında bilgilere de yer verilmiştir. Dergiye göre her öğretmen gerçek bir sanatkar olmayabilir. Fakat ilgi duyduğu sanat dallarından birisinde kendini geliştirmeye çalışmalıdır. Çünkü öğretmenlerin öğrencilere yaptıkları bir resmi, bir yazılı ders ödevini gereğini gibi değerlendirebilmesi, onlara uygun fırsatlarda sanat zevk ve anlayışını kazandırarak yetenekli öğrencileri geliştirip önlerini açabilmeleri için sanat dallarından en az birisi üzerinde kendisini yetiştirmesi gerekmektedir (İlköğretim Dergisi, 1961).

Öğretmenlerin rehberlik faaliyetlerindeki yeri ve önemi ele alınan konulardan birisidir. Öğrencilere iyi bir çevre yaratma, onların bedensel, zihinsel, duygusal gelişimlerini engelleyen nedenleri bulma ve bunları ortadan kaldırma konusunda onlarla en yakın temasın öğretmenden geldiği belirtilen dergide bu nedenle iyi bir öğretmenin aynı zamanda başarılı bir rehber olduğu ifade edilmektedir. Bu konuda bir öğrencinin duygusal ve fiziksel dünyası emniyette değilse öğrenmeye ve öğrendiklerini hazmetmeye hazır olmadığı vurgulanmakta, bu konuda öğretmenin çocuk psikolojisini ve ruh sağlığı alanında iyi yetişmiş olması gerektiği belirtilmektedir (Berktin, 1962c).

Öğretmen kişiliğinin öğrenci davranışları üzerindeki etkilerini konu alan makalede çocukların kişiliğinin oluşmasında aileden sonra en önemli etkinin öğretmenden geldiği belirtilmektedir. Öğretmenin bu etkisinin iki açıdan ele alındığı belirtilen makalede bunlardan birincisinin öğretmenin inandığı metot ve araçlarla sistemli bir şekilde yaptığı çabalar ve ikincisi ise öğrencinin davranış örneği olarak öğretmenini alması olduğu ifade edilmektedir. Dergiye göre öğretmenlerde görülen kişilik bozukluklarının öğrenci davranışlarına olumsuz yansımaktadır. Öğretmenlerin kişiliklerinde ortaya çıkabilen bu aksaklıklar; aşağılık duygusu ve sinirlilik gibi ortaya çıkan duygusal istikrarsızlıklardır. Değişik mesleklerde de buna benzer kişilikte insanlar bulunsa da bunların etkileri öğretmenler kadar etkili olmamaktadır. Dergide bu tarz kişilik bozukluklarına karşı alınacak önlemler konusunda da önerilere de yer verilmiştir. Bu konuda ilk alınacak önlem öğretmen okullarına bu kişilik tiplerine sahip adayların alınmaması için iyi bir seçme işlemi yapılmalıdır (Enç, 1949).

Öğretmenin cemiyet içinde oynadığı role dikkat çeken Irmak (1949), onun cemiyeti bir hamur gibi yoğuran ve ona dilediği şekli verebilecek tek kuvvet olduğunu vurgulamaktadır. Ona göre bir millet için büyük hamle ve inkılaplara girildiği bir dönemde aynı dünya görüşüne bütün kalbiyle bağlı ve fedakâr bir öğretmen kitlesine sahip olmak büyük bir mutluluk kaynağı olduğu kadar ideale yaklaşmanın tek çaresidir. Bu, öğretmenin görev ve sorumluluğunun diğer mesleklerden daha önemli olduğunu ortaya koymaktadır.

Dergide ele alınan konulardan birisi de yedek subay adayı öğretmenler konusudur. İlk olarak 1960-1961 eğitim öğretim yılında başlayan yedek subay adayı öğretmen uygulamasının intibak sorunu aşıldıktan sonra önemli sonuçlar verdiği belirtilmektedir. Yedek subay adayı öğretmenlerin başarılı olabilmeleri için bazı önerilerde getirilmiştir. Her şeyden önce bu kişilere metot, mesleki bilgi ve idari bilgi yönünden kurslar verilmelidir. Dergiye göre yedek subay adayı öğretmenlerin başarılı olmalarının önündeki en önemli engel metot bilmemeleridir. Bunun yanında kurslarda köy eğitimi ve birleştirilmiş sınıflarda eğitim konularında bilgi verilmesi, milli eğitim müdürlüklerinin bu öğretmenler için birer danışma ve yardımlaşma birimi oluşturması, öğretmeni işbaşında yetiştirme çalışmasının devam ettirilmesi konuyla ilgili getirilen belli başlı öneriler arasındadır (Günden, 1961).

SONUÇ

1939 ve 1966 yılları arasında yaklaşık 27 yıl yayın hayatına devam eden İlköğretim Dergisi'nde dönemin önemli eğitimcileri yanında öğretmen, yönetici ve müfettişlerin yazılarına da yer verilmiştir. Bu makalelerde ele alınan konulardan birisi de öğretmenlik mesleğidir. Öğretmenlik mesleği ile ilgili olarak öğretmen eğitimi ve öğretmenlik mesleğinin nitelik ve özellikleri yanında köy öğretmenleri ile ilgili çalışmalar da ele alınan başlıca konular olmuştur.

Öğretmen okulları, eğitim enstitüleri ve köy enstitülerinin gelişimleri hakkında bilgilere yer verilen dergide bu kurumların yaşamış oldukları tecrübeler konusunda da günümüze ışık tutulmaktadır. Bunun yanında işbaşında eğitimin de sık olarak vurgulanması öğretmenin kendisini geliştirmesi bakımında son derece önemli görülmüştür.

Öğretmenlik mesleğinin özellikleri, iyi bir öğretmenin nitelikleri ve öğretmenlerin görevleri dergide ele alınan bir konu olmuştur. Zor bir meslek olmasına rağmen manevi açıdan önemli yararlar sağlaması, toplumda iyi bir örnek olunması, kendisini sürekli olarak geliştirmek zorunda olması öğretmenlik mesleğinin öne çıkan özellikleri olarak dikkat çekmektedir. Dergide ayrıca köy öğretmenlerinin yaşamış oldukları sorunlar yanında, başarılı olmaları için bazı tavsiyelere de yer verilmiştir. Özellikle öğretmenlerin köyü ve köylüyü sevmesi, sadece okulda değil okul dışında da aktif olarak çalışması onun köyde başarılı olması için şart koşulmuştur.

Eğitimde Yeni Bir Süreç: Ters-Yüz Sınıf Sistemi

Büşra G. Gençer^a Neşe Gürbulak^b Tufan Adıgüzel^{c*}

^{a b c} Bahçeşehir Üniversitesi

Özet

Bilgi ve iletişim teknolojilerinin kullanım ve üretiminin hızla yayılması ile birlikte, yeni teknolojilerin eğitim alanında kullanım biçimi de değişmektedir. Bu değişim, öğretme ve öğrenmeye yönelik yeni yaklaşımların ortaya çıkmasına olanak sağlamış ve öğretim-öğrenim sürecinde yeni bir strateji olan Ters-Yüz sınıf sistemi'nin eğitimde kullanılabilirliğini gün yüzüne çıkarmıştır. Ters-yüz sınıf sistemi, öğrencilere asenkron sistemler yardımı ile ileriye yönelik çalışacakları konuların bireysel öğrenmeye uygun olan kısımlarını okul dışında erişebilmelerine fırsat sunarken, sınıf ortamında daha çok bu konularla ilgili bireysel veya grup olarak problem çözme aktiviteleri yapma ve bireysel öğrenmelerinde çoğunun karşılaştığı problemlere odaklanma imkanı sunar. Kısaca, ev ödevi ile sınıf içi ders işleyişinin yer değiştirmesidir (Verleger & Bishop, 2013). Literatürde bu yeni strateji ile ilgili deneysel olarak son derece az araştırma bulunsa da, bu çalışmada Ters-Yüz sınıf sistemi teknik ve uygulama açısından detaylı şekilde tanıtılacak ve Türk eğitim sistemindeki öğrenme-öğretme kültürüne göre sınıf içi kullanımlarında hangi durumlarda etkili olabileceği incelenecektir. Ayrıca, Ters-Yüz sınıf sistemi'nin, çeşitli eğitim seviyelerindeki etkinliğini ve eğitim ortamını nasıl zenginleştirdiğini ölçen çalışmalar değerlendirilecektir. Türk eğitimcilerin bu gibi yeni öğrenme-öğretim sistemleri ve kullanılan teknolojileri tanımları, bu ortamlardan edinilmiş deneyimleri öğrenmeleri açısından bu çalışmanın yol gösterici olacağı düşünülmektedir.

Anahtar kelimeler: Ters-Yüz Sınıf Sistemi, Eğitim Teknolojisi, Harmanlanmış Öğrenme, Program Geliştirme

GİRİŞ

Hızla gelişen bilim ve teknoloji, toplumların sosyal yapısındaki değişimi ve gelişimi kaçınılmaz hale getirmekte ve eğitim-öğretim kurumlarının da bu değişime ayak uydurma zorunluluğunu ortaya çıkarmaktadır (Davis & Shade, 1994). Diğer yandan teknolojinin sürekli gelişimi, teknolojinin eğitime entegrasyonunu da zorunlu hale getirirken, eğitim sistemleri de —okul öncesi eğitimden üniversiteye kadar— her alanda çağın gereksinimlerini karşılayabilmek ve çağa uyum sağlayabilmek için sürekli gelişim ve değişim mecburiyetindedir. Bu değişikliklere bağlı olarak eğitim sisteminde de “davranışçı” yaklaşımdan “yapılandırmacı” yaklaşıma doğru bir paradigma değişikliği yakalanmaya çalışılmaktadır (Kertil, 2008). Bu değişim, öğretme ve öğrenmeye yönelik yeni yaklaşımların ortaya çıkmasına olanak sağlamış ve öğretim-öğrenim sürecinde yeni bir eğitim stratejisi olan Ters-Yüz sınıf sisteminin eğitimde uygulanabilirliğini gündeme getirmiştir. Ters-Yüz sınıf sistemi, asenkron sistemler yardımı ile öğrencilere çalışacakları konuların bireysel öğrenmeye uygun olan bölümlerine okul dışında da erişebilme fırsatı sunarken, sınıf ortamında bu konularla ilgili daha çok bireysel veya grup olarak problem çözme aktiviteleri yapma imkanı sunmaktadır. Kısaca, öğrencilere bireysel öğrenmelerinde karşılaştıkları problemlere odaklanma fırsatı veren bu sistem, ev ödevi ile sınıf içi ders işleyişinin yer değiştirmesi olarak tanımlanmaktadır (Verleger & Bishop, 2013).

Bu çalışmada Ters-Yüz sınıf sistemi teknik ve uygulama açısından detaylı şekilde tanıtılmış ve Türk eğitim sistemindeki öğrenme-öğretme kültürüne göre sınıf içi kullanımlarında hangi durumlarda etkili olabileceği incelenmiştir. Ayrıca, Ters-Yüz sınıf sistemi'nin, çeşitli eğitim seviyelerindeki etkinliğini ve eğitim ortamını nasıl zenginleştirdiğini ölçen çalışmalar değerlendirilmiştir.

Ters-Yüz Sınıf Sistemi

Ters-Yüz sınıf sistemi, geleneksel öğrenim-öğretimin aksine öğrenciye teorik bilgiyi evde kendi başına öğrenip, öğrendiklerini okulda uygulama fırsatı sunan bir metot olarak tanımlanmaktadır (Zownorega, 2013). Verleger ve Bishop'a (2013) göre bu eğitim sistemi, sınıf ortamında öğrencinin kendi başına çalıştığı konularla ilgili daha çok bireysel veya grup olarak problem çözme aktiviteleri yapma ve bireysel öğrenmelerinde çoğunun

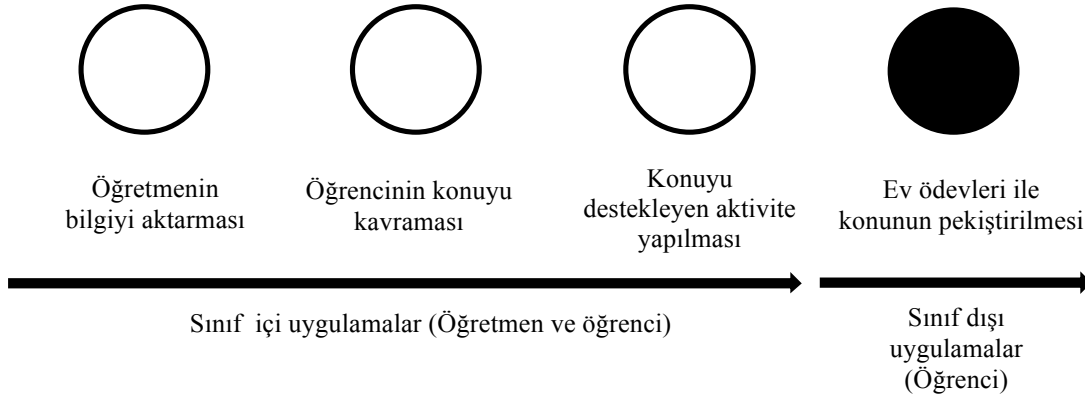

karşılaştığı problemlere odaklanma imkanı sunan, öğretmenin öğrenen ile birebir ilgilenmesine fırsat veren bir öğretim-öğrenim metodudur (Seaman & Gaines 2013). Diğer yandan bu öğretim-öğrenim sistemi, derslerin video kaydının alınması ile öğrenciye istediği bilgiye istediği yer ve zamanda ulaşma imkanı sunarak bireysel öğrenmeyi de desteklemektedir (Talbert, 2012).

Ters-Yüz sınıf sistemi, ilk olarak Miami Üniversitesi ekonomi profesörleri tarafından iş, hukuk, sosyoloji, psikoloji ve felsefe alanlarında okuma ödevlerinin çokluğundan dolayı kullanılmaya başlanmıştır (Lage, Platt, & Treglia, 2000). 2007 yılında Woodland Lisesi'nde öğretmenlik yapan Jonathan Bergman ve Aaron Sams'in powerpoint sunularını kaydetmek için bir yazılım üretmesi ve dersi kaçıran öğrenciler için canlı derslerini kaydedip çevrimiçi olarak yayınlamaya başlaması ile eğitim alanında kullanılan bu sistem diğer öğretmenlerin de dikkatini çekmiştir. Bununla birlikte, Northern Colorado Üniversitesi'nde öğretim elemanlarının sınıftaki zamanlarını ortak çalışma ve uygulamalara ayırarak, dersin içeriğini sunmak için çevrimiçi ve indirilebilir videolar kullanmaya başlamaları ile birlikte (Bergmann & Sams, 2012), 3000'in üstünde katılımcı ile birkaç ay içinde yaygınlaşmaya başlamıştır (Talbert, 2012).

Ters-Yüz sınıf sistemi uygulamasında geleneksel öğretim yönteminden farklı olarak, öğrenciler dersin teorik bölümünü çevrimiçi videolar, sunular, öğrenme yönetim sistemleri gibi çoklu-ortam araçları ile evde öğrenmektedirler (bkz. Şekil1). Ayrıca, konuyla ilgili öğretmenin verdiği temel ders materyallerine ek olarak, içerikle ilgili gerekli araştırmaları yaparak bireysel öğrenme sorumluluğunu elde etmektedirler. Sınıf ortamında ise öğrenciler, konu ile ilgili hazırlanan uygulamalar ve öğrendiklerini paylaşmaya yönelik sunulan tartışma ortamları gibi, öğretmenin yardımcı olmak için aktif şekilde rol aldığı çalışmalarla edindikleri bilgileri paylaşma ve pekiştirme imkanı bulmaktadırlar (Seaman & Gaines, 2013).

Öğrencinin öğrenmesi için en iyi yöntemin eskiden kalma yapı olan geleneksel öğretim yöntemi olmadığını savunan Talbert (2012), öğrencilerin, öğretmen yardımına en çok ihtiyaç duyduğu zamanlarda sınıf dışında olduklarını ve onları zorlayan görevleri sınıf dışında yapmak zorunda kaldıklarını belirtmiştir. Bununla birlikte, sınıf içi öğretmenlerin yeteneklerinin en üst seviyede olduğu, ancak öğrencilerin en az yardıma ihtiyaç duyduğu ve bilişsel becerileri en düşük seviyede kullandığı zaman dilimidir (Arslan & Özpınar, 2008). Gelişim olması için geleneksel yapının tersine çevrilmesi; öğrencilerin sınıf dışında dersler, okumalar ve diğer kaynaklarla temel bilgi alması, sınıf içinde ise zorlu ve üst düzey bilişsel aktivitelerle çalışması gerekmektedir.

Geleneksel Model

Ters Yüz Sınıf Modeli

Şekil 1. Geleneksel Eğitim Modeli ile Ters Yüz Sınıf Modelinin Karşılaştırılması (Zownorega, 2013)

Eğitim-Öğretim ve Öğrenme Ortamları

Günümüzde çoğunlukla öğretmen merkezli bir öğretim sistemi uygulansa da, son yıllarda okullarda öğretmenin rolünün sadece yol gösterici bir rehber olarak tanımlandığı öğrenci merkezli eğitim sisteminin uygulanması gerektiği savunulmaktadır. Bu sistem, gelişen teknolojinin sunduğu imkânlar sayesinde öğrencilere, pek çok kaynaktan bilgiye ulaşma imkanı sunmaktadır. Burada öğretmene düşen görev ise öğrencilere ulaşmak istedikleri bilgiye nasıl ulaşabilecekleri konusunda yol göstermektir (Grover & Stovval, 2013).

Ters-Yüz sınıf sistemi şu şekilde uygulanmaktadır; (1) öğrencinin sınıf dışında geçirdiği zamanın öğrenciyi sınıfta yapılacak olan aktivitelere hazırlaması (2) öğretmenin, öğrencilerin sınıf dışında gerçekleştirdiği ders hazırlık aşamasını değerlendirmesi (3) öğrenciye sınıf ortamında, sadece dinleyip not tutmanın dışında işbirlikçi ve problem tabanlı öğrenme fırsatı vermesi (4) öğrenciye teorik bilgiyi öğrenmek dışında öğretmen eşliğinde pratik yapma ve anında geri bildirim alma olanağı sunulması (McGivney & Xue, 2013). Bu uygulanma şekli göz önünde bulundurulduğunda Ters-Yüz sınıf sistemi, geleneksel yöntemle göre daha öğrenci merkezli, aktif bir öğretim sunmakta ve bu da daha etkili bir öğretim gerçekleştirilmesine yardımcı olmaktadır (Talbert, 2012). Toto ve Nguyen'a göre (2009) Ters-Yüz sınıf sistemi öğrenciye öğretmen rehberliğinde, işbirlikçi öğrenme, problem tabanlı öğrenme, aktif öğrenme, grup çalışmaları ve sınıf içi tartışma imkanı sunduğu için öğrenciye kendi bilgisini oluşturma ve öğrendiği teorik bilgiyi uygulama imkanı sunmaktadır.

Bunun yanı sıra, Ters-Yüz sınıf ortamı dijital öğrenme ortamı ile desteklendiğinde öğrenci, işbirlikçi ve ilgi çekici öğrenme ortamında öğrenim görürken, 7/24 bilgiye erişme imkanına sahip olmaktadır. Bunlara ek olarak, dijital ortamlar, öğrencinin pedagojik özellikleri de göz önünde bulundurularak kullanıldığında öğretimi özelleştirdiği ve geliştirdiği için eğitimin verimlilik düzeyini artırarak geleneksel yöntemle göre daha etkili bir eğitim imkanı sunmaktadır (Seamen & Gaines, 2013). Ters-Yüz sınıf sistemi bir anlamda bireysel öğrenme becerisini gerektirdiği için, bilgi toplumunda yaşayan bireyler; bilgiye nasıl ulaşım onu nasıl sınıflayacaklarını, nasıl üretip diğer bireylerle paylaşacaklarını ve değişen şartlara nasıl uyum sağlayacaklarını öğrenmek zorundadırlar. Kol'a (2011) göre bilgi çağında başarılı olacak bireylerin; bilgi teknolojilerini rahatlıkla ve verimli bir biçimde kullanabilen, girişimci, üretken, yenilikçi, bireysel sorumluluk sahibi, kendini gerçekleştirmiş ve sürekli kendini yenileyen kişiler olması gerektiğini savunmaktadır. Buna bağlı olarak Chang, Sung ve Lee (2003), bilgi teknolojilerinin, işbirlikçi öğrenmenin aşamalarından olan etkileşim yoluyla öğrenme sürecine aktif katkıda bulunmayı destekleyen bir yapıya sahip olduğu için hem bilgiye ulaştırılan hem de bilgiyi oluşturan bir araç olarak kullanılması gerektiğini savunmaktadır. Ayrıca, teknoloji ile zenginleştirilmiş öğrenme ortamları, daha fazla duyu organına hitap ettiği için geleneksel yöntemin aksine öğrencinin ilgisini daha fazla çekip öğretimi kolaylaştırarak zevkli hale getirip, öğrenmenin hızlanmasını sağlamaktadır (İşman, 2005; Yalın, 2003).

Ters-Yüz Sınıf Sisteminin Avantajları ve Dezavantajları

Jenkins'e (2012) göre eğitim tabanlı teknoloji ve çevrimiçi platformlar büyüme ve gelişmeye devam ederken, eğitim dünyasına giren kavram, program ve cihazların artması sonucu ortaya çıkan Ters-Yüz sınıf sistemi, yöneticiler, öğretim üyeleri ve öğretmenler arasında yeni dalgalanmalara sebep olmaktadır. Ters-Yüz sınıf sistemi üstüne yapılan tartışmalar neticesinde öğrenciler ve öğretmenler açısından avantajları şu şekilde sıralanabilir (Duerden, 2013; Miller, 2012):

- Öğrenciler açısından;
 - Öğrenciye becerilerine göre farklı sürelerde öğrenme olanağı sağlaması
 - Öğrencinin yorum yapma yeteneğini geliştirmesi
 - Öğrencinin aktivitelere kullanacağı bilgiyi önceden öğrenmesine olanak sağlaması
 - Hasta olan ya da gelmeyen öğrenciye bilgiye istediği zaman erişme imkanı sunması
 - Ailelere dersleri takip etme ve çocuklarına daha fazla yardımcı olma imkanı sunması
 - Öğrenciye öğrenme faaliyetlerinde sorumluluk almasını sağlaması
 - Öğrenciye uygulamalarda yaşlılarıyla aktif olarak çalışmasına olanak sağlaması
- Öğretmenler açısından;
 - Öğretmene sınıfta bilge değil takıma kılavuz olma imkanı sunması
 - Sınıf içi uygulamalarda öğretmenin öğrencilere daha fazla yardımcı olmasına olanak sağlaması

- Öğrencilerle yapılan etkileşimli aktivitelerden dolayı sınıf yönetiminde öğrenci davranışlarıyla ilgili sorunların azalmasına yardımcı olması
- Öğretmene birebir ve küçük gruplarla çalışma olanağı sağlaması
- Öğretmenin konuyu anlatma ve tekrar etme için harcadığı zamandan tasarruf etmesine olanak sağlaması
- Öğretmenin materyal hazırlarken işbirliği içerisinde çalışmasına olanak sağlaması
- Öğretmen ve öğrenci arasındaki iletişimin gelişmesine olanak sağlaması

Jenkins (2012) Ters-Yüz sınıf sisteminin öğrenci ve öğretmene sağladığı avantajların yanında dezavantajlarında olduğunu savunmaktadır. Öğrencinin videoları izleyip izlemediğini ve konuyu öğrenip öğrenmediğini kontrol etmenin öğretmenler açısından zor olabileceği bu dezavantajların başında gelmektedir. Bununla birlikte, bireysel öğrenme özelliklerine sahip olmayan öğrencilerin, öğrenme sürecinde sorun yaşaması ihtimali de ortaya çıkmaktadır. Ayrıca, öğrencilerin bilgisayar ile birlikte, güçlü internet bağlantısına sahip olma zorunluluğu da ortaya çıkmaktadır. Ters-Yüz sınıf sisteminde, öğrencinin öğretmen ve diğer öğrenciler ile etkileşim kurmadan, sınıf dışında gerçekleştirdiği çalışma sürecinde zorluk yaşayabileceğini savunan Duerden (2013), öğrencinin dersi öğrenirken soru sormadığı, konular arasında anlam ilişkisi kurmadığı için zorluk çekebileceğini ve bunların öğrenme sürecinde kopukluk yaşanmasına sebep olabilecek dezavantajlar olabileceğini belirtmiştir. Miller'a (2012) göre bu sistem kullanılırken eğitim platformunun ihtiyaçlara yönelik olarak hazırlanmaması, öğrencinin dinleme sürecinde aktif olmaması, konuyu öğrenirken konuşabileceği ve tepkisinin ölçülebileceği bir ortamın oluşturulmaması öğrenme etkinliğinin azalmasına sebep olduğu belirtilmektedir. Ayrıca, öğrencinin bilgiyi yanlış öğrenmesi ve yanlış öğrenmesinin anlaşılabilmesi gibi ihtimallerin yanında, yanlış bilgiyi düzeltmek için harcanan ek zaman da bu sistemin uygulanabilirliği açısından dezavantaj olarak görülmektedir.

Örnek Çalışmalar

Ters-Yüz sınıf sisteminin, öğrencilerin öğrenme başarılarına etkisi konusunda geleneksel öğretimden farklılığı ve uygulanabilirliğini ölçmek amacı ile Matematik, İngilizce, Biyoloji, Mühendislik, Bilgisayar gibi alanlarda sayıları az da olsa birtakım araştırmalar yapılmıştır..

Detroit'te bulunan bir lisede öğrencilerin eğitimlerinin desteklenmesi ve gelişmesi amacıyla eğitim modelinin değiştirilmesi gerektiği düşünülerek, Matematik ve İngilizce derslerinde Ters-Yüz sınıf sistemi uygulamasına geçilmiştir. Öğretmenler her hafta için 5-7 dakikalık üçer video hazırlayarak öğrencilerin evde izlemelerini, evinde internet bağlantısı olmayan öğrencilerin ise okulda izlemelerini istemiş ve sınıf içinde etkileşimli aktiviteler ve uygulamalar ile içeriği zenginleştirmişlerdir. Çalışmanın sonucunda, öğrencilerin ev ödevlerini yapmama problemlerinin ortadan kalktığı, öğretmenin öğrenciye içerikle ilgili daha fazla açıklayıcı örnekler verdiği ve öğretmenin dersi tekrar etmek yerine sadece öğrencilerin anlamadıkları konularda onlara yardımcı olduğu tespit edilmiş ve İngilizce dersinde başarısız olan öğrenci yüzdesinin %19'dan %13'e, Matematik dersinde ise %50'den %44'e indiği gözlemlenmiştir (Strayer, 2011)

Benzer şekilde, Miami üniversitesinde Ters-Yüz sistem kullanılarak gerçekleştirilen yazılım mühendisliği sınıfında öğrencilerin uygulama yazılımı geliştirme ve sorumluluk alma konusunda kendilerini geliştirdikleri tespit edilmiştir (Gannod, Burge & Helmick, 2008). Kaliforniya Üniversitesinde ise "Biyolojiye Giriş" dersinde Ters-Yüz sınıf sistemi uygulanarak, öğrencilerin önceden kaydedilmiş videoları sınıf dışında izlemesi ve etkileşimli alıştırmaları takip etmesi sonucu, sınav sonuçlarındaki başarılarında %21 artış olduğu saptanmıştır (Moravec, Williams, Aguilar-Roca & O'Dowd, 2010).

Franklin Üniversitesinde, iki farklı öğrenci grubuna biri geleneksel diğeri Ters-Yüz eğitim olmak üzere iki farklı yöntemin kullanıldığı araştırmada Ters-Yüz eğitim gören grubun geleneksel eğitim gören gruba göre daha yüksek başarı gösterdiği saptanmıştır. Ayrıca "Bilgisayar Bilimlerine Giriş" dersinde bir dönem boyunca uygulanan Ters-Yüz sınıf sistemi ile bilgisayar geçmişi az olan öğrencilerin bu sistemle yeteneklerini geliştirerek yüksek düzeyde teknik beceri kazandıkları gözlenmiştir (Talbert, 2012).

Wetterlund (2008), öğrencilerin arkeoloji bilgilerini geliştirmek amacı ile resimler ve çevrimiçi uygulamalar kullanarak elektronik ortamda sanat müzesi oluşturmuştur. Sanat müzesi ve okul öğretmenlerinin birlikte görev aldığı bu çalışmada, Ters-Yüz sınıf sistemi ile öğrencilerin sanat müzelerinde kullanılan materyalleri öğrenmesi, okuma-izleme-dinleme aktiviteleri ile yorumlama ve sınıflandırma becerilerinin geliştirilmesi hedeflenmiştir.

Çalışmanın sonucunda, bu yöntemin konunun anlaşılabilirliğini arttırdığı ve öğrencilerin dersi kısa sürede etkili şekilde öğrenmelerine katkı sağladığı gözlemlenmiştir.

SONUÇ VE ÖNERİLER

Türk eğitim sisteminde doksanlı yıllarda öğrenciyi hesaba katmayan, hiyerarşik ve aşırı katı bir öğretim biçimi olan “Davranışçı” yaklaşım ve eğitim uygulamaları yaygın olsa da, son yıllarda kuram ve uygulama anlamında davranışçı yaklaşımın tam tersine bir öğretim metodu olan “Yapılandırmacı” (constructivist) eğitim ve öğretim metodunun tüm dünyada olduğu gibi Türkiye’de de yaygınlaştığı görülmektedir (Çelen, Çelik & Seferoğlu, 2011). Öte yandan “Yapılandırmacı” yaklaşıma destek niteliğinde öğrenenleri araştıran sorgulayan, yaparak yaşayarak öğrenen ve öğrendiği bilgileri içselleştirip öznel anlamlandırmalar oluşturan bireyler haline getirebilmek için her geçen gün okullarda teknoloji kullanımını yaygınlaştırmayla ilgili çalışmalar da gerçekleştirilmeye çalışılmaktadır.

Ancak eğitim alanındaki bu değişim Türkiye’nin eğitim sisteminde istediği noktaya ulaşmasını tam olarak sağlayamamıştır. Ülkelerin öğretim programlarındaki gerekli düzenlemeleri yapabilmeleri, öğretim sistemlerindeki eksiklikleri giderebilmeleri ve uluslararası düzeyde kendi başarılarını görebilmeleri amacıyla son yıllarda bazı çalışmalar gerçekleştirilmektedir. Uluslararası Öğrenci Değerlendirme Programı olarak adlandırılan, ekonomik İşbirliği ve Kalkınma Örgütü (OECD) tarafından 15 yaş grubundaki öğrencilerin zorunlu eğitim sonunda hayata hazır oluş durumlarını belirlemek için üç yılda bir gerçekleştirilen dünyanın en kapsamlı eğitim araştırması olan PISA 2012 sonuçlarına göre Türkiye, değerlendirilen 65 ülke arasında ilk 40’a giremeyip OECD puanlarının oldukça altında kalmıştır. (Türkiye, yine sınıfta kaldı, 2013). PISA sonuçları eğitim sistemimizin sınıfta kaldığını ve yıllardır reformlarla dönüştürmeye çalıştığımız bu sistemin anlamlı bir ilerleme kaydetmediğini göstermektedir. Türkiye’nin diğer ülkelere göre geri kalmasının sebepleri arasında çok fazla sınav yapılması, yanlış nitelikte ev ödevi verilmesi, eğitim sisteminin öğrencilere bireysel öğrenme ortamı sunmaması ve teknoloji kullanımının yetersizliği yer almaktadır (PISA, 2012). Eğitim-öğretimde pedagojik açıdan doğruluğu tartışılan ev ödevleri çocukların belli konularda önceden bilgi sahibi olmalarını sağlayan veya belli konularda alıştırmalar yaparak bilgilerini pekiştirmeye yarayan bir öğretim tekniğidir (İlgar, 2005). Ancak ev ödevlerinden yeterli faydanın sağlanabilmesi için amaca yönelik ödev haline dönüştürülmelidir (Giasser, 1990). Bu bağlamda, geleneksel eğitimin aksine ev ödevlerinin içeriğinde, Ters-Yüz sınıf sisteminde gerçekleştirilmesi istenen konuyu öğrenme aktivitelerinin yer almasının öğrenci başarısını arttıracığı düşünülebilir.

Bilgi ve iletişim teknolojilerinin gelişmesi, her alana büyük yenilikler getirdiği gibi eğitim dünyasına da büyük yenilikler getirmiştir (Odabaşı, 2010). Bu bağlamda, okullarda teknoloji kullanımının yaygınlaştırılması, eğitim ve öğretimde niteliğin artırılması için farklı yöntemler denenmektedir. Türkiye’de son yıllarda farklı ve ilginç öğrenme etkinlikleri içeren eğitsel yazılımlar, oyun tabanlı öğrenme ortamları, web tabanlı öğrenme ortamları, e-öğrenme içerikleri kullanılarak ders içerikleri zenginleştirilmeye çalışılsa da (Çelen ve diğ., 2011), öğretmenlerin bilgi ve iletişim teknolojilerini kullanma konusunda ciddi eksikliklerinin olduğu ve bazı öğretmenlerin nadiren bilgisayar kullandıkları, vurgulanmaktadır (Kayaduman ve diğ., 2011). Ters-yüz sınıf sisteminin gereklilikleri göz önünde bulundurulduğunda, Türkiye’de kullanımının yaygınlaştırılması için öğretmenlerin bu sistem hakkında bilgilendirilmesinin ve teknoloji kullanımı konusunda motivasyonlarının artırılmasının önemli olduğu düşünülmektedir.

Özdem (2007) bireyin sınıf ortamı dışına taşındığı ve eğitimini bireysel olarak gerçekleştirdiği uzaktan eğitim sisteminin, eğitim kurumlarına ulaşmada sorun yaşayan hasta, özürlü ve suçlu insanların kendine uygun olmayan ders saatlerinde en iyi eğitimi almasına olanak sağladığını vurgulamaktadır. Bununla birlikte, Türkiye’de de gelişen ve sürekli değişim içerisinde olan bilimin etkisi ile eğitime olan talep artışı, maliyet ve zaman konusunda yaşanan sıkıntılara çözüm olarak uzaktan eğitim sisteminin kullanımının yaygınlaştığı düşünülmektedir (Yadigar, 2010). Öğrencilerin konuyu evde öğrenip, uygulamaları okulda yapması teorisine dayanan Ters-Yüz sınıf sisteminde öğrencilerin uzaktan eğitim sistemi ve araçlarını kullanmasının önemli bir yeri olduğu vurgulanmaktadır (Bergmann & Sams, 2012). Bu nedenle Türkiye’de uzaktan eğitim sisteminin Ters-Yüz sınıf sistemine entegrasyonu konusunda çalışmaların artırılması, konuyu öğrenme aşamasında öğrencilerin en üst seviyede fayda sağlayabileceği uzaktan eğitim metodlarının belirlenmesi ve kullanılması gerekmektedir. Literatürde Türkiye’de Ters-Yüz sınıf modelinin kullanımı yaygın olarak görülmesi de, Graham’ın (2006) çevrim içi ve yüz yüze öğrenme gibi iki ayrı öğrenme modelini bir araya getiren sistem, Demirer’in (2009) ise sınıf içi öğrenme ile internet teknolojilerinin birleştirildiği sistem olarak tanımladığı harmanlanmış öğrenme

modelinin uygulanma örneklerine rastlanmaktadır. Bazı araştırmacılar, biyoloji, coğrafya, yabancı dil, bilgi teknolojileri gibi derslerde uygulaması yapılan harmanlanmış öğrenme yönteminin kısa süreli kullanımında öğrencilerin başarısına ve tutumlarına anlamlı bir değişiklik yapmadığını savunmaktadırlar (Çepni, Taş & Köse, 2006; Gönen & Kocakaya, 2008; Maskan & Güler, 2004). Diğer yandan, harmanlanmış öğrenmenin derslerin belirli konularında etkili olduğunu düşünen Yapıcı ve Akbayın'da (2012) harmanlanmış öğrenme yönteminin uzun vadede öğrenci başarısına etkilediğini söylemektedirler. Dolayısıyla, eğitime yeni bir bakış açısı getirmek, eğitim ortamını zenginleştirmek, ders etkinliğini artırmak amacıyla büyük fayda sağlayacağı düşünülen Ters-Yüz sınıf sisteminin kullanılabilirliği gün yüzüne çıkmaktadır. Harmanlanmış öğrenmeden farklı olarak Ters-Yüz sınıf modelinde yüz yüze öğrenme yerine sınıf içi öğrenme ortamının uygulama ve aktivitelere ayrılması ile öğretmenlerden maksimum yardım alınabilir ve öğrenciler konuyu daha kolay ve kalıcı şekilde öğrenebilir. Bununla birlikte, Özmen'in (2004) öğrencilerin kendisine ulaşan bilgileri aynen almadığını, bilgileri öğrenirken kişisel özelliklerinin ve öğrenme ortamının büyük etkisi olduğunu savunduğunu düşünüldüğünde de Türkiye de bu sistemin kullanımının arttırılmasının eğitim alanına büyük katkı sağlayacağı fikri ortaya çıkmaktadır.

Ters-Yüz sınıf sisteminin Türkiye'de az kullanımının nedenlerden biri olarak, öğretmenlerin Ters-Yüz sınıf sistemi kullanımı ve faydaları ile ilgili yeterli bilgiye sahip olmamaları söylenebilir. Ayrıca, ulusal ve uluslararası alanyazında Ters-Yüz sınıf sisteminin tanımı ve uygulanabilirliğinin ölçüldüğü araştırmaların yok denecek kadar az olması bu sistemin yaygın olarak kullanılmasına engel olabilir. Çoklu ortam araçları kullanılarak materyal tasarlanması ve bu materyallerin öğrenme yönetim sistemleri ile öğrencilere aktarılması becerilerinin gelişmesine dayanan bu sistemde, öğretmenlerin teknolojik araçları kullanma ilgi, istek ve motivasyonlarının az olması da okullarda bu sistemin yaygınlaşması konusunda yaşanan sorunlardan biridir. Eğitim ortamının zenginleşmesi, ders etkinliğinin artırılması ve etkileşimli ders işlenmesi konusunda büyük fayda sağlayan Ters-Yüz sınıf sisteminin, öğretmen ve öğrenciye sağladığı kolaylıklardan yararlanılabilmesi için şu şartlar gerçekleşmelidir:

1. Bu sistem ile ilgili gerekli inceleme ve araştırmaların yapılması,
2. Öğretmenlerin bu sistemin faydaları ve uygulanabilirliği açısından bilgilendirilmesi,
3. Ters-Yüz sınıf sisteminin hangi alanlarda daha etkin şekilde kullanılabileceğinin araştırılması ve eğitim sistemine sağlayacağı faydaların benimsenmesi,
4. Okullarda bu sistemin kullanılabilmesi için gerekli eğitim platformlarının oluşturulması,

Bu şartların sağlanması durumunda, eğitimde yeni bir süreç olan Ters-Yüz sınıf sisteminin dünyadaki uygulamalarından toplanan verilerin sonuçları da dikkate alınarak, bu sistemin tanınması ve Türk Eğitim sistemine entegre edilmesi durumunda, eğitim sürecinde öğrenci ve öğretmenlere birçok kolaylık sağlayacağı düşünülmektedir.

Özet

Eğitimin üçlü ayağında öğretmen öğrenci ve veli birbirini tamamlayan bir bütün oluşturmaktadır. Bu üçlü grup içindeki bilgi alışverişi, iletişimin kalitesi, eğitimin amacına ulaşmasında ve işlevselliği açısından önemlidir. Öğretmen öğrenci ve veli ilişkilerinde öğretmen öğrenci, öğretmen veli, öğrenci veli gibi birbirinden farklı boyutlar ve çözülmesi gereken farklı sorunlar vardır. Her grubun ve o grubu oluşturan kişilerin sorunları çözmeye biçimleri kendine özeldir. Forum tiyatro sorunların çözümünde, sorunlarla ilgili farkındalık oluşturulmasında önemli bir araçtır. Herkesin kendi sorununu kendi bilgisi donanımı ve koşulları elverdiği oranda çözmesi, bulunan çözümleri işlevliliğini görebilmesi açısından Forum Tiyatro önemlidir ve katılımcısına tüm bu olanakları verir. Bu bildirinin konusunu öğretmen veli ilişkilerinin düzenlenmesinde, sorunların çözümünde Forum Tiyatrodan ne şekilde yararlanılacağı İstanbul’da çeşitli liselerde yapılan örneklerle anlatılacaktır.

Anahtar kelimeler:

GİRİŞ

Bir ülkenin geleceğini eğitim sistemi, eğitimin kalitesi belirler. Değişen çağın koşullarına uygun eğitim programları, uygun fiziksel koşullar ve bu koşulları organize edecek ve uygulayacak insan faktörü eğitimin kalitesini belirleyen temel unsurlardır. İnsan faktörü dendiğinde öğrenci, öğretmen ve veliden oluşan üçlü bir grup akla gelmektedir. Bu üçlü grup tıpkı üçayaklı bir masa gibi birbirine destek olan, birbirini tamamlayan bir bütündür.

Öğretmen, öğrenci ve ebeveyn arasındaki bilgi alışverişi, iletişim ve iletişimin kalitesi, eğitimin ve öğretimin amacına ulaşmasında önemli bir etkidir. Öğretmen öğrenci ve veli ilişkilerinde öğretmen-öğrenci, öğretmen-veli, öğrenci-veli ve hatta öğrenci-öğrenci gibi birbirinden bağımsız, farklı boyutlarda iletişim biçimleri vardır. Her grubun kendi içinde ve birbirleriyle olan iletişimleri kendine özeldir. Öğretmen öğrenci arasında gözle görünür biçimde var olan hiyerarşik yapı, öğretmen ebeveyn arasında daha belirsiz, daha dile getirilmemiş alanlara doğru kayar. Her bir grup, diğer gruba karşı taraf olmak durumunda kalır ve bu kendiliğinden gelişen bir süreçtir. Taraflar arasında yaşanan sorunlar, iletişim kopukluğu ya da doğru iletişimin, doğrudan eğitimin kalitesini dolayısıyla öğretmen veli ve öğrenci üçgeninde merkezde olan öğrencinin eğitim ve öğretim durumunu da etkiler.

Etkili insan ilişkileri ve iyi bir iletişim eğitim sisteminin amaçlarına ulaşmasında önemli bir etmendir. Bir eğitim kurumunun örgütsel, yönetsel ve eğitsel amaçları vardır ve bunları gerçekleştirmek için kurulur.

“Okulda insan ilişkilerinin amacı, tüm eğitim iş görenlerini okulun amaçlarını (sosyal, ekonomik ve politik) geliştirmeye yöneltmek ve eğitim iş görenlerinin gereksinimlerini karşılamak için takım çalışması yapmaya güdülemek olarak ifade edilebilir. Okul yönetimi, okulun iç öğeleri (öğretmen, öğrenci, eğitici olmayan personel) ve dış öğeleri ile (aileler, ticari kuruluşlar, baskı grupları ve merkez örgütü) işbirliği yaparak her kesimi tatmin edebilecek sağlıklı ve sürekli insan ilişkileri ile okul kültürü ve iklimi oluşturmaya çalışmalıdır. Okulda insan ilişkilerini “yönetim-öğrenci ilişkileri”, “öğretmen-öğrenci ilişkileri”, “öğrenci-öğrenci ilişkileri” ve “okul-çevre-öğrenci ilişkileri” olmak üzere değişik boyutlarda ele almak mümkündür. Bu beş grup arasında kurulan ve sürdürülen ilişkilerin niteliği, okullarda verilen eğitimin niteliği ve öğrencilerin akademik başarıları üzerinde olumlu etkiye sahiptir.

(dhgm.meb.gov.tr/yayimlar/dergiler/Milli_Egitim_Dergisi/.../cinkir.htm)

Eğitim sistemi içinde özellikle öğretmenler önemli bir rol oynarlar. Çocuklarla gerektiği gibi iletişim kurabilen, onların dilinden anlayan, güvenen ve güvenilen bir öğretmen çocuktaki öğrenme zevki uyandırarak çocuğun gelecekteki yaşamını da şekillendirebilir. Öğretmenin başarısı bu iletişim biçiminde saklıdır. Öğretmenin başarısı ise genel olarak öğrencinin sınav sonucu aldığı not olarak değerlendirilir. Çocuğun ortaya koyduğu bu performansa, başarı derecesine aslında çocuk kadar çevresinde bulunan ebeveyn, öğretmen de sahip çıkar. Ebeveyn ve öğretmen çocuğun başarısını kendi başarısı olarak gördüğü gibi başarısızlığı durumunda da

birbirlerini suçlamakta herhangi bir tereddüt göstermezler. Çocuğun başarısızlığı karşısında “öğretmenin iyi anlatıp anlatamaması”, “ebeveyn’in yeterli ilgiyi gösterip göstermemesi”, “çocuğun dikkatinin dağınık olması” gibi küçük dokundurmalar gündeme gelir. Bu ciddi anlamda baskı oluşturan bir durumdur. Bu süreç, ezen ezilen ilişkisine kolaylıkla dönüşebilen süreçtir. Oysa taraflar arasında kurulacak olan etkili iletişim sorunları ciddi anlamda yok edeceği gibi eğitimin kalitesi de artacaktır.

Forum tiyatro sorunun ifade edilmesi, çözüm arama ve uygulama noktasında önemli bir araçtır. İnsanoğlu kendini gözlemlerken, ne olduğunu fark eder, ne olmadığını keşfeder ve ne olabileceğini hayal eder. Nerede olduğunu, nerede olmadığını kavrar. Nereye gidebileceğini tasarlar. Bu noktada bir üçlü ortaya çıkar: gözlemleyen ben, durum içindeki ben ve ben olmayan ben, yani öteki. Yalnızca insanoğlu, imgesel bir aynada kendini gözleme yetisine sahiptir. Estetik alan bu hayali aynayı sağlar. Bu hayali ayna aracılığıyla insanoğlu kendine yabancılaşır, kendini izler, gözlemler ve bu sırada bazı şeyleri fark eder. Forum tiyatro yapmak için oyun öncesi küçük bir örnek grupla yapılan atölye çalışmaları yaşanan sorunların, baskıların bir başka deyişle ezen ezilen durumunun tespit edilmesi için gereklidir.

Forum tiyatro seyircisine içinde bulunduğu durumun farkına varmasını değerlendirmesine yardım eder. Homojen bir seyirci grubu karşısında sunulan ve seyircinin sahneye çıkarak eylemde bulunmasını sağlayan Forum Tiyatro seyircisini eyleme geçirerek gerçek dünyada benzer bir durumla karşılaştığı zaman ne yapması gerektiği hakkında bilgi sahibi olur. Gerçek dünyanın prova alanıdır sahne. Seyirci sahnede ezilen kahramanın yerine geçerek olaya müdahale eder. Yapabilecekleri şeyleri sahnede deneyerek öğrenir.

Baskının analizi:

“Baskı” kaynaklarda hak ve özgürlükleri kısıtlayarak zor altında bulundurma durumu, bir başka tanımda ise “belirli ruhsal etkinlik ve süreçleri, kişinin isteği dışında bilinçaltına itmesi veya bu itilenlerin bilince çıkmasını önleme durumu” şeklinde açıklanmış. Her iki tanımda da bir kısıtlama, bastırma söz konusu. Ancak ilkinde bilinçli bir kısıtlama, engel olma hali var iken ikincisinde bilinçaltına itilmiş, bilince çıkmasını engelleme durumu söz konusu edilmiş. Buradan şöyle bir sonuç çıkarabiliriz; bizler baskı durumunu her zaman fark edemeyebiliriz. Yani, baskıyı öylesine içselleştiririz ki onu yaşamımızın bir parçası, bir gerekliliği olarak, hatta doğal bir durummuş gibi kabul ederek birlikte yaşamın yollarını ararız. Başta toplumsal bilinç, gelenekler olmak üzere, yazılı ve yazılı olmayan kurallar, dayatılan toplumsal cinsiyet rolleri, başka türlü düşünmemizi engelleyerek bu duruma uyum sağlamaya çalışmamıza neden olur.

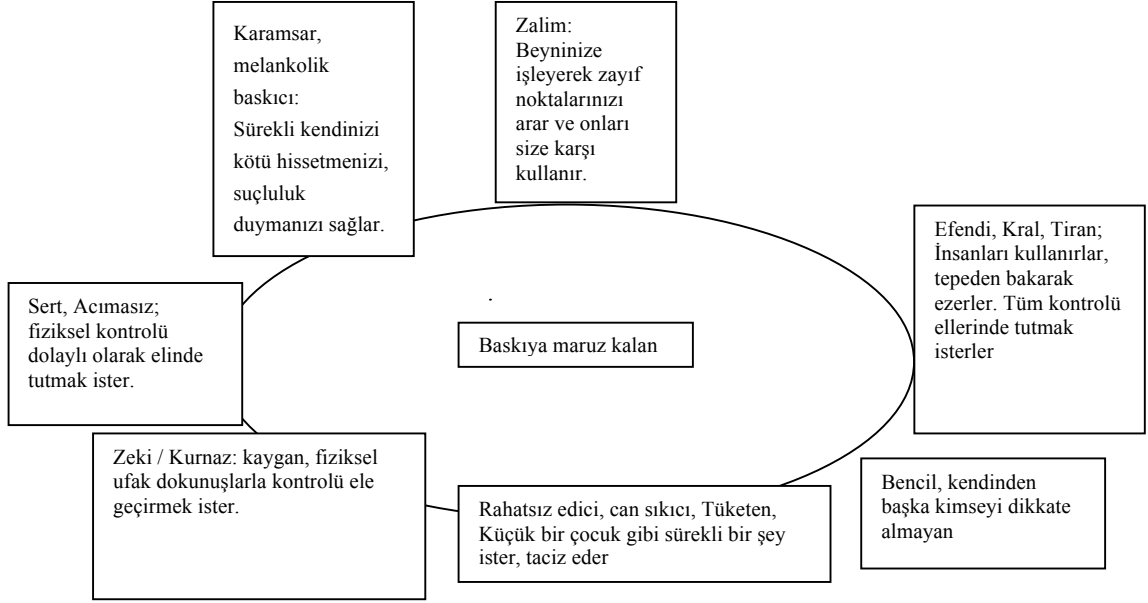

Baskı çeşitli biçimlerde yaşamımızda vardır. Paulo Freire “Ezilenlerin Pedagojisi” adlı eserinde insanın varlık nedenini “kendi dünyası üzerinde eylemde bulunmak, bu dünyayı dönüştüren bir özne olmak, daha zengin bir hayata giden yepyeni olanaklara doğru hareket etmek” olarak açıklamaktadır. (Freire:14) Freire’in deşindiğı bu dünya statik, kapalı, korunması gereken, insanın kabul etmek zorunda olduğı, kendini uydurmak zorunda olduğı, bir dünya değıldir. Bu dünyayı, üzerinde çalışılması ve çözülmesi gereken bir problem olarak kabul etmek gerekir. Bu problem, insanoğlunun tarihi oluştururken kullandığı malzemedir. İnsanın, belirli bir zaman ve yerde birçok sorunu alt ederek, yeni olanı yaratma cesareti göstererek yerine getirdiğı bir görevdir.

Freire ne kadar “cahil” veya “sessizlik kültürüne” gömülü olursa olsun, her insanın ötekilerle diyalog içinde yüzleşerek dünyasına eleştirel bakma yeteneğinde olduğunu düşünür. Böylesi bir yüzleşme için uygun araçlar sağlandığında insan kendi kişisel ve sosyal gerçekliğini de, bu gerçekliğin çelişkilerini de kademe kademe algılayabilir. “İnsanlar dünya aracılığıyla birbirlerini eğitebilirler. Bu olurken “söz” yeni bir güç kazanır. Freire’in ifadesiyle her insan kendi sözünü söyleme yoluyla dünyayı adlandırma ve dolayısıyla değıştirme dönüştürme hakkını yeniden kazanır.

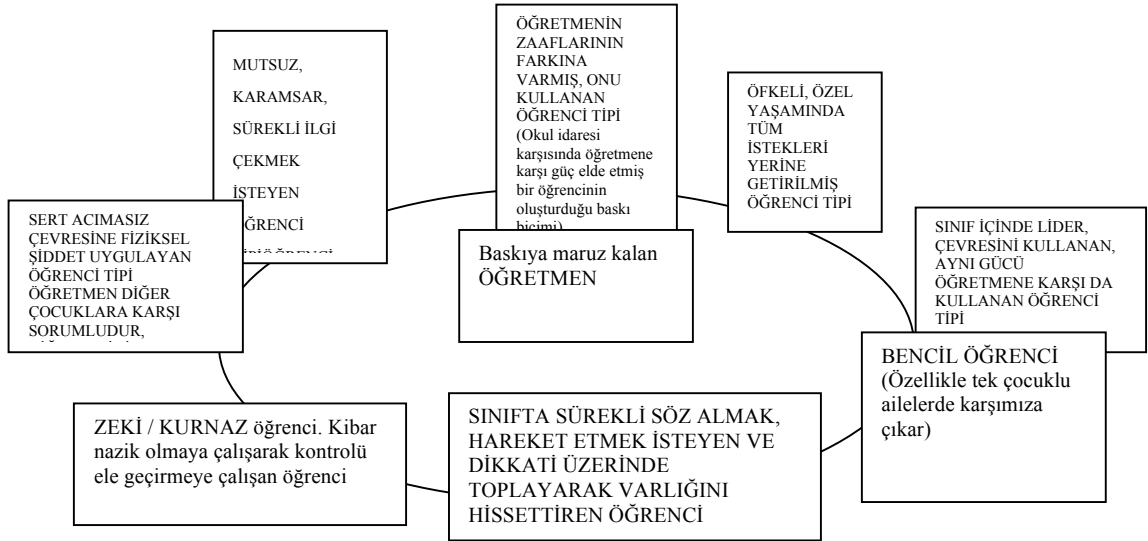

Söz içinde iki boyut barındırır: Düşünce ve Eylem. Her ikisinin bir bütünlük içinde olması gerekir. Bu ikisi öylesine bir bütünlük içindedir ki birinden verilen en ufak bir ödün diğlerinin de zarar görmesine neden olur. Çünkü, *Eylem + Düşünce = söz=iş’dir*. Düşüncenin olduğı ama eylemin olmadığı yerde varılan nokta “Lafazanlık”tır. Düşüncenin bir tarafa bırakılmasıyla ise, söz eyleme dönüştürülmüş olur. Eylem için eylem ise doğru uygulamaya izin vermez. Diyalogu imkânsız kılar. Sözün her biçimdeki bölünüşü özgün/gerçek olmayan düşünce biçimleri yaratır. (Freire:1998:66) Bu nedenle gerçek bir “söz” söylemek söz ile eylemi bir arada kullanmaktır ve ancak dünyayı gerçek bir söz söylediğimiz zaman değıştirebiliriz, dönüştürebiliriz.

Baskı Modelleri:

İnsan sosyal bir varlıktır ve içinde bulunduğu toplumla sürekli iletişim halindedir. Bu iletişim sırasında yazılı olan ve olmayan baskı modelleri hayatımızın her anında yer alabilir. Bu baskı modellerini şöyle gösterebiliriz: Şekil-1 içselleştirdiğimiz baskı modelleri (Malbogut, Iogna: 24)

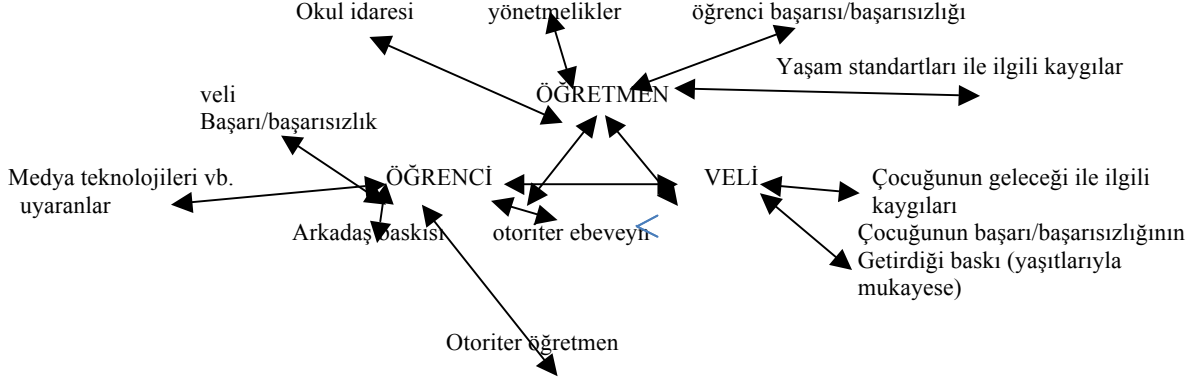

Yukarıdaki şemada görüldüğü üzere merkezde baskıya maruz kalan kişi, çemberin dışında bulunan karamsar melankolik baskıcı modelinde, yaşlı bir yakınının yalnızlığını kullanarak sitemle dile getirmesi o kişi için bir baskı modelidir. Kişinin kendisini suçlu hissetmesine neden olur ve üzerinde baskı oluşturur. Zeki kurnaz baskıcı, nazik kibar hareketlerle o kişinin yapmak istemediği bir şeyi yaptırabilir. Ya da çocuğun sürekli sizden bir şeyler istemesi, mızımızlanması da bir anne ya da baba için karşı koyamadı bir baskı modelidir. Şemada görülen diğer baskı modellerinin her biri tanıdık, günlük yaşam içinde karşımıza çıkan bizde bazı birikimlere neden olan baskı biçimleridir. Aynı şemayı aşağıda görüldüğü üzere öğretmen/öğrenci, öğretmen/veli ilişkileri açısından da ele alarak uyarlayabiliriz. Öğretmenin maruz kaldığı baskı öğrenci ve veli ilişkilerinde ortaya çıkabilir.

Şekil-2 Bir öğretmenin üzerinde bulunan baskı modelleri (Malbogat, Iogna: 24 şemasına göre)

Yukarıda şemada görüldüğü gibi öğretmen öğrencisinin karşısında farklı baskı modelleriyle karşı karşıyadır. Bu baskı biçimleri doğrudan öğrenciden gelebildiği gibi öğrenci aracılığıyla ebeveynden, okul idaresinden de gelebilir.

Bu ilişki biçimi çok yönlü olarak kurulur. Öğretmen Öğrenci Veli karşılıklı olarak her biri tek tek ve ayrı ayrı karşılıklı birbiri üzerinde bir baskı alanı oluşturabilirler.

Şekil.2: Öğretmen, öğrenci ve veli'nin birbiri üzerinde kurduğu baskılar

Forum Tiyatro:

Örnek:1 Öğrenci & Öğretmen, Öğrenci & Ebeveyn ve Öğrenci & Öğrenci ilişkileri:

Öğrencilerle sorun belirleme ve belirlenen sorunlardan oluşan bir oyun hazırlamak üzere günde üç saat olmak üzere dört gün atölye çalışması yapıldı. Çalışmada, donmuş ve canlanan imgeler, iç ses dinleme, ikili üçlü ve grup heykelleri, heykellere öyküler oluşturma, sorun sergileme, yerinde ben olsaydım, empati kurma gibi tekniklerle sorunlar belirlendi. Belirlenen sorunlar gruplandırıldı. Dramatik kurgular oluşturuldu, çatışma noktaları belirlendi ve ön oyunlar oluşturuldu.

Ortaya çıkan sorunlar üç başlık altında toplandı.

-- Öğrenci ve öğretmen ilişkileri: Bu ilişkilerde ortaya çıkan temel sorun öğrencilerin kılık kıyafet yönetmeliğine karşı ortaya koydukları tavır ve idarenin ve öğretmenlerin bu soruna karşı ortaya koydukları ısrarlı sert aşağılayıcı tutumları. Bir diğer sorun sınıfta bulunan bir kız ve erkek öğrencinin arasındaki ilişki biçimi velilere olduğundan farklı aksettirilmesi.

--Öğrenci ve öğrenci ilişkileri: Sınıfta çalışkan öğrencilere karşı diğerleri tarafından sergilenen dışlama tavrının yanı sıra, okul çıkışı ders çalışma yerine bir kafeye gidip oturma, sinemaya gitme, sigara içme konusunda ısrarcı davranışlar ve bunlara karşı olan öğrencilerin dışlayıcı, küçümseyici tavırlarla mücadele etmek zorunda kalmaları

--Öğrenci ve veli ilişkileri: Grup son sınıf öğrencilerinden oluşuyordu ve hepsinin üniversiteye hazırlık senesiydi. Çocuklar ne kadar çok ders çalışırlarsa çalışınlar aileleri tarafından yeterli bulunmuyorlardı. Bir ikinci sorun, üniversiteyi İstanbul dışında okuma isteğine ailelerin çeşitli gerekçelerle karşı çıkmaları. Üçüncü sorun ise kızların erkek arkadaş edinmeleri karşısında ebeveynin sergilediği tavır.

Ön Oyun:

Sabah kontrollerinin yapıldığı saatin canlandırıldığı sahneyle ön oyun başladı. Daha sonra sınıfa girip oturdular. Çalışkan öğrenci ile o günkü sınavın pazarlığı yapıldı. Bu arada bir erkek öğrenci yanındaki kız öğrencinin omzuna elini atmış vaziyette oturmuş kızın gösterdiği ders notlarından bir konuyu takip ediyordu. O sırada öğretmen geldi ve kıza ve erkek öğrenciye bağırarak kızın babasına telefon açıp şikâyet edeceğini söyledi. Üçüncü bölüm ise evde geçiyordu. Kız ders çalışırken tam ara verip biraz müzik dinlenmek istediği sırada annesi odaya giriyor, annesi tarafından çalışmamakla suçlanıyordu. Kız annesini ara verdiği konusunda ikna etmeye çalışıyordu. Ayrıca İstanbul dışında okuma isteği gündeme geldiğinde abi şiddetle karşı çıkarak babayı da etkiliyordu. Oyun 15 dakika ile sınırlandırılarak sergilenmek üzere hazırlandı. Seyirci grubu olarak okulun lise bölümü öğrencileri davet edildi.

Forum:

Önce öğrenciler kendi aralarında çözüm aradılar. Rahatsızlıklarını dile getiren imzasız mektup göndermekten, grup halinde müdürün yanına gidip sıkıntılarını dile getirmeye kadar birçok öneri geldi. Daha sonra okul müdürü ve öğretmenler etkinliğe davet edilerek sahneye çıkarıldı. Önce öğretmen (müdür yardımcısı) öğrencinin yerine geçerek öğrencinin kıyafet kontrolünden geçerken yaşadıkları yaşamı sağlandı. Öğrenciler öğrenci rolündeki öğretmene öğretmenin kontrollerde kullandığı kendi sözcükleriyle karşı çıktılar, bu salonda alkışlarla karşılandı. Öğretmenin itirazları önerileri çıkışsız kaldı. Davet edilen bir başka öğretmen de benzeri durumlar sergilendi.

Müdür sahneye davet edildi. Müdürün bazı itirazları, öğrenciler tarafından aynı müdürün kontrollerde kullandığı sözleriyle kesildi. Bir iki öneriden sonra müdür oyunu keserek aslında kendisi de kıyafetlere bu kadar karışılmasından hoşnut olmadığını, kravat takmayı sevmediğini ama kendisinin de sorumlu olduğu bir Milli Eğitim Müdürlüğü olduğunu dile getirdi.

Radikal bir çözüm bulunamadı. Oyunun sonunda sahneye davet edilen rehber öğretmen, öğrencilere açıklamalarda bulundu. Verdiği bilgiler arasında yönetmelikler, uygulanma gerekçeleri, ikili ilişkilerde dikkat edilmesi gereken noktalar, aileleri ile ilgili ilişkilerde çeşitli davranma modelleri, olası sonuçlar, empati ve önemi gibi konular yer alıyordu.

Örnek:2 Öğretmen Veli ve İdareci ilişkileri

Bir devlet okulunda çalışan öğretmen bir velisinden şikâyetçiydi. Veli zengin bir iş adamı ve her fırsatta okula yardımlarda bulunuyor, buna karşılık çocuğuna karşı ayrıcalıklı davranılmasını istiyordu. Öğretmenle çocuğu ile ilgili yaşadığı bir anlaşmazlık durumunda müdüre gitmiş, müdür de veliden yana bir tavırla hafta başında odasına gelmesini istemişti öğretmenin.

Olayı anlatan öğretmenin tarifine göre ön oyun oluşturuldu. Buna göre, müdür masasında oturduğu sırada veli gelir, öğretmenle ilgili şikâyetini dile getirir. Laf aralarında kendisinin okul ile ilgili yardımlarından söz eder ve başka bir ihtiyacınız olursa lütfen bildirin der. O sırada öğretmen girer odaya. Müdür biraz tepeden bakarak öğretmene sorunun ne olduğunu sorar. Öğretmen kısaca durumu özetler, veli sert bir şekilde öğretmenin sözünü keserek itiraz eder, müdür veliyi yatıştırır gibi bir tavır alır. Oyun kesilir, seyirciye dönülür.

Bu çalışma sırasında gözlenen en önemli ayrıntı öğretmenlerin oyun sonunda kendilerini karşısında gerçek müdür ve veli varmış gibi hissettiklerini söyleyeceklerinden emin olduklarını kendilerini daha güçlü hissettiklerini dile getirdiler.

Odak Grup Görüşmesi:

Bu çalışmada örneklem olarak biri İstanbul'da bir meslek lisesinde (12 öğrenci 5K+7E), ikincisi Muğla/Fethiye'de Anadolu Lisesinde (3K+4E) ve diğer üçüncüsü ise yine İstanbul'da bir özel lisede (6K+7E) gerçekleştirilmiştir. Ayrıca iki okulda atölye çalışması ve Forum uygulayan öğrencilerin yanı sıra Forum katılan idareci ve öğretmenlerle de odak grup çalışması yapılmıştır. Görüşme, İstanbul'daki okulda bir müdür beş öğretmen, Fethiye'de ise bir müdür üç öğretmenle gerçekleştirilmiştir.

Nitel araştırma tekniklerine dayanan bu çalışmada yarı yapılandırılmış görüşme ve odak grup görüşmesi aynı anda uygulanmıştır. Odak grup görüşmesi her üç gruba da Forum yapıldıktan bir gün sonra uygulanmıştır. Her bir görüşme yaklaşık 45 dakika sürmüştür. Görüşmeler grupların izni alınarak ses kayıt cihazına kaydedilmiştir. Odak grup görüşmelerinin amacı, belirlenen bir konu hakkında katılımcıların bakış açılarına, yaşantılarına, ilgilerine, deneyimlerine, eğilimlerine, düşüncelerine, algılarına, duygularına, tutum ve alışkanlıklarına dair derinlemesine, detaylı ve çok boyutlu nitel bilgi edinmektir (Çokluk:2011: 98) Odak grup görüşmelerinde önemli olan katılımcıların kendi görüşlerini özgürce ortaya koymalarını sağlayacak ortam oluşturmaktır. Bu nedenle öğretmen ve öğrenci gruplarıyla ayrı ayrı görüşme yapılmıştır.

Bu etkinlikte, Forum sırasında salonda veliler yer almadığı için onlara yönelik bir çalışma yapılamamıştır.

Forum Tiyatro Atölyesine Katılan ve Oyun Sergileyen Gruplarla Yapılan Odak Grup Görüşmesi:

Forum tiyatro çalışması, önceden de dile getirildiği gibi hazırlık, sunum ve forum olmak üzere üç aşamalı bir süreci kapsıyor. Bu sürecin başından itibaren çalışmalara katılan grup üyeleri, özellikle workshop sırasında tartışmalı, bedensel ifadenin önemli olduğu, yani düşüncelerin bedensel ifadeye dönüştürülmesi ve sözsüz ifade ile (sadece ses, jest ve mimiklerle) oluşturulması sürecinin, her üç grupta da yoğun bir farkındalık oluşturduğu ifade edildi. Gençler, okulda kıyafet kontrolü sırasında sergilenen davranışları önceleri doğal gelirken atölye sürecinde yaşadıkları kontroller sırasında daha farklı bir gözle baktıklarını dile getirdiler. Günde üç saat, toplam

dört günlük çalışmada empati duygusu konusunda farkındalık olduğu gözlemlendi. Erkek öğrenciler özellikle kız arkadaşlarının durumunun kendilerinden daha zor olduğunu ifade ettiler. Daha önce birbirleri hakkında bilmedikleri birçok şeyin olduğunu, birbirlerini 3 senedir aynı sınıfta paylaşımlarına karşın yeterince tanımadıklarını, atölye çalışmalarının birbirlerini tanımalarında etkili olduğunu dile getirdiler.

Forum sırasında aileleri ile empati yaptıklarını –özellikle anne ve babayı oynayan çocukların- onların işlerinin hiç de kolay olmadığını daha iyi anladıklarını dile getirdiler. Ancak yine de yapmak istediklerinden vaz geçmeyeceklerini, anne babalar için de böyle bir forum tiyatro çalışması yapılmasının iyi olacağını söylediler. Böylece onlar da çocuklarıyla empati yapabileceklerini böylece kendilerini daha iyi anlayacaklarını ifade ettiler.

Seyircilerle yapılan görüşme:

Forum Tiyatro oturumundan sonra yapılan çok kısa süreli görüşmede salondaki öğrenciler, bu tiyatroyu kesinlikle ebeveynlerine de yapılması gerektiği, onların böyle bir çalışmaya ihtiyaçları olduğunu söylediler. Böylece onlar kendilerini daha iyi anlayacaklarını daha az çatışacaklarını dile getirdiler.

Öğretmenlerle yapılan Görüşme:

Öğretmenlerle yapılan atölye çalışmasında ortaya konan resimleri her biri çok iyi tanıdılar. Müdürün hareketleri, velinin hareketleri çok net anlaşıldı. Bu saptamadan yalnız olmadıklarını, benzer sorunlarla her birinin ayrı ayrı mücadele ettiklerini fark ettiklerini söyleyerek rahatladıklarını dile getirdiler. İçlerinde müdür, müdür muavini gibi görevleri yürütenlerin olması sorunları çok yönlü görmelerini ve tartışmalarda olayları çok yönlü değerlendirme şansı yakaladıklarını ifade ettiler.

Ancak, oyuna müdahale eden öğretmenler içinde, görüşme sırasında eskisi kadar bu olayın onları rahatsız etmediğini söyleyen iki öğretmen vardı. Sanki bir çeşit katarsis yaşamışlardı. Sahnede istediği gibi müdürü oynayana bağırdıklarını, müdürü oynayan kişinin de çok gerçekçi bir şekilde rolünün gereğini yerine getirdiğini söylediler. Bir çeşit psiko-terapi seansından çıkmışçasına rahatlamışlardı. Bu rahatlama üzerine konuşuldu. Oyunun sağladığı bu rahatlama, müdürle yaşadıkları sorunu unutturacak mı yoksa müdürle daha sakin soğukkanlı olarak mı konuşacaklardı? Her ikisi de daha sakin, ne söyleyeceklerini, ne söylemeleri gerektiğini bilerek müdürün karşısına çıkacaklarını dile getirdiler. Bu da onları daha güçlü hissetmelerini sağlamıştı, rahatlama kaynağını bu güçlü hissetmeden alıyordu.

Rahatlama, arınma Ezilenlerin Tiyatrosunun sakındığı bir konudur. Zira bu tarz tiyatronun hedefi kişiyi eleştirel bilinçle birlikte harekete geçecek gücü kazandırmayı hedefler.

SONUÇ:

Ezilenlerin tiyatrosu tekniklerinden biri olan Forum Tiyatro seyircisine gerçek dünyada karşılaştığı ya da karşılaşma olasılığı olan ezilme durumlarıyla başa çıkma olanağı sunar. Tiyatro sahnesi bir prova alanıdır. Seyirci sahneye gelerek yaşadığı sorunlara çözüm arar, dener, olası durumlarda başına gelebilecekleri görür ve ona göre tavır almasını sağlar.

Bu bildiri kapsamında dile getirilen uygulama ve odak grup görüşmeleri göstermiştir ki Forum Tiyatro sorunları belirlemede, sorunlara çözüm arayışında ve çözüm bulmada önemli bir araçtır. Hangi grup içinde yapılırsa yapılsın sahne üstünde oluşturduğu ortamlarla seyircisine empati, eleştirel bilinç ve sorunların çözümünde dinamizm kazandırmaktadır.

Bu çalışmalar bir kez daha göstermiştir ki, Ezilenlerin tiyatrosu tekniklerinden biri olan Forum Tiyatro, her alanda olduğu gibi eğitim kurumlarında da kullanılması iletişimin kalitesini artırarak eğitim hedeflerine ulaşmada daha barışçıl bir ortam hazırlayacak bu da eğitimin kalitesini arttıracaktır.

Internationalization Status of Selected Teacher Education Institutions in the Philippines

Marilyn U. Balagtas^a Marla C. Papango^b Zenaida Q. Reyes^c Marilou M. Ubiña^{d*}

^{a b c d} Philippine Normal University

Abstract

This study assessed the level of internationalization of ten Teacher Education Institutions (TEIs) in the Philippines. These institutions were assessed in terms of their strengths and weaknesses in four domains in teacher education and nine dimensions of internationalization using a 4-pt scale rubric developed by Balagtas & Associates (2012). The results reveal that none from the selected TEIs are internationalized to a great extent in all the four domains of teacher education based on the scale. They were, however, internationalized to some extent in academic standards and quality (domain 2), knowledge creation and appreciation (domain 1), and growth, efficiency, and accountability (domain 4), but internationalized to a little extent in culture of sharing and service (domain 3). In terms of the dimensions of internationalization, they were internationalized to a great extent only in curriculum and instruction but considered weak in all other eight areas of internationalization of HEIs.

Keywords: Assessment, Internationalization, Teacher Education

INTRODUCTION

With the onslaught of technology, the world has shrunk into a global village that people mobility and information generation have increased in unimaginable proportions. Nations needed to reach out to other countries not only for political and economic reasons, but also for educational purposes. This process of reaching out is described in most conferences in education as internationalization.

According to Bernardo (2002), internationalization could be construed as related to educational and development goals. Educational goals are related to assumptions of universal knowledge and the need for collaborative international efforts and perspectives. The development goals, on the other hand, are related to the mission of developed countries to provide assistance and support to less developed countries in their efforts at improving their capabilities in their higher education institutions.

Internationalization is considered a compelling reason for an academic institution to change or modernize its programs and practices in order to compete globally. With the advent of global rankings of countries and universities, everyone in the academe becomes conscious of how one's country or institution can be included in the ranking as such is an indicator of progress, quality and capability.

Internationalization of Higher Education Institutions (HEIs) has also been among the challenges of the Commission on Higher Education (CHED) in the Philippines because of the collaboration and intercultural exchanges in the global village. According to Bernardo (2002), there are some opportunities for internationalizing higher education, namely, student and staff mobility; internationalizing curricula through international studies; research collaborations; international networks; transnational distance education; twinning and articulation programs; and international quality assurance. Likewise, Padama et al. (as cited by Balagtas et al., 2012), proposed a framework for internationalization of HEIs with nine dimensions, namely, curriculum and instruction; facilities and support system; cooperation and development assistance; diversity of income generation; research collaboration; international and intercultural understanding/networking; academic standards and quality; mobility and exchanges for students and teachers; and international students recruitment.

To translate these dimensions of internationalization in Teacher Education Institutions (TEIs) in the Philippines, Balagtas et al. (2012) developed an instrument that has the dimensions reflective of specific

indicators to improve the programs and practices as institutions offering teacher education programs. This contextualization of internationalization reflects the areas of commitment of the Philippine Normal University (PNU), being the premier teacher education institution in the Philippines and the National Center for Teacher Education (NCTE). The four areas of commitment include 1) Commitment to Knowledge Creation and Application; 2) Commitment to Quality and Excellence; 3) Commitment to Culture of Sharing and Service; and 4) Commitment to Growth, Efficiency, and Accountability (PNU Administrative Manual, 2005).

As NCTE, the Philippine Normal University is mandated by the government of the Philippines to provide technical support to the CHED and to the Department of Education (DepEd) in their programs and projects that chart policies and recommendation on teacher education, teacher training, teacher education curricula, professional development for teachers and educational leaders in the country (Republic Act No. 9647, Sec 3a, 2009). True to its mandate, PNU envisions national and international responsiveness and recognition as a Teacher Education University (PNU, 2012).

In order to act on its mandate and realize its vision, PNU has set five strategies for internationalization: 1) develop an internationalization program that will increase the number and expand diversity of foreign students and faculty; 2) develop an international relations strategic plan to ensure a strategic position within the global teacher education network and academic community; 3) develop and produce scholarly work and products that attract international audience; 4) position PNU as a hub of academic activities and exchanges relevant to teacher education and basic education to ensure its international presence; and 5) participate in international network of TEIs to promote collaboration and partnership in the conduct of research, extension, and production (PNU, 2012).

One project that PNU spearheaded is the creation of the National Network of Normal Schools (3NS). The network serves as the arm of CHED for its project dubbed as “Save Our Normal Schools” which was conceived to address serious challenges faced by Teacher Education Institutions (TEIs) in the country. As the lead shepherd, PNU is expected to lead or collaborate with the other nine (9) member institutions of 3NS in all efforts to improve the quality of programs, operations and services of TEIs in the country.

Cognizant of these strategies, the researchers felt the need to contribute to the realization of PNU’s vision for internationalization. They started this by assessing the level of internationalization of their institution and then the nine other member TEIs in the network so that it can provide a basis for spearheading development programs in teacher education in the country. Assessment as defined by Balagtas & Dacanay (2013) is the process of gathering information and organizing them into an interpretable form for easy decision making. Assessment is imperative then to have basis in determining the capacity of the institution to compete globally. The results of such assessment could show the strengths and weaknesses of the institutions and define the specific actions they have to take in enhancing their programs and practices towards global competitiveness. Internationalization of the institution is one possible concrete action towards global competitiveness.

In this study, internationalization refers to the process where two or more foreign institutions collaborate in the delivery of academic, research, social and economic activities for their mutual benefits and understanding. According to Taylor, Rizvi, Lingard and Henry (1997), any activity that involves a cross-country collaboration contributes to the internationalization of the activities of the partners. Examples of such internationalization activities include international students in undergraduate or postgraduate courses; internationalization of the curriculum and comparative curricula studies; international research conferences; international publications; collaborative and/or comparative cross-country research projects; professional development programs; and international consultancies.

Through the examination of the strengths and weaknesses of the 10 normal schools in each of the domains and dimensions of internationalization, the researchers believe that the member institutions of the 3NS will have basis in improving their own internationalization efforts. The analysis will also help them as they synergize with other member institutions in their network to sustain their identified strengths and to improve on the areas they are weak at.

METHODOLOGY

This descriptive research describes the level of internationalization of the 10 surveyed institutions belonging to the Network of Normal Schools (3NS) as assessed by their own internal stakeholders to have basis for the

improvement of their efforts at internationalization. Each institution has 23 to 36 internal stakeholders for a total of 308 who served as assessors. About 27% of these are students, 52% are faculty, 7% are staff, and 12% are officials. About 2% of the respondents did not indicate their identity in the instrument. To assess their level of internationalization, the 4-pt scale rubric in assessing the internationalization level of TEIs developed by Balagtas, Atweh, Papangao, Reyes, & Ubiña (2012) was used. This instrument has been content validated and subjected to test of reliability using Cronbach's Alpha ($r=0.88$), in which results indicate high internal reliability coefficient, also high intra-rater reliability ($r=0.88$) as well as high inter-rater reliability ($r=0.76$). For data gathering, the consent of the institution's President was first sought, and those s/he identified as participants mostly from the college offering education programs attended a forum where they were introduced to the framework of internationalization. The forum participants also served as the assessors who gathered a set of documents (e.g. curricular programs with syllabi, technical reports, list of foreign students and faculty, President's reports, annual reports, memoranda of understanding/agreement, etc.) that could gauge the institution's level of internationalization. Descriptive statistical procedures were used to describe the strengths (areas with average rating from 2.5 to 4) and weaknesses (average rating is below 2.5) of the institutions, which served as basis for the proposed developmental program. The average ratings also classified the institutions into five (5) levels, namely, not internationalized (0-0.49); internationalized to a little extent (0.5 to 1.49); internationalized to some extent (1.5 to 2.49); internationalized to a high extent (2.5 to 3.49); and internationalized to a very high extent (3.5 to 4).

RESULTS AND DISCUSSIONS

Strengths and Weaknesses on Internationalization of the 10 Member Institutions in the 3NS

Institution 1: A Normal School in Manila. Among the nine (9) areas of internationalization, this institution is seen strong in the area of *academic standards and quality* having been rated as 3.14 out of 4, which means **internationalized to a high extent**. The assessment on the level of internationalization of this institution in this area seems to conform to the high performance of its graduates in the Licensure Examination for Teachers (LET), because it has been consistently at the top among those TEIs that have the most number of teacher applicants who passed the examination. Other areas that this institution is seen as strong include the dimension on *curriculum and instruction* (2.69) and *facilities and support system* (2.58). Such results can be attributed to the University leadership's vision of becoming internationalized; hence, its curriculum and instruction including its facilities and support system are designed to be at par with other top rank universities in Asia and in the world. This institution, being the NCTE is also expected to lead reforms in teacher education. An evidence of its leadership is in its curricular programs which are considered alternative to what the CHED provides. These curricular programs are equally effective as those prescribed by the CHED since they also produced graduates with high performance in the LET. The institution, however, is viewed weakest in *mobility and exchanges for students and teachers* (1.32) and on the dimension of *research collaboration* (1.42). This explains why this institution has been assisted in these areas in an applied research grant by the Department of Foreign Affairs and Trade Australian Aid Project through the efforts of the University of New England (UNE) SIMERR, National Research Centre, an institution in Armidale, Australia that has led the development of the Australian National Professional Standards for Teachers (NPST). This grant established a national research center called Research Center for Teacher Quality (RCTQ), which was envisioned to provide evidence-based inputs to policy formulation that could improve teacher quality in the Philippines. The other dimensions of internationalization that the institution is also weak at include *international and intercultural understanding and networking* (2.36), *international students' recruitment* (2.23), *cooperation and development assistance* (1.92), and *diversity of income generation* (1.61). As a whole, the institution is considered **internationalized to some extent** (2.29). This means that this institution should continue developing itself "to level up teacher education for a quality nation...as it moves along with global demands" (Ogena, 2013).

Institution No. 2: A Normal School in Palawan. The member institution of 3NS in Palawan is seen strongest in the area of *curriculum and instruction* (2.59) and *facilities and support system* (2.54) since both are interpreted as internationalized to a high extent. However, the institution is viewed as weak or rated as internationalized to a little extent in *cooperation and development assistance* (0.98), *mobility and exchanges for students and teachers* (1.15), and *research and collaboration* (1.17). Other dimensions such as *international and intercultural understanding and networking* (1.52), *international students' recruitment* (1.51), and *diversity of income generation* (1.71) are rated internationalized to some extent, which area dimensions still considered as also a weakness. As a whole, the institution is considered of **internationalized to some extent**. This means that

the institution has to develop internationally benchmarked programs and practices to continue to be “leaders in Philippines education” (Sespeña, 2013).

Institution No. 3: A Normal School in Bicol. The stakeholders of a normal school in Bicol assess their institution strong in the area of curriculum and instruction (3.21), facilities and support system (3.03), international student recruitment (3.88), and academic standard and quality (2.84) with all these dimensions interpreted as internationalized to a great extent. It can be noted that the institution is strong in four areas of internationalization compared to the first two normal schools in Luzon. This strength of the institution could be explained by the international accreditation it has gone through since it is the only ISO certified institution among the 10 member institutions under the 3NS. However, just like other normal schools, the institution is viewed weak in diversity of income generation (0.05) and mobility and exchanges for students and teachers (1.2). This can be explained by the fact that the budget of a state university is mostly dependent only on the appropriation in the national budget. The other dimensions that the institution is known weak or rated internationalized to some extent include international and intercultural understanding and networking (1.9), cooperation and development assistance (1.61), and research collaboration (1.69). As a whole, the institution is considered of **internationalized to some extent**. This means that the institution still needs some development programs to continue to help “steer the country towards progress and development” (Lauraya, 2013).

Institution No. 4: A Normal School in Leyte. Stakeholders from a normal school in Leyte rated their institution **internationalized to some extent** with a 1.92 overall rating. Such rating reflects the objective evaluation of the stakeholders of the institution as they see this assessment as input to its improvement. Cruzada (2013) quotes “know thyself; the unexamined life is not worth living.” – an inscription at the Temple of Delphi, a concept that holds true for a person, as it does for the society, and may also be true to an institution. In so doing, respondents from the institution evaluated their *facilities and support system* (3.28) and *curriculum and instruction* (2.8) internationalized to a high extent, which shows that its curricular offerings, its strategies in teaching and the facilities that support its delivery of the programs can well compete with standards overseas. Meanwhile, in regard to *academic standards*, they rated their institution internationalized to some extent (2.05). This means that at least 25% of its programs are level 3 accredited by nationally/internationally known accrediting bodies; at least 20% of the faculty and administrators are recognized for their expertise here and abroad; at least 25% of the administrators and staff have special trainings or exposures abroad; the institution is cited by only 2 recognized international societies or publications as a good institution for learning; and at least 25% of the faculty and administrators are recipients of scholarships, fellowships or grants abroad. However, the stakeholders viewed *research and collaboration* (1.22) and *international/intercultural understanding/networking* (1.22) internationalized to a little extent since the institution has had few researches and twinning programs at the international level. Such perceptions support the stakeholders’ views on mobility of students/faculty and income generation. The institution’s faculty rated their institution poorly in terms of *mobility and exchanges of students and teachers* and in terms of *diversity of income generation* which both got 0.63. Such ratings prove that there have been very few student and faculty exchanges between this institution and foreign institutions. This also means that less than 3 % of the faculty members taught, received trainings, or served as consultants abroad.

Institution No. 5: A Normal School in Iloilo. Stakeholders’ ratings on the level of internationalization of a normal school in Iloilo reached an overall rating of 2.68 interpreted as **internationalized to a high extent**. The institution was evaluated highly for its *curriculum and instruction* (3.43), *academic standards and quality* (2.95), *international students’ recruitment* (2.95), and *facilities and support system* (2.9) – all internationalized to a great extent. Whereas, in terms of *cooperation and development assistance*; *diversity of income generation*; and *mobility and exchanges for faculty and students*, the stakeholders evaluated it internationalized to some extent. These evaluations can well be supported by the fact that the institution has had some of its programs accredited at level 4 by the Accrediting Association of Chartered Colleges and Universities of the Philippines (AACUP). Such evaluation also confirms what this institution has been consistently doing, i.e. “living up to its core values” one of which is “excellence” (Subong, 2013).

Institution No. 6: A Normal School in Zamboanga. The level of internationalization of a normal school in Western Mindanao in the dimensions of *curriculum and instruction* (2.48), *facilities and support system* (2.13), and *research collaboration* (2.07) garnered the highest means and interpreted as internationalized to some extent. The faculty, students, and staff of this university perceived these dimensions as their strength since these are the very reasons why they were awarded as the Center of Development (COD) in Teacher Education. On the

other hand, the dimensions on *mobility and exchanges for students and teachers* (0.47), *diversity of income generation* (1.11), and *international students' recruitment* (1.26) had the lowest means. The data imply that these dimensions are the weak areas of this normal school since they are the very areas interpreted as internationalized to a little extent or not internationalized at all. This is easily explained by their geographic and socio-political conditions. The university is located in Mindanao, the southernmost island in the Philippines. Peace and order is problematic in the area, thus, most foreign embassies issue travel advisories to their citizens not to travel to the area. Since many cases of kidnapping of foreigners and locals including conflict situations are often sensationalized abroad, very few foreign nationals go to Mindanao. Overall, this university however, has a mean score of 1.78, which means **internationalized to some extent**. Therefore, the 3NS should gather all its efforts to help this institution “to improve and transform teacher education in the country to meet the challenges posed by globalization” (Ho, 2013).

Institution No. 7: A Normal School in Bukidnon. The stakeholders from the normal school in Bukidnon gave their institution an overall rating of 1.58 with a corresponding description of **internationalized to some extent**. This means that the institution needs development programs in its “journey towards excellence driven by substance and not form” (Barroso, 2013). For a closer look at the areas for development, the respondents rated the institution’s *curriculum and instruction* highest at 2.45, followed by *facilities and support system* at 2.07 and *academic standard and quality* at 1.87, which were both rated internationalized to some extent. Meanwhile, *international and intercultural understanding and networking* had 1.43 rating; *international students' recruitment* had 1.01; *cooperation and development assistance* had 0.95; and *mobility and exchanges for students and teachers* had 0.71 – all interpreted internationalized to a little extent. In contrast, the respondents rated *diversity of income generation* the least at 0.39 which reveals that in terms of creating projects and programs that will help the university gain revenues, this institution cannot yet compete with internationalized benchmarks.

Institution No. 8: A Normal School in Cebu. The top two dimensions of internationalization of a Normal School in Cebu are the *academic standard and quality* (2.76) and *curriculum and instruction* (2.55) which are interpreted as internationalized to a great extent. This indicates that the Normal School is strong in these dimensions. They were able to strengthen these dimensions, thus, the CHED named it as the Center of Excellence in Teacher Education. However, this Normal School was rated weak in three dimensions, namely, *mobility and exchanges for students and teachers* (0.84), *cooperation and development assistance* (1.19), and *diversity of income generation* (1.19), which are all interpreted as internationalized to a little extent. Like the other Normal Schools which rely on the national government for its meagre appropriations, this Normal School has to strengthen its income generating projects. In addition, this institution was built primarily to educate teachers in the province. In 1902, this Normal School was established as a “tributary school of Philippine Normal School in Manila” (Lopez, 2013). From then on, it has been a strong producer of quality teachers in the Visayas province of Cebu. Recent efforts on internationalization, however, are on their way. Overall, this institution has a mean score of 2.03, which is interpreted as **internationalized to some extent**.

Institution No. 9: A Normal School in Ilocos. The stakeholders of a normal school in Ilocos assessed their institution’s level of internationalization highest in the area of Facilities and Support System having been rated as 2.58 out of 4, which means internationalized to a great extent. The institution is viewed as weak in *diversity of income generation* (0.09) and *cooperation and development assistance* (0.24), both interpreted as not internationalized at all. The other dimensions interpreted internationalized to a little extent are *mobility and exchanges for students and teachers* (0.54), *research and collaboration* (0.75), *international students' recruitment* (0.84), and *international and intercultural understanding and networking* (0.99). Meanwhile, the dimensions on *curriculum and instruction* and *academic standard and quality* were considered internationalized to some extent. As a whole, the institution is considered **internationalized to a little extent**. This level indicates that there is really a need for development programs for a higher level of internationalization of this TEI as it continues to be “a bastion of tradition and excellence” in the northern part of the Philippines (Pascua, 2013).

Institution No. 10: A Normal School in Pangasinan. The stakeholders of a normal school in Pangasinan assessed their institution’s level of internationalization as needing improvement in almost all areas of internationalization although it is now working on its Level 4 accreditation status for its teacher education program. Nevertheless, the assessors see their institution as having potential in *facilities and support system*, *academic standards and quality*, and in *curriculum and instruction* since these dimensions were all rated

equivalent to level 2 in internationalization, which is interpreted as internationalized to some extent. The institution is viewed as weak in *mobility and exchanges for students and teachers, cooperation and development assistance, diversity of income generation, and international students' recruitment* as these dimensions were rated not internationalized at all. Moreover, assessors also see their institution internationalized to a little extent in the dimensions of *research collaboration and international and intercultural understanding and networking*. As a whole, this institution sees itself as **internationalized to a little extent**. This means that it needs development programs in all areas of internationalization to have a successful “journey towards global excellence” (Estira, 2013).

Across Institutions. Figure 1 shows the areas of strengths and weaknesses of the 10 normal schools in the 3NS along the nine (9) areas of internationalization. As shown in the figure, the stakeholders of the 3NS see the network as strong or **internationalized to a great extent** in only two (2) areas – *curriculum and instruction* and *facilities and support system*. They have the potential to be strong in *academic standards and quality, international and intercultural understanding and networking, and international students' recruitment* as these dimensions are interpreted **internationalized to some extent**. On the contrary, the network needs to strengthen its *mobility and exchanges for students and teachers, cooperation and development assistance, diversity of income generation, and research collaboration*. As a whole, the institutions in the network are internationalized only to some extent; thus, explains the need for development programs for internationalization.

Figure 1: Over-all Level of internationalization of selected TEIs in the Philippines

The results pointed to almost the same deterrents to internationalization of higher education institutions in the Philippines which Bernardo (2002) discussed: programs cost, research capability, lack of involvement in international networks, and inability to comply with quality assurance process.

CONCLUSIONS AND RECOMMENDATIONS

The analysis made on the strengths and weaknesses of the 10 member institutions of the 3NS in the Philippines gives a picture of the needed development programs in teacher education in the Philippines. Likewise, the results also reveal the capacity of the surveyed institutions to be the country's resource that could be shared with other countries in terms of the preparation and development of teachers at least in Asia if not beyond it. Apparently, among the nine areas for internationalization, the country's *curriculum and instruction* could be a potential area for internationalization. As the country prepares for the ASEAN 2015, the government could promote the country's TEIs particularly their curriculum and instruction in producing teachers for the ASEAN community. The present teacher education curriculum in the Philippines can be considered internationally benchmarked; hence it can also develop teachers in the other countries in the ASEAN region. The *facilities and support system* of these TEIs particularly those belonging to the 3NS are also being improved to effectively deliver the curriculum for teachers. The *standards and quality of their programs and services* are also potential strength including initial efforts for *international and intercultural understanding and networking* as

well as *international student recruitment*. However, to help strengthen TEIs as a country's resource, the government can also facilitate the *mobility and exchanges for students and teachers*; establish *cooperation and development assistance* at least with the ASEAN countries; *diversify the sources for income generation*; and establish *research collaboration*. Since the member institutions of the 3NS are all government institutions created basically to produce teachers for the Filipino people, government efforts and resources should be appropriated for them to produce teachers who are at par with those teaching in top rank universities in Asia. Since ASEAN 2015 is one year away, efforts need to be doubled for TEIs in the country to be of help in making the Philippines a country to consider when it comes to the preparation or development of teachers at least in the ASEAN community.

Abstract

This paper proposes some development programs for the internationalization of ten (10) Teacher Education Institutions (TEIs) in the Philippines that constitute the National Network of Normal Schools (3NS). The internal stakeholders of these institutions served as the assessors of the internationalization level using a 5-pt rubric, which highlights four (4) domains of Teacher Education and nine (9) dimensions of internationalization of Higher Education Institutions (HEIs). The four domains are: 1) Knowledge Creation and Application; 2) Quality and Excellence; 3) Culture of Sharing and Service; and 4) Growth, Efficiency, and Accountability. The nine (9) dimensions of internationalization in Higher Education Institutions are: 1) Curriculum and Instruction; 2) Facilities and Support System; 3) Cooperation and Development Assistance; 4) Diversity of Income Generation; 5) Research Collaboration; 6) International and Intercultural Understanding/Networking; 7) Academic Standards and Quality; 8) Mobility and Exchanges for Students and Teachers; and 9) International Students Recruitment. The proposed development programs are recommended for consideration by the individual institutions sampled, the network that they belong, and all the other TEIs in the country for the advancement of teacher education in the Philippines to merit the recognition by the global community.

Keywords: Assessment, Internationalization, Development Program

INTRODUCTION

In this era of fast changing technology, the world has shrunk into a global village where people mobility and information generation have increased in unimaginable proportions. One nation reaches out to other countries not only for political and economic reasons, but also for educational purposes. This kind of interaction among nations particularly for educational purposes is referred to as internationalization in this paper. According to Bernardo (2002), the educational goals of internationalization are related to assumptions of universal knowledge and the need for collaborative international efforts and perspectives while its development goals are related to the mission of developed countries to provide assistance and support to less developed countries in their efforts at improving their capabilities in their Higher Education Institutions (HEIs).

Internationalization of HEIs has been among the challenges of the Commission on Higher Education (CHED) in the Philippines because of the collaboration and intercultural exchanges between and among HEIs in the global village. The Philippine Normal University (PNU), is not excused in this challenge of internationalization in HEIs. PNU, as the National Center for Teacher Education (NCTE), is mandated “to provide technical support to the Commission on Higher Education (CHED) and to the Department of Education (DepEd) in their programs and projects that chart policies and recommendation on teacher education, teacher training, teacher education curricula, professional development for teachers and educational leaders in the country” (Republic Act No. 9647, Sec 3a, 2009). One area of concern to realize its mandate as the NCTE, is to lead pioneering projects on teacher education in the Philippines through the National Network of Normal Schools (3NS), that it leads. PNU, as the lead shepherd of 3NS sets the over-all directions of the network with the other nine (9) member institutions (Defensor, 2013). This network has then become an arm of CHED for its projects that aimed at improving the quality of programs, operations and services of TEIs in the country. Given PNU’s commitment of producing excellent teachers for a better world and its vision to be a nationally responsive Teacher Education University and an internationally recognized leader in Teacher Education, it has set five strategies for internationalization, such as: 1) to develop an internationalization program that will increase the number and expand diversity of foreign students and faculty; 2) develop an international relations plan to ensure a strategic

E-mail address: balagtas.mu@pnu.edu.ph papango.mc@pnu.edu.ph reyes.zq@pnu.edu.ph ubina.mm@pnu.edu.ph

position within the global teacher education network and academic community; 3) develop and produce scholarly work and products that attract international audience; 4) position PNU as a hub of academic activities and exchanges relevant to teacher education and basic education to ensure its international presence; and 5) participate in international network of TEIs to promote collaboration and partnership in the conduct of research, extension, and production (Philippine Normal University, 2012).

Likewise, Bernardo (2002) also identified some opportunities for internationalizing HEIs, which include (1) student and staff mobility; (2) internationalizing curricula through international studies; (3) research collaborations; (4) international networks; (5) transnational distance education; (6) twinning and articulation programs; and (7) international quality assurance.

Cognizant of these strategies for internationalization, the researchers felt the need to contribute to the realization of PNU's vision and mission and the purpose of the synergy of "normal schools" or the 3NS by providing evidence-based advice for the internationalization of TEIs in the country. Thus, the researchers conceived of analyzing the level of internationalization of the member institutions of 3NS using a validated rubric developed by Balagtas and Associates (2012). Specifically, this research aims to involve the teachers, students, administrators, and staff of 3NS in the assessment of their own institution's level of internationalization and use such information in proposing development projects that could help improve programs and practices of TEIs in the country to gain international recognition.

In this study, internationalization refers to the process where two or more foreign institutions collaborate in the delivery of academic, research, social and economic activities for their mutual benefits and understanding. According to Taylor, Rizvi, Lingard and Henry (1997), any activity that involves a cross-country collaboration contributes to the internationalization of the partners. Examples of such internationalization activities include: international students in undergraduate or postgraduate courses; internationalization of the curriculum and comparative curricula studies; international research conferences; international publications; collaborative and/or comparative cross-country research projects; professional development programs; and international consultancies.

In internationalizing HEI in the Philippines, Padama et al. as cited by Balagtas et.al (2012), proposed a framework for internationalization with nine (9) dimensions: 1) Curriculum and Instruction; 2) Facilities and Support System; 3) Cooperation and Development Assistance; 4) Diversity of Income Generation; 5) Research Collaboration; 6) International and Intercultural Understanding/Networking; 7) Academic Standards and Quality; 8) Mobility and Exchanges for Students and Teachers; and 9) International Students Recruitment. To translate these dimensions of internationalization in HEIs in the Philippines, Balagtas et. al (2012) developed an instrument to measure the level of internationalization of TEIs using the dimensions, which were defined using specific indicators on how TEIs could improve their programs and practices. This contextualization of internationalization in a TEI also reflects the areas of commitment of PNU, being the premier TEI in the Philippines and the NCTE. PNU Administrative Manual (2005) stipulated the four (4) areas of commitment, which were incorporated in the framework for the internationalization of a TEI. The four areas of commitment which were considered domains of internationalization in this study include 1) Commitment to Knowledge Creation and Application; 2) Commitment to Quality and Excellence; 3) Commitment to Culture of Sharing and Service; and 4) Commitment to Growth, Efficiency, and Accountability.

Figure 1 shows the framework of internationalization in teacher education and how this could be used in making institutions more globally competitive. The development programs hope to further strengthen the institutions in the areas they are strong at and capacitate them in areas where they needed help.

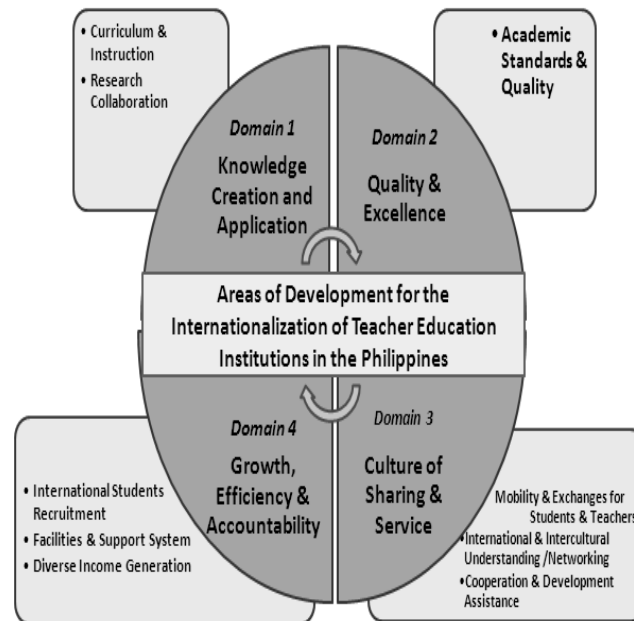

Figure 1: Conceptual Framework of Internationalization in Teacher Education Institutions in the Philippines

As shown in Figure 1, the nine (9) dimensions of internationalization identified by Padama et al. (2010), were classified into four (4) domains by Balagtas, et.al (2012) in their instrument that has been adopted in this study. The researchers believed that the development programs for internationalization of a TEI could be drawn from a careful examination of the domains and indicators, which became strategies for internationalization. The analysis could also help the TEI to synergize with other member institutions in their network to sustain its identified strengths and to improve on the areas it is weak at. Knowing the institution's strengths in internationalization will also enable the stakeholders to see what they could offer to other TEIs in the region to contribute as well to the global competitiveness of the country.

METHODOLOGY

The study employed the descriptive research in describing the development programs proposed to the TEIs in the Philippines based on the assessment done on the strengths and weaknesses of 10 selected institutions in a prior study done by the researchers. These institutions belonged to the National Network of Normal Schools in the Philippines, which are all state universities that started as a teacher training institution. Each institution had 23 to 36 internal stakeholders for a total of 308 assessors of their strengths and weaknesses using a 4-pt scale rubric in assessing the internationalization level of TEIs developed by Balagtas, Atweh, Papango, Reyes, & Ubiña (2012). This instrument has been content validated with high internal consistency reliability using Cronbach's Alpha ($r= 0.88$), high intra-rater reliability ($r=0.88$) and also high inter-rater reliability ($r=0.76$). Descriptive statistical procedures were used to describe the strengths (areas with average rating from 2.5 to 4) and weaknesses (average rating is below 2.5) of the institutions, which served as basis for the proposed developmental program.

RESULTS AND DISCUSSIONS

Development Program for the TEIs in the Philippines

Based on the data on the level of internationalization of each member institution of the 3NS in a prior study conducted by the researchers, several schemes in the design of a development program for the areas each

institution is weak at are hereby proposed. The following schemes are named to capture the proposed development programs for the internationalization of the individual institutions or the whole network.

Self-development. This scheme could be done by the institution itself in order to increase its level of internationalization along the nine areas identified in this study without the assistance of a member institution in the network. This model of development jibes with the philosophy of education of PNU, which is educating for personal renewal and social transformation. Warner (1992, cited in Qiang, 2003) describes this model for internationalization as self-development and social transformation. The framework for development using this scheme is based on the indicators of internationalization that were given in the instrument used for data gathering, which were transformed into strategies for development. It requires the institution to examine the area it is weak at and exert extra efforts to improve on it to reach the highest level on internationalization to gain the recognition not only in one's country but also beyond it. Below are the suggested strategies for development highlighting the highest level in each domain and dimension of internationalization, which individual institution should aim to implement within the period of a teacher education program, which is normally for four (4) years, or for a maximum of five (5) years to accommodate the irregular schedule of students who are working while studying for the enrolled teacher education program.

Domain 1: Knowledge Creation and Application. In terms of the dimension on *Curriculum and Instruction*, which is under this domain and is recognized as strength of the member institutions of the network, some possible strategies for further development are as follows:

- design courses that allow different race/ethnicity, religion, culture, class and gender, social class and people with disability to learn together;
- offer at least five (5) courses on foreign languages in the institution;
- offer at least eight (8) courses that may serve as a venue for understanding and appreciation of the culture of other countries e.g.: Multicultural Education, Global Education, International Education, World Geography, World Literature, Peace Education, Ecology, Environmental Education, Education for Indigenous People, Comparative Education;
- design at least five (5) customized programs that are responsive to the demands of different sectors, agencies or organizations here and abroad;
- design at least five (5) programs delivered in different modalities that could allow students from other countries to take courses at their own time and place (e.g.: Distance Education, Correspondence Education, Open University, University in the Air, Virtual Classrooms);
- provide functional information and communication technologies that could facilitate efficient and effective learning (e.g.: internet connection, e-library, teleconferencing technologies, e-journal, e-testing, webinar, video conferencing, and social networking sites);
- establish at least seven (7) laboratories functional to test theories or theorize from experiences (e.g.: laboratory school for pre-school, elementary, high school learners; a computer laboratory; multimedia room; speech laboratory; a science laboratory; and other laboratories for teaching and learning);
- design at least ten (10) special learning experiences within one's country and/or across countries where students could appreciate the culture of other tribal groups/classes or races. (e.g. : home stays, cultural field trips, mission work e.g. spiritual, school-based, church-based), literary immersion, feeding program , cultural shows, film festivals, photo exhibit/galleries, cultural exchange programs, school visits, community works/immersion;
- create at least two (2) joint full program/s or course/s curriculum with foreign institutions/universities; and
- update at least 85% of the syllabus of course offerings to integrate the new trends and address pressing issues around the globe that have implications to education.

On the dimension, *Research Collaboration*, which is an area that the institutions or the whole network is weak at, some strategies that individual institutions could work on are as follows:

- lead at least four (4) research activities done in collaboration with other educational institutions, agencies or industries in other countries;
- encourage at least 40% of the faculty, students or administrative staff to participate in international studies as researchers;
- involve at least 40% of the faculty, students or administrative staff to participate in international studies as respondents within the period of 5 year;
- conduct at least four (4) studies on international comparative education to understand differences between and among nations;
- organize at least four (4) international conferences where research studies are presented or disseminated; and
- contribute at least ten (10) ideas to the growing body of knowledge recognized abroad in a year.

Domain 2: Quality and Excellence. Under this domain is the dimension on *Academic Standard and Quality* with the following proposed strategies for development:

- have at least 75% of the institution's programs at least level 3 accredited by nationally known accrediting body;
- benchmark at least 5% of the institution's curricular or extra-curricular activities with national and/or international standards;
- be cited as benchmark by at least five (5) institutions in one's country or abroad;
- obtain recognition of at least 40% of the faculty and administrators for their expertise here and abroad;
- expose at least 75% of the administrators and staff to special trainings or experience abroad;
- be cited by at least four (4) recognized international societies/publications as a good institution for learning; and
- have at least 75% of the faculty and administrators who are recipients of scholarships, fellowships or grants abroad.

Domain 3: Culture of Sharing and Service. Under this domain is the dimension on *Mobility and Exchanges for Students and Teachers*, which offers the following strategies for development:

- encourage at least 10% of the students to study in other institutions abroad for some of their courses delivered online or face-to-face;
- target to have at least 15% of the total number of students from foreign countries;
- encourage at least 5% of the faculty members who are trained/taught abroad to serve as consultants; and
- have at least 3% of the faculty members as visiting professors from other countries doing academic works in the institution.

Below are the strategies for development on the second dimension, *International and Intercultural Understanding/Networking*:

- have a Memorandum of Agreement or Memorandum of Understanding with at least 4 institutions from other countries for any international or intercultural understanding/networking;
- establish twinning programs with at least 4 foreign institutions;
- participate in at least ten (10) international assemblies or activities for the promotion of one's culture;
- establish at least four (4) of the given identified centers for multicultural education/ foreign students' organization that serve as venue for the understanding of the culture of different nations such as International Center, Center for Multicultural Education, Center for Gender & Peace Education; and Foreign Students' Organization;
- organize at least four (4) multicultural activities both curricular and/or extra-curricular in nature; and
- involve at least 40% of the faculty, students or administrative staffs as active members in international organizations.

Below are the strategies for development on the third dimension, *Cooperation and Development Assistance*:

- partner with at least five (5) universities and/or colleges in other countries for international academic networks/alliance, consortia, or leagues;
- collaborate with at least four (4) government or non-government institutions or organizations abroad on education in formulating policies to achieve academic, scientific, economic, technological or cultural tie;
- source out funding to offer at least 4 programs for the promotion of cultural understanding/ mutuality/ international learning/ecumenical or inter-religious activities;
- conduct at least four (4) international development projects commissioned by international agencies;
- accommodate at least ten (10) foreign students from less developed countries that have satisfied the entry requirements of the institution
- offer scholarship/grant for at least 1 foreign student a year who comes from less developed countries; and
- innovate projects in partnership with at least 4 foreign agencies or institutions.

Domain 4: Growth, Efficiency and Accountability. Under this domain is the dimension on *International Students Recruitment*, which offers the following strategies for development:

- make at least 90% of the institution's educational programs, course offerings, syllabi and policies for admission and retention of students available online;
- provide responsive computerized or online system in recruiting and enrolling international students, including the screening prospective students, enrolling international students; and payment of fees.
- provide 24/7 responsive system to address inquiries of prospective students for the whole week including weekends;

- provide a library with the convergence of complete and updated facilities both print and non-print such as document camera, learning station, open access cataloguing, instructional materials development center, etc.);
- procure at least ten (10) local and foreign updated reference materials per course published in the last ten (10) years both in print and non-print forms;
- observe the ratio of at least one (1) licensed full-time librarian to at most 500 local and/or foreign students to ensure that there are sufficient number of licensed fulltime librarians in all its sections;
- provide a dormitory for local and foreign students with at least 10 of the following amenities, namely: student lounge, visitors' receiving area, kitchen, dining area, laundry area, drying area, internet connection (Wifi), prayer room, and function room among others;
- observe the ratio of at least one (1) licensed full-time guidance counselor to at most 500 local and/or foreign students to ensure that there is sufficient provision for guidance and counseling services to the number of local/and foreign students
- provide at least ten (10) of the following amenities/support system for foreign students, faculty and visitors, student lounge, faculty lounge, visitor's lounge, tutorial center, ecumenical chapel, foster parent, etc.;
- provide the medical and dental support and facilities/materials for the local and foreign faculty members, staff and students (i.e: receiving room; stretcher; wheel chair; state-of-the-art medical equipment; and state-of-the-art dental equipment).

The following are the strategies for development on *Diversity of Income Generation*:

- generate alternative sources of income like offering educational programs or creating publications patronized by at least 4 international institutions and industries; and
- allocate specific budget coming from at least 4 partner educational institutions from other countries.

Sisterhood thinking. This principle describes a relationship where one (1) strong member of the family of the network nurtures one or more member institutions of the network considered weak in the area of internationalization as they work on one development program for internationalization. The strategies for development that these institutions could implement using this kind of thinking are those pertaining particularly to research collaboration, mobility for exchanges of teachers and students, international and intercultural understanding, cooperation and development assistance, and diversity of income generation.

Collective thinking. In the event that no institution is considered strong in a certain indicator of internationalization, then 3NS through its Steering Committee or Lead Shepherd should create an internationalization committee that could scout for possible foreign university as partner in a development program. One case that could be cited to illustrate this scheme is what the Philippine Normal University (PNU) has done when it forged partnership with the University of New England (UNE) in Armidale, Australia. UNE established a Research Center for Teacher Quality (RCTQ) in partnership with PNU through the support of the Australian Government to conduct applied research to provide evidence-based policy advice directed at strengthening teacher quality in the Philippines. Since PNU is the lead shepherd of the network, this research center can then become the link not only of PNU to UNE but also with its network with nine other member institutions.

Service-oriented thinking. This principle describes a relationship where one (1) strong member of the family of the network adopts for a development program one or more member institutions not belonging to the network but also offering teacher education programs in the region. The program could be organized and conducted in partnership with any other member institutions in the network or another foreign institution.

CONCLUSIONS AND RECOMMENDATIONS

The proposed development programs for the internationalization of the TEIs in the Philippines are based on the indicators in each of the nine dimensions of internationalization in a measure developed by Balagtas and Associates (2012).

The first scheme, which is for self-development, could be done by the individual institution through the efforts of its own stakeholders without reliance on the network. The strategies include those in the domain of 1) Knowledge Creation and Application; 2) Quality and Excellence; 3) Culture of Sharing and Service; and 4) Growth, Efficiency, and Accountability. More specifically, the strategies describe processes for internationalization in the nine (9) dimensions to include: 1) Curriculum and Instruction; 2) Facilities and Support System; 3) Cooperation and Development Assistance; 4) Diversity of Income Generation; 5) Research

Collaboration; 6) International and Intercultural Understanding/Networking; 7) Academic Standards and Quality; 8) Mobility and Exchanges for Students and Teachers; and 9) International Students Recruitment. Considering the intention of the measure, which is for self-assessment and then self-improvement, the recommended strategies for development in this study could also be utilized by other TEIs in the Philippines and in other countries specially those who are offering teacher education programs.

The other three development programs such as sisterhood thinking, collective thinking, and service-oriented thinking are schemes that would require the efforts of the members of the network to address the areas that an institution is weak at. Most strategies where development is needed with the help of other institutions in the network are those pertaining particularly to research collaboration, mobility for exchanges of teachers and students, international and intercultural understanding, cooperation and development assistance, and diversity of income generation. The development of these programs is based on the assumption that those institutions, whose internal assessors assessed their institution as internationalized to a high extent, will assist another member institution in the 3NS identified as weak in the same area. This development model is actually highlighted as strategy for oneness in ASEAN 2015. ASEAN 2015 promotes cooperation among ASEAN University Network (AUN) members to increase mobility for both students and staff within the region (ASEAN Secretariat, 2009). However, if no institution is considered strong in a certain dimension of internationalization, then the whole network has to synergize to establish a network with other institutions in other countries that are considered strong in the specific area of internationalization.

Since the member institutions of the 3NS are all government institutions created basically to produce teachers for the Filipino people, support and resources should be provided to them by the government and other funding agencies to produce teachers who are at par with those teaching in top rank universities in Asia. Since ASEAN 2015 is one year away, efforts should then be doubled to enable TEIs in the country to be of help in making the Philippines a country to consider when it comes to the preparation or development of teachers at least in the ASEAN community.

Abstract

The aim of this study was to determine the effect of peer teaching model that was applied by the lower and higher skilled student teachers in volleyball and in teaching proficiency on performance in volleyball skills of the students. The quasi-experimental design (pre-post without control group) model was used in this study. The study involved twenty two first and second grade students who took volleyball course at AIBU, The School of Physical Education and Sport during the educational year 2012-2013. 11 students from third class (experimental group I) and 11 students from first and second classes (experimental group II) participated in this study. The forearm pass, tennis serve and spike observation forms and AHPERD tests which included forearm and serve tests developed by Barlett and et. all. (1991) and spike test developed by Stanley (1967) were used to collect the data. The Kappa analysis, Wilcoxon Signed Rank Test and Mann Whitney U test were used to analyze the data. The significance level was taken 0.05 in this study. The results revealed that there were significant differences between pre and post test scores of the students who were taken volleyball course by both novice and experienced student teachers. On the other hand, the comparison of the two groups' achievement scores in AHPERD tests (forearm pass, tennis serve and spike) was showed that no significant difference between the two groups. In addition, no significant difference was found on the volleyball skills' achievement scores that were taken by using observation forms between both groups.

Keywords. Peer teaching, volleyball, physical education.

GİRİŞ

Etkili beden eğitimi derslerinin nasıl olması gerektiği ile ilgili son yıllarda pek çok araştırma yapılmış, konu ile ilgili farklı görüş ve öneriler sunulmuştur. Yapılan bu çalışmaların sonunda etkili beden eğitimi dersleri için beden eğitimi öğretmenlerinin öğrenme-öğretme ortamlarında her öğrencinin farklı öğrenme taleplerini karşılayacak şekilde derslerini desenlemeleri gerektiği ortak görüş olarak kabul edilmiştir. Bunu gerçekleştirebilmek için de, beden eğitimi öğretmenlerinin öğrencilerinin tüm özelliklerini geliştirebilecekleri uygun öğretim stratejileri ve modelleri kullanarak (Cervantes, Lieberman, Magnesioue Wood, 2013; Metzler, 2005) ve öğrenci merkezli öğretim yaklaşımları ile öğretimi daha etkili hale getirebilecekleri pek çok araştırmada rapor edilmiştir.

Metzler (2005)'e göre beden eğitimi öğretiminde kullanılan sekiz model vardır. Bunlardan biride akran öğretim modelidir. Akran öğretim modeli öğretmenin rehberliğinde, eğitim almış yetenekli bir öğrencinin aynı sınıf düzeyinde bulunan bir ya da birkaç öğrenciye bir kavramı ya da bir beceriyi öğrettikleri bir süreçtir (Doğanay, 2007). Akran öğretiminin başarısı yaş, öğrenci ve öğretici öğrencilerin yetenek düzeyi, öğrencilerin işbirliğine olan motivasyon düzeyleri, görevin doğası, işbirliğine kurumsal ve kültürel destek gibi pek çok faktöre bağlıdır (Hogan ve Tutge, 1999). Ancak bunlar arasındaki en önemli faktör akranlar arasındaki iletişim ve öğrencinin yeterliğidir. Eğer öğrenci olan öğrenciler daha yeterli öğretici öğrenci ile çalışıyorlarsa, genellikle daha yüksek kazanımlar elde ederken, eşit ya da daha alt seviyede yeterliği olan öğretici öğrenci ile çalışıyorlarsa daha az seviyede kazanım elde etmektedirler (Hogan ve Tutge, 1999).

Beden eğitimi derslerinde konu ile ilgili yapılan çalışma sonuçlarına göre akran öğretimi öğrencilerde istenilen motor beceri düzeyinde artışa neden olurken (Houston-Wilson ve diğ., 1997; Ayvazo ve Ward, 2009; Iserbyt ve diğ., 2011), özellikle engelli öğrencilerdeki fiziksel etkinlik düzeyini arttırmaya (Lieberman, 1996), öğrenci katılımını ve sosyal etkileşimi geliştirmeye ve başkalarına güven duyma alışkanlığı kazandırmaya (Lund, 1997; Iserbyt ve diğ. 2011), sorumluluk özelliğini geliştirmeye (Ayvazo ve Ward, 2009), orta ve yüksek seviyede engelli bulunan öğrencilerde olumlu akademik öğrenme zamanına da etkili olduğu (Webster, 1987)

belirlenmiştir. Ayrıca, Longueville ve ark. (2002) farklı yüzme becerisine sahip olan ve akran öğretimi yapan öğretici öğrencilerin yüzme becerisi düşük olan öğrencilerin beceri performanslarına ve başarı motivasyonlarına etkisini incelemişler ve beceri seviyesi yüksek öğreticiler erkekler için daha iyi yüzme becerisi sağlarken, beceri seviyesi yüksek ve orta seviyedeki öğreticiler kız öğrenciler için deneyimsiz öğreticilere göre daha iyi öğretim sağladıklarını rapor etmişlerdir. Beceri düzeyi yüksek olan deneyimli öğretici grubu acemi öğretici grubuna göre daha fazla gösterim ve sözel bilgi sunmuşlardır.

Bu noktadan yola çıkarak, gelecekte öğretmen ve antrenör olacak üniversite öğrencilerinin yetiştikleri bölümlerde aldıkları derslerin ülkemiz Milli Eğitim felsefesinin ve insan yetiştirmenin temelini oluşturan öğrenci merkezli anlayışa uygun olarak desenlenmesi yoluyla onlardaki bu anlayışın geliştirilmesi gerekmektedir. Ancak yapılan incelemeler sonucunda ülkemizde beden eğitimi alanında farklı modellerin etkilerini inceleyen çalışmaların sınırlı olması nedeniyle, bu çalışmanın amacını üniversitede deneyimli ve acemi öğretici öğrencilerle yürütülen akran öğretim modelinin voleybol dersindeki becerilerin öğrenilmesi üzerindeki etkisini incelemek oluşturmaktadır.

YÖNTEM

Bu çalışmada yarı deneysel araştırma modellerinden, kontrol grupsuz öntest-sontest deseni kullanılmıştır.

Çalışma Grubu

Çalışmaya 2012-2013 öğretim yılı güz döneminde AİBÜ Beden Eğitimi ve Spor Yüksekokulu Beden Eğitimi Öğretmenliği Bölümü'nde voleybol dersini alan 3. sınıf öğrencileri (6 kadın ve beş erkek toplam 11 kişi) ve Antrenörlük Eğitimi Bölümü'nde seçmeli voleybol dersini alan farklı sınıf seviyelerindeki öğrenciler (iki kadın ve dokuz erkek toplam 11 kişi) katılmışlardır. Aşağıda deney grubu I ve II ile ilgili tanımlayıcı bilgiler sunulmuştur.

Tablo 1. Deney Grubu I ve II İçin Yaş ve Spor Yılı İstatistikleri

	DENEY I (Deneyimli Öğretici)		DENEY II (Acemi Öğretici)	
	N	X \pm ss	N	X \pm ss
Yaş	11	20,82 \pm 2,44	11	20,91 \pm 3,54
Spor Yaşı	11	7,64 \pm 4,52	11	4,36 \pm 4,06
Akran Öğretici Yaş	7	21,29 \pm 2,98	7	20,71 \pm 2,63
Akran Öğretici Spor Yaşı	7	9,00 \pm 4,80	7	3,71 \pm 4,31

Çalışmanın yapıldığı iki grupta yer alan öğrencileri araştırma öncesi belirli nitelikler bakımından denkleştirmek için araştırmalar tarafından geliştirilen psikomotor alan gözlem formları (manşet pas, tenis servis ve smaç) ve Bartlett ve diğerleri (1991) tarafından geliştirilen manşet pas ve tenis servis testleri, Stanley (1967) tarafından geliştirilen smaç testi kullanılmıştır.

İki grupta (BEÖ-ANE) yer alan öğrencilerin voleybol becerilerine ait hazır bulunuşluk seviyelerinin eşit olup olmadığının belirlenmesi amacı ile farklı gruplarda yer alan öğrencilerin öntest puanları Mann Whitney U testi ile karşılaştırılmış ve gruplar arasında hiçbir beceride anlamlı farklılık bulunmamıştır (manşet pas $z=-.427$, $p=.669$; tenis servis $z=-.362$, $p=.717$; smaç $z=-.890$, $p=.374$, beceri testleri manşet pas $z=-.364$, $p=.716$, tenis servis $z=-1.557$, $p=.120$ ve smaç $z=-.600$, $p=.548$). Bu sonuçlara göre, iki farklı grubu oluşturan öğrencilerin voleybola ait beceri düzeylerinin birbirine benzer olduğu söylenebilir. Daha sonra BEÖ bölümü öğrencileri daha önceden aldıkları öğretim dersleri nedeniyle deneyimli öğretici öğrenci grubu (deney I), ANE bölümü öğrencileri ise öğretim dersleri almadığı için acemi öğretici öğrenci grubu (deney II) olarak belirlenmiştir.

Veri Toplama Araçları

Araştırmada verileri toplamak için araştırmacılar tarafından geliştirilen manşet pas, tenis servis ve smaç ile ilgili gözlem formları kullanılmıştır. Oluşturulan bu formlar için, iki voleybol antrenörü ve iki voleybol hakeminden görüşler alınmış ve uzmanlardan gelen öneriler doğrultusunda gözlem formları üzerinde düzenlemeler yapılmıştır. Hem ön test hem de son testte psikomotor alana ait yapılan uygulamalar kameraya

çekilmiş ve üç voleybol antrenörü tarafından gözlem formları kullanılarak değerlendirmeler yapılmıştır. Gözlemciler tarafından verilecek olan puanlar; 1 –“Hiçbir Zaman”, 2 – “Nadiren”, 3 – “Bazen”, 4 – “Sık sık” ve 5 – “Her Zaman” şeklinde derecelendirilmiştir. Kritik davranışın gözlenmesi sırasında verilen “5” puan, o davranışın tekniğe uygun şekilde kazanıldığını veya gözlendiğini; “1” puan ise, davranışın kazanılmamış ya da gözlenmemiş olduğunu ifade etmektedir.

Voleybol becerilerine (manşet pas, tenis servis ve smaç) ait gözlem formlarını dolduran üç uzmanın verdiği ön test ve son testteki puanları arasındaki güvenilirlik ve tutarlılığı test etmek için Fleiss kappa analizi yapılmış,uzmanların hem ön test hem de son testlerde öğrencilerin manşet pas, tenis servis ve smaç becerilerine verdikleri puanlar istatistiksel olarak tutarlı bulunmuştur.

Araştırmada öğrencilerin voleybola ait seçilen becerilerdeki performanslarını belirlemek amacı ile ayrıca Bartlett ve diğerleri (1991) tarafından geliştirilen manşet pas ve servis testi ve Stanley (1967) tarafından geliştirilen smaç testi kullanılmıştır.

İşlem Süreci

Çalışmaya katılan öğrencilerin voleybol becerilerine ait gelişimini belirleyebilmek için çalışmaya başlamadan önce manşet pas, tenis servis ve smaç becerilerine ait gözlem formları, Bartlett ve diğerleri (1991) tarafından geliştirilen manşet pas ve tenis servis testleri ve Stanley (1967) tarafından geliştirilen smaç testi kullanılarak ön test verileri elde edilmiştir.Ön test verileri elde edildikten sonra Beden Eğitimi Öğretmenliği Bölümü’nde voleybol dersini alan öğrenciler I. grup, Antrenörlük Eğitimi Bölümü’nde voleybol dersini alan öğrenciler ise II. grup olarak adlandırılmıştır. Her iki grupta da akran öğretimi modeli kullanılarak dersler planlanmıştır. I. grupta ön test puanlarına göre voleybol beceri düzeyleri (öğretim yeterliliği) yüksek öğrenciler (deneyimli öğretici grubu), II. grupta ise voleybol beceri düzeyleri (öğretim yeterliliği) düşük olan öğrenciler (acemi öğretici öğrenci) sınıflarında akran öğretim modelini uygulamışlardır. İki grupta da her ders saati 50 dakika ve haftada 4 ders saati olmak üzere (80+80 dak.) toplamda altı hafta boyunca (öntest-sontest 2 hafta, beceri öğretimi 4 hafta) voleybol dersleri işlenmiştir. Her iki grupta da akran öğretimi yapması için seçilen öğrenciler dersleri işledikten sonra, iki grup öğrencilerine de manşet pas, tenis servis ve smaç becerilerine ait gözlem formları ve Bartlett ve diğerleri (1991) tarafından geliştirilen manşet pas, tenis servis ve Stanley (1967) tarafından geliştirilen smaç testi kullanılarak son test verileri elde edilmiştir. Ön ve son test uygulamaları ve öğrencilerin işledikleri tüm dersler kamera ile kayıt altına alınmıştır.

Verilerin Çözümlemesi

Araştırmada elde edilen verilerin çözümlemesinde Kappa analizi,Wilcoxon işaretli sıralar testi ve Mann Whitney U testinden faydalanılmıştır. İstatistiksel işlemlerde anlamlılık düzeyi 0.05 olarak alınmıştır.

BULGULAR

Araştırmada elde edilen bulgulara göre, deneyimli ve acemi öğretici öğrencilerin akran öğretimi yaptığı her iki grupta da bulunan öğrencilerin ön test ve son test puanları karşılaştırılması için Wilcoxon işaretli sıralar testi yapılmış ve tüm becerilerde son testler lehine istatistiksel olarak anlamlı bir farklılıklar olduğu belirlenmiştir.

Çalışmada ayrıca deneyimli öğretici öğrencilerin akranlarına öğretim yaptığı I. grup (BEÖ) ve acemi öğretici öğrencilerin akranlarına öğretim yaptığı II. grup (ANE) öğrencilerinin manşet pas, tenis servis ve smaç becerilerine ilişkin erişim değerleri arasında anlamlı bir fark olup olmadığını belirlemek için Mann Whitney U testi yapılmış ve yapılan analiz sonucunda her iki grupta bulunan öğrencilere uygulanan manşet pas ($z=-1.151$, $p=.250$), tenis servis ($z=-1.288$, $p=.198$), ve smaç ($z=-1.283$, $p=.199$) testleri erişim puanları arasında istatistiksel olarak anlamlı bir fark bulunmamıştır. Benzer şekilde, iki grubun gözlem formları kullanılarak belirlenen voleybola ait manşet pas ($z=-.665$, $p=.506$), tenis servis ($z=-.637$, $p=.524$) ve smaç ($z=-.100$, $p=.920$) becerilerine ait erişim puanları karşılaştırıldığında ise yine iki grup arasında istatistiksel olarak anlamlı bir farka rastlanmamıştır.

TARTIŞMA VE SONUÇ

Çalışmada elde edilen bulgulara göre, akran öğretimi uygulanan her iki grupta da öğrencilerin voleybolu oluşturan manşet pas, tenis servis ve smaç becerilerini dersin sonunda verilen eğitime bağlı olarak dersin başındaki seviyelerine göre daha yüksek oranda öğrendikleri belirlenmiştir. Bu sonuç, ister deneyimli öğretici öğrencilerle isterse de acemi öğretici öğrencilerle yürütülmüş olan akran öğretiminin üniversite düzeyinde

voleybol becerilerinin öğretiminde etkili olduğunu göstermektedir. Akran öğretimini farklı branşların öğretiminde kullanan ve bu çalışmanın bulgularını destekleyen pek çok çalışma bulunmaktadır (Houston-Wilson ve diğ., 1997; Ayvazo ve Ward, 2009; Iserbyt ve diğ., 2011). Bu çalışmalardan Ayvazo ve Ward (2009)'ın yaptıkları çalışmada 6. sınıf öğrencisinde voleybol becerilerinin öğretiminde akran öğretiminin bir çeşidi olan tüm sınıf akran öğretiminin (CWPT) etkisine bakılmış ve veriler tüm sınıf akran öğretiminde öğrencilerin 4'de 3'ünün toplam ve doğru deneme performanslarını geliştirdiklerini göstermiştir. Ayrıca bu yaklaşım ile kız öğrencilerin doğru performans sayılarında ve sorumluluk alma özelliklerinde artışa neden olduğu belirlenmiştir. Ward ve diğ. (1998) bir dakikalık sürede voleybol becerilerinin denenmesi süresince grup öğretiminin, akran çiftleri ve akran aracılığı ile yapılan eğitimin (eğitim sorumluluğunun) deneme performans sayıları ve doğru performans sayıları üzerindeki etkisini incelemişlerdir. 24 öğrenci üzerinde yürütülen bu çalışmada öğrenciler grup öğretimi ve akran çiftleri durumuna göre akran destekli sorumluluk yaklaşımında daha fazla deneme yapmışlar ve daha fazla başarı elde etmişlerdir. Johnson ve Ward (2001) yaptıkları çalışmada 3. sınıflardaki 20 ders saatlik akran öğretimin bir türü olan CWPT'yi vuruş ünitesinde uygulamışlar ve çalışmanın sonucuna göre öğrenciler daha az toplam deneme yapmışlar, fakat doğru deneme oranı öğretmen merkezli öğretime göre daha yüksek bulunmuştur. Ayrıca, Iserbyt ve diğ. (2011) yaptıkları çalışmada öğretmen merkezli uygulamalar ile içerisinde görev kartlarının kullanıldığı akran öğretiminin motor becerilerdeki etkisini karşılaştırmışlar ve görev kartları ile işlenen akran öğretiminin motor becerilerin geliştirilmesinde en az öğretmen merkezli öğretim kadar etkili olduğunu belirlemişlerdir.

Çalışmada deneyimli ve acemi öğretici öğrenci gruplarındaki öğrencilerin voleybol becerilerindeki performans değerleri karşılaştırılmış ve tüm voleybol becerilerinde iki grup arasında fark bulunmamıştır. Bu sonuca göre, farklı öğretim yeterliliğine ve beceri düzeyine sahip olan öğretici öğrenciler, arkadaşlarının voleyboldaki becerileri öğrenmede benzer etkiyi yaratmışlardır. Çalışmada araştırmacılardan biri sınıf uygulamalarından önce o derste akran öğretimi yaklaşımını uygulayacak olan öğretici öğrencilerle toplantı yaparak, onlarla derste uygulayacakları ders planını birlikte yapmışlardır. Yapılan bu plan her iki sınıfta da aynı şekilde uygulanmıştır. Her iki grup arasında beceriler açısından fark çıkmamasının bir nedenini bu durum yaratmış olabilir. Ayrıca bu duruma etki eden faktörlerden bir diğerinin de her ne kadar bir grupta öğrencilerin öğretim güçleri diğer gruba göre daha düşük ise de, voleyboldaki becerilerin öğretimi için bir şekilde kendilerine özgü yolları bulmaları ve becerileri öğretirken tam olarak gösteremeyecekleri beceriler için teknolojik destek kullanmaları olduğu söylenebilir. Halbuki, Longueville ve ark. (2002) yaptıkları çalışmada, farklı yüzme becerisine sahip olan ve akran öğretimi yapan öğretici öğrencilerin yüzme becerisi düşük olan öğrencilerin beceri performanslarına ve başarı motivasyonlarına etkisini inceledikleri çalışmada, beceri seviyesi yüksek öğreticiler erkekler için daha iyi yüzme becerisi sağlamışlar, beceri seviyesi yüksek ve orta seviyedeki öğreticiler kız öğrenciler için deneyimsiz öğrencilere göre daha iyi öğretim sağlamışlardır. Beceri düzeyi yüksek olan öğretici grubu acemi öğretici grubuna göre daha fazla gösterim ve sözel bilgi sunmuşlardır. Ancak bu çalışmanın farklı bir spor branşında yapılması ve öğretimdeki süre farklılıkları bu iki çalışma arasında fark çıkmasına neden olmuş olabilir.

Çalışmadan elde edilen bulgulardan yola çıkarak benzer çalışmaların kontrol gruplarının da yer aldığı farklı spor dallarında ve farklı sınıf düzeylerinde uygulanması elde edilen verilerin daha sağlıklı olarak yorumlanmasına katkı getireceği düşünülmektedir.

Modern Method of Teaching Piano and its Importance in the Development of Performance Playing Skills

Bahia Galal Al Ekhrity^{a *}

^aDr. ,Assistant Professor, Department of Music Education, Faculty of Specific Education – Alexandria University – Egypt

Abstract

The aim of this paper is to identify the modern teaching methods to learn to play the piano during the parade of the most important of these modern methods and innovative in performance on the piano. And how to develop the playing skills and performance overcome the difficulties of the student from beginner through them and take advantage of them in the preparation of the graduates of the College of Education to develop their performance and quality. The importance of this paper is that it may contribute to the development of performance playing for students, including contents of the methods and techniques play unfamiliar.

This research is based on the use of the descriptive approach through review of the most important methods of teaching and research sample illustrate how to take advantage of them on the piano, and to overcome the difficulties of the student play novice and then the results.

Keywords. Teaching methods - Piano - Beginner student – Playing skills.

INTRODUCTION

The piano instrument one of the most important musical instruments, especially for its essential role in the field of music learning in all its stages. The piano teachers relied upon the traditional methods (The special style is that which every teacher uses for learning music art in different countries. They enriched Arts and flourished upon their hands. They left notes / exercises and books explain in details every current) (Bayoumi, A. 1992, p.251) in teaching it for a long period. No changes but some simple ones took place, concerning the method and content. Studying playing on the piano, is the which we cannot do without especially for the beginners (who studies the piano for the first time. He/she is the first year student in the specific educational colleges at the age of 16-18 years). It is one of the most important playing scholastic subjects which musical education syllabi include in the colleges and specialized institutions. In the current age, different ways and several schools which take care of finding modern methods for educating students and beginners, playing on the piano, appeared. Their aim targeted providing easiness to the student, attracting him/her raising level standard, of performance in a short time, and in a frequent gradual way get him to learn what we aim at without distress or hardness. By showing these means, we find what are similar in dealing with and graduality and find which integrates each other. This of course, is without intention on the side of the authors. This, is discovered by the way teach, hoping for getting known of all new in the field of learning "playing skills on the piano instrument to enable the student get to the level of "playing goodness".

Looking at *Teaching Styles*, we find that teacher way in acting with the educational situation and which show his personal characteristics and in which teaching methods are reacting, so as to have this leads to the appearances of the individual differences among the teachers themselves.(S. Amal & AH. Fouad, 1990, p.406)

All teaching methods contain advantages and disadvantages. Not every style acts in a good manner for every student. These styles should be valued / estimated in the light of the special needs of every student. So, the burden falls upon the teacher in using these ways, either separated intermediated, or integrates each other. The she researcher will show some of these modern and creative methods and their roles and importance in developing: -

John. Thompson Method, It is one of the old methods styles and which's still going on till today. It introduces to the student simple arrangements based upon the international melodies which were styled in an educational-manner. J. Thompson is considered the pioneer of C middle. It is one the methods which proved its success, in which the two hands thumbs are alternatively, used in playing the tone of C middle. He concentrated

on the importance of leaving playing by the way of numbering the fingers blew the noted-tones. In addition, he gave importance to putting instructions when learning a new tone or skill with assurance upon the teacher's accompaniment to the student, especially, in the first stages of learning. As well, with the importance of graduating the exercises in the rhythmical types with increasing the musical tones, one after the other.(Thompson J., 1934, p.134-138)

Bella Bartok's method gave importance to studying "solfege principles" and the basic musical rules as a base for acquiring the skill of playing performance on the piano. This method depended upon on the Hungarian folklore songs and putting it in educational exercises in gradual exercises of the primitive principles to works of more difficulty, in addition to the "solfege" singing trainings.

The student has to sing it first, and then plays it. Bartok assured the importance of having the student play the first sound and the teacher plays the whole exercise. With giving importance to all accurate details, written down in the musical note. These details should be explained at the beginning of every note. Bartok's educational style in its six parts (Micro Kosmos). Includes "speed change melodies". In addition to the scales, religion pitches and using the different ends, he as well composed educational melodies for the five fingers, using the same sound tone at the distance of one octave or two, and using the melodic different length arrow for the one exercise. As well, he used time signs () and the stops opposite to them and the graduating of melodies from the easy ones to the more difficult together with using the pedal and hands crossing.(Rakhawi N., 1979,p.100)

Clark's method known by the name "the music tree" is interested in learning the basics of piano playing for the scholar whether young or adults. It takes an interest in evaluating the phrases, the musical style, the general type, and music expressions. The scholars in the shape of music tree, we see them good at reading music distances from the first day as she is very specialized in music terms and sight reading which endue them the force for starting studying in the higher stages (masters).(Zaghoul, N., 1981)

Michael Aaron's method, His style was based on the music of some popular songs and remolding it to be performed on the piano with the possibility of singing it, as well, during playing. His way is based on performing (from the beginning) by the way of exchanging alternating the two hands, and writing the tone name by letters on each musical tone on the scale, with giving importance to finger numbering. He made writing for the explanation guidance's, necessary before training. His melodies are easy and simple. They are cute to attract the beginners. He used the simple harmonies, the simple coloring, and expressional performance from hearing start, as well. (El Sawi, H.2006, P171)

Suzuki's method, it is one of the most important styles which sprang in Japan but it has got a large popularity in the USA. This method is of great success with the Japanese students, more than the Americans. The Japanese students, showed cleverness in "solfege reading", listening training, and playing techniques. Though the American students followed the same method, they missed a lot of these skills. They in most cases cannot read the notes and depend on their playing on ears and free playing. This method handles music bases and playing gradually slow at the beginning, then, going on in speed steps positive and accurate; to get to the desired level. (Suzuki, S., I, 1976, p.23)

Mr. Kern's method, Play by choice is one of the best methods available for learning the beginners. Mr. Kern has organized a teaching method by which he could deal with the beginners and the adults. He wrote down one syllabus with multi-faceted for learning the fundamental bases and the sound is educationally required. He decided that "*No two persons are found learn the same concepts in the exact same way*". There are no flashy graphics or associated bells or whistles attached to them; only, there are facts and a lot of suggestions for how to mix these facts and having them in the position of application "training" into your practice. This method assured the reading of individual tones, chords, and the relationships between distances and the melodic corners, not merely playing setting. The music pieces in this book are a good collection of pop, religious, Broadway musicals, and arrangements of some classical pieces. The beginner student has the freedom of choosing a piece of them for playing and studying. The book text pointed to the pieces which need to be studied for assurance and learning. Then the rest pieces in every act and that can be played by choosing.

Play by Choice method was and is still one of the most successful methods which students can use. All students who study by means of this style can be able to read music without relying on the position playing to get them through a composition. They become functionally literate music students in reading and writing music.

Bastian's method, this style assures on the five finger position-playing method. This method was used in a large type in the past. It found that the students had a very frustrate time to get out of the mode of position-

playing. Their note reading is slowed down tremendously, to the point none-existence and progress is very slow. Unfortunately, most of the units in Book One deal with the different five finger positions of playing, instead of having multi-faceted for the syllabus of reading the note.

Rote's method, it is an effective method in teaching the piano. It focuses on teaching students the basics of piano playing. In this way, the students became aware of the keyboard first before starting in reading the notes from the staff. The student learns hearing, thinking, sight reading and harmony on the keyboard. So, it is in the very beginning easier and better. Concentrating on the keyboard opens before the student several chances for extemporization and melodizing. As a result, a concept for a better piano, and music as a whole, develops.

Pace's Method is of the right style, educationally for teaching the beginners. It introduces the scientific subject in a summed up way and in specific points. This way of piano teaching prepares the students for an early classic store. Note reading and strong playing skills are great benefits of the Pace Method. Moreover, he avoids the position playing method, which limits the basic skills for students' from the very beginning. Although this method is difficult, the student's only complaint was that the music had been from the old style. The method can use more sight reading exercises and material. It requires a lot of effort on the part of both the student and the teacher, in spite of its effectiveness.

Hanz Hoiman's Method depended for teaching the piano to the beginners upon removing fear far from them and relying on a fast playing for the piano and not on training. He was interested in writing down all his compositions in an educational way, going from easiness to the more difficult gradually, to what suits the student's educational level. As well he gave importance to coping with the modern age in composing such as; the Jazz, Rock, Pop and Folk but in graduation in difficulty level. His style relied upon specifying music period time, only on playing the piano but in a daily manner with concentration and mixing information in a short period to defect students' fear. He used excitement style in learning in his musical notes whether by means of a teacher or without to be a powerful base in playing practically and theatrically. (Yassen. A., 2006, p.97-99)

Many of the research methods of teaching piano, was conducted. Including, for example, (Leila Zidan, 1972) study in which she made a comparison for the piano playing methods in the 19th c., and knowing their effect on the piano playing teaching. She collected between "matte's style" which relied upon showing the theoretical and physiological bases, necessary for playing the piano with "kurto's way" which is based upon the practical applications for theses bases. She got out a method collects between the two methods. She introduces exercises for training on the varied technical kinds with an explanation, fits the beginning scholar. Has been reported (El Rakhawy N., 1979) to the importance of putting the correct technical base in singing playing which is of well expression, and encouraging students in studying the piano instrument. (Gomaa G., 1992) study in which he dealt with the most important different modern attitudes in teaching the piano in the second half of the 20th c. , and how to get use of these attitudes and the range of its fit for the Egyptian student. (Koutb M., 1996) study which targeted towards student's wishing for training on playing on the piano and guiding him to the correct way of training till getting his fruits through some of exercises to break down some of performance difficulties. As well, giving the student a chance for taking part in choosing a piano instrument syllabus which fits his individual abilities.

Method and procedures

The current study is based upon using the descriptive syllabus which lies an registering and describing what is being, and the experimental syllabus through running a questionnaire for the misers experts and specialists in the field of piano playing in the items which is suitable for the suggested presented method and which is based on constructing a scientific theoretical content, includes a theoretical background about the methods and styles. The beginner student is exposed to, when starting to learn playing on the piano. Its idea depended upon collecting between Rote's method and all methods and styles which are used currently for the students of the specific educational faculty Alex University.

The Questionnaire items came to include:- 1) A hint about the piano instrument constructions. 2) The instrument mechanism and how to get sound out of it. 3) The correct sitting to the piano instrument. 4) The bases of playing on the piano. 5) The most important performance of playing skills intended to be acquired and development (Subject Search) and includes "The Technique - The Musical sentence and phrase - The constant playing - The intermittent playing - The Melodic line - The Short expressional bow - The Musical scale - The Arpeggio - The Ornaments -The Strong pressure - The Pedal. The researcher presented the most important points, which are: -

Sitting right in front of the piano, Attention must be paid to sit in front of the piano session right until the student gets used to hearing right from the beginning of training.

Figure (1) shows the correct setting in front of the piano
The arms can move freely and the head balances easily on top of the spine, easing the load on the neck, shoulders, and arms.

The setting determined the correct specification of the previous figure as follows: A) sit in the middle seat of the rectangle so that the rectangle occupies two-thirds of the surface of the seat. B) The Body straight and torso fixed in standby mode, and the weight of the body rests on the torso and feet. C) The head in a normal situation with no parts of the front or back and shoulders and put them in with the natural lack of raising them up. D) Arms and forearms to be obtuse angle.

The performance of playing skills wanted to be acquired for beginner students:-

- 1) *The technique* is one of the most important skills which mean knowing the correct way for the fingers on the instrument. And discovering its route through the touch sense. The technique is technical exercises of fingers. The student performs them on the piano instrument every day, with a sense mind and complete concentration for acquiring elasticity, skill and the correct mental physical habits which are stored in the unconsciousness as a result of daily training till it becoming an automatic spontaneous habit and getting to the best by means of this technique. It is a most to avoid strong physical settings. There should not be a high pressure above the two arms in the body and the two elbows should be to the outside and the two wrists to the inside with not bending the two shoulders. The two elbows should be lowered down, the arm directs the hand and the hand directs the finger. As long as the forearms muscles move the fingers, make the hand and the arm at a single straight. (Al said, N. Hanim, 1998, p.21)
- 2) *The musical sentence and the phrasal one*: music is a special language and has its sentences; parts and pronunciation and the musical phrase is a part at the parts from which the musical passage is composed. And, in turn it consists of several parts. Each of them divides into small parts; melodic or harmonic. Everyone is called the melodically photo or the melodic drawing. By collecting these photos, we get a certain idea or a certain meaning named the sentence. We acknowledge the musical sentence and its parts by the ending or separating each from the other by a stop for the plan periodical, similar to the punctuation marks in the language for the phrases, the sentences and their parts. The simplest kind of the musical sentences is that which is formed of eight musical octaves, divided into two phrases or two drawn parts, each of them of four octaves. The first on the shape of a question and the second on the shape of an answer. The first section usually ends in a minus stop (not complete) but the second one usually ends in a complete stop. (Bayoumi, A.1992, pp. 308-309).
- 3) *Play legato* is intended to contact playing tones for piano to each other, and this kind of performance does not come except by good listening on the part of the student. He must listen to the end of the sound by listening to his debut completely, and when the music is slow he must take every sound right to help connect the sounds together while pressing the keys to take into account the rapid disappearance of sound and noting that there are sentences (interconnected) sound are not connecting because they are not equalled in terms of rhythm and melody. (Zaghloul N., 1981,p.4) The related performance - skills that sometimes cause difficulty and often cause refraction in the continuity of the sound while performing the melody if a student is not fully aware of the treatment manner manipulated.
- 4) *The Portato*; playing intermittent, it is one of the different skill in playing on the piano, and is intended to perform in a way tones are not tied or separate, but are as close as to be to the tones and referred to the development of a short clause above or below these tones (-).
- 5) *The Melodic line* is a playing skill. lies in how to control the quantity and quality of the audio output of music and its association with the sounds before, and the sounds that followed and this is the playing of musical phrase, so care must be taken in the time your melody as a whole and not of interest by clicking strong the beginning of each Measures so as not to lose the wholesale musical flow of goods. The most important points to be observed while performing wholesale musical interest is the beginning of the melody,

- especially when student's playing Anacroz, Observed without pressure on the first tune, but the pressure starts on the first unit in order not to give a different expression. (Zaghloul, N. 1981,p.2)
- 6) *The Slur* (Sagittarius expressionist short), It is a bracket combines two tons or more gathered in the playing of musical fine the same in one whisper , which is one of the elements of shading melody and intended to move from a powerful notepad to anther weak one. It's the disappearance of sound in the notation. Second this disappearance depends on the rhythm and character of the music melody. (Willi, A.1987, p. 234) Leads this expressive bow by throwing the weight of the tone arm on the first and then lift the hand after playing second tone, lightly in preparation for playing the tones that followed.
 - 7) *The musical Scales* is a group of notes certain played, smoothly to know the beginning and the end of the specified key. They are sequential in steps and are considered, scientifically, arrangement acoustically or mechanically literature or musical paragraphs, while retaining the time value of these steps. The scales are of particular importance in the technique to play, and during training on the scales music must be taken into account as follows: A) Training on each hand separately at first, even playing every touch tone strongly equaled and equal in time. B) Familiarity with all the tones that make up the peace as well as the directory , so as to be determined by placing the hand and using the thumb and its relationship to the third and fourth finger where it is of great importance in the easiness of performance of the musical scale. C) Focus on the full looseness of muscles after playing each tone and the use of finger touch with freedom of movement of the shoulder. D) Gradient in the speed at which training on scales depend to be up to the speed performance required from the student.
 - 8) *Arpeggio* tones consist of the scales first, third and fifth tones , the same combination of first-class ladder , but plays in quick succession , and to acquire the skill to perform playing arpeggio entails several points , followed by the student during the training , namely: a) Training arpeggio tones in the style of continues playing and in one sentence. B) Training on arpeggio tones of one strong touch and a time of one. C) Training by using fingers number of the right tones in your hands. D) Training on arpeggio tones with no tightening fingers during performance.(Al said, N. Hanim, 1998, pp.49-52)
 - 9) *The Accent* is a pressure force of a sudden - action on a notepad or harmonic one , it takes its character from the character of the music, located where and referred to by the symbol \wedge or $>$ leads accent more strongly when playing melodic line hard, but if the melodic line is played weakly, the accent should be played strongly . (Willi, A.1987, p. 773)
 - 10) *Ornaments* are small notes or special symbols recorded in the artwork and the student performs to increase the richness of musical composition and  Among the most important and most commonly used ornaments as follows: - a) "Acciaccatura"  a mini notepad divided by a line in the tail, and so be quick and deducted replied from the beginning of the note key followed in most cases and it is located as strong bits on Acciaccatura, or sometimes deducted from Acciaccatura replied from the end of the time of the note, which was accepted in this case is located, as a powerful bits on the basic notation and not Acciaccatura.  "Mordent" is a  changing fast, starts and then the sharpest note and the core if it is with the same format,  but if it was  so basic  begins the note somewhat cruder and the core agene. C) "Trill" meaning decoration shortened to a (tr.)  the signal extends until the end of its time, and be its reference above basic tone is composed of Al trill notation and basic notation the sharpest, including a regular basis and quickly and without strong bits in the run off until the basic notation-time ends. D) "Arpeggio" This ornament is referred to so often, leads to the tone of the crudest manner to the sequential sharp tone (Hassanein, s. 1987.pp.170-179)
 - 11) *Pedaling skill*, is the term given to the multiple forms of levers which are powered by the foot and cause, when you press them either strengthen or weaken the sound. The piano contains two pedals, except the big pianos which contain three each of them has its own position. A) The right pedal (muffler) Forte Pedal or Sustain Pedal. B) The left pedal (Pacific) Soft Pedal or Una Corde. The right pedal and powers when pressed raises stops for tendons completely. This allows an increase of ringing sound as a result of vibration tendons so -called "Sustain" means the continuation and extension of tones and lengthen them continue as long as the pressure is on pedal. It is the goal of pedal to give beauty to playing and enrich the tone and deepen it. The left pedal is a soft pedal "Una Corde" because it leads to methods of tendon and only bait. This pedal works to reduce the size of the sound of the tone, plus it gives the tone the special color coded (Ali, S., 1994, p 35: 36). The meddle pedal is found in large pianos and is called "Sustain Pedal" (pedal for lengthening the melody) and the basic function is to install an extension tones as long as the pressure continues pedal. Requiring a good use of the pedal as a skill needs to exercise and many organizations from the beginning until the student gets used to it and becomes a permanent part played automatically in all senses of the eye, ear, and a sense of conscious thinking and foot muscles. So, it is on the teacher to draw students' proper guidance from the beginning towards the use of pedal, function and usefulness till he

finishes his training, perfectly and easily. He acquires that skill and knows how to move his foot on the pedal at the right time. (Abu Auf B., 1986 pp. 279-292) The use of pedal - art is based on some simple basic rules: The first rule; pedal change must be followed directly fiddle harmony, new note, or new melodic. The second rule: pedal differing treatment depends on the layers of instrument sound, whenever we turn on the sounds of acute pedal its use must be free and as we head for the big sounds shall it renews the pedal slowly. The third rule: Renewal of the pedal with every change of Harmony, a base of great importance in the expression of the mysterious sounds, thin and modern inside harmonies. The rule must take into account the full accuracy in the application of the basic rules, rather because of its great importance. (Nassif, H., 1977, P.31-32)

The researcher prepared a list of items and basic skills through a questionnaire, and the attention of the experts and professors who specialize in playing the piano. The result of the survey, as shown in the following table, with some modifications in those items.

TABLE I. The items and basic skills in a questionnaire

Number	Points	Value
(1)	A hint about the piano instrument constructions.	100%
(2)	The instrument mechanism and how to get sound out of it.	100%
(3)	The correct sitting to the piano instrument.	100%
(4)	The bases of playing on the piano.	100%
(5)	The most important musical skills intended to be acquired:-	
(5-1)	The Technique.	100%
(5-2)	The Musical sentence and phrase.	100%
(5-3)	The constant playing.(legato)	100%
(5-4)	The intermittent playing.(portato)	100%
(5-5)	The Melodic line.	100%
(5-6)	The Short expressional bow.(slur)	100%
(5-7)	The Musical scale.	100%
(5-8)	The Arpeggio.	100%
(5-9)	The Strong pressure.(accent)	100%
(5-10)	The Ornaments.	70%
(5-11)	Pedal skill	100%

DISCUSSION

Through the previous table that demonstrates opinion questionnaire items and the percentage of approval of the points to be included in the proposed method of teaching the skills of piano performance We note that all the agreed views of professors who specialize on the validity of all the items, except for item differed in some ornaments to the difficulty of their performance at the beginning of the learning of the student novice.

The data showed that the proposed method of researcher interest in teaching piano skills. These findings agreed with Study for Yassin A., (2006) which exposed to collect between the modern style of both "J. Thomposon and H. Hoiman " for learning adults playing the piano. It informed that both styles integrates each other and it easy for the piano teacher to use a new style and method for playing on the piano. The findings of the current study were also supported by several studies, such as (El Sawi H., 2006) study in her presentation and analysis of "Michael Aaron" for learning playing on the piano for the beginners which help the student get to the good performance through using some of scales with raising and lowering marks. But this is made for each passage alone. His use of alternative hands style when performing for the first time and by the opposite way of the two hands by the same numbering of finger. (Saleh S., 1994) this study targeted at studying "Francis Clark's method" for learning beginners playing on the piano and showing the followed up method in a group of books "look and listen". And the distinguished points of him as this has an effecting in enlarging the scopes of music teacher and providing him with some of the modern styles in learning playing on the piano. She pointed out her findings for Clark's method is different concerning learning beginning, tones, fingers used and added the guidance's, necessary for model performance

CONCLUSION

From the previous showing of this paper, it appears the modern teaching methods to learn to play the piano, and the most important of these modern methods and innovative in performance on the piano. As well, how to develop the playing skills and performance overcome the difficulties of the student from beginner through them

and take advantage of them in the preparation of the graduates of the College of Education to develop their performance and quality.

RESULTS

After having the experts' questionnaires in field of Western musical (piano specialization), results appeared to point out their acceptance and approval for the points Suggested for teaching piano playing skills. The different piano teaching methods are essential tools in developing students' abilities and performance skills in playing the piano. Because of the diversity in learning abilities, personalities and skills of students, such methods will greatly help in mastering each piano lesson.

Abstract

First-generation, low-income, and underrepresented students (FGLIU) face multiple challenges adapting to academic and social expectations on university campuses, particularly elite institutions, where these challenges greatly impact students' sense of belonging and overall retention. Tufts University, an elite private university, is uniquely positioned as one of the smallest research universities in the United States, while remaining, at its core, a liberal arts teaching college. Tufts is also committed to assisting FGLIU students through the implementation of two bridge programs (BLAST and BEST), aimed at supporting and retaining liberal arts and engineering FGLIU students, respectively. Utilizing a single site case study, programmatic and student data reveals how these students are enrolling, experiencing, and succeeding at Tufts. In addendum to the data, this paper will also address fundamental access and equity issues for FGLIU students within higher education and how these issues directly impact the everyday experiences of BLAST and BEST scholars at Tufts.

Keywords.

INTRODUCTION

Scholars have urged higher education institutions to be more purposeful in their recruitment of first generation, low-income, and underrepresented students (FGLIU) (Kaufman, 2001), especially at elite and Predominately White Institutions (PWIs), which enroll a small percentage of students from this population (Astin & Oseguera, 2004). Even with acceptance to elite PWIs, however, inherent challenges await FGLIU students, particularly if they are also students of color (SOC). Factors such as race, gender, and/or ethnicity are inseparable from class and economic features (Swartz, 1997); thus, individuals from FGLIU backgrounds are in fact often operating at the junction of numerous counts of oppression due to the "intersectionality" of their minoritized backgrounds (Delgado & Stefancic, 2012).

Furthermore, adjusting to college involves exploring and mastering multiple transitions within academic, social, and cultural realms, often requiring that students possess the skills and knowledge (or cultural capital) to understand the higher education system and its expectations in order to successfully acclimate to college life. Frequently though, FGLIU students do not possess the preset cultural capital expected by elite higher education institutions (Valadez, 1993). This lack of cultural capital creates an intimidating process for low-income students, particularly first generation students (Terenzini et al., 1994). As a result, FGLIU students find themselves at a disadvantage when navigating their transition to college. They are often left to navigate the institutional system on their own (Hornak, Farrell, & Jackson, 2010), while also experiencing "profound" sentiments that they do not belong (Ostrove, 2003). Ultimately, due to the myriad of challenges these students face during their transition, they are subsequently less likely to persist to graduation (Berger, 2000; Walpole, 2003; Ostrove & Long, 2007; Wells, 2008a).

Because of these challenges, Tufts University is committed to assisting FGLIU students through the implementation of two bridge programs (BLAST and BEST), aimed at supporting and retaining liberal arts and engineering FGLIU students, respectively. As an elite private university, Tufts is uniquely positioned as one of the smallest research universities in the United States, while remaining, at its core, a liberal arts teaching college. The purpose of this paper is to present student data from the BLAST and BEST programs, revealing how these FGLIU students are enrolling, experiencing, and succeeding at Tufts. In addendum to the data, this paper will

also address fundamental access and equity issues for FGLIU students within higher education and how these issues directly impact the everyday experiences of BEST and BLAST Scholars at Tufts.

BACKGROUND LITERATURE

FGLIU Students and Inequity within Higher Education

FGLIU students face three major inequities in higher education: they go to college in fewer instances than others, they complete college at lower rates, and they attend four-year colleges generally, and selective schools particularly, with substantially less frequency (Kahlenberg, 2004). Of all college first-year entrants, almost half of low-income students attend two-year community colleges, in contrast with just one in ten high-income students. At top-tier colleges, “students in the highest socioeconomic quartile take up 74 percent of the available slots, compared with three percent from the bottom quartile” (Bowen & Bok, 1998, p. 341). The under representation of low-income students at elite colleges is many times greater than it is for under represented students of color, who are still the subject of debate in relation to access and equity.

Inequality in access to higher education has historically been, and continues to be, a significant problem in American society due to the growing wage premium provided by a college education and the particular advantages of attending a selective university. As Gladieux (2004) notes, the median annual household income in 1999 was roughly \$36,000 for those with a high school degree, \$62,000 for those with a bachelor’s degree, and \$100,000 for those with a professional degree. While community colleges are seen as a gateway to four-year colleges, less than one-tenth of community college students ultimately receive a bachelor’s degree. Carnevale and Rose (2004) point out that there are three major advantages to attending a selective four-year college. Controlling for test scores, students in selective colleges are more likely to graduate, enroll at and attend a postgraduate school, and receive an increased wage premium of 5-20 percent post graduation, representing the value added from attending a competitive school.

The Impact of “Capital” on the Transition Issues FGLIU Students Face

Although elite four-year institutions offer many tangible benefits for students, not all students access these benefits easily or equitably. Because of their minoritized position within the institution in terms of their race, ethnicity, and/or socioeconomic background, many FGLIU students face inherent challenges in their transition to colleges and in establishing a sense of belonging within the community. For example, with a history of racial exclusion, and a lack of role models, racial and ethnic minorities often experience initial sentiments of alienation, feeling like “outsiders within” at elite institutions (Datnow & Cooper, 2009, p. 197). Ostrove (2003) also notes that, “class plays a large role in constructing the markers that define ‘belongingness’ on [elite] college campuses” (p. 771). Moreover, FGLIU students often lack the social capital, cultural capital, and human capital valued within higher education, particularly elite institutions (Massey, 2003). Social capital is the tangible benefits and resources that people accrue by virtue of their inclusion in a social structure (Bourdieu & Wacquant, 1992), cultural capital refers to an individual’s knowledge of the norms, styles, conventions, and tastes that pervade specific social settings and allow individuals to navigate them in ways that increase their odds of success (Swindler, 1986; MacLeod, 1995), and human capital refers to the skills, abilities, and knowledge possessed by an individual (Schultz, 1963).

Subsequently measurable differences in academic preparation clearly exist between FGLIU and majority students by the time they graduate from high school. DiMaggio and Ostrower (1990) and Roscigno and Ainsworth-Darnell (1999) have documented clear differences in capital possession, also finding that these differences among students were substantially explained by differences in socioeconomic background. The capital deficiency theory posits that cultural information passed on informally from one generation to the next helps to perpetuate social stratification. Wealthy children inherit a substantially different body of cultural knowledge compared with working class children, especially when the latter are members of a racial or ethnic minority. Furthermore, academia in particular is a rarefied social niche with its own customs, traditions, and expectations in terms of cultural capital. Exposure to and prior knowledge of the social conventions of academia can be critical in preparing students for achieving success in a school environment (Farkas, 1996, p. 5). As translated by Swartz (1997), “Bourdieu sees the educational system as the principal institution controlling the allocation of status and privilege in contemporary societies” (p. 189). And, although all students enter higher education with some type of cultural capital, only certain students “will be able to exchange this cultural capital for something of value” (Winkle-Wagner, 2010, p. 8). In essence, certain types of cultural capital, particularly those belonging to underrepresented or nontraditional students (such as FGLIU students) remain unvalued by

higher education, leaving them at an elevated risk for lower success rates in school (Valdez, 1993; Berger, 2000, Walpole, 2003, Wells, 2008b).

Similar to national trends, FGLIU students at Tufts were also historically at risk for transition and persistence difficulties impacting their retention rates. Therefore, in recent years institutional attention was directed toward their lower retention rates and transition challenges, and as a result, the Bridge to Engineering Success at Tufts (BEST) program and Bridge to Liberal Arts Success (BLAST) program were created in 2010 & 2012, respectively. The purpose of these programs is to support, develop, and retain engineering and liberal arts students who may be first in their family to attend a four-year college, and/or have attended an under resourced high school, and/or have worked with a college access agency. Through these programs Tufts aims to address this gap in capital possession, sense of belonging, and retention for FGLIU students.

METHODS

Purpose of the Case Study Approach

To explore how FGLIU students were experiencing, and succeeding at Tufts, we utilized a single-site case study approach, collecting both quantitative and qualitative data on the Bridge to Liberal Arts Success at Tufts (BLAST) program and the Bridge to Engineering Success at Tufts (BEST) program, our two summer bridge programs that provide continued support through graduation. Our approach utilized case study methodology as we conducted an “in-depth and detailed exploration” of both programs (Rossman & Rallis, 2012, p. 103). As Rossman & Rallis (2012) further note, case studies are often complex and multilayered, utilizing a variety of techniques to collect data over time. Furthermore, case studies are context-dependent, as exemplified in our single-site case study, in which we are examining both of these programs within the broader context of the Tufts environment. Moreover, as referenced above, case studies are multilayered; as such, we have collected quantitative data in the form of student surveys, demographic information, and institutional data (such as grade point averages and retention rates), along with qualitative data in the form of written student narratives and student interviews. The triangulation of this data has provided us with a rich description of the student experience of FGLIU BLAST and BEST Scholars at Tufts.

Overview of BLAST and BEST

The BLAST program

Implemented in 2012, The Bridge to Liberal Arts Success (BLAST) vision is to develop a strong cohort of scholars from diverse backgrounds who demonstrated academic excellence in their secondary education. The purpose of the program is to support and retain students who may be first in their family to attend a four-year college, and/or have attended under resourced high school and/or have been affiliated with a college access agency; the majority of BLAST scholars are also FGLIU students. Supported by a strong and varied Tufts network, BLAST Scholars begin their experience with a six-week intensive, residential summer program. In this segment of the program, Scholars find themselves immediately immersed into the “Tufts experience.” BLAST Scholars take two courses that will allow them to fulfill requirements toward their Tufts degree. This program prepares students for a rigorous college curriculum, orientates them to the Tufts culture, and provides the resources for a successful transition. Although preparatory, rather than remedial, students are required to demonstrate success in their summer courses in order to matriculate to Tufts in the fall.

The goal of the program is to make certain that BLAST Scholars begin their college experience empowered and ready to take advantage of everything that Tufts has to offer. As the four-year program progresses, the BLAST program provides the scaffolding to support Scholars for the variety of opportunities, challenges, and experiences that characterize a Tufts undergraduate education. A focal point is building a strong sense of community within the program and to the larger Tufts community. A number of teambuilding activities and events bring the Scholars together as a group, creating a cohort that they can turn to throughout the course of their continuing years together. In addition, the program strives to provide students with the capital to understand the academic culture inherent to any college or university. As the BLAST Scholar ends the six week session, s/he will be ready to make a seamless transition from any type of secondary school setting to Tufts’ rigorous and exciting undergraduate environment.

An overview of the demographic breakdown of the two BLAST cohorts is as follows:

BLAST Cohort	Size	Gender % Male	% Female	Economic Financial Aid Recipients	College status First Generation
--------------	------	------------------	----------	--------------------------------------	------------------------------------

C1	22	54%	46%	100%	90.9%
C2	23	44%	56%	96%	54.5%

BLAST Cohort	Race/Ethnicity				
	% Latino/a	% Black	%Asian	%White	%Multiracial
C1	46%	36%	9%	9%	N/A
C2	26%	26%	17%	13%	17%

The BEST program

The Center for STEM Diversity (CSD) at Tufts University is an umbrella organization that develops best practices and creates new programming designed to increase the recruitment and retention of underrepresented students in the STEM (science, technology, engineering, and mathematics) majors. The Center interfaces with undergraduates, graduate students, faculty, and staff across the campus. Currently, the Center operates two internal programs, the Bridge to Engineering Success at Tufts (BEST) and Promoting Retention in Science and Engineering (PRISE) aimed at assisting FGLIU students at Tufts. For the purpose of this paper we will focus our attention on the BEST program.

The BEST program began in 2010 with the goal of ensuring first-generation college students from low income backgrounds were given the tools (both academic and social) to successfully graduate from the School of Engineering. BEST Scholars attend at six-week summer program and take two foundational engineering classes (Calculus and Physics) for credit, while also attending various workshops on engineering and campus resources during the summer. This program allows students to experience college level academics in a supportive environment, and introduces them to the numerous co-curricular support services on campus. In addition, the BEST program is also preparatory, rather than remedial, because most BEST students have not had formal physics or calculus due to the fact that these courses are typically not offered at their particular high schools, or offered, but not at the AP level. Subsequently, admission to the School of Engineering is contingent on completion of the program. Once admitted, students receive academic and social support through their first year (and until graduation) via weekly meetings, tutoring, and program sponsored social activities.

An overview of the demographic breakdown of the four BEST cohorts is as follows:

BEST Cohort	Size	Gender		Economic Financial Aid Recipients	College status First Generation
		% Male	% Female		
C1	8	75%	25%	100%	88%
C2	10	50%	50%	100%	90%
C3	11	64%	36%	100%	73%
C4	9	56%	44%	100%	100%

BEST Cohort	Race/Ethnicity				
	% Latino/a	% Black	%Asian	%White	%Multiracial
C1	25%	63%	N/A	12%	N/A
C2	40%	20%	20%	20%	N/A
C3	55%	27%	N/A	18%	N/A
C4	56%	33%	N/A	11%	N/A

FINDINGS & DATA

As documented in the literature section of this paper, FGLIU students are often at a greater risk for transition issues, which directly impacts retention. However, both the BLAST and the BEST scholars appear to be academically thriving at Tufts and are maintaining close to perfect retention rates. To begin, every BLAST and BEST scholar has successfully completed their summer bridge program and matriculated to Tufts. In addition, all the BLAST and BEST scholars are currently scheduled to graduate within the standard four year time period. Lastly, the retention rates for the BLAST and BEST cohorts often surpass the overall retention rates for the schools of Arts and Sciences and Engineering at each respective class level. Retention rates were not included for BLAST cohort 2 and BEST Cohort 4 as they have only completed the Fall 2013 semester at Tufts and have yet to finish their freshman year; however the retention rates were calculated for the rest of the cohorts. The retention rates are as follows:

	BLAST C1	Arts & Sciences: Sophomore Class	BEST C1	Engineering: Senior Class	BEST C2**	Engineering: Junior Class	BEST C3**	Engineering: Sophomore Class
Retention rate	100%	94.3%	100%	92.3%	100%	90.5%	91%	94.3%

**For BEST cohorts 2 & 3, one student from each cohort did transfer out of the school of Engineering into Arts & Sciences, but they remain at Tufts and are on track to graduate within four years.

In addition, data was collected from students in BLAST cohort 1 in comparison to three separate student groups. The first group, Control Group 1, is composed of 27 students who matriculated in Fall 2011, and had BLAST existed at this time, many students from this group would have been chosen to participate in BLAST. The second control group, Control Group 2, consists of 12 students who matriculated in Fall 2012 and share similar characteristics to the BLAST group, but were not chosen to participate in the program. The randomly sampled group, or the Comparison Group, is comprised of 59 students from the greater Tufts freshmen population who matriculated in Fall 2012 and has no affiliation with the BLAST program. To determine whether there were significant differences across the control, BLAST, and comparison groups, we analyzed the data by measuring differences in mean rank scores for various academic and social engagement variables (such as academic preparedness, confidence in academic skills, engagement with the Tufts community, and so forth). Overall very few significant differences existed, with the exception that BLAST students were more familiar with academic resources than the Controls and Comparison group, and BLAST students were also more willing to access academic resources than the Comparison group. However, the Comparison group still felt more academically prepared at the end of spring semester than the BLAST group.

In terms of academics, both BLAST and BEST scholars maintain competitive Grade Point Averages (GPAs) similar to, or within close range of, their peers. In fact, BLAST scholars maintained a higher cumulative (CUM) GPA than both of the control groups. The overall freshman year cumulative GPA for BLAST cohort 1 was a 3.26 out of a 4.0 scale; while the GPAs for control group 1, control group 2, and the comparison group were 3.0, 3.09, and 3.46 respectively. Presently the GPA information for BLAST cohort 2 and the control/comparison groups are still being collected.

Freshman Year GPA Comparison: BLAST Cohort #1 vs. Control and Comparison groups			
BLAST C1	Control Group 1	Control Group 2	Comparison Group
3.26	3.0	3.09	3.46

For the BEST cohorts, the CUM GPAs for the four cohorts in comparison to the overall class averages were calculated out of a 4.0 scale. When translated to a letter grade, only a half grade difference exists between the CUM GPA for each BEST cohort and the CUM GPA for each respective class (the difference between a B and a B+). The CUM GPAs are as follows:

GPA Comparison: BEST Cohorts vs. Class Averages (CUM GPA)							
BEST C1	Senior Class	BEST C2	Junior Class	BEST C3	Sophomore Class	BEST C4	Freshman Class
2.95	3.35	2.95	3.29	2.94	3.31	***	***

*** Still collecting the data for BEST cohort 4 and the current freshman class for the school of Engineering.

DISCUSSION

This case study provides a tangible example of how carefully designed access programs aimed at recruiting and retaining diverse talent from underrepresented populations can be successfully implemented at elite, private institutions such as Tufts. The research literature clearly identifies challenges that FGLIU students face in terms of their transition, feelings of belongingness, and possession of multiple types of capital. However, the goal of these programs is to immediately address those issues by engaging students in a six-week (pre-matriculation) summer experience while being inherently thoughtful of each students' unique experiences, their background, and their skill set. Doing so allows students to build upon and expand their social, cultural, and human capital, thereby establishing a greater sense of belonging. Undoubtedly a number of our students are coming from school districts that have not provided the optimum academic preparation for success at Tufts. However, our aim is not to provide remediation for these students, but rather to build a community of learners that better understands the expectations and intricacies of higher education, while creating a safe space for their exploration, growth, and development.

The success of these programs is largely due to key factors, such as support from the university's administration (e.g. Deans of Arts & Science and Engineering), BLAST and BEST program staff, the office of admissions, and other student support services available on campus. The collaboration between these entities forms the critical infrastructure needed to cultivate an ecosystem of dedicated faculty and staff attuned to the needs of FGLIU students. In addition, significant financial resources from both the university and alumni have been committed to ensure the sustainability of these programs and to provide students with a wide array of financial support opportunities so that they may focus on their academics, participate in co-curricular activities,

and pursue other interests that may have been otherwise impeded due to financial constraints. In essence, a supportive infrastructure in the form of institutional “buy in” and financial commitment make it possible to design and implement the BLAST and BEST programs.

These programs are also exemplary in that they provide students with an opportunity to earn credits towards their college degree prior to matriculation in classes taught by faculty known for the quality of their teaching, thereby ensuring an optimal learning experience. Participation in the BLAST and BEST programs also include networking opportunities, skill workshops, and an exploration of the surrounding community. Furthermore, both programs place an emphasis on disseminating knowledge about the academic and personal support resources available to students (cultural centers, tutoring, counseling, and so forth). Beyond their initial introduction and acclimation to Tufts, students are also heavily supported during their four-year experience until graduation. Lastly, BLAST and BEST rely on a strong cohort model coupled with peer-to-peer mentorship. This creates a sense of community, or as some students describe, a “family,” which provides the necessary academic and social reinforcement needed to persist and complete the rigorous liberal arts and engineering programs at Tufts.

Ultimately, we believe that the opportunities and resources provided by the BLAST and BEST programs, as outlined above, help FGLIU students to thrive and succeed at Tufts. The strong four-year persistence and retention rates for FGLIU students participating in the BLAST and BEST programs (as documented in the data section) are well above the national averages. For example, in a report produced by the Pell Institute regarding college success for first-generation, low-income students, we see that FGLIU students are four times more likely (than non FGLIU students) to leave higher education after their first year. In addition, only 43% of FGLIU students attending private four-year institutions graduate with their bachelors degree within a six year time period, in comparison to 80% of their non FGLIU peers who graduate with their bachelors in that same time period (Engle & Tinto, 2008). In summation, we believe the distinctive approach and support provided by the BLAST and BEST programs at Tufts lead directly to increased retention and graduation rates. As such, we offer a few recommendations for practice applicable to similar institutions looking to implement comparable bridge programs in order to better assist their FGLIU students in their transition to college:

- 1) Incorporate as many, and as often as possible, senior administrators in the planning and decision making process to ensure institutional support and “buy in.”
- 2) Clearly define program goals and expectations for participants so that they are empowered to achieve academic success.
- 3) Keep students involved in the program’s progression as mentors to incoming students to create a continued and cohesive sense of community.
- 4) Also keep students involved through assessment and feedback measures to inform future policy and practice.
- 5) When structuring the overall programmatic goals and opportunities, take into account each student’s unique strengths, needs, and talents, while still valuing the common good of the larger group.

Abstract

In this paper, simple voltage and current based processor parts are constructed in Orcad-Pspice medium. The intrinsic differential characteristics of the primitive capacitor and inductor models in Pspice are utilised in the construction of the,so-called here, processor parts. The designed compact parts are shown to be effective in taking integral and derivative of input signals, either voltage or current form, simultaneously. This study will help students to understand the fundamentals of simple voltage/current processors.

Keywords. Orcad, PSpice, simulation, voltage/current processors

INTRODUCTION

Pspice has been extensively used as an CAD [1-8] tool of both analog and digital parts, circuits and systems. On the other hand, it is well known that, by using Pspice models, many mathematical equations, including both linear and nonlinear differential equations, can be solved.

In the simulation of differential equations several different approaches may be followed. For example, the differential equation is transformed into Laplace domain and Pspice 's' parameter are used as part of the simulation circuit, or the differential equation is first arranged in a special order and integrator (plus summer) blocks are realized with some operational differential device models.

In this work, the intrinsic differential characteristics of the primitive capacitor and inductor models in Pspice are utilised in the construction of the designed compact, so-called here, processor parts. Although processing range of them is limited to integration and derivation, they can perform both functions simultaneously, one on voltage and the other on current input signals.

The performance of the processors are tested successfully with exemplary signals.

Processor circuitry

The voltage processor circuit is given in Figure 1. Both integral and differential stages provide a high enough input resistance. Shunt resistor for the integral stage is also very high and used as the consequence of a Pspice connection rule.

The current processor circuit is given in Figure 2. Both integral and differential stages provide a low enough input resistance. It can be made much near to zero but must take a nonzero value.

Test run

The processors are tested, one with a squarewave input signal the other with a trianglewave input. The results obtained are provided below.

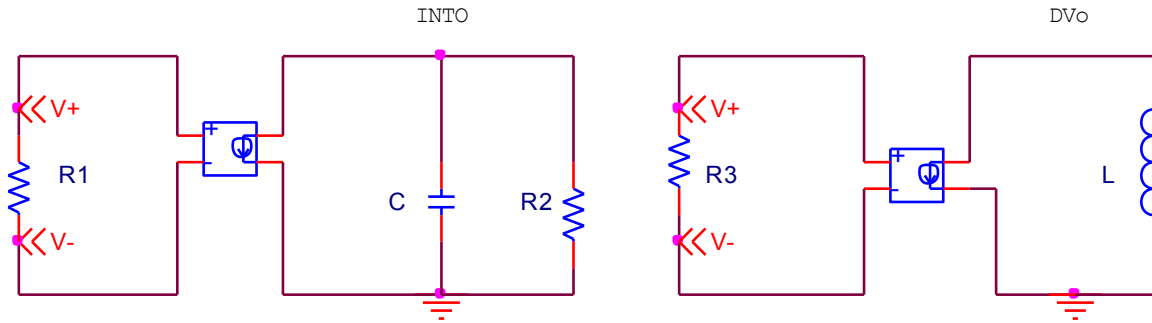

Figure 1. Inside view of the voltage processor. All resistors have a value of 1 G Ohm. Capacitor and inductor both have unity element value. Gain of the voltage controlled current sources is (-1).

Figure 2. Inside view of the current processor. Input resistors have a value of 1 N Ohm. Integral stage output resistor is of 1G Ohm. Capacitor and inductor both have unity element value. Gain of the current controlled current sources is (-1).

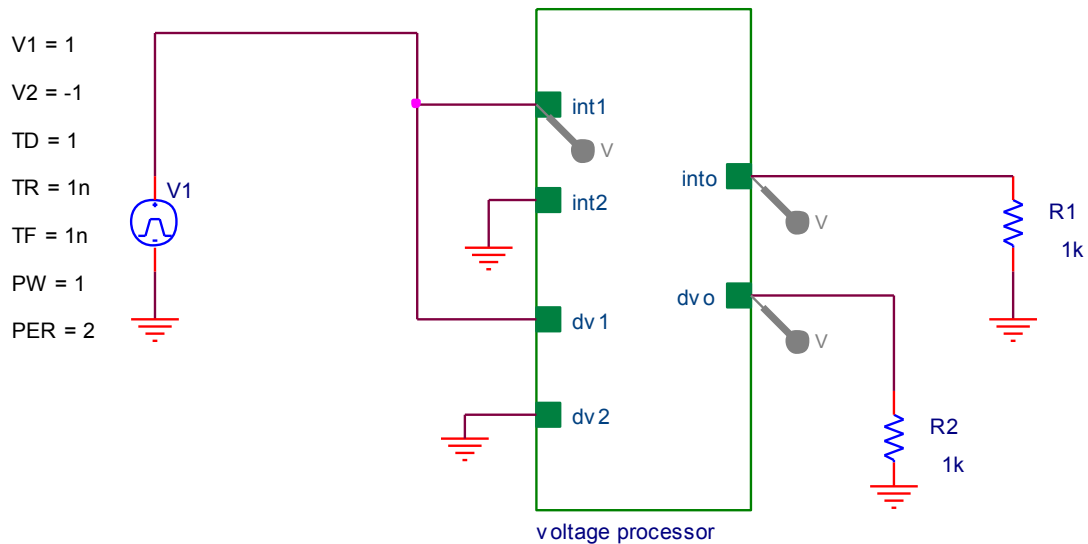

Figure 3. Test connection for the voltage processor. Compact model is used.

Figure 4. The test run results for the voltage processor. Input voltage signal (the toppest curve), integrator output (the middle curve) and derivator output (the lowest curve).

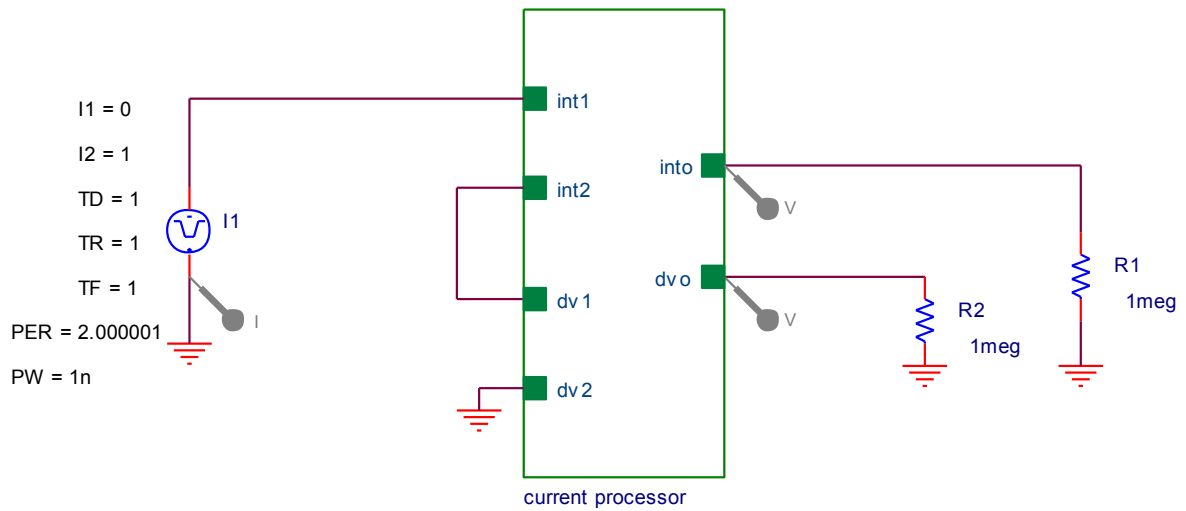

Figure 5. Test connection for the current processor. Compact model is used.

Figure 6. The test run results for the current processor. Input current signal (the toppest curve), integrator output (the middle curve) and derivator output (the lowest curve).

Conclusion

In this work, simple voltage and current based processor parts are constructed in Orcad-Pspice medium and tested successfully. The designed parts are considered functional and user friendly in a simulation medium especially for educational purposes.

Meeting Teacher Competence Standards Through A Construction of an Outcome-Based Field Experience Framework: A Case of Hong Kong

Christina Wai-Mui YU^{a*}

^a *The Hong Kong Institute of Education*

Abstract

The Hong Kong Institute of Education (HKIEd) as one of the five Teacher Education Institutions (TEIs) as well as the largest TEI in Hong Kong, it concerns very much on meeting the teacher competence standards to uphold a high standard of teacher education for benefiting the whole education community and maintain a high level of quality assurance for teacher education programme. As Field Experience (FE) is a cornerstone of any teacher education programmes that could interlock with other domains and content areas of the programme to achieving the most effective learning outcomes, HKIEd recently reviewed and constructed a new outcome-based framework for student teachers to actively engage in learning activities of FE in order to meeting the standards. This paper aims to (1) review the literature on teacher competence standards and its implication on teacher education, (2) demonstrate how HKIEd review and construct a new outcome-based framework, (3) critically analyse the quality of the new outcome-based FE framework from the latest literature and trends in teacher competence standards, and (4) conclude and recommend how the FE framework can be further developed for meeting and upholding teacher competence standards through a series of studies.

Keywords:

INTRODUCTION

The Hong Kong government has been keen on relying external sources from United Kingdom, United States and Australia on policy advice in shaping its education policy (Kennedy, 2011). The idea of OBL emerged in the first round of Teaching and Learning Quality Performance Reviews (TLQPR). It was suggested that “a focus on universities’ processed to assure quality of learning outcomes” should be highlighted for further discussion. However, it did not draw enough attention from the local academics. It was until a local academic report that emphasized students’ learning outcomes as part of education quality work. Along with the ongoing pressure on quality assurance, Quality Audit Council (QAC) was established in 2006 and one of its major tasks is to monitor the implementation of OBL approaches to teaching and learning in institutional levels (Stone, 2005). Whereas student learning presents one face of teaching and learning, the other face is accountability. It means that “outcomes” become a focal concern and a tool to justify public expenditure on higher education. Those higher education institutions should strive to produce “outcomes” in order to holding accountability for public funding.

In the teaching profession of Hong Kong, the Committee on Professional Development of Teachers and Principals (COTAP), recently renamed from the former Advisory Committee on Teacher Education and Qualifications (ACTEQ) is the highest Government advisory body that approves policies on teacher education and development, and advises on the supply of and demand for teachers with the necessary professional qualifications, skills and competencies. In 2003, the ACTEQ published a set of Teacher Competency Framework (TCF) (Appendix I) for the reference of the community in the teaching professional competencies. The Hong Kong Institute of Education (HKIEd) as one of the five TEIs as well as the largest TEI in Hong Kong, it concerns very much on meeting the teacher competence standards as the learning outcomes in all the teacher education programmes. This concern relates to preparing professional teachers for benefiting the whole education community but also to maintaining high quality teacher education programme for public accountability. Therefore, over the past few years, all the teacher education programmes were revamped under the OBL approach to ensure the student learning outcomes are lined up with the teacher competence standards. As Field Experience (FE) is a cornerstone of any teacher education programmes that could bridge theory and practice to achieve the most effective learning outcomes, a new outcome-based FE framework was also

developed at HKIED to actively engage students into FE learning activities and meeting the teacher competence standards.

This paper aims to (1) review the literature on teacher competence standards and its implication on teacher education, (2) demonstrate how HKIED review and construct a new outcome-based framework, (3) critically analyse the quality of the new outcome-based FE framework from the latest literature and trends in teacher competence standards, and (4) conclude and recommend how the FE framework can be further developed for meeting and upholding teacher competence standards through a series of studies. It is expected that readers can gain a better understanding of the latest teacher education development in Hong Kong from the competence- and outcome-based perspectives.

LITERATURE REVIEW

The term 'competence' including its derivatives 'competent', 'competency' and 'competencies' may have different meanings to different people within a consideration of a social context (Thompson, 1998, p. 15) and Bartlett (1992) defined competence as follows:

Competence is "The ability/capacity to work (act) effectively as judged against established or known standards and encompassing intellectual, cognitive and attitudinal dimensions. Competence is based on knowledge in a specific field (for example, teaching) and context, and is constituted of a set of separate competencies, units or domains considered at once and/or globally ..." (p. 10).

Competence-based education (standards) originated in the performance-based teacher education movement in the United States in the 1960s due to the public concern on accountability and control of the teachers' certificate issue (Hyland, 1994). Throughout the 1970s, the teacher training programs had clearly defined standards and pre-specified outcomes under competence-based approach (Hyland, 1994; Wolf, 1995, pp.3-4). The development of competency-based curricula and assessment was further applied in education and a variety of occupations (Wolf, 1995, p.4). Competency-based education was then widely used throughout the United States, United Kingdom, Australia and Europe over the past few decades despite the approach and degree of usage differ between countries (Velde, 1998). Even though competence standards had been used widely in teacher education in different countries over the past few decades, there is controversial discussion about the teacher competence standards and its implications on teacher education, as a result of different perspectives in its constitution, implementation process and assessment that need to be thoroughly investigated.

Teacher competence standards (TCSs) is a set of documents that reflects '*the shared commitment of the teaching profession*' viewed by the stakeholders in the teaching and education community in order to uphold the highest quality of the teaching professional (Ministerial Council on Education, Employment, Training and Youth Affairs, 2003). The TCSs also provides clear guidelines on the professional knowledge and skills necessary to developing high quality professional teachers in difference aspects and at different stages. For example, emphasizing on a mastery of pedagogical content knowledge and a possession of sincere attitude towards teaching in equipping the teachers who are at threshold stage. Most TEIs would develop their teacher education programmes in light of those TCSs proposed by their respective country or nation despite there is no conditional commitment to meeting those TCSs. The quality assurance of graduate teachers' learning outcomes of teacher education programmes would largely depend on the TCSs as they describe the key features of high-quality teachers and provide the performance indicators of high-quality learning outcomes.

In general, TCSs draws significant impacts on teacher education in few major aspects including about teaching and learning, about student development, about working at schools and about a professional (Task Force on Initial Teacher Education, 2009; Queensland College of Teachers, 2009). Some TCSs may refer these major aspects to professional knowledge, professional practice, professional relationship or engagement (AEEYSOC National Standards Expert Working Group, 2010; New Zealand Teachers Council, 2007). In Hong Kong, the TFC builds around four similar core domains: (1) teaching and learning, (2) student development, (3) school development, and (4) professional relationships and services. Each of the four domains is extended by four dimensions, each of which highlights an important aspect of teachers' work. The stages of professional maturity are differentiated by Threshold, Competent and Accomplished on a continuum of growing professional achievement. The criteria under the THRESHOLD that refers to beginning teachers are the basic competences of teachers - sufficient for them to be able to perform their daily duties smoothly and independently (Appendix II). These are the competence standards that graduates from the Teacher Education Institutions (TEIs) are expected to meet too.

PROCESS OF CREATING AN OBL FE FRAMWORK

As informed by the TCF (Threshold stage) and situated in HKIED's Generic Intended Learning Outcomes (GILOs) and Programme Intended Learning Outcomes (PILOs), a conceptual framework for guiding the review process with the use of the backward-mapping approach was developed (see Appendix III). The whole review process was based on the mapping of the intended outcomes of individual FE courses and activities with TCF, GILOs and PILOs from the perspectives of strategic, organizational and operational levels. Then, a set of Field Experience Intended Learning Outcomes (FEILOs) have been drawn up guiding further development of Course Intended Learning Outcomes (CILOs) of individual FE courses by using the backward-mapping curriculum design approach. A Field Experience Task Force comprising four academic/teaching staff from all the three faculties, representatives from the Field Experience Office (acting as Chairperson) was established with the aims of developing the new OBL FE framework, preparing for the launch of it and ensuring a smooth transition during the implementation. The Task Force met regularly to review and oversee preparatory tasks.

Then, a proposed FE framework has undergone many rounds of rigorous discussions and consultations conducted by external and internal parties. Externally, two external consultants were firstly engaged in developing and reviewing the framework. One consultant who suggested a general direction of the development and pointed out the direction for change and the required key features and elements that should be incorporated, thus setting the scene for the development that followed immediately. Another consultant was invited to review the proposed framework in its developing stage, who strongly recommended the use of a FE ePortfolio as a tool to gauge the overall development of students in relation to professional standards for beginning teachers. Both of them were very pleased with the overall development but added some minor points in fine-tuning the implementation. Their points were discussed and considered by the task force team thereafter. A group of recently retired and renowned principals were also consulted and they supported the development and complimented on the direction the framework was moving to. In addition, a meeting with 13 vice-principals from both primary and secondary schools was conducted to consult their views on the revised framework, as well as the feasibility and demand of student teachers completing the FE ePortfolio with the assistance from schools.

Internally, the development was first reported to the three faculties and thereafter, the draft documents were circulated among the faculties to collect feedback from all faculty members. At the same time, in the meetings with Associate Dean (programmes), Programme Leaders, Assistant Registrars and FE Coordinators from all faculties, the FE framework proposal and its implementation direction were fully discussed. The comments were taken and incorporated into the revised proposal. Moreover, some relevant committees at Institute level received and reviewed the reports of the new FE framework in its meeting. Faculty and Committee members provided comments on the number of FEILOs, technical terms used in FE supervision form, clarity of the grade descriptors and demanding activities in the teaching portfolio I and II were received. All these comments were addressed and revised.

At the same time, a series of two-cycle pilot study were carried out in the existing cohort of undergraduate and postgraduate teacher education programmes. The pilot studies aimed: (1) to examine the effects of the new ten FEILOs and their related activities and assessment tools in the new FE framework on the learning performance of some selected subject groups, and (2) to identify the good practices and activities that support the implementation of the new FE framework. The study included questionnaire survey, focused group interviews and double marking.

Review Results on the New OBL FE Framework Proposal

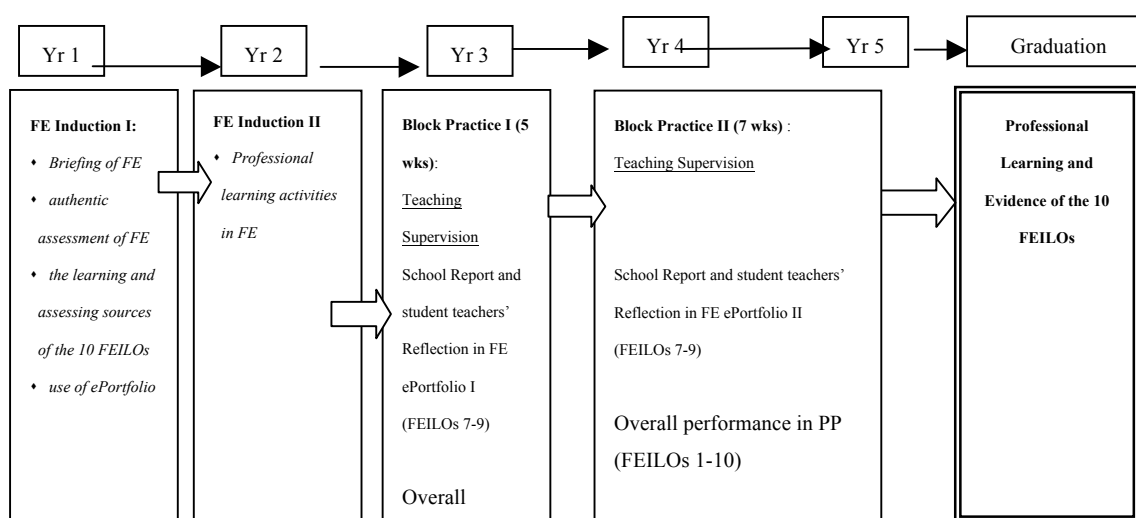

The proposed outcome-based framework for FE aims to provide the opportunities for student teachers to actively engage in learning activities and to demonstrate their abilities to:

- a) Command content knowledge of the subject(s) they study and are assigned to teach;
- b) Use pedagogical content knowledge appropriate to the pupils' needs when planning and teaching;
- c) Employ diversified modes of teaching strategies, skills, materials and technology to create a learning environment to engage pupils' learning;
- d) Design and apply formative and summative assessment strategies and practices to provide feedback on pupil's learning and inform ongoing teaching;
- e) Cater for pupils' individual diversified needs through applying knowledge of learner development;
- f) Recognize the role of teachers in schools in providing discipline, guidance and counseling to foster pupils' learning and personal development;

- g) Develop an understanding of the school as a social and cultural institution responding to local and global educational development;
- h) Develop an understanding of the school's educational philosophy, goals, policies and practices and the impact on teachers' professional responsibilities ;
- i) Develop cordial and co-operative relationships with peers and/or school supporting team(s) and participate in school's professional development responsibilities as part of teachers' professional responsibilities and practice; and
- j) Review and evaluate their professional practice as part of continuous professional learning.

Under the new framework, ten new FE Intended Learning Outcomes (FEILOs) (Appendix IV) were firstly developed with a thorough consideration of the existing four domains and sixteen dimensions in the TCF as well as a mapping to the current GILOs and PILOs of undergraduate and postgraduate teacher education programmes. A set of Grade Descriptors based on 10 FEILOs were further developed to guide the teaching practice and assessment items (i.e. teaching supervision and portfolio). Three assessment modes are proposed to be used for collecting evidence about student teachers' teaching competence and capacity. They are: (1) classroom observations that link to the TCF for beginning teachers, (2) a FE ePortfolio documenting student teachers' professional knowledge and practice and their reflection on both, and (3) performance in other FE related-course(s) like FE induction programme. Based on the review rationale, framework and process, FEILOs, individual FE courses CILOs, related assessment forms, grade descriptors and evaluation tools are being developed too. Figure 1 shows the learning and assessing sources of the ten FEILOs in the new FE framework.

Figure 1: Learning and Assessing Sources of the Ten FEILOs in the New FE Components and Courses

CRITICAL ANALYSIS ON THE NEW OBL FE FRAMEWORK

The new FE framework comprises 10 FEILOs and relevant tasks or activities designed for student teachers to understand teachers' work in the aspects of: (1) Teaching and Learning, (2) Learner Development, (3) School Development, and (4) Professional Services and Development. After completing the proposed tasks or activities in FE, student teachers are expected to demonstrate their understanding of, proficiency with and critical reflection on the four specific aspects of teachers' work:

1. Context for learning (link with teachers' work in (3) School Development)
2. Planning for teaching and assessment (link with teachers' work in (1) Teaching and Learning)
3. Supporting learner learning (link with teachers' work in (2) Learner Development)
4. Reflecting on and evaluating professional practice (link with teachers' work in (4) Professional Services and Development)

The new framework has been prepared for meeting two important changes in current FE practice: (1) adopting the outcome-based approach to emphasis the specific learning outcomes in FE, and (2) taking into

consideration the holistic professional teachers' work in the school context rather than solely focusing on the teachers' teaching performance in a decontextualized way.

Moreover, the framework emphasises authentic assessments of student teachers' actual performance of professional practice in their placement schools, incorporating multiple measures, and focusing on the impact of their professional knowledge and practice on student learning. A main feature for assessing FE in the new framework would be achieved through the use of a FE ePortfolio in Block Practice I & II. The proposed FE ePortfolio components and assessment tasks form a capstone assessment to enable student teachers to provide evidence of their consolidated professional practice and reflection on their teaching practices including theory building during their progressive study in FE. Such outcome-based, technology-based and progressive learning design provides an opportunity for student teachers to interlock with other components and content areas of the programme to achieve the most effective learning outcomes. Their professional judgement can also be enhanced throughout the process of learning in FE ePortfolio.

However, at the operational level, the provision of professional and administrative support to facilitate the implementation of the proposed changes is essential. With the adequate FE resourcing, full support from faculties and departments, accountability on academic and teaching staff's professional contributions, and support from local schools is necessary. The trainings and workshops to be provided to FE supervisors, student teachers and school supporting teachers, and communications with them for the continuous refinement of the tools and framework are necessary at the first place. Moreover, continuous dialogues with stakeholders for supporting a smooth implementation will be maintained internally and externally. Internally, all the faculties, departments and relevant committees in the Institute will be fully informed and invited to support the changes. Externally, scholars, school principals, teachers, graduates and current student teachers will be consulted regularly too.

For ensuring a smooth and proper large-scale implementation, more research work on measuring the effectiveness of attaining the objectives of the framework in particular with the 10 FEILOs, identifying problems and difficulties in carrying out the framework and preparing action plan for full-scale implementation needs to be set out. In addition, a number of FE evaluation tools like student evaluation of FE and feedback from school should also be fine-tuned to measure the effectiveness of the framework.

CONCLUSION AND RECOMMENDATIONS

With the increased focus on learning outcomes of how student teachers prepare for their professional teaching and growth, a new OBL FE framework was developed through an intensive consultations and a number of pilot studies. In the framework, one of the most critical elements is the development of ten FEILOs which are based on current standard requirements in the 'threshold' level of the TCF (that is, the beginning teacher level), and the Institute's GILOs and PILOs. A number of learning activities/tasks and a set of grade descriptors based on 10 FEILOs were further developed to guide the teaching practice and assessment. Moreover, a FE ePortfolio is used as an effective tool to capture evidence for assessment of 'threshold' or beginning teacher standards from multiple sources. Related assessment forms, grade descriptors and evaluation tools are being developed accordingly.

The proposed outcome-based framework provides opportunities for student teachers to demonstrate a wider scope of learning outcomes through the 10 FEILOs and in turn demonstrate their achievement in teachers' holistic work at the exit point. The FE ePortfolio also provides opportunities for student teachers to develop and sustain their continuous professional in a systematic evidence-based way of learning. It is expected that through a provision of necessary research work, trainings and communications with relevant stakeholders, the framework is able to implement smoothly and refine continuously. More studies could be put on the implementation and measurement of the student learning outcomes in the new FE OBL framework.

SIX CORE VALUES THAT UNDERPIN THE WHOLE FRAMEWORK					
belief that all students can learn	love and care for students	respect for diversity	commitment and dedication to the profession	collaboration, sharing and team spirit	passion for continuous learning and excellence
BASIC PREMISE: THE PERSONAL GROWTH AND DEVELOPMENT OF TEACHERS					

Appendix 2. Competency Descriptors in the Teaching and Learning Domain (THRESHOLD)

Subject Matter Knowledge	Command of subject matter knowledge	Displays a basic command of content knowledge of the subjects assigned to teach, but may not be aware of gaps and misconceptions in the basic subject content. Has sporadic and infrequent updating of subject knowledge.
	Updating of subject matter knowledge and search for new subject knowledge	
	Sharing and exchange of subject teaching practice	
Curriculum and Pedagogical Content Knowledge*	Command and application of pedagogical content knowledge	Displays basic knowledge of the current curriculum objectives, pedagogy and subject content; able to impart basic, core subject matter to students, but may not be able to anticipate student misconceptions. Makes sporadic attempts to strengthen or update own knowledge base for teaching and to share pedagogical content knowledge with colleagues.
	Curriculum design, implementation and improvement	
	Updating and sharing of pedagogical content knowledge	

Teaching Strategies and Skills, Use of Language and Multi-Media	Knowledge and application of teaching strategies and skills	Employs a limited range of teaching strategies and skills in delivering lessons to students, adhering mainly to the original lesson plan. Displays an acceptable command of language(s); aware of the importance of appropriate use of language as a medium of instruction. Makes sporadic attempts to update him-/herself with current research in teaching and learning with a view to improving own teaching methods.
	Language proficiency	
	Motivation of student learning through different teaching methods and multi-media	
	Research and dissemination on teaching strategies and skills	
Assessment and Evaluation	Student assessment methods and procedures	Able to follow the statutory assessment and reporting requirements and knows how to prepare and present informative reports to students; recognizes the level at which a pupil is achieving and assesses pupils against attainment targets, where applicable, with guidance from an experienced teacher.
	Use of student assessment results	
	Evaluation and review of teaching and learning programmes	

Competency Descriptors in the Student Development Domain (THRESHOLD)

Students' Diverse Needs in School	Understanding students' diverse needs	Has basic understanding of students' characteristics at different developmental stages, students' different learning styles and intelligences, family backgrounds and interests. Shows awareness of the impact of students' diverse backgrounds on their learning processes.
	Identifying and supporting students' diverse needs	
	Collegial collaboration in identifying and supporting students' diverse needs	
Rapport with Students	Awareness of the importance of establishing rapport with students	Recognizes the value of establishing rapport with students; demonstrates evidence of belief that individual students deserve respect and trust, and that teacher-student relationships should be grounded in rapport and mutual respect. Interacts with students in a generally appropriate manner, showing general care and consideration for them.
	Building trust and rapport with students	
Pastoral Care for Students (Discipline, Guidance & Counselling, Further Studies & Career Guidance)	Providing pastoral care for students	Has basic understanding of the nature of the different areas of pastoral care work. Participates in the provision of pastoral care for students as assigned. Efforts made are mainly on an individual basis, with a vague idea of the spirit of a whole school approach to pastoral care.
	Collegial collaboration in providing pastoral care	
Students' Different Learning Experiences*	Participation and implementation	Recognizes that learning takes place both inside and outside the classroom, and that students should have all-rounded development besides academic performance. Participates in the planning, organization and implementation of students' learning activities as specifically assigned.
	Planning and organization	
	Whole person development of students	

Competency Descriptors in the School Development Domain (THRESHOLD)

School Vision and Mission, Culture and Ethos	Adaptation to the school vision and mission, culture and ethos	Has general understanding of the school's vision and mission statement and recognizes the significance of the school vision and mission for own daily work; aware of the need to adjust to the school environment and recognizes the importance of a pleasant school climate for students' development and their learning outcomes.
	Actualization of school beliefs, vision and mission	
	Cultivation of a caring and inviting school climate	
	Contribution to reviewing the school vision and mission, as well as promoting the school culture and school image	
Policies, Procedures & Practices	Understanding school goals and policies	Has general understanding of own professional responsibilities in relation to school goals and policies; has general knowledge of the school's established procedures and practices; shows interest in the process of formulation/ review of school policies.
	Implementation of school policies, procedures and practices	
	Formulation of school policies, review of procedures and practices for continuous school development	
Home-School Collaboration	Understanding students' family backgrounds	Has general understanding of students' family backgrounds and is aware of their impact on students' learning process. Able to adhere to the school's required procedures for communicating with parents. Participates in parent-related activities when required
	Communication with parents	
	Involvement in parent-related activities	
	Building trust with parents for further school development	

Responsiveness to Societal Changes	Awareness and knowledge of societal changes in relation to their impact on school	Pays attention to and has general understanding of what happens outside the school; shows concern for societal changes and issues related to social values.
	Responsiveness to societal changes and issues related to social values	

Competency Descriptors in the Professional Relationships and Services Domain (THRESHOLD)

Collaborative Relationships within the School	Working relationships with individuals	Maintains cordial relationship with colleagues to fulfil duties assigned by the school. Shows willingness to work and contributes as a member of a team in the school. Has general understanding of the division of work as well as the duties and responsibilities of the various departments, committees and teams within the school.
	Working relationships with groups	
	Working relationships within formal structures	
Teachers' Professional Development	Sharing of knowledge and good practices with others	Prepared to share knowledge and good practices with colleagues when invited to do so. Participates in school-based staff development activities/other professional development activities when assigned to.
	Contribution to teachers' professional development	
Involvement in Policies Related to Education	Awareness and knowledge of policies related to education	Has a basic grasp of current education policies and pays attention to the possible implications of these new initiatives on own teaching work.
	Responsiveness to policies related to education	
	Contribution to policies related to education	
Education-Related Community Services & Voluntary Work	Interaction with the broader community	Aware of the importance of establishing links with the broader community for improved learning outcomes as well as the development of students' positive social values. Ready to participate in district projects, voluntary work committees and so on when invited.
	Participation in education-related community services and voluntary work	

Appendix IV. Ten FEILOs for FE Courses

Upon successful completion of the FE courses, student teachers will be able to:

I. Teaching and Learning

1. Display adequate command of subject content knowledge, processes of inquiry and the concepts and skills of the subjects assigned to teach.
2. Demonstrate the ability to use pedagogical content knowledge in planning, developing and implementing appropriate aspects of the subject curriculum.
3. Employ diversified modes of teaching strategies, skills, materials and technology to create a learning environment to enhance pupils' learning.
4. Design and apply a variety of formative and summative assessment strategies and practices in order to provide relevant feedback on pupils' learning and to inform ongoing teaching.

II. Pupil (Learner) Development

5. Demonstrate an understanding of learning styles, interests, intelligences and ways to cater for individual diversified needs of pupils in the learning context.
6. Recognize the role of teachers in schools in providing discipline, guidance and counseling to foster pupils' learning and personal development.

III. School Development

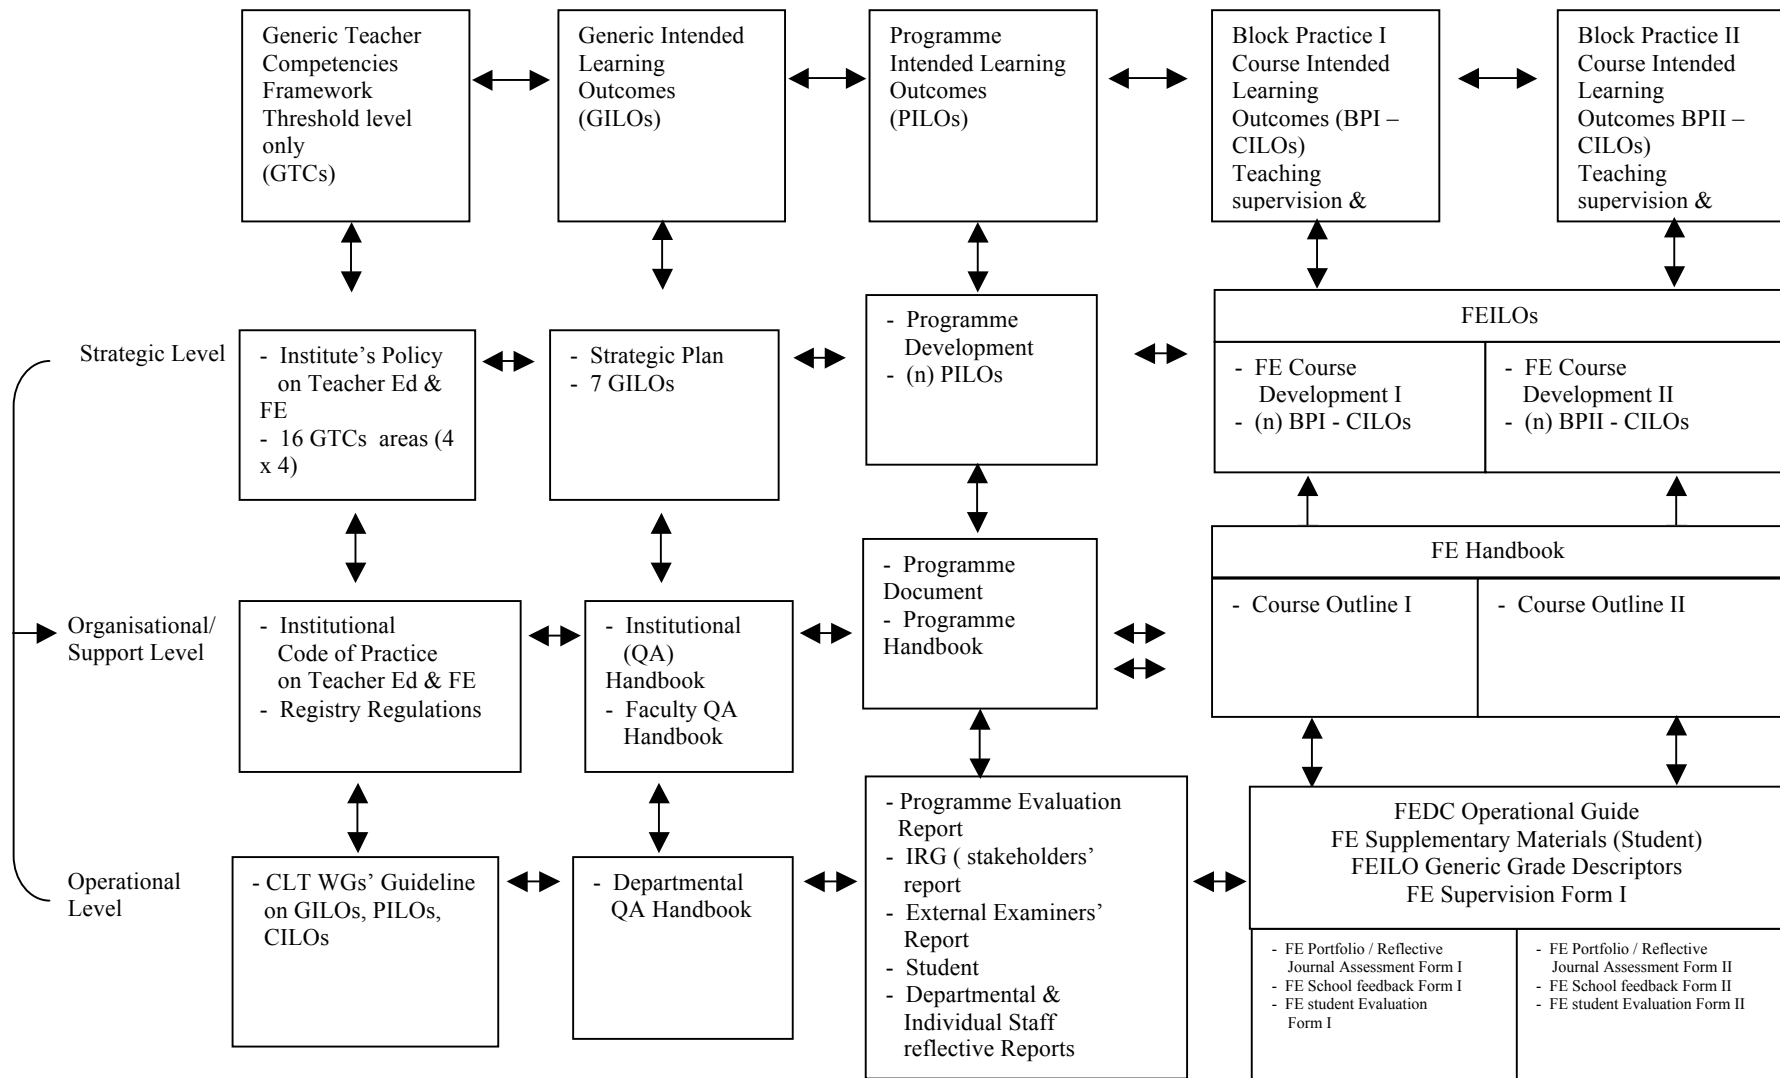

7. Demonstrate an understanding of the school as a social and cultural institution responding to local and global educational development.
8. Develop and demonstrate an understanding of the school's educational philosophy, goals, policies and practices and the impact on teachers' professional responsibilities.

IV. Professional Services and Development

9. Develop and demonstrate cordial and cooperative relationships with peers and/or school supporting team and participate in school's professional development activities.
10. Review and evaluate their teaching in the pursuit of continuous professional learning.

Appendix II

Appendix III. Conceptual framework for Guiding OBL Assessment on FE

Impact of the Mass Media Tools on Students at the High School Level

MA. Behcet ÖZNAÇAR Faculty of Education, Near East University, Northern Cyprus

ABSTRACT

Aim of this research is to investigate the impact on and feedback of the students to the use of mass media tools who attend at the 10th grade secondary education within the formal education system in North Cyprus. The specific objective is to determine the role and importance of mass media tools on students at the secondary level who reside at relatively rural areas and find the opportunity to attend at standardized education system. Observations, interviews and survey methods were used in this study. Observations were made in classrooms and interviews administered with teachers. Total of 95 questionnaires were administered for the students in three different schools during the survey and results of the survey were analyzed by using SPSS 11.5 software. Results of the research reveal that the students are in relation with the mass media tools. Besides, it is observed that students use the knowledge gained from mass media tools in different fields of their lives. In general, it is seen that the mass media tools have positive impact on students, the most needed tools in schools are computer and internet, families and teachers play an important role and the most educative tool is evaluated to be the internet.

INTRODUCTION

In our world, a new day, simply perceived as 'sunrise'. The most common phrase to sustain life "to continue communication activities" are required. The birthday of individuals communicating with the environment to affect the surrounding, and still consciously or unconsciously influenced to change, to adapt itself to the environment or are trying to create their own rules. Formed in the process of personality, development is demonstrated by the way people communicate. Everything that learned, heard and performed by the behavior of all communication. Communication is a tool for relationship between people. People use communication to understand, to know, to express and to reach to others (Usluat, 1995)

French language through our "communication", in Latin the word "communication" is the same word and the word 'communis' as the concept of several individuals or objects, and means common with (Kuzu, 2003). Communication, which is a natural part of human life, is a social activity in the history of mankind. There is a difference between the definition of communication used in the past and in today's era. A simple definition of communication, is the process of transferring from the source to the receiver. According to Masterson and Watson 'through communication we make sense of the world and this means that we share with others is a human process' (Merry, 1994).

Nowadays, increasingly sophisticated information and communication technologies required to enter into the existing social relations and helped to modernize, but they are understood to be affected by economic, political and such factors. (Bernard, 2008). In this case affecting mass communication there is a need to examine more closely.

MASS COMMUNICATION

Mass media tools are aimed at those with media technology products. With a clearer explanation, communication is done by the press, cinema, film, radio and television. With these tools, a message from one place (individuals, organizations, communities, etc.) to be transferred to a wide audience in the process or activity falls within the scope of mass communication (Kaya, 1985).

Mass communication, is a fairly recent phenomenon of our civilization. Mass media has helped not only the socialization of individuals, but also to society, because it help in human development is necessary and inevitable (Reddi, 1991). Contact the socialization size, occurs through the mass media. Especially mass media is widely used to transfer information from the central area of the nation to the rest of the population.

According to Arklan and Taşdemir (2008), in order to reach for the information, especially the mass media and the Internet began to be considered a part of the social structure. Although there are negative aspects to reach target group, these tools are very important to spread information for the community. They are easy and cheap, making the possibility of access to information for different targets, the various obstacles and limitations

due to features such as disposal a resource that emphasizes the dissemination of information (Arklan and Taşdemir, 2008).

With new methods of communication all over the world, more and more people stay clear of the mass media and devote more time to these vehicles. Thus, the mass media to become an integral part of social life, increased what has been mentioned, written and done about them. The impact of mass media on individuals for a long time is one of the issues discussed and interested (Şimşek, 1995; Gökçe, 1993). Moreover, in recent years this debate has gained a new dimension...

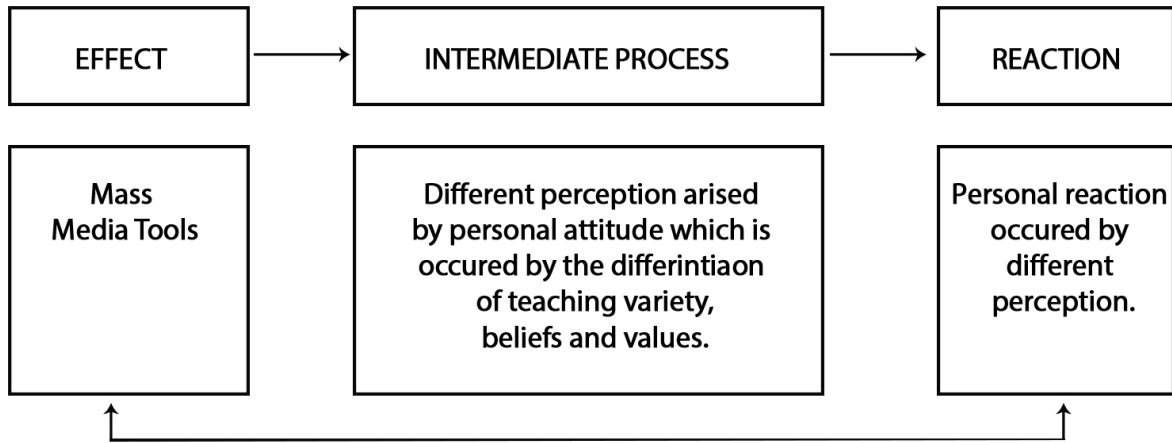

Figure 1. Linear Exposure-Response Model (Gökçe, 1993)

In figure 1 according to Gokce (1993) the location of linear exposure-response model has been replaced by a two-step information flow models. But agenda setting and detection model, have led to a revival of the view that the impact of the mass media has the power.

Contact effects model, built on the the classic action-reaction model, although this varies from model pretty. For example, contact effects model on the impact process model, is not as simple as it assumes as in the classic action-reaction model, on the contrary, it is a highly complex phenomenon. Accepting or rejecting a passive recipient is not in the position. Recipients are actively involved in the process of mass communication and the recipient's activities can be observed in the whole communication process (Moemeka, 1998). In addition,

the linear exposure-response model (Figure 1), one of the major shortcomings of individual differences is not emphasized. Whereas, a group of people are significantly different from each other in personal psychological organization (Figure 2). These differences are partly begins biological; but the real learning environment originates from the differences. This case has also appeared between profile of the students in the center which have access to all facilities and the students near the rural areas.

Westley and MacLean (2010) alerts sent many to be the result of the selection process, ie, the sender of the message wants to select the topic you and the recipient messages sent from him again corresponding sites in emphasizing and various messaging channels of different selectivity functions caused by to determine that.

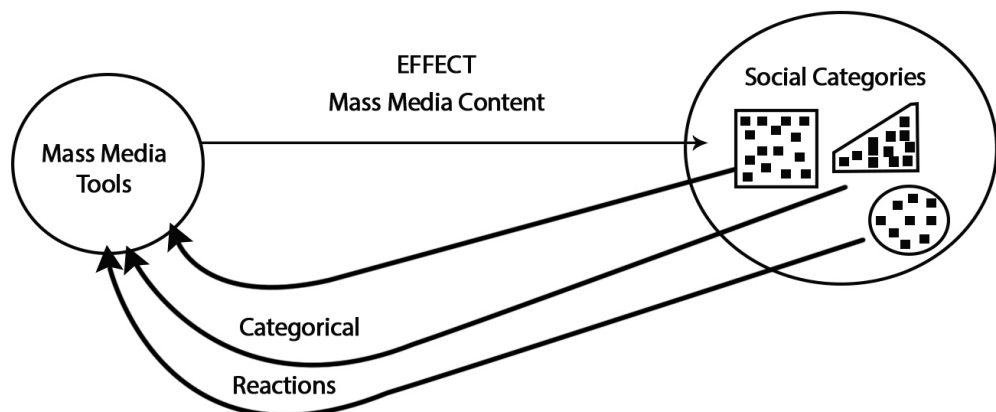

Figure 2. Theories of Mass Communication Process according to differences (Fluer, 1982)

Thus, the classic action-reaction model also social factors are also ignored. Whereas the mass media, the impact of social factors in isolation must require and influence processes involved in the social factors of the buyer's resources, its relationship with the buyer's belongs to the group, the recipient's social communication status and opinion leaders and multi-stage communication should be noted that (Gokce, 1993). Many studies conducted in the town or city views communication on the interest shown is limited and mass media showing this limited interest, because of the subject in detail, critical and analytical in a way that should be addressed is stated that (Inal, 2007). Therefore, the study of the students live and study the differences between the regions should also be considered.

EDUCATION IN DEVELOPING COUNTRIES AND THE EFFECT OF MASS COMMUNICATION

With the developing technology giant has reached dimensions of communication technology, not just technology for the production of society, has also affected the developing societies. In communication technology, speed, reaches a giant-sized features, technology transfer and effective means of communication when bringing widespread in all societies; development has further increased the interest of society aimed. Nowadays, economic, social and cultural fields, go to the level of developed countries, changes and improvements have been the main wish of the whole society. Social change and the adoption of technological innovations of recent research on the relationship between technology factor in the change, but may be a dependent variable showed that. Oskay (1978) as other technological tools and possibilities of mass media in social change also not be regarded as an independent variable has emphasized many years ago. Therefore, today a fast-growing technology and it brings that knowledge production and transfer, our era's most salient characteristic, and therefore also the era we live "information age" was the name (Knoll, 2002). In formal education, mass media, the role and importance of the community by enough can not be detected and the computer, the internet and new emerging technologies of knowledge for teaching, for transferring and for delivering great benefits would be 90 years from an uncovered and the said vehicles, especially used in schools to begin training a new aspect to (Scannelli, P., Schlesinger, P., Sparks, C., 1992). Karas (2004) affected by the rapid development of communication technology in the education sector in infrastructure improvements to be robust adaptation of these technologies in education by way of the concepts and practices that are connected to adoption is good. Get educated on the rote learner rather than learning, debate and discuss characteristics of individuals who are cultivating long-standing debate is an important issue and researchers in formal education through mass media should be utilized and the mass media when used well give good results that twenty years previously stated (Scannell, P. Schlesinger, P., Sparks, C., 1992). Today, social development, especially in developing countries, and depending on him to ensure progress in education, are trying to take advantage of these tools. Kirschen (2001) for training of technological tools, educational benefits, as well as the student's scanner, CD burner, such as printer sharing, outdoor tools and equipment with the use, interoperability, and social relations have the ability to win and also networks with the student's knowledge, producing areas and critical structure refers would have. Cinema, radio, television, video, computer, internet, CD tools such as classic today has brought new dimensions to education, especially in rural areas, and public education efforts have been attempted to use effectively.

Television and video usage in education is very effective in putting abstract subjects on concrete grounds. For example, television and video usage in geography education makes it possible in providing a long standing education through targeting visual and sensorial senses, and this makes lectures even enjoyable rather than being monotonous. (Demirkaya ve Tokcan, 2006).

Kaya and Tuna (2008) argues that, primarily families, teachers, education institutions, insitutions and departments related to publication policy should show an effort in taking measures against negative effects of television on children due to the fact that children are prone to effects of television in young age.

Senturk (2009), despite all theoretical substance since 1960s until recently for televisions, argues that still there are basic problems which are not solved, and puts forward the fact that relationship between media experience and other experiences should be clear by media research.

According to Karasar (2004), since the usage of internet in education, traditional student and teacher concepts has changed, and they have become educated and facilitator. Role of the student is not to adopt information provided, but to make research, to adopt them in real life and make it possible to be used in daily life, and benefit from that information.

Tuncer and others (2005), after making a research on environmental consciousness of students from urban-rural areas, found out that students in rural areas are not conscious how industrialization has effects on environment, and specified this to the life style and consumption trends on rural areas.

Utilization of mass media become widespread after 2000s, however, targeted level is not achieved due to lack of infrastructure and resources. Setting computers and internet connection to schools is being continued though the help of government, private sector, and the non-governmental organizations (Milli Egitim Bakanligi, 2011). Some schools are granted by outside resources such as the EU and settled smart boards, projection, computers, internet, etc but education is still based on books and the usage of those equipments are done according to the subject of lectures and in informatics classes (Avrupa Komisyonu, 2010).

METHOD

In this study, observation, interview, and survey methods are used as a research method. Target of the research are comprised of 10th year students of Turk Maarif College in three large cities of TRNC. 10th year students in large cities besides Lefkosa, which are close to rural areas comprise the target of the research. This research is a study about Turk Maarif College, which is known for its continual education standard and educational quality. Turk Maarif College is a leader school in English IGCSE (International General Certificate of Secondary Education) for many years, and acceptance of students to this school is held through the Educational Ministry examinations. High proportion of graduates of this school continue their higher education in overseas schools. Therefore, reason of determining these schools is the fact that they have equivalent education standards and student levels from different regions. This makes the research more meaningful, valid and trustworthy. Number of these students is approximately 200. In each target school, observation has been made in 1 class for three lecture hours. Open ended technique has been used in the observation. According to the results of observation, semi structured interview questions have been prepared. Interviews have been made with five teachers in three schools. Total interview amount is 15. In order to support the results of the study, surveys have been done with students. Sample amount (0,4 confidence interval and 0.5 selection confidence) is calculated for the survey (Survey Design, 2010). According to this, sample amount = $266/1 + [(266-1)/200] = 114$ students.

DATA GATHERING AND ANALYSIS

Observation results of the study are recorded in the observation form. In observation form, date, place, time, lecture name, school name, class subjects of that day, environment and utilized information technology equipments are recorded. Confidentiality of meetings are confirmed by related experts. Observation study was done between November 2010 and February 2011. Event, fact and behaviors observed are directly recorded in forms, subjective observations and comments of researcher are recorded in a different document.

Results after analyzed observation forms are categorized and each question in the interview question form are designed as different codes. Interview study was held in March 2011. Each participant was given different code number. Codes of GY for Guzelyurt TMK, GG for Girne 19 Mayıs Turk Maarif Koleji, and GM for Gazimagusa Turk Maarif Koleji are used.

For instance, Number 3 teacher in Girne 19 Mayıs Türk Maarif Koleji is written as G:G(ogt 3). Answers to the questions are determined under themes and in presenting, these themes are used to make it easy for readers to understand (Yıldırım & Şimşek, 2005).

Survey form is detailed and prepared according to the results of semi structured interview. Pilot test of the survey has been held with 10 students, and after making necessary amendments, survey application has been done in April 2011. Stratified random sampling is applied to students in separated schools according to quota, and 35 students from Guzelyurt, 40 from Girne, and 20 students from Magusa participated in the survey. Survey question form is prepared according to the literature review, and is comprised of 17 questions. In the introduction of the survey form, a summary of information and the aim of the survey is prepared. Questions are prepared as closed ended in regards to the usage of mass media (television, internet, computer, radio etc) in education, effects of them on students, relationship with daily life, and behaviors of families. SPSS 11.5 (Statistical Package for the Social Science) package program is used in survey analysis. Significance level is taken as 0.05 in this research.

Confidence level of 95% (k^2 -square) and higher results are analyzed in comparative results. 95 student participants comprise the 84% of the sample amount and the alpha confidence coefficient is 0.92.

FINDINGS

OBSERVATION

Observations were done during lectures within classes, behaviors of teacher and students, technical infrastructure, class conditions are considered while filling forms. Aim of using observation technique is to make observations from first hand during lectures and making evaluations by an expert. According to the observations, problems of teachers are gathered under four main pillars.

First pillar is about basic infrastructure needs. Technical infrastructure is comprised of; number of computers in schools, number of students per computer, architecture of schools, and class structures. Observations put forward the need for computers and infrastructure in classes, and continuation of current system. For instance, it is determined that two computers are not working in the Gazimagusa Turk Maarif Koleji 10th class in informatics lecture and although school administration is aware of this condition, the problem is not solved yet. Therefore, two students had to share a computer with their classmates. It is also determined that informatics teacher tried to solve the problem but due to lack of hardware parts, the problem is not solved. Another case is that some equipments that are used in classes are out of date and problems are stemming as a result of these lacks. Teachers and students are having serious problems during lectures due to technical problems related to infrastructure and computers. At this point, individual and institutional inadequacies are seen, and even easy problems are solved in long time periods. Also, lack of computers in classes when compared to number of students is another problem. For example, Chemistry teacher at 19 Mayıs Turk Maarif Koleji wanted to show some reactions on computer by using CD but due to lack of computer in class and the lack of capacity in the laboratory, teacher had to keep teaching through books. Lack of computers in classes results in students' not being able to concentrate and having educated in effective ways. Bored students find lectures unattractive due to these reasons.

Another interesting case is that internet and computer are major mass media instruments. For example, 10th year students in Guzelyurt Turk Maarif Koleji are advised to learn more through internet in their geography class, and this application is well responded by the students. Students remarked to their teacher that they individually searched through search engines and they made researches. Both teachers and students are determined for generally using computer and internet, and not using radio, tv etc. It is understood that Office programs are being used in computers. For example, in Girne 19 Mayıs Turk Maarif Koleji informatics class, it is determined that students mostly use excel, word, and powerpoint programs. Also, it is determined that newspapers, and journals are preminent in minimum levels. During informatics classes in Gazimagusa Turk Maarif Koleji and 19 Mayıs Turk Maarif Koleji, students are advised to learn more through information technologies journals but schools are seen not to have such journals available for students. Third main pillar is the effect of teachers on mass media tools. It is observed that tools are generally used during informatics class, and in other lectures they are used in minimum levels. In three schools, it is observed that except informatics lectures, computers are not used in other lectures, but in normal classes projection is used for presentations, therefore, this situation is considered as not providing minimum levels of benefits for students. Computer laboratories are not being used if not necessary, and lectures are depended on books in all three schools. As the fourth case, communication between student, teacher and administration is not effective, and due to usage of mass media tools by students out of school, and the lack of teachers knowledge for students' problems in this fields are observed to be stemming from the lack of communication between teacher and administration in planning and application. For example, students complained due to usage of 2003 office programs at school, while they are using 2007 office programs at their houses and the need for updated versions, and teacher mentioned that they informed the administration but they could not get an answer yet.

INTERVIEWS

According to the semi structured interview analysis results, main research subjects that are coded by questions, it is determined that three main themes are chosen. In this respect, below mentioned observations are summarized.

1. *Theme – Administration and infrastructure:* Teachers mentioned that mass media tool usage is the responsibility of school administration, and in terms of planning and investment, they are dependent on school administrations. A teacher (G:G(ogt 2)) in Girne 19 Mayıs Turk Maarif Koleji answered as “school principal is responsible for all lack of computers in the school” to the question of mostly faced problems. It is understood from this answer that teachers find school administration responsible for infrastructure needs of their school. Nonexecution of annual investment planning in schools and leaving these terms to the ministry is problematic. A teacher (G:M (ogt 5)) answered to the question of suggestions for solving problems, as “ministry is not making enough investments to schools”, while a teacher (G:Y(ogt 1)) answered as “we should be contented with investments of our ministry”. In this respect, being totally dependent on investments of ministry, and the fact that investments shares are less than expected, mass media tool investments and recruitment applications are delayed. A teacher in Gazimagusa Turk Maarif Koleji (G:M (ogt 4)) mentioned that “each year we are preparing needs for recruitment but there is no results”, and said that school administrations are not doing their part of work in

establishing mass media tools and their usage. A teacher (G:Y (ogt 3)) from Guzelyurt Turk Maarif Koleji mentioned that “we demanded projection and a laptop from the school principality to be used in lectures but we did not have a reply yet”. In this respect, it is understood that a general acknowledgement in usage of mass media tools during lectures is not enough; school administration should be supplying these needs.

2. *Theme – Used Mass Media Tools:* Teacher also mentioned that mostly used mass media tool is computer in schools. Teacher (G:G(ogt 2)) answered to the question regarding mostly used mass media tool as “we are using computer and internet especially in informatics lectures”. However, lack of these tools for each students’ usage is also mentioned. Informatics class teachers in all three schools mentioned that “computers are less than number of students”(G:G(ogt 1)), “there is not enough computers for each class”(G:Y(ogt 5)), “number of computers per student should be increased for the sake of computered lectures”(G:M(ogt 2)). It is seen that benefits from mass media tools should be calculated according to amount of lectures and applications for each class. Also, it is determined that video or cd usage in visual basis can be used but that this is not a valid application for all classes. It is understood that in class education, written material are mostly used educational method.

3. *Theme – Student Profile and Competence:* Teachers mentions the importance of relationship between students and mass media tools and the effects of those tools on students’ lives. It is understood that teachers have a critical role and families’ behavior in this respect are important in providing a pathway for students. A teacher (G:Y(ogt 4)) from Guzelyurt Turk Maarif Koleji mentioned that “attitude of students who live away from school are much different towards computers and internet”. In this respect it is mentioned that these tools might both have negative and positive effects, and especially for students from rural areas should be directed more significantly. Two teachers (G:Y(ogt 2)) and (G:M(ogt 5)) from Guzelyurt Turk Maarif Koleji and Gazimagusa Turk Maarif Koleji mentioned that “families are complaining for over internet usage of their children” and “students are pretending as movie series characters”. Also, it is stated that students are more interested in using these tools out of school and for social sharing. A teacher from 10 Mayis Turk Maarif Koleji answered to the question regarding mostly used tool as “students are more interested in television programs and internet pages such as facebook” (G:G(ogt4)).

SURVEY

DEMOGRAPHIC SHARE

Demographic features of student participants of survey are shared as gender, region, and age.

As seen in Table 1, 56 female and 39 male students participated in the survey, and in terms of gender, a balanced share is featured.

According to regions, 35 students from Guzelyurt, 40 from Girne, and 20 from Magosa participated. .

Table 1.Share based on gender and region

		Region			
		Güzelyurt	Girne	Magosa	Total
Gender	Female	21	25	10	56
	Male	14	15	10	39
Total		35	40	20	95

If we look at gender distributions, students are generally between 15 and 17 years old, and there are 3 students who are 14 years old, 38 students who are 15 years old, 21 students who are 16 years old, 31 students who are 17 years old, and 2 students who are 18 years old.

MASS MEDIA AND TOOLS

Firstly, when students are asked how they are affected from mass media tools, 62 students answered positive, 25 students both positive and negative, 4 students negative and 5 students had no idea. At this point, although some students had no idea, it is understood that majority of students are affected positively.

When the mostly used mass media tool is asked, Television is seen as mostly used tool by 90 students. As a second tool internet is seen as mostly used by 87 students. Followingly, Newspapers 65 students, Books and radio 37 students. In this respect, television and internet are seen to be mostly used mass media tools.

As a similar to previous answer, students replied as television (76 students) and Internet (86 students) to the question on which tool is used for a long time during the day. Book (30 students), newspapers (27 students) and journals (22 students) are the following. Least used mass media tool is determined as radio (13 students).

Afterwards, students are asked how they would see formal education through mass media tools, and 80 students answered positive, while 15 students did not find this idea beneficial.

When students are asked how often they watch educational programs in Radio and television, and 13 students replied always, 52 sometimes, 6 in previous years, 18 students replied as negative and 6 replied as they never heard of such programs. At this point, a small decrease is seen between availability and watching for educational purposes.

When students are asked if they find radio and television programs educational, 57 students finds it educational sometimes, 34 finds educational, 4 does not find it educational. The fact that most of the students find it educational shows the reason of various usage of mass media tools.

At this point, question asked to the student is to learn which tool should be used during education. 42 students chosen all tools, 42 students computer, 34 students internet, 9 students video, and 4 students chosen television usage. In this respect, 82% of students chosen computers to be used during lectures.

Figure 3 Answers to the question regarding which mass media tool should be used in formal education

When students are asked how can mass media tools be beneficial for formal education, 62 students answered as it can be supporting lectures, 54 students mentioned that they can be used in daily lives, 64 students mentioned that they can be beneficial for general knowledge, 1 student finds it not beneficial, 6 students replied that they never thought this, and 10 students replied as they have no idea.

Afterwards, when students are asked for their teachers' attitude towards their lectures and educational programs, 15 students replied that their teachers are willing, 10 students replied that teachers are willing and showing in relevant lectures, 28 students replied that some of their teachers are willing, 17 students replied that teachers are not willing, and 25 students replied that they do not know. In this respect, 25.5% of students mentioned that teachers are willing to use those tools.

Figure 4. How can we benefit from mass media tools ?

When students are asked if they used mass media tools in school or any place that they have been with school, 13 students replied as often, 41 students sometimes, 36 students very few, and 5 students answered as none. This shows that mass media tool usage is low in schools.

Students were also asked what the benefit of using education mass media tools would be. 50 students stated that educating positive individuals, 43 students stated that using tools would make them responsive individuals towards family, societal and environmental norms, 35 students stated that this would help them to be more informative for their families and for themselves and lastly, 26 students stated that they do not have an opinion. Moreover, students were asked to state one of the mass media tools as their aid to learn. 77 students chose internet, 71 students chose computers, 61 students rated slideshows, 49 students chose films, 43 students stated photography, 30 students chose television and 28 students mentioned VCDs. Only 5 students stated no opinion. These results indicate that approximately 70-75% of the respondents find the internet and computers beneficial media tools for their education.

Another question in this research was how educational the students find the mass media tools. According to the results, 58 students found internet, 25 students found VCDs, 23 students found television, 7 students found radio and 22 students found all the mass media tools educational. 5 students stated no opinion.

Students were asked whether they use one of the mass media tools if they find something educational for their specific topic. 42 students stated that they use any tool, 44 students stated that they use it often and 9 students mentioned that they do not use any tool for this purpose.

In the questionnaire, the attitudes of parents were measured as well. 19 families of the respondents stated that they find mass media tools very beneficial, 57 families found the tools both beneficial and disadvantageous. In addition, students were asked to rate their parents' reactions towards the usage of the mass media tools. The results show that 36 students stated that their parents warn them often; 46 students stated that they get a warning occasionally and 15 students stated that they do not get any warning against the tools.

Lastly, the research aimed to measure the affect of the characters on TV and radio on students. 34 students stated that they find some characters familiar to themselves, 35 students mentioned that they compare the TV characters with other people they know, 41 students stated that some programmes remind them some events they have gone through in their lives. Moreover, 20 students mentioned that they want to meet some people like the ones they watch on TV and 31 students stated that they are not interested in TV or radio programmes.

Figure 5. Affects of TV and radio

COMPARATIVE RESPONDS

The comparisons for multiple choice questions consist of 95% accurate responds. Due to high accuracy, below results show statistically meaningful results. Below are the comparisons of the demographical results:

The surroundings of the schools were compared and as a result the number of newspaper suppliers was measured. According to the results, Morphou (Guzelyurt) has 65%, Kyrenia (Girne) has 75% and Famagusta (Magosa) has 35% newspaper suppliers around the schools. The results show that students have less access to newspapers in Famagusta than other cities.

A similar question was posed to students about the books and their age range was compared. According to the results, 70% of 15 year old students, 56% of 16 year old students and 33% of 17 year old students were found to have books with them. The results indicate that as the age increases, the usage of books decreases.

Among the ones who do not have access to newspapers, the participants who use newspaper as media tool seem to be more boys than girls. Similarly, the presence of radios was observed and according to the results; Morphou (Guzelyurt) is 49%, Kyrenia (Girne) has 40% and Famagusta (Magosa) has 10% around the schools. This indicates that the radio usage is the most in Morphou.

When gender difference of newspaper usage was measured, it is indicated that 19% of girls read newspapers, where 37% are boys.

Moreover, the amount of time spent on magazines was researched. According to the age range of students it was measured that 34% of 15 year old students, 0.4% of 16 year old students and 15% of 17 year old students have magazines with them. This indicates that as the age increases, the usage of magazines decreases. .

According to the results of a question about the benefits of using mass media tools, the age range differences were measured. The results show that 74% of 15 year old students, 78% of 16 year old students and 93% of 17 year old students found the tools beneficial. The results indicate that the age difference does not have an impact on the opinions of respondents.

Furthermore, according to the results, it was indicated that 44% of 15 year old students, 30% of 16 year old students, 21% of 17 year old students found the tools beneficial for educational purposes. The results show that as the age increases, benefiting from the tools for educational purposes decreases.

The results of a research question about general knowledge and mass media tools were compared to different regions in Cyprus. According to the results, Morphou has 54%, Kyrenia has 70% and Famagusta has 80% of the responds. This indicates that Kyrenia and Famagusta has higher percentage of contribution on general knowledge through mass media tools.

The results of a research question about using mass media tools in their education lives were compared to different regions. 46% of Morphou, 28% of Kyrenia and 70% of Famagusta students stated that they have very little or no benefit of tools for education. The results indicate that Famagusta being in the first place, all city schools have low usage of mass media tools for educational purposes.

The usage of media tools for subjects at schools was compared with the cities. The results show that in Morphou 86%, in Kyrenia 60% and 50% in Famagusta students stated that they want to benefit from computer usage.

When the results of using the tools as aid for lessons were compared with gender differences, it was shown that 78% of boys and 86% of girls want to use the internet as a media tool. This shows that there is no significant difference between genders in relations to internet usage.

The age differences of students who found radio educational were compared as well. The results show that 5% of 15 year old students, 4% of 16 year old students and 6% of 17 year old students found radio educational. This shows that there is no significant difference between ages in relations to benefits of radio for education.

Similarly, the age differences of students who found television educational were compared. The results show in Morphou 20%, in Kyrenia 15% and in Famagusta 60% of students find television educational. This can be interpreted as television might be used more for entertainment purposes than educational reasons.

The amount of students who would prefer to use television if they find something interesting was compared with the cities. In Morphou, it is 80%, in Kyrenia it is 97% and in Famagusta it is 90%. This shows that the content of TV shows are dependent on participants' preferences.

Parents' attitudes towards mass media tools and the age differences of respondents were compared. According to the results, 25% of 15 year old students, 22% of 16 year old students and 17% of 17 year old students mentioned that their parents find the tools beneficial. This shows that the responded parents have some worries about using media tools. Moreover, the parents who found the tools both beneficial and disadvantageous and the age differences of students show that 51% of 15 year old students, 74% of 16 year old students and 55% of 17 year old students' parents express their worries.

The answers of questions that were separated in terms of their demographical features are as below with 95% accurate results:

Table 2. The effect of mass media tools when teachers makes students use it.

	Does your teachers want to show you educational programs?					Total	
	Yes	They use it when its need	Some of them	No	I don't have any idea		
How does Mass Media Tools effect you?	Positive	11	8	21	11	10	61
	Negative	1	0	0	0	4	5
	Both	3	2	8	4	8	25
	No idea	0	0	0	1	3	4
Total	15	10	29	16	25	95	

When the willingness of teachers to show the educational programmes was compared to the results of students being affected by them, 64% of the positively affected students stated that all or some of their teachers are willing and do let them watch the programmes. Students who were both positively and negatively affected by the programmes, which are 53%, seem to have similar teachers as above. This might be interpreted as there is a correlation between the willingness of teachers and the positive affect of students by the programmes.

Table 3. The effects of the Mass Media Tools and the characthers

	How does the characthers and cases effect you after you watch T.V. or listen to Radio ?		Total	
	No	I remember some memories i have been through		
How does Mass Media Tools effect you?	Positive	34	27	61
	Negative	5	0	5
	Both	14	11	25
	No idea	4	0	4
Total	57	38	95	

CONCLUSIONS AND RECOMMENDATIONS

The impact of mass media on the students understanding of the scope of work performed for observations, interviews and questionnaires obtained from the analysis of the results and recommendations are presented below. The majority of students were affected positively from the mass media , but a significant portion is also understood that both positively and negatively affected . Most regularly found mass media tools are television and the Internet , and in addition the most common tools used by students of television and the internet is seen that again . This situation with the availability of mass media might indicate a direct correlation between the use and availability. Students to be given formal education through mass media is largely find useful but the vast majority of them occasionally watched training programs from the radio and television. This is because the majority of the students stated that they found the tools to be educational sometimes. The majority of students has emphasized the need to use computers in education. If a significant proportion of students stated they preffered to use all means of mass communication. Most students are able to take advantage of mass media in public life and explain what is involved and the general culture of mass media and occasionally at school and very little was said could benefit .. The majority of students stated they take advantage of computers and the Internet , while another part is understood to prefer slide and movie preferences . In addition, most of the students stated that they find more tutorials on the internet . Internet and computer usage that can provide access to all of the students to disseminate the school administration, parents associations and the relevant ministries to develop joint projects and removes the lack of this infrastructure will improve the quality of the training is evaluated . Students of the subject followed by the mass media and that they constantly emphasized that they do not . The majority of students of the mass media family is both beneficial and find objectionable . Most of the families of the children is still appropriate subject is understood that the constant or occasional fits . Kaya and Tuna (2008) stated that after watching the program, students indicated that they are affected in different ways . In this case, students need to be correctly routed to the appropriate programs and in its establishment of effective communication between teachers and parents can lead to positive result.. A portion of students said they related

to the person in the programmes and some said it reminded of other people and things they had been through. Kaya and Tuna (2008) stated in their study that some students took of heroes for real-life models for themselves. This rate of television in the socialization process of children suggests that it may bring alongside many positive effects, some negative effects in terms of personality development. Therefore, the ministry of education through visual communication with other interested parties with regard to the publication of educational programs consultations and sample applications for these issues might be considered beneficial to the development of the project. Famagusta in the school newspaper that difficulties in accessing, age increases the availability of books has fallen, radio availability is understood that more in the Morphou area. Newspapers of the time allocation is relatively higher among male students and the availability of magazines fell with increasing age are analyzed. There are useful tools vary according to age, but the age increases, the rate of utilization has decreased in the course. The use of the mass media contribute to the overall culture in Kyrenia and Famagusta region is relatively higher. Famagusta tools mainly utilized in all city schools are understood to be at a low level. For this union representatives, school management and ministry officials should ensure coordination between and the lack of effective use of existing mass media joint work can be done to remedy is considered to be more appropriate. Students claimed by the high rate of computer use and internet use did not differ by sex of the request is indicated. Karasar (2004) states this situation on new technologies in education makes use of the Internet as determined in other studies that show gender differences are similar to the results. The radio did not differ between the age of not less instructive and relevant to the topic of the use of the mass media are pointing to vary. The use of the mass media in terms of families that reservations of the majority of the families of students of all ages and they are seen as both beneficial and may find objectionable. On the other hand, teachers' and students' willingness to use the tools of positive interaction is understood to be affected. Positive and negative impact, both positive and a significant portion of the students of mass communication program is understood to remember the events of their own. This phenomenon Senturk (2009) in his article the theory of television, especially television created by people affected by several factors that can be attributed to sign. Found it helpful to be given by mass media education media in large scale programs of most of the students sometimes, but a significant portion is also always find trainers. In this case, the purpose of the mass media awareness campaigns done for proper use and schools, families and students in the three sections, the positive results can be achieved is recommended. Therefore, in our age of mass media in a positive as well as negative impacts are understood to be also. Researchers to remain away from this negative effect is of individuals, more selective, qualified, unique, equipped with the ability to think creatively and healthy, intuition and may be able to be much more responsive. Desired behavior expected of individuals and features, but all of these can be given to them with a good education can take place. The best way to benefit from the mass media culture assessment to individuals, apprehension, and his qualifications to take responsibility which can provide contemporary education. Formal education and science to us, and to interpret the law in the world that we will use to watch the lens offers an important insight. Adequate and properly balanced children who can not get a formal education, a well established education is not to say that they received an excellent education and these children are also being excluded (Ozsoy, 1998). By means of mass communication student's interest, perception, and increasing knowledge; express itself could contribute to. Atay (2010) Most of the students spent time at the computer more than 6 hours a day, but the office using the program that allocated less than 1 hour of time looking at the majority stressed that time was seen to separate. Formal education of students and teachers on the use of the mass media in promoting the efficient use of computers and the Internet in schools and for the creation of the necessary environment and resources are considered to be helpful. In non-school environments will contribute to the education of the children of families in monitoring programs of the positive results that router could be anticipated. Means of mass communication students in school and outside of school interaction should be noted that psychological factors play a role. From this perspective, students' age, gender, social status, familial status, region and so on. matters to be considered and shown simultaneously in both programs and educational content must be carefully selected according to the characteristics of such students. Teachers encourage the use of mass media for educational purposes will be transferred to the students while at the same time plays a major role in the selection of programs. In this context, in-service training of teachers in these matters of education and training by the Ministry of Education to be organized with the support of outside experts could lead to more effective results suggested. Learning the use of the mass media and their effects play an important role in the psychological development of students. Close to rural areas in a standard way for students to be trained and supported by mass media it is important to raise the efficiency. What effect only to individuals and not only depend on the properties of the mass media is not to act, on the contrary, is in their mutual relations and interactions (Moemeka, 1998). Of the mass media be used in education, both form and content, in terms of students' social and psychological structure resulting from the inhibiting factor exceeded carefully and attitudes, empowering convictions developer and information-enhancing way that would be more appropriate is evaluated.

SAKARYA UNIVERSITY, SAKARYA, TURKIYE, E-posta: uyaroglu@sakarya.edu.tr, yalcin@sakarya.edu.tr

Abstract

In this work nonlinear dynamics, synchronization and secure communication by synchronization of Rucklidge Attractor is investigated and matlab simulation results are given for engineer students.

Keywords: Rucklidge Attractor, chaos, synchronization, chaotic masking.

1. Introduction

The human has continuously researched the ways of transmitting information beyond normal borders for thousands of years. With enhancement of technology, researches have focused on secure and private information transmission. Secure and private transmission of information with chaos/chaotic signals has become an interesting subject due to dynamical, tender dependency to introduction, nonlinear structure of chaos/chaotic signals. In order to demodulate the transmitted information -modulated with chaotic signals- at receiver, chaotic synchronization concept has occurred. With observation of synchronization at subsystems of chaotic systems, communication system design, using chaotic signals as carrier, has become one of the significant research areas of recent years.

Chaotic Rucklidge dynamical system model was built up at 1991 to derive models for two-dimensional convection in a horizontal layer of Bössness fluid with lateral constraints with hypothesis that “In certain parameter regimes, it is possible to derive third-order sets of ordinary differential equations that are asymptotically exact descriptions of weakly nonlinear double convection and that exhibit chaotic behavior.” [1]

This paper is organized as follows. In section 2, the nonlinear equations of Rucklidge and its dynamical behavior are introduced with matlab simulations. In section 3, synchronization of Rucklidge attractors with pecorra-carroll method was simulated. In section 4, secure communication by using Rucklidge attractor with chaotic masking was simulated. Finally we summarize our work in the Conclusion [2].

2. Rucklidge attractor and It's chaotic behavior

Rucklidge systems equations are;

$$\begin{aligned}\dot{X} &= -KX + LY - YZ \\ \dot{Y} &= X \\ \dot{Z} &= -Z + Y^2\end{aligned}\quad (1)$$

Where K and L are system constants.

If equation (1) is solved by using Runge-Kuntta method on Matlab with initial values $X(0) = 1, Y(0) = 0, Z(0) = 4.5$ and for system constants $K = 2, L = 6.7$ as could be seen over Figure-1 and Figure-2 Rucklidge system equations shows chaotic behavior for the given conditions.

Figure 1. Chaotic Time Series of X-Y-Z

Figure-2- Chaotic Phase Portrait of X-Y-Z

By Modeling equation (1) via simulink as shown at Figure-3- for the same initial conditions and system variables we are able to get similar results of Figure 1, as shown at Figure 4, Figure 5.

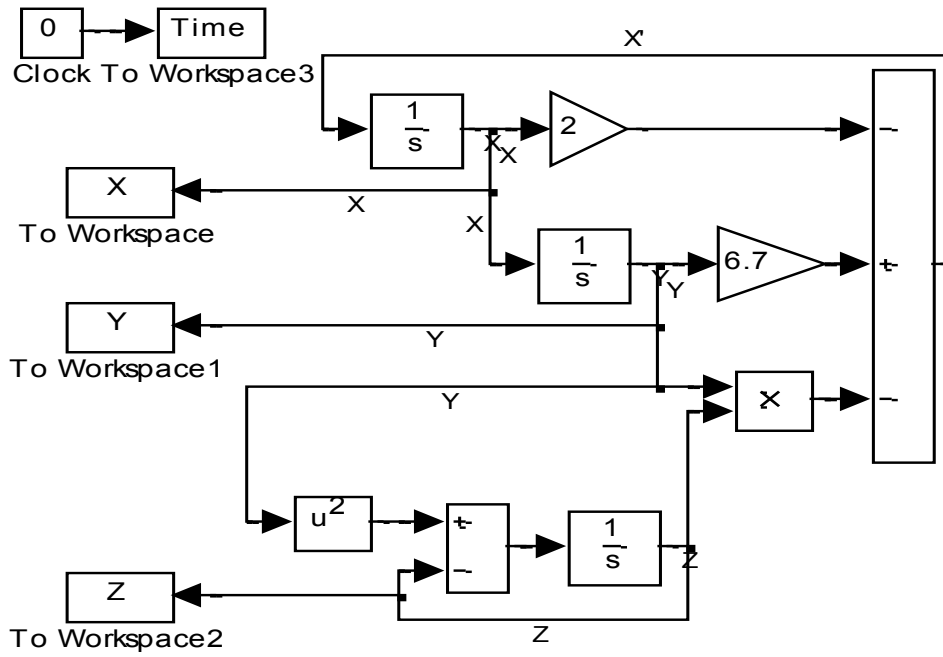

Figure 3. Simulink Model of Rucklidge Equations

Figure-4- Chaotic Time Series of X,Y,Z

Figure 5. Chaotic Time Series X,Y,Z

3. Synchronization of Rucklidge Attractor

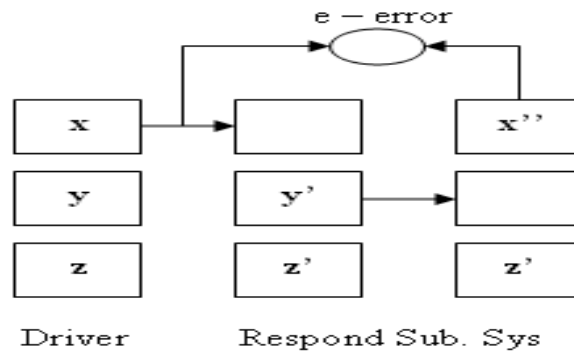

Figure 6. Block Diagram of Pecora-Carroll Synchronization [3-4]

$$\begin{array}{ccc}
 \frac{dx}{dt} = f(x, y, z) & \longrightarrow & \frac{dx'}{dt} = f(x', y', z') \\
 \frac{dy}{dt} = g(x, y, z) & \longrightarrow & \frac{dy'}{dt} = g(x', y', z') \\
 \frac{dz}{dt} = h(x, y, z) & \longrightarrow & \frac{dz'}{dt} = h(x', y', z')
 \end{array}$$

Driver / Master
Sub-Sys1
Sub-Sys2

Dinamical Equations for pecora-carroll synchronization of two chaotic rucklidge attractor can be structured as,

Drive/Master Sys. Equations :

$$\left. \begin{aligned} \dot{X} &= -KX + LY - YZ \\ \dot{Y} &= X \\ \dot{Z} &= -Z + Y^2 \end{aligned} \right\} (2)$$

Sub Sys.1 Equations :

$$\left. \begin{aligned} \dot{Y}' &= X \\ \dot{Z}' &= -Z' + Y'^2 \end{aligned} \right\} (3)$$

Sub Sys.2 Equations :

$$\left. \begin{aligned} \dot{X}'' &= -KX'' + LY' - Y'Z'' \\ \dot{Z}'' &= -Z'' + Y'^2 \end{aligned} \right\} (4)$$

By modeling the equations (2), (3), (4) via simulink shown as Figure-7- pecora-carroll synchronization model can be investigated.

The variables of the rucklidge oscillators(Master&Sub) are; $K = 2$, $L = 6.7$

Initial Values of rucklidge oscillators are; Drive/Master Sys.(Oscillator1) $X(0) = 1, Y(0) = 0, Z(0) = 4.5$

Sub Syst. (Oscillator2), $X(0) = 1.1, Y(0) = 0, Z(0) = 4.6$

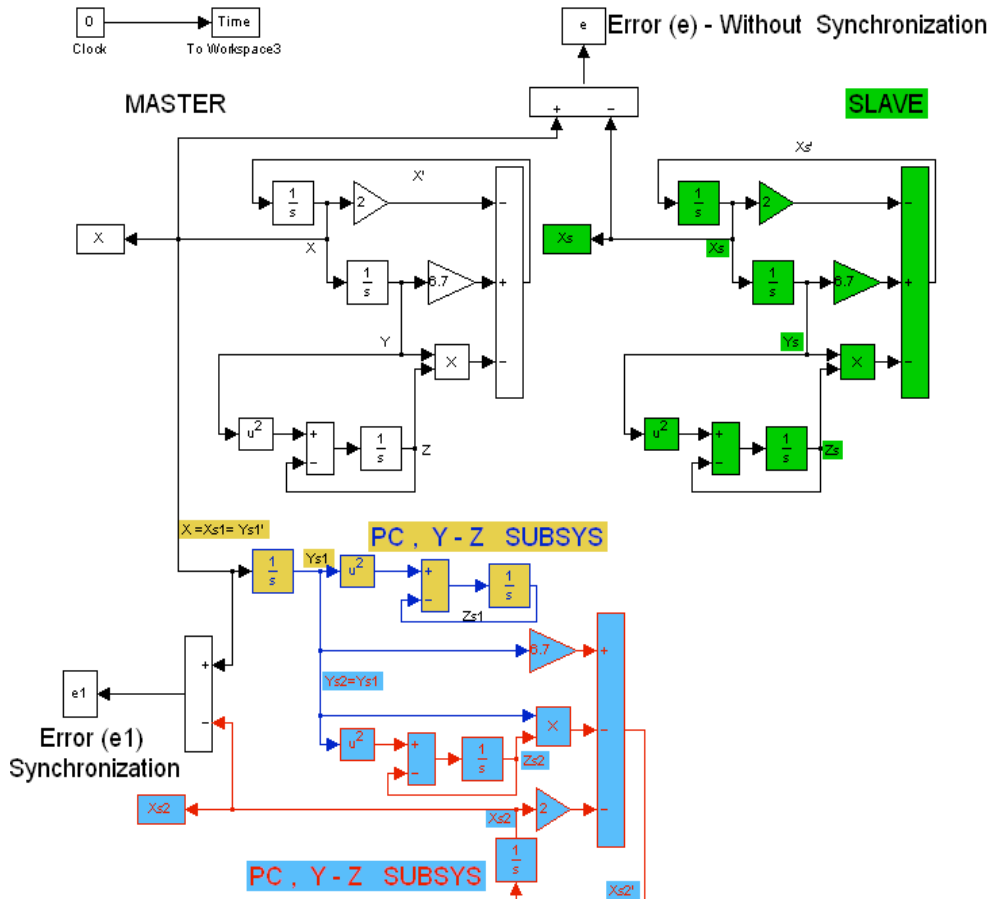

Figure 7. Synchronization Simulink Model of Rucklidge Equations

Figure 8. Error No-Synchronization at Attractor

Figure 9. Time Series of non synchronized attractors's X values

Figure 10. Error at Synchronized Attractors

By using simulink if we check the error(X_s-X) we can follow the synchronization between two chaotic attractor.

Unsynchronized two rucklidge attractors's(With different initial conditions) error(X_s,X) and time series of X_s-X is shown at Figure 8 and Figure 9. Synchronized two rucklidge attractors's error(X_s,X) with Pecora-Carroll method is shown at Figure 10. Two rucklidge attractor with chaotic behaviour is being synchronized within 10 milliseconds.

3. Communication with Chaotic Masking.

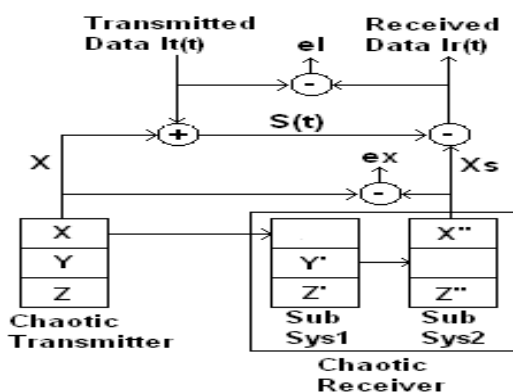

Figure 11. Block Diagram of Communication with Chaotic Masking

Communication with Chaotic Masking is based on a simple logic as could be seen over Figure-11, driven by masking I_t (Transmitted Data) with Chaotic X to have the transmitted/masked data as $S(t)$ over Transmitter and de-masking of $S(t)$ with X_s to have I_r (Received Data) at receiver where the success of communication can be followed by checking e_1 (Error between I_t and I_r).

It is obvious that “eI=0” case could be gathered only when “ex=0”(X=Xs) with other words when synchronization between Receiver – Transmitter realized.

Which basically defines the pre-requirements of communication with chaotic masking as;

- 1- Transmitter and Receiver circuits should be equivalent.
- 2- Chaotic Transmitter needs to be utilized as well master for synchronization.
- 3- The amplitude of Transmitted Data selection should be in line with Chaotic X sign, to secure/mask data correctly.

By using the simulink model shown as Figure 12. Communication with Chaotic Masking can be investigated for Rucklidge equations.

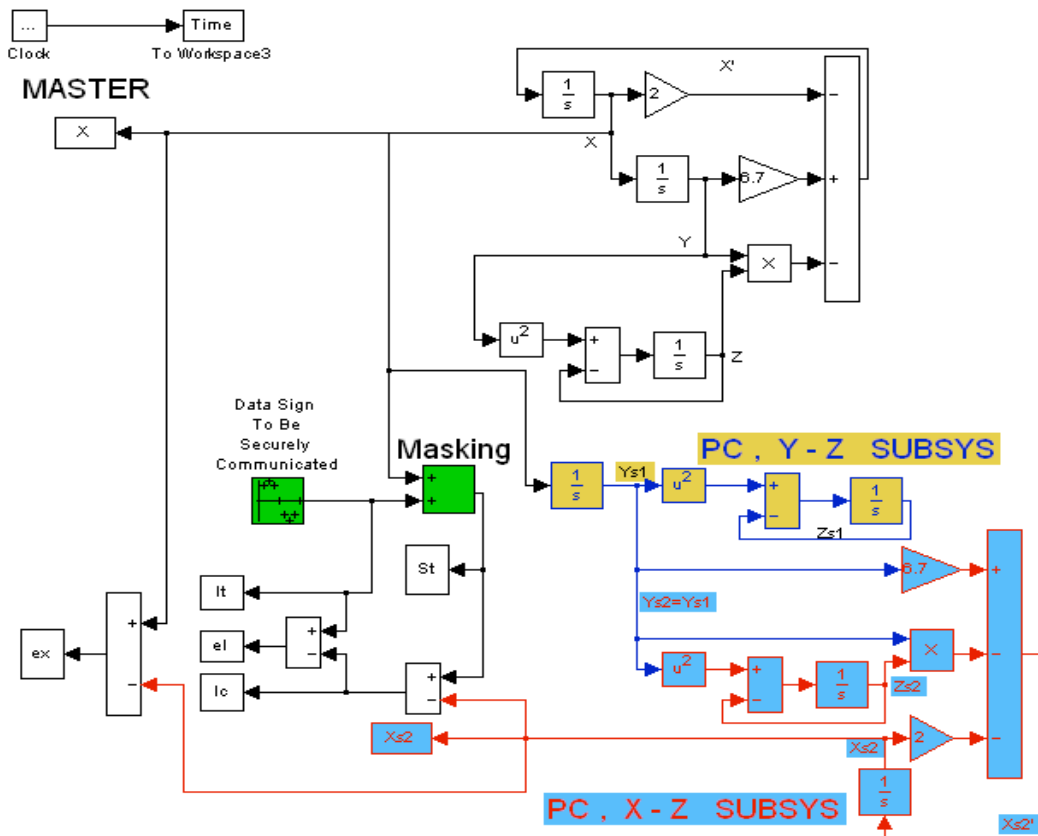

Figure-12- Simulink Model of Rucklidge Equations for Communication with Chaotic Masking

The variables of the rucklidge oscillators (Master&Sub) are; $K = 2$, $L = 6.7$. Initial Values of rucklidge oscillators are; Master Sys.(Transmitter) $X(0) = 1, Y(0) = 0, Z(0) = 4.5$, PC-Sub Sys's (Receiver), $X(0) = 1.1, Y(0) = 0, Z(0) = 4.6$. It (Transmitted Data) is a sine wave with 5V amplitude. Time series of “It”(Transmitted data), “X”(Chaotic Masking Wave) shown at Figure 13, as amplitude of “It” is less than amplitude of X, “It” could not be easily seen over generated “S”(Transmitted/Masked Data Wave) by 3rd parties as shown at Figure 14 which supports the aim of secure communication. Synchronization between Master and Sub Sys Rucklidge oscillators is being taking place within 10 ms as shown at Figure 15 and Figure 16 which as well the start point of success at de-masking at receiver side as could be seen at Figure 17 and Figure 18.

Figure 13. Time Series of It (Transmitted Data) of X

Figure 14. Time Series of S (Transmitted/Masked Data Wave)

Figure 15. Time Series of X values. (X Master Sys, Xs₂ Sub Sys Respond)

Figure 16. ex-error at Synchronized Attractors

Figure 17. Time Series of It(Tranmitted Data), Ic (Received Data)

Figure 18. eI-error between It(Tranmitted Data) and Ic (Received Data)

As indicated, selection of amplitude of I_t (Transmitted Data) is a pre-requirement of secure Communication with Chaotic Masking as “ I_t ” is going to be masked into X (Chaotic Masking Wave) therefore amplitude of “ I_t ” should preferably be less than amplitude of “ X ”.

In case the amplitude of “ I_t ” is greater than amplitude of “ X ” S (Transmitted/Masked Data) is mostly consist of “ I_t ” values as shown at Figure 20 therefore unfortunately I_t could be easily seen by 3.rd parties, Where security of communication can be increased by selecting smaller amplitude values as an example shown at Figure 19.

Figure 19. Time Series of S (Transmitted/Masked Data Wave), I_t (Transmitted Data). Where $I_t = 5$ Volt

Figure 20. Time Series of S (Transmitted/Masked Data Wave), I_t (Transmitted Data). Where $I_t = 15$ Volt

4. Conclusions

In this work, we studied secure communication by synchronization and chaotic masking of Rucklidge attractors, as first step we investigated the nonlinear equations of Rucklidge and its dynamical behavior by using Matlab

and Matlab Simulink Model (Figure 3). Where rucklidge equations show chaotic behavior with a certain initial condition and variable set. (Shown at Figure 1, Figure 2, Figure 4, Figure 5)

Secondly we investigated synchronization of Rucklidge attractors by using Pecora-Caroll method by using the Simulink Model (Figure 7) where the results shows that two equivalent rucklidge attractor with different initial conditions can be synchronized within 10 ms (Figure 10).

After synchronization of two rucklidge attractor we investigated Communication with chaotic masking by using the Simulink Model (Figure 12) where we do manage to get the Transmitted Wave back at receiver side shown at Figure 13 to Figure 18 with a small remark in regards with selection of amplitude of I_t (Transmitted Data) less than amplitude of X (Chaotic Masking Wave) to improve security of communication as shown with Figure 19 and Figure 20. As a summary, rucklidge attractor can be used at chaotic masking and communication applications for engineer education.

Elektrik Mühendisliğinde Trafo Merkezleri için Yeni Bir Topraklama Ölçümü Eğitimi: Selvaz Yönetimi

ÖZET

Elektrik Enerjisi ve Elektrik Projelerinin Kalitesi, Çağımızda her geçen gün önemli artan bir konu haline gelmiştir. Meydana gelebilecek bir hata durumunda oluşacak adım ve dokunma gerilimlerinin insan hayatını tehlikeye sokacak mertebede olmasını önlemek veya bu tehlikeli gerilimleri tamamen ortadan kaldırmaktır. Elektrik sistemlerinin devamlılığı ve insan hayatını güvenceye almak için elektrik sistemlerinde, gerilim altındaki kısımlar yalıtılırlar. Toprağa karşı yalıtımda, çeşitli sebeplerle, her zaman bozulma meydana geldiği görülmüştür. Topraklama ağının iyi tesis edilmiş olması her tesiste önemlidir, orta ve yüksek gerilimli trafo merkezlerinde tesis edilen topraklama ağının empedansının selvaz yöntemiyle ölçülmesi gerekmektedir. Bu çalışmanın hem sahada çalışan Elektrik Mühendisleri hem de mezun olacak elektrik Mühendisliği öğrencileri için faydalı olacağı hedeflenmektedir.

Anahtar sözcükler: Elektrik Enerjisi, Tesis Topraklaması, Toprak Direnç Testleri, Toprak Empedans Ölçümü, Selvaz Yöntemi

1.GİRİŞ

Toprak, sonsuz büyüklükte iletken bir kitledir ve bütün elektrik tesislerinin bulunduğu yapıları bünyesinde barındırır. Toprak direncinin doğru ölçülmesi, sağlıklı çalışan bir topraklama sistemi düzenlenmesinde önemli bir yer tutar. Enerji tesislerinin topraklanmasındaki genel amaçlar; [1]

- İnsan ve hayvan ölümlerinin önüne geçmek,
- Teçhizat ya da aygıtların elektrik arızalarında hasar almasını önlemek,
- Enerjinin güvenilirliğini ve sürekliliğini arttırmaktır.

2.AMAÇ VE HEDEFLER

İnsanların ve hayvanların bulunduğu alanlarda toprağa geçiş direncinin mümkün olduğunca küçük tutulması önemli ve hayati bir meseledir. Topraklama direncinin mümkün olduğu kadar küçük olması atmosferik elektrik boşalmalarında yıldırımdan korunma tesislerinde meydana gelecek yan atlamaları ve tehlikeleri azaltacağından bu hususa önem verilmelidir. [2]

Topraklama direncinin azaltılması için mümkünse aşağıdaki toprak tiplerinden biri seçilmelidir;

- Islak bataklık zemin
- Kil, balçıklı toprak, sürülebilir toprak, killi toprak, az miktarda kum ile karışık killi toprak veya balçık
- Değişik oranlarda kum ile karışık kil veya balçık, çakıl ve taşlar
- Rutubetli ve ıslak kum seçilmeli
- Kuru kum, çakıllı tebeşir, kireç taşı, granit ve çok taşlı zeminler ve genç kayaların zemine çok yakın olduğu alanlardan kaçınılmalıdır.

Elektrik güç sistemlerinin etkin olarak topraklanmaya başlamasıyla beraber topraklama direncinin doğru olarak belirlenmesi birçok çalışmaya konu olmuştur. Topraklama direncinin ölçümünde son yıllarda selvaz(selected voltage amper -z) yöntemi ön plana çıkmaktadır

SELVAZ YÖNTEMİ

Ölçüme başlanmadan önce trafo merkezinin şalt kısmının etrafı kontrol edilir ve kenar uzunlukları tespit edilir. Testlere başlanmadan önce ise şalt sahasının tüm enerjisi kesilir ve şalt sahası çıkış ve giriş fiderleri hem merkezden hem karşı taraftan açılır.

Şekil 1. Akım Kazıklarının Toprağa Çakılmış Hali

(Çanakkale Akçansa TM)

Hesaplanan c uzunluğunun 5 katı mesafede seçilen uygun zemine 5-8 adet akım kazığı 70 cm derinliğinde daire

oluşturacak şekilde çakılır. Çakılan kazıklar uygun noktalarından birbirlerine halka şeklinde kısa devre edilir. Akım elektrodu olarak kullanılan kablo bu kazıklara bağlanır. Akım ve gerilim elektrodları arasındaki açı 90 dereceden küçük olmalıdır.

Şekil 2. Selvaz Ölçüm Şeması

Cihazlar fens telinin hemen yanına kurularak şalt sahası toprağı ile akım elektrotu arasında 5-10 amper aralığında akım akıtılmalıdır. Mesafenin uzunluğuna göre 25m ya da 50m aralıklarla gerilim elektrotundan V_0 - V_1 - V_2 değerleri okunur. Her ölçümde V_p ve Z değerleri hesaplanır. [3]

Bu işlem 5c uzunluğunun birkaç işlem sonrasına kadar devam eder. Toprak potansiyeli test formülü aşağıda verilmiştir.

$$V_p = \sqrt{\frac{V_1^2 + V_2^2}{2} - V_0^2} \quad Z = \frac{V_p}{I}$$

V_p : Toprak Potansiyeli

V_0 : Test akımı yokken okunan gerilim

V_1 : Test akımında okunan gerilim

V_2 : Test akımını 180 derece ters bağladığımızda okunan gerilim

Z empedans değeri şu şekilde bulunur;

- Yapılan ölçümler ile empedans-uzunluk grafiği oluşturulur.
- Grafiğin tepe noktasına denk gelen L mesafesinin 3/2 mesafesinde okunan direnç değeri Z empedans değerini verir.
- Şekil 3. de tepe noktası 550m'ye denk gelmektedir. $550 \times \frac{3}{2} = 366m$ 'dir. 366m den sonra en yakın ölçüm noktası 400m olduğu için 400m ye karşılık gelen 0,14ohm değeri sonuç olarak alınır.

Şekil 3. Yapılan Ölçümlere Ait Örnek Grafik

ADIM VE TEMAS GERİLİMİ

Adım Gerilimi Ölçümü

Şalt içerisinde herhangi bir noktada, 1 metre ara ile iki kazık çakılarak kazıklar arasında okunan gerilim bize adım gerilimini verir. Adım gerilimleri ölçülürken sistem kurulu vaziyette olmalıdır. $V_0-V_1-V_2$ gerilim değerleri alınır ve kaydedilir. Bu testler

0-1, 1-2, 2-3, 3-4 ve 4-5 metrelerde tekrarlanır.

Temas Gerilimi Ölçümü

Şalt sahası içerisinde bulunan teçhizatlar (Akım trafosu, KGT, Kesici, Parafudr, Trafo vb.) ile onlara dokunan insan arasında, insanların zarar görmemesi için ve kriter olarak belirlenen 42 Volt ya da daha altında bir gerilimin belirlenmesi için temas gerilimleri ölçülür. Temas gerilimlerinde sistem kurulu vaziyette ölçülür. Akım akıtılmak suretiyle $V_0-V_1-V_2$ gerilim değerleri alınır ve kaydedilir. Numune olarak bazı teçhizatlar seçilir. Seçilen teçhizat ile onun 1 metre ilerisine kazık çakılarak arasındaki gerilim okunur.

Şalt alanına bağlanan koruma tellerinin şaltın topraklama ağından ayrılması şarttır, aksi takdirde şalt topraklamaya paralel girerek değeri düşürür. Ölçümlerin yapılması için gerekli olan enerji jeneratör vasıtasıyla temin edilir. Teste başlarken akım akıtılmıyorsa toprak direnci büyük demektir. Bu durumda toprak direncini küçültmek için akım kazıklarının dibine tuzlu su dökme gibi yöntemler uygulanabilir. Bu testlerde ölçüm yapılırken filtre devresi kullanılarak 50Hz dışındaki kaçak gerilimlerin okunması engellenir. Hataları minimuma indirmek için polarite değiştirilerek ölçümler her iki polaritede de yapılmalı ve ortalaması alınmalıdır.

Şekil 4. Selvaz Metodu ile Toprak Empedans Devresi

SONUÇ

Z empedans değeri yeni yönetmeliğe göre 380 kV şahtlarda 0,5 ohm ve daha aşağısı, 154 kV şahtlarda 1 ohm veya daha aşağısı olmalıdır. Şayet bu değerlerin üzerinde ise şahttaki teçhizat ve insanlar için tehlike arz edeceğinden şaltın topraklama ağının artırılarak direncin düşürülmesi sağlanır. [4]

Bütün boyutları ve iletkenliđi önceden bilinen bir iletkene karşılık toprak, birçok özellikleri bilinmeyen çok karışık bir iletkendir. Bu nedenle insan ve hayvanların güvenliđi için toprak yapısı iyi incelenmeli ve test edilmelidir. Bu inceleme ve sonuçlar doğrultusunda daha kaliteli topraklama projeleri tasarlanmalıdır.

Türkiye’de Yabancı Dil Öğretmeni Yetiştirme Koşulları ve Fransızca Öğretmeni Yetiştirmede Yaşanan Sorunlar

Doç.Dr. Nur Nacar-Logieİstanbul Üniversitesi nurlogie@istanbul.edu.tr

Özet

Bilindiği üzere genel olarak öğretmen yetiştirmede olduğu gibi yabancı dil öğretmeni yetiştirme süreçlerinin de pek çok bileşeni ve paydaşı vardır. Yeni nesilleri erken yaşlarda okullarda öğretmenlere emanet ettiğimiz düşünüldüğünde, bir ülkede ihtiyaçlar doğrultusunda ekonomist, hukukçu, doktor yetiştirmek kadar, gerekli ve yeterli donanım, bilgi ve becerilere sahip eğitici, öğretmen yetiştirmek de son derece önemlidir. Ülkemizde öğretmen yetiştiren kurumların en başında eğitim fakülteleri yer alır. Öğretmen adayları eğitim fakültelerinde dört yıllık bir eğitiminin sonunda aldıkları lisans diplomasıyla öğretmen olmaya hak kazanırlar. Ancak yabancı dil öğretmeni adayları için söz konusu eğitim-öğretim süresi hazırlık sınıfıyla birlikte genellikle beş yıldır. Hazırlık sınıfında yaklaşık 400-600 saat arası yabancı dil dersi alan öğrencilerin çoğu zaman öğrendikleri yabancı dilde temel becerilere istenen seviyede sahip olamadan birinci sınıfa geçtikleri ya da yönetmelikler gereği iki yıldan fazla hazırlık sınıfını tekrar edemedikleri için otomatik olarak birinci sınıfa geçtikleri gözlemlenmektedir. Bu sorun bir yandan ileriki yıllarda lisans programında başka sorunlara yol açarken, öte yandan pek çok açıdan bir zaman ve emek kaybına da işaret etmektedir.

Başarı ve başarısızlıkta tüm paydaşların belirli oranlarda katkıya sahip olduklarını düşünecek olursak, öğrenci profilinin, eğitim-öğretim sistemi ve koşullarının gözden geçirilerek başka sistemler onların işleyiş biçimleriyle karşılaştırılması fayda sağlayacaktır. Yabancı dil öğretmeni yetiştirme süreçleri, gerek eğitim yılı sayısı gerek alınan eğitimin kapsam ve içerikleri ve aday profilleri açısından ülkelere göre farklılıklar göstermektedir. Bu çalışmanın amacı gerek ülkenin ve toplumun ihtiyaçları gerekse Fransızca öğretmeni adaylarının ihtiyaçları açısından ve zaman kaybetmeksizin eğitimde azami kaliteyi sağlayacak kısıtları saptamak amacıyla, öğretim süreçleri ve öğretmen adayları profillerini bazı Avrupa Birliği ülkelerinininkilerle karşılaştırmak olacaktır.

Giriş

Türkiye’de öğretmenlik mesleğine aday olabilmek için zorunlu eğitim süresi dört yıl olmakla birlikte yabancı dil öğretmenliği için bu süre genellikle hazırlık sınıfıyla birlikte beş yıldır. Aday öğrenci profillerinin çeşitliliği, yanlış ve eksik bilgi ve algıdan dolayı bu süreç daha da uzun olabilmektedir. Geniş ölçekte bu sürecin uzaması bireyler, toplum ve genel olarak da ülke için zaman, enerji kaybıyla birlikte maddi bir kayıptır. Öğrencilerin motivasyonlarının tercih ettikleri meslek eğitimiyle örtüşmemesi profil sorunun bir parçasıdır. Eğitim sürecinin başarı ve başarısızlığında tüm paydaşlar eşit ölçüde sorumlu olsalar da süreci iyileştirme yolunda ilk sorgulanması gerekenin öğretmen adaylarının hangi koşullarda öğretmenlik mesleğine yöneldikleri gibi görünmektedir. Her meslekte olduğu gibi yabancı dil öğretmenliğinde de motivasyon ve mesleğe yatkinlik son derece önemlidir. Ancak özellikle Fransızca öğretmenliği bölümlerini tercih eden adaylarının aslında çoğu zaman gönüllü bir tercihte bulunmadıkları gözlemlenmektedir. Doğal olarak da bu durum eğitim-öğretim süreçlerine yansımakta ve nitelikli öğretmen adayları yetiştirmeyi güçleştirmektedir. Asıl profile uygun adaylar yetiştirme hedefine ulaşmak için öncelikle var olan aday profilinin gözlemlenmesi ve tanımlanması oldukça önemlidir. Bu nedenle bu çalışmada öncelikli olarak özellikle Fransızca öğretmenliğine aday öğrencilerin profilleri tartışılacaktır. Ayrıca sisteme bağlı sorunlar irdelenecek ve çözüm önerilerini tartışabilmek için de bazı karşılaştırmalar yapılacaktır.

Avrupa Birliği çerçeve programı ve öğretmen profili metni zerine

Öğretmen profili ile öğretmen aday öğrenci profilini karıştırmamak gerekir. Bu çalışmada söz konusu edilen özellikle lise eğitiminin ardından Fransızca öğretmenliğini tercih eden öğrencilerin profilidir. Ancak öğretmenlik mesleğine aday öğrencilerin profiline geçmeden önce kısaca yabancı dil öğretimi için hazırlanmış ortak kısıtların önerildiği Avrupa Birliği çerçeve metni ve Avrupa Birliği öğretmen profilinden söz etmekte fayda var. Son derece ayrıntılı ve kapsamlı biçimde sadece kısıtlardan oluşan Avrupa Birliği ortak çerçeve metninde aslında yöntem ve içerik konusu muğlaktır. Söz konusu metinde önerilen kısıtlar içinde bulunduğumuz çağın tüm gereksinimleri göz önünde bulundurularak oluşturulmuş olmakla birlikte özellikle de Avrupa Birliği ülkelerinde eğitim birliğine de gidişin çok önemli bir adımını oluşturmaktadırlar. Önerilen kısıtlar ne kadar ideal olurlarsa olsunlar mantıksal olarak ortak kısıtların uygulanması ancak ortak eğitim-öğretim sistemi, ortak toplum, ortak öğrenci ve ortak öğretmen profilleriyle gerçekçi olabilir. A. Işık Türkiye’deki yabancı dil öğretimi

sorunlarını irdelediği makalesinde benzer bir saptamada bulunmaktadır: “Bir yabancı dil programının başarısı, toplumun iyi incelenmesi ile elde edilen veriler üzerine kurulmasına bağlıdır. Dolayısıyla, yabancı dil eğitiminin başarısı da, toplumu göz önüne alması ile orantılıdır. Bu nedenle, bütün ülkelere ve durumlara hitap eden bir ortak yabancı dil programından bahsedilemez” (2008: 22-23). Her şeyden önce ardışık ve eşzamanlı olmak üzere iki farklı eğitim sistemi olduğu bilinmektedir. Avrupa Birliği Ülkelerin de bile bu bağlamda farklılıklar söz konusudur. Örneğin Fransızcanın yabancı dil olarak öğretiminde genellikle örnek alınan Fransa'nın hem genel eğitim sistemi buna bağlı olarak da öğretmen yetiştirme sistemi Türkiye'ninkinden oldukça farklıdır. Fransızcanın yabancı dil olarak öğretimini meslek olarak seçen adaylar için dil zaten anadilleridir. Dolayısıyla ne öğrenci ne de öğretmen aday profilleri Türkiye'ninkilerle aynı değildir. Fransa dışındaki diğer Avrupa Birliği ülkelerinde de profiller aynı şekilde farklıdır. Örneğin Avrupa'da öğrenci hareketliliği daha ikinci öğretimde başladığı için öğrencilerin daha erken yaşlarda anadilin konuşulduğu ülkelerde bulunma olanakları dilde temel becerileri geliştirmelerine büyük katkıda bulunmaktadır. Bu nedenle ortak kıstaslarla belirlenen dil düzeyleri Türkiye'de sağlanmış gibi gözükse de sonuçlar göreceli olabilir. Kısaca, yabancı dil öğretiminde kıstaslar öğretim yöntemleri, içerik ve işleyiş belirlerken ülkenin ve toplumun kendi ortam ve koşullarının göz önünde bulundurulması başarının sağlanmasında önemli rol oynayacaktır. Avrupa Birliği öğretmen profili ortak çerçeve metnine gelince, genel hedefler, toplumlarda yabancı dil öğrenme konusunda hassasiyet yaratmak, yabancı dil eğitim-öğretimi programlarının sayısını, yabancı dil öğrenen sayısını, yabancı dil öğretiminde kaliteyi artırmak ve daha küçük ölçekte öğrenilen ve öğretilen dillerin promosyonunu yapmak, yabancı dil öğrenmeye erişimi kolaylaştırmak olarak sıralanmaktadır. Bu hedefle Avrupa Birliği üyesi olsun olmasın her toplum için geçerli sayılabilecek hedeflerdir. Ancak yine de bu profilin de

Öğrenci profilleri sorunu

Türk üniversitelerinde Fransızca Öğretmenliği bölümleri sayısı ihtiyaç duyulanan üzerinde olduğu gibi bölümlerin öğrenci kontenjanları da ihtiyaç duyulanan üzerindedir. Bu durum pek çok açıdan nitelikli öğretmen yetiştirme hedefinin gerçekleştirilmesini güçleştirmektedir. Türkiye'de özellikle Fransızca öğretmeni yetiştirmede en önemli sorunlardan biri, öğrenci profillerinin çeşitliliğidir. Bu çeşitlilik dilsel yeterliliklerin geliştirilmesi güçleştirmektedir. Fransızca öğretmenliğini tercih eden adaylar için genel olarak üç tip profilden söz edilebilir. En önemli grubu daha önceki eğitimlerinde yabancı dil olarak Fransızcanın dışında yabancı dil eğitimi almış dolayısıyla da üniversite sınavında başka dillerden özellikle de İngilizceden sınava girerek aldıkları puanlarla kayıt yaptıran adaylar oluşturmaktadır. Bir diğer grup ise Fransızca eğitim yapan liselerden mezun olanlar yer alır. Son olarak da göçmen ailelerin çocukları yer aldığı gruptan söz edilebilir.

Fransızca öğretmenliği bölümlerini tercih eden öğrencilerin profilleri, algı ve hedefler açısından Almanca ve İngilizce öğretmenliği bölümlerini tercih eden öğrenci profillerinden farklıdır. Fransızca öğretmenliği bölümlerine girebilmek için gerekli puanın nispeten düşük oluşu bir motivasyon teşkil etmekle birlikte bu öğretmenlik mesleğinin kendisi için gerçek bir motivasyon değildir. Öte yandan gerekli puan ile eğitimin güçlük düzeyi arasında bir paralellik kurma eğilimi de yanlış algıya dayanmaktadır. Bir başka deyişle bir kısım aday öğrenci kitlesi aslında hiç arzu etmediği, hedeflemediği halde sırf herhangi bir üniversite diplomasına sahip olabilmek için zorunlu bir tercih olarak görmektedir. Bu gruptaki öğrenciler de genellikle üniversite sınavına başka yabancı dillerden girip o dilden aldıkları puanlarla Fransızca öğretmenliği bölümlerine aday olmaktadır. Fransızca eğitim-öğretim yapan kolejlerden gelen aday öğrenciler de bu gruba dahil edilebilirler. Bu öğrenci kitlesi ise asıl hedefleri bölümlere girmek için yeterli puanı sağlayamadıkları için Fransızca öğretmenliği bölümlerini son çare olarak görmektedirler. Bu durumda en önemli sorun öğrencilerin önemli bir kısmının gerçekten öğretmen olmayı hedeflemeyişleridir. Sonuçta Fransızca öğretmenliği bölümlerinin Fransızca öğrenilen bir dil kursu olduğu algısı ve temel becerilerde ortalama bir seviyeye sahip olmanın da öğretmenlik eğitiminde kesin başarının garantisi olduğu algısı aday öğrencileri büyük ölçüde yanıltmaktadır.

İdari sorunlar

Hazırlık sınıfında başarısız olan öğrenciler genellikle yanlış algı ve bilgi dayalı yanlış tercihte bulunanlardır. Bu öğrenciler arasında iki yıl hazırlık eğitimi alıp yine de başarısız olanlar vardır. Söz konusu öğrenciler yönetmelikler gereği iki yıldan fazla hazırlık sınıfını tekrar edemediklerinden başarılı sayılmakta ve doğrudan birinci sınıfa kayıt yaptırabilmektedirler. Bu da sınıflarda heterojen bir yapı oluşumuna neden olmaktadır. Öte yandan, idari anlamda hazırlık sınıflarının bünyelerinde barındıran yabancı diller yükseköğretim bölümlerine yerine doğrudan rektörlüklere bağlı oluşları idari bakımdan eşgüdümlü çalışmaları ve denetimi olanaksız kılmaktadır.

Sonuç ve Öneriler

Bölümlerin misyon, vizyonları, müfredat ve ders kapsamlarının adaylara yeterince tanıtımının sağlanması, bölümlerin toplam beş yıllık bir dil kursu olduğu algısının ortadan kalkmasına ve öğrencilerin üniversite sınavına girerken uygun tercihi yapmalarına katkıda bulunacaktır. İstenen ve beklenen niteliklere ve donanıma sahip Fransızca öğretmeni yetiştirebilmek için her şeyden önce alanda arz talep dengesi göz önünde bulundurulmalıdır.

Her yıl Fransızca öğretmenliği bölümlerine toplamda ihtiyacın çok üstünde öğrenci alınmakta ve yine ihtiyacın çok üstünde mezun verilmektedir. Bölüm sayısı ile birlikte kontenjan sayısının azaltılması, giriş puanının yüksek tutulması, gerçek öğretmen aday sayısının ortaya çıkmasını ve bu doğrultuda gerekli motivasyona sahip nitelikli öğretmen adayları yetiştirebilmeyi sağlayacaktır. Bu önerilerin gerçekleştirilmesinin çeşitli nedenlerle oldukça güç olduğunu da kabul etmek gerekir. Çünkü bölüm veya anabilim dalı sayısının azaltılması Fransızca bölümlerinde görev yapan öğretim üyelerini de doğrudan ilgilendirmektedir. Öte yandan kontenjan sayısının azaltılması ve puanlarının yüksek tutulması ise bu defa da yeterli öğrenci sayısını sağlayamama riski nedeniyle yine bölümlerin kapatılmasına neden olacağından ve bölüm ve anabilim dallarının hemen hemen hiç birinin bu çözümü kabul etme ihtimali olmayacağından bu çözüm yolları şimdilik bir çıkmazda gibi görünmektedir. Ancak hem toplumsal hem de bireysel bağlamda zaman ve enerji kaybının önüne geçmek ve nitelikli öğretmen adaylarının yetiştirilmesi için bu sorun çözülmek zorundadır. Yabancı dil öğretmenliği bölümlerinde, teknolojik yenilikler ve yükselen değerler doğrultusunda düzenli olarak derslerin ve içeriklerin düzenlenmesi, söz konusu bölümlerde görev yapan öğretim üyelerinin de bilgi ve becerilerini güncellemelerini gerektirdiği açıktır. Bu nedenle yabancı dil öğretmenlerini yetiştirenlerin de düzenli olarak hizmet içi eğitim almaları gerekli olabilir. Hizmet içi eğitimle birlikte iç denetimin mekanizmasının geliştirilmesi aynı şekilde istenen profile uygun adaylar yetiştirmede fayda sağlayacaktır.

Bionic Architecture Course For Architecture Students

Naglaa Ali Megahed

Architecture and Urban Planning Department, Faculty of Engineering,

Port Said University, Port Said, Egypt

E-mail address: Naglaaali257@hotmail.com

Abstract

There is a growing list of academic institutions that are integrating bionic subjects into their educational programs. Bionics is an applied science that studies fundamental principles of biological systems to be used for solving environmental issues or inspiring new design processes. The combination of bionics and architecture is just like the combination of bionics and other disciplines, which already has made a remarkable development in different research areas. Consequently, architecture students are inspired by living organisms and their adaptive interactions with nature. The main purpose of this work is to propose a theoretical framework for bionic architecture course in architectural programs which provides the appropriate knowledge to analyze different bionic structures. This derives from the importance of bionics understanding for architecture students to open new approaches for creativity. The analysis and conclusions shed light on bionics is not only as a bio-inspired architectural style that can emphasize ways of thinking and designing, but also is as a process of more unique and sustainable design process.

Keywords: Architecture students; Bionic approaches; Bionic architecture; Bionic classification; Design process; Sustainable thinking

Introduction

Bionics is an applied science that studies fundamental doctrines of nature, structural, technical and forming in order to be used in solving the problems that human faces. In this context, bionics is an interdisciplinary field on the way to establish itself a science which incorporates all areas of biological science and technology. This applied science will continue to grow in the future with continuous innovative models which also will shape the architecture of the twenty-first century. Bionic architecture belongs to all buildings and structures which have been built with the help of enormous nature's role models (Gruber et al., 2011; Huang, et al., 2011). Architecture students need to be aware of bionics and its innovative applications in architecture. The proposed course aims to provide the architecture students with the basic knowledge and skills of how to clarify the interactive relation between architecture and nature through the philosophy of bionic thinking. In addition, give the students the ability to analyze a range of bionic structures, differentiate between different bionic approaches and illustrate how to create new bionic architecture which sustains nature in a unique bio-design process.

Bionic Architecture Course

Throughout the context of the proposed course, a set of relevant bionic disciplines is presented and explained since they are important for the understanding of bionic architecture. The development of bionic architecture can be divided into direct and indirect approaches which shape the current philosophy of bionic architecture. In addition, the course illustrates the classification of bionic architecture according to the percentage of mimicking or imitating nature and its living organisms. Within the course the students are encouraged to present and analyze various bionic projects and models.

Direct and Indirect Approaches

Nature is very smart in optimizing the shape, material and form so the comprehensive understanding of how nature handles such tasks is a key issue to many researchers nowadays. Furthermore, there is a major shift in architectural thinking towards nature and the use of applications through natural rules. In the beginning of the course, the students learn to differentiate between direct and indirect bionic approaches which are used in old and recent architectural history.

Direct approach

This is also known as the formal approach, where is no deep attention to the fundamentals of structure, behavior and process. It depends only on the surface imitation of natural models after some changes accordance in their structure to match new functions. The remarkable architecture in this approach is including in Antonio Gaudi's works.

Indirect approach

This is also known as the metaphoric approach where an abstract form from nature is used thus keeps metaphor from being a superficial approach towards a creative one. The challenge of successful bionic architecture is going beyond the mere translation of form to the deepest insight into the all common features that connect architectural elements with nature and technology. Analogies serve as a starting point for bionic translation which means similarity, correlation, and equivalence in terms of function or behavior. Similar functions require similar structures, and inspirations by this approach can deliver new insights within interactive innovations in architecture (Gruber et al., 2011; Pourjafar et al., 2011).

Classification of Bionic Architecture

Bionic architecture has a wide range of levels, scales and applications, from the city in general to the single building, from the mega structure to the nanotechnology can be covered. It gives the architecture students the inspiration that must follow and pay attention to many of nature laws, environmental, economic and ecological benefits. For a long time and so far, bionics still be a source of architectural innovation and ensures the environment an important means of sustainability. The course intends to illustrate bionic architecture that takes inspiration from nature through different perspectives and analogies that consisting bionic architecture classification. The following classification is reviewed according to the complexity of the use of bionics within architecture which begins from using only the characteristics of biological materials to imitate the overall process of living organism and its surrounding environment.

Structural bionics

The classic example of structural bionics is the "*Lotus Effect*", which enables buildings to be self-cleaning. The surface of plants, especially the outer layer of the surfaces of plant leaves, is covered with fine wax excretions, which make the surface hydrophobic. This fine fractal structure is also responsible for the weak adhesive forces of dirt particles, which can easily be removed with water. The same effect appears on the surfaces of insect bodies and wings. Structural bionics could be also called materials bionics which engaged with biological materials that have common characteristics used to solve many expected challenges that face architecture. Biological materials are often: a) highly specialized and build in many layers; b) each layer has its own specific structural and functional specification; c) strictly functional and still structured in a hierarchical order; d) ultra-light construction and finally e) self-repairing or can be easily recycled (Gruber et al., 2011; Roudavski, 2009; Zari, 2007). These common characteristics when applying to architecture play main role in sustaining the environment and help in making more sustainable architecture especially when combined with the other bionic approaches.

Constructional bionics

It is the most promising field of bionic architecture especially in the field of light constructions through using cable constructions, membranes, shells and transformable constructions. Constructional bionics works depends on the understanding of the organisms' construction and mechanism of the forms, bones and plant stems, which are among the natural surfaces that serve as potential sources for new construction systems. Organisms often reach to the best structural form with the least amount of materials; the shell is interesting form as a role model inspiration for architecture. Structural and constructional bionics together had made many extraordinary achievements to create a series of unique bionic architecture. Living organisms choose their geometry on the basis of performance and coordination with their other parts as well as to respond the functional, economic and stability challenges. Examples of this bionic architecture can be seen also in the Geodesic Dome, which are optimal for the relationships between volume and weight, efficient use of material and floor area (Gruber et al., 2011; Jian, 2007; Mojdehi & Mehr, 2011; Pourjafar et al., 2011; Selcuk, 2005). The proposed course illustrates the pioneers in this field from the investigations of d'Arcy Thompson to Frei Otto and Heinz Isler works.

Climatic bionics

The idea of bionic architecture, in which buildings are not only self-sufficient but also eco-friendly, is growing nowadays especially with the sustainable concerns. Architects can develop architectural ideas without the punishment of natural environment. Climatic bionics or energy bionics is about energy issues through ventilation, cooling and heating systems. The best example of climatic bionics in natural world is found in termite mounds. The termite mound serves as a role model for an effective passive ventilation system to control of the internal climate. Also, the mound itself is designed to catch the breeze as the wind blows. Cool air is sucked upwards from subterranean channels, cooling the mushroom shaped nest below the mound. Efforts have been made to translate termite mound principle in architectural world; Green Building in Zimbabwe is a good example (Mojdehi & Mehr, 2011; Rezaei & Zare, 2011). Most of climatic bionics approaches will get higher results when integrated and combined with the procedural bionics. The architecture students are imitated throughout the course to discover more related examples in architectural world and analyze the bionic applications.

Procedural bionics

Procedural bionics depends on the deep imitation of biological organisms and research on biological process; material, function, structure and energy conversion. Then applying the whole process to a technology system, in order to improve or create a new process technology through architectural configuration. Procedural bionics is

the most complicated approach which may augment many of other bionic approaches in architecture. Thus, until recently the clear methodology of procedural bionics in architecture is only roughly described. However, scientists have long tried to mimic photosynthesis process through harness the sunlight energy and turn it into a usable fuel, just as plants do by green leaves. In addition, new solar cells were investigated and developed by printing thin films of organic solar cells instead silicon solar ones, the new technology can be integrated into all kinds of products as well as architectural elements (Gruber et al., 2011). One of the pioneer works of procedural bionics is the bionic photovoltaic tree construction. It is proposed by Zähr et al., (2010), to carry lightweight flexible and moveable solar panels, with a property to keep cooler than conventional photovoltaic panels or silicon solar panels.

Bionic Architecture Course to Increase Students' Sustainable Thinking

It has become part of the accepted wisdom to say that the twentieth century was the century of physics while the twenty-first century will be the century of biology. However, biology has been bigger than physics, as measured by the size of finance, by the size of the workforce, or by the output of major innovations. In addition, living organisms are the outcome of million years of gradual perfection, so inspiration from biological world can be useful in achieving more sustainable architecture. Nothing in nature disappears nor comes into existence after changing in shape, form or function. Every part in living organism is provided to being used in another shape after consumption (Mojdehi & Mehr, 2011; Pourjafar et al., 2011; Salingaros, 2003). In architecture, thinking within bionics will encourage using of biological materials and recycling concepts that emphasizes sustainable thinking. This thinking begins from structural and constructional bionics and increasingly achieved in climatic and procedural bionics by more applications based on termite mounds and green leaves.

In this context, architecture students should pay attention to improve their projects and look more for biology to inspire, imitate and to take many lessons to learn. They should recognize bionic approaches from the first years of their study to be aware with the interactive relationship between nature and architecture. It's obvious that the models inspired from nature have been more economical, and more useful than the models arising from pure human thoughts. This may be improved if bionic thinking are included from the initial design process and used as a measure, model or as evaluation criteria throughout the design process by different bionic architecture approaches.

The paper presents a theoretical framework of the proposed bionic architecture course which illustrates different methods and approaches to achieve unique architecture from a sustainable viewpoint (Fig. 1). The course tries to highlight bionics attention because it is still able to achieve a new major shift in architectural thinking. The idea of back to nature and seeks the related biological elements to solve design and architectural problems, is not a new one, but it has been only reevaluated through innovative ideas and environmental awareness in recent years. Architecture students should be focused on understanding of the biological roots of bionics than surface imitation of nature. In addition, architecture students should recognize that bionics is a tool but is not a universal tool for all solving problems in architecture, it just a brilliant assisting tool for increase students' thinking or biological observations.

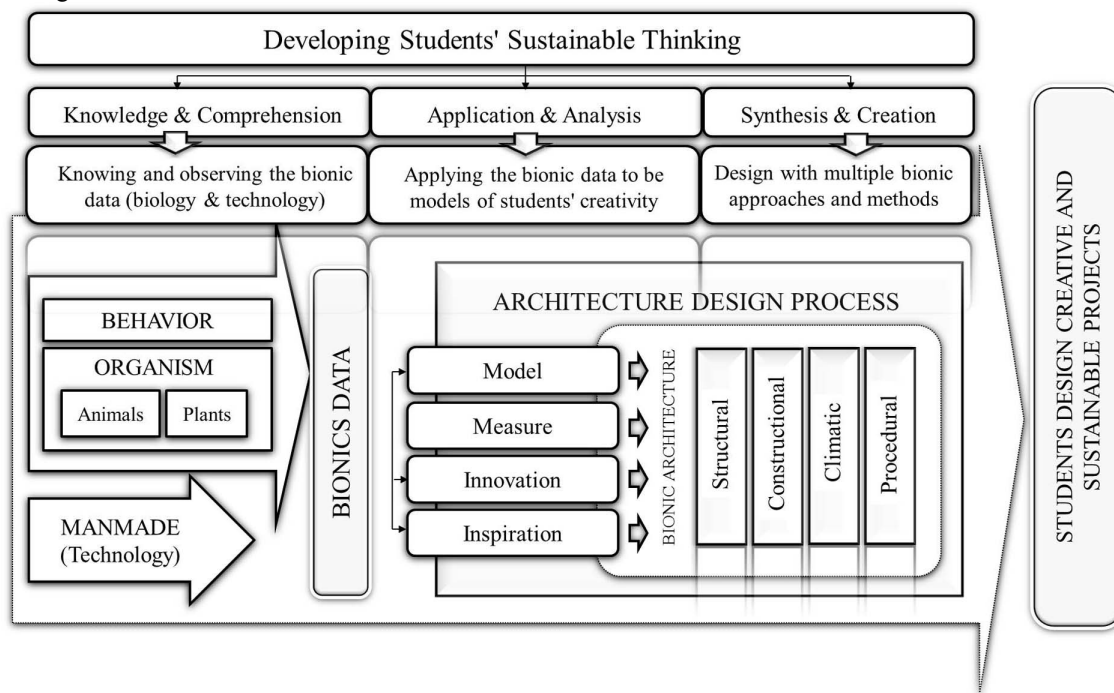

Figure 1: Bionic architecture course to increase students' sustainable thinking.

Conclusions and Perspectives

The growing intermediate of biological terminology in the context of architecture delivers new perspectives towards innovation in architecture and its design process. Moreover, the idea of bionic architecture, in which buildings have eco-friendly approach, began to mature to solve the increased problems of our built environment. However, we could say that bionic architecture is an old topic, but in the same time, one of the latest research topics (Gruber, 2008; Mojdehi & Mehr, 2011; Roudavski, 2009; Salingaros, 2003).

Bionic thinking in architecture considers being as an innovative architectural style that takes all the best from biology and technology. Thus, bionic architecture is increasingly drawing attention and one might say that architecture linked to biology to support any innovative architectural style. Nature world is full of various forms of living organisms, and they can often become inspiration's role models for bionic architecture. Finally, nature has devoted its countless gifts and resources kindly to architecture students to be a readily available example to learn from. The work with bionics opens a unique source of inspiration and enlarges the catalogue of design methods. In this context, bionic architecture is something that opens students' eyes to be more focus on responsive and sustainable design approaches in order to emphasize the students' ways of sustainable thinking.

KİTLE İLETİŞİM ARACI OLARAK TELEVİZYONUN EĞİTİM VE ÖĞRETİM İŞLEVİNDEN YARARLANILMASI: PROGRAM ÇEŞİTLİLİĞİ İLE ANADOLU ÜNİVERSİTESİ TELEVİZYONU TVA ÖRNEĞİ

ESRA FIRATLI

Anadolu Üniversitesi, Açıköğretim Fakültesi,efiratli@anadolu.edu.tr

ÖZET

Günümüz bilgi toplumlarında bilgiye ulaşmak ve paylaşmak için teknolojiden yararlanmak gerekmektedir. Günlük yaşamın her alanına girerek, vazgeçilmez olmayı başaran kitle iletişim araçları, teknolojik olanaklardan yararlanarak varlıklarını sürdürebilmektedir.

Kitle iletişim araçlarının genel yapıları ve sundukları içeriklerle, toplum üzerinde etkili olan geniş alanlardaki faaliyetleri kapsadıkları düşünülmektedir. Bu nedenle medyanın farklı işlevleri ve etkileri hakkında sürekli tartışıldığı gibi, araştırma konusu olarak çekim alanı oluşu da devam etmektedir.

Kitle iletişim araçları arasında özellikle televizyon, toplumsal yaşamın belirleyici unsuru haline gelmiştir. Televizyonun toplum üzerinde olumlu ve olumsuz etkilerinin bulunduğu savunulmaktadır. Bu yaklaşımlar değerlendirilirken araç olarak televizyonun karmaşık yapısıyla birlikte, kapsamlı potansiyeli de göz önünde bulundurulmalıdır.

Televizyon; aynı anda göze ve kulağa hitap edebilen bir teknolojik araç olmanın ötesine geçmiştir. Geniş izler kitlesinin gereksinimlerini karşılayabilmek için, kültürel ve eğitsel yönleriyle karşımıza çıkmaktadır. Kitle iletişimi istenildiğinde hangi düzeyde olursa olsun, eğitim ve öğretime katkı sağlamak amacıyla fonksiyonel olarak kullanılabilir.

Bu çalışma genelde kitle iletişim aracı olarak televizyon ve eğitim arasındaki bağlantılar ortaya çıkarılmak istenmektedir. Çalışmanın özelinde ise, Anadolu Üniversitesi televizyonu TVA'nın programları incelenerek, eğitime ve öğretime sağladığı katkı belirlenmeye çalışılmıştır.

Anahtar kelimeler; kitle iletişimi, kitle iletişim araçları, televizyon, eğitim televizyonu

TAKING ADVANTAGE OF THE EDUCATION FUNCTION OF TELEVISION AS A MASS MEDIA: PROGRAM VARIETY AND ANADOLU UNIVERSITY TELEVISION TVA EXAMPLE

ESRA FIRATLI

Anadolu University, Faculty of Open University, efiratli@anadolu.edu.tr

ABSTRACT

In the information societies of today, taking advantage of technology is necessary for reaching and sharing information. Mass media which enter all fields of daily life and succeed in becoming indispensable are able to continue their existence by taking advantage of technological availabilities.

It is considered that mass media cover the activities in wide areas that are effective on society with their general structures and the contents they introduce. For this reason, different functions and effects of media are continuously being discussed and at the same time it continues to be a field of interest as research topics.

Among the mass media, especially television has become the determining factor for social life. It is supported that television has both positive and negative effects on society. While these approaches are being evaluated, the complex structure of television as a medium and its extensive potential has to be taken into consideration.

Television has gone beyond just being a technological tool which appeals to eyes and ears at the simultaneously. In order to fulfill the expectations of vast mass of audience, it occurs with its cultural and educational aspects. Mass communication, if requested, can be used functionally to provide contribution to education in every level.

Throughout this study, the relations between education and television as a mass medium are intent to be revealed while the specific objective is to examine TVA, television of Anadolu University, and to determine its contribution to education.

Key words; mass communication, mass media, television, educational television

KİTLE İLETİŞİMİ VE KİTLE İLETİŞİM ARAÇLARI

Thompson'a göre; kitle iletişimi dört karakteristik üzerinde odaklanarak daha teorik bir şekilde çözümlenebilir: Simgesel malların kurumsallaşmış üretim ve yayımı; üretim ve alımlama arasındaki kurumlaşmış kopuş; zaman ve mekanda elde edilebilirlik kaplamı; ve simgesel biçimlerin kamusal dolaşımı (Mutlu, 2005, s. 212).

Kitle iletişimi, iletinin, bir veya daha fazla kitle iletişim aracı (gazete, dergi, kitap, radyo, televizyon, sinema, internet, vb.) aracılığıyla geniş ve bilinmeyen bir hedef kitleye (okuyucu, dinleyici, izleyici kitlesi) iletilmesidir. Kitle iletişimi sürecinde kullanılan aracın, iletinin içeriğini de etkilediği görüşünü vurgulayan Harold Laswell'e göre; "kim, kime, hangi araçla ve nasıl bir etkiyle, ne söylüyor?" sorularının cevapları önem taşımaktadır.

Oskay'a göre (2011, s. 42) bireylerarasındaki iletişimden farklı olarak kitle iletişiminde kaynak tek kişi değil, bir kuruluş, kurumlaşmış bir kişiliktir.

Şekil 1: Kitle İletişimi ve Kitle İletişim Araçları

Kitle iletişiminde:

Kitle iletişiminin hedef kitlesi görece geniştir, çeşitli toplumsal gruplardan oluşur.

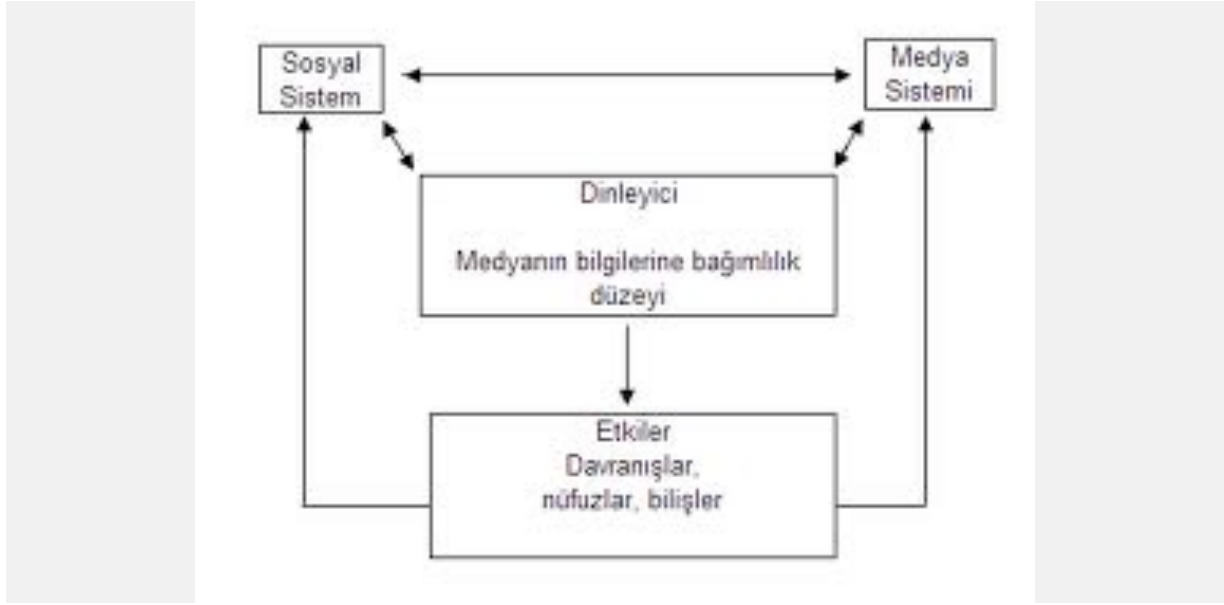

Hedef kitleyi oluşturan bireyler birbirlerini tanımazlar.

Kitle iletişim profesyonelleri de hedef kitleyi oluşturan bireyleri tanımaz.

Kitle iletişim araçları vasıtasıyla, birbirinden ayrı mekânlardaki kitle ile aynı anda iletişim kurulabilir.

Kitle iletişimi karmaşık biçimsel kurumları gerektirir.

Çağımızın yeni olgusu olan kitle iletişimi, iletişimin kurumsal bir yapıya dönüşmüş şeklidir. Kitle iletişim araçları hedef kitlesiyle iletişim kurduğunda karmaşık bir süreç başlatılmaktadır. Kaynak; tek kişi değil, biçimsel bir kurum (gazete, dergi, televizyon kanalı, sinema vb.) veya profesyonel iletişimcilerdir (gazeteci, yapımcı, çeşitli kademelerde çalışan kitle iletişim uzmanları vb.). Kitle iletişimi aynı zamanda süreci içinde, hedef alıcının sayısını toplum düzeyine çıkartan iletişim yönetimidir. Hedef alıcı sayısındaki artış, kitle kavramını da beraberinde getirmektedir.

Şekil 2: Kitle İletişim Süreci

Kitle iletişim araçlarının gönderdiği mesajlar toplumdan soyutlanmış tek tek bireylere değil, şu ya da bu grubun üyesi olan gruplar içinde yaşayan insanlara yöneliktir. Bu nedenle kitle iletişim aracından (medya), grup bağlılıkları ve normları ile donatılmış birey ile karşılaşır. Eğer etki söz konusu ise, bu bağlılıkların ve normların süzgecinden geçmek zorundadır (İnceoğlu, 200, s. 155).

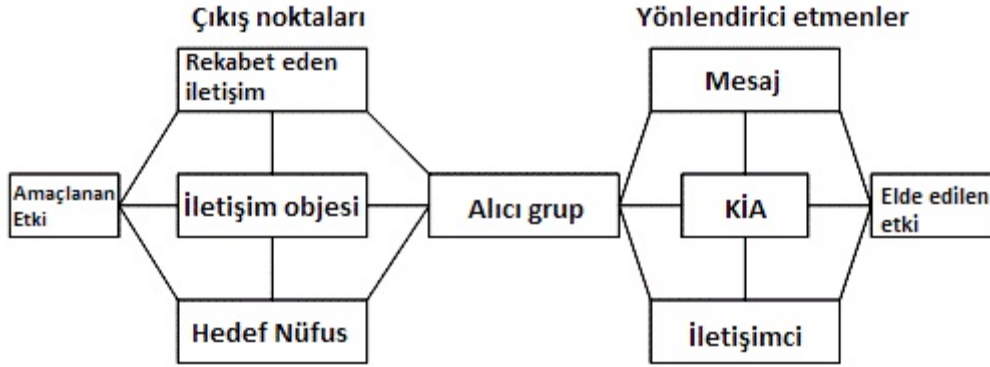

Medya öncelikle halkın haber alma hakkını sağlamakla yükümlüdür.

- Medya; mesaj üreten ve dağıtan iletişim araçlarıdır,
- Medya aynı zaman ticari bir işletme olduğundan, piyasanın rekabet kurallarına göre yönetilmektedir. Kullanıcıları olan okuyucu, dinleyici ve izleyici kitlesini “rating” ölçümleri ile belirlemeye çalışır.
- Yerine getirdiği hizmetin niteliği itibarıyla medyanın mesleki etik kuralları ve sosyal sorumlulukları gözetmesi beklenir.
- Çok boyutlu ve çok işlevli araçlara sahiptir.
- Sürekli ve sınırsız iletileriyle her türlü bilgilendirici, eğitici, eğlendirici ve tanıtıcı içerikler sunmaktadır.
- Kitle iletişim araçları halkın çoğunluğu için kolay ulaşılabilir konuma sahiptir.

Medyanın işlevleri; eğlence, enformasyon, kültürel, toplumsal ve politik işlevlerdir. İşlev sözcüğü, medyanın ne yapması gerektiği, gerçekte ne yaptığı ve amaçlarının ne olarak görüldüğü konularını kapsar (Burton, 1995, s. 87).

Kitle iletişim araçları toplum için dört temel işlev sağlamaktadır. Bunlar; haber ve bilgi verme işlevi, toplumsal gözetim, denetim ve kültür aktarma işlevi, eğlendirme işlevi ve eğitim işlevleridir. Medyanın toplumsal sorumluluk anlayışıyla hareket etmesiyle birlikte; kamuoyu oluşumuna, gündem belirlemeye, kültürün geliştirilmesine, farkındalık yaratmaya ve toplumsal bütünleştirmeye öncülük etmektedir.

Kitle iletişim araçları, bireylerin ufuklarını genişleterek evrensel boyutta düşünmeyi, toplumun geniş kesimlerini eğitmeyi sağlayabildiği gibi, birey ve toplumun bilincini de oluşturabilmektedir. Böylelikle etkilerinin avantajını kullanan medya, modern bir toplumsal yapıya geçişi de kolaylaştırabilmektedir.

Şekil 3: Kitle İletişim Araçlarının Etkileri

TELEVİZYON

Televizyonun toplumsal kullanımının birçok farklı biçimi ve karmaşık tarzını keşfedebilmek için, yıllardır sayılamayacak kadar çok araştırma tekniğinden yararlanılmaktadır.

Televizyonu sadece siyasal güç ya da eğlence aracı değil, tüm kültürü yaratan devasa bir sosyalizasyon aracı olarak görmenin zamanı gelmiştir (Batmaz, 1998, s. 3).

Kitle iletişim araçları arasında özellikle televizyonda, ideolojik egemenliklerin sürekli olarak yinelenen sunumu söz konusudur. Televizyon, var olan düzeni sorgulamaksızın kabul eder. Sosyalizasyon aracı görevini yerine getirirken, kültürel değerleri koruma, pekiştirme ve sürdürme yönünde hizmet sağlar. Kültürel işlevini gerçekleştirirken, toplumun kültürel yapısını kendi isteği özelliklerle şekillendirebilir.

Televizyon çok popülerdir. Böylesi heterojen bir seyirci topluluğuna, böylesine çok çeşitte haz sunabilmektedir. Çünkü televizyonun metinsel karakteristikleri ve alılmama kipleri “kültür” olarak adlandırdığımız anlam üretme sürecine etkin bir katılımı olanaklı kılmaktadır (Fiske, 1987, s. 19).

Televizyona yönelik kuramsal yaklaşımlar çeşitlilik göstermektedir:

“**Temsil Kuramları**”, geleneksel kitle iletişim araştırmalarının televizyon programlarının simgesel, metinsel karmaşıklığını göz ardı etme eğilimine karşı özellikle 1970 başlarından itibaren ivme kazanan araştırmaları kapsayan bir çerçeve oluşturmaktadır. Kuramların gelişmesinde esas dönüm noktasını toplumsal kuramda yapısalci/göstergebilimsel eğilimlerin ağırlığını koyması oluşturur. Çalışmalarda Birmingham Üniversitesi’ndeki Çağdaş Kültür Çalışmaları Merkezi’nin önemli yer tuttuğu görülür (Mutlu, 2005, s. 81).

“**Araç Kuramları**”, televizyonu kültürel bir teknoloji olarak ele almaktadır. Bu kurumlar televizyonun toplumsal etkisinin daha çok bir teknoloji olarak genel özellikleriyle ilgili olduğunu öne sürmektedir. Program türlerinin bu etki konusunda hiçbir önemi olmadığını belirtmektedir. Televizyona ilişkin temsil kuramlarından, araç kuramlarına kayış kuramsal etkinlikteki Marksist gündemden, modernizm sonrası gündeme yönelik tedrici, seçici bir hareketin sonucudur (Mutlu, 2005, s. 82).

“**Kurum Kuramları**” esas olarak televizyonun örgütsel yapısıyla ilgilenmekte ve bu yapının özgül siyasal ve ekonomik sistemler içindeki yerini, konumunu sorunsallaştırmaktadır. Bu kuramlara göre televizyonun, ne simgesel/anlatımsal boyutu ne de kültürel/teknolojik profili özel önem taşımaktadır. Kavramsallaştırılması gereken, kitle iletişim örgütünün üretim, dağıtım, mevzuat işleriyle, devletin etkinlikleriyle ve/veya piyasa yapılarıyla olan bağıdır (Mutlu, 2005, s. 83).

“**Süreç Kuramları**” diğer kuramlardan farklı olarak doğrudan doğruya izleyici ile televizyon arasındaki ilişkisel konulara, etkileşim ve karşılıklı bağımlılık konularına yönelik kavramlaştırmaları içermektedir. Televizyon üzerine geliştirilen anlamlı ve önemli bir kuramsal çalışma, süreçsel nitelikten kendisini uzak tutamaz. Daha açık bir ifadeyle; televizyon metnini konu alan temsil kuramları, televizyonun teknolojik niteliklerini konu alan araç kuramları ve televizyon endüstrisinin işleyişini ele alan kurum kuramları, ancak televizyonun bir bütün olarak izleyiciyle olan ilişkisini ele alan ve irdeleyen bir kuramsal yaklaşım çerçevesinde bir araya gelebilirler (Mutlu, 2005, s. 83).

Kaplan'ın ifadesiyle, (1993) en yaygın ve en etkin “kültür üretme makinesi” olan televizyon, hem eğlendirmekte hem de bilgilendirmekte ve bunu belli bir öyküleme/anlatım tekniği ile yapmaktadır. Bir sanat ve kültürel dışavurum aracı, çağdaş kültürün somut bir örneği olan televizyon, karmaşık bir kültürel formdur.

Televizyonun genel özellikleri şöyle sıralanabilir:

- 7 gün 24 saat yayın yapar ve günün her saatinde kolaylıkla takip edilebilir.
- GörSELLİĞİN etkili dili ve sonsuz görüntü akışı ile insanları ekrana bağlar. Bu özellik, televizyon bağımlılığı sorununa da neden olabilir.
- İzleyicileri ekranda tutabilmek için genellikle profesyonelce kurgulanmış müzikli, hareketli görüntüler ve canlandırma (drama) tekniği kullanılır.
- Farklı program türlerine yer vererek, her yaştan izler kitleye hitap edebilir.
- Araç olarak bilinçli ve amacına uygun kullanıldığında, televizyon programları toplumun eğitimine katkı sağlayabilir.
- İzler kitlesine farklı işlevleri ve rolleriyle ulaşabilir.
- Ekran başında izler kitlesinin en fazla serbest zaman geçirdiği araç haline gelmiştir.

Kitle iletişim araçları içinde televizyonun önemli bir yeri vardır. İletişim bir bilginin, bir görüşün ya da bir davranışın yayınlanması süreci olarak tanımlanmaktadır. Televizyonun önde gelen işlevleri arasında eğlendirici ve öğretici nitelikleri sayılabilir. Bunun yanında, televizyon bireylerin kendilerini tanıyabilmelerine, kişiliklerini geliştirebilmelerine ortam hazırlayan, zaman zaman onlara düşünme ve eleştirme fırsatı veren önemli bir araçtır (Oktay, 1999, 293).

Televizyonun kapsamını genişleten teknolojik olanaklar, izler kitlesi ile arasındaki zaman ve uzam üzerindeki ilişkilerini de farklılaştırmıştır. McLuhan “evrensel köy”e doğru gidişin kaçınılmaz olduğunu ileri sürmektedir. Televizyon, zaman ve uzamı dünya çapında yeniden düzenlemekle kalmaz, var olan bütün sınırları ortadan kaldırarak, aynı zamanda ev içi alanların kültürel olarak konumlandırılma tarzlarını da belirler. İzler kitlesini oluşturan bireylerin dış dünyayı algılayışlarını da dikkat çekici biçimde etkileyebilmektedir.

Livigstone’a göre televizyon; (1990, s. 49) izleyiciye ne düşünmesini, ne düşünmemesini, ne söylemesini ya da ne hakkında söylemesi gerektiğini anlatan bir şekilde kavramsallaştırmıştır. Abercombiye göre; (1996, s. 200) Ayrıca televizyon bireyleri, toplumun bakış açısını ve toplumdaki yerlerini kabul etmeleri konusunda ikna eder ve bu bağlamda toplumdaki hiyerarşik yapıyı destekler.

Yirmi birinci yüzyılda görsel ve işitsel medya, yalnız bireyleri değil, toplumları da şekillendiren bir yapı olarak karşımıza çıkmaktadır. İzler kitle televizyondan; çevrelerini düzenlemek, bireylerarası iletişimlerini kolaylaştırmak, toplumsal rollerini ve davranışlarını öğrenmek, kişisel becerilerini geliştirmek, kararlarını gözden geçirmek, eğitimlerine katkı sağlamak amacıyla da yararlanabilmektedir.

TELEVİZYON VE EĞİTİM

Diğer kitle iletişim araçlarının özellikleriyle karşılaştırıldığında, televizyonun eğitim açısından önemli bir yere ve öneme sahip olduğu, televizyonun bireyin birden fazla duyu organına uyarak algılama, hafızada tutma ve öğrenmede kolaylık sağladığı ve bireyde öğrenme isteği uyandırdığı görülmektedir (Aziz, 1982).

Uzaktan görme anlamı taşıyan televizyonun, olumlu etkilerinden yararlanarak verimli bir eğitim aracı olarak kullanılabilmesi sağlanmalıdır. Televizyon izlemenin tek yönlü ve pasif bir etkinlik olduğu unutulmamalıdır. Bir kitle iletişim aracı olan televizyonun eğitim işlevini yerine getirebilmesi için, program içeriklerinin amacına uygunluğu dikkate alınarak yayınlanması gerekmektedir.

Televizyonun eğitim televizyonu ve okul televizyonu olarak kullanılması, değişik ülkelerde farklı uygulamalarla yapılmıştır. Bu uygulamalar, ülkelerin politik, sosyal ve eğitim ile ilgili koşullarına ve özelliklerine, televizyon sisteminin yönetimine ve olanaklarına bağlı olmaktadır. Söz konusu televizyonla eğitim uygulamalarında, televizyonun sınırlılıklarını ve olumsuz yönlerini tamamlayıcı yöntemlerden yararlanılmaktadır (Berwanger, 1979; Sözer, 1979).

Televizyon ve eğitim arasındaki bağlantıları ortaya koyan önemli örnekler bulunmaktadır. Dünyada İngiltere başta olmak üzere, Amerika Birleşik Devletleri, Finlandiya, Kanada, Hindistan, Japonya, Singapur gibi ülkelerde kamu ve özel televizyon kanallarının, farklı programlarında eğitim içeriklerine günün her saatinde yer verilmektedir.

Televizyonla eğitim; değişik ölçütlere göre, farklı şekillerde sınıflandırılabilir. Bu sınıflamalar açısından, televizyonun haber ve bilgi vermeye yönelik programları, “tamamlayıcı eğitim” grubunda yer almaktadır. Televizyon programları arasında, mesleklerle ilgili bilgi ve becerileri aktaran; bireyi belirli alanlara yöneltmeyi amaçlayan; teknolojik gelişmelere ve gelişmelerin sonucunda ortaya çıkan duruma uyum göstermeye yardımcı

olan; bireyin ufkunu genişletmeyi amaçlayan, bireyin demokratik yaşayışta yerini almasını sağlayan, temel bilgileri aktaran ve bireyleri çeşitli konularda aydınlatan programlar, “yaygın eğitim” kapsamına girmektedirler (Aziz, 1982).

İzleyici de; bilgi, beceri, duygu, düşünüş, kanaat ve tutumlar açısından, var olanı pekiştirmeyi veya değiştirmeyi, yenilerini kazandırmayı amaçlayan programlara, “eğitim fonksiyonlarını yerine getiren” veya “eğitici” programlar denilebilir. Bu programlar, çocuk, genç ve yetişkin olmak üzere değişik yaş gruplarında, farklı cinslere, farklı meslek gruplarına, farklı yerleşim birimlerindeki izleyici kümelerine yönelik olabilir (Özgen, 1985).

Televizyonun genel yayın programları içerisindeki, belirli izleyici kümelerini, belirli amaçlar doğrultusunda eğitmeyi amaçlayan programların yanı sıra, televizyonun doğrudan doğruya örgün eğitime yönelik “eğitim programları” da söz konusudur. Bu tür programlar, öğretim programlarıyla uygunluk gösteren, okul derslerine paralel olarak hazırlanan ve örgün eğitimi destekleyici programlardır. Televizyonun eğitim amacıyla kullanılışı, doğrudan eğitim veya zenginleştirici eğitim olarak ortaya çıkmaktadır (McQuail, 1973; Swallow, 1973; Türkoğlu, 1983).

Televizyon yayınları, ister genel yayın programı içerisindeki eğitici yayınlar; isterse okul programlarına paralel, okuldaki öğretimi destekleyici, tamamlayıcı ve doğrudan örgün eğitime yönelik eğitim yayınları olsun; temelde davranış değiştirmeye ve izleyici açısından öğrenmeye, televizyon açısından öğretmeye dayanmaktadır (Groombridge, 1976).

Gelişmiş, eğitilmiş ve modern toplumlar seviyesine ulaşabilmek için her kurum yapması gerekenleri belirlemelidir. Bu bakış açısıyla televizyonlar, halkı bilinçlendirme, yönlendirme, eğitim ve öğretim işlevlerinden yararlanma anlamında önemli görevler üstlendiklerini fark etmelidir. Kitle kültürünü geliştiren televizyonun kitle iletişim aracı olarak insanlar üzerindeki eğitici rolünden sınırlı yararlanılmaktadır. Televizyon, eğitim televizyonu olarak bilinçli ve amaca uygun kullanıldığında faydalı bir araç olabilir. Televizyon programları da eğlendirmenin yanı sıra, eğitim ve öğretim gibi farklı amaçlara hizmet edebilmelidir.

Televizyonla eğitim uygulamaları bireylerin hayatın gerektirdiği temel bilgi, beceri ve alışkanlıkları kazanmalarına yardımcı olacak ve örgün eğitimle sağlanamayan temel eğitimi gerçekleştirecek şekilde kullanılmaktadır. Televizyonun bu şekilde kullanılması “fonksiyonel eğitim” olarak adlandırılmaktadır. Fonksiyonel eğitim ile ilgili uygulamalar, okuma-yazma eğitiminden mesleklerle ilgili eğitime, sağlık ile ilgili eğitimden toplum kalkınmasına ve üretime yönelik eğitime varıncaya kadar, çok çeşitli konu ve alanlarda gerçekleştirilmiştir (Topuz, 1985; Türkoğlu, 1984; Aziz, 1982).

Televizyonu, diğer eğitim araçları arasında belirgin hale getiren ve onu iletişim ve öğrenme süreçleri yönünden önemini arttıran üç önemli özelliği bulunmaktadır. Bunlardan birincisi ve en önemlisi, çok uzaklarda oluşan olayları ve olguları, oldukları anda, oldukları gibi, sesleriyle ve hatta doğal renkleriyle gösterebilmesidir. İkincisi ise, olay ve olguların görüntü ve seslerini çok geniş bir alana yayılmış insan kitlelerine ulaştırabilmesidir. Televizyonun üçüncü önemli özelliği ise, Dale’in yaşantı konisinde sıralanmış olan bütün eğitim araç ve yöntemlerini ayrı ayrı ya da bir arada kullanarak göz ve kulak yoluyla edinilebilen bütün yaşantı çeşitlerini kazandırabilmesidir. Bu üç özellik televizyona hiçbir eğitim aracının erişemediği bir değer kazandırmıştır (Çilenti, 1982).

Şekil 4: Edgar DALE'in Yaşantı Konisi

Yaşantı konisi ile bireylerin yaşantıları ve öğrenmeleri arasındaki bağlantılar gösterilmeye çalışılmıştır. Öğrenmenin kalıcı olabilmesi bazı koşullara bağlıdır. Bunlar:

- Öğrenme; basitten karmaşığa, somuttan soyuta yönelerek gerçekleşmelidir,
- Öğrenme süreci ne kadar çok duyuya hitap ederse, öğrenme de o kadar kalıcı olur,
- Öğrenme için en etkili ve yardımcı organ gözdür,
- İletişim ve öğrenme süreçlerine dâhil olan bireylerin aktif katılımlarının sağlanması ile, kalıcı öğrenme daha yüksek oranda gerçekleşebilir.

PROGRAM ÇEŞİTLİLİĞİ İLE TVA

TVA'da Yayınlanan Program Adı	Anadolu Haber'deki Yayın Tarihi	Anadolu Haberinin Sayı Numarası

Hukuk Günlüğü: Hukuk alanının bilinmeyen yönleri araştırıyor ve değerlendiriliyor.	1 Aralık 2006	396
Açık Kapı: Anadolu Üniversitesi'nin sosyal, kültürel, sanatsal ve sportif etkinliklerinin yapıldığı mekânlar tanıtılıyor.	8 Aralık 2006	397
Bilim Sohbetleri: İleri teknolojiye yönelik olarak bilimdeki gelişmeler ve uygulamaların anlatıldığı programda, Anadolu Üniversitesi'nin kaydettiği gelişmeler de inceleniyor.	15 Aralık 2006	398

Kent ve Kültür: Eskişehirlielerin yaşamları ve halkın günlük hayatını ilgilendiren gelişmeler anlatılıyor.	22 Aralık 2006	399
Metronom: Daha çok film müziklerine yer verilen programda, yerel gruplarla gerçekleştirilen söyleşiler de yayınlanıyor.	29 Aralık 2006	400
Kampusun Ritmi: Her hafta bir Üniversite kulübü ele alınıyor.	12 Ocak 2007	401
Ekonomi Gündemi: Türkiye’de ekonomide yaşanan son gelişmeler tartışılıyor.	19 Ocak 2007	402
Yaşayan Hukuk: Yurttaşların günlük hayatta karşılaştıkları çeşitli hukuki problemler, uzman konuklarla değerlendiriliyor.	26 Ocak 2007	403
Kalemin Dili: Her hafta farklı uzmanlık alanlarından gazetecilerin konuk oldukları programda, Türkiye’nin sorunları ve bu sorunların çözümleri masaya yatırılarak konuşuluyor.	2 Şubat 2007	404
Sağlık Saati: Her hafta uzman bir doktor eşliğinde, bir sağlık problemi tartışılıyor.	9 Şubat 2007	405
Özgün Düşünenler: Programda her hafta seçilen bir yazar, eserleriyle tanıtıyor.	16 Şubat 2007	406
Soruyorum: Farklı Fakültelerden öğrencilerin konuk olduğu programda öğrencilerin ve ileride çalışacakları sektörlerin sorunları ele alınıyor.	23 Şubat 2007	407
Senkron: Popüler şarkılar ve kliplerle ilgili bilgilere yer veriliyor.	2 Mart 2007	408
Yaşamın İçinden: Programda, Türkiye’de yaşayan yabancıların, Türkleri nasıl değerlendirdikleri ele alınıyor.	9 Mart 2007	409
Herkes İçin Spor: Alternatif sporların tanıtıldığı programda, izleyicilerin spora yönelmeleri ve spor hakkında bilgi sahibi olmaları amaçlanıyor.	16 Mart 2007	410
Girişimcilik Saati: Uzman kişilerin konuk olduğu programda, girişimcilikle ilgili bilgiler veriliyor.	23 Mart 2007	411
Genç Olmak: Üniversite öğrencilerinin; fiziksel, bilişsel ve psikolojik sorunlarına yer veriliyor.	30 Mart 2007	412
TVA’da Yayınlanan Program Adı	Anadolu Haber’deki Yayın Tarihi	Anadolu Haberin Sayı Numarası
Sigortalı Yaşam: Programda, sigorta sektöründeki gelişmeler masaya yatırılıyor.	6 Nisan 2007	413
Sanat Dönencesi: Sanata dair bilinmeyenlerin paylaşıldığı programda, farklı sanat dalları tanıtıyor.	13 Nisan 2007	414
Tercih Zamanı: Üniversite sınavı sonrasında tercihte bulunacak öğrenciler için, her hafta farklı bir Fakülte tanıtılıyor.	20 Nisan 2007	415
Fragman: Vizyona giren filmler tanıtılıyor.	27 Nisan 2007	416
İz Televizyon Kuşağı: İz televizyonunda yayınlanan belgesellerden seçme yapımlara yer veriliyor.	4 Mayıs 2007	417
Sanat Dönencesi: Sanata dair bilinmeyenlerin paylaşıldığı programda, farklı sanat dalları tanıtıyor.	11 Mayıs 2007	418
Haber Bülteni: Kampustaki gelişmeler ekranlara geliyor.	18 Mayıs 2007	419
Girişimcilik Saati: Uzman kişilerin konuk olduğu programda, girişimcilikle ilgili bilgiler veriliyor.	25 Mayıs 2007	420
Sine düş Kuşağı: Her hafta sinema tarihinde, beyaz perdede önemli yeri olan bir filme, ekranlarda yer veriliyor.	1 Haziran 2007	421
Fuaye: Programda, Eskişehir ve kampustaki kültür, sanat etkinlikleri konu ediliyor.	8 Haziran 2007	422
Sağlık Saati: Her hafta uzman bir doktor eşliğinde, bir sağlık problemi tartışılıyor.	15 Haziran 2007	423
Özgün Düşünenler: Programda her hafta seçilen bir yazar, eserleriyle tanıtıyor.	22 Haziran 2007	424
Yaşayan Hukuk: Yurttaşların günlük hayatta karşılaştıkları çeşitli hukuki problemler, uzman konuklarla değerlendiriliyor.	13 Temmuz 2007	425

Sine düş Kuşağı: Her hafta sinema tarihinde, beyaz perdede önemli yeri olan bir filme, ekranlarda yer veriliyor.	20 Temmuz 2007	426
Anadolu'da Arkeoloji: Anadolu Üniversitesi'nin gerçekleştirdiği arkeoloji çalışmaları başta olmak üzere, bölgedeki arkeolojik çalışmalar ve kazılar hakkında bilgi veriliyor.	27 Temmuz 2007	427
Senkron: Popüler şarkılar ve kliplerle ilgili bilgilere yer veriliyor.	10 Ağustos 2007	428
Masa Başı Sohbetleri: Programda ilginç konular, konuklarla sohbet ortamında konuşuluyor.	24 Ağustos 2007	429
Genç Olmak: Üniversite öğrencilerinin; fiziksel, bilişsel ve psikolojik sorunlarına yer veriliyor.	7 Eylül 2007	430
Gündemin Kıyısı: Programda sosyal politika ele alınıyor.	21 Eylül 2007	431
Satranç Öğreniyorum: Program ile ilköğretim öğrencilerine satranç öğretmeyi hedefliyor.	28 Eylül 2007	432
Sesli Düşünceler: Her hafta farklı bir konu, farklı yönleriyle ele alınıyor.	5 Ekim 2007	433
Tiyatro Söyleşileri: Programa her hafta yıllarını tiyatroya veren sanatçılar konuk ediliyor.	19 Ekim 2007	434
Çizgi Dışı: programda çeşitli sanatsal etkinliklere yer veriliyor.	26 Ekim 2007	435
Ekonomi Gündemi: Değişen ekonomi gündemi takip ediliyor.	2 Kasım 2007	436
Kampus Haber: Programda kampus yaşantısından haberler aktarılıyor.	9 Kasım 2007	437
Ayraç: Edebiyat dünyası, farklı türdeki kitaplar ve yazarlar yansıtılıyor.	16 Kasım 2007	438
Büyülü Fener: Beyaz perdenin kendine özgü büyüdü dünyası, ekrana yansıtıyor.	23 Kasım 2007	439
Tüketici Bilinci: Programda tüketicilere satın alma bilinci aşılamak amaçlanıyor.	30 Kasım 2007	440
7 Gün Spor: Spor etkinlikleri yer alıyor.	7 Aralık 2007	441
Radar: Müzik programı ekranlara geliyor.	14 Aralık 2007	442
Haber Bülteni: Şehirdeki, kampaştaki ve ülkedeki önemli gelişmeler ekranlara geliyor.	21 Aralık 2007	443
Bir Yazar Bir Kitap: Her hafta bir öğretim elemanı ve kitabı tanıtılıyor.	4 Ocak 2008	444
Geniş Açık: Televizyon, sinema, basın ve reklam dünyasında öne çıkanlar izleyicilerle paylaşılıyor.	11 Ocak 2008	445
Bizim Zamanımızda: Evli çiftler hayatlarını bugün ki gençlere anlatıyor.	18 Ocak 2008	446
Biz Üniversitedeyken: Anadolu Üniversitesinin alanlarının başarılı mezunları, öğrencilik yıllarını anlatıyor.	25 Ocak 2008	447
Masa Başı Sohbetleri: Programda ilginç konular, konuklarla sohbet ortamında konuşuluyor.	1 Şubat 2008	448
7 Gün Spor: Hafta boyunca Eskişehir'de gerçekleşen spor etkinliklerinin panoraması veriliyor.	8 Şubat 2008	449
Bir Yazar Bir Kitap: Her hafta bir öğretim elemanı ve kitabı tanıtılıyor.	15 Şubat 2008	450
Fragman: Beyazperdeye yansıyan filmler tanıtılıyor.	22 Şubat 2008	451
Genç Yaşam: Programda, öğrenci kulüplerinin etkinliklerinin yanı sıra üniversite öğrencilerinin de çeşitli çalışmalarına yer veriliyor.	29 Şubat 2008	452
İlçelerimiz: Eskişehir'in 12 ilçesinin tarihsel süreçleri, ekonomik faaliyetleri, örf, adetleri ve gezilecek yerleri aktarılıyor.	7 Mart 2008	453
Milimetraj: Öğrenci projesi olan programda, her bölümde bir kısa film gösteriliyor ve filmin yönetmeni ağırlanıyor.	14 Mart 2008	454
Kampus Haber: Kampusta gerçekleşen etkinlikler hakkında bilgiler aktarılıyor.	21 Mart 2008	455
Fotosentez: Fotoğrafçılığa ilgi duyanların, uzmanlar	28 Mart 2008	456

aracılığıyla bilgilendirileceği uygulamalarla, örnekler görebileceği bir program dizisi ekrana geliyor.		
Anadolu'nun Konukları: Anadolu Üniversitesinin uluslar arası öğrenci değişimi programı çerçevesinde gelen konukları ekrana geliyor.	4 Nisan 2008	457
Seslerin İzdüşümü: Programda ana tema olan müzik konusuna ilişkin uzman ve sanatçılarla sohbetler ve canlı müzikler yer alıyor.	11 Nisan 2008	458
Doğal Yaşam: Her hafta farklı bir uzmanla, bitkilerden bilimsel yollarla yararlanma ve destek tedavi anlayışı konusunda bilgiler aktarılıyor.	18 Nisan 2008	459
Biz İstersek: Her hafta farklı bir uzman rehberliğinde; stresle başa çıkma, hayır diyebilme, kendine güvenme gibi konularıyla izleyicilere yol gösterici olmayı hedefliyor.	25 Nisan 2008	460
7 Gün Spor: Hafta boyunca Eskişehir'de gerçekleşen spor etkinliklerinin panoraması veriliyor.	2 Mayıs 2008	461
Uçuş Seyri: Sivil Havacılık alanında merak edilen tüm konular uygulamaları ile birlikte anlatılıyor.	9 Mayıs 2008	462
Radar: Müzik programı ekranlara geliyor.	16 Mayıs 2008	463
Bir Yazar Bir Kitap: Her hafta bir öğretim elemanı ve kitabı tanıtılıyor.	23 Mayıs 2008	464
Haber Bülteni: Şehirdeki, kampustaki ve ülkedeki önemli gelişmeler ekranlara geliyor.	30 Mayıs 2008	465

Şekil 5: Anadolu Haberde Tanıtılan TV A'da Yayınlanan Programlar

SONUÇ ve ÖNERİLER

Sahip oldukları işlevlerle birlikte geniş bir sunum alanı olan kitle iletişim araçlarının toplumsal yararları dikkate alınmalıdır. Teknolojik olanakları sayesinde sürekli değişme ve gelişme eğiliminde olan medya, dinamik toplumsal kurumlardır.

Televizyonun eğitim ve öğretim işlevlerini yerine getirip, getiremediği, televizyon yayınlarının ve programlarının eğitim amacıyla kullanılıp, kullanılmaması gerektiği akademik çevreler başta olmak üzere, televizyon yayınlarını üreten ve yayınlayan kurumlar tarafından da tartışılmaktadır. Kuramcılar ve araştırmacıların bir bölümü televizyonu eğlendiren, görsel bir kitle iletişim aracı olarak değerlendirerek, eğitici nitelikten uzak bir araç olduğu görüşünü savunmaktadır. Diğer bölümü ise planlı, programlı ve uygun koşullarda eğitim amaçlı kullanılabilen görüşünü öne sürmektedir.

Farklı görüşlere rağmen televizyon, toplumsal eğitim ve öğretim faaliyetlerine doğrudan veya dolaylı olarak katkıda bulunma eğilimindedir. Televizyon, eğitim ve öğretim işlevini yerine getirirken, sorumluluklarını da üstlenebilmelidir. Televizyon aracılığıyla eğitim yapılması, ülkelerin gelişmişlik düzeyleriyle orantılı biçimde kullanılmaktadır.

Kitle iletişim araçları arasında radyo ve televizyona eğitim-öğretim faaliyetlerinde Açık ve Uzaktan eğitim sisteminde yer verilmektedir. 1969 yılında kurulan İngiltere Açık Üniversitesi'nin, kamu televizyonu BBC ile birlikte gerçekleştirdiği eğitsel televizyon programları bu alanın ilk ve başarılı örneğini oluşturmaktadır. Türkiye'de 1982 yılında kurulan Açıköğretim Fakültesi'nde, eğitim-öğretim aracı olarak yararlanılan ders kitaplarının yanı sıra, ETV'de çekilen, derslere yönelik televizyon programlarından da yararlanılmıştır. Önceleri TRT 4 kanalında yayınlanan Açıköğretim televizyon programları, günümüzde Anadolu Üniversitesi ve kamu televizyonu TRT tarafından birlikte yürütülen TRT Okul kanalında yayınlanmaktadır. TRT Okul kanalı, 31 Ocak 2011 tarihinde yayın hayatına başlamış ve halen devam etmektedir.

Radyo ve Televizyon Üst Kurulunun 3984 sayılı kanun çerçevesi içinde verdiği izinle Anadolu Üniversitesi Televizyonu TVA (Televizyon Anadolu) kurulmuştur. TV A 27 Eylül 2004 tarihinde, Anadolu Üniversitesi'nin 2004-2005 Öğretim Yılı açılış törenini canlı yayınlarken, yayın hayatını başlatmıştır. Açıköğretim Fakültesi ile İletişim Bilimleri Fakültesi'nin uzun yıllarla dayanan yayıncılık, eğitim ve öğretim deneyimini kullanarak yayın yapan TVA, kimliğini "eğitim, kültür ve sanat" programları çerçevesinde oluşturmuştur. TVA, kaliteli kamusal yayıncılığı kendine hedef olarak belirlemiştir. Bu doğrultuda tüm fakülteleri ve birimleriyle birlikte çalışan TVA, aynı zamanda sahip olduğu profesyonel, modern ve nitelikli yayıncılık teknolojisi ile öğrencilere profesyonel hayatta karşılaştıkları bir eğitim ortamını da sunmuştur.

Televizyon Anadolu, kısa adı ile TVA, Anadolu Üniversitesi'ne ait bir televizyon kanalı olarak Eskişehir'de yerel olarak yayın yapmıştır. Yönetmenler, kameramanlar, kurgu operatörleri, resim seçiciler ve diğer tüm çalışanlar Anadolu Üniversitesi öğrencilerinden oluşmuştur. Yayınlanan programların; yapım, yönetim ve sunum aşamalarında öğretim görevlileri ve öğretim üyeleri de görev almıştır.

TV A'da çeşitli sanatçı ve orkestraların konserleriyle birlikte, filmler ve belgeseller de yayınlanmıştır. Anadolu Haber'de yer alan programların yanı sıra; "Sanata Dair", "Hepsi Evcil", "Senkron", "Yaşamın Sesleri- Yaşamın Yüzleri", "3 Dakika", "Dil Bir Aynadır", "Yaşamın İçinden", "Profil Dışı", "Net Bilgi", "Zamanım Var", "Düşünceden Ürüne", "50. Yıl'ın Birincileri", "Turkuaz", "Teyp-Desibel", "Hayatı Yaşanır Kılanlar", "Sözden Söze", "Bu İşin Ustaları", "Rock Günlüğü", "Karagöz Akademisi", "Dönüşümler", "Kültürün Dili Dans", "Geçmişten Bugüne", "Biraz Yemek Biraz Kültür", "Mitoloji", "Sağlık için Spor", "Seslerin Rengi", "Değişen Zamanlar", "Cilasız Sözler", "Fotoğrafın Dünyası", "Gece ve Eskişehir", "Dünya ve Eskişehir", v.b. programlar da yayınlanmıştır.

Televizyonun eğitim ve öğretim işlevinden yararlanması gerekmektedir. Bu amaçla, (ETV ve TVA deneyimlerinden yola çıkarak, halen yayın yapan TRT Okul örnekleri de göz önünde bulundurularak) öncü ve nitelikli yayınlar yürüten kamu televizyonları ve Üniversiteler desteklenmelidir. Bununla beraber benzeri çalışmaların gerçekleştirilmesi için gerekli olanaklar sağlanmalıdır.

AMAÇ: Bu pilot çalışmanın amacı, son sınıf öğrencileri ve öğretim elemanlarının üniversite ortamı, olanakları ve fizyoterapi eğitiminden duydukları memnuniyet açısından geri bildirimlerini incelemektir.

GEREÇ VE YÖNTEM: Araştırma Pamukkale ve Dumlupınar Üniversitesi Fizyoterapi ve Rehabilitasyon Bölümlerinde gerçekleştirilmiştir. Son sınıf öğrencilerinin (N=102; yaş ort.: 22.9±1.9 yıl) ve öğretim elemanlarının (N=11; yaş ort.: 39.4±6 yıl) üniversite ortamı, bölüm olanakları ve yürütülmekte olan fizyoterapi programından memnuniyetlerini değerlendirmek için iki anket kullanılmıştır: (1) öğrencilerin ve öğretim elemanlarının memnuniyet düzeylerini belirleyen 25 soruluk anket (cronbach alfa: 0.90); (2) öğrencilerin öğretim üyelerini değerlendikleri 20 soruluk anket (cronbach alfa: 0.95).

SONUÇLAR: Öğrencilerin eğitim programının içeriği, stajların etkinliği kategorisindeki memnuniyet düzeyi çok yüksek iken, fiziksel ortam ve araç-gereç yeterliliği kategorisinde çok düşüktü. Öğretim elemanlarının stajların etkinliği ve öğrenciyeye kazandırılan mesleki beceriler kategorisindeki memnuniyet düzeyi çok yüksek iken, fiziksel ortam kategorisinde çok düşüktü. Öğrencilerin, öğretim elemanlarını değerlendirdikleri ankette memnuniyet düzeyi iletişim becerileri, sınav soruları ve not verme kategorilerinde çok düşük iken, ders hazırlığı, kullanılan materyal ve bilgi paylaşımı-tartışma kategorilerinde çok yüksekti.

KARAR: Üniversite eğitiminde kalite standartlarının yüksek tutulabilmesi ve uygun düzeyde eğitim verilebilmesi için paydaşların görüş ve önerilerinin dikkate alınması önemlidir.

Anahtar Kelimeler: fizyoterapi eğitimi, öğrenci memnuniyeti, eğitici

Analysing final year physiotherapy students and teaching staff feedback related physiotherapy education

AIM: In this pilot study conducted in two universities offering physiotherapy education in Turkey, the aim is to evaluate final year physiotherapy students and teaching staff feedback in terms of physical environment, possibilities, and physiotherapy education. **METHODS:** This study was conducted in two physiotherapy departments in Pamukkale University and Dumlupınar University. Final year physiotherapy students (N=102; mean age: 22.9±1.9 yr) and teaching staff (N=11; mean age: 39.4±6 yr) were asked to give their feedback in terms of physical environment, possibilities, and physiotherapy education. To obtain the feedback from the participants, two questionnaires were used: (1) the first questionnaire consisting of 25 questions reflecting the students and teaching staff feedback related physical environment, possibilities, and physiotherapy education (cronbach alfa: 0.90); (2) the second one consisting of 20 questions reflecting the students satisfaction and dissatisfaction about teaching staff (cronbach alfa: 0.95). **RESULTS:** While the students reported higher scores in terms of the curriculum and the effectiveness of clinical placement, they gave negative feedback about physical environment of the classes and laboratories. Teaching staff satisfied about clinical placement and professional competencies of the students. The teaching staff also gave negative feedback in terms of physical environment. Students rated their lecturers as poor in terms of communication, exam questions, and grading style. On the other hand, the students satisfied with the teaching staff professional experiences, course preparation, and material used during the presentations in the classroom. **CONCLUSION:** To

keep higher the quality assurance in higher education and to offer relevant education in physiotherapy, the stakeholders, including students and teaching staff feedback should be considered.

Key Words: physiotherapy education, student satisfaction, lecturer

Giriş

Fizyoterapistlik mesleği 20. yy'ın başlarında savaşlardaki yaralanmalar ve artan poliomiyelit vakalarını tedavi etmek amacıyla geliştirilmiş bir meslektir. Toplumun ihtiyacını karşılamaya yönelik primer sağlık ekibinde yer alan pozitif bilime hizmet eden meslek kollarından biridir. Bu meslekte klinik tedavi ve sağlığı geliştirici programlar temel davranış ve sosyal bilimlerin prensipleri doğrultusunda uygulanır. Mesleğin mezuniyet sonrası eğitimi boyunca uzun dönemdeki hedefleri ve süreçlerini geliştirmeye yönelik beklentileri tanımlanmıştır ("PT Evaluative Criteria," 2013). Fizyoterapi eğitim standartlarının oluşturulduğu rehberler de bulunmaktadır ("Guide to Physical Therapist Practice", 2001, Alexandria, VA 2004, "APTA Guide for Professional Conduct", 2010 "APTA Physical Therapist Clinical Education Principles", 2007).

Fizyoterapi eğitimi temel bilimler (fizik, kimya, biyoloji, istatistik) ile anatomi, fizyoloji gibi temel tıp bilimlerinin yanı sıra temel ve klinik mesleki beceriler üzerine inşa edilmiştir. Sosyal bilimler, sanat, temel bilimler ve genel eğitim ile kazandırılan beceriler öğrencilere ilgi alanlarını keşfetme fırsatı vermelidir. (Lake, 2003)

Fizyoterapi eğitiminin teorik ve pratik olmak üzere iki önemli komponenti vardır. Teorik ve pratik eğitim, öğrencinin sınıfta ve laboratuarda fiziksel, biyolojik ve davranışsal bilgi, beceri, tutum ve fizik tedavi uygulamaları için gerekli olan becerileri kazandırmayı hedefler. İdeal bir eğitim ortamında öğrencilerin farklı düşünme stilleri ile farklı mesleki ve toplumsal kavramları tanımlamaları, toplum ve meslek için kendi sorumluluklarını yerine getirmeye yardımcı olacak etik davranışları ve problem çözmede büyük önem taşıyan eleştirel düşünme özelliğini kazanmaları sağlanır ("PT Evaluative Criteria," 2013).

Fizyoterapi eğitiminde öğretim elemanları performansını geliştirmeye yönelik 17 standart tanımlanmıştır. Genel olarak öğretim elemanlarının performansları için mevcut ve potansiyel engeller: tesis, fizik tedavi mesleğinin mali / ekonomik koşulları ve teknolojik donanım olarak belirlenmiştir ("Office of Minority Health, 2001). Fizyoterapi eğitiminin gerçekleştirildiği klinik eğitim merkezleri (okulları) öğrencilerin bilgi teminini, tutumlarını ve becerilerini geliştirmeyi amaçlayan akademik ve klinik aktivitelerin, uygulamalı analiz ve sentezinin gerçekleştirilmesi yönüyle hayati önem taşımaktadır (Barr, Gwyer, Talmor, 1982). Bu bağlamda klinik ortamların ve eğitim ortamlarının değerlendirilmesinin gerekliliği kaçınılmazdır.

Fizyoterapi eğitimi ile ilgili öğrencilerin gerek eğitim programına gerekse öğretim elemanlarına bakış açısını irdeleyen anket çalışmaları literatürde mevcuttur [Hayes, Huber, Rogers, Sanders (1999), Morren, Gordon, Sawyer (2008), Buccieri, Brown, Malta, Ward, (2008)]. Ancak öğretim elemanları ve öğrenci bakış açısının birlikte değerlendirildiği ve sonuçların incelendiği nitelikteki çalışmalar ülkemiz literatüründe yok denecek kadar azdır. Bu çalışmanın temel amacı ülkemizde sayıları giderek artan fizyoterapi okulları/bölümlerinde eğitim alan öğrenciler ile görev alan öğretim elemanlarının fizyoterapi eğitimi ile ilgili memnuniyet düzeylerini belirleyerek, bu konuda ülkemiz için yol gösterici olabilecek bilgi bankasını oluşturmaktır. Ayrıca bu sonuçlardan hareketle eğitimciler, yöneticiler ve sorumlu kurumlara stratejik planlama yaparken kullanabilecekleri sonuç ve öneriler sunulmaktadır.

Materyal ve Metod

Bu pilot çalışma tanımlayıcı kesitsel bir çalışmadır. Katılımcılar (N= 113) araştırma kriterlerine uygun iki üniversitede gerçekleştirilmiştir. Bu çalışma Pamukkale Üniversitesi Etik Kurulu tarafından onaylanmıştır. Son sınıf öğrencilerinin (N=102; yaş ort.: 22.9±1.9 yıl) ve öğretim elemanlarının (N=11; yaş ort.: 39.4±6 yıl) üniversite ortamı, bölüm olanakları ve yürütülmekte olan fizyoterapi programından memnuniyetlerini değerlendirmek için iki anket kullanılmıştır: (1) öğrencilerin ve öğretim elemanlarının memnuniyet düzeylerini belirleyen 25 soruluk anket (cronbach alfa: 0.90); (2) öğrencilerin öğretim üyelerini değerlendikleri 20 soruluk anket (cronbach alfa: 0.95).

Anketlerde yer alan önermelerin değerlendirilmesi beş kısımdan oluşan (Kesinlikle katılmıyorum:1, Tamamen Katılıyorum:5) Likert tipi ölçekler ile yapılmıştır. Anketlerde yer alan önermeler daha önce uygulanmış ve mevcut uygulanmakta olan anketlerden oluşturulmuştur [Jarski, Kulig, Olson R (1990), Buccieri, Brown, Malta, Ward (2008), Morren, Gordon, Sawyer (2008), Housel, Emeritus, Gandy, Edmondson (2010)]. Konu ile ilgili bir eğitim fakültesinin ölçme ve değerlendirme anabilim dalından iki ve bir tıp fakültesinin biyoistatistik anabilim dalından bir olmak üzere, toplam üç uzmandan görüş alınmıştır. Çalışmanın yapılacağı okullar/bölümlerden gerekli izinler alınmıştır. Çalışma gönüllülük esasına dayanmaktadır. Katılımcılara çalışmanın amacı, gerekçesi ve anket içeriği detaylı bir şekilde açıklandıktan sonra anketler dağıtılmıştır.

Katılımcılardan önermeleri objektif yorumlayabilmeleri ve kendilerini baskı altında hissetmemeleri için isimlerini yazmamaları istenmiştir.

Verilerin Analizi Yöntemi: Araştırmadan elde edilen verilerin analizi Statistical Package For Social Science (SPSS) 20.0 paket programında gerçekleştirilmiştir. Araştırmada kullanılan ölçeğin güvenilirliğini test etmek için güvenilirlik analizi uygulanmıştır. Araştırmada verilerin analizinde tanımlayıcı istatistikler de yapılmıştır. Katılımcıların tanımlayıcı verileri ortalama, standart sapma, sayı ve yüzde olarak verilmiştir. Öğrenciler ve öğretim elemanlarının memnuniyet sonuçları % olarak verilmiştir. Öğrencilerin öğretim elemanlarından memnuniyetleri de % olarak gösterilmiştir.

Ölçeklerin geçerlik ve güvenilirliğini belirlemek için aşağıdaki yöntemler kullanılmıştır.

1. Güvenirlik çalışması: iç tutarlığın (internal consistency) belirlenmesinde “Cronbach alfa” Güvenirlik Katsayısı” kullanılmıştır.
2. Test-tekrar test güvenilirliği: test-tekrar test puanları arasındaki ilişkinin belirlenmesinde “Pearson Momentler Çarpımı Korelasyon Analizi”, test-tekrar test puan ortalamalarının karşılaştırılmasında “Bağımlı Gruplarda t Testi kullanılmıştır.

Sonuçlar

Çalışma 58’i kadın 44’ü erkek yaş ortalaması 22,95±1,62 toplam 102 öğrenci; 7’si kadın 4’ü erkek, yaş ortalaması 39,41±6,05 olan 11 öğretim elemanı ile gerçekleştirilmiştir. Öğrencilerin genel akademik ortalamaları 3,07±0,36’dır (Tablo 1).

Öğrenciler ve öğretim elemanlarının okullarını ve fizyoterapi eğitimini değerlendirdikleri ilk anketten alınan geri bildirimler: işlenen konuların öğrencinin anlayabileceği düzeyde olduğu, yürütülen stajların mesleğe hazırlık açısından katkısı olduğu ve öğrencilerin problemi çözmek için, güncel teknik ve yöntemleri kullanma yeteneğini geliştirdiği yönündedir. Kantin ve dinlenme alanlarının yeterli donanıma sahip olmaması, sınıfların fiziki olanaklarının yetersiz olması ve sınıf mevcudunun uygun sayıda olmaması negatif yöndeki geri bildirimlerdir (Tablo 2).

Öğrencilerin öğretim elemanlarını değerlendirdikleri ikinci anketten alınan olumlu geri bildirimler şu şekildedir:

- a. Öğretim elemanları yardımcı ders araçlarını (Örneğin WebCT, görsel-işitsel sunumlar, Power point sunumları, e-posta) etkin bir şekilde kullanmaktadır
- b. Öğretim elemanlarının bilgi aktarımları ve açıklamalarının anlaşılır düzeydedir
- c. Öğretim elemanları öğrencilerin ihtiyacı olan ders notlarını öğrencilere ulaştırmaktadırlar

Öğrencilerin öğretim elemanlarını değerlendirdikleri ikinci anketten alınan olumsuz geri bildirimler şu şekildedir:

- a. Öğretim elemanları öğrencilerin akademik durumlarını takip ederek gerekli uyarılarda bulunmazlar ve yol göstermezler,
- b. Öğretim elemanlarının hazırladıkları sınav soruları yapıcı ve öğretici değildir. Derste işlenen konuları kapsamaz,
- c. Öğretim elemanlarının sınavlarda verdikleri notlar öğrencilerin derse ilişkin bilgisini yansıtmaz.

Öğrencilerin öğretim elemanlarını değerlendirdikleri 2. anketten alınan olumlu/olumsuz geri bildirimler Tablo 3’de detaylı olarak gösterilmiştir.

Tartışma

Bu araştırmanın sonuçları ülkemizde fizyoterapi eğitimi veren kurumlardaki sorumlu akademisyenlerin ve ilgili yöneticilerin eğitim planlanmasında aşamasında ve eğitim sürecinde öğrenci ve öğretim elemanları gibi paydaşların memnuniyetlerini, beklentilerini ve eleştirilerini dikkate almalarının önemli olduğunu açıkça göstermiştir. Zira, bu konu kalite standartlarını sağlamak ve öğrencileri mezuniyet sonrasında daha donanımlı hazırlayabilmek için önemlidir. Özellikle klinik eğitim müfredatının bileşenleri iş seçimi ve pratik uygulama alan seçimi için öğrencilere henüz fizyoterapist olmadan önce yol gösterme olanağı sağlamak açısından da hayati önem taşımaktadır (Stith J F, Butterfield WH, Strube MJ, Deusinge SS, Gillespie DF,1998). Fizyoterapi Eğitimi Akreditasyon Komisyonu (CAPTE) ölçülebilir kriterleri ile fizyoterapi eğitim programları 1995 yılı Şubat ayında klinisyenler ve akademisyenlerden bilgiler doğrultusunda revize edilmeye başlanmıştır. American Physical Therapy Association (APTA) fizyoterapi eğitiminde kaliteyi arttırmak için farklı ülkelerdeki

fizyoterapistlerle yaptığı çalışmalardan elde edilen kanıtlar ile “Consensus Model of Physical Therapist Professional Education” başlıklı bir rapor yayınlamıştır. APTA’nın temel iki amacı vardır: Yüksek iş hacmi ve yüksek donanımlı kaliteye sahip fakülteler oluşturmaktır (Harrison AL, Kelly DG, 1996). Bu çalışmanın uzak hedeflerinden biri de bu düşüncüyü kapsamaktadır.

Devebakan ve diğerleri (2003) Dokuz Eylül Üniversitesi’nde lisansüstü eğitim kalitesini arttırmaya yönelik yaptıkları çalışmada eğitim programları değerlendirilmesinde sadece öğrenci başarı düzeylerinin belirleyici olmadığını bildirmişlerdir. Öğrencilerin öğretim elemanlarını değerlendirdikleri anket çalışması sonucunda ders programlarının, ders içeriklerinin güncellenmesi gerektiği ve güncel sunum tekniklerinin daha etkin kullanılması gerektiğinin yanı sıra öğretim elemanlarının iletişim, bilgi beceri ve öğretme konusunda motive olduklarını bulmuşlar. Robert W Jarski ve diğerleri 1990 yılında yaptıkları çalışmalarında öğrenciler ve öğretim elemanları klinik öğretim programlarını değerlendirmişlerdir. Seçilen 8 üniversitedeki öğrenci ve öğretim elemanlarına uygulanan 58 soruluk bir anket ile iletişim becerilerinin, mesleki becerilerin eğitim programındaki etkinliğini araştırmışlar. “Soru sorma” ve “tartışma ortamı yaratma”, “öğretim elemanlarının sorulara açık cevap vermeleri” ve “klinik stajlarda öğrenciyle aktif katılmaları” gibi faktörlerin öğrenmeyi daha çok kolaylaştırdığını saptamışlardır. Klinik çalışma alanlarının yetersiz oluşu, derslerin zamanında başlayıp bitirilememesinin ise öğrenmeyi en çok engelleyen faktörler olduğunu belirlemişlerdir. Natalie ve diğerlerinin (2010) öğrenci aracılığıyla öğretim elemanlarının klinik deneyimlerinin öğretmedeki etkinliğini değerlendirdikleri çalışmalarında, öğrencinin öğrenim stilini dikkate alması ve buna göre program değişikliği yapması, yapıcı eleştirilerde bulunması, arkadaşça yaklaşımı, gerektiği yerde öğrenciye sorumluluk vermesi açısından öğretim elemanlarının deneyimlerinin istatistiksel açıdan önemli olmadığını bildirmişlerdir. Shokooh ve diğerleri (2009) öğretim elemanlarının deneyim süreleri ile öğrencilerin verdikleri cevaplar arasında negatif korelasyon bulmuşlardır.

Üniversite bünyesinde yürütülen konuşma terapisi, iş uğraşı terapisi ve genel fizyoterapi programlarının öğrenci ve öğretim elemanları tarafından klinik önemi ve başarılarının algılanma düzeylerini karşılaştırmışlar. Hastaların tedavilerinin belgelenmesi, hükümet tarafından uygulanan yasal düzenlemeler hakkında bilgilendirme, diğer aile üyeleri üzerinde kronik hastalığın etkisini anlama, kronik hastalığı olan kişilerin bakımında etik / yasal sorunları çözme konusunda programın yeterli olmadığını belirtmişlerdir (Ziaee ve diğerleri, 2004). Literatürde yer alan çalışmalardan elde edilen ortak sonuçlar şu şekilde sıralanabilir:

1. Fizyoterapi eğitiminde kalite standartlarının oluşturulmasında öğrenci ve öğretim üyelerinin görüşleri önemli belirleyicilerdir.
2. Bu konuda daha çok araştırma yapılmalıdır.
3. Öğretim elemanlarının fizyoterapi eğitimi konusunda yeterli donanıma ve deneyime sahip olmaları gerekmektedir.
4. Öğrenci katılımını klinik uygulamalarda ve teorik eğitimde sağlanmasının önemlidir.

Bu çalışmadan elde edilen pragmatik olumsuz sonuçlar:

1. Fiziksel ortam ve fizyoterapiye özgü ekipman eksikliği çok önemli bir sorun olarak öne çıkmaktadır.
2. Klinik çalışma alanlarının yetersiz olduğu vurgulanmaktadır.
3. Öğretim elemanlarının sınavlarda öğrencinin bilgi düzeyini objektif olarak değerlendiremedikleri göze çarpmaktadır.
4. Kantin ve dinlenme gibi fiziki olanakların yetersiz olduğu ifade edilmektedir.

Genelin bir kısmını temsil eden bu pilot çalışma tamamlandığında yapılması planlanan iyileştirme çalışmalarına temel teşkil edecek veriler elde edilmiş olacaktır. Bu çalışmada fizyoterapi eğitimine özgü standart bir anketin geliştirilmesi ve düzenli olarak uygulanarak geri bildirimlerin alınabilmesi amaçlanmıştır. Sonuçlar buna ihtiyaç duyulduğunu kanıtlamıştır. Anketin kullanılması fizyoterapi eğitim kalitesinin ileri düzeylere taşınması açısından değerli olacaktır.

PATIENT EDUCATION – RELEVANCE IN NURSING EDUCATION AND PRACTICE

Gunta Bēta -Rīga Stradina University, Liepaja Branch, Latvia Gunta.Beta@rsu.lv

Evija Tofere -Rīga Stradina University, Liepaja Branch, Latvia evija.tofere@inbox.lv

ABSTRACT

Working in health care, regardless of the care level provided by the establishment - primary, secondary or tertiary – a nurse must know and apply the competences and expertise in pedagogy. Theoretical knowledge and pedagogical skills are acquired within the educational process. The development of the pedagogical skills occurs according to the actual situation in the process of the nurse's practical work. Patient education includes general pedagogical coherence and is based on the structure of the educational process, the application of the means according to the patient's needs. Despite the e - learning opportunities that are being successfully applied in many areas, the patient's direct contact with nurses is important because the opportunity to have personal contact and get feedback is an advantage of direct communication that in the majority of cases is a personal and accurate way of communicating.

The study analyzes the range of methods used by nurses in the education of patients that reflect the nursing activities in real situation, securing the process of development of formal education.

Keywords: cognition, education, communication, nurse, patient

INTRODUCTION

Each individual's health is a social, economic and personal development resource regardless of age, gender or cultural criteria. Health maintenance or preventional measures largely depend on the educational work that can be viewed not only in the perspective of nurses' work, but in the general context of the implementation of common public health strategy. Every individual's personal interest is also an important factor. Patient education as a process of interaction is topical in the context of any disease or prevention case. Quite often arriving to the health care institutions, especially hospitals, a patient feels as at the technological institution where the personnel works with very high, incomprehensible technologies. The role of a nurse as an educator here is very significant. She transfers to the patient a certain amount of appropriate and understandable information, reduces information deficit about the coming steps, promotes emotional stability and prevents the formation of cognitive dissonance. The patient's safety and well-being are created by a welcoming attitude and favorable atmosphere at various levels of patient care, when the patient's health problems or discomfort are understood. In general it can be described as a part of the treatment process service.

Patient education is an important but a complex issue. Nurses and doctors recognize the need for patient education. In the greatest number of cases the information that is important for the patient for the time being is outlined verbally or visualized, less focus is put on the secondary education aspects that are currently not in sight. The overall view of the situation is not less important because an educated patient is more engaged in solving problems, improving their health status, and future preventional measures. Educated, empowered patients and their relatives are active participants in maintaining health, forming an educated society.

1. ASPECTS OF PATIENT EDUCATION IN THE TRAINING OF NURSES

Information gathering skills (Silverman et al. 2005) in the process of interaction with the patient (patient's subjective vision of the situation, the assessment of knowledge gained), the following transformation of the information obtained in the educational and patient care process are included in the training of nurses. Formal education, when acquiring the first level higher professional education, apart from free care philosophy involves also the acquisition of general philosophy, ethics and communication not only theoretically, but also working practically in groups dealing with study cases.

The implementation of the process of patient education as well as the application of the pedagogical principles in the training of nurses is defined by the Latvian Education Nursing professional standard in the sub-part – specific skills (paragraph 18) defining the guidelines of educational skills, including the assessment of the patient's knowledge and skills in the field of health preservation and restoration. Patient knowledge and practical skills'

assessment is defined in detail in the educational programmes for nurse training by the education authorities at the educational institutions.

The study process is systematized in such a way that at its beginning a health care specialist - a nurse could understand two important aspects. Firstly, the significance of health as a general value, taking into account that health is not just a personal value but should be viewed from a publicly moral, economic and even political perspective. Good health is not just a lucky phenomenon of a person, but the interaction of complex biological (sometimes genetic) and cultural factors. Secondly, they should learn to perceive health care as a dynamic, holistic process.

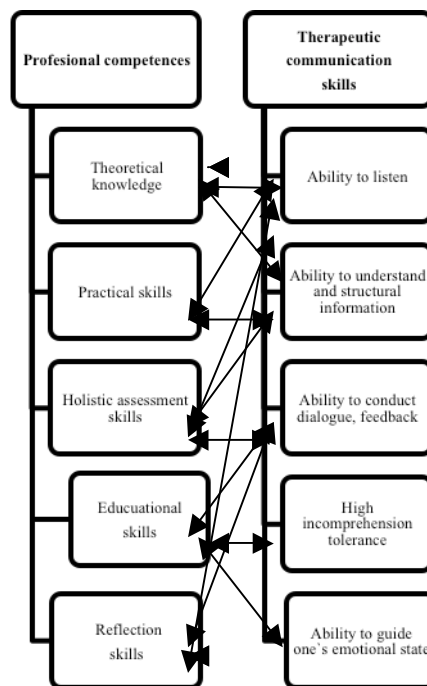

Successful outcome of the study process is formed not only of the future nurse professional conduct based on the synthesis of theoretical knowledge and practical skills, but the ability to build the context of an empathic attitude, including the creation of the therapeutic relationship (Rosenberg, Gallo-Silver 2011), which includes a comprehensive awareness of a patient based on the feedback received.

The development of the study process from informative, regulatory process into a flexible, transformative learning process (Elliott, 2010; Mezirow, 1991; Benner et. al, 2010; Briede & Peck, 2011), not only lecturers but also students, sharing the responsibility, are involved in the democratic realisation of this process. Transformative approach to education is the basis for sustainable education, because it is based on a positive, critical and constructive approach to integration in the study process that develops step by step. A critical approach to patient education is inseparable from the content, process and prerequisites' reflection (Mezirow, 1991).

In any case, acquiring the professional skills that make up the nurse's competence, the motivation of the student's activity and behaviour, values that form the development of a future nurse are important. As noted by N. Geidžs (1999), "Motivation is a hypothetical internal process that gives energy and guides behavior." M. Puķīte (2012) Analysing students' pedagogical competences in the study process, says: "Competence is formed, gaining knowledge, acquiring skills and developing a responsible attitude." The acquisition of interdisciplinary knowledge forms the development of a variety of competences and expertise.

The set of theoretical knowledge as well as practical and communicative skills acquired by nurses is based on the platform of personal responsibility and understanding of values, including the nurse's practical skills in educating patients are the essential parameters of the professionalism of nurses that will determine the future career opportunities.

Picture 1. A set of competences for the progressive nurse-patient cooperation ©

Students, after the acquisition of the theoretical material and dealing with case studies, acquire the patient education methodology where the alternatives vary. Ability to recognize non-verbal communication's physical and emotional expression, to understand the positive verbal communication strategies as well as identify the

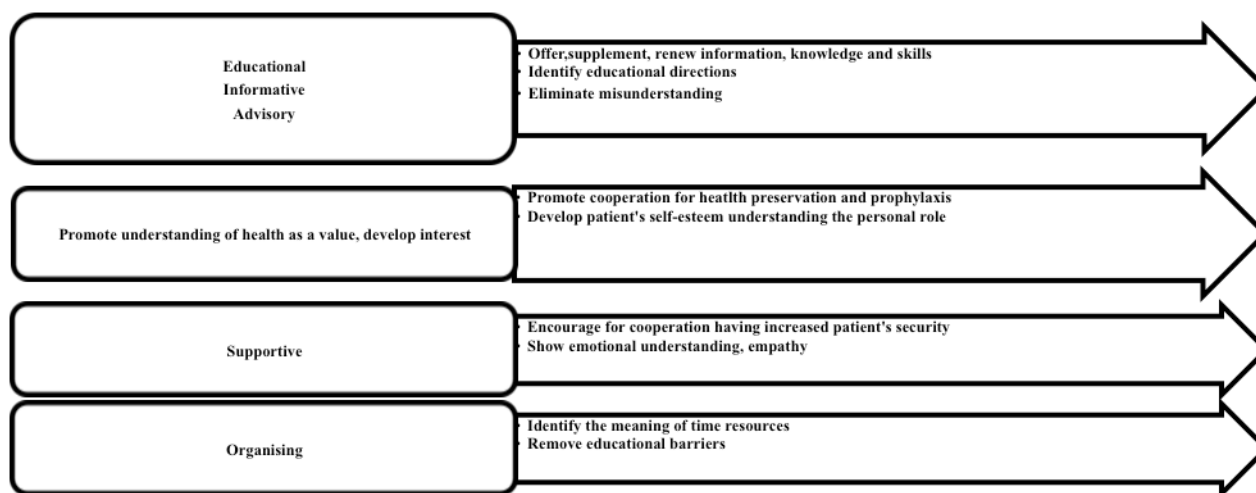

significance of the patient education development strategy is the part of the professionalism of future nurses in the context of the pedagogical aspect. Communication skills - the ability to listen, to form open questions, to conduct a dialogue - often form one of the leading aspects in the patient care management and patient education.

2. ASPECTS OF PATIENT EDUCATION IN NURSE PRACTICE

The range of nurses' educational activities includes patient education about the prevention of various diseases, basics of professional activities as well as practical issues. The information provided by the nurse within the process of interaction may be both informative and educational. Patient education can be a spontaneous response to the issues raised by the patient, or it can be planned in advance. The boundaries of the transition from information to the educational sphere are not restricted.

Picture 2. Directions of educational work of nurses in cooperation with

patients

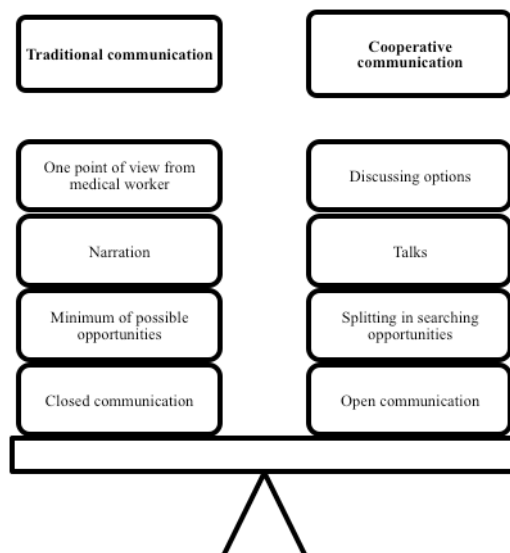

Psychological, sociological, anthropological and ethical aspects are important in patient education. The understanding of those, identifying each patient as a phenomenon, demonstrating positive collaboration, flexible interface, the ability to structure educational information, as well as offering alternative solutions form an informed nurses' educational activities' paradigm.

Undoubtedly, in the process of patient education a nurse must be able to guide her own emotional state and orient the patient to open and positive communication and cooperation in order to promote both the understanding of the situation and the strategical awareness how to maintain and foster health in future.

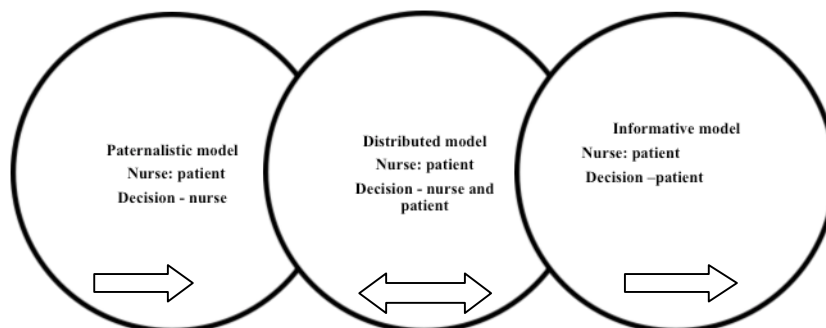

Picture 3. Traditional and cooperative communication in the process of patient education

(McCabe, C., Timmins, F. 2006, 67)

The patient educational process relevant to the patient’s level of understanding, comprehensive, delivered at the appropriate time, as well as designed to understand can be one of the prerequisites for the patient to get some inspiration to change attitudes, increase motivation and awareness of the importance of co-responsibility to make decisions about medical treatment, the patient’s behaviour or change of habits. Nurses’ professional communication adjusted to the case is able to ensure a high level of patient trust and cooperation that is of great importance in prevention, but particularly in the treatment process. The nurse provides information, educates without making judgments, allowing patients to decide for themselves except acute situations. The author has adopted the model for professional nurses’ activities area where the role of a nurse conducting patient education is reflected diversly, indicating the range of possibilities, making an appropriate decision.

Picture 4. Three models of making decisions in the medical treatment process in interaction (adapted acc.to Charles et al., 1999; & Chalamon, I., Chouk, I., Heilbrunn, B., 2010)

When you create a positive communication patients prefer to engage themselves in joint decision-making that is based on comprehensive information, and education and is related to the patient’s satisfaction. Education, counseling process and the result of the patient's judgment are connected with the value priorities of the patient, possible or impossible changes in the patient's life that are also largely determined by the patient's future course of action.

The nurse’s understanding of the educational process plays a really important role in the evaluation. Has the patient understood what was said? What causes difficulties for a patient? Should the educational process be repeated? These issues include both the feedback, identifying the patient's level of understanding and integration of reflection in society, in the educational process. The nurse, who demonstrates the ability to respond to patients' questions not with abstract concepts, but concrete examples, is able to clearly clarify the priorities to the patient, is able to appeal to their co-responsibility for health as well as analyze her performance, is an important supportive and educational resource of a definite case. It should be noted that the educational dimension contributing to the socio-psychological sphere of development, helping the patient to develop a new perspective is rather more complicated than educating about practical activities.

In order to ensure the patient's range of perception it is recommended to expand the range of educational tools because each person perceives information and events in different ways. Different barrier impact on the patient’s health, age, cultural differences and language barriers are possible. A nurse should evaluate the applied

educational methods and tools to the corresponding situation (audio, visual, tactile, kinesthetic teaching), keeping in mind that a healthy person remembers 10% of what he/she has read, 20% of what he/she has heard, 30% of what was spoken or written, 50% of what he/she has heard and seen, 70% of what is being said, and 90% of what is being said and done. The figures are different for each individual, but they reflect the tendencies of the adaptation of information.

It is possible to connect verbal education with an emotionally perceived educational type (case study), practical action, which is sometimes more effective than the general theoretical one. A written or visual (posters, CDs, video) patient education mode could be used as an additon to the given verbal information.

A wide spectrum of activities of a nurse as an educator is focused on the case and the desired outcome. Patient education process can be affected by both the patient's expressed wishes about the information they want to receive and by the nurse's personal views on the necessary information priorities: what, when, and what kind of information should be delivered to patients. That information may not always be adequate to patients' preferences.

Methodology

Motivation of the research: the nurses have voluntarily attended a formal education course that was free of charge. They have acquired the 1st level higher education, having improved the earlier (until 2004) acquired 3rd level professional education ISCED (International Standard Classification of Education) to the 4th ISCED professional level.

Subjects of the study programme – pedagogy, requirements for the graduation paper – to reflect in a written way how a nurse conducts a free chosen patient education case study connecting it to her own pedagogical activities.

Aim of the research: identify the patient education tendencies in nurses' self-reflection using a qualitative research method.

Tasks of the research:

1. To conduct a qualitative study analyzing the nurses' graduation papers in pedagogy (2012/13 academic year).
2. Analyze the patient education methods defined by the nurses that reflect an understanding about the patient education.

Procedures

In the qualitative analysis of work the tendencies of nurses' practical educational work have been clarified, noting patient education by nurses indicated methods and provision of the feedback in the educational process.

The graduation papers were selected at random. Total number (n = 140).

Statistical data analysis was performed using SPSS v.17.0 software and Microsoft Office Excel v.11.

Results

The analysis of the study data (see results in Tables A and B) shows that nurses conduct patient education only verbally by defining the types of information delivered in the patient education process: tell, educate, inform - (100%). It could be concluded that in most cases patient education occurs giving information, which is not the

most effective method of education. It is evident from the small amount of the marked answers that in the process of patient education discussion takes place - 24, 3% (Mean - 0.24). Discussion is organized using open questions as well as empathy on the nurse's part in the process of communication at the time of the patient education process.

Table1 . Reflection of document analysis A

	N	Mean	Std. Deviation
	Statistic	Statistic	Statistic
Educated, informed	140	1,00	,000
Discuss	140	,24	,430
Written materials	140	,09	,281
Demonstrations	140	,06	,246

Electronic resources	140	,01	,119
Feedback	140	,29	,453
Valid N (listwise)	140		

Table 2. Reflection of document analysis B

Additional educational tools that help to ensure a full understanding on the patient's part and improve patient education strategies, are really used in the graduation papers. Electronic resources that provide appropriate learning topics' in-depth visual and auditory perception are used only in 1.4% cases (Mean - 0.1). Working with Internet resources and the computer was defined in the graduation papers mostly referring to when a nurse indicates the address where one can find relevant information rather than focus on the activity- who, what and how.

The written information reflected in the schemes that helps the patient to visualize and understand the information provided that the patient can re-read or look at later, is used only in 8.6% cases (Mean - 0.9).

The figures for providing feedback, while making sure that the patient has understood the information, are presented in 28.6% cases (Mean - 0.29). The results are similar to the EU's Eurobarometer survey

(Eurobarometer Qualitative Study, 2012) data, where it is stated that the time allocated by health care workers, including nurses, in Latvia to a patient as well as feedback as a performance instrument are factors that were defined as insufficient.

Role-games as one of the possible methods of patient education are not defined by nurses in their practical work.

Discussion

Considering the results obtained, it can be concluded that two factors mismatch: the knowledge gained during the education process is not fully integrated into practice. If nurses have within the framework of the education process further added to their knowledge in pedagogy, then the most knowledge has been transferred to the philosophical (theoretical) aspect without increased specific practical knowledge updating, mostly informative rather than transformative.

An important factor for the teachers involved in the education of nurses and future nurses is to have practical experience in patient care. "The nurse is an expert who can evaluate and focus herself on the critical factors in a situation" (Taylor, K., Marienau, C., & Fiddler, M., 2000, 61), leaning on the experience-based practice she can provide colleagues, nurses with full understanding how to ensure patient education and integrate it in work.

The teaching staff in this specified educational process for nurses who raise their educational level, were experienced nurses. It should be noted, however, that such a practice is not always provided. Occasionally, but mostly it refers to the future nurses' education process, specialists with only pedagogical education without medical experience are involved to deliver pedagogical knowledge to nurses. The reason for such cases in various parts of the programme implementation is the limited number of nurses - experts who are willing to participate in the education of students during their pre-clinical practice, as well as economic factors that limit the opportunity to involve additional nurses from the field practice institutions in the educational process. The nurses from the field practice institutions can become a complementary part of the system while, at the same time, developing an inter-institutional cooperation model.

In health care, as it is in other sectors, errors come from insufficient, improper communication (Provonost, et al., 2003; Leonard, M et al., 2004) and information deficit. Communication is a heart of patient education. Error versatility can influence the process of treatment. Inadequate patient education can create a Swiss cheese model (Perneger 2005) that directs away from the working strategy without mistakes and may cause the following:

1. Instead of promoting patient understanding comes additional patient confusion;
2. Erroneous information is obtained from other sources;
3. To promote the formation of unwanted side-effects;
4. To prolong the recovery process.

Patient information deficiency in the treatment process and the home or ambulatory care settings, could be solved with the help of nurses. Half of the patients in the period after they have left the hospital make at least one error in the use of the prescribed medication. (Kriplani et al., 2012).

A nurse is regarded as a skilled and responsible work performer. According to the Fr. Herzberg theory, dissatisfaction with the job can be caused by the processes of the organization and management of work, job security, status and salary. These are considered as hygiene factors. Similarly, a negative impact on work processes can be caused by motivational factors: growth opportunities, recognition deficit. Uniformity of educational work and gaps reflected in the graduation papers could be caused by the chronically disorganized system of work organization, a large number of patients and intensive work. A lot of nurses do not see an opportunity to work in a different way and they reflect this in their graduation papers.

Insufficient patient education process could be caused also by human factors (Leonard et al., 2004): nurses' cognitive overload, stress and fatigue, as well as poor (nurse - patient) communication factors.

Conclusions

It could be concluded that the study process in pedagogy for nurses has been mainly informative, because, analysing the graduation papers of nurses in pedagogy, a positive representation of a transformative learning process, based on the meta-cognitive skills' integration (to plan, conduct, foresee, check - feedback and appreciate - to reflect) is observed fairly little.

Randomly selected graduation papers reflect relatively low understanding of professional values (patient / person - value) where the patient's desire to get comprehensive information is not always fulfilled, mostly filling an information niche. Without receiving feedback, which is an advantage of direct communication, the assessment of the information given to the patient lacks. This assessment can be viewed as a part of the content, process and premise reflection. Nurses' activity in educating patients is mainly focused on the goal rather than on the result. The nurses can not fully integrate the knowledge acquired of patient education in their work process description, they do not form a new activity paradigm. Reflection of the situation in the graduation papers confirms the strong one-way patient education traditions that are contradictory with the principles of comprehensive patient education and partly refer to the actual situation in patient care and patient education. The results obtained suggest that there are both latent and visible chronic work organization errors that had a destructive impact during the nurses' practice period. The latter have influenced the nurses' understanding about patient educational work. These errors can not be identified in the qualitative analysis of documents.

According to the author's point of view, the spectrum of patient education inhibitory reasons can appear in the process of the future research, surveying on patient education work. The nurses' point of view not only on educational methods used, but also on the factors that cause distraction in educational work was clarified.

The result that a small number of nurses confirm comprehensive patient education platform understanding, shows the need for more informal education course in practical methodology for patient education. The course should contain a practical possibility for integration and an opportunity for nurses to form patient educational situation, to demonstrate and evaluate it in an intellectual and practical way, promoting a positive change in the nurse's critical thinking and action.

USING NON-DIGITAL SOURCES AT CZECH TECHNICAL UNIVERSITIES TO NARROW THE GAP BETWEEN STUDENTS COMING FROM TECHNICAL AND NON-TECHNICAL SECONDARY SCHOOLS

Mark Landry¹, Lenka Landryova²

¹Language Department, ²Department of Control Systems and Instrumentation
VSB - Technical University Ostrava, 17. listopadu 15, Ostrava, Czech Republic

¹mark.landry@vsb.cz, ²lenka.landryova@vsb.cz

ABSTRACT

This paper deals with the use of non-digital sources at Czech technical universities to narrow the gap between students coming from technical and non-technical secondary schools and between students who have studied a foreign language as few as four years and others who have studied it more than sixteen years. It proposes the use of additional teaching sources, introduced at critical times, to supplement conventional textbook learning.

This paper also gives a general outline on the Czech education system and how languages have been taught. It takes in the findings of various recent attention span studies, which indicate that students today are less likely to be attracted by just textbook learning. It also looks at the encroaching effects of digital media on and in the classroom and proposes a methodology on how to better capture student attention. It draws its conclusions from a questionnaire distributed at a Czech university which has implemented the technique.

Keywords: supplementary/enhancing materials, creative classrooms, blended approach, sustained/focused attention, passive/participatory methods

INTRODUCTION

The teaching of English and other foreign languages for full-time students at advanced levels studying at technical universities in the Czech Republic is generally based on the use of a textbook widely oriented in a certain area of study. For example, students later studying specific technical fields, such as Architecture or Mechanical Engineering, first study general courses in engineering or technology, and students studying economics study general business English in their first study semesters. There can be also more specific courses offered for smaller select groups, for example VŠB- Technical University of Ostrava (later only VŠB-TUO) has had more concentrated study in the branches of Air Transport, the European Union and in Computer Science. Study sessions are concentrated into 90 minutes a week (2 teaching periods), and are not based on how many years of study nor the type of secondary education a student has had. The majority of these students together have had about 10-12 years of foreign language study with some students having up to 16 or more years and some others only 4 years. Within these groups, many students are following up their secondary educational field at a tertiary level, that is students who have studied at a business academy go on to study at economic or business/management faculties or at economic branches at technical faculties. And similarly, students who have studied at vocational (technical) secondary schools go on to study at faculties specialized in such branches as Computer Science, Materials Engineering and Metallurgy or Mining-Geology. Students, who study at gymnasias with or without specializations, study a general course in English without a technical focus. Students, who study at secondary technical schools and secondary vocational schools, are more specifically prepared for a wide range of professions. When these students are brought together in one group a teacher (who has usually not been especially educated in the teaching of technology/economics) is faced with charting a course between trying to comprehend and explain technical/economic concepts in more detail and to clarify the finer (grammatical) points of a language.

Fortunately, there are enough interesting stimuli and teaching resources to help such a teacher to enrich and keep the attention of students who are already well-immersed in a subject and enough supplementary materials and sources available for those who need to catch up. One possibility is to further implement the pan-European policy of making "creative classrooms" by increasing the use of digital media in them (that is beyond the use of the audio recordings of transcripts) This is a popular step for some students, who have already had access and exposure to their influences, especially if they study at technically-oriented schools. However by doing this a teacher also has to take into consideration that these digital media could be affecting how students learn as certain recent attention span studies have pointed out. They could also be sources of distraction or serve as competition for a student's attention. An alternative to the risk of having students hidden behind a screen or using digital devices for non-lesson related purposes is to introduce more conventional types of non-digital teaching materials at peak periods when a student's attention is usually waning.

Figure 10 The structure of the Czech educational system [25]

According to [16] the study of a first foreign language is compulsory at the age of 8, and the vast majority of students at elementary schools study English as a second language, followed by German, Spanish and French. Almost all students who have studied at gymnasia study English. At technical or vocational schools 74% of students study English.

These choices continue on to university, even at technical universities which make up over 25% of state-supported universities. Almost all of these 7 technical universities (VŠB-Technical University of Ostrava, Technical University of Liberec, University of West Bohemia in Plzen, University of Pardubice, Czech Technical University in Prague, Brno University of Technology and Institute of Technology and Business in České Budějovice) in the Czech Republic have economic/business faculties attached to them. An example of language study preferences at VSB-TUO, which are similar to preferences at other Czech technical universities, can be seen in Table 1.

Table 1 An Overview of Languages Study at VSB-TUO.

Although it is not compulsory as in 14 other EU countries, according to Key Data on Teaching Languages at School in Europe (further only KD), the Czech Republic is following a similar pattern of preferring learning English, which is basically reflected throughout the European Union [6]. Language learning sessions, mostly at secondary grammar schools, business academies or technical/vocational schools, are generally divided into 2 weekly periods of 45 minute study, instead of the more concentrated form at universities.

Once reaching university students choose a (first) language to study and are generally offered its study for the first two years. Students studying English (which this paper focuses on) at VŠB-TUO (as indicated in Table 1) are placed into groups of about thirty. There are also language labs, and classes offered at a lower level for smaller groups of “weaker” students, and for those who did not have English as a first language. Students are expected to be present in class the majority of the time, and have the course material in either written or electronic form. Students with language certificates (such as FCE and CAE) or a superior knowledge of English have the option to take a pre-test in the 4th/5th week of study, and not attend study in a semester if they have shown they have already mastered the study material. This reduces class sizes, and hopefully concentrates teaching on students more or less at the same level. All remaining students have to pass a standardized test in electronic form at the end of each semester. This is accompanied by an oral exam after the successful completion of the last test during the final semester.

A BRIEF HISTORY OF LEARNING AND TEACHING SECOND LANGUAGES

Since language learning has become systemized, there have been conflicting linguistic and cognitive/psychological theories, methods and approaches on how to best learn a language. Applebee in [1] has traced how the “interaction between the shifts in school populations, educational philosophies, psychology and scholarly disciplines... have all had a more or less influence upon instruction patterns”. In the course of time, traditional methods such as the translation of isolated phrases (literal translations or working with interlinear texts originally derived from learning Latin) or the natural method of only using a target language, rote repetition and drills have been largely replaced as new methods were tried, such as code switching, sandwich techniques, mother tongue mirroring, back changing, mnemonic devices and scaffolding processes.

Whatever method preferred, no one learns or retains information in the same way. And of course, learning may occur whether one is aware of it or not. One area of general agreement is that the more actively interested a person is, the more he/she generally remembers. Part of the philosophy of both Waldorf and Montessori education is based on this concept of using hands-on activities or discovery modules. One way to depict how activity improves learning is by using learning pyramids, which can slightly vary in percentages and categories, and compare the effectiveness of passive and participatory teaching and learning methods. They mostly show that the more involved a student (and teacher) is in speaking, teaching and writing activities, the more he/she learns. For an example of a learning pyramid see Figure 2.

Teach Others

90%

Figure 2 A Learning Pyramid Showing Average Retention Rates [21]

Second language acquisition and improvement also depend on one's own experience, background, attitude and exposure to a target language, and of course the ability to retain information plays an important role in the process. In a Brief Description of Second Language Acquisition Dr. Kathy Escamilla describes the proposal of Noam Chomsky and other nativists that humans have even a more in-depth innate predisposition for learning a second language, similar to learning a first language [9] Although language books have served as our guides for ages, it wasn't until the 1980s that a more blended approach to them and to learning was taken by incorporating digital media partially through on-line instruction, and mostly CD-ROMs. At that time it was recognized that the four basic skills of reading, writing, speaking and listening, focused separately on in language textbooks, are more integrated than previously thought. The fact that we use more than one skill at one time led to an emphasis on more socially-based skills and activities, such as summarizing, describing and narrating, and on to more cooperative, active learning exercises, such as role-playing and debate. Despite this seemingly emphasis on speaking activities, and the fact that teachers have dominated most of them [7] KD of Teaching Languages still places equal importance on all four basic skills [8].

It was the world-wide influence of the Internet that really brought the possibility of language learning out of the classroom and away from the textbook. There are now on-line and self study courses in which a student can work at his/her own pace and go back to, making the presence of a teacher unnecessary. There are text-to-speech synthesis (TTS) devices, interactive software and websites which paradoxically are great sources for generating non-digital teaching material. For a general overview of current technologies supporting English Teaching and Learning see The British Council's publication Innovations for Learning Technologies in English [3].

Well into the 1990s language learning institutes in the Czech Republic (Czechoslovakia) continued to follow the conservative approach laid out by textbooks on learning languages. Although books from abroad replaced those written and published in the Czech Republic, language teachers continued to teach in the ways they were familiar with. It was the plethora of private language schools, offering new techniques for learning languages including such novelties as alphalearning and the Callan method, and internationally recognized language certificates, that vastly reduced the realm of the state language schools. It was also the presence of such culture support organizations such as the British Council and Alliance Francais that showed that there were other resources available for learning languages.

In accordance with the pan-European policy of making creative classrooms, tablets and other devices are today replacing paper notebooks and textbooks in the Czech Republic which is one of 9 chosen EU countries involved in the European Schoolnet (EUN) programme [10]. According to an EUN survey the majority of students say that ICT (Information and Communications Technology) have now been implemented into 20% of the classrooms in the Czech Republic [11]. Such sites as Moodle and LMS (Learning Management System) have now been introduced at institutes of higher learning, and have been designed specifically for the learning and testing of languages. For example, Milan Hauser has found that the introduction of interactive whiteboards in primary schools in the EUN programme has many learner benefits, but ICT should not be used for more than about half-an hour [13]. Similarly, advocates of e-learning like Ivana Pekarová and Vera Bitljanova at the University of Liberec, believe it should play a key role in education, but have also pointed out that it works best in having it in conjunction with blended learning scenarios [23].

THE INFLUENCE OF DIGITAL MEDIA

Different studies assess that there are both harmful and beneficial effects from Internet use. More specifically, there are a number of articles being written on the influences of these social network/digital media on and in the classroom. They specially focus on how the smartphone and the teacher are competing for a student's attention. Do digital media enhance and improve lessons? Are they forms of distraction, or both? Liz Kolb in "Cell Phones in the Classroom" has called such devices "powerful classroom tools" and no longer classroom distractions [15]. On the contrary Bernard McCoy of the University of Nebraska [19] gives a list of reasons why electronic devices should be banned from schools. He doesn't see it as just a step for students on the road from writing with styli and slates to using electronic textbooks. And similarly for teachers to go from blackboards to whiteboards and then to electronic boards. Of course, there remains the question of whether introducing data protectors and other electronic media into the classroom is making (language) learning more effective. Is the pro-technology approach sometimes being taken just for its own sake? And by advocating it too much, are we not forsaking effective learning techniques and in fact throwing the baby out with the bath water?

Whether it is making us more clever or not, people are spending less time exposed to digital media sites, such as when they are watching a video or reading a text online [22]. Nevertheless, there are some studies that say we may be able to absorb more information in a shorter exposure time when we use digital media. And we are now

becoming more creative due to the restrictions placed on us by companies such as Twitter to read/create the news or a message in 140 characters or less.

One way to monitor people's concentration is to use attention span studies. Although they differ in the exact number of minutes or seconds of what actually takes place, and the fact that Wilson and Korn have found that many of them have been imprecise, [28] they can give us a general overview of what is happening in a classroom or auditorium. More specifically we have to clarify if we are referring to short-term focused attention or more sustained attention and take into consideration such influences as the type of stimuli being introduced, the type of interaction between participants, what part of the day it is and if the audience/students are enjoying themselves. Although a university class can last up to 90 minutes, some top end studies show that an audience/class can only keep some sort of sustained attention up to 40 minutes by refocusing on the same thing. Nevertheless, in Figures 3 and 4, you can see that even for the same agreed-upon period of time (40 minutes), there are various findings and interpretations of what actually takes place during that time, and no agreement on the position of the attention span at the beginning and end of a session.

Figure 3 The 40-minute attention span - example 1 [20]

Figure 4 The 40-minute attention span – example 2 [5]

More conservatively, some experts on giving (Power Point) presentations recommend keeping them down to about half that time before an audience's attention drops, (See Figure 5).

Source: M62 presentation "The right structure"

Figure 5 The 20-minute attention span [18]

With proper timing, Brad Vander Zanden writes that this 20-minute period can be extended by giving your audience/class a “break” by introducing such activities as giving a demo or telling a story [27]. At the same time, Wilson and Korn have found no specific evidence to support the common belief that the typical student attention span is about 10 to 15 minutes long, and no reason why teachers should chunk content to best facilitate learning and retention [28].

More dramatically some recent studies have shown both a considerable drop in both our sustained and focused attention spans. According to the infographic “How Social Media is Ruining Our Minds” our sustained attention spans have been reduced from 12 minutes to 4 minutes in just ten years [2]. In a behaviour study [17] Lloyds TBS Insurance has found that it is our modern lifestyles that have shortened our focused attention spans to mere seconds, and this has led to a striking and more costly increase in domestic accidents (See Table 2). An interesting finding of the study was that older people (who presumably have less exposure to digitalized media) are able to keep their interest on something longer than younger people.

Table 2 Insurance Claims as related to intention spans [17]

Average insurance claim for accidents by region							
Region	UK	North East	North West	York/Humber	E.Mids	W.Mids	
Ave. claim	1,400	1,300	1,410	1,300	1,370	1,425	
Region	East Anglia	S.East	S.West	London	Scotland	Wales	
Ave. claim	1,190	1,525	1,260	1,960	1,560	1,1190	
Attention span in seconds by sex, age and region							
	UK	Male	Female	18-34	35-44	45-54	55+
Att. Span	5.07	5.03	5.11	5.01	5.18	5.18	5.10
Region	N.East	N.West	Yorks/Humber	E.Mids	W.Mids	East Anglia	S.East
Att.Span	4.15	5.18	5.17	5.43	5.20	4.47	5.02
Region	S.West	London	Scotland	Wales			
Att.Span	4.40	4.47	5.18	6.07			

In another study, “Not Quite the Average: An Empirical Study of Web Use, [26] it was found that the average focused attention span has dropped by 4 seconds from 2000 to 2012 (See Table 3)

Table 3 An Overview of Attention Span and Internet Browzing Statistics [22]

Attention Span Statistics	Data
The average attention span in 2012	8 seconds
The average attention span in 2000	12 seconds
The average attention span of a gold fish	9 seconds
Percent of teens who forget major details of close friends and relatives	25 %
Percent of people who forget their own birthdays from time to time	7 %
Average number of times per hour an office worker checks their email inbox	30
Average length watched of a single internet video	2.7 minutes
Internet Browzing Statistics (Taken from 59,573 page views)	
Percent of page views that last less than 4 seconds	17 %
Percent of page views that lasted more than 10 minutes	4 %
Percent of words read on web pages with 111 words or less	49 %
Percent of words read on an average (593 words) web page	28 %
Users spend only 4.4 seconds more for each additional 100 words	

We now have instantaneous information available on our smart phones and tablets that make it less necessary to think in old ways. We now have software to translate for us by just typing in a text. We have long had electronic spellers and grammar checkers to check for our mistakes. There is software in phones that can automatically translate from one language to another just by speaking into them. By pointing smartphones with the most up-to-date applications at an unknown sign or text you can have it translated back via Google. Communication has also been simplified. Understandable text messages with familiar abbreviations can be sent without punctuation or with a smiley to convey the tone of what we mean or how we are feeling. Nevertheless, as various neurological studies have shown there are more evident accompanying chemical changes (in the levels of oxytocin, adrenaline and dopamine) that also take place when using digital media [2]. In Figure 6 you can see specialized MRI brain scans showing multiple structural changes in the brain’s activity as new neural connections are formed when people are in repeated contact with electronic devices [12].

Figure 6 Brain Scans comparing the active areas of the brain when reading text or using the net. [14]

One UCLA study has found that neurologically normal volunteers were able to change their brain activity patterns and increase function after just one week of searching the web [4]. Another study has seen more activity in the problem-solving and decision-making areas of the brain than in the brains of those who do not use the net [24].

THE NON-DIGITAL RESPONSE

Those language teachers not comfortable with digitized media or skeptical of its real benefits must find new competitive ways of keeping and stimulating student's attention for shorter time periods. According to Assisted Living Today [2] young people are being used to receiving (processing and perhaps retaining) information in much faster ways than the pace laid out by traditional language learning textbooks. This effect and our sped-up lifestyles could be a (partial) reason for increasing impatience or boredom with traditional learning methods. Whether this fact is accepted or not, these competing digital attractions/distractions make it necessary for teachers to find ways of making lessons more interesting, and to go beyond just following the literal instructions in a textbook and relying on recordings of people using the correct way of speaking.

With this knowledge in mind, a different approach could be used to supplement the education of students who didn't have a similarly oriented secondary school as the faculty they study at and to enrich those who did. It is based on using target vocabulary, concepts and grammar and applying them in different forms at critical times rather than only following the instructions of a curriculum textbook.

An example of this approach was applied during a semester on a weekly basis at VŠB-TUO. After attendance was taken, and administrative matters cleared up, an attention-grabbing exercise, a short guessing game of "Who Am I" (See Appendix 1a) or some fun with logic puzzle started each class. This was followed by a short review (See Appendix 1b) of the previous lesson and after about the first few minutes, when the attention span of students usually starts to drop, students were given a word/phrase on a slip of paper and had to find an equivalent matching word in English or Czech. These were words, phrases and expressions which would be dealt with in the lesson, and would provide a good base (and a list of vocabulary) before any reading, writing or listening exercises connected with the textbook began. During this activity, all types of dictionaries can be used or students can ask a teacher or fellow student for help or advice. After this activity students settled down again with the list of vocabulary in English (and their own native tongue), and started to concentrate on the exercises or articles in the textbook.

Similarly, other curriculum-based exercises were interspaced with other activities to repeat the concepts/vocabulary, like Bingo (See Appendix 2) in which the words/phrases used in the textbook are described. This can again be followed by the curriculum specified in the textbook, and supplemented by some topical word search or criss-cross activity. (Some textbooks also provide these types of activities but not usually on a regular basis). In this way students can repeat target words and phrases in different more varied forms. There are also many supplementary activities which can be applied between curriculum-based exercises, such as betting play money on whether the grammar in a sentence is correct, using analogy games (for example, "customer to supplier is the same as credit to ____" or "pretty to beautiful is the same as warm to ____"), activities focused on the similarities of words in English and those loanwords adapted into a student's mother language, (of course some basic knowledge of the students' mother tongue is required), co-operative information collection activities and exercises that rearrange target letters, words and phrases to reinforce spelling and word order.

HOW EFFECTIVE IS THIS TECHNIQUE?

How interesting and effective are these supplementary tools in helping students better master a target language? To get feedback an anonymous questionnaire (Appendix 3) was distributed towards the end of a semester to 200 students at VŠB-TUO (from the Faculties of Economics, Mechanical Engineering, Electrical Engineering and Computer Science, Metallurgy and Materials Engineering and Safety Engineering) who were exposed to both curriculum and non-curriculum type sources. It was also used to find out how students generally view digital media in language learning. It consisted mostly of a description of language learning activities and was based on what students see as helping them learn and improve their language skills, that is on a student's perception of what he/her believes is helping him/her more. The activities were designated beforehand as supplementary/enriching (S/E) activities and/or course of study (CoS) activities directed by the contents of most language study textbooks used at VŠB-TUO. The descriptions were ordered randomly in the questionnaire, mixing the descriptions of usual S/E and CoS activities and students had about 10 minutes to decide if they were in some way helpful or not in language learning. There were also 3 neutral points, which could be applied to either category, about cooperative and competitive activities, and the giving of homework. There is of course some overlap in assessing if a description could be exclusively S/E or exclusively curriculum-based, and S/E activities were deemed as additional material not part of the teaching curriculum.

The questionnaire was divided into four sections – the type of school previously attended, the number of years of previous language study, the importance of the four basic language learning skills, and the helpfulness of specific language learning activities. And here are the findings:

a) Type of school

The results showed that more than half of students at technical faculties had studied at vocational/technical schools and also more than half of students studying economics at the Economic Faculty come from business academies. (See Table 4).

Table 4 Type of study and corresponding secondary school in figures and percentage.

Source: The Questionnaire in Appendix 3

Faculty	Total	From a business academy	From other types of school
Economic	67	37 (55.2%)	30 (44.8%)
	Total	From a technical school	From other types of schools
Technical Faculty	133	74 (55.6%)	59 (44.4%)

It also showed that there were not any students from conservatories or other types of education institutes not indicated by the questionnaire, and that all but 5 students came from state-funded schools. Although many technical students came from some type of vocational/technical school (with such specializations as fire-fighting, chemistry, metallurgy and electrical engineering), there were also a large number of students coming from gymnasia without specializations and from business academies. The specializations of the 9 students who studied at specialized gymnasia included languages, IT, sport and agriculture. (See Table 5)

Table 5. The type of school attended before university.

Source: The Questionnaire in Appendix 3

	Number of students	%
Specialized gymnasium	9	4.5
Non- specialized gymnasium	64	32
Conservatory	-	-
Technical/Vocational School	75	37.5
Business Academy	52	26

b) Years of study

According to the years of study of a foreign language before entering university almost 60% of students had studied English from 10-12 years. About 37% had had language study 9 years or less. The two extremes were 2 years for one student from a technical secondary school and 20 years for a student who studied at a private school specialized in the English language (see Table 6)

Table 6: Years of language study before entering university in figures and percentage

Source: The Questionnaire in Appendix 3

4 years or less	5-6 years	7-9 years	10-12 years	13 or more years
18 (9%)	5 (2.5%)	50 (25%)	118 (59%)	9 (4.5%)

c) The four basic skills

In ranking what basic language skill was most important some students gave equal importance to more than one skill, and they overwhelmingly ranked speaking over listening, reading and writing (See Table 7).

Table 7: The results of what basic language skill is most important for you.

Source: The Questionnaire in Appendix 3

	Reading	Writing	Listening	Speaking
Most important	20	11	53	144
Second most important	61	50	93	27
Third most important	62	56	35	14
Fourth most important	38	70	14	5

d) The main questionnaire itself

According to the completed questionnaires the respondents considered 20 of the 24 descriptions of activities as helpful or rather helpful, that is 83% of the activities (see Appendix 4). All activities, under the category S/E were seen as helping students learn and improve their language skills. The activities of playing bingo and matching words in English and Czech, which focus on the target words and phrases to be dealt with in the upcoming lesson were valued most, along with a review of the previous lesson. Most CoS-based activities were evaluated as positive in some way, with the practicing and explanation of grammar seen as the most valued, along with exercises matching words and descriptions. The activities of preparing/making presentations and of writing essays were seen as unhelpful in some way by about 50% of the respondents. Although considered participatory and therefore usually considered as effective in learning languages, we can only speculate why they are seen as unhelpful. Perhaps there too little practice with writing essays in a foreign language at secondary school, or students find the topics boring or tedious. Perhaps making a presentation in a foreign language in front of a group of people seems too daunting an experience, when it's easier to be just an equal member of a group, or it requires too much preparation time outside of class. It is also to be noted that about the same percentage of students didn't positively evaluate the introduction of electronic media into the classroom as a way of improving one's language skills. Again we can only speculate why. Perhaps many students, who (as the results of the questionnaire indicate) place speaking as the most important skill to improve, see direct human contact as making more sense, or see little difference between writing into a textbook or typing on a electronic keyboard. It was also of interest that the categories of making presentations, writing essays and using electronic media had also the highest percentage of "I Don't Know" answers. Under the neutral category, both competitive and co-operative activities were seen as positive in helping students learn a language, while almost 60% considered the giving of homework as ineffective. Again we can only speculate why. It's boring, too difficult, too easy or seems childish. It's not a priority, teachers don't make a difference between those who do homework and those who don't, it doesn't improve their English nor ability to speak.

CONCLUSION

From the results of the questionnaire and from the information provided above, it has been shown the time-honoured methodology prescribed by a language learning textbook is basically considered an effective way to learn a second language. And that both passive and participatory teaching methods (as designated by a learning pyramid) can be efficiently used to target the four basic skills. It has also shown that textbook-bound learning could be enhanced by the practice of introducing extra stimulating activities at critical times when attention is usually dropping, which only a teacher him/herself can recognize, as various attention span studies can not exactly pinpoint when this happens. They can also be used for activities considered less interesting as a way of reinforcing the learning process in a more fun way. The insertion of these types of sources could also provide an opportunity for bringing those students with only a few years of language learning closer to those who have had many more. It could also be the way to narrow the gap between those students who have/have not been exposed to a certain area of study at secondary school. The introduction of more (less teacher-dominated) speaking oriented activities or courses, as indicated in the questionnaire and pointed out by KD, is another. Of course, the effectiveness of this methodology could be proven more by comparing the test results of those who have used and have not used supplementary materials in their lessons.

Although this approach is concentrated on the study of English (which has the most resources available) at a specific university, it could also be applied to other languages and other types of universities. It is a question of finding the right balance of what non-digital teaching sources to insert into course curriculum and finding the right timing when to use them. Despite the doubts brought up by students in the questionnaire and the concerns

brought about by more scientific attention span studies on the effects of digital technology, there is also room for the proper integration of teaching sources in a more blended approach to learning. Language learning textbooks now have references to different digital links to be used to enhance lessons. Being able to record a presentation on You Tube or being able to compose an essay using cited Internet sources may be ways of making these types of activities more attractive and a novel way of introducing digital media into the classroom. It is just up to the teacher to know when and how to use these sources, and to try to keep students more active in the learning process. It is likewise up to the students to know how and when to use devices like smartphones for looking up unknown words or concepts and not for checking and sending text messages.

After all, the concept of learning through game-like activities, and not just dry rote learning is more fun and well-known in the Czech Republic. Native son Jan Amos Comenius, one of the first theorists to write systematically on language learning, believed that the best learning must be accompanied by sensation and experience. Losing “money” on a bad bet on whether the target grammar of an English sentence is correct or winning a sweet or accumulating points for active participation during a game of bingo is one possibility. Another possibility is to watch a short scientific experiment online to help clarify something in the course curriculum. The question is if one method is more effective than the other, and if a teacher can find the time and effort to make lessons more attractive.

Appendix 1a

An example of “Who am I”? The teacher gives five clues about a well-known person and the students try to guess who the person is.

Clues: I was born in 1975 in Orlando, Florida.

My mother is from Thailand

I have the same name as an animal, but my real name is Elrick.

My family name is another word for forest.

I became the youngest person to win The Masters

Answer: Tiger Woods

Appendix 1b

A short review - The students are given about seven definitions of words and phrases connected to the previous lesson and they have to try to figure out the hidden word from the first letters of each definition

An example taken from the textbook Cambridge English for Engineering, Mark Ibbotson, Cambridge University Press, 2008)

		ANSWERS	
Cambridge Engineering pages 70 – 71			
_____	something not real	MOCK UP	M
_____	efficiency	EFFECTIVENESS	E
_____	_____ test	ACID	A
_____	full-_____	SCALE	S
_____	opposite of attach	UNATTACH	U
_____	trial _____	RUN	R
_____	effectiveness	EFFICIENCY	E

An example taken from the textbook Technology 2, Eric H. Glendinning and Alison Pohl, Oxford University Press, 2008

Technology 2 pages 4 – 5			
_____	wide _____	RANGE	R
_____	make money	EARN	E
_____	the opposite of right	LEFT	L
_____	civil _____	ENGINEERING	E
_____	a type of student	APPRENTICE	A
_____	applied _____	SCIENCE	S
_____	_____ qualifications	ENTRANCE	E

Appendix 2

BINGO: the students listen to the teacher's description of the words and phrases they have on the paper and have to find them on a bingo card and call them out. If a student has 5 words/phrases together, vertically, horizontally or diagonally, he/she wins the round, and is somehow rewarded. This can be repeated one or two more times to emphasize the vocabulary.

An example of a list of vocabulary and bingo cards taken from the textbook *The Business*, Allison and Emmerson, Macmillan Publishers, 2007

The Business Vocab: pages 6 – 9|

To avoid:	vyhnout se	subsidiary:	dceřiná firma

Appendix 3 The Questionnaire

Circle what faculty are you studying at? Mechanical Engineering Mining-Geology Economic
 Electrical Engineering and Computer Science
 Metallurgy and Materials Engineering Safety Engineering Civil
 Engineering,

How many years of language study have you had before entering university?

What type of secondary school did you attend before attending this university?
 Please circle.

A a gymnasium with a specialization. Did the school have any specialization?

If yes, what _____

B a gymnasium without a specialization

C a conservatory

D a vocational (technical) secondary school. Did the school have any specialization?

If yes, what _____.

E business academy

Was it a state or private school? State Private

In learning and improving a foreign language what aspect is the most important for you?

Please rank in order 1 2 3 4, that is 1 = the most important, 2 = the second most important, etc.

Reading _____ Writing _____ Listening _____ Speaking _____

Please check which activities YOU BELIEVE are helping you to learn or improve your English

1 Helpful - 2 Rather helpful - 3 Rather unhelpful - 4 Unhelpful - 5 I don't know					
Warm-up activity: guessing "Who am I" or solving some puzzle					
Role playing according to the book's instructions					
Reviewing the previous week's lesson by filling in a slip of paper					
Doing competitive activities (against other pairs or groups)					
Doing grammar exercises: filling in the blanks or transferring tenses					
Matching words in Czech and English on slips of paper					
Reading and translating of articles and answering questions on them					
Playing bingo with the target phrases and vocabulary					
Doing co-operative activities					
Weekly word searches of target vocabulary					
Listening to taped dialogues/texts or a transcript read by a teacher					
Weekly criss-crosses (crosswords) with the target vocabulary					
Having a group discussion on how to solve problems in a specific field					
Writing essays					
Making presentations in front of a teacher or class					
General quizzes					
Using electronic media (including electronic textbooks) in class					
Betting play money on English grammar or facts					
Matching words and their descriptions					
Talking about similar words taken from English which are used in Czech					
Having English grammar explained by the teacher					
Receiving awards (such as candies) or accumulating points					
Being assigned homework					
Doing collocations (Matching partly or fully fixed expressions)					

Appendix 4

The results of the 4th part of the questionnaire in order of ranking in percentage

Description of Activity	Rather Helpful/Helpful	Rather Unhelpful/Unhelpful	I Don't know
Supplementary/Enriching (S/E)			
Playing bingo	87	13	-
Previous lesson review	85.5	11	3.5
Matching slips of paper	84	16	-
Warm-up guessing game	83.5	17.5	-
Receiving awards/points	83	12	5
Comparing English/Czech words	77.5	20.5	2
Doing crosswords	74.5	23.5	2
Doing word searches	72.5	19.5	8
General quizzes	71.5	24	4.5
Betting on grammar/facts	66.5	24	9.5
Course of Study (CoS)			
Matching words/descriptions	85.5	9.5	5
Having grammar explained	85.5	12.5	2
Doing grammar exercises	80	19	1
Discussing specific problems	78.5	20	1.5
Reading/translating articles	74	22	4
Doing collocations	70.5	18.5	11
Listening to tapes	68.5	27.5	4
Role playing	59.5	30.5	10
Writing essays	42	47	11
Using electronic media	42	45.5	12.5
Making presentations	36	50.5	13.5
Other			
Competitive activities	88	10.5	1.5
Co-operative activities	82.5	14.5	3
Receiving homework	34.5	58.5	7

Abstract¹²⁴

During the pilot implementation of English as a foreign language to 6 years olds in Greek primary schools, a survey of teachers' attitudes reveals that the learners' difficulties were often ascribed to specific learning problems especially among non-native speakers of Greek. If this is correct then the response is alarming but reveals some dangerous misconceptions if the teachers are wrong. Foreign language teachers are rarely trained in teaching children of this age. The present study aims to investigate the accuracy of these reports. 75 questionnaires were administered and then 21 interviews with the teachers were conducted and the findings reveal the misconceptions the teachers were under. The results demonstrate the necessity for informing, updating and training teachers involved with foreign languages at this age. This is an innovative research study appearing for the first time in Greece on a subject that is in a real need of further research.

1. Context of the study

In a European context where early foreign language teaching has acquired a great significance and the introduction of EFL programmes for young learners in schools has become more and more frequent, Greece has also followed this tendency with the introduction of English as a compulsory subject in some schools at the age of 7 since 2010. The Greek EYL project, also known with the acronym PEAP (<http://rcel.enl.uoa.gr/peap/en>), has been designed and carried out by the University of Athens at the Research Centre for Language Teaching, Testing and Assessment (RCeL). Experts in the field of Early Language Learning from the University of Athens and the University of Thessaloniki have collaborated for the design and implementation of the programme.

The general aim of the PEAP programme is to develop young learners' social literacies through English and this is the foundation upon which the PEAP curriculum, its syllabuses and instructional materials have been based. The programme also aims at familiarizing young learners with English as well as helping them develop a positive attitude towards the language and foreign language learning in general. PEAP students are firstly introduced to spoken language through a data bank of creative activities at the teacher's disposal, which can be adjusted to student needs.

The present study deals with the issue of learning difficulties and their manifestation in very young learners as they learn English as a foreign language in Greek public schools. The aims of the study aims are:

- (a) to shed light on the teachers' perceptions and possible misconceptions regarding learning difficulties at a very young age and
- (b) to investigate whether (and which) young learners' characteristics tend to be misinterpreted as signs of a learning difficulty in early language teaching.

What motivated research in this particular area was an interesting finding of a questionnaire survey seeking to profile the teachers who taught English within the context of the programme in the first year of its implementation. One of the striking findings of this study was that half of the respondents (49%) claimed that several students in the PEAP classes seem

¹²⁴ *This research project is funded by the Research Committee of Aristotle University Greece (code: 89508)*

to have some kind of learning difficulty. Therefore, we decided to further investigate the area of learning difficulties in young learners beginning with teachers' perceptions on the issue.

The idiosyncratic characteristics of young learners were an additional reason for proceeding to further research as they can cause confusion to teachers. Very young learners usually tend to learn quickly but forget easily, have a short attention span and absorb information only when motivated. They are kinaesthetic, they learn by making and doing and they may go through a silent period at first. This unique profile can become extremely complicated, especially when combined with learning difficulties.

For the purposes of the study and in order to explore the above questions, a two-phase research was designed which is presented in detail below.

2. Exploring the existing literature in the Greek context

Before proceeding to the description of the methodology employed in the present study, it is worth exploring briefly the already existing studies in the field of learning difficulties in Greece.

The majority of studies concerning the issue of learning difficulties carried out in the Greek context deal with the learners' first language acquisition while few studies focus particularly on dyslexia in the EFL classroom (Lemperou, Chostelidou & Griva, 2011; Andreou & Baseki, 2012; Goudi, 2010). In the case of L1 acquisition, several research studies are concerned with the learner's family environment (Panteliadu, 2007), with the impact of learning difficulties on the student's overall school performance (Panteliadu & Patsiodimou, 2007; Sakkas, 1999) or with the learner's reading and writing skills (Protopapas & Skaloubakas, 2008). In some cases, such factors as student age are taken into account, thus separating students in different age groups subject to analysis (young learners, teenagers and adults with learning difficulties) (Papatheofilou, Chatzivasili, Poga, Kallinaki & Aliferi, 1993; Nousia, 1990).

However, learning a foreign language is a great challenge for learners with learning difficulties, especially if one considers the difficulty of those learners to cope with tasks while learning a foreign language (Crombie, 1995). What has hitherto been investigated in the Greek context concerning this issue, focuses mainly on student performance (particularly of dyslexic students) and on EFL teachers' perceptions and practices with regard to dealing with dyslexia in secondary education. For instance, Rontou (2012) focuses on the differentiation of teaching methods, and on the extra time needed in class for learners with dyslexia in secondary school. EFL teachers' perceptions as regards the issue of dyslexia in Greek state secondary schools have also been explored (Gouzkouri, 2012). Various other studies, which are beyond the scope of the present study and therefore will not be mentioned in detail, deal with the difficulties Greek students face in spelling English due to the opacity of the English language as opposed to the transparency of the Greek language (Spencer, 2000).

Although numerous studies conducted investigate students' performance or the EFL secondary school teachers' perceptions towards learning difficulties, other issues, such as the teacher's ability to recognize and distinguish difficulties in a primary school setting, have yet to be adequately examined. Lemperou (2009) has attempted to identify EFL primary school teachers' experience and views on the challenges of dyslexic children in the mainstream classroom. An investigation of the inclusion techniques employed by state primary school EFL teachers in Greece in order to promote the successful incorporation of students with dyslexia in the general classroom has also been made (Katrini, 2005).

However, and bearing in mind that the PEAP programme constitutes a special EFL context, where school literacy has not yet been introduced and children are exposed to a foreign language at a very young age, it seems as though the issue of learning difficulties in the particular context requires further research. Therefore, the present study is an attempt to investigate the EFL teachers' perceptions of learning difficulties in the PEAP classes and their experience with these learners in general.

It has to be clarified at this point that the term “learning difficulties” in this study is conceptualized as a broader term than the term “dyslexia” as the latter is used in most studies so far. The concept of the “learning difficulty” is hereafter used to refer to students who cannot cope efficiently with basic reading skills, written expression and reasoning in combination with memory and/or attention problems as well as several perceptual disorders, such as the inability to recognize, discriminate and interpret stimuli (Mercer, 1997). This conceptualization of learning difficulties has guided the development of the research tools of this study, used in two research phases, which are presented and explained below.

3. Methodology and data collection

3.1 First research phase: a questionnaire survey

In the first research phase, a questionnaire survey was conducted with a view to tracing PEAP teachers’ perceptions concerning learning difficulties in young learners, as well as gathering information on possible misconceptions on this area, which would be further investigated in the second research phase (i.e. the teachers’ interviews). The tool employed was an online questionnaire designed by the working team for the elicitation of data on the PEAP teachers’ profile, their views on what a learning difficulty is and its impact on foreign language learning at a very young age.

More specifically, the tool was divided into three sections; in the first section the respondents were asked to provide us with their demographic characteristics, including their years of teaching experience in the public sector in general and the PEAP programme in particular. The participants were also asked to evaluate their knowledge in the field of learning difficulties, as well as to specify on how they have gained it (e.g. their studies, seminars, etc.). The second part of the questionnaire aimed at investigating the teachers’ perceptions on learning difficulties and thus, the participants were asked, among others, to describe those student behaviours which they consider a sign of a learning difficulty, to outline the profile of students with learning difficulties and provide their own definition of learning difficulties. In the third and final part of the questionnaire, the respondents commented on the teacher’s role when realizing that a student might be facing a learning difficulty. Most items of the present tool were open-ended questions as the working team was aiming at a qualitative analysis of the teachers’ views.

The participants were contacted by the School Advisors of English, who kindly accepted to administer the tool to the PEAP teachers in the area of their responsibility (snowball sampling). Although the questionnaire survey took place in the beginning of the school year when several English teachers have not yet been appointed to their schools, 75 PEAP teachers in state schools all over Greece responded to this call and completed the questionnaire.

3.2 Second research phase: Interviews

Moving on to the second phase of the research, a structured interview scheme was designed and divided into two parts. The first part contained a number of statements of student behavior classified under four key categories (Reception of oral speech, Production of oral speech, Reading and writing, Reasoning and inclusion in the school environment). Several items have been adopted by Panteliadu & Sideridis’ standardized test of tracing learning difficulties (Panteliadu & Sideridis, 2008). The participants were then asked to evaluate these statements as signs of learning difficulty, taking into account their experience in class. They could answer positively, negatively or state that they do not know whether a certain behaviour signifies the existence of a learning difficulty or not. Then, they were asked to contemplate on the frequency of encountering each of the stated behaviours in their classes. As the distinction between signs of a learning difficulty and typical young learner characteristics can be difficult to make, the research team deliberately included some statements in the interview scheme, which were descriptive of typical young learner characteristics and the participants’ answers to these specific questions were separately evaluated.

The second part of the interview contained general questions about the teachers' experience with children with learning difficulties. The questions in this part revolved around the following three axes of teacher experience: a) their perceptions of whether bilingual children exhibit signs of learning difficulty in the PEAP classes, b) how the reactions of children with learning difficulties change as their school experience increases and c) the impact of the existence of children with learning difficulty in class on the rest of the children as well as on the teacher's role. Finally, teachers were encouraged to make general comments and express possible problems on the issue of dealing with very young learners with learning difficulties in the English language classroom.

In this research phase, the participants were 21 respondents in the questionnaire of the first phase, who have willingly agreed to participate in 20-minute telephone interviews, thus providing further detail on the issues touched upon in the questionnaire.

4. Results

4.1 Major questionnaire findings

With regard to the respondents' profile it should be noted that all of them hold a BA in English Language and Literature. A significant number of the participant teachers hold an MA in TEFL (34%), a few of them (14%) hold a BA in a different field and only a small minority (6%) holds a PhD in TEFL. The vast majority of the PEAP teachers who responded to the questionnaire were women (96%). As regards their age, half of the participants (50%) belonged to the 36-45 age group, 18% aged up to 35 years, and 32% were older than 46 years old. Moreover, half of those teachers have more than 16 years of service in the public sector, 32% of them have 6-10 years, 14% have 11-15 years and only 4% have 1-5 years of service. It is also of great significance that 44% of the respondents have been teaching English in grades A and B since the PEAP launch, 16% have been teaching in the programme for two school years, 24% for just one school year, while 16% of them have just been introduced to the programme. In addition, almost all the participants of the survey (98%) are currently teaching English within the context of PEAP.

The respondents were also asked to comment on the extent to which they consider themselves informed about learning difficulties. Only a small minority (6%) of the respondents declare that they consider themselves very informed, 36% of them consider themselves more or less informed, the majority (58%) claim they are a little informed on learning difficulties, while none of the participants stated that they are not informed whatsoever. What is really interesting though, is their source of information about learning difficulties. The vast majority of the teachers (76%) said that they have been informed in training seminars, 60% that their source is the Internet, 50% that they study bibliography on the field on their own, 42% that they get informed at academic conferences and seminars, 34% stated that their knowledge derives from their BA degree and only 4% that it derives from their MA degree. It becomes obvious that state school English teachers rely on their own initiatives to get informed about learning difficulties, as it is an issue they have to deal with on a daily basis in their classes.

Furthermore, almost all participants (98%) confirmed that they have encountered learners with learning difficulties in their PEAP classes. It is also worth mentioning that a great number of the respondents have estimated that more than 10% of their students face a learning difficulty (see table below).

Graph 1: Teachers' perceptions on the percentage of learners with learning difficulties in their classrooms

When the participants were asked to describe the learner behaviours that they consider a sign of learning difficulty, they have mostly referred to:

- hyperactivity
- poor concentration
- hostility
- inability to cooperate and adjust in the school environment

Many teachers also point out that the students' inability to remember words or sounds, a negative attitude towards writing, difficulties in articulating oral speech, shyness, lack of self-confidence, emotional instability, omission or reversals of letters/syllables, difficulty in holding the pencil or scissors and the inability to understand and follow the teacher's instructions may also indicate a learning difficulty.

All the above problematic behaviours according to the respondents tend to be signs of several learning difficulties such as Dyslexia, Dysgraphia, the Attention Deficit Hyperactivity Disorder (ADHD), the Asperger Syndrome or Autism. Most of the teachers asked also claim that students having a learning difficulty in acquiring their mother tongue, do so in English language acquisition as well.

With regard to this special student group profile, the participants highlight that they often tend to have a generally poor performance at school (i.e. not solely in the language classes). They also have a tendency to adopt problematic behaviour which could be a result of domestic violence, a poor academic and social background of their family or their personal low self-esteem. The respondents stress that these tendencies are often witnessed in immigrant children and their families and thus, teachers should not always conclude that they indicate a learning difficulty. Moreover, they declare that learners with learning difficulties usually find it demanding to cooperate with other students and adjust to the school environment.

In the definitions of learning difficulties, the participants articulated themselves, they referred to learning difficulties as a factor that makes the acquisition of new knowledge difficult for some students. They also stressed that students with learning difficulties are intelligent in their own unique way and that they need a different teaching approach. Below are some of the most interesting definitions provided by the respondents:

(a) *Having a learning difficulty usually means that the student finds no joy in learning something new, instead the learning process becomes an exhausting procedure often accompanied by the feeling of disappointment.*

(b) *Trying to avoid writing, illegible handwriting, difficulty in concentrating.*

(c) *A student who has a learning difficulty needs more time than other students when working on an activity, while s/he needs to discover his/her own way to memorize and recall information.*

(d) *Students with learning difficulties need reward and love, not rejection.*

(e) *Students with learning difficulties are intelligent students who are imaginative and artistic; they find it difficult to adjust to the rules and pace of others mostly because they are too slow for them. They seek for action, creative expression, release of the tension. They often fail to follow and understand linear stream of thought, reading or writing because their own boundaries are broader.*

As regards the teacher's role when s/he has an indication that a student has a learning difficulty, the participants stressed that it is their duty to:

- cooperate with the class teacher and the school principal
- inform, advise and support the students' parents
- seek for advice from experts in the field
- differentiate his/her instruction adjusting it to the student's needs
- support, protect and encourage the student highlighting his/her strengths
- keep himself/herself informed so that they are able to detect and face potential problems.

Finally, the majority of the state school teachers of this survey claimed that their experience in the programme did not change their perception of learning difficulties. Those who said that they gained some knowledge on the field, suggest that it derives from their newly-developed insight into teaching young learners.

4.2 Major interview findings

Using their background knowledge and their experience in the PEAP classes, 21 teachers participated in the interview and proceeded to an evaluation of a series of statements of learner behaviour. Interestingly, in this first part of the interview, most statements of learner behavior were considered as possible signs of a learning difficulty by the interviewees. However, after responding positively to the evaluation of some statements, many of the participants tended to comment that certain behaviours could also be attributed to the learners' young age. Upon reflection, they identified several additional causes, rather than the mere existence of a learning difficulty, such as the lack of school experience and the lack of practice in English or in general world knowledge on the part of the young learners. Generally, only 10-30% of the respondents tended to state that they did not know whether a statement was a sign of a learning difficulty or not.

Out of the four categories of learner behavior included in the interview and already described above, the statements most frequently evaluated by the participants as signs of learning difficulty were under the headings "Reading and writing" as well as "Reasoning and inclusion in the school environment". This is especially interesting as at the age we are discussing, children **do not** possess **literacy skills**. Specifically, "Reordering, replacing, omitting or adding letters when writing" was considered a sign of difficulty by 85,7% of the respondents, "Negative attitude towards writing" was pointed out as a difficulty by 81% of the respondents, while other behaviours, such as "Easily giving up the effort to understand" was considered a difficulty by 76,2% of the respondents. Similar answers were given for the following statements: "Difficulty in understanding written English (at word level) but relative ease when they hear the oral representation" (61,9% of the respondents), "Being easily distracted when they perform an activity" (66,7%), "Difficulty in discerning phonemes" (57,1%) and "Inability to identify the gist" (57,1%).

Moreover, most of the participants classified many of the most typical young learner characteristics of the aforementioned two categories as signs of a learning difficulty.

Specifically, the vast majority of the respondents (90,5%) categorized the learners' "Inability to concentrate for a long time" as a learning difficulty. Behaviours such as the "General difficulty in the initial steps of reading and writing skills development" and the "Signs of hyperactivity" were also characterized as learning difficulties by a percentage of 71,4% of the respondents respectively. More than half of the participants (61,9%) claimed that the "Difficulty to discipline and follow class rules" is a sign of a learning difficulty and almost half of them (47,6%) hold the same belief for the children's "Inability to consolidate and reproduce new knowledge effortlessly".

Apparently, the undoubted difficulty in differentiating between typical young learner behaviour and a possible learning difficulty accounts for the high percentage of respondents stating that these behaviours are signs of a learning difficulty. It should be noted at this point, however, that this is not always a misinterpretation on the part of the teacher as in many cases some of these behaviours might as well have been signs of learning difficulty.

On the other hand, some other statements were deemed as more of a natural and expected behavior by children at this age and at this level of school experience. These statements of learner behavior, which were classified as rather unlikely to be a learning difficulty, are presented below: a) "Difficulty in the comprehension of a quickly uttered phrase/relative ease upon slower repetition of the utterance" (71,4% of the respondents), b) "Misinterpretation of directions given in English" (61,9% of the respondents), c) "Recalling another word of the same semantic category in English (e.g. notebook instead of book)" (52,4% of the respondents), d) "Difficulty in the clear articulation of oral speech in English" (52,4% of the respondents), e) "Inability to recall and reproduce new knowledge easily" (42,9% of the respondents).

Therefore, the respondents appear to be more lenient when young learners show signs of confusion, misinterpretation or difficulty in English than in Greek. For instance, as regards the difficulty in the articulation of oral speech in Greek, almost half of the respondents (47,6%) consider it a sign of learning difficulty, as opposed to a much lower percentage (19%) who state the opposite. On the other hand, when it comes to the difficulty in the articulation of oral speech in English only some of the respondents (19%) answered positively while for half of them (52,4%) this is not a learning difficulty. It seems as though young learners' limited experience with English plays a determining role in their teachers' judgement.

Moving on to the second part of the interview, almost half of the respondents (47,6%) have had the experience of teaching a PEAP class for two consecutive years. In this case, all of them record increased school experience on the part of student as a key factor in alleviating possible learning difficulties and helping learners mature and improve their behaviour.

Regarding the issue of the combination of *bilingualism* and *learning difficulties*, some of the participants (38,1%) claimed they had witnessed learning difficulties in bilingual children. Few respondents (28,6%) stated that they had **not** spotted learning difficulties in bilinguals and a percentage of 33,3% of the respondents were not certain and refrained from providing a specific answer. In an effort to explore their views on this issue, most respondents (61,9%) stated that they do **not** consider bilingual learners as a group of learners more prone to learning difficulty as opposed to a percentage of 23,8% who report the opposite. Another interesting finding is that many teachers have described bilingual students as extreme cases (i.e. either as excellent students or as students of poor performance).

When it comes to the teacher's role in class, the majority of the respondents (71,4%) argued that learners with learning difficulties hinder their work in the PEAP classes. They further explain that by referring to the need for differentiated instruction and the extra planning involved in dealing with mixed ability classes (e.g. simplification of educational material, etc).

A categorization of the responses in the open questions (qualitative analysis) yields the following findings. The PEAP teachers participating in the survey almost unanimously ask for

special training in the area of learning difficulties. With respect to the Greek EYL project, they comment on its idiosyncratic nature in general, emphasizing on the carefully designed educational material, which helps soothe learning difficulties, as it familiarizes young learners with oral production, games and songs before the introduction of school literacy. Reference is also made to several other stakeholders, as the participants stress the need for informing parents, children and society as a whole on the issue of learning difficulties. Each of these stakeholders should be informed to the extent that this is necessary and can have a positive impact on the teaching process. Finally, the participant teachers point at the importance of their cooperation with the class teacher or even the kindergarten teacher where this is possible.

When reflecting on how they go about “diagnosing” possible learning difficulties in their students, the participants appear to have developed their own perceptions and “rules”, thus being more alert in certain cases. For instance, when they witness a persistent appearance of a “problematic behaviour” in a student even as s/he grows older, they tend to attribute it to the existence of a learning difficulty. This finding renders student age one of the most important factors in “diagnosing” and perceiving learning difficulties. Another factor of great importance for teachers is the combined realization of certain behaviours in a child (e.g. hyperactivity along with a shorter attention span). Finally, frequency and intensity in the manifestation of the “problematic behaviour” also appear to count.

5. Conclusions

Examining the results of the present survey, it becomes evident that the respondents have already formulated certain views on what constitutes a learning difficulty and how they can go about dealing with it. However, they stress the need for further training which will enable them to recognize and cope with learning difficulties. Moreover, one of the significant findings of the current study was that most of the participants seem to be aware of young learners’ characteristics and of the fact that PEAP students belong to a special group of learners who need time to adjust in the school environment and especially before being introduced to literacy.

Still, teachers appear to misinterpret behaviours that relate to adjustment in the new sector with learning difficulties (hyperactivity, poor concentration, discipline, inability to follow instructions). There appears to be confusion between a typical young behaviour and learning difficulty. Teachers also indicate specific language learning problems in learners who have not developed literacy skills (negative attitude to writing, dyslexia, shyness to read).

What is really encouraging is that the participants have confirmed that the educational material used in the context of the programme helps students with learning difficulties participate in the learning process and build their self-esteem, promotes differentiated learning and gives equal opportunities to all students.

The respondents also admit that bilinguals do encounter several difficulties in language learning but they stress that this is due to their poor linguistic environment and does not always indicate a learning difficulty.

Some additional questions that would be interesting to explore in more detail in the future are:

- How can a teacher best deal with mixed ability classes of young learners?
- How can a teacher handle the parents whose children exhibit a degree of learning difficulty?
- To what extent is knowledge about learning difficulty in one’s mother tongue applicable to foreign language acquisition?

Finally, an important limitation needs to be considered. The current study has only examined a small sample of PEAP teachers and the results presented are tendencies concerning the teachers’ perceptions on learning difficulties. In order to draw safer and more accurate conclusions which can be generalized for all PEAP teachers, a larger scale survey should be carried out. The current study, however, along with the emerged interesting results can be of

use to English teachers, teacher trainers and policy makers especially because teachers strongly emphasise their need for further training on the issue of learning difficulties.

¹Anadolu Üniversitesi, Bilgisayar ve Öğretim Teknolojileri Eğitimi Bölümü

Hızla gelişen teknoloji sayesinde her gün yeni ürünler sunularak yaşantılarımız zenginleştirilmeye ve kolaylaştırılmaya çalışılmaktadır. Eğitsel süreçleri zenginleştirmek ve kolaylaştırmak amacıyla teknolojinin yoğun olarak kullanıldığı alanlardan biri de eğitim olmuştur. Bunun bir sonucu olarak da etkili, verimli, çekici öğrenmeyi sağlamak amacıyla, eğitime teknoloji entegrasyonunun sağlanması her bir eğitimcinin öncelikli hedefi haline gelmiştir. Bu noktada eğitimde teknoloji entegrasyonu sürecinde, göz önünde bulundurulması gereken hususların başında, söz konusu teknoloji veya teknolojilerin hedef kitle tarafından ne derece kabul göreceğinin ve ne düzeyde kullanılabileceğinin belirlenmesi ve bu doğrultuda düzenlemeler yapılmasının geldiği söylenebilir. Alanyazında çok sayıda teknoloji kabul ve kullanım modeli bulunmaktadır. Bu modellerden Teknoloji Kabul Modeli (Technology Acceptance Model-TAM), TAM 2 ve TAM 3 modelleri, Venkatesh (2003) tarafından Birleştirilmiş Teknoloji Kabul ve Kullanım Modeli (UTAUT, Unified Theory of Acceptance and Use of Technology) ile bir çatı altında toplanarak daha kapsamlı ve güncel bir model öne sürülmüştür. Bu model kapsamında geliştirilen ölçek, bilgi ve iletişim teknolojilerinin neredeyse tamamının kabul ve kullanımını ölçmek için uyarlanabilir niteliktedir.

Bu çalışmada Anadolu Üniversitesi, Eğitim Fakültesi'nde bir altyapı projesi ile etkileşimli tahtalar ile donatılan sınıflarda eğitim-öğretim etkinlikleri gerçekleştirilecek olan öğretmen adaylarının etkileşimli tahta kabul ve kullanım düzeylerinin belirlenmesi amaçlanmıştır. Bu amaç çerçevesinde, veri toplama aracı olarak UTAUT temelinde İngilizce olarak geçerlik ve güvenilirlik çalışması yapılan ölçek, araştırmacılar tarafından Türkçeleştirilip öğrencilerin etkileşimli tahta kabul ve kullanım düzeylerini ölçecek biçimde uyarlanarak kullanılmıştır. Anadolu Üniversitesi, Eğitim Fakültesi'nde, 12 farklı anabilim dalında, çeşitli kademelerde öğrenim görmekte olan 358 lisans öğrencisinden sözü edilen veri toplama aracı ile veri toplanmıştır. Elde edilen veriler parametrik testler ile analiz edilerek Eğitim Fakültesi lisans öğrencilerinin etkileşimli tahta kabul ve kullanım düzeyleri ortaya çıkarılmış ve öğrencilerin cinsiyetleri, öğrenim görmekte oldukları anabilim dalları ve sınıfları açısından karşılaştırılarak incelenmiştir.

Computer Education and Instructional Technology Department

The joint use of texts and graphics, called as “multimedia”, have been wide spread in many contexts as well as in educational settings. The most common use of multimedia components have been in distribution of informational content to learners. Also nowadays multimedia features are often being used in assessment activities. Several internationally recognized assessments such as Test of English as Foreign Language (TOEFL), European Computer Driving License (ECDL), Scholastic Assessment Test (SAT), and also some national tests (e.g. Turkish Middle School Attendance Exams) use multimedia in both test items and answer options abundantly. Majority of multimedia used in aforementioned test environments are in static format. There are some emerging questions regarding the use and quality of graphics in test environments such as the necessity of using them, when to use them, for who they are beneficial, and the aims of using graphics.

Some taxonomies classify graphics according their use in any content. Levin (1981)’s taxonomy of graphics is one of these frameworks in the literature. In this study, the graphics of Turkish Middle School Attendance Exams’ (OKS & OGES) 6th-7th & 8th Grade English achievement tests were examined in terms of quality, aim, type, content and context with reference to Levin (1981)’s taxonomy. The study is expected to provide findings that could have insights for selecting pictures to be used in the multimedia-based tests. Implications will be addressed and further suggestions will be made in the presentation.

ÖZET

Web 2.0 teknolojilerinden biri olan Vikipedi, kullanıcılar tarafından işbirliği içerisinde oluşturulan özgür, bağımsız, ücretsiz, reklamsız kar amacı gütmeyen bir internet ansiklopedisidir. Takımlara ve bireylere yeni bilgiyi ekleme, düzenleme ve yapıyı gözden geçirebilmelerini sağladığı yapısı aracılığıyla birlikte içerik üretme olanağı sağlamaktadır. Ancak bu teknolojiler bireyler tarafından amacına ve etik kurallara uygun kullanıldığı sürece fayda sağlayacaktır. Bu bağlamda sözü edilen teknolojilerin bilişim etiğine uygun kullanılmasına odaklanmak yerinde olacaktır. Bilişim etiği, bilim ve etiğin arasında bir alan olmasına ve onlara bağlı olmasına rağmen, hem anlayış için kavramsallaştırma hem de teknolojinin kullanımı için ilkeler sağlayan kendi doğrusu içinde bir disiplindir. Bilişim etiği gizlilik, doğruluk, fikri mülkiyet ve erişilebilirlik olmak üzere dört temel boyut olarak tanımlanmıştır.

Bu çalışmada bilişim etiği boyutları altında Vikipedi kullanımı incelenmeye çalışılmıştır. Nitel araştırma desenlerine uygun olarak desenlenen çalışmanın verileri Anadolu Üniversitesi Bilgisayar ve Öğretim Teknolojileri Eğitimi (BÖTE) Bölümünde öğrenim gören sekiz öğretmen adayı ve bir uzman ile yapılan küçük grup görüşmeleri aracılığıyla toplanmıştır. Öğretmen adayları ile yapılan görüşmeler her bir lisans düzeyinden 1 erkek 1 kadın olmak üzere ikişer kişilik dört adet küçük grup görüşmesi olarak gerçekleştirilmiştir. Elde edilen veriler betimsel analiz yöntemi ile analiz edilmiştir. Bu bağlamda veriler bilişim etiği ölçütleri altında düzenlenmiş ve bu ölçütler altında Vikipedi incelenmeye çalışılmıştır.

ABSTRACT

Wikipedia is a Web 2.0 technology of an internet encyclopedia. It is created in collaboration by users, free, independent, commercial-free and non-profit. This technology provides opportunity to create content together through the structure with teams and individuals who are able to add, edit and revise information. It has a valuable effect if it is used in accordance with the ethical rules by individuals. In this sense, it would be appropriate to focus on using this technology in accordance with the information ethics. Although Informatic ethics is an field between science and ethic and depend both of them, it is a discipline in own truth providing not only conceptualizing to understand but also to use of technology. Information ethics has four core dimensions as privacy, accuracy, property and accessibility.

Öğretme-öğrenme ortamlarını, öğretim programını ve alt yapıyı içine alacak biçimde öğretme-öğrenme sürecinin tüm boyutlarında teknolojinin etkili ve verimli biçimde kullanılması olarak tanımlanabilen eğitimde teknoloji entegrasyonu konusunda günümüze kadar gerek dünyada gerekse de Türkiye’de birçok proje yürütülmüştür. Türkiye’de yürütülen eğitimde teknoloji entegrasyonu projelerinden en güncel ve en kapsamlısı Fırsatları Artırma ve Teknolojiyi İyileştirme Hareketi (FATİH) Projesidir. FATİH Projesinin en önemli bileşenlerinden biri olan donanım kapsamında getirilen en önemli yenilik ilkökul, ortaokul ve liselerde her sınıfa etkileşimli tahtaların yerleştirilmesinin planlanmasıdır. Bu güne kadar etkileşimli tahta donatımı liselerde tamamlanmış, ilk ve ortaokullarda ise henüz başlamamıştır. Öğretmenlere bu proje ile sınıflara yerleştirilen teknolojileri etkili ve verimli kullanabilmelerini sağlamak için Milli Eğitim Bakanlığı tarafından hizmetiçi eğitimler verilmekte, ancak beklenen verim alınamamaktadır. Bu nedenle öğretmenlerimiz henüz hizmet öncesinde bu teknoloji ile tanışarak, gerek sınıf içi kullanımı gerekse de eğitimde etkili entegrasyonu konusunda gereken yeterliklerle donatılması oldukça önemlidir. Bu amaçla, öğretmen eğitiminde bu teknolojilerin etkili kullanılmasını sağlamak amacıyla Anadolu Üniversitesi, Eğitim Fakültesi’nde hazırlanan bir altyapı projesi ile tüm sınıflar etkileşimli tahtalar ile donatılmıştır. Proje ile birlikte öğretim elemanlarının da etkileşimli tahtaları aktif olarak kullanmaları beklenmektedir. Bu nedenle çalışmada Anadolu Üniversitesi Eğitim Fakültesi öğretim elemanlarının etkileşimli tahtanın öğretim süreçlerinde etkili kullanımına ilişkin beklentileri belirlenmeye çalışılmıştır. Araştırma kapsamında Eğitim Fakültesi bünyesinde bulunan 12 anabilim dalından üçer öğretim elemanı olmak üzere toplam 36 öğretim elemanı ile yarı yapılandırılmış görüşmeler gerçekleştirilmiştir. Görüşmelerden elde edilen nitel veriler içerik analizine tabi tutulmuştur. Araştırmanın bulgularının “Etkileşimli tahtanın sınıf ortamında katkıları ve sınırlılıkları”, “Etkileşimli tahtaların öğretme becerilerine etkileri”, “Etkileşimli tahta ile gerçekleştirilmesi planlanan etkinlikler”, “Etkileşimli tahta kullanım becerilerine ilişkin algıları” ve “Etkileşimli tahta kullanım becerilerini geliştirmek için yapılması önerilen etkinlikler” olmak üzere beş kategori altında toplandığı görülmüştür.

Reflections from a two-year Multimedia Learning Research Project

Research projects in the Academy require high levels of interaction, communication, commitment and synergy among their members. Furthermore, there are several common challenges in the projects to be confronted by the researchers. Concrete timeline, limited budget, outsourcing expertise, losing team members are some of these grand challenges. Running research projects in social contexts, specifically in educational environments do not decrease but increase the amount of challenges to be dealt with. The ever changing nature of individuals and several differences between educational settings make it difficult to predict and control the extraneous variables of researches.

In this paper, the experiences of our research team in doing a true experimental study in several Turkish government primary schools were presented. These experiences include the issues faced with school administrations, subject teachers, experimental settings, and- participants of the study- students. The two-year research process was addressed with a narrative approach and the ways the researchers hurdled problems during this period were elucidated. Further suggestions were made for the members of future projects in educational settings.

Özet

Günümüzde hemen her yaşta birey tarafından kullanılan web 2.0 teknolojilerinin en yaygın olanı sosyal paylaşım ağlarıdır. Sosyal paylaşım ağları; bireylerin kendilerini etkili biçimde ifade edebilecekleri ve paylaşımda bulunabilecekleri ortamlar sunması açısından bilgi ve iletişim teknolojileri içerisinde önemli bir konuma sahiptir. Sosyal paylaşım ağlarının sahip olduğu iletişim ve etkileşim özellikleri, bu ortamlara öğretme-öğrenme süreçlerinde kullanılabilme potansiyeli kazandırmakta; hem bireysel hem de grupla öğretim konusunda sanal ortam üzerinde önemli olanaklar sunmaktadır. Öğretimin bireyselleştirilmesi ve daha etkili hale getirilmesi sürecinde, öğrenenlerin öğrenme stilleri gibi bireysel farklılıkların göz önünde bulundurulması; etkili, verimli ve çekici öğrenmenin gerçekleştirilmesini destekleyen faktörlerden biridir. Bu çalışmada; bireylerin, bireyselleşmiş bilgi paylaşım olanakları sunan sosyal paylaşım ağlarını kullanma biçimleri ile öğrenme sürecinin bireyler açısından farklılıklar gösterdiğini ifade eden öğrenme stilleri arasındaki ilişkinin ortaya çıkartılması amaçlanmaktadır. Bu amaç doğrultusunda çalışmada, 2012-2013 öğretim yılında Manisa Celal Bayar Üniversitesi Eğitim Fakültesi'nde öğrenim gören 301 lisans öğrencisinden oluşan çalışma grubundan, sosyal paylaşım ağları sormacası ve Felder tarafından geliştirilen öğrenme stilleri indeksi aracılığı ile veri toplanmıştır. Çalışmanın sonuçlarına göre öğrenme stilleri indeksindeki “yaparak” alanına ilişkin ortalama puanlar ile sosyal paylaşım ağları sormaca maddeleri arasında orta düzeyde, pozitif ve anlamlı bir ilişki olduğu ortaya çıkmıştır ($r=.329$, $p<.001$). Ayrıca sormacadaki görsel alana ilişkin maddelerin ortalama puanları ile indeksteki “görsel” alana ilişkin ortalama puanlar arasındaki düşük düzeyde pozitif yönlü ($r=.172$, $p<.001$) bir ilişkinin olduğu, diğer alanlara yönelik anlamlı bir ilişkinin olmadığı sonucuna ulaşılmıştır.

Abstract

Social networking, which is being used by people of all ages today, is the most widespread Web 2.0 technology. It is important in information and communication technologies for providing individuals with environments to express themselves efficiently and share ideas. Communication and interaction features of social networking offer opportunities in a virtual environment for teaching-learning process in both individual and group studies. In the process of individualizing instruction and making instruction more effective, consideration of individual differences like learning styles is an important factor supporting effective, productive and attractive learning. This study aims to point out the relationship between learning styles and individuals' usage of social networks that provide individualized information sharing opportunities. For this purpose, data was collected via a social networking questionnaire and learning styles index developed by Felder, from 301 undergraduates studying at Manisa Celal Bayar University in 2012-2013 academic year. According to the results, there is a medium level, positive and meaningful relationship between the average scores in "active" score of the learning styles index and the items in the social networking questionnaire ($r = .329$, $p < .001$). Furthermore, there is a low level positive relationship between the average scores in "visual" score of the index and average scores of questionnaire items related to visual domain ($r = .172$, $p < .001$). There were no meaningful relationships for the other domains.

Anadolu Üniversitesi, isilk@anadolu.edu.tr

Yaşanmış ya da tasarlanmış bir durumu, bir olayı anlatan düz yazı türü olarak tanımlanan öyküler (hikayeler) gelişen bilgi ve iletişim teknolojilerindeki değişimlerle birlikte yeni bir boyut kazanmıştır. Bilgi ve iletişim teknolojileri ile birlikte dijital bir ortama taşınan öyküler dijital öykü olarak isimlendirilmiştir. Dijital öykü, dijital bir ortamda; ses, resim, görüntü, grafik, hareketli grafik, müzik ve metne dayalı anlatım olarak tanımlanabilir. Dijital öykü oluşturmanın amacı verilmek istenen mesajın duyuşsal boyut ile desteklenerek öğrenenlerin motivasyonlarını artırma ve öğrenme süreçlerini hızlandırmadır. Bu çalışmanın amacı bir devlet üniversitesinin Bilgisayar ve Öğretim Teknolojileri Eğitimi (BÖTE) bölümünde eğitim gören ve Eğitimde Materyal Tasarımı ve Kullanımı (EMTK) dersini alan öğrencilerin dijital öykü hazırlarken yaşadıkları sorunları belirlemektir. Araştırma tarama türü araştırmaya dayalı olarak gerçekleştirilmiş olup, araştırmanın verileri nitel veri toplama yöntemleri ile toplanmıştır. Araştırmanın katılımcılarını 2013-2014 öğretim yılında bir devlet üniversitesinin Eğitim Fakültesi BÖTE bölümünde EMTK dersini alan 76 öğrenci oluşturmaktadır. Araştırma verileri; anket, öğrenci ödevleri, öğrenci günlükleri yarı yapılandırılmış görüşmeler sonrasında elde edilen veriler oluşturmaktadır. Verilerin analizinde nitel veri analizi yöntemlerinden betimsel analiz kullanılmış ve veriler yüzde frekans ile görselleştirilmiştir. Bu çalışma sonucunda öğrencilerin karşılaştıkları sorunlar ortaya konmuş ve bu sorunlara ilişkin çözüm önerileri sunulmuştur.

NEW PATHWAYS IN INITIAL TEACHER EDUCATION

Dr Tim Lucas, Head of Programme PGCE Primary Part-time Route/School Direct Primary Lead, York St John University, United Kingdom

t.lucas@yorks.j.ac.uk

Keith Parker, Head of Programme PGCE Secondary/School Direct Secondary Lead, York St John University, United Kingdom

k.parker@yorks.j.ac.uk

Abstract

This paper outlines the response of a UK university to recent government initiatives to shift postgraduate initial teacher education from a university to a school-centred model.

New partnerships have been established and existing ones redefined as both university and school based staff have responded to the challenge to design new high quality teacher education programmes for both primary and secondary student teachers.

The way in which expertise has been shared is discussed, together with strategies for effectively integrating theory with practice. Consideration is given to the challenges this has presented to school staff as they shift from predominantly teaching children to educating student teachers, and to university staff as they relinquish overall control whilst maintaining responsibility for programme quality.

The paper concludes with a discussion of the tensions that have become apparent as the initial cohorts progress through the year and the expectations of key players in the programme.

INTRODUCTION – CONTEXT OF INITIAL TEACHER EDUCATION

In England there has been much debate surrounding the most effective way to train teachers in recent years. Much of the discussion has surrounded the respective merits of the key pathways into teaching; the traditional university route where universities train teachers in partnership with schools; the school based route and employment based route where training is done essentially ‘on the job’. In the last 30 years and particularly most recently there has been an increase in employment based and school-based teacher training, though the university route remains the most popular option. According to Smithers, Robinson and Coughlan (2012) there were 37,340 recruits to initial teacher training in 2010-11, nearly four-fifths to university courses, 16.6% to employment based initial teacher training programmes (EBITTs) and only 4.6% to school centred initial teacher training schemes (SCITTs).

It is possible to become a qualified primary or secondary school teacher in England through a number of different routes; taking a programme of initial teacher education (ITE) or initial teacher training (ITT) based at a university, college or school in order to be recommended for qualified teacher status (QTS). QTS can be recommended only by accredited providers of ITT, those universities, colleges or schools who demonstrate they can satisfy the criteria for ITT set out by the NCTL (the National College of Teaching and Leadership, 2013), an agency of the Department for Education. Accredited providers have been, and are still, inspected regularly by Ofsted (Office for Standards in Education), an independent and impartial organisation who seek to ensure quality and compliance with ITT criteria. The current framework for inspection is outlined in the Initial Teacher Education (ITE) inspection handbook (Ofsted, 2014). The terms ITE and ITT are often used interchangeably and there has been much debate about the implied difference between the terms teacher education and teacher training. For the purpose of this paper the term ITE will be used.

Programmes of ITE can be undertaken at either undergraduate level with enrolment on, for example, a Bachelor of Arts (BA) degree with QTS that is usually for 3 or 4 years, or at Postgraduate level, a one year programme of study with QTS. This is typically either the Postgraduate Certificate in Education (PGCE) or Graduate Diploma in Education (GDE) and is for those who already have a relevant degree and other necessary qualifications in English, mathematics and science (at General Certificate of Secondary Education level). Some institutions offer

part time as well as full time routes. These programmes involve both an academic element that is assessed and awarded by the accredited provider (e.g. university), with the PGCE carrying Masters Level credits, and a professional element of QTS. This is assessed against the professional Teachers' Standards as set out by the Department for Education. These outline the minimum requirements for teachers' practice and conduct (DfE, 2012).

Historically, those choosing to undertake an ITE programme based almost entirely in school have had the choice of applying for a school based programme operated by a SCITT (School Centred Initial Teacher Training) or EBITT (Employment Based Initial Teacher Training). EBITT pathways have included the Graduate Teacher Programme (GTP); Overseas Trained Teacher Programme (OTTP); and Teach First (TF). There was also, the Registered Teacher Programme (RTP), similar to the GTP, but for non-graduates. The RTP, GTP and OTTP led to qualified teacher status (QTS), but not necessarily a PGCE, this being the academic qualification as well as QTS. These routes essentially involved training to teach whilst being employed by the school as an unqualified teacher, following an individual programme of training to achieve QTS. Recent government policy has led to a change in employment based provision with the closure of GTP, RTP and OTTP routes and the emergence of School Direct, the government's preferred school based route leading to QTS. The Secretary of State for Education, Michael Gove (2012) suggested,

The idea is a simple one: take the very best schools, ones that are already working towards improving other schools, and put them in charge of teacher training and professional development for the whole system.

There are two School Direct training options. Firstly, training programme where the student teacher is based predominantly in school for their training but is supernumerary and is eligible for a bursary or scholarship to support them. Secondly, a salaried route which provides an employment-based route for high-quality experienced graduates with at least three years' work experience, who earn a salary whilst training and are expected to have some teaching responsibility. Whilst many on School Direct programmes will complete a PGCE, which includes both academic qualification and recommendation for QTS, there is a growing trend for QTS only programmes and Assessment only routes, which give trainee teachers the QTS they need to become a teacher but not the academic qualification.

Government allocations for teacher training published in November 2013 (National College for Teaching & Leadership, 2013) indicated clearly the government policy to shift teacher training into schools. Figures showed that 41,100 teachers would be trained in the year starting September 2014, rising from 38,900 in September 2013. Of this number the government intends that 15,400 will be trained via the School Direct route, an increase from 9,600 in the last year, representing an increase from 25% to 37%. Numbers trained on the postgraduate university route will fall from 20,000 this year to 16,200 in 2014.

Whichever route is undertaken to become a qualified teacher there is extensive time spent in a school environment. For example on a typical university based secondary or primary PGCE programme student teachers are based in schools for 120 days out of the 180 day programme with the other 60 days typically spent in university for academic study and training. This is a change from the model of the 1980's where the PGCE generally involved just two 6 week school placements over the year. The university has overall responsibility for the training programme and quality assurance mechanisms. University staff work in partnership with school staff to ensure the development of a coherent and consistent programme of training for student teachers that integrates theory with practice and supports their development as reflective practitioners.

University staff and school staff have both specific and shared roles and responsibilities that provide a blended model of training. For example, university staff act as link tutors when student teachers are on school placements to support school mentors in implementing the training programme in schools.

Whilst there may be different routes into teaching there are common ITT criteria (NCTL, 2013), common professional standards to meet (DfE, 2012) and a common framework for quality assurance (Ofsted, 2014).

The current government agenda to shift teacher education from universities into schools and allocate a large number of training places to the new School Direct route has re-awakened the debate on how best to prepare student teachers for their role in the classroom. This has also led to a realisation that the roles and responsibilities of those involved in teacher education are changing.

THE LOCAL CONTEXT – YORK ST JOHN UNIVERSITY

York St John University was founded in 1841 as a Church College for Teacher Training and has now been training teachers for over 173 years. The institution gained University status in 2006. It is an accredited provider of primary and secondary programmes of initial teacher education. A variety of awards are available for those wishing to train as teachers. For those wishing to train as primary school teachers there is both a three year undergraduate programme Bachelor of Arts degree with qualified teacher status (BA Hons QTS) in primary education, and a master's level postgraduate qualification, Postgraduate Certificate of Education with qualified teacher status (PGCE). There is in addition an 'exit' award of Graduate Diploma with QTS for those students who choose not to pursue the M level qualification. For those wishing to train as secondary school teachers only the PGCE route is available. The Primary PGCE can be studied either on a full-time or part-time basis, the Secondary PGCE on a full-time basis.

Whilst historically these programmes have been university-centred in conjunction with partnership schools for separate teaching experiences, the university via its PGCE programme now offers the award through school-centred routes (School Direct) where the vast majority of training takes place in partnership schools with much reduced input taking place within the university itself.

Hence currently we offer the Primary PGCE full time via both university and school centred routes. Secondary PGCE subjects currently offered are in Religious Education (university based) and English, Mathematics and Biology (School Direct). In 2014-15 secondary subjects will also include Modern Foreign Languages, Physics, Chemistry and Computer Science which will be school centred routes.

Whichever route is followed there is a commitment on the part of all involved within the YSJU partnership to ensure the development of high quality student teachers who will have the knowledge, understanding and skills to continue to develop to become outstanding teachers of the future with a focus on raising standards of attainment for pupils in our schools.

However, whilst positive and supportive of new developments in ITE the reallocation of a greater number of training places to School Direct rather than university-centred routes has undoubtedly had an impact on university ITE provision. Quite simply, fewer trainees on PGCE programmes at YSJU mean that fewer members of university-based staff are needed.

TEACHERS' STANDARDS IN ENGLAND

In order to be awarded qualified teacher status (QTS), all student teachers training in England need to demonstrate that they have met a series of professional standards. Recently reviewed, the current standards came into effect on 1 September 2012. 'The Teachers' Standards' (DfE, 2012) are used to assess all student teachers working towards QTS. Once qualified, these standards continue to have key importance for teachers. They are assessed against these in the first year of teaching (the statutory induction period) and throughout their career. These 'new standards' replaced previous more complicated and numerous standards.

The current eight standards reflect current thinking about accountability and the pursuit of excellence in teaching and learning to support high pupil achievement. They are in two parts; Part One – Teaching and Part Two – Personal and Professional Conduct.

Part One of the Standards are grouped under these main headings:

A teacher must:

1. Set high expectations which inspire, motivate and challenge pupils
2. Promote good progress and outcomes by pupils
3. Demonstrate good subject and curriculum knowledge
4. Plan and teach well-structured lessons
5. Adapt teaching to respond to the strengths and needs of all pupils
6. Make accurate and productive use of assessment
7. Manage behaviour effectively to ensure a good and safe learning environment
8. Fulfil wider professional responsibilities

Part Two of the Standards deal with personal and professional conduct as follows:

A teacher is expected to demonstrate consistently high standards of personal and professional conduct. The following statements define the behaviour and attitudes which set the required standard for conduct throughout a teacher's career.

- Teachers uphold public trust in the profession and maintain high standards of ethics and behaviour, within and outside school, by:
 - treating pupils with dignity, building relationships rooted in mutual respect, and at all times observing proper boundaries appropriate to a teacher's professional position
 - having regard for the need to safeguard pupils' well-being, in accordance with statutory provisions
 - showing tolerance of and respect for the rights of others
 - not undermining fundamental British values, including democracy, the rule of law, individual liberty and mutual respect, and tolerance of those with different faiths and beliefs
 - ensuring that personal beliefs are not expressed in ways which exploit pupils' vulnerability or might lead them to break the law.
- Teachers must have proper and professional regard for the ethos, policies and practices of the school in which they teach, and maintain high standards in their own attendance and punctuality.

- Teachers must have an understanding of, and always act within, the statutory frameworks which set out their professional duties and responsibilities.

The Teachers' Standards (DfE, 2012)

By the end of their training programme the standards are used to determine a level of competence. Each student teacher is given a final assessed grade against Ofsted guidance criteria that indicates whether they are outstanding (Grade 1), good (Grade 2), require improvement (Grade 3) or below standard (Grade 4). The university then determines targets for students' period of induction, where schools then become responsible for the continuing professional development of the beginning teacher.

The Teachers' Standards set the baseline expectations for all teachers' practice. They are intended to make it easier for teachers and headteachers to assess teacher performance and support continuing professional development. However, whilst these Standards form a baseline at YSJU we are committed to developing outstanding student teachers whose expertise is not confined to meeting this narrow criteria.

THE GOVERNMENT AGENDA – SCHOOL DIRECT

Since the Coalition Government took office in 2010 the Department for Education, led by Secretary of State for Education Michael Gove, has indicated its intention to shift teacher training into schools with the new programme of School Direct.

In the Department for Education White Paper for Schools, *The Importance of Teaching* (Department for Education, 2010) the government outlined their commitment to raising the status of the teaching profession by recruiting high quality recruits to train to teach and by giving schools increased control over teacher training. The paper outlined three key areas for which teachers need to be very well equipped; subject knowledge and academic preparation, overall literacy and numeracy, and personal and interpersonal skills. In a speech given by Gove (June 2010) he reinforced his view expressed in the White Paper that 'teaching is a craft and it is best learnt as an apprentice observing a Master craftsman or woman'. He outlined that this would be achieved through the development of a national network of new Teaching Schools to lead and develop teacher development including initial teacher training.

With the aid of government funding this network of Teaching Schools has grown in the last few years with 'lead' Teaching Schools developing wider Alliances with partnership schools. One of their key roles is to provide teacher training, for example School Direct programmes. The original intention was for these Alliances to then employ those they trained but this clause was soon modified to suggest they 'should' employ them. Teaching Schools or Alliances that offer School Direct teacher training programmes are required to work with an accredited provider (e.g. university) which has the authority to recommend for QTS. Whilst funding for School Direct places goes directly to the Teaching School, which is part of the government's intention to give schools more control, the quality assurance responsibilities for the training programme still lie with the provider. Unsurprisingly, this has led to new negotiating processes to establish who will be responsible for different areas of the teacher training programme; how these will be rigorously quality assured and how funding should be apportioned. Existing partnership agreements have been revised, many new partnership agreements drawn up and new partnerships have been developed accordingly.

Many universities have embraced the new initiative and have not only worked with existing partnerships but developed new partnerships, to develop high quality PGCE School Direct programmes. There is recognition that different routes into teaching suit different types of people, and there is a need to ensure that all routes support student teachers into developing into high quality teachers who will ultimately have an impact on pupil progress and achievement. University based teacher education departments have a strong tradition of forging strong partnerships with schools and have worked together to develop and train high quality teachers for local and national schools. The idea of schools having a significant role in teacher education has long since been established.

It is the Government's attempt to undermine university teacher education programmes and the impact of this that currently causes great concern. Not least, that their policy has led to some departments closing as allocations and subsequent funding is cut. This could of course be understood if university teacher education programmes were performing poorly but that is not the case as reflected in Ofsted reports that attest to the high quality of university-based teacher education programmes. Burgess (2014) comments,

Michael Gove repeatedly praises what he calls 'the best generation of teachers'

in our schools. What he perhaps forgets is that the vast majority of these outstanding teachers and leaders were trained by university schools of education working in partnership with schools.

The Annual Report of Her Majesty's Chief Inspector of Education, from the Office for Standards in Education (Ofsted, 2010) indicated that the most outstanding provision for initial teacher education is delivered in Higher Education in partnership with schools. As indicated earlier in this paper the Teaching Schools have been allocated increasing numbers of training places for School Direct whereas university providers of teacher education have seen their allocations reduced or cut, which has resulted in the closure of some PGCE programmes in universities across the country. It should also be noted that some outstanding providers of PGCE are set to close due to funding and allocation issues (John Elmes - Times Higher Education November 2013). This has led to concerns raised about the future of teacher supply with the School Direct initiative being focussed on local need and a lack of coordination of national teacher supply.

Estelle Morris (2013) a previous Secretary of State for Education, suggests there are three problems that are emerging with the School Direct initiative related to teacher supply. Firstly, schools do not have to recruit to the number of places allocated and whilst universities are penalised if they under-recruit schools are not. Whilst schools may be committed to involvement in teacher education their core business is in the teaching and learning of their pupils. Secondly, 'School Direct places are not evenly allocated, either geographically or by subject, leaving some regions without access to this teacher-training route' and thirdly, reduced allocations to universities and lack of information about future allocations is leading to 'destabilisation' of education departments and the reduced ability to strategically plan. Morris suggests,

The government has, in effect, handed the strategic planning of the nation's teacher training to the market. No one has responsibility to deliver and oversee an effective national strategy for the recruitment and retention of teachers; there is no attempt to plan places and no one is looking at the cumulative effect of policy changes on supply.

In addition to this at the same time some Teaching School Alliances are working with universities to develop School Direct PGCE programmes, others wish to offer QTS only or Assessment-Only routes. Whilst these lead

to recommendation for QTS and thereby qualify student teachers to work in schools, they do not carry the academic qualification. This has led to concerns about the future of the profession and quality of teacher supply.

Not surprisingly, perhaps many educationalists have argued that the current Government's education policy reduces teacher education to simply *training* and undermines the *education* element of teacher education programmes. Concern has been expressed that if teacher education is moved wholly into schools there will not be as much opportunity for student teachers to become reflective practitioners and critically engage with the different theories and ideas that underpin professional practice. There will be also fewer opportunities to develop essential critical skills to support current and future professional practice. This will be especially the case for those following the QTS or Assessment Only routes, though arguably pertinent also to the School Direct PGCE route.

Hayes (2011) suggests that the direction of the Coalition Government's education policy is a worrying trend for those who think more than training is required for tomorrow's teachers, whilst Surman (2011) sees this direction in education policy as the 'de-professionalisation' of teaching and teachers. Hayes (2011:19) argues that government agencies have reduced teacher education to 'nothing more than training to meet the narrow standards they approved'. Student teachers might well meet the standards for QTS, as is the professional requirement, but they may not have the opportunity to develop the strong foundations necessary for teaching now and in the future. Hayes believes we need an educated as well as a trained workforce.

Northcott (2011) argues that there seems to be a tension between theory and practice inherent in the Coalition Government education policy with them clearly supporting a focus on practice. Reid and O'Donoghue (2004:562) argue that the 'skilled artisan' approach 'tends to draw a sharp distinction between theory and practice, privileging the latter and by implication denigrating the former'.

Hobby (2011) considers that focussing on practical experience alone is dangerous and risks creating 'fragile professionals' without the wider experience needed to adapt to different teaching contexts. Lawes (2011:24) argues we need teachers who are educational thinkers in order to avoid a 'conformist and compliant workforce'. This echoes Durkheim's view that it is critical that student teachers acquire a 'critical self-consciousness' to avoid being:

doomed to a mindless and mechanical repetition of the principles and procedures which governed his own education and education itself is condemned to a stifling and degenerate conservatism. (Durkheim, 1977:19)

Further to this Durkheim extolled the importance of new teachers knowing and understanding the history of the education system and how it has evolved to its current state, whilst also having the skills to challenge it in the light of contemporary social need.

Marshall (2011:28) concluded that 'all future teachers require an education in education' and that 'training is simply not good enough'. He suggests that this will ensure they 'understand what education is, and are fully aware of its cultural significance and complexity'. It can't guarantee them becoming good teachers as they alone are responsible for their practice but it will support the establishment of strong foundations for future development.

More recently, the interim report from the British Educational Research Association (Bera, 2014), on the role of research in teacher education, suggests that in other high performing education systems, for example Finland and Singapore, there has been a shift away from school-based training towards university-based teacher education, and a focus on research training for teachers. Ironically this would suggest that the Coalition Government's policy of shifting teacher training into schools in England contradicts the findings on international best practice, that it claims its policy is based on. The White Paper (DfE, 2010:21) refers to best practice in Finland and Singapore stating that:

we know that highly effective models of teacher training (including those of Finland, Singapore, Teach First and Teach for America) systematically use assessments of aptitude, personality and resilience as part of the candidate selection process.

It might be argued that the success of an education system is dependent on a number of variables and 'cherry picking' specific elements of one education policy that might suit another is unlikely to reap the benefits that all variables together ensure.

Joy Carter, vice-chancellor of the University of Winchester, commenting in a newspaper article (Swain, 2014) stated that:

the potential effect of the changes on teacher quality is particularly worrying given the relatively poor performance of British schoolchildren shown in figures published last month by the Organisation for Economic Co-operation and Development, comparing standards in maths, reading and science.

Despite these concerns many universities are committed to working alongside school partners to train and educate high quality student teachers.

At York St John University our model of teacher training is built upon collaborative partnerships whereby schools have long been involved in programme development, recruitment and assessment and where the emphasis on the integration of theory and practice is embedded, as opposed to there being a hard dichotomy of the roles of universities and schools. As such the introduction of the School Direct programmes may have brought challenges in funding and allocations but has built upon existing good practice in terms of programme development and partnership working. We work with partnership schools and alliances only on PGCE School Direct routes where the focus is on academic development to underpin developing professional practice.

MODEL OF SCHOOL-CENTRED TEACHER TRAINING AT YORK ST JOHN UNIVERSITY

Recruitment and Selection to School Direct Programmes

It is essential to develop highly effective selection and recruitment procedures to identify potential high quality teachers who will have the knowledge, understanding and pedagogical skills to further develop the quality of our education system; improve pupil achievement and thereby improve our rankings in international league tables. Barber and Mourshed (2007) suggest that getting the right people to be teachers is a feature of high performing schools internationally, 'the quality of an education system cannot exceed the quality of its teachers' (2007:13).

At York St John University (YSJU) both the university and schools work together within the recruitment process. Potential applicants apply via a website – UCAS Teacher Training (Universities and Colleges Admissions Service). Here a candidate is able to choose a course and provider according to subject and age group. A preferred route for either a teaching programme at a university or college or a training programme based in school is decided upon. The candidate is then able to choose up to three suitable courses based upon the training provider or region which is most appropriate for them.

At YSJU school partnership staff have always had a role in the recruitment of candidates for teacher training programmes as this has been considered an important element of partnership and collaboration. For primary PGCE programmes this has involved school staff attending interview days at the university and interviewing candidates alongside university staff.

On the secondary university-based PGCE programme, which deals with smaller numbers, interview days are held in both partnership schools and at the university to ensure that candidates are introduced to the professional environment they hope to be a part of right from the start of the training process. The morning of the interview day is in school where candidates typically have a tour of the school and opportunities to liaise with staff and pupils whilst seeing the school in operation. Candidates also undertake a short teaching task; have a staff interview, with a panel made up of school and university staff and also a pupil panel interview, giving pupils the opportunity to have a voice on the selection of future student teachers and teachers. The afternoon of the interview day is at YSJU where candidates undertake a group activity and skills related tasks. As such the secondary PGCE selection and recruitment procedures, implemented in 2007 and revised annually, provided a model that supported the Department for Education (DfE) plans set out in the White Paper (2010) and Training Our Next Generation of Outstanding Teachers: Implementation Plan (2011).

As employers of newly qualified teachers, schools have a critical
interest in initial teacher training, and should play a greater role in leading
the recruitment, selection and training of teachers (DfE 2011:11)

Hence with the introduction of School Direct the Teaching Schools/Alliances have supported this model for secondary PGCE recruitment, not least because they were involved in developing it many years ago as YSJU partnership schools. The key change has been that applications for the PGCE are now accessed by both the Teaching School and university who collaborate to shortlist candidates for interview.

However, whilst not unused to engagement in the selection process of students to the profession; schools have found themselves in a new situation with School Direct of assessing the potential of candidates with the realisation that they may well be employed within the schools and alliances for a substantial period of time. It is hoped that heavy investment in the training at this stage will reap rich dividends in the future.

For the primary PGCE there have been some changes to interview processes for the School Direct route. Candidates are invited to be interviewed at one of the partnership schools within an alliance. Both school staff and university staff contribute to the process which takes the best part of a day. The procedure has been designed to try to assess the potential of the applicants to respond well to the programme of training, in order to be developed as an outstanding teacher.

For both primary and secondary school centred routes assessments at interviews are made against key criteria such as intellectual qualities, commitment to, experience and understanding of primary or secondary education and the ability to communicate effectively with adults and children in a school context.

There are key features of the interview days that are common to both primary and secondary school centred routes. A guided tour of the school conducted by pupils; a written task to assess the quality of their academic writing and potential to engage with master's level study; a short teaching task designed to provide candidates with an opportunity to demonstrate their ability to plan, deliver and engage pupils in learning. Here candidates demonstrate if they have good presence and can communicate ideas effectively. The best candidates show that they have a genuine interest in learning, good subject knowledge and are enthusiastic and animated. Behaviour management skills become apparent during the session and their response to often unpredicted situations can be noted. It is recognised that all this takes place 'pre' initial teacher education – a situation going wrong would not preclude a candidate from gaining a place, rather, if they are able to demonstrate good reflective skills as a result of engagement in the process, this would actually stand them in good stead and of course enable specific targets to be set to support preparation for the programme. In-tray activities, common across programmes provide opportunities for candidates to demonstrate their ability to prioritise difficult situations with competing demands whilst the formal staff interview provides the interview panel opportunity to make assessments about candidates' motivation for entering the profession; personal and intellectual qualities related to the job; their understanding of the role of an effective teacher and their knowledge and understanding of subject/phase specific issues as well as current educational issues.

As the PGCE is a particularly demanding programme candidates are also encouraged to consider strategies and skills they might employ to ensure that they are able to cope with the challenging demands that engagement with this programme would present.

Candidates have opportunities to reflect on their experiences during the interview day which also supports target setting and identification of areas to focus on in preparation for the programme.

The Programme

School Direct school-centred ITE programmes were written and validated together with the university-centred ITE programmes within a very tight timescale, as the recruitment process had already begun for a September 2013 intake. A key complication can be seen in that in addition to the award of QTS, this was also an academic award from the university and therefore strict university regulatory frameworks needed to be adhered to.

This process involved the writing of much documentation; partnership agreements, due diligence documentation, risk assessments, programme specifications and module documents to name but a few.

It is interesting to note that this process was entirely driven by the university teams, who were familiar with such processes. Schools, whilst experts in the provision of policies and curricula for their pupils, had neither the time, nor the expertise, to develop the documentation needed. What became apparent was the complete lack of understanding on the part of the government of exactly how complex and lengthy university validation processes take, particularly when bearing in mind the necessary involvement of external agencies and such necessary consultative processes central to the construction of a robust programme.

Other than guidance gained from knowledge of the Teachers' Standards (2012) and ITT Criteria (2013) exactly how programmes should be put together was for writing teams to decide. Here, a crucial factor was the need to draw upon the expertise and past experience of academic staff at the university in understanding the complexities and implications of teacher education issues. A very positive feature of the process was that key aspects of provision known to work well, provided a very strong starting point.

University partners facilitated the design of phases of progress through the programmes entitled 'Introductory, Development, Consolidation and Transition' phases. For consistency and coherence these were made common to both primary and secondary programmes. At a later date, this provided the framework for School Alliance teams and university teams to work together in order to construct a meaningful progression of school experiences, workshop input and taught sessions. For all programmes, the design facilitated common aspects of assessment for example two Masters level essays, one a synthesis of practice and theoretical perspectives, a second a research project concerning an area of educational interest. Other assessments included presentations and assessed portfolios.

Once provided with a coherent framework to work from School partners could then work with university leads to incorporate their expertise of how things would work well in the school settings. To aid this process several collaborative planning days were organised and with these came a further complication - the recognition that school staff had little understanding of what School Direct actually involved or the Government expectations on school staff to have responsibility for the training process. Hence the School Direct planning days also became staff training and information sharing events; essential to ensure the successful development and implementation of School Direct and to support future quality assurance of this programme.

It also became clear that what was possible within the university context did not always translate well to schools. Likewise, many new and exciting possibilities arose by having daily access to a school setting and easy on-site access to expert practitioners.

The School Direct programme has now been set up to ensure that student teachers, whilst based predominantly in school have the 60 days for training as specified in the ITT Criteria (2013). This 'training' however is largely undertaken independently with the aid of school centred training activities supported by school mentors and university link tutors. Student teachers are released one afternoon for academic sessions that are delivered by either university or school staff. Rigorous quality assurance systems have been set up to monitor and ensure the quality of the training programme delivered including support materials for school staff on planning and delivering academic sessions. YSJU aims to ensure consistency and coherence across all PGCE programmes. Student teachers on the School Direct PGCE have some shared sessions and shared opportunities with the university centred PGCE students and similar enrichment opportunities. There is parity across academic modules in learning outcomes and assessments and modules are integrated with school-based experience and training to ensure a student teachers developing professional practice is underpinned by knowledge and understanding of educational theory and current local, national and international research. However, early evaluations indicate emerging differences in the ability of School Direct PGCE student teachers to engage with some elements of the programme in the same way that university-centred students can.

As time has progressed, it has become increasingly apparent that this is a continuing process that requires rigorous monitoring and evaluation. Programme needs evolve as the days and weeks progress.

WHERE ARE WE NOW AND WHERE NEXT?

Without doubt, the new school centred programmes of initial teacher education (School Direct) have enhanced ITE provision at York St John University. The process of designing, writing and implementing new training programmes in conjunction with school-based colleagues has provided an opportunity to synthesise strengths; the expertise of the university and its long tradition of educating teachers with the expertise of current practitioners in the classroom.

There have been many positive outcomes during the fostering of these new relationships. It has provided a tremendous opportunity for the university to maintain up-to-date contact with schools and dialogue with staff about current priorities the profession is facing. There has been a better two-way understanding of the tensions that currently face both universities and schools, for example the particular demands and pressures that Ofsted presents in the thirst for improved data sets for both student teachers and pupils themselves.

The process has not been without its challenges. Entirely willing staff in schools have found it difficult to secure adequate time and specialism to deal with the complexity of the entirety of a programme of Initial Teacher Education. The very fact that someone is recognised as a good or outstanding teacher does not necessarily mean that this translates into being an outstanding teacher educator.

At times, the process has revealed areas of insecurity and gaps in school teachers' experience; for example, learning to deliver material to a student body considerably older than they are used to presents its challenges. On many levels, student teacher needs differ to those of pupils. Outstanding practitioners in the classroom now need to address new academic demands, such as the need to include robust sources of literature to the sessions they are delivering. This has highlighted the need for a comprehensive programme of mentor training opportunities.

For university-based staff a strange tension exists of being in control and yet being out of control. They are answerable for the quality of the provision, yet have relinquished responsibility for much of the delivery. The number of players in the process means that the need to be reactive and responsive to wide-ranging situations becomes a difficult, complex process. There are a fog of unknown responsibilities which reveal themselves on a daily basis.

Student teachers on the school centred route have relished being wholly part of a school and having access to situations where they are afforded increased opportunities to be engaged in practice. Yet there is the dawning realisation that this is at the expense of being able to spend sustained periods of time in study and reflection, and in discovering academic sources to add weight to the practice they see. The availability and provision of increasing numbers of e-books has proved essential as has improved support via virtual learning environments. Expectations of schools and teaching demands upon student teachers can be at odds with the training situation, in particular for those on the salaried School Direct PGCE who are not supernumerary and have teaching timetables and associated responsibilities. Evaluations from student teachers completing their first term of the secondary

PGCE indicate little difference between student teachers on the school-centred PGCE route and those on the university centred route, in their perceived ability to manage key areas like assessment for learning and behaviour for learning, to ensure appropriate pupil progress.

Whilst we are still in the process of implementing the first year of the School Direct programme the increased allocation of teacher training places to schools for 2014 has led to more changes. Further Teaching School Alliances have requested YSJU work with them as accredited providers for both primary and secondary PGCE and allocations have been approved for more subject strands for the secondary PGCE.

The current school partnerships we collaborate with for School Direct have proved to be committed to genuine partnership and clearly recognise the contribution that the university makes to teacher education. Indeed many of them have recruited former student teachers into their schools from our university-centred programmes. There are early indications that not all universities are experiencing this level of partnership. It is interesting to note that as we move into planning for the second year of School Direct having been supported in the first instance partnership schools are demonstrating a greater amount of independence. There is much debate about the transfer of intellectual property as part of this transition.

In conclusion, the proverbial wheel is turning at an ever faster pace but all in all School Direct has offered the opportunity for new ways of working. Partnerships are stronger than ever and both university and school based staff continue to learn... along with the students.

THE NEW PROPOSALS FOR TEACHER-TRAINING IN AUSTRIA. A POLITICAL PARTY SCRAMBLE WITH UNSATISFACTORY RESULTS. ANOTHER CHANCE WASTED.

Alice Reininger, University of Applied Arts Vienna
alice.reininger@uni-ak.ac.at

THE WRANGLE OVER NEW EMPLOYMENT RIGHTS FOR TEACHERS.

On the 19th November 2013 the ministerial decision with regards to the new employment contract for teachers, which had been deliberated out over for 12 years in 35 rounds of unsuccessful negotiations, caused a storm amongst teaching staff. The powerful civil service union (in Austria teachers are employed as civil servants) and the teachers unions reacted promptly with threats of strike action. The majority of teachers supported strike action. The chancellor Werner Faymann, in the daily press conferences at this time, defended the government saying it has done everything it could to meet the unions' demands. The moment of decision had now come since there was a feeling that no concessions would be made on the union's side. The ÖVP vice-chancellor Michael Spindelegger added the Latin byword, *the dice has fallen*. In December 2013 the new employment laws for teachers were passed in Parliament. In the following days there were heated discussions on the television. The media inflamed the situation even more with their coverage.

However the results of an immediate opinion poll taken from the public showed that the majority of parents were against the teachers taking strike action. The opinion was that the teachers anyway belonged to a group of privileged workers; maximum number of working hours in a week and presence in the school between 17 and 22 hours with a mandatory requirement of 22 hours per week, and a starting salary of between 2080 and 2294 euro before tax, depending on which type of school they work in, primary, new middle school, higher vocational school, or grammar school. Certainly the teachers spend time with preparation, correcting work and similar additional working hours, this, however is included in the monthly salary they receive.

The increase of two hours raising the teaching week from 22 to 24 hours with a starting salary between 2420 and 2720 euro before tax for all the aforementioned types of school has aroused great indignation and is not acceptable amongst a large number of teachers. However if one compares the teaching hours, the starting salary and the amount of holidays with other member states of the European Union, then one sees that Austrian teachers are well ahead in their field. Some of the parents who were asked, were of the opinion that the teachers were about to destroy their image themselves. The teachers tune is: *the worm has turned*.

It is clear – and nobody is arguing with this – teachers are jointly responsible for the future of our children, and with their work make a worthy contribution to our society which is not only valued but also should also be rewarded accordingly. Nobody is questioning this!

However, many old privileges which date from a bye-gone age are blocking every type of urgently needed reform. It concerns not only the training of the teachers, but also the curriculum in the various types of school, the employment contract and the views of the unions and their mandates. The government is now forced to act and knows that it is on the winning side since the public mood is on their side.

The social partners play an important part in the Austrian political landscape. This is a system that has a long tradition in Austria, and is a system based on the joint working relationship between federations of employers and employees, chambers of commerce, agricultural chambers of commerce and industrial societies, all on a free will basis. Their capacity to influence things is very large, although they are neither written into the law nor into the constitution of the Republic. These social partners collaborate in the area of vocational schooling. They are allowed take a position on school laws, and the proposed curriculum. Likewise they are active in the area of training and education and career information, and support the collaboration between the vocational schools and the industry and economy. The Austrian Chamber of Labour and the Chamber of Commerce and their respective educational establishments contribute financial means to the so called Fachhochschulen (higher educational establishments for applied sciences, with university status). Universities and higher technical colleges voluntarily send their course curriculum to the institutions of the social partners. Many theme specific events and activities are financially supported by the social partners. As well as relevant courses, they manage financial incentives for further education and, of course, run a targeted lobbying for the social provision of additional resources.

HISTORICAL LOOK AT THE DUEL TEACHER TRAINING SYSTEM IN AUSTRIA.

a) The Gymnasium- or Grammar school

Let's take a look back at the development not only of the school system, but also the teacher training in Austria. In the *Ratio Studiorum* of 1599 the Catholic Jesuits, through their own initiative began to turn the former *Latin Schools* into Gymnasiums, what we would today call grammar schools. This required that the teachers who taught at the Gymnasiums should be suitably qualified to do so. They were clergymen who studied at the

universities run by the Jesuits. There were various reasons for the success of the Society of Jesus in education and school standards. The main aim-laid down in the rules of the Jesuit order was *to help thy neighbour to a recognition and love of God, and to help heal his soul, an act in the higher honour of God*. From the very start they made the effort to have the school lessons progress clearly step by step. They introduced a system of the yearly class that was oriented towards a class that was homogeneously proficient. The elementary schools, where reading, writing and arithmetic were taught, were clearly marked off from the higher studies. Every Jesuit led institution offered a five to six year basic education. The pupils had to be able to express themselves in Latin. In principle here lay the form of a classical Latin school. After successful completion of the rhetoric class one could devote oneself to further higher study and begin in either the theological, judicial or medical faculties. An own faculty the so-called *artists faculty* which was completed with a master's thesis allowed that master's holder to teach at a Gymnasium. The Gymnasium form of schooling was however reserved for the financially better off and the aristocracy.

b) The "German School" the "Trivial School"

In 1773 Johann Ignatz von Felbiger (1724-1788) Abbot of the Sagan Monastery in Silesia was called to Vienna by the Empress Maria Theresia (1740-1780) to reform the school system, in particular the Trivial School. In the 18th and 19th century a Trivial School in the Austrian Empire was to be understood as a *lower German school* which was open to everyone. The so-called *German school* in Austria in the 15th century was a school type developed to prepare pupils for a working life in trade or craft. Here the pupils learned to read and write German, arithmetic and knowledge of scales and units. It was a fee paying school since it was financed by the pupils as well as the industry. It was a secular led school.

In 1774 with the *General School Regulations* introduced for the area of compulsory education, guidelines were set out for the first time regarding lessons and the training and education of teachers in the *lower German school*. The compulsory education of children at these state schools was fixed for six years. With this school reform Maria Theresia founded the state school system. Model schools were set up to help with the training of the teachers. However, even at this time the teacher training was not uniform and consistent. A teacher for a normal school did not have to attend a university or academy, their training at this stage was for half a year, on the other hand for a teacher at a Gymnasium completion of university was compulsory. This dual system is still running in Austria in the 21st century.

The development and spread of knowledge in the 18th and 19th century necessitated that the Gymnasiums provide a purposeful education. In 1806 the University of Vienna established the department for pedagogy and two years later the specialist subject teacher system was introduced into the Gymnasiums. A recognisable state exam was introduced in 1856 which future teachers of subjects at the lower grades in Gymnasium had to take.

For the teachers in the compulsory education system, their training was increased step by step during the 19th century to two years. The Trivial school became the primary school and attendance was increased to eight years. In 1869 the rearrangement of the lower school system in the state schools law introduced reforms for the training of teachers in these types of school. Teacher training institutes were established where the course lasted for four semesters, and ended with matriculation to teach. After two years probationary work the exam for teaching proficiency was taken. Compulsory schooling was raised from six to eight years in this state law.

It is interesting to note that at the end of the 19th century women were allowed to take up a career as teachers. Education for girls was a luxury. For women who chose a job as their route to independence the way was often very difficult. Women fought their way to a university education through pedagogic training. If a woman married she was forced by law to give up her job, so called *teacher celibacy*. Job, household and children were not compatible according to the law makers. Unmarried teachers scraped a meagre living, received poor pay, no social status and were often quite isolated.

c) Changes in the school system after the First World War.

After the First World War and the establishment of the first republic of Austria the Social Democrats with their recently compiled proposal, *principles for the reorganisation of teacher training* wanted to have the primary school teachers educated at the university, and failed miserably with this move. The Social Democrat and State Secretary for Education, Otto Glöckel, tried hard, but without success to introduce a general secondary school for 10 to 14 year olds. With no differences between background, sex or social class, all children should have access to an optimal educational development which would encourage their talents accordingly. He called for the education of primary and secondary school teachers at the universities. The universities made a decisive block against this proposal with the justification that for these teachers, academic or scientific criteria was not necessary. A proposal to establish an academy for teachers found no majority in Parliament.

The social democrats did manage to establish a four semester higher education type of training for teachers, this model however only managed to last a few years. Special, and further training courses did develop, where strangely enough, university professors were engaged. It is to be noted here that the reforms introduced by Otto Glöckel are still functioning today. He initiated an *inner reform of the school system*, for example the new formulation and modernising of the curriculum, text books suitable for children, and compulsory schooling no

longer had to be paid for by the parents. It was also Glöckel who, with a state decree, ensured women the opportunity to free access to the universities.

In 1927 the antiquated *Bürgerschule* (the historical equivalent of the secondary modern school) which had, up to now, ran for three years after a five year attendance at primary school, was replaced with the *Hauptschule* or secondary modern school. Thus the *Hauptschule*/secondary modern school was introduced and became a compulsory school for 10 to 14 year olds. The pupils were taught by specialist subject teachers. The teachers followed advanced and continual education at pedagogic institutes.

d) The time after the Second World War reaching back for what had proven to be good.

After the Second World War they turned again to the question of teacher education and training institutes. It was now extended to five years and ended with the matriculation or *Reifeprüfung* (a general qualification for university access, A-levels). At the same time one achieved teaching competence. This *proof of maturity* or matriculation opened the way to a university study since it was equivalent to the matriculation from the Gymnasium. Primary school teachers were also eligible to teach at the secondary schools for 10 to 14 year olds. Through additional external courses a primary school teacher had to qualify in chosen specialist subjects (a main subject either German, maths or English and a secondary subject, for example history, geography, music etc.) and thus they could advance to the secondary modern school. In the course of the years the primary school teacher who taught at the secondary school had to pass their teaching competence test, for their continual assessment for a main and secondary subject.

In 1962 the Pedagogic Academy was introduced. It was the result of a school amendment that was introduced in that year. General compulsory education for children was extended from eight to nine years. If one decided to become a teacher at a compulsory school (i. e. not a Gymnasium) one had to attend this Academy after completing the *Reifeprüfung*. The training to become a primary school teacher lasted four semesters and was concluded with the certificate of competence to teach. One was also immediately given a post at a school. In 1971 the training to become a secondary modern school teacher was also introduced at this academy. Training lasted six semesters, after a general basic course one could train in two specialist subjects, a main subject such as German, mathematics or English, and a subsidiary subject. During this study the prospective teacher would undergo practical training at a secondary school of their choice under the supervision of a qualified teacher there. After passing a written and oral test one was qualified to teach at a secondary school. In 1974 as the first of teachers under this system became qualified they were given immediate tenure and a fixed post at a secondary school.

In 1971 the reforms for university education to teach upper schools were introduced. With a diploma in either humanities or sciences the teacher training at the universities was completed with graduation with a Masters degree. Study for a doctorate could then be followed on. It has remained the same until this day.

In all these years nothing really changed for the pupils. School and teachers were regarded as bench marks which one did not really challenge. When I think back to my own time in school there was never any question. No one challenged the performance of the school, not to mention the teachers not even the place of the school in the rankings. When entering into the working world, nobody asked which school you had attended, rather whether one had been successfully completed and whether you had the required qualifications for the job you were aiming for. Today this has fundamentally changed. The parents ask themselves if that is the most suitable school to send their children to – what will the children be offered there? What are the teachers like? What facilities does it have?

TEACHER TRAINING “NEW” IN AUSTRIA. THE DUEL SYSTEM REMAINS. A “LIGHT” SCHOOL REFORM AND THE POLITICAL PARTY WRANGLING GOES ON.

Since 1995 Austria is a full member of the European Union. For decades people have been working here on a new teacher training concept and a reform of the schooling system. It is a political party wrangle with no end to it. If one of the coalition ruling parties, for example the Socialist Party (SPÖ), presents some suggestions, it is immediately torpedoed by the conservative (ÖVP), or vice-versa. The political polarisation of schools and education was and is a huge hindrance to further development. In 2011 industrialist and former socialist finance minister Hannes Androsch initiated a petition on education. The opening statement read

we demand by means of state (constitution) legal regulation a fair, efficient and cosmopolitan education system, that from early childhood on challenges those who are gifted and compensates the weaker ones, autonomous schools with the involvement of school partners and independent of party influence, a performance-differentiated high quality comprehensive school until the end of compulsory school, and the offer of an all-day school, an upgrading of teaching as a career and the continuous rise of governmental financing for the universities to 2% of GDP until 2020...

The ÖVP (conservatives) were vigorously against this, and the SPÖ (socialists) entrenched themselves behind empty phrases. The results of the petition were bleak. Only 6.07 % of those eligible to vote signed this initiative. However if the results of this petition are compared with those of similar petitions run in the past concerning education, then with regards to the absolute number of signatures received, this was by far the most successful.

The Green party saw that there was a clear signal that the government should set to work on this, and demanded that the chancellor (SPÖ) Werner Faymann, call an education summit inviting all parliamentary parties, social partners and initiators of the petition. Even the industrial concerns insisted on immediate measures being taken. It took half a year after the petition for a special committee of the National Assembly to sit down and hold discussions. However power political personnel interests, the defence of privileges by union leaders and the stupidity of the ruling parties thwarted any progress. The petition for education reform ran aground leaving no trace.

However changes in our society today, frustrating results from the PISA tests in the last few years and similar evidence finally forced both coalition parties, who for the last decades have been steering the talent in this country, to an interim agreement which was celebrated by both major parties as a *milestone*. In the spring of 2013 education minister Claudia Schmidt of the SPÖ and science minister Karl-Heinz Töchterle (ÖVP) presented the agreement to the reform of teacher training and qualification. Vice-chancellor Michael Spindelegger (ÖVP) publicly expressed his satisfaction with the agreement saying that he was certain the new arrangements would have a positive effect. However on closer inspection of the agreement one can find some clear weaknesses, which actually led to immediate heavy disagreements amongst educational experts, opposition parties and the umbrella organisations of the teaching groups, since not all professional groups involved in education, school and learning have been accounted for.

There is no recipe to train a good teacher. In September 2013 the school year began amidst a shortage of teachers. A further personnel intensive reform such as the reduction in the number of children in a class, the introduction of the *new secondary school* (replacing the *Hauptschule* in secondary education) and a generation change amongst the teachers (many retiring) have exacerbated the situation with personnel. The measures that the audit office had recommended the previous year had been scarcely looked at by the education department and were recently disparaged again by the education minister.

According to statements made by the former education minister Claudia Schmidt in January 2013 the actual budget for education for that year was 8,060 billion euro, which, when compared to 2012 was an increase of 193 million euro. It was further stated that between the years 2000 and 2009 spending in education had increased 25% per head, which was confirmed in the national education report of 2012. Since 2009 the Austrian government has made further investments in the conversion of all secondary schools into new middle schools and a huge upgrading to provide the offer of an all-day school.

At present in primary school the lessons finish between 12.00 and 13.00 (sometimes as early as 11.30 in rural areas). With the rise in the number of one parent families and working mothers the demand for afternoon school became louder and louder. Many kindergartens and schools provide what they call *Hort* which is afternoon care for primary school children. This, however, has to be paid for by the parents. In *Hort* the pedagogues supervise the children doing their homework. However if the *Hort* is in the actual school building these pedagogues are not allowed to do this supervising, instead the teachers are required to do this. No additional hours have been budgeted for this which means a teacher contracted for 22 hours per week has to spend one of these hours supervising homework, whilst down the road in a separately established *Hort* the pedagogues are doing this! A proper all-day school cannot really be provided until the government employs more teachers to cover the extra hours, otherwise an Austrian teacher is expected to spread their 22 hours a week in the class very thinly across the day.

THE STONE BEGINS TO TURN SLOWLY.

In the higher education law of 2005 teachers and further education at the post-modern Pedagogic Academies, Vocational Pedagogic Academies, and pedagogic institutes were integrated into the higher education/university area. In 2007 the Teacher Training Colleges (known as the Pädagogische Hochschule, PH) were created. They offer internationally comparable final degrees according to the guidelines of the so called Bologna Process. These teacher training colleges will also train all future pedagogues in various fields of work. They also cover management training in schools and the training for teaching in the field of adult education.

When Austria took over the presidency of the European Union from January to June 2006 it presented its motto for education in the following words:

The reason for the attractiveness and the high ranking of the vocational education in Austria lies in the wide range of vocational educational systems offered, in the good quality of the training the special feature of which is the connection between the theory and the practise, and in the permeability of the education system. In Austria no educational path leads to a dead end. Independently, whether in full-time education or in part-time education whilst working, the option for a higher educational qualification up to a university degree is there for everyone.

Life-long learning, LLL, should be encouraged. A LLL task force to co-ordinate the necessary concepts and measures was formed. In the summer of 2011 it published the guidelines for an Austrian strategy to the life-long accompaniment of learning. *LLL 2020*, this concept was dismissed by the government. In it political aims and projects had been formulated. It contained a budget aim which committed the government to have raised the spending on education, under the OECD indicator, from 5.4% of GDP in 2007 to 6% GDP by 2020.

Raising children is for parents, as well as teachers, an extremely challenging task. So, what sort of teachers do we need? It is clear we need teachers who enjoy doing their job, who are pedagogically well trained, who are engaged and motivated in their job, and who can prepare those children in their care for their future lives in society. The school has an important role to play, namely the key role of nurturing and encouraging talent. It is teachers who are often the role models for children who receive little support from their own parents.

So what is the outlook for teacher training in Austria today? In the future everyone applying for teaching qualification will have to undergo an admissions process. There are 15 institutions currently working on the development of this admissions process. The aim is to develop a common admissions process which can be piloted in the autumn of 2016. With this commonly developed testing process those students best suited for the job of teaching can be filtered out. The main emphasis of this test will be a self-assessment and a foreign evaluation. First trials at the Styrian Teacher Training College have resulted in positive feedback from both sides. To avoid a run for places at the universities admittance will be restricted to a certain number of available places for the courses. This is something that is already practised at the teacher training colleges as well as the universities of Art in Linz, Graz and Vienna where a course can only be taken after successful completion of an admissions test. It should be noted that Vienna University has the largest number of students studying to be a teacher. Further training and education which will continue to play an important role will also take place at the universities.

At present, if they pass they admissions test the prospective pedagogue will study three years for a Bachelor degree in Education (a BEd). The plan for the future is that they continue to study either at the PH or university for a Masters degree this coming into effect in 2019/2020. This means that for teachers in the compulsory school system (i.e. not the Gymnasiums) study will be lengthened from a three year Bachelors study to a five to five and a half years for a Bachelors and Masters degree (Bachelor and Masters being the requirement for a fixed post). Primary school teachers can continue to study and train fully at the teacher training colleges (the PH's). For teachers at Gymnasium or middle and higher vocational schools there is hardly any change to the length of their study, except for the admissions procedure, already established by the teacher training colleges. Their study will then take place at the normal universities. From the winter semester 2014/2015 the University of Vienna will offer the *new* teacher training programme for the secondary level as a Bachelors and Masters study. In July 2013 the University of Vienna Senate passed the necessary guidelines for the lawful implementation of the programme. Thus all requirements are now in place for the programme to run. The rector of Vienna University Heinz Engel had this to say.

The development of the education and training of teachers is of the highest priority in the next years for the University of Vienna. We need good well trained teachers, since they are the guiding forces for the future of young people and therefore the whole of society.

The pedagogic universities, besides training teachers for compulsory and vocational schools, will also continue with the further education and training of teachers as well as research in the field of education.

For training in compulsory education there are four choices, primary school, secondary, polytechnic, and *Sonderschule*. *Sonderschule* is a special needs school for those children and youths with certain disabilities, for example seeing or hearing difficulties, behavioural difficulties, physical disabilities, etc. Since 1993 there is the possibility for special needs children at primary and secondary level and in the lower Gymnasium to attend a regular school in integration classes. In an integration class there are two teachers, the regular teacher and the special needs teacher working in a team. Additionally the teacher training colleges will offer training to become a vocational teacher in the areas of, nutrition, information and communications, fashion and design and in specialist technical and commercial branches.

A polytechnic school in Austria is a one year general compulsory education system for the 8th school year and serves primarily to prepare those children for the working world.

The curriculum in the teacher training colleges is a classic case of a regimented school plan. The courses contain only compulsory subjects and offer no possibilities for any optional subjects or a compilation of optional subjects to be taken. There has been heavy criticism of this system from opposition parties because, with all these reforms the training and education of the kindergarten teachers has been forgotten! Austria is the only country in Europe, besides Malta, which does not train its elementary pedagogues to an academic niveau. The kindergarten pedagogues will, at first, not be part of the general education plan. This has outraged the umbrella organisation representing this group of workers who speak of a discrimination of this group and say that this decision has lowered the value of the work they do. The law does provide for a bachelor study for elementary and/or primary level, however in the absence of teachers for this group at the colleges there will be no suitable offer of courses. In the future a bachelor study for elementary pedagogues is planned that will take three years whilst for other pedagogues it will take four years.

The opposition parties have also loudly criticised the bachelor study. The fear is the cheap training of teachers without a masters degree. At the moment, because of a shortage of teachers, it is possible for students, without the appropriate accreditation, to teach in schools. Also one knows how difficult it will be for these people to complete their masters study at the few universities in the provincial cities, and work in the classes parallel to this.

An exception is the training of handcraft and art teachers at the Gymnasiums. Here, after some heavy debates, the study stays fixed at the universities of art. A nine semester study is required leading to a masters in art. Here in addition to teacher training for upper schools, it will be possible to further qualify for working in fields such as art mediation in museums or project management in the field of art and culture. In this case special additional studies will be offered.

THE BATTLE FOR A GOOD SCHOOL SYSTEM: FOR PUPILS AND FUTURE TEACHERS.

It is quite clear that in Austria fundamental changes need to be made in education. It is urgently necessary to address the taboos surrounding the school system. A common teacher training and education plan for all further education school forms needs to be passed. The snobbery that exists between being either a compulsory school teacher or a Gymnasium teacher has to be seriously addressed, the differences in the salaries adjusted, more pedagogic training for the Gymnasium teachers given, and the compulsory school teacher needs more support in building up their specialist knowledge. The political parties have to jump over their shadow and perform more in relation to education. Every child, regardless of their social class, should have the same opportunities open to them. The educational system must do justice to the individual requirements of the pupil. A comprehensive school system would be useful for this. It has to be ability orientated and performance graded. It needs a show of strength from both political parties to negotiate sensibly and avoid any accusations of blame. It is not enough to think in five year periods of government and who will be sitting in parliament; it needs a vision for the future, where will the country be? What position does the country want to take? The next conflict is already programmed; in December the results of the PISA study carried out in 2012 will be published. Enough to kindle another fiery debate regarding teaching contracts, school systems, training and, dig up old political quarrels. All these debates are to the detriment of the pupils, amongst whom a few will one day, out of their own conviction, decide to pursue a career as a teacher.

AN INVESTIGATION OF THE RELATIONSHIP BETWEEN EGO-IDENTITY FUNCTIONS AND INTERPERSONAL RELATIONSHIP SKILLS AMONG FACULTY OF COMMUNICATION STUDENTS

Füsün Ekşi

Asst. Prof. Dr., Marmara University, Faculty of Communication, Public Relations and Publicity Department

The Relevance of interpersonal relationships with identity and identity related processes is a basic promise of developmental theorists like Erikson, Marcia and Sullivan during adolescence and emerging adulthood. In order to test this promise, the aim of the current study was determined as to investigate the relationship between Ego-Identity Functions and Interpersonal Relationship Skills Among university students. The study was conducted with 220 students (male: n=108; %49.1; female: n=112, %50.9) in 2013-2014 education year by using random sampling. The data was collected by using Identity Functions Scale (IFS) and Interpersonal Style Inventory (ISI). Descriptive approach was used as a research design. The data were analyzed by using SPSS 15.0 statistical analysis software. During the analysis, demographical information of the participants were presented by computing frequencies and percentages. The relationship between IFS and ISI was investigated by computing Pearson correlations among the subscales of the inventories. Based on the results, it was found that, the Structure dimension of IFS and dominant style ($p<0.05$), avoidant style ($p<0.05$) and angry style ($p<0.05$) dimensions of ISI; Harmony dimension of IFS and dominant style ($p<0.05$), avoidant style ($p<0.05$) and insensitive style ($p<0.05$) dimensions of ISI; goal dimension and avoidant style and insensitive style ($p<0.05$); future dimension and avoidant style ($p<0.05$) and finally, control dimension and dominant style, avoidant style and insensitive style ($p<0.05$) were found to be negatively correlated. For both IFS and ISI, strong and positive correlations were found between the dimensions. Hence, it was concluded that the main hypothesis of the research was accepted with some exceptions among some subscale pairs where there was no relationship found. The results of the study was discussed in the light of relevant literature.

Keywords: Ego Functions, ego status, emerging adulthood, adolescence, interpersonal styles, intimacy, university students

INTRODUCTION

It is a debated topic whether forming healthy relationships is primarily dependent on fulfilling one's own identity among developmental psychologists. For instance, according to Erikson (1968) people could form close relationships only after solving their own crisis. Intimacy is a relationship between trust based on acceptance of uniqueness and differences and emotions (Kan and Cares, 2006, cited in., Eryılmaz and Ercan, 2011).

Erikson's developmental theory is the first place to see this phenomenon. According to Erikson, there are eight critical period in a person's life. In each period, there is a crisis and conflict to be solved. Erikson stated that conflicts faced during developmental periods are not a disaster. Instead, it is a critical turning point to fulfill one's potential. People could develop healthy personality to the extend s/he cope with these conflicts. In this way, a person could be equipped with tools to coper with the conflict s/he will face during the later developmental periods (Özdemir, Özdemir, Kadak, and Nasiroğlu, 2012). Young people that is the focus of the current study should have a steady identity sense in order to feel that s/he is ready to adulthood period. Hence, it is a important problem for a young people not to have sense of steady identity especially just before passing to the adulthood period and disrupt their harmony at some circumstances (Dereboy and Dereboy,1997 cited in Arslan and Arı, 2008).

Marcia added the fact that whether a person have crisis or not as a parameter to Erikson's theory proposed identity status concept and defined identity statuses and defined those statuses bade on availability of the dimensions of commitment and exploration. In other words, for Marcia, exploration of identity is ended with a status and there could be transitions between statuses. Marcia stated that foreclosure, identity diffusion, moratorium and identity achievement are the identity statuses (Atak, 2011).

Arnett (2000), like Erikson, studied identity exploration but, unlike Erikson, stated that identity exploration process is not end up during adolescence period. An adolescent conduct experimentations in the areas of vocation, love and world views. Those experimentations become intense during emerging adulthood period (cited in Atak, 2011).

During emerging adulthood period, five basic psychological of identity was proposed (Adams and Marshall, 1996, pp. 433; Serafini and Adams, 2002): (i) to present a *structure* enabling a person to understand who s/he is: Identity enable person to be aware of his/her autonomy and uniqueness. This awareness further present a structure enabling a person to be self-confident and having self-respect. (ii) to present meaning and direction sense with various connections, values and *goals*: identity is to provide a base where a person could direct or control his/her behaviors. (iii) to present sense of personal *control*: identity is to present a sense of an ability to express yourself independently, free will, and sense autonomy. (iv) to present a sense of consistency, continuity and harmony between values, beliefs and ideas. Identity is to present *harmony* ability and ability to have synthesis about yourself in a period of time. (v) To present an awareness about the probabilities and alternatives related to the *future*: Identity provides a future directedness which give opportunity for fulfilling your own potential (cited in Demir, 2011a).

Studies of identity functions conducted in Turkey is very limited Demir (2011b) conducted a study with 253 graduate students which showed that structure, goal, future, harmony and control sub-dimensions of identity functions have a predictive power over life satisfaction and explain %28 of it. It was found that there is a relationship between future relatedness and coping styles of active planning, seeking outside support. Another relationship was found between personal control and active planning, sheltering to religion and acceptance (Önen, 2012).

Majority of recent publications generally focused on Marcia's Kimlik Statuses Årseth, Kroger, Martinussen and Marcia (2009) conducted a meta-analysis with 550 empirical study published between 1966 and 2005. The findings of the empirical studies conducted in Turkey are as follows;

Atak, Kapçı and Çok (2013) who proposed that studies related to identity should focus on emerging adulthood instead of adolescence, conducted a study with 700 young people between the ages of 19-26. The focus of the study was individuation types and identity statuses. In the study, it was found that people in developmental individuation group had more healthy identity forming in comparison to people in standard individuation group. On the other hand, Ego statuses were found in close relationship with family attitudes. It was found that authoritarian and permissive family attitudes, in comparison to neglecting attitudes, were more related to identity foreclosure (Cakir and Aydin, 2005). Similarly, Eryılmaz and Aypay (2011) found that there is a strong relationship between subjective well-being and identity achievement and foreclosure identity statuses.

Bacanlı (2011) found that there is a positive relationship identity achievement and rational decision making style, and negative relationship with dependent and undecided styles. Additionally, he further found that ego statuses are in close relationship with impulsive and undecided styles.

The problems related to interpersonal relationships which is the other variable in the current study, has an effect in many field in life. This fact is already proven by many researches. For instance, Durak-Batıgün and Atay-Kayı (2014) avoidance, anger and manipulative sub-dimensions of "Interpersonal Style Scale" were found to have predictive power over impatient approach, unplanned approach and evaluative approach sub-dimensions of "Problem Solving Inventory".

Aim of the Study

The main aim of the study is to investigate the relationship between ego-identity functions and interpersonal styles among Communication Faculty students in Marmara University. Additionally, it was further investigated whether or not ego-identity functions and interpersonal styles show difference by gender, age, field of study, kind of high school graduated, perceived economic status and order of birth.

METHODOLOGY

Population and Sample

The population of the study is students enrolled to Communication Faculty in Marmara University. Sample of the study is composed of 220 students selected based on cluster sampling from the population. The demographical information related to the sample was given in Table 1.

Table 1. Distribution of the Sample by Gender

Gender	f	%
Male	108	49,1
Female	112	50,9
Total	220	100,0

As the distribution of the participants by gender is examined, it is seen that number of male (n=108; %49,1) and female (n=112, %50,9) participants are very close to each other (see Table 1). Additionally, it is observed that, participants are mostly at the ages between 21-23 (n=118, %53.6), the number of students at 1st and 2nd years of study is very similar to number of student at 3rd and 4th years of study (%55.9 and %40.9 respectively). The distribution of students by the field of study are as follows: Journalism (%31.4), Public Relations and Publicity (%27.3), Radio, Television and Cinema (%41.4). Most of the participants were graduated from general high school (%57.3). Education of their parents is mostly found to be at primary and secondary school levels (%45 and %28.6 for mothers, %51.8 and %25 for fathers respectively). Majority of students (%62.7) perceive their economic status as middle class while %42.3 of them are the first child of their parent.

Data Collection Tools

Ego Functions Scale (EFS): The original form of the scale was developed by Serafini and colleagues and the scale was adapted to the Turkish culture by Demir (2011a) The scale is based on Erikson's theory and composed of 15 items and 5 sub-dimensions (structure, harmony, goals, future and control). It is a self-report inventory and it is composed of Likert type questions with 5 options. The factor analysis confirmed that Turkish version of the scale is composed of five factors like the original scale. For instance, the content validity of the scale was proved with the ones that are theoretically parallel. The reliability of Turkish version of the scale was investigated with the results of internal consistency coefficients, test-retest reliability and item-total correlations.

Interpersonal Styles Scale (ISS): The scale was developed by Şahin et al (2009) and composed of 60 items Likert type items. For each item 5 options are available. The scale aims to determine interpersonal relationship styles. Higher scores earned in the scale means lower level of quality in each dimensions. The scale is composed of six dimensions: dominant style, avoidant style, angry style, insensitive style, manipulative style and cynical style. The scale was found as reliable and valid based on the investigations by Şahin and his colleagues.

Analysis

The analysis of the data was performed by using SPSS 15 statistical analysis software. During the analysis, demographical information of the participants was described by using frequencies and percentages. The relationships between the sub-dimensions of EFS and ISS were determined by calculating Pearson correlations. In order to determine whether or not EFS and ISS subscale scores show difference by gender of the participants, independent sample of T test analysis were performed. For other demographical variables, One Way Analysis of Variance (ANOVA) was used for each sub dimension.

RESULTS

Table 2. Means and Standard Deviations of EFS sub-scale Scores

EFS Sub-dimensions	X	SS
Structure	11,77	2,61
Harmony	11,90	2,45
Goals	12,30	2,51
Future	11,00	2,49
Control	12,31	2,30

As seen in Table 3, it was seen that EFS sub-dimensions' mean and standard deviation scores are close to each other (for instance 11.77 for structure and, 12.31 for control).

Table 3. Means and Standard Deviations of ISS sub-scale Scores at Item Level

ISS Sub-dimensions	X	SS
Dominant Style	2,05	0,75
Avoidant Style	2,32	0,68
Angry Style	2,63	0,75
Ignorant Style	2,13	0,61
Manipulative Style	2,37	0,62
Cynical Style	2,47	0,81

Based on Table 3, it is concluded that participants have highest level of scores in Angry Style ($x=2.63$) while least frequently used style was found as Dominant Style ($x=2.05$).

Table 4. Correlation Coefficients Between EFS and ISS Sub-scale Scores.

	Structure	Harmony	Goals	Future	Control	Dominant	Avoidant	Angry	Insensitive	Manipulati.	Cynical
Structure	r=1	,688**	,678**	,603**	,681**	-,204**	-,266**	-,159*	-,137	-,097	-,060
Harmony		r=1	,624**	,482**	,549**	-,194**	-,261**	-,093	-,177*	-,038	-,123
Goals			r=1	,672**	,726**	-,094	-,212**	-,061	-,148*	,040	-,033
Future				r=1	,630**	-,024	-,143*	-,052	-,057	,045	-,012
Control					r=1	-,164*	-,171*	-,056	-,147*	,026	-,026
Dominant						r=1	,709**	,645**	,614**	,662**	,538**
Avoidant							r=1	,616**	,662**	,640**	,564**
Angry								r=1	,497**	,588**	,539**
Insensitive									r=1	,578**	,426**
Manipulative										r=1	,474**
Cynical											r=1

* $p < .05$

As presented in Table 4, it was found that sub-dimensions of EFS are highly correlated with each other (for instance correlation between Structure and Harmony subscales is calculated as $r=,624$, $p < .05$; for Control and Goals subscales, $r=,726$, $p < .05$). Additionally, there was a strong and negative correlation between structure sub-dimension and dominant style ($r=-,204$), avoidant style ($r=-,266$) and angry style ($p < .159$) at $p < 0.05$ level; Harmony subscale and dominant style ($r=-,194$), avoidant style ($r=-,261$) and insensitive subscale ($r=-,177$); Goals subscale and avoidant style ($r=-,212$), and insensitive style ($r=-,148$); Future subscale and avoidant style ($r=-,143$) and finally control subscale and dominant style ($r=-,164$), avoidant style ($r=-,171$) and insensitive style ($r=-,147$) at $p < 0.05$ level. Finally, it was found that all of the ISS sub dimensions are positively correlated with each other (for instance, avoidant and angry styles $r=,616$, manipulative and cynical styles $r=,726$ at $p < 0.05$ level).

Results Related to Demographical Variables

In order to investigate whether or not EFS and ISIS subscale scores show difference by gender of the participants, T test analysis were conducted for each sub-dimension. The results showed that only significant difference was observed for manipulative style dimension. For this dimension, male students were found to have significantly higher scores than female students ($p < 0.05$). In other words, male students use manipulative style more frequently. The significant differences were found for other sub-dimensions of EFS and ISS.

In order to investigate whether or not EFS and ISIS subscale scores show difference by the type of high school students graduated, ANOVA was performed for each sub-dimension. For dominant subscale, a significant

difference found ($F=51,05$; $p<.05$). In order to see which schools show difference, Scheffe post hoc analysis were performed. According to the results, it was found that, students graduated from vocational schools show dominant style more frequently than students from general high schools. Additionally, another significant difference was found for avoidant style ($F=4,406$, $p<0.05$). Further post hoc analysis with Scheffe test showed that students graduated from vocational schools show avoidant style more frequently than students from general high schools. Angry style subscale scores of the students were found to be significantly different based on high school type. In order to see which school types specifically show difference, Scheffe test was conducted. The results showed that, students graduated from vocational schools show angry style more frequently than students from general high schools.

Any significant difference was observed for insensitive style sub dimension based on type of high school type ($p>0.05$). For manipulative styles of students, a significant difference was observed between students graduated from different types of high schools ($F=3,640$; $p<.50$). In order to investigate the source of this observed difference, Scheffe post hoc analysis was performed. The results showed that there was any significant difference among any pairs of the school types. Finally, for cynical style sub-dimension significant difference was found by the graduated high school type ($F=6,226$; $p<.50$). Complementary Scheffe analysis showed that Anatolian high school students use more cynical relationship style in comparison to students from general high schools. On the other hand, for EFS subscales, any significant differences was observed for demographical variables ($p>0.05$).

RESULT and DISCUSSION

The aim of the current study was to investigate the relationship between Ego-Identity Functions and Interpersonal Styles among university students and to see the effects of demographical variables on them. First of all, it was found that, there are a high level of correlations between the sub-scale scores for each scale. Similarly, Serafina & Maitland (2013) found that Ego-Identity function sub scales are highly correlated.

The main hypothesis of the study is also confirmed to large extend. It was found that there is a relationship between interpersonal styles and identity functions partly. Because scores of Interpersonal Style Scale is interpreted negatively, the observed correlations were also found as negative. Structure sub dimension of EFS is found to be correlated with dominant, avoidant and angry relationship styles. This means that people who are aware of and confident on who they are, show less dominant, avoidant and angry styles in their interpersonal relationships. Harmony sub-dimension was found to be related to dominant, avoidant and insensitive styles. This could be interpreted as that university student who shows consistency, continuity and harmony between values, beliefs and ideas, less likely to use dominant, avoidant and insensitive styles in their interpersonal relationships. Goals sub dimension is found to be related to avoidant and insensitive styles. That is, those who present meaning and direction sense with various connections, values and goals use avoidant and insensitive styles less frequently. For the Future sub-dimension, avoidant style was found to be correlated. This could be interpreted as students who present an awareness about the probabilities and alternatives related to the future are less likely use avoidant style in their interpersonal relationships. Finally, control sub-dimension was found to be related with avoidant and insensitive style. This finding showed that, those who present sense of personal control, less likely use avoidant and insensitive styles during their interpersonal relationships. In the literature, there are many studies showing the predictive power of identity statuses on interpersonal relationships. For instance, Özgüngör (2014) found that identity statuses are significant predictor of intimacy satisfaction. Similarly, Årseth et al (2009) found a significant correlation between intimacy satisfaction and identity statuses.

This study was conducted with a study group consist of adolescents and those who are at emerging adulthood. For these two group, the relationship between identity functions and intimacy could be studied comparatively. In this way, the relationship could be investigated longitudinally. In the current study, high level of correlations between identity functions is not well focused because this was not the main aim but further qualitative studies could be conducted in order to understand the nature of this phenomenon in depth.

Ergenlerde Görülen Siber Zorba/Mağdur Yaşantılarının Utanç/Suçluluk ve İntikam Duyguları Çerçevesinde İncelenmesi¹²⁶

Halil Ekşi¹²⁷, Yaşar Dilber¹²⁸
Özet

Bu araştırmanın temel amacı, ergenlerin sanal ortamda karşılaştıkları siber zorba ve mağdur yaşantılarında utanç/suçluluk ve intikam duygularının etkisini incelemektir. Araştırmaya Bursa ilinin sosyo-ekonomik durumları farklı merkez iki ilçesinde 5 farklı lise türünde (Genel Lise, Anadolu Lisesi, Kız Meslek Lisesi, Endüstri Meslek Lisesi ve Anadolu Güzel Sanatlar Lisesi) toplam 9 ortaöğretim kurumunun 9. ve 10.sınıflarında öğrenim gören 553 öğrenci katılmıştır. Katılımcıların 308'i kız, 245'i ise erkektir. Araştırmaya katılan öğrencilere Kişisel Bilgi Formu, Siber Zorbalık Ölçeği, Siber Mağdur Ölçeği, Utanç/Suçluluk Ölçeği ile İntikam Ölçeği uygulanmıştır. Analizlerde Çoklu Regresyon Analizi kullanılmıştır. Araştırmada ergenlerin siber zorba/mağdur yaşantılarına utanç/suçluluk ve intikam duygularını yordamaya katkısını incelemek için Çoklu Regresyon Analizi yürütülmüştür. Analiz sonucunda, utanç/suçluluk ile intikam duygusunun siber zorba üzerinde anlamlı bir yordayıcı olduğu görülmüştür. Siber zorbalığın suçluluk duygusu ile negatif yönde, utanç ve intikam duygusu ile pozitif yönde bir ilişkisi vardır. Siber mağduriyette ise; utanç ve intikam duygusunun negatif yönde siber mağduriyet üzerinde anlamlı bir yordayıcı olduğu görülürken suçluluk duygusunun anlamlı bir yordayıcı olmadığı görülmüştür. Araştırma sonucunda utanç/suçluluk ve intikam duygusunun siber zorbalığı, utanç ve intikam duygusunun ise siber mağduriyeti açıkladığı bulgusuna ulaşılrken, suçluluk duygusunun siber mağduriyeti açıklamadığı görülmüştür. Siber zorba/mağdur davranışları ortaya çıkaran etmenlerin farklı araştırmalarla incelenmesi bu yaşantıların anlaşılmasına ve önlem alınmasına katkı sağlayacağı düşünülmektedir.

Anahtar Kelimeler: Siber zorba, siber mağdur, utanç/suçluluk duygusu, intikam duygusu

Analyzing the Cyber Bullying and Victimization among Adolescents In The Framework Of Shame/Guilt and Revenge

The main aim of this study was to analyze the effect of the feelings of shame/guilt and revenge on the cyber experiences of adolescents who face cyber bullying and victimization. The study included 553 students (308 female and 245 male) in 9th and 10th grades in 9 high schools (in five different high school types: general education, Anatolian, girls vocational, industrial vocational, Anatolian fine arts) in two central municipalities of Bursa with different socio-economic status. Personal Information Forms, Cyber bullying, Cyber victimization, Shame/guilt, and Revenge scales were used as data collection instruments. Main analyze technique is stepwise regression analysis. The results showed that the feelings of shame/guilt and revenge were significant for being a cyber-bully. Cyber bullying had a negative relationship with the feeling of guilt whereas it had a positive relationship with the feeling of shame and revenge. In cyber victimization, shame and revenge feelings had negative effect while the feeling of guilt was not significant. The research showed that the feeling of shame/guilt and revenge explained the cyber bullying while the feeling of shame and revenge explained the cyber victimization, however, the feeling of guilt did not explain the cyber victimization. We think that studying and analyzing the factors causing cyber bully and victim behaviors will help explain these life forms and devising interventions.

Keywords: Cyber bullying, cyber victim, shame/guilt feeling, revenge feeling

1. GİRİŞ

Günümüzde bir milyardan fazla kişi sosyal ilişki oluşturmak amaçlı olarak interneti kullanmakta ve bunların büyük bir kısmı da özellikler gençlerin üye olduğu popüler web siteleri olmaktadır. Bugün Kuzey Amerika'daki gençlerin büyük bir yüzdesi sosyal ağ (network) oluşturmak amaçlı olarak Facebook, Myspace, Xanga vb. popüler web sitelerini kullanmaktadır (Akt. Arıca, 2011).

Gelişen ya da yenilenen teknolojiler insanların yaşamını kolaylaştırmasıyla birlikte bazen yeni bir takım problemleri de beraberinde getirmektedir. Okullarda öğrencilerin göstermiş olduğu geleneksel zorbalık davranışları teknolojinin de devreye girmesi ile birlikte başka bir boyut kazanarak sanal zorbalık (cyber bullying) adı ile anılmaya başlanmıştır.

Siber zorbalık kavramı ilk kez 2004 yılında Kanadalı eğitimci Bill Belsey tarafından kullanılmıştır (Belsey, 2004). Türkiye'de ise siber zorbalık kavramı 2006 yılında literatüre girmiştir (Arıca, 2012). Bu kavram bazı araştırmacılar tarafından çevrim-içi zorbalık, elektronik zorbalık, dijital zorbalık, çevrim-içi zarar verme, internet saldırganlığı, internet tacizi ve internet zorbalığı gibi farklı kavramlarla adlandırılmıştır (Kowalski ve Limber, 2007; Raskauskas ve Stoltz, 2007; Williams ve Guerra, 2007).

Willard (2006)'a göre siber zorbalık, dijital teknolojinin diğer bireylere rahatsız edici mesajlar göndermek veya sosyal saldırganlık yapmak amacıyla kullanılmasıdır (Akt. Eroğlu ve Peker, 2011). En geniş anlamı ile siber zorbalık, bilgisayar, cep telefonu ve diğer iletişim teknolojileri aracılığıyla bir birey ya da gruba karşı yapılan kasıtlı ve tekrarlanan teknik ya da ilişkişel tarzda zarar verme davranışlarının tümüdür (Arıca, 2011; Yaman, Eroğlu, Peker, 2011; Belsey, 2007; Hinduja ve Patching, 2009; Li, 2006). Siber zorbalığın üç temel özelliği bulunmaktadır. Bunlar; tekrarlama, siber zorba ile mağdur arasında teknoloji kullanma becerisine dayalı bir güç dengesizliği, zarar vermesi. (Campbell, 2012).

Smith ve ark. (2006)'na göre siber zorbalık içeren davranışlar; SMS (short message service-kısa ileti) yoluyla, cep telefonu kamerası aracılığıyla video ve fotoğraf çekilerek, cep telefonuyla diğer bireyleri rahatsız ederek, sohbet odalarında, e-posta yoluyla, anlık mesajlaşma sırasında veya web siteleri aracılığıyla gerçekleştirilebilmektedir (Akt. Eroğlu, 2011).

Siber zorbalık mesajları elektronik posta, tartışma grupları, sohbet odaları, anında mesajlaşma, haber grupları ve mobil olanaklar aracılığıyla mesaj ve dijital görüntü gönderilmesi yoluyla da iletilebilmektedir. Ayrıca siber zorbalık, bireylere onur kırıcı mesajlar yollamadan önce bu mesajları başkalarına göstermek, tehdit edici e-postalar yollamak, bir kişiye ait özel ya da mahrem bir mesajı başkalarına göndererek, ilk göndereni herkesin önünde küçük düşürmek gibi şekillerde de kendini göstermektedir (Karlıer-Soydaş, 2011). Siber zorbalık, internet ve/veya cep telefonu kullanılarak tehdit etme, isim takma, alay etme, söylenti/dedikodu yayma, kişinin rızası olmadan fotoğrafını yayma, şifrelerini ele geçirip zarar verme, virüslü e-mail yollamak gibi davranışları içermektedir.

Siber zorbalık sosyal ortamda gerçekleştirilen zorbalık türlerine benzemektedir. Siber zorbalığın geleneksel zorbalıktan ayıran temel fark ise, internet veya cep telefonu gibi sanal iletişimin, bilgi ve iletişim teknolojilerinin aracı olarak kullanılmasıdır (Arıca, 2009; Arıca ve diğerleri, 2008; Erdur-Baker ve Kavşut, 2007; Topçu, 2008). Siber zorbalığın meydana gelmesi için zorbaca davranışın mutlaka dijital teknolojilerin kullanımıyla oluşması gerekmektedir (Ayas ve Horzum, 2010).

Öyle ki sanal ortamda birbirlerine gönderdikleri mesajlarla başlayan tartışmalar daha sonra okul ortamında veya dışarıda da devam ettiği tespit edilmiştir (Erdur-Baker vd., 2006). Fiziksel ortamda sosyal dışlama yoluyla zorbalık yapan ergenlerin sanal ortamda zorbalık yapma olasılıklarının daha fazla olduğu görülmektedir (Burnukara, 2009). Bu nedenle bu iki zorbalık türünün etkileşim halinde olduğu ve bazı durumlarda birbirinin devamı niteliğinde gerçekleştiği söylenebilir.

Geleneksel zorbalık ile siber zorbalık arasında bazı benzerlikler olsa da (Hinduja ve Patchin, 2008; Li, 2006, 2007), siber zorbalığı geleneksel zorbalıktan ayıran önemli özellikler mevcuttur. Bu ayırıcı özelliklerden ilki, geleneksel zorbalık okulda ya da iş yerlerinde diğerleri tarafından tanınır. Ancak çoğu zaman siber zorbalıkların kim olduğu bilinmez (Anderson ve Sturm, 2007 ; Chibbaro, 2007; Strom ve Strom , 2005). Özellikle bu durum siber zorbalığın daha çok incitmesine neden olur (Beale ve Hall, 2007 ; Akt. Dilmaç, 2009). Diğer bir ayırıcı özellikte, geleneksel zorbalıkta genellikle kilolu, psikolojik olarak zayıf, öğrenme güçlüğü çeken ya da popüler olmayan çocuklar hedeftir (Willard, 2007; Akt. Dilmaç, 2009). Geleneksel zorbalık genellikle okulda ya da gün

içinde yaşanırken (Cunningham, 2007) siber zorbalık ise zaman ve mekândan bağımsız olarak günün herhangi bir anında gerçekleşebilir.

Siber zorbalık gençler arasında hızla yaygınlaşan bir problemdir (Kowalski ve Limber, 2007; Li, 2006). Özellikle son beş yıldır A.B.D, Kanada ve Avustralya’da eğitim bilimciler ve psikologlar başta olmak üzere diğer uzmanlar tarafından araştırılan ve tartışılan bir konu olmuştur. Ülkemizde son zamanlarda gerçekleşen araştırmalarda gençler arasında siber zorbalık davranışlarının yaygın bir şekilde görüldüğünü ortaya koymuştur (Arıca vd., 2008; Topçu, 2008; Dilmaç, 2009). Aslında sorun teknolojiye değil, teknolojinin nasıl ve ne amaçla kullanıldığında yatmaktadır.

Siber zorbalık adı verilen bu olumsuz davranış bireylerin duygusal ve sosyal yaşamında önemli sorunlara yol açmaktadır. Yazılı-görsel basında yer alan haberler ve yapılan araştırmalar, siber zorbalığa maruz kalmış ergenlerde sosyal ilişkilerinde bozulma, okuldan kaçma, üzüntü, öfke, endişe, intikam, akademik başarısızlık, okul devamsızlığı, okula silah getirme, yalnızlık, depresyon ve hatta intihara kadar varabilen çeşitli psikolojik travmalara neden olduğu bilinmektedir (Agatston vd., 2007; Arıca, 2011; Hinduja ve Patchin, 2009; Raskauskas ve Stolz, 2007; Willard, 2007; Ybarra, Diener-West, ve Leaf, 2007). Siber zorbalık davranışlarına maruz kalan ergenlerde, siber zorbalığın, bireysel ve toplumsal yaşamı ciddi biçimde tehdit etmesi, siber zorbalığın temelinde yer alan sosyo psikolojik süreçleri araştırmaya yöneltmiştir (Eroğlu, 2011).

Raskauskas ve Stoltz (2007) siber mağdurların siber zorbalıktan dolayı kendilerini kötü hissettikleri ve bu nedenle okula gitmekten korktuklarını ifade etmiştir. Siber zorbalığa maruz kalma, öğrencilerin okuldan uzaklaşmalarına ve akademik başarılarında da ciddi bir düşüşe neden olmaktadır.

Siber zorbalığa maruz kalanlarda kızgınlık, moral bozukluğu, huzursuzluk duyguları yaygın olarak gözlenmekte, akut stres bozukluğu ve duygudurum bozukluğu yaşanmakta, bu durum ise intihara kadar uzanan yıkıcı birçok ruh sağlığı problemine neden olabilmektedir (Ayas, 2011; Şener ve ark. 2012; Arıca ve ark. 2008). Arıca (2009), siber zorbalık yapmayan ve siber zorbalığa maruz kalmayan grubun siber zorba ve siber mağdurlardan daha az psikiyatrik belirti gösterdiğini bulgulamıştır. Erkek öğrenciler siber zorbalığa maruz kaldıklarında daha çok öfke; kızlar ise üzüntü duygusunu daha yoğun yaşamaktadırlar. Diğer bir yoğun yaşanan duygu ise intikamdır (Yaman ve Peker, 2012).

İnsanlar yaşamları boyunca birbirleriyle fiziksel ve duygusal bağlar kurmaya gereksinim duyarlar. Ancak yakın ilişkilerde bireyler doyum, mutluluk paylaşma gibi olumlu duygular yaşarken aynı zamanda incinme, kırılma, gücenme ve hayal kırıklığı gibi olumsuz duygularda yaşayabilmektedirler (Ergüner-Tekinalp ve Terzi, 2012). İntikam duygusu da diğer duygular gibi (mutluluk, sevinç, neşe, keyif, keder, öfke vb.) temel insani duygulardan biridir ve sosyal davranışın kuvvetli bir uyarıcısıdır.

Stuckless ve Goranson (1992) intikamı, “yanlış olarak algılanan bir davranışın karşılığında zarar veya ceza vermek” şeklinde tanımlamaktadır. McCullough ve ark. (2001) “intikam, kişilerarası anlaşmazlığı çözmek amacıyla, saldırgan olarak algılanan kişiye karşı gönüllü olarak saldırgan davranışlar göstermektir”. Hakarete uğrama, aldatılma, saldırıya uğrama gibi olumsuz olaylarla karşılaştıklarında insanların suçlu kişiden kaçınma veya bu kişilerden intikam almaya motive oldukları ifade edilmektedir (McCullough ve Witvliet, 2002). İntikam çok komplike, yıkıcı ve bir o kadar da güçlü bir duygudur.

Bireyler normal hayatta veya sanal ortamda hakarete ve saldırıya uğradıktan sonra intikam duygusu içerisinde ya kendine yöneltilen davranışa karşılık vermekte, karşı saldırıya geçmekte ya da yaşadığı intikam duygusunu başka bireylere yönlendirmektedir. Raskauskas ve Stoltz (2007) bireylerin eğlenmek, kendini iyi hissetmek ve intikam alma amacıyla siber zorbalık yaptığını ifade etmiştir.

Başkaları üzerinde kontrol kurmayı amaçlama, saldırganca davranmaktan haz alma, arkadaşları arasında saygınlık kazanma çabası, gerçek yaşamda davranışa dökemediği saldırganlık içeren düşlemlerini sanal ortamda dile getirme arzusu, kendisine kötü davranan kişilerden sanal dünyadan intikam almaya çalışma gibi nedenlerden dolayı siber zorbalık davranışının meydana geldiği ifade edilmektedir (Kowalski vd., 2008; Akt. Peker vd., 2012).

Şahin ve ark. (2010) öğrencilerin siber zorbalığa maruz kaldıklarında öfke, nefret, üzüntü ve intikam duyguları hissettiklerini belirtmişlerdir. Ayrıca siber zorba davranışlara maruz kalan öğrencilerin kendilerinin de siber zorba davranışlarda bulunduğunu tespit etmişlerdir. Ülkemizde yapılan bir başka araştırmada ise ortaöğretim öğrencilerinin arkadaş ortamı, can sıkıntısı, intikam alma isteği gibi nedenlerle siber zorbalık yaptıkları tespit

edilmiştir. Siber zorbalığa maruz kaldıklarında da öfke, üzüntü ve intikam duyguları yaşadıkları görülmüştür (Yaman ve Peker, 2012).

İnsanoğlu içinde yaşadığı sosyal hayatta bireylerle kurduğu etkileşim içerisinde farklı duygular yaşamaktadır. Duygular ise kişilerarası ilişkileri etkileyen önemli birer faktördürler. İnsan, kendisinde ve çevresinde olup bitenleri bir yandan algılamakta diğer yandan bunları değerlendirir ve anlamlandırır. Duygularda insanın en önemli yönlendiricileridir. İşte insanoğlunun yaşadığı duygulardan en önemlileri ise utanç ve suçluluk duygusudur.

Utanç ve suçluluk insanlarla olan ilişkilerimizde karşımızdaki kişiyi rahatsız edecek davranışlarda bulunduğumuzda yaşanabilen iki duygudur. Bu duygular yoluyla rahatsız edici davranışlarımızı fark edebilir ve düzeltme yoluna gidebiliriz (Barasch, 2000; Akt. Karataş, 2008). Budak (2005)'a göre suçluluk duygusu dinen, kanunen ya da ahlaki yönden ayıplanan, yasaklanan değerleri, kuralları, töreleri çiğnediğimizde ortaya çıkan düşüncenin yarattığı rahatsızlık ve pişmanlık duygusudur. Utanç duygusu ise bu değerler, kurallar ve töreleri çiğneyen kişinin benliğini olumsuz değerlendirmesiyle ortaya çıkarak acı vermektedir. Suçluluk genellikle, yapılan hata karşısında verilen yanıt; utanç ise kendini mutsuz hissetme ve hayal kırıklığına uğrama gibi duygulardır (Barasch, 2000; Akt. Karataş, 2008).

Utanç, bir kişinin kusuruyla bağlantılı iken, suçluluk ise yapılan hata ile bağlantılıdır (Striblen, 2007). Suçluluk davranış temelli iken, utanç duygusu daha çok kişinin kendi benliğiyle ilgilidir. “ben kötü bir şey yaptım” ifadesinde; kişi “kötü bir şey” üzerine odaklanırsa suçluluk duygusu, “ben” üzerine odaklanırsa utanç duygusu ortaya çıkabilmektedir (Silfver, 2007). Suçluluk duygusu daha kolay baş edilebilir bir olgu olduğu söylenebilir. Çünkü doğru veya iyi şeyi yaparak ya da yanlış yapılmasına rağmen özür dileyerek suçluluk duygusu görece giderilebilir. Ancak utanç, kişinin kendi benliğine yönelik hissettiği duygudur ve bu duyguyla baş edebilmesi daha zordur (Wilson, 2001).

Sağlıklı boyutta gelişen suçluluk-utanç duygusunun büyüme, gelişme, olgunlaşma, bağışlama, değişme ve yenilenme gibi olumlu sonuçları vardır (Sığırdı vd., 2010). Bu iki duygunun hiç yaşanmamasının ya da gereğinden fazla yaşanmasının sağlıklı bir durum olmadığı söylenebilir. Suçluluk ve utanç duygularının yoğun bir şekilde yaşanmasının bireyi şiddete yöneltebileceği de belirtilmektedir. Kişi yaşadığı yoğun suçluluk ve utanç duygusuyla baş etme yöntemi olarak şiddeti seçebilir. Bu durumda kişinin kendisine zarar vermesinin yanında başkalarına da zarar verebileceği olasıdır (Gilligan, 2003; Akt. Sığırdı vd., 2010).

Bu araştırmanın konusu araştırmacının ergenlerde görülen siber zorba ve mağdur yaşantılarının üzerinde hatayla ilgili utanç/suçluluk ve intikam duygularının etkisini merak etmesi sonucu oluşmuştur. Bu araştırmadan elde edilecek ipuçları siber zorbalığı önlemeyi amaçlayan araştırmacılara rehber olacaktır.

1.1. Amaç

Ergenlerde görülen utanç/suçluluk ve intikam duyguları siber zorba/ mağdur yaşantılarını nasıl yordamaktadır?

2. YÖNTEM

2.1. Araştırmanın Modeli

Bu araştırmada ilişkisel tarama modeli kullanılmıştır. Bu bağlamda araştırmada ortaöğretim öğrencilerinin siber zorbalık, siber mağdur, utanç, suçluluk ve intikam duyguları arasındaki ilişki incelenmiştir. Korelasyonel araştırma olarak da adlandırılan ilişkisel tarama modelinde “iki ya da daha çok değişken arasındaki ilişkinin herhangi bir şekilde bu değişkenlere müdahale edilmeden incelenmesi” (Büyüköztürk, Kılıç-Çakmak, Akgün, Karadeniz ve Demirel, 2008) söz konusudur. Korelasyon türü ilişki aramalarda değişkenlerin birlikte değişip değişmedikleri, birlikte bir değişme varsa, bunun nasıl gerçekleştiği öğrenilmeye çalışılır.

2.2. Evren ve Örneklem

Bu araştırmanın evreni 2012–2013 eğitim öğretim yılında Bursa ili Yıldırım ve Nilüfer İlçelerinde ki 5 farklı (Kız Meslek Lisesi, Teknik ve Endüstri Meslek Lisesi, Anadolu Lisesi, Genel Lise ve Anadolu Güzel Sanatlar Lisesi) orta öğretim kurumunda toplam 9 orta öğretim kurumunda öğrenim gören öğrencilerdir. Araştırma evreninin tamamına ulaşmak mümkün olmadığından örneklem alma yoluna gidilmiştir. Evreni daha iyi temsil edeceği düşüncesiyle farklı sosyoekonomik çevrelerdeki okullardan “sistemik tesadüfi (katmanlı) örnekleme” yoluyla 553 öğrenci araştırma örnekleme alınmıştır. Sistemik tesadüfi (katmanlı) örnekleme “bir evreni oluşturan elemanları özelliklerine göre gruplandırarak homojen tabakalara ayırma, sonra da örnekleri bu tabakalardan alma işlemidir” (Gökçe, 1988). Uygulama toplam 575 öğrenciye yapılmış, 12 öğrenci elenmiş,

analizler 553 öğrenci üzerinden gerçekleştirilmiştir. Örneklemin temel özellikleri tablolar olarak aşağıda verilmiştir.

Tablo 1. Cinsiyet Değişkeni İçin Frekans ve Yüzde Değerleri

Gruplar	f	%	% _{gec}	% _{yig}
Erkek	245	44,3	44,3	44,3
Kız	308	55,7	55,7	100,0
Toplam	553	100,0	100,0	

Tablo 1’de görüldüğü üzere örneklem grubunu oluşturan öğrencilerin 245’i (%44,3) erkek,308’i (%55,7) kızdır. Toplam 553 öğrenci vardır.

Tablo 2. Okul Türü Değişkeni İçin Frekans ve Yüzde Değerleri

Gruplar	f	%	% _{gec}	% _{yig}
Genel Lise	95	17,2	17,2	17,2
Meslek Lisesi	248	44,8	44,8	62,0
Anadolu Lisesi	210	38,0	38,0	100,0
Toplam	553	100,0	100,0	

Tablo2’de görüldüğü üzere örneklem grubunu oluşturan öğrencilerin okul türlerine bakıldığında 95’i(%17,2) genel lise,248’i (%44,8) meslek lisesi, 210’u (%38) Anadolu lisesi öğrencisidir.

Tablo 3. Sınıf Değişkeni İçin Frekans ve Yüzde Değerleri

Gruplar	f	%	% _{gec}	% _{yig}
9. sınıf	292	52,8	52,8	52,8
10. sınıf	261	47,2	47,2	100,0
Toplam	553	100,0	100,0	

Tablo 3’de görüldüğü üzere örneklem grubunu oluşturan öğrencilerin sınıflarına bakıldığında 292’si(%52,8) 9. sınıf,261’i (%47,2) 10. Sınıf öğrencisidir.

2.3. Veri Toplama Araçları

2.3.1. Siber Zorbalık Ölçeği: Veri toplama aracı olarak Arıçak, Kınay ve Tanrıku (2011) tarafından geliştirilen “Siber Zorbalık Ölçeği” (SZÖ) kullanılmıştır. Ölçek, 24 maddeden oluşmakta olup dördü Hiçbir Zaman, Bazen, Çoğu Zaman, Her Zaman skala üzerinden yanıtlanmaktadır. Öncelikle tüm maddeler için temel bileşenler analizi bağlamında açıklayıcı faktör analizi gerçekleştirilmiştir. Bileşen matriksi incelendiğinde tüm maddelerin tek faktör altında toplandığı görülmüştür. Bu tek faktör toplam varyansın %50.58’ini açıklamaktadır. Aynı zamanda çizgi grafiği (scree plot) üzerinde kırılma noktası incelenmiş, kırılma noktasından da ölçeğin tek faktörlü bir yapı gösterdiği görülmüştür. Tek faktör altındaki maddelerin faktör yükleri .49 ile .80 arasında değişmektedir. Böylece ölçeğin tek faktörlü bir yapıya sahip olduğu yargısına varılmıştır. Ölçeğin tamamı için hesaplanan Cronbach alfa katsayısı .95 olarak; test-tekrar test güvenilirlik katsayısı ise .70 olarak bulunmuştur. Elde edilen bu değerler ölçeğin, güvenilir bir ölçme aracı olduğu şeklinde yorumlanabilir.

2.3.2. Siber Mağdur Ölçeği: Veri toplama aracı olarak Arıçak (2011) tarafından geliştirilen “Siber Mağdur Ölçeği” kullanılmıştır. Siber zorbalığa maruz kalan öğrencilerin tespitinin sağlanması ve hangi yollarla mağduriyet yaşandığını tespit etmek için geliştirilmiştir. Ölçek, 24 maddeden oluşmaktadır ve 532 öğrenciden elde edilen veriler üzerinde yapılan istatistiksel analizlerde ölçeğin tek faktör yapısına sahip olduğu görülmüştür. Bu tek faktör toplam varyansın %30.17’sini oluşturmaktadır. Madde faktör yükleri .43 ile .67 arasında değişmektedir. Cronbach alfa katsayısı ise .89, test-tekrar-test korelasyonu ise .75 olarak bulunmuştur. Elde edilen bu değerlerden ölçeğin geçerli ve güvenilir olduğu yargısına varılmıştır.

2.3.3. Suçluluk ve Utanç Ölçeği: Veri toplama aracı olarak Akın, Sarıçam, Akın, Çitemel, Gediksiz ve Çardak (2012) tarafından geçerlik ve güvenilirlik çalışması yapılan “Hatayla İlgili Suçluluk ve Utanç Ölçeği” adlı envanter kullanılacaktır. Suçluluk alt boyutu: 1, 4, 7, 9, 10, Utanç al boyutu: 2, 3, 5, 6, 8, Ters kodlanan madde bulunmamaktadır. Ölçeğin yapı geçerliliği için uygulanan doğrulayıcı faktör analizinde orijinal formulla tutarlı olarak 10 maddeden oluştuğu ve utanç ve suçluluk şeklinde iki boyutta uyum verdiği görülmüştür ($\chi^2=86.59$,

sd=28, RMSEA=.068, GFI=.94, CFI=.95, AGFI=.93 ve SRMR=.070). Ölçeğin faktör yükleri .36 ile .75 arasında sıralanmaktadır. İç tutarlılık güvenilirlik katsayıları ölçeğin bütünü için .80, utanç alt ölçeği için .78, suçluluk alt ölçeği için .70 olarak bulunmuştur. Ayrıca ölçeğin düzeltilmiş madde-toplam korelasyonlarının .29 ile .62 arasında sıralandığı görülmüştür.

2.3.4. İntikam Ölçeği: Veri toplama aracı Satıcı, Can ve Akın (2012) tarafından geçerlik ve güvenilirlik çalışması yapılmıştır. İntikam Ölçeği toplam 20 maddeden oluşmaktadır. Ters puanlanan maddeler bulunmaktadır. Bu maddeler : 1-4 5-8-9-11-15-17-18-20' dir. Yükselen puanlar yüksek düzeyde intikam duygusunu göstermektedir. Ölçeğin faktör yükleri .39 ile .73 arasında sıralanmaktadır. İç tutarlılık güvenilirlik katsayısı ölçeğin bütünü için .91 ve test-tekrar test güvenilirlik katsayısı da .87 bulunmuştur. Ayrıca Ölçeğin düzeltilmiş madde toplam korelasyonlarının .35 ile .67 arasında sıralandığı görülmüştür.

2.4. Verilerin Çözümlemesi

Örneklem grubunu oluşturan öğrencilerin “Siber Zorbalık” ile “Siber Mağdur”luğu “Suçluluk ve Utanç Ölçeği” ve “İntikam Ölçeği”nin ne derecede yordadığını belirlemek amacıyla regresyon analizi kullanılmıştır. Elde edilen veriler bilgisayarda “SPSS for Windows ver:20” programında çözümlenmiş, manidarlıklar minimum $p<.05$ düzeyinde sınırlanmıştır.

3. BULGULAR

3.1. Betimsel İstatistikler

Öğrencilerin ölçme araçlarından (siber zorbalık, siber mağdurluk, Suçluluk, Utanç ve İntikam) düzeyleri Tablo 4.'de verilmektedir.

Tablo 4. Siber Zorbalık ve Siber Mağdur Olma Ölçeğinin Toplam Puanlar ve Tüm Alt Boyutların Aritmetik Ortalama, Standart Sapma

Boyut	N	\bar{X}	Ss
Siber Zorbalık	553	27,17	7,222
Siber Mağdurluk	553	44,68	4,225
Suçluluk	553	20,35	8,236
Utanç	553	18,49	8,520
İntikam	553	76,50	22,991

Tablo 4 'de görüldüğü üzere, örneklem grubunu oluşturan öğrencilerin siber zorbalık belirleme ölçeğinin toplam puanların aritmetik ortalaması $\bar{X}=27,17$ standart sapması $ss=7,222$ olduğu, siber mağdur belirleme ölçeğinin toplam puanların aritmetik ortalaması $\bar{X}=44,68$ standart sapması $ss=4,225$ olduğu görülmektedir. örneklem grubunu oluşturan öğrencilerin suçluluk ölçeğinin toplam puanların aritmetik ortalaması $\bar{X}=20,35$ standart sapması $ss=8,236$ olduğu, utanç ölçeğinin toplam puanların aritmetik ortalaması $\bar{X}=18,49$ standart sapması $ss=8,520$ olduğu, intikam ölçeğinin toplam puanların aritmetik ortalaması $\bar{X}=76,50$ standart sapması $ss=22,991$ olduğu görülmektedir.

3.2. Regresyon Analizleri

Siber zorbalığı suçluluk, utangaçlık ve intikam duygusunun ne derecede yordadığını belirlemek amacıyla yapılan çoklu Regresyon analizleri sonuçları Tablo 5'de sunulmuştur.

Tablo 5. Siber Zorbalığı, Suçluluk, Utanç ve İntikam Duygularının Ne Derecede Yordadığını Belirlemek Amacıyla Yapılan Çoklu Regresyon Analizleri Sonuçları

Değişkenler	B	Standart Hata	B	t	p
Sabit	23,667	1,366		17,326	,000
Suçluluk	-,115	,051	-,131	-2,246	,025
Utanç	,115	,049	,135	2,343	,019
İntikam	,051	,014	,156	3,667	,000
		$R=,202$	$R^2=,041$	$F=7,795$	$P=,000$

Tablo 5'de görüldüğü gibi suçluluk, utanç ve intikam duygularının, siber zorbalığı yordamasına ilişkin çoklu regresyon analizi sonuçları incelendiğinde; siber zorbalık ile suçluluk, utanç ve intikam duyguları arasında anlamlı bir ilişki olduğu sonucu ortaya çıkmıştır ($R= .202$, $R^2= .041$, $p<.01$). Adı geçen üç değişken birlikte siber zorbalıktaki toplam varyansın %41'ini açıklamaktadır. Standardize edilmiş regresyon katsayısına (β) göre, yordayıcı değişkenlerin siber zorbalık üzerindeki göreceli önem sırası; intikam, utanç ve suçluluk duygusudur. Regresyon katsayılarının anlamlılığına ilişkin t testi sonuçları incelendiğinde tüm değişkenlerin siber zorbalık üzerinde önemli (anlamlı) bir yordayıcı olduğu görülmektedir. Siber zorbalığın suçluluk duygusu ile negatif yönde, utanç ve intikam ile pozitif yönde bir ilişki vardır. Regresyon analizi sonuçlarına göre, siber zorbalığın yordanmasına ilişkin regresyon eşitliği (matematiksel model) ise şöyledir; siber zorbalık = $23,667 + -,115$

suçluluk + ,115 utanç + ,051 intikam.

Siber mağduriyeti suçluluk, utanç ve intikam duygusunun ne derecede yordadığını belirlemek amacıyla çoklu Regresyon analizleri sonuçları Tablo 6.'te sunulmuştur.

Tablo 6. Siber Mağduriyeti, Suçluluk, Utanç ve İntikam Duygularının Ne Derecede Yordadığını Belirlemek Amacıyla Yapılan Çoklu Regresyon Analizleri Sonuçları

Değişkenler	B	Standart Hata	B	t	p
Sabit	48,994	,779		62,866	,000
Suçluluk	,040	,029	,078	1,380	,168
Utanç	-,084	,028	-,170	-3,023	,003
İntikam	-,049	,008	-,256	-6,181	,000
		R=,296	R ² =,088	F=17,629	P=,000

Tablo 6'd görüldüğü gibi suçluluk, utanç ve intikam duygularının, siber mağduriyeti yordamasına ilişkin çoklu regresyon analizi sonuçları incelendiğinde; siber zorbalık ile utanç ve intikam duyguları arasında anlamlı, suçluluk ile ise anlamsız bir ilişki olduğu sonucu ortaya çıkmıştır (R= .296, R²= .088, p<.01). Adı geçen iki değişken birlikte siber mağduriyet toplam varyansın %88'ini açıklamaktadır. Standardize edilmiş regresyon katsayısına (β) göre, yordayıcı değişkenlerin siber mağduriyet üzerindeki görece önem sırası; utanç ve intikam duygusudur. Regresyon katsayılarının anlamlılığına ilişkin t testi sonuçları incelendiğinde utanç ve intikam duygusu değişkenlerin negatif yönde siber mağduriyet üzerinde önemli (anlamlı) bir yordayıcı olduğu görülürken suçluluk değişkeninin anlamlı bir yordayıcı olmadığı görülmüştür.

Regresyon analizi sonuçlarına göre, siber mağduriyetin yordanmasına ilişkin regresyon eşitliği (matematiksel model) ise şöyledir; siber mağduriyet = 48,994 + ,040 suçluluk + -,084 utanç + -,049 intikam.

4. TARTIŞMA

Araştırma bulgularında siber zorbalık ile suçluluk, utanç ve intikam duyguları arasında anlamlı bir ilişki ortaya çıkmıştır. Tüm değişkenlerin siber zorbalık üzerinde önemli bir yordayıcı olduğu görülmektedir. Siber zorbalık suçluluk ile negatif yönde, utanç ve intikam ile pozitif yönde bir ilişki vardır. Siber zorbalık arttıkça suçluluk duygusunda azalma görülmektedir. Bu sonuç siber zorbalığı anlama yönünde önemli bir bulgu olarak değerlendirilebilir. Nitekim siber zorbalığın bu davranışı sergilerken ya da ondan sonraki süreçte suçluluk duygusu yaşamaması, mağdurla yüz yüze iletişim kurmamasından kaynaklanıyor olabilir. Ayrıca siber zorbalıkta yakalanma olasılığının geleneksel zorbalıktan daha düşük olması, siber zorbalıkta kendini gizleme imkanının da olması yine siber zorbanın suçluluk duygusu yaşamamasına neden olmaktadır. Siber zorbanın suçluluk hissetmemesi de bu davranışın sürekliliğine ve tekrarlanabilirliğine neden olmaktadır.

Siber zorbalık utanç ve intikam duyguları ile de pozitif yönde bir ilişki vardır. Siber zorbalık arttıkça utanç ve intikam duyguları da ona paralel olarak artmaktadır. Siber zorbalığın artmasıyla utanç duygusunda artışı beklenenin aksine bir bulgudur. Utanç duygusunun artmasının anlık bir duygu durumu olduğu düşünülmektedir. Utanç duygusundan sonraki aşamanın suçluluk duygusu olması ve siber zorbanın da suçluluk duygusunun düşük olması bunun en önemli göstergesidir.

Siber zorbalığın artması ile intikam duygusunun da artması bulgusu beklenen bir bulgudur. Raskauskas ve Stoltz (2007) tarafından siber zorbalık yapan öğrencilere, siber zorbalığın nedenlerinin sorulduğu bir araştırmada, siber zorbalığın %38'i siber zorbalığın eğlence amaçlı olduğunu, %25'i de siber zorbalığın intikam alma amacı taşıdığını, %6'sı bireyin kendini kötü hissetmesinin siber zorbalık yapmasına yol açtığını ve %31'i bu konuda herhangi bir fikrinin bulunmadığını belirtmiştir. Yaman ve Peker (2012)'in yaptığı araştırmada siber zorbalığın önemli nedenlerinden birisinin intikam alma olduğunu belirtmiştir. Ergen normal hayatta güç yetiremeyeceği bir tanıdığından, sanal ortam yardımıyla, bu ortamın bazı avantajlarını da kullanarak (kimliğin rahatça gizlenebilmesi ve yakalanma olasılığının zayıf olması vb.) intikam alabilmektedir.

Araştırma bulguları incelendiğinde utanç ve intikam duygusu değişkeni negatif yönde siber mağduriyet üzerinde anlamlı bir yordayıcı olduğu görülürken, suçluluk değişkeninin anlamlı bir yordayıcı olmadığı görülmüştür. Bu

bağlamda mağdur bireyin suçluluk duygusunu hissetmemesi beklenen bir bulgudur. Ergenlerde utanç ve intikam duygusu arttıkça siber mağduriyet azalmaktadır. Bu bulgu, Şahin ve ark. (2010) ile Yaman ve Peker (2012)'in yaptığı araştırmalarda öğrencilerin siber zorbalığa maruz kaldıklarında öfke, nefret, üzüntü ve intikam duygularını yaşadıkları şeklindeki bulguyla örtüşmeyen bir bulgudur. Siber zorba intikam duygusu ile hareket edip sanal ortamda zorba davranışlar sergilerken mağdur birey bu yaşantıya maruz kalınca intikam duygusu ile başka bireylere yönelmeyebilir. İntikam duygusu olanlar daha çok zorba olurken, intikamın mağduriyet üzerine etkisi olmadığı söylenebilir. Siber mağdur olan her birey de intikam alma amacıyla karşısında bireye ya da bir başkasına yaklaşmayabilir. Mağduriyet arttıkça utanç duygusunun azalması ise mağdur bireyin yanlış yapmadığı tarzındaki düşüncesi etkili olabilir.

Nitekim bilgi ve iletişim teknolojilerinin kullanımının artmasıyla birlikte bireylerin internette karşılaştıkları zorbalığı zaman içerisinde kanıksamış olabilecekleri ya da bu tarz davranışlara karşı duyarsızlaştığı şeklinde de yorumlanabilir.

Araştırma bağlamında geliştirilen öneriler ise şöyledir:

- Alanyazında siber zorbanın ve mağdurun hangi duyguları yaşadıkları ve hangi duygularla bu tarz davranışlar sergiledikleri üzerine yapılan araştırmaların az olduğu görülmektedir. Siber zorba ve mağduriyet üzerine etki eden faktörlerin ortaya çıkarılması, siber zorba ve siber mağduriyet hakkında daha çok bilgi edinilmesine katkı sağlayacaktır. Bu edinilen bilgiler gerçekleşen olumsuz davranışların azaltılması yönünde atılacak adımlara da rehber olacaktır.
- Ailelerin çocuklarına verdikleri cezalar içinde en çok kullanılanı internet ve cep telefonu yasağıdır. Ailelerin ceza olarak interneti ve cep telefonu yasaklaması, çocukların siber zorbalık davranışına maruz kaldıklarında ailelerin bu cezaları öne süreceğinden hareketle ailelerle paylaşamamaktadır. Özellikle bu davranışlara maruz kalındığında aile ile paylaşılması konusunda öğrenciler desteklenmelidir. Ceza konusunda yasaklıktan ziyade öğretici ve yapıcı cezalar verilmesi önerilebilir.
- Okul rehberlik servisleri tarafından siber zorba davranışlarda bulunan ergenlere yönelik özellikle empati eğitimi ve geliştirilmesine yönelik çalışmalar yapılmalıdır. Ayrıca okullarımızda değerler eğitimi ile ilgili çalışmalar istenilen düzeyde değildir. Müfredatta saygı, sevgi, hoşgörü, anlayış gibi değerlere çokça yer verilmesi ve pekiştirilmesi öğrencileri çevresine karşı daha duyarlı hale getireceği ileri sürülebilir. M.E.B idarecilerin, öğretmenlerin, psikolojik danışmanların ve öğrencilerin siber zorbalık hakkında duyarlılıklarını arttırmak için çeşitli çalışmalar yürütmelidir (Hizmet içi eğitim, seminer, sempozyum, afiş çalışması, resim yarışmaları vb). Siber zorbalığı önleme ve mağdurların yaşadıkları psikolojik problemlere yönelik acilen müdahale programlarının geliştirilip uygulanması gerektiği düşünülmektedir.

Özet

13. yüzyılda Anadolu'da görülmeye başlanan ve bir süre sonra da Osmanlı Devleti'nin kurulmasında önemli bir rol oynayan Ahîlik teşkilatı dinî-içtimaî bir yapı arz etmekle birlikte aynı zamanda döneminde yaygın bir "eğitim kurumu" haline gelmiştir. Ahîlik küçük esnaf, usta, kalfa ve çırakları içine alan, onların dayanışmaları kadar mesleklerini dürüstlük ve özenle yapmalarını ve en önemlisi de "eğitilmelerini" amaçlayan bir lonca teşkilatı olarak da tanımlanabilir. Böylece Ahî teşkilatlarında ahlak ve meslek eğitiminin bütünlük içerisinde ömür boyu süren bir faaliyet olması amaçlanmıştır. Muallim ahî ve pîr denilen hocalar tarafından verilen ahlak ve meslek eğitimi "iş dışında" ve "iş başında" olmak üzere iki farklı şekilde uygulanmıştır. Usta-çırak ilişkisi ile yapılan bu eğitim usûlü belirli kurullarla işleyişini sürdürmüştür.

Anahtar Kelimeler: Ahî Teşkilatı, Usta/Öğretmen Eğitimi, Manevî-Meslekî Eğitim, Osmanlı.

Abstract

The Ahi community which was firstly seen in the 13 th century in Anatolia and after a while played an important role in foundation of Ottoman Empire, is not only a religious-social structure but also had become a common educational institution in its period. Ahi community can be defined as a guild community which covers small retailer, master, apprentice, qualified workman and aims to perform their vocations fairly and meticulously as well as solidarity. As the most important thing, this community aims them to be educated. Thus, it has been aimed that education of morality and vocation must be an action which continues for a life time in harmony. Education of morality and vocation which trains by teachers so called 'muallim' and 'pir' has practiced as two ways: 'off the job training' and 'on the job training'. This educational method that bases on relation between teacher and apprentice has continued its process with certain norms. In this essay, we will try to discuss this process of moral and vocational education which has practiced according to certain methods and norms, with its stages and different dimensions in the context of master/teacher education.

Key Words: Ahi Community, Master/Teacher Education, Moral-Vocational Education, Ottoman.

Giriş

Selçuklular döneminde ortaya çıkıp Osmanlı devletinin ilk yüzyıllarında da etkili olmuş önemli bir yaygın eğitim kurumu olan ahîlik, küçük esnaf, usta, kalfa ve çırakları içine alan, onların dayanışmaları kadar mesleklerini dürüstlük ve özenle yapmalarını, ayrıca eğitilmelerini amaçlayan bir lonca teşkilatı olarak tanımlanabilir. (Akyüz, 2013:52)

Ahî birlikleri kendine özgü bir felsefesi, dünya görüşü, ilkeleri olan ve bunları çeşitli eğitim faaliyetleriyle topluma yaymaya çalışan bir okul niteliğindedir. Bir eğitim kurumu olarak incelendiğinde ahî birliklerinin askeri, dinî-ahlakî ve meslekî alanlarda eğitim ve öğretim hizmeti verdiği, bu eğitimin amacının ise insanı mükemmelleştirmek, hayata hazırlamak, bir meslekte yetkinleştirmek, davranışlarında dengeli hareket etmesini bilen, çevresine uyum sağlayabilen ve başkalarının haklarına riayet eden bir insan yetiştirmek olduğu görülmektedir. (Duman, 2012:182)

İçerisinde ahlakî olduğu kadar meslekî bir eğitimin de yer aldığı ahî teşkilatına küçük yaşta intisab eden bir öğrenci, icra ettiği meslek ve sanat kolunun ustası tarafından, mesleğine göre değişebilen bir sürede eğitimini alır ve kendisi de öğrenci yetiştirmek üzere usta seviyesine yükselirdi. Biz de bu tebliğimizde ahî teşkilatında eğitim sistemin temel özelliklerine kısaca temas ettikten sonra işe yamaklıkla başlayan öğrencinin usta olana kadar hem ahlakî hem de meslekî olarak geçirdiği eğitim sürecini işleyecek ve böylece ahî teşkilatında bir yamak/öğrencinin nasıl işinin ve sanatının ehli bir usta/öğretmene dönüştüğünü göz önüne koymaya çalışacağız.

Ahî Teşkilatında Eğitim Sisteminin Genel Özellikleri

Büyük şehirlerde çeşitli gruplar halinde teşkilatlanan ahîlerin her birinin müstakil bir zaviyesi bulunmaktaydı. Küçük şehirlerde ise muhtelif meslek grupları tek bir birlik teşkil etmişti. Teşkilata ilk defa girenlere çırak adı verilirken, esnaf birliklerinin başındaki kişiye şeyh, halife veya nakib, bütün esnafın en üst makamındaki kişiye ise şeyhü'l-meşâyih denilmiştir. (Kazıcı: 541) Ahîlik, bu teşkilatlanma yapısı ayrıca adabı, kuruluşu ve işleyişi itibarıyla tasavvufi yapılanmaya benzer bir teşkilat hüviyeti kazanmıştır. (Erdem, 2012:23) Ahîlikte başlangıçtan beri mesleki beceri ve kıdeme dayanan bir hiyerarşiye göre mesleği gelenek halinde sürdürme ve gelenekten kopmama prensibi şiar edinilmiş ve bu tarih boyunca da devam etmiştir. (Bayram, 1991:149) Tasavvufi eğitimde bir şeyhe intisab etmeden irşadın mümkün olamayacağı gibi ahîlikte de bir ustadan el almadan bir sanatta olgunluğa sahip olmak uygun görülmemiştir. (Ekinci, 1990:25)

Ahîliğe mensup kişilerin mesleklerinde yüceltikleri ve izinden gitmekle iftihar ettikleri *pîr*lerine duydukları sevgi ve saygı yüzyıllarca işyerlerine çerçeveleyip astıkları beyitlerde¹²⁹ de açıkça görülmektedir. Halen Anadolu'da bazı işyerlerinde rastlanabilen levhalarda, *pîr*lere duyulan saygı ve muhabbetin yanında, işlerine ve dünya görüşlerine dair pek çok ipucu da yer almaktadır. (Gölpınarlı, 2011:35)

Ahî teşkilatında eğitim faaliyetleri İslam dininin esaslarına göre düzenlenmiştir. (Ekinci, 1990: 35) Zaviyelerde, gayesi İslamî eğitim esaslarıyla paralellik gösteren bütüncül bir eğitim anlayışı hâkim olmuştur. Bu esaslar özellikle ferde kendini tanıma ve tanıma yolunu göstermek, insanın fitratını koruyarak şahsiyetli, iyi insan yetiştirmek, fertteki gizli kabiliyetleri ortaya çıkarıp bu kabiliyetlere yön vermek, sözle davranışı birleştirmek, evrensel ahlakı ve tevhit inancını hâkim kılmaktır. (Sarıkaya, 2002: 69)

Ahî teşkilatında insan bir bütün olarak ele alınmış, ona yalnızca mesleki bilgi değil, dini, ahlakî ve sosyal bilgileri de vermeyi prensip haline getirmişlerdir. İş başında yapılan eğitimin iş dışında yapılan eğitimle bütünleşmesini ve üyelerin en yetkili kimselerden ders alarak her yönüyle yetişmelerini sağlamışlardır. Köylere kadar varan geniş bir teşkilat kurulmuş, eğitimden herkesin ücretsiz olarak faydalanması imkânı tanınmıştır. Eğitimi, belirli bir noktada kesilmeyip ömür boyunca devam etmesi gereken bir faaliyet olarak düşünmüşlerdir. (Ekinci, 2008:150)

Bir ustanın yanında çırak olmak isteyen genç, aynı zamanda bir ahî olan ustasını "yol atası", girdiği meslekte ilerlemiş kalfasını "yol kardeşi" kabul etmek suretiyle ahîlik teşkilatına girilebilmekteydi. Böylece ustanın yanında teknik eğitimini alırken, hem ahlakî esaslara değer verecek şekilde eğitilmekte, hem de ahî zaviyesindeki toplantılarda okunan fütüvvetnamelerde belirtilen düzende ahlak eğitimini almaktaydı. Ahîlik teşkilatlarında eğitim gündüz işyerinde iş başında eğitip biçimlendirmek, geceleri de ahî zaviyelerinde sosyal ve ahlakî yönden yetiştirmek şeklindeydi. (Kazıcı, 2006:65) Bu eğitim, terbiye için gerekli temel dersleri esas alan sistemli bir programla beraber teşkilat içindeki çeşitli toplantı ve merasimlerde pratik/uygulamalı olarak verilen, teşkilat adab ve erkânını öğretme ve yaşatmayı hedefleyen bir faaliyetti. Bunun bir başka boyutu ise gündelik hayatta ve işyerinde usta-kalfa-çırak ilişkisi içerisinde verilen meslek eğitimiydi. Teşkilat mensubu kimselerin hayat tarzı teşkilatta öğretilen dini-ahlakî kurallara doğrultusunda şekillenmekteydi. (Sarıkaya, 2002:68)

Ahîlikte gençler, yamaklık ve çıraklık yaşlarında işe alınarak atölyelerde, tezgah başlarında mesleki beceri ve ahlakî davranışlarla süslenip, zaviyelerde ise askerlik eğitimi ile birlikte, toplumun her sınıfı içinde her türlü davranışta ve girişimde, aksaklık yaşamayacak, beğeni ile karşılanacak terbiye ve olgunlukta yetiştirilirdi. Bunun için mesleğe girmiş olan ahî adayları oda temizlemek, yemek pişirmek, bir toplantıda yerine göre konuşmak gibi durumlarda tam bir yetenek sahibi olacak tarzda eğitilirdi. (Çağatay, 1990:65) Birer terbiye ocağı olan zaviyelerde ayrıca muallim ahîler tarafından gençlere kuran okuma, musiki, tarih, Arapça, Farsça ve edebiyat dersleri verilir: önemli kişilerin yaşam öyküleri, tasavvufi esaslar, öğretilirdi. (Ekinci, 2008:152&Çağatay, 1990:80) Böylece atölyede, tezgahta sanat eğitimi, zaviyelerde kültür ve genel bilgi olarak çift yönlü bir eğitim gören ahîler, hem aralarında güçlü bir dayanışma ve yardımlaşma zinciri kurarlardı, hem de nitelikli bir mesleki beceri kazanırlardı. (Çağatay, 1990:80)

Hazret-i (...)dır pirimiz üstadımız

Ahî Teşkilatında Manevî Eğitim

Ahîlik her şeyden önce İslam ahlakına dayalı bir esnaf teşkilatlanma modelinin adıdır. (Erdem, 2012: 25) Ahînin sahip olması gereken genel ve iş hayatına dönük ahlakî ilkelere bakıldığında hepsinin İslam inanç ve ahlak anlayışının ürünü olduğu rahatlıkla anlaşılacaktır. Bu sebeple iyi bir ahî, yüksek ahlakî değerlere sahip iyi bir Müslüman-esnaf demektir. (Erdem, 2012: 25)

Öncelikle kişilerin manevî ve ahlakî eğitimini hedefleyen ahîler, kendileriyle birlikte olmak isteyenler için edebi, tevazuu, güler yüzlülüğü, en önemlisi de dürüstlüğü değişmez bir ilke edinmişlerdir. İnsanlığın sadece dış görünüşüyle değil, ruh zenginliği ile de gerçek kimliğini kazanacağına inanan ahîler, üyelerine verdikleri eğitimle bir yandan sosyo-kültürel ve ekonomik hayata derinlik ve zenginlik kazandırmış, öte yandan da toplumda alan el olmaktan ziyade başkalarına, ihtiyaç sahiplerine yardım elini uzatan kimseler yetiştirmişlerdir. (Hızlı, 2011: 38) Böylece ahî birlikleri açmış oldukları yârân odaları ve zaviyelerle, esnaflaşma ve sanatkarlaşma süreci içerisinde kısa zamanda birer “ahlakî eğitim merkezi” haline dönüşmüştür. (Güllülü, 1992: 94& Erdem, 2012: 24)

Kendisini topluma adama, hizmet aşkı, karşılık beklemezsizin yolcuya, düşküne, muhtaca yardım eli uzatma, barındırma, yol atasına, yol kardeşine, ustasına yardım etmek gibi prensipleri telkin etmesi bakımından ahîlik ile melamet ve fütüvvet anlayışı arasında birçok ortak nokta bulunmaktadır. (Bayram, 1991: 146-147& Turan, 1996:40) Fütüvvetnamelerde sıkça rastlanan muhtaç olana malını bağışlamak, onlara yumuşaklıkla muamelede bulunmak, güzel sözle bile olsa karşısındakine ihsan ve kerem etmek, iyiliği buyurmak, kötülükten nehyetmek, (Harputlu, vr. 113b-114a.) ihtiyacı olanın ihtiyacını gidermek, insanlarla iyi geçinmek, karşılık beklemezsizin ihsanda bulunmak (Simnâni, vr. 173b-174a.) öğüdü Ahîliğin toplumsal dayanışma yönüne de işaret etmektedir.

Ahî eğitim sisteminde fütüvvetnamelerde zikredilen ahlakî esaslar adeta tüzük ve yönetmelik haline gelmiştir. (Çağatay, 1990: 72) Bu fütüvvetnamelerin en önemlilerinden biri olan Harputlu Nakkaş İlyasoğlu Ahmed'in yazdığı *Tuhfetü'l-vasâyâ*'da ahînin gözünün haram olan şeylere, ağzının günah sözlere, elinin zulümlere bağlanıp, kapısının konuklara, kesesinin kardeşlerden ihtiyacı olanlara, sofrasının ise bütün açlara açılması gerektiği ifade edilmiştir. (Harputlu, vr.109a.) Abdürrezzak Kâşânî ise *Tuhfetü'l-ihvân* isimli fütüvvetnamesinde ahî zaviyelerinde verilen eğitimde en çok vurgu yapılan cömertliği, “verilmesi gereken şeyi, vermek icab eden kişiye nasıl verilmesi lazımsa, onu minnet zahmetine düşürmeden ve bu verişe bir karşılık beklemeden, bir maksat gütmeyen vermektir.” şeklinde tanımlamıştır. (Kâşânî, vr.355a.) Nâsırî'nin ise Fütüvvetname'sinde ahînin iki alemde de candan, gönülden cömert olması gerektiğine vurgu yapması ve “fasık cömertlikle cennete girer de zaid, nekesse çirkinleşir kalır.” (Nâsırî, vr.91a.) ifadesi, bu fütüvvetnamelerin ahîlerin hayatını şekillendiren görüş ve düşünceleri ihtiva eden eserler olduğuna ve onların ahî terbiyesini, ahîlik meşrebinin gerektirdiği esasları bu eserleri okuyarak öğrendiklerine işaret etmektedir. (Şeker, 1993: 69)

Ahîlik teşkilatına giren genç, hayatının her safhasında ahlakî eğitim alıyordu. Ahîlerin uymak zorunda oldukları esaslar, öğütler, ahlakî ve ticari tüm prensiplerin yer aldığı fütüvvetnâmelerde, terbiye konusu üzerinde çokça durulmuştur. (Kazıcı, 2006: 65) Nâsırî, Fütüvvetnâme'sinde: “Dağ meyvesinin ne rengi vardır, ne kokusu. Ne tadı vardır, ne hoş bir lezzeti. Fakat yetiştirildi mi renklenir, güzelleşir, sevimli ve tatlı hale gelir. Dağ ağacını şehre getirdiler, aşlayıp yetiştirdiler mi halk onu şeker gibi yer. Terbiye ile yapraktan atlas yapılır. Adam olmayan, terbiye ile adam olur. İnsanoğlu terbiye edilmezse hiç kimse onu öküzden eşekten fark edemez.” diyerek ahî meşrebinde terbiye ve manevî eğitimin önemine işaret etmiştir. (Nâsırî, vr.91a.)

Ahî zaviyelerinde Ahî babanın başkanlığında haftanın belli günlerinde peygamberin yaşamına, ibadete, İslam inanç esaslarına dair eserler okunup bilgiler verilmiştir. Bu konuda fütüvvetnamelerde “kelam-ı kadim okuna, kısas-ı enbiya okuna, menâkıb-ı evliya okuna” ifadeleri bulunmaktadır. (Çağatay, 1990: 46) Ayrıca “eline, diline, beline” sahip olma, bilgi sahibi olmayı dileme, bilgi sahipleriyle dost olma prensipleri sanatkâr üyelere benimsetilip yaygınlaştırılmaya gayret gösterilmiştir. (Nâsırî, vr.91a.)

Zaviyelerde ahîlere manevî ve ahlakî eğitime ilave olarak görgü kuralları da öğretilirdi. Fütüvvetnamelerde gençlere öğretilmesi tavsiye edilen bu kurallar genel olarak ahîlerin hal ve hareketleriyle ilgiliydi. 740 maddeden oluşan bu kurallar ahîlere cumartesi günleri öğretilirdi. Bunlar su içme, konuşma, sokakta ve çarşıda yürüme, bir yerden bir yere gitme, alışveriş yapma, oturma, saç tarama, yatma ve yemek yeme konularında toplumsal ilişkiler ve yerleşik hayat tarzının gerektirdiği medeni bir düzeye yükselmeye ilişkin kurallardı. (Uçma, 2011: 140)

Ahî zaviyelerindeki belli bir usul ve adaba dayanan bu manevî ve ahlakî eğitim sisteminde tedricilik esas alınmıştır. Muhatapların öğrenim seviyelerine ve yaşlarına göre bilgi aktarılmış, muhatabın seviyesi olgunlaştıkça verilen bilgi düzeyi de tedrici olarak arttırılmıştır. (Özköse, 2011: 12)

Ahî teşkilatında çırak-kalfa ve usta ilişkileri karşılıklı sevgi ve saygıya dayanan esaslar üzerine kurulmuş, sağlam ahlakî ve meslekî temeller üzerine oturtulmuştur. Bu teşkilatta yükselmenin tek kuralı, iyi ahlak ve mesleki üstünlüktür. (Turan, 1996: 43) Bu yolda ahîlerin kaçınması gereken tutum ve davranışlar zaviyelerde öncelikle öğretilen bilgiler arasındadır. Yiğidi yiğitlikten, ahîyi ahîlikten çıkaran davranışlar şöyle sıralanmıştır: Şarap içmek, zina yapmak, dedikodu yapmak, iftira atmak, münafıklık, gururlanmak, kibirlenmek,

merhametsiz olmak, haset etmek, kin tutmak, affedici olmamak, sözünde durmamak, yalan söylemek, emanete hıyanet etmek, insanların ayıbını açığa çıkarmak, cimri olmak ve hırsızlık etmek. (Ekinci, 1990: 37)

Ahîlikte merasimler de bir ahlakî ve manevî eğitim vasıtası haline gelmişti. Kabul töreni, aklanma töreni, tövbe ve yemin merasimleri esnasında dini ve ahlakî değerler tekrarlanıyor, “nereye varırsan izzetle hürmetle var, nerede oturursan edeple otur, bir söz söylersen hikmetle söyle, söylemezsen dinle, kalktın mı hizmetle kalk.” denilerek uyulması gereken kurallar hatırlatılıyordu. Şed kuşanırken de “Allah’ın yolunu hatırla, dinini gözet, çekinme yolunu sıkı tut, Ahîret işlerine hazırlan, insanların ayıplarını ört, kötü huyunu gider, insafı ver ahîret yurdunu al.” şeklinde sekiz öğüt zikrediliyordu. Merasimin icrasından sonra ise “tövbekâr ol, namazda tembellik etme, nekeslikte bulunma ve ululanma, emanete hıyanet etme, insaf sahibi ol ki sana da insaf etsinler, mürid ol, murad ver, kerim ol, bu taifeyi ulu bil, kardeşlerini aziz tut, ehli olmayan sır verme.” (Kazıcı, 2006: 66) öğütünde bulunuluyordu.

Ahîler özellikler konukseverlik ve yardımlaşma duygularının aşılmasına büyük ağırlık vermişlerdir. (Çağatay, 1990: 43) Nitekim İbn Batuta seyahatnamesinde Anadolu’nun muhtelif yerlerinde karşılaştığı ahîler hakkında “Yabancılara yardım etmek, onları konuklayıp yedirmek içirmek, bütün ihtiyaçlarını görmek... hususunda bir benzerleri yoktur.” ve “Dünyada ahîlerden fazla güzel işler işleyenleri görmedim. Şiraz ve İsfahan halkının bu hususlarda onlara benzerliği varsa da ahîler gelen geçene muhabbet, ikram ve şefkat gösterirler.” diyerek onların misafirlerine karşı gösterdikleri alaka ve yakınlığa temas etmiştir. (Şeker, 1993: 75) İbn Batuta ayrıca ahîlerin, kötülüklerle karşı oldukları gibi kötülükleri ortadan kaldırmaya böylece toplumda huzur ve güvenliği sağlamaya çalışan kimseler olduğunu ifade etmiştir. İbn Batuta’nın bu ifadeleri, Ahî teşkilatına mensup kimselerin toplumda yardımlaşma ve huzur ortamı oluşturmaya katkıda bulunmalarının yanı sıra insanların ahlakî eğitimlerinde de müspet rolü olan bir kuruluş olduğuna işaret etmiştir. (Şeker, 1993: 81)

Ahî Teşkilatında Meslekî Eğitim

İntisab eden talibi her yönüyle eğitmeyi ve bir yetkinliğe ulaştırmayı amaçlayan ahî teşkilatı, eğitim sürecinin sadece dinî, ahlakî ve tasavvufî boyutuna değil meslekî boyutuna da oldukça önem vermiş, mesleği icra eden sanatkârların her yönden kâmil ve yetkin bir insan olmasını amaç edinmiştir. Bu eğitim sürecinde ahîler, insanın çok yönlü olmasını göz ardı etmeyip onun farklı yönlerini bir uyum ve ahenk içerisinde eğitmeye çalışmışlar; bu şekilde taliblerin farklı istek ve ihtiyaçlarına cevap vermişlerdir.

Ahî teşkilatında eğitim genel olarak, "iş başında" ve "iş dışında" olmak üzere iki kısımdan meydana gelmekteydi. Talibin icra ettiği meslek, ustası tarafından farklı süreler ve merhalelerde öğretilmekte ve bu eğitim iş başında verilmekteydi. Bu eğitimin ve ahî zaviyelerinde pir, hoca, muallim denilen kişilerce verilen iş dışında kısmı ahlak ve adab eğitimini içermekteydi. İş başında ve iş dışında olarak, eğitimin bu iki farklı mekân ve usûlde gerçekleşen kısımları uyum içerisinde ve birbirlerini tamamlar mahiyetteydi. Bu şekilde meslek eğitimi ile ahlak eğitimi bir bütünlük içerisinde verilmekteydi.

Ahî eğitim sisteminde bir yamağın ustalık yolundaki meslekî eğitimi oldukça önem taşıymaktaydı. Çünkü her yamak bir usta adaydır ve o da aldığı eğitim sonucu usta yetkinliğine ulaştıncaya kadar kendisi gibi yamaklıktan eğitime başlayan kişilere öğretmenlik yapacaktı. Bu sebeple usta, yamağını yetiştirirken kendi ustasından aldığı eğitimi ona aksettirmekte, yamak da usta olunca kendi yamaklarına yahut çıraklarına vereceği eğitimde kendi ustasını yansıtmaktaydı.

Ahî zaviyelerinde yamak olarak mesleğine adım atan bir talibin ustalığa uzanan eğitim sürecinde çeşitli merhalelerden geçmesi gerekilmekteydi. Mesleğe yamak olarak başlayan talib hem ustası tarafından icra ettikleri sanatın inceliklerini öğrenir hem bu süreçte çalışma ve sabrın önemini kavrar, hem de ticaret yaparken nasıl bir iş ahlakına sahip olacağını ustasından uygulamalı olarak görürdü. Böylece ustalık yolundaki eğitimini hem teorik hem de pratik olarak almaktaydı.

İş başında usta-çırak ilişkisi salt bir işçi-işveren ilişkisinden farklıydı. Teşkilata giren çocuk için usta babası ile eş değerdirdi ve usta da çırağını adeta evlâtlık edinirdi. Usta dükkânda çocuğa sanatını öğretirken ona aynı zamanda ahlaken de örnek olurdu. Usta, yetiştirmeye çalıştığı öğrencisinin meslekî terbiyesinden sorumlu olduğu gibi ahlakî terbiyesinden de sorumluydu. (Öcal, 2012: 210) Öğrenciden, öğrendiği bu bilgi ve ahlakî düsturları hayata geçirmesi beklenirdi.

Öğrencinin ustasıyla olan ilişkisi onun zaviyelere girmesi açısından da önemliydi. Nitekim çırağın zaviyelere girebilmesi için ustasının, onun doğru ve yetenekli olduğuna kanaat getirmesi gerekiyordu. Ustası tarafından takdir edilmeyen çırak zaviyelere giremezdi. (Duman, 2012: 185)

Ahî teşkilatında yamak olarak mesleğe giren talibin iş başında aldığı eğitim süreci yamaklık, çıraklık, kalfalık ve ustalık şeklinde dört aşamada değerlendirilebilir:

a. Yamaklık Aşaması: Meslekî eğitime başlayan bir öğrenci işe ilk olarak yamak olarak başlardı. Yamağın on yaşından küçük olması ve bu işe devam edeceğinin velisi tarafından sağlanması gerekiyordu. (Çağatay, 1974: 153) Yamak iki yıl süren bu dönem boyunca herhangi bir maaş almazdı.

Bu gence meslekî bilgiler ve incelikleri en basitten zora doğrucu tedricî bir metotla öğretilirdi. İş, önce kısımlara ayrılır ve tasnife tabi tutulur, parçadan bütüne doğru giden bir öğretim metodu benimsenirdi. (Demir, 2000: 379)

Bu aşama yamak için bir deneme süreci mahiyetindeydi. Çünkü ustası çırak adayının işyerindeki tutum ve davranışını göz önüne alarak ya aynı iş yerinde devam etmesine yahut mizacı ve kapasitesine uygun başka bir meslek dalında devam etmesine karar verirdi.

b. Çıraklık Aşaması: Çıraklık aşamasına geçen bir öğrencinin bu aşamada tamamlayacağı süre, icra etmekte olduğu sanat ve mesleğe göre farklılıklar göstermekteydi. Örneğin bu süre bazı mesleklerde binbir gün iken kuyumculuk mesleğinde süre yirmi yıla kadar çıkabiliyordu. (Güllülü, 1992: 129) Çırak ailevî durumu göz önünde bulundurularak ihtiyaçlarına yetecek kadar bir para almaktaydı. (Anadol, 1991: 94)

Ustasının tüm emirlerini yerine getirmek suretiyle onun verdiği meslekî sırları ve gerekli bilgileri öğrenen çırak, bu dönemi başarıyla tamamladıktan sonra yine ustasının teklifi ve usta meclisinin de onayıyla kalfalığa terfi ettirilirdi. (Demir, 2000: 385)

c. Kalfalık Aşaması: Bütün mesleklerde üç sene süren bu aşamada kalfa meslekî eğitiminin yanı sıra askerî eğitim de almaktaydı. Bunun içerisinde at binme, atıcılık, nişancılık, avcılık, binicilik gibi sportif ve askerî faaliyetler vardı. (Anadol, 1991: 91& Ekinci, 2008: 154)

Kalfanın bu aşamada çırak yetiştirme hususuna dikkat etmesi gerekliydi. Nitekim kalfa, çıraklık yetiştirme kabiliyeti dikkate alınarak ustalık aşamasına geçebiliyordu. Ayrıca iş yerindeki diğer kalfalarla da iyi geçinmesi şarttı.

Tüm eğitimini başarıyla tamamlayan kalfa, usta olabilmesi için öncelikle bir sınava tabi tutulur, bu imtihanı da geçerse her aşamanın sonunda olduğu gibi kendisi için düzenlenen bir tören ile ustalık makamını elde ederdi.

d. Ustalık Aşaması: Kalfalık aşamasından sonra gelen ve meslekteki en üst mertebe olan ustalık aşamasına geçmek için kalfanın, üç yıl hakkında bir şikayet olmadan, üzerine aldığı görevleri dikkatli bir şekilde yerine getirmiş olması gerekiyordu. Ustalık aşamasına geçmek için bir kalfada sanatına bağlılık, müşterilere karşı tutumu ve onlarla olan ilişkisi, yeni bir dükkân açıldığında bu dükkânı yönetebilme kabiliyeti gibi şartlar aranmaktaydı. (Çağatay, 1974: 154) Ayrıca o güne kadar aldığı eğitim sonucu ahlak ve adab kurallarının gerektirdiği şekilde bir iş ahlakını benimsemiş olması gerekmektedir. Ancak böyle bir kişi ustalık aşamasına geçebilir ve mesleğin sırrına erebilirdi.

Daha önce de bahsedildiği üzere, bir önceki dönemin eğitimini tamamlayıp bir sonraki aşamaya geçen öğrenci için bu geçişlerde törenler yapılırdı. Törenler sırasında mecliste mesleğin erbabı uzmanlardan oluşan bir heyet bulunur, bu heyet öğrencinin ortaya koymuş olduğu ürünlerden örnekler alarak inceler ve kalitesine kanaat getirdikten sonra öğrencinin bir sonraki dereceye terfi ettirilmesine hükmederdi. Bu merasime "Şed Kuşanma Töreni" denilirdi. (Demir, 2000: 385)

Her aşamanın sonunda o aşamaya münhasır olarak yapılan bu törenlerin de kendi içinde çeşitli manalar içeren sembolik birtakım ritüelleri olurdu. En geniş ve önemli tören işe yamaklıkla başlayan öğrencinin meslek hayatında yetkinliğe ulaştığı son aşama olan ustalığa geçerken yapılan törendi. Bu törende esnafın tüm üstadları, memleketin müftüsü, kadısı da hazır bulunurdu. (Çağatay, 1974: 154)

Çeşitli merhalelerden oluşan tören tamamlandıktan sonra usta olan kişiye lonca sandığındaki bu iş için ayrılan fondan bir dükkân açılırdı. Dükkân açılınca yeni olan ustanın bir ad alması gerekirdi. Bu isim de loncada okunarak ustaya verilirdi.

Meslekî eğitimin öğrenciye usta tarafından verilen pratik ve iş başında yapılan kısmının yanı sıra talib, ahî zaviyelerinde ahlakî ve manevî eğitim ile birlikte iş ve ticaret ahlakı ile ilgili bilgiler de öğrenmekteydi. Eğitimin bu kısmı öğrencinin meslekte çalışma saatleri dışında ve meslekî çalışmasından ayrı olarak gerçekleştiriliyordu.

Ahî teşkilatlarında ahîler öncelikle, teşkilata intisab etmiş olan kimselerin icra ettikleri sanatları peygamberlere dayandırır ve her birinin o toplum için önemine işaret ederlerdi. Mesleklerin aslında birer peygamber mesleği olduklarını vurgulayan ahîler bu şekilde hem toplumda o sanata itibar kazandırır ve hem de olan ilgiyi artırırlardı. Örneğin, tarımı başlatan Hz. Adem çiftçilerin, Hz. İdris terzilerin, Hz. Nuh gemici ve marangozların, Bilal-i Habeşî müezzinlerin, Hz. Yunus balıkçıların, Hz. Davud demirci ve dokumacıların, Hz. Muhammed de tüccarların piri sayılmaktaydı. (Anadol, 1991: 94) Böylesi bir telkinle sanatını icra eden talibte de psikolojik bir tatmin meydana gelirdi. (Bayram, 1991: 149)

Ahî teşkilatlarındaki meslekî eğitim her bakımdan ince noktalara sahipti. Usta, öğrencisi olan kalfa yahut çırağa dükkânlarını zamanında açıp kapatma, dürüst çalışma, üretimi artırma ve çırakları iyi yetiştirme gibi iyi davranışların yanı sıra sahip olması gereken en önemli şeyler olan saygılı ve sabırlı olmayı öğretirdi. Bu eğitim sürecinde özellikle saygı ve sabır konusunda birçok nokta dikkatimize sunulmaktadır. Örneğin çırak ustası tarafından başka bir ustaya herhangi bir iş için gönderildiği zaman dükkânda çırağın girmesi için özel terbiye kapısı denilen bir kapı bulunurdu. Çırak karşısındakinin de bir usta olduğunu unutmaz ve usta oluncaya kadar dükkâna ön kapıdan değil arkada bulunan bu terbiye kapısından girerdi. (Anadol, 1991: 98)

Aynı şekilde esnaflığa giren gencin beceri sahibi olmadıkça ve ustası zamanının geldiğine hükmetmedikçe yükselmesine ve dükkân açmasına imkân yoktu. (Turan, 1996: 39) Bu şekilde henüz yetiştirme

aşamasında olan öğrencinin ustasına karşı sabırlı ve saygılı olması öğretilirdi. Çünkü öğrenci sanatının ve mesleğinin inceliklerini öğrenene kadar ustasına hizmet etmeye mecburdu.

Mesleğini icra eden ve ahî zaviyelerinde eğitimine devam eden talib, dürüst çalışma, karşısındakine saygı gösterme, başkasını aldatmama, ölçü ve tartıda hile yapmama, dükkânları erken saatte açma, komşu esnaf ve sanatkârların da kazanmalarını isteme, ticaret yaparken ahlak ve edeb kurallarını gözetme gibi ahlakî ve aynı zamanda meslekî kuralları öğrenirdi. Bu kurallara uymayan kimse hakkında birtakım yaptırımlarda bulunulurdu. Dükkânlarını kapatma, onlarla selamı ve yardımı kesme, ikramda bulunmama, kurban kesmeye zorlama gibi bazı yaptırımlar bunlardan bazılarıdır. (Özköse, 2011: 17)

Ahî teşkilatında hem iş başında hem de iş dışında verilen eğitimde ortaya konulan kurallar ve aksi halde davrananlara uygulanan yaptırımlar göstermektedir ki, bu eğitimde amaç, sanatkârlar ve esnafın mesleklerine sadakatle bağlanmalarını, hem mesleklerine hem de ilişkide buldukları insanlara ihanet etmemelerini sağlamak ve iş ahlakını kazandırmaktır. (Bayram, 1991: 149) Bu sebeptendir ki, Ahî Teşkilatı'nın, müntesipleri arasında yerleşmiş ve benimsetmiş olduğu ahlakî ve meslekî düzen, karşılıklı dayanışma ve yardım, zamanla tüm topluma yayılmıştır.

Sonuç

İçerisinde mesleki olduğu kadar ahlakî bir eğitimi de barındıran Ahî teşkilatları faaliyet gösterdiği günden bu güne kendisine katılan bireyleri iş yerinde mesleki yönden, Ahî zaviyelerinde ise dini ve ahlakî yönden yetkinliğe ulaştırmayı amaçlamıştır. Teşkilat bununla da kalmamış, gençleri sanatsal faaliyetler ile desteklemiş, ayrıca askeri bir eğitim de vermiştir. Tüm bu eğitim sürecinde işe yamak olarak başlayan ve usta olma yolunda adım adım ilerleyen genç, ustası tarafından bir öğretime tabi tutulmuş ve sonuç olarak genişçe izah etmeye çalıştığımız bu eğitim-öğretim süreci ortaya çıkmıştır.

Ahî teşkilatının eğitim alanında gösterdiği faaliyetlerin, ahîliğin kültürel fonksiyonlarının anlaşılmasında özel bir önemi vardır. Bu durum, ahî birliklerinde verilen eğitimin öncelikle hangi karakteristik özelliklere sahip olduğunun araştırılmasını zorunlu kılmaktadır. Ahîlik kurumu gençleri başboşluktan kurtarıp kendi bünyesine alarak bir sanatta ustalaşmalarını sağlamış, onların enerjilerini manevi önderler vasıtasıyla sosyal hayatın düzen ve devamı için kanalize etmiştir. Böylece gençlerin bir araya gelme, birlik oluşturma eğilimleri toplumun yararı istikametinde değerlendirilerek ahlak eğitiminden geçmeleri, kötü alışkanlıklardan korunmaları mümkün olmuştur.

Ahî teşkilatı ahlaklı ve üretici fertler yetiştirerek zengin-fakir, üretici-tüketici arasında iyi ilişkiler kurarak sosyal adalet, gerçekleştirmek ve ahlakî bir toplum düzeni meydana getirmeyi hedeflemesi açısından önemlidir. Bu amaçlara da sağlam bir teşkilat ve köklü bir eğitim ile ulaşılmıştır.

Özet

İnsanlığın entelektüel tarihi boyunca filozoflar varlık, bilgi, değer, ahlak, siyaset, eğitim gibi birçok problemi ele almışlardır. Bu problemlerin en önemlilerinden biri, insanların mutlu olmalarını sağlayacak ideal bir devletin hangi özelliklere sahip olması gerektiğidir. Bu konuda en özgün düşünürlerden biri olan Platon, insan ruhunun bölümleriyle ideal devletin birimleri arasında bir benzerlik kurarak; insan ruhu gibi ideal devletin de üç parçalı bir yapıya sahip olması gerektiğini iddia eder. Besleyenler, koruyanlar ve öğretmenler sınıfından oluşan üç parçalı devlet kendi arasında hiyerarşik bir düzene sahiptir. Bu hiyerarşide en alt sınıfı “üreticiler” oluştururken, en üst sınıfı “yöneticiler” oluşturur. "Koruyucular" sınıfı ise bu iki sınıf arasında yer alır. Öğretmenler sınıfı en üstte yer aldığı için ideal devleti oluşturan ilkelerin belirlenmesinden sorumludurlar. Bu sebeple Platon için yöneticiler sınıfının eğitimi, ideal devletin gerçekleşmesinde çok büyük bir öneme sahiptir. Biz de bu çalışmamızda Platon'un ideal devletin temelini oluşturan yöneticiler sınıfının eğitimiyle ilgili nasıl bir yaklaşım ortaya koyduğunu ele alacağız.

Anahtar Kelimeler: Platon, eğitim, yöneticiler sınıfı, filozoflar, ideal devlet

Abstract

Throughout the history of human intellectual, philosophers have discussed many problems such as existence, knowledge, values, ethics, politics, education. one of the most important problems is about characteristics of the ideal state insuring the happiness of people. By making an analogy between the parts of human soul and the parts of the ideal state, platon who is one of the most original philosophers claim that the ideal state must consist of three parts like human soul. The ideal state consisting of philosophers, guardians and nourishers should have hierarchical structure.

In this hierarchical structure then nourishers are the lowest class, the philosophers are the top class of the ideal state. The guardians locate between the two class. Because of being the top class of the ideal state the philosophers are in charge of determining the principles of the ideal state. Thus, for Plato the education of the philosophers is very important for realization of the ideal state. In this essay we will discuss that Plato's approach to education of the philosophers consisting the base of the ideal state.

Key Words: Plato, education, ruler class, philosophers, ideal state

Giriş

Thomas More 1516 yılında yazdığı eserine *Ütopya* adını verdiğinde, düşünce tarihine yeni bir kavram hediye etmiştir. "İyi yer (goodplace)" anlamına gelen bu kavram, More tarafından katı dil kuralları esnetilerek geliştirilmiştir (Öztürk, 2004: 91). İnsanların mutlu olacakları iyi ve mükemmel toplum modelinin sunulduğu bu eser, düşünce tarihinde tek değildir. Campanella'nın *Güneş Ülkesi*, Francis Bacon'un *Yeni Atlantis*'i, Fârâbî'nin *Medînetü'l-fâzıla*'sı, Aldous Huxley'in *Yeni Cesur Dünya*'sı ve George Orwell'in *1984*'ü de iyi ve mükemmel toplum idealini konu alan eserlerdir. Düşünce tarihinde ütopya geleneğini başlatan ve bu alanda yazılan tüm bu eserlere ilham kaynağı olan eser ise Platon'un *Devlet* adlı eseridir (Arslan, 2006: 396).

Bildirimiz amacına uygun olacak şekilde iki bölümden oluşmaktadır. İlk bölümde Platon'un ideal devletinin genel özelliklerinden bahsedilecek, ikinci bölümde ise bu ideal devlet içerisinde filozofların geçirdiği eğitim süreçleri ele alınacaktır. Bu bildiri Platon'un olgunluk dönemi eseri olan *Devlet*'teki görüşleriyle sınırlandırılmıştır. Bu nedenle Platon tarafından *Devlet*'ten sonra yazılan *Yasalar*'da öngörülen ideal devletle ilgili fikir değişiklikleri bildirimizin konusu dışındadır. Ayrıca bildiri içerisinde bu iki eser arasında karşılaştırmaya da gidilmemiştir.

I. Platon İdeal Toplumu ya da Devleti

Antik Yunan'ın ilk büyük felsefi sistemini inşa eden Platon'un üzerinde kafa yorduğu en önemli problemlerden biri ideal bir toplumun nasıl olması gerektiğidir. Biz de bu bölümde Platon'un bu konuda ortaya koyduğu görüşleri genel hatlarıyla ortaya koyarak bu bağlamda şu üç soruyu cevaplamaya çalışacağız: (1) Platon'un ideal devletinin temeli ve amacı nedir? (2) İdeal devletin toplumsal yapısı nasıldır ve hangi toplumsal sınıflardan oluşur? (3) İdeal Devlette yer alan toplumsal sınıfların genel özellikleri nelerdir?

Platon, devletin temelinde insanların birbirlerine olan bağımlılığın yattığını iddia etmektedir (Platon, 1999:369d). Ona göre insan, tabiatı gereği tüm ihtiyaçlarını karşılamada yetersizdir. Bu yetersizliğin temelinde hem insanların doğuştan gelen her işe yatkın olmama eksikliği, hem de insanın yaşamını devam ettirmek için ihtiyaç duyduğu gereksinimlerin fazlalığı yatmaktadır. Buna göre insanların temel ihtiyaçlarını sırasıyla beslenme, barınma ve giyinme olarak belirleyen Platon, insanların bu ihtiyaçlarının karşılanmasının ancak doğru bir işbölümüyle mümkün olduğunu ifade etmektedir (Platon, 1999: 369e). Platon "doğru iş bölümü"nden, herkesin tabiatına uygun olan işi yapmasını anlamaktadır (Arslan, 2006: 403). Buna göre, doğuştan kunduracılığa yatkın olan insan Platon'un ideal devletinde sadece kunduracılık yapacak, çiftçiliğe yatkın olan insan ise sadece çiftçilik yapacaktır. Bu tarz bir işbölümünü doğru işbölümü olarak tanımlayan Platon, bu durumun toplum açısından ortaya çıkardığı en önemli sonucun, işlerin zamanında ve en güzel şekilde yapılması olduğunu söylemektedir (Platon, 1999: 369e;373d;397e). Platon ayrıca insanların ihtiyaçlarının toplumu oluşturacak bireylerin sayısını da belirlediğini ifade etmektedir. Buna göre insanların temel ihtiyacını oluşturan yeme, barınma ve giyinmeye ek olarak diğer ihtiyaçlar da devreye girdiğinde Platon için ideal toplum dört kişiden fazla olmak durumundadır (Platon, 1999: 369e). Platon'un ideal toplumun minimum sayısını bu şekilde belirlemesinin altında yatan en temel neden, ideal toplumda yer alan bir kişinin birden fazla iş yapmasının devletin genel ilkelerine aykırı bir durum oluşturmasıdır.

Platon, ideal devletinin amacını, tüm yurttaşların mutluluğunun temini olarak belirlemektedir. Onun üzerinde ısrarla durduğu nokta, mutluluğun toplumun geneline dağılmasıdır. Bu nedenle onun ideal devletinde toplumun bir kesimi mutsuzken, diğer kesiminin mutlu olması gibi bir duruma göz yumulamaz (Platon, 1999: 420c).

İdeal devletinin temelini, insanların gereksinimlerine ve bu gereksinimleri karşılama noktasındaki yetersizliğine dayandıran Platon, ideal devletin sınıflarını toplumun ihtiyaçlarından

hareketle belirlemektedir. Platon'a göre bu ihtiyaçlar; devletin iç ve dış düşmanlara karşı korunma ihtiyacı (Platon, 1999: 373d), devleti oluşturan bireylerin yeme, barınma, giyinme gibi gereksinimlerinin (Platon, 1999: 369d) karşılanma ihtiyacı ve devletteki bireyler ve sınıflar arası işleyişin ve iş bölümünün yönetilmesi ihtiyacıdır (Platon, 1999: 412c). Bu noktada Platon ideal devletin tek bir insan gibi mütalaa edilmesi gerektiğini söylemektedir. Ona göre devlet tüm birimleriyle tek bir insan gibi kurgulanırsa ancak ideal bir bütün oluşturacaktır. Bu durumda nasıl ki parmağı yaralanan bir insanın diğer tüm organları da aynı acıyı hissediyorsa, Platon'a göre ideal devleti oluşturan toplum da aynı şekilde sınıfsal bir yapıya kavuştuğunda, toplumun bir sınıfında ortaya çıkan problem diğer sınıfları ilgilendirecektir. Böylece toplumda ortaya çıkan sevinçler ve üzüntüler toplumu oluşturan tüm bireyler tarafından aynı oranda hissedilecektir (Platon, 1999: 462d). Platon'un devleti tek bir insan gibi algılaması, onu devlet ile insan ruhu arasında bir analogi yapmaya sevk etmiştir.

Platon insan ruhunu üç ayrı bölüme ya da yetiye ayırmaktadır (Platon, 1999: 504a). Buna göre (1) insanın bilgi edinmesini sağlayan yani akleden yeti; (2) yeme, içme, cinsel ilişki gibi türün devamını sağlayan yani isteyen arzulayan yeti; (3) bazen akleden yeti tarafına geçen, bazen de isteyen, arzulayan yetinin tarafına geçen, insandaki öfke ve taşkınlıkların kaynağı olan yeti (Arslan, 2006: 416). Platon'un ortaya koyduğu ruhun bu üç yetisi aynı zamanda devletin üç temel gereksinimine ve bu üç temel gereksinime dayanan üç toplumsal sınıfa işaret etmektedir. Buna göre ruhun isteyen, arzulayan yetisi ideal toplumun temel gereksinimlerinin karşılanma ihtiyacına işaret etmektedir ve bunun karşılığı da ideal toplumda "üretenler sınıfı"dır. İnsandaki öfke ve taşkınlıkların kaynağı olan yeti ise toplumun içteki ve dıştaki düşmanlara karşı ideal toplumun korunma ihtiyacına işaret etmektedir ve ideal toplumda bunun karşılığı "koruyucular sınıfı"dır. Ruhun akleden yetisi ise ideal toplumda düzenin ve işbölümünün sağlıklı bir şekilde yürütülmesi ve yönetilmesi ihtiyacına işaret etmektedir. Bu da ideal toplumda "yönetenler sınıfı"na karşılık gelmektedir (Blössner, 2007: 352). Platon'un insan ruhunun yetileri temelinde sınıfsal yapısını ortaya koyduğu ideal devletinde dikkat edilmesi gereken bir nokta vardır. Buna göre her ne kadar Platon, ruhun üç yetisinden hareketle toplumu üç sınıfa ayırsa da pratikte ideal devlet "yönetenler" ve "yönetilenler" olmak üzere iki temel sınıf üzerine inşa edilmiştir. Çünkü Platon'un ideal devletinde yönetenler sınıfı kendi içerisinde koruyucular ve yöneticiler olmak üzere iki alt sınıfa ayrılmaktadır. Bir başka ifadeyle ideal devletin yöneticileri koruyucular arasından seçilmektedir. Platon'un kurguladığı ideal devletindeki sınıfsal yapının bugünkü bildiğimiz tarzda kast sistemiyle eşitlenmesi yanlış bir yaklaşım olacaktır. Çünkü, Platon'un ideal devletinde toplumu oluşturan sınıflar arasında dikey hareketlilik mümkündür. Bir başka ifadeyle insanların ideal devlet içerisindeki konumlarını hangi toplumsal sınıfta doğdukları değil, hangi yaratılış özelliklerine sahip oldukları belirlemektedir. Söz gelimi, yönetici sınıfının çocukları arasında bu sınıfın gerektirdiği yetenekleri taşımayanlar alt sınıflara gönderilirken, alt sınıflar için de tam tersi geçerlidir. Bu açıdan Platon'un ideal devletinde önemli olan soy değil, liyakattir (Arslan, 2006: 410).

İdeal devletin sınıfsal yapısını bu şekilde ortaya koyduktan sonra Platon her sınıfın görevlerini ve özelliklerini tespit etmektedir. Platon'un ideal devletinde üretenler sınıfı, ideal toplumda sadece üretenleri kapsamaz, aksine koruyucular ve yöneticiler dışındaki tüm fertler bu sınıfı oluştururlar. Dolayısıyla bu sınıfa sadece işçi ve emekçi sınıfı girmez, toplumun bütün üretici güçleri, toplumun varlığını sürdürmek için ihtiyaç duyduğu maddi ürünlerin üretimi ve dağıtımını için çalışan herkes girer. Bir başka ifadeyle bu sınıf para kazananlar ve vergi verenler sınıfıdır. Platon bu sınıfın görevini ideal devletin ihtiyaç duyduğu temel maddi gereksinimlerin temini olarak belirlemiştir (Arslan, 2006: 409). Platon, üretenler sınıfında yer alan yurttaşların, ideal devletin nüfusunun en geniş kısmını oluşturduğunu söylemektedir (Platon, 1999: 503b).

İçlerinden ideal toplumun yöneticilerini çıkaran koruyucular sınıfı ise Platon'un ideal toplumunda hiçbir ekonomik faaliyette bulunmayan, tek görevleri toplumu iç ve dış düşmanlara karşı

korumak olan sınıftır. Bu sınıf, toplumu yönetecek olan yöneticilere kaynaklık yaptığı için Platon bu sınıfa çok önem vermektedir. Ona göre bu sınıfta meydana gelecek en ufak bir bozulma ideal toplum içerisinde önüne geçilemez problemlerin doğmasına neden olacaktır. Bir başka ifadeyle eskici olmadığı halde eskici geçinen birisi toplumun başına çok büyük bir problem çıkarmaz ama kanunların ve toplumun koruyucuları olanlar, koruyucu olmadan koruyucu geçinirlerse Platon'a göre devlet çökmüş demektir (Platon, 1999: 421a). Bu nedenle Platon, *Devlet* adlı eserinde bu sınıfı uzun uzadıya ele almaktadır. Buna göre Platon bu sınıfın ilk görevinin toplumun varlığını korumak olduğunu söylemektedir (Platon, 1999: 373d). Platon, bu sınıfın özel mülk edinmesine izin vermez. Çünkü ona göre eğer bu sınıfa özel mülk edinme hakkı verilirse; bunlar yurttaşların yardımcıları olacakları yerde onların düşmanları ve zorba efendileri olacaklardır. Bu nedenle bunların oturdukları evler, yemek yedikleri yerler ve yiyecekleri ortak olmalıdır (Platon, 1999: 413c). Platon, koruyucular sınıfı için aile kurumunu da yasaklar. Buna göre koruyucu sınıfının kendine ait bir ailesi olamayacaktır. Bu nedenle kadınlar ve çocuklar ortak olacaktır. Ancak Platon bu ortaklığın yönetici tarafından düzenlenerek ahlaksızlığa varmasının engelleneceği kaydını da düşmektedir (Platon, 1999: 451c). Platon, bu sınıf içinde yer alma hakkını sadece erkeklere tanımaz. Bu açıdan koruyucular sınıfı içerisinde kadınlara da yer vardır. Kadınlar da Platon'un ideal devletinde erkeklerin yer aldığı her yerde yer alabilirler. Bu görüşünün temelinde Platon'un kadınlara bakışı yatmaktadır. Ona göre kadının erkekten tek farkı çocuk doğurmasıdır. Bunun dışında fiziksel güç olarak eksiklikleri dışında Platon açısından kadın ve erkek arasında herhangi bir fark yoktur. Bu nedenle Platon, koruyucu sınıf için erkeklerden ne bekliyorsa aynıını kadınlardan da beklemektedir. Bir başka ifadeyle Platon'un ideal devletinde kadının kadın olduğu için, erkeğin erkek olduğu için daha iyi yapacağı hiçbir şey yoktur (Platon, 1999: 455e).

Platon'un ideal devletinin en üstünde yer alan yönetici sınıf, koruyucular arasında seçilmektedir. Platon, yöneticilerin koruyucuların en iyileri arasından seçildiğini, dolayısıyla toplumu yöneten kişilerin o toplumun en üstün kişileri olduğunu ifade etmektedir (Platon, 1999: 412c). Bu tarz bir seçimin ideal devletin olmazsa olmaz şartı olduğunu söyleyen Platon, devletin başına filozoflar gelmediği sürece toplumun başının dertten kurtulmayacağını ve ideal toplumun hiçbir zaman gerçekleşmeyeceğini iddia etmektedir (Platon, 1999: 501e). Çünkü Platon için filozofun devletin başına geçmesi, iktidar gücüyle akıl gücünün birleşmesi anlamına gelecektir (Platon, 1999: 473d). Platon'un ideal devletinde en az sayıda yurttaş yöneticiler sınıfında yer alır. Bunun nedeni Platon'a göre bu sınıfta yer almayı sağlayacak filozofça yaratılış ve erdemlere sahip bireylerin kolay kolay bulunamamasıdır (Platon, 1999: 503b).

Platon ideal devletin dört erdeme sahip olduğunu söylemektedir. Bunlar; bilgelik, cesaret, ölçülülük ve adalettir (Platon, 1999: 427e). İdeal devlette bu dört erdem toplumun tüm sınıflarına dağılmamıştır (Lorenz, 2006: 149). Buna göre Platon'un bilgelik dediği ve devlette alınan kararların bilgece alınmasına vurgu yapan bilgelik erdemi ideal devlette yönetenler sınıfına has bir erdemdir (Platon, 1999: 427e). Platon'a göre korkulacak ve korkulmayacak şeyler üstüne kanunlara uygun olarak, beslenen inancın sarsılmazlığını ifade eden cesaret ise, koruyucular sınıfına özgü bir erdemdir (Platon, 1999: 430a). İlk iki erdemi toplumun belirli bir sınıfına hasreden Platon, ideal devletin sahip olduğu üçüncü erdem olan ölçülülüğün ise toplumun üç sınıfında da bulunması gerektiğini söylemektedir. Buna göre devletin iyi yanının kötü yanını kontrol altına alması anlamına gelen ölçülülük toplum içerisinde hazların, acıların, tutkuların aşırıya kaçmadan yaşanmasını ifade etmektedir (Platon, 1999: 431b). Adalet ise, Platon'un ideal devletinde bulunması gereken en önemli değerdir. Çünkü, diğer üç değer bilgelik, cesaret ve ölçülülük değerlerini ortaya çıkarır. Bir diğer ifadeyle adaletle sahip olmayan bir devletin diğer üç değere sahip olması Platon için bir anlam ifade etmez. Dolayısıyla Platon'a göre devletin üstünlüğü adaletle ortaya çıkmaktadır. Adaleti, toplumu oluşturan üç sınıfın kendilerine verilen görevi en iyi şekilde yapmaları ve birbirlerinin işlerine karışmamaları şeklinde anlayan Platon, bu erdem devleti ayakta tutan

ilke olduğunu, bu ilkenin yıkılmasının devletin yıkılması anlamına geleceğini iddia etmektedir (Platon, 1999: 434b-c).

II. İdeal Devlette Filozof Eğitimi

Bu bölümde ideal devletin yönetimini devralan filozofların nasıl bir eğitime tabi tutuldukları incelenecektir. Bu bağlamda, "Platon'un ideal devletinde eğitim ne anlama gelmektedir ve bu eğitimin temel ilkeleri nelerdir?" sorusuna cevap aranacaktır.

Platon, eğitimle ilgili görüşlerini *Devlet* adlı eserinin VII. kitabında detaylı bir şekilde ele almaktadır. Biz de burada onun eğitimle ilgili görüşlerini dört ana başlık altında ele alacağız.

1. Eğitim, "Doxa (Sanı)"dan "Episteme (İdeanın/Gerçeğin Bilgisi)"ye Giden Bir Süreçtir

Platon'a göre eğitim, ruhun doğuştan getirmiş olduğu öğrenme gücünü iyiden yana çevirme ve bunun için en kolay, en doğru yolu bulma sanatıdır (Platon, 1999: 518d). Onun bu tanımı en açık şekilde, felsefe tarihinde meşhur olmuş olan "Mağara Benzetmesi"nde görülmektedir. Eğitilmiş insan ile eğitimsiz insan arasındaki ayrımı göstermeyi amaçlayan bu anaoloji *Devlet*'in VII. kitabında şu şekilde ortaya konulmaktadır:

"İnsan denen yaratığı eğitimle aydınlanmış ve aydınlanmamış olarak düşün. Bunu şöyle bir benzetmeyle anlatayım: Yeraltında bir mağaramsı yer, içinde insanlar. Önde boydan boya ışığa açılan bir giriş. İnsanlar çocukluklarından beri ayaklarından, boyunlarından zincire vurulmuş, bu mağarada yaşıyorlar. Ne kımlıdayabiliyorlar ne de burunlarının ucundan başka bir yer görebiliyorlar. Öyle sıkı sıkıya bağlanmışlar ki, kafalarını bile oynatamıyorlar. Yüksek bir yerde yakılmış bir ateş parıldıyor arkalarında. Mahpuslarla ateş arasında dimdik bir yol var. Bu yol boyunca alçak bir duvar, hani şu kukla oynatanların seyircilerle kendi arasına koydukları ve üstünde marifetlerini gösterdikleri bölge var ya, onun gibi bir duvar... Bu durumdaki insanlar kendilerini ve yanlarındakileri nasıl görürler? Ancak arkalarındaki ateşin aydınlığıyla mağarada karşılarına vuran gölgeleri görebilirler, değil mi?... Bu zindanın içinde bir de yankı düşün. Geçenlerden biri her konuştuğu, mahpuslar bu sesi karşılarındaki gölgenin sesi sanmazlar mı?... Bu adamların gözünde gerçek, yapma nesnelere gölgelerinden başka bir şey olamaz ister istemez, değil mi?... Şimdi düşün: Bu adamların zincirlerini çözer, bilgisizliklerine son verirsen, her şeyi olduğu gibi görürlerse ne yaparlar? Mahpuslardan birini kurtaralım, ayağa kaldıralım, başını çevirelim, gözlerini ışığa kaldırsın. Bütün bu hareketler ona acı verecek. Gölgelerini gördüğü nesnelere gözü kamaşarak bakacak. Ona demin gördüğün şeyler sadece boş gölgelerdi, şimdiyse gerçeğe daha yakınsın... Mağaradan kurtulan adam, mağarada kalanlara imrenir mi? O, ünleri o kazançları sağlayanları kıskanır mı?" (Platon, 1999: 514a vd)

Benzetmede de ortaya konulduğu gibi Platon için eğitim, mağarada bulunan ve gerçek varlıklar olan ideaların gölgelerini gerçek zanneden insanın, mağaradan kurtarılıp, gölgelerin asıl sahibi olan ideaların bilgisine ulaşma sürecine işaret etmektedir. Onun bu yaklaşımı, epistemolojisinde yer alan ideaların bilgisi anlamına gelen "episteme" ile ideaların gölgesinin bilgisi anlamına gelen "doxa" arasındaki ayrımına dayanmaktadır. Bu bağlamda episteme, doğru bilgiyi ifade ederken, doxa ise bilgi yerine sanıyı ifade etmektedir. Bu ayrıma göre Platon'un sanı dediği şey, duyulur dünyadan duyu organlarımızla elde ettiğimiz muğlak verilerdir ve bunlar bu haliyle doğru bilgi olarak kabul edilemezler. Çünkü bu bilgi, asıl gerçeklikler olan ideaların birer yansıması olan gölge varlıkların algılarıdır. Fakat doğru bilgi yani episteme ise asıl gerçeklik olan ideaların bilgisidir (Arslan, 2006: 228). Mağara benzetmesi, Platon sisteminde eğitimin gücüne işaret etmektedir. Bu benzetmeyle Platon, mevcut toplumdaki insanların epistemolojik durumlarını göz önüne sermektedir. Bu benzetme arkaplanında iki memnuniyetsizliği barındırmaktadır. Birincisi, o ana kadarki yaşantının sadece gölgeleri izlemek ve yankıları dinlemek olduğunu fark etmekten kaynaklanan memnuniyetsizlik; ikincisi ise mevcut epistemolojik seviyenin farkına varılmasından kaynaklanan memnuniyetsizlik (Lear J. , 2006: 34). Platon,

ortaya koyduğu eğitim anlayışıyla bu memnuniyetsizliğin ortadan kaldırılmasını amaçlamaktadır. Bu haliyle mağara benzetmesi, hem yetersiz bir epistemolojik durumdan daha üst bir epistemolojik duruma geçişi, hem de doxadan epistemeye bir dönüşüm sürecini öngörmektedir (Scolnicov, 1998: 99). Bu benzetmeyle Platon'un, eğitime muhatap olacak kişinin yol haritasını çizdiği söylenebilir.

İşte Platon için eğitim, doxaya sahip olan insanın epistemeye ulaştırılmasını amaçlayan süreci ifade etmektedir. Doxadan epistemeye uzanan, çeşitli aşamalardan oluşan ve epistemolojik bir dönüşümü ifade eden bu süreç, Platon'a göre ontolojik bir hazırbulunuşluğu gerektirir ki, bu da Platon'un eğitimle ilgili bir diğer ilkesine bizi götürmektedir.

2. Eğitim Ontolojik Hazırbulunuşluğu Gerektirir

Platon'un eğitim süreci “temel eğitim” ve “ileri düzey eğitim” aşamalarından oluşmaktadır. Platon için bu sürecin ilk aşamasını, ideal devlet içerisinde eğitime kimin tabi tutulacağına belirlenmesi oluşturmaktadır (Arslan, 2006: 411). Platon'un eğitiminin ilk aşaması bireyin 30 yaşına kadar, ikinci aşaması ise 30 yaşından 50 yaşına kadar olan süreyi kapsamaktadır (Platon, 1999: 539d). Platon ilk aşama eğitim için dikkat edilmesi gereken bazı pedagojik ilkelerden bahsetmektedir. Bunlardan ilki, birinci aşama eğitimin daha çocukken başlaması gerektiğidir. Buna göre eğitimin ilk aşaması çocukken başlatılmalı ama asla çocuk zorlanmamalıdır. Çünkü ona göre bedene zorla yaptırılan şey çocuğa zarar verecektir, zarar vermese bile, zorla öğretildiği için çocuğun aklında hiçbir şey kalmayacaktır. Bu nedenle eğitim çocuk için eğlenceli hale getirilmelidir. Platon'a göre bu uygulama hem çocukların kolay öğrenmelerini sağlayacaktır, hem de hangi işe daha yatkın oldukları ortaya çıkacaktır (Platon, 1999: 537a). Temel eğitim ve ileri düzey eğitim aşamalarının kendilerine has amaçları vardır ve bu amaçlar da eğitimin uygulanacağı sınıfları belirlemektedir. Temel eğitim için yapılacak olan ilk şey, ideal devletteki tüm yurttaşların mı yoksa belirli bir zümrenin mi eğitileceği sorusuna cevap vermektedir. Buna göre Platon, ideal devlette eğitime tabi tutulacak sınıfın yöneticiler ve koruyucular sınıfı olduğunu ifade etmektedir. Ona göre yönetilenlerin eğitime tabi tutulmalarına gerek yoktur (Takala, 1998: 791). Platon bu görüşüyle günümüzde geçerli olan eğitimde fırsat eşitliği ilkesine ideal devletinde yer vermemektedir. Eğitilecek sınıfla ilgili olarak Platon'un yaklaşımının böyle bir yapıya sahip olmasının nedeni, onun eğitim sürecinin epistemolojik ve ontolojik olmak üzere iki yöne sahip olmasıdır. Dolayısıyla Platon için eğitime tabi tutulacak birey, doğuştan bazı niteliklere sahip olarak doğmak zorundadır. Aksi takdirde ideal devlet içerisinde kendisine koruyucular ve yöneticiler sınıfında herhangi bir yer bulamayacak ve yönetilenler grubunda yer alacaktır. Platon, eğitimde sınıflar arasında bir ayrıma gitmekle beraber, eğitim verilecek sınıf içerisinde herhangi bir ayrıma gitmez. Buna göre yöneticiler ve koruyucular arasında bulunan kadın, çocuk ve erkek tüm bireyler ideal devletin eğitiminden geçmek durumundadır (Platon, 1999: 543a).

Platon'un eğitime tabi tutulacak birey için aradığı nitelikler şunlardır: Bilime düşkün olma, varlığı bütünüyle sevme (Platon, 1999: 485a), sağlam bir belleğe sahip olma, öğrenme kolaylığı, ruh üstünlüğü ve inceliği (Platon, 1999: 486e). Doğuştan bu nitelikleri bünyesinde barındıran birey filozof olmanın ilk şartını yerine getirmiş sayılmaktadır. Fakat gerçeğin bilgisine yani epistemeye sahip olmayı doğuştan getirilen verili yeteneklerle ilişkilendiren Platon, sadece bu yeteneklerin gerçeğin bilgisine ulaşmaya yetmeyeceğini ifade etmektedir. Ona göre, filozof olmak için fiziksel hazırbulunuşluk gerekli olmakla birlikte yeter şart değildir. Platon, doğuştan gerçeğin bilgisi için gerekli hazırbulunuşluğa sahip vatandaşların ancak yeterli ve doğru eğitime tabi tutulduklarında, gerçeğin bilgisine ulaşabileceklerini ve filozof olarak devleti yönetebileceklerini savunmaktadır. Ona göre doğuştan filozof olmanın gerekliliklerine sahip olan kişiler, uygun eğitimi almadıklarında filozof olamayacaklardır. Uygun eğitimi alamayan filozof, bozulacak, kötü bir ruha sahip olacaktır. Adeta toprağa yeni atılan yabancı bir tohum nasıl soysuzlaşıp o toprağın özelliklerine uyarsa, filozof da bozuk toplumu şekillendirecek yerde, kendisi de bozuk düzene ayak uyduracaktır (Bayram, 2013: 113).

Platon, ideal toplum içerisinde eğitilecek sınıfları belirledikten sonra, bu eğitimin niteliğini belirlemektedir ki bu da bizi eğitim süreciyle ilgili bir başka ilkeye götürmektedir.

3. Eğitimin İçeriği Amaca Uygun Olmalıdır

Platon'un ideal devlet için öngördüğü bu eğitim sisteminde ilk aşamada koruyucular ve filozoflar aynı eğitime tabi tutulacaklar, ardından tekrar bir seçime tabi tutularak, koruyucular arasından filozof olmaya en yatkın olanlar seçilerek devleti yönetmekle görevlendirileceklerdir(Arslan, 2006: 411).Bu bağlamda Platon'un ideal devletinde eğitimin verileceği sınıf, eğitimin niteliğini ve amaçlarını da belirlemektedir. Buna göre eğitimin ilk olarak uygulanacağı sınıf olan koruyucular sınıfına verilecek olan eğitim, devletin bu sınıftan beklentilerini karşılamasını sağlayacak amaca matuf olarak düzenlenecektir (Öztürk, 2004: 100).Buna göre Platon, ideal devlette öngördüğü eğitimin ilk aşamasını koruyucuların sahip olması gerektiğini düşündüğü nitelikler temelinde geliştirmektedir. Platon, ilk aşamada filozofları da içerisinde barındıran koruyucu sınıfı bekçi köpekleriyle özdeşleştirmektedir. Ona göre, iyi bir bekçi köpeği, tanıdığı, bildiği, sevdiği insanlara şefkatli ve korumacıyken; yabancılara ve düşmanlara karşı haşin ve vahşidir. Dolayısıyla bekçi köpeğiyle özdeşleşen koruyucu sınıf, kendi halkına karşı şefkatli ve korumacı, düşmana karşı saldırgan ve haşin olmak durumundadır (Platon, 1999: 376c). Platon doğuştan getirdikleri nitelikleriyle koruyucu olarak seçilen vatandaşların, varolan niteliklerinin doğru eğitime istenilen yönde geliştirilmesini amaçlamaktadır. Bu noktada Platon, koruyucu sınıf için iki nitelik belirlemektedir: İlki, koruma görevini yerine getirebilecek azgın olma, çevik olma ve güçlü olma gibi fiziki yeterliliklerdir. Bu niteliklerini güçlendirmek için o, beden eğitimini yani jimnastik eğitimini öngörmektedir. Platon koruyucu sınıfından beklediği ikinci nitelik olan kendi halkını sevmeye, dostunu düşmanından ayırt edebilme, estetik duyguya sahip olma gibi ruhsal yeterliliklerin ise müzik eğitimiyle güçlendirilebileceğini düşünmektedir(Platon, 1999: 376c-e). Her iki eğitimin de koruyucu sınıfı için elzem olduğunun altını çizen Platon, müzik eğitiminin beden eğitiminden daha önce gelmesi gerektiğini söylemektedir(Platon, 1999: 376d). Bunun temel nedeni, Platon'un sisteminde ruhun bedenden önce gelmesi ve bedeni yönlendiren unsurun ruh olmasıdır (Arslan, 2006: 411). Platon ideal toplum içerisinde bu ilkeye uyulmadığında bedenen güçlü ancak daha az bilgili, entelektüel kapasitesi daha düşük kuşakların ortaya çıkacağını, bu durumda ise toplumsal sınıfların birbirlerine karışacağını, toplumun düzeninin ortadan kalkacağını, yurttaşların birbirlerine düşman olacaklarını iddia etmektedir (Platon, 1999: 546b-e).

Platon, eğitim sürecinin amacına ulaşması için eğitim içeriklerinin yanında, eğitim ortamlarının da düzenlenmesini şart koşmaktadır. Bu düşüncesi de bir başka ilke olarak karşımıza çıkmaktadır.

4. Eğitim Ortamları Eğitimin Amacına Uygun Olarak Düzenlenmelidir

Platon'un eğitim ortamlarının düzenlenmesiyle ilgili görüşlerinin temelinde ruha dair görüşleri yatmaktadır. Buna göre Platon her ruhta bir öğrenme gücü olduğunu düşünmektedir. Bu nedenle o, eğitimi ruha yeni bir şeyler koyma, yükleme olarak görmemektedir. Bir başka ifadeyle onun için eğitim bir inşa değil, yönlendirme faaliyetidir(Lear J. , 2006: 39).Onun bu düşüncesi epistemolojisiyle doğrudan ilişkilidir. Çünkü ona göre bilgi, zaten ruhta var olan şeylerin hatırlanması sürecidir (Cevizci, 2010: 98). Dolayısıyla Platon için yeni doğmuş bir bebek, eğitim sürecinde kendisine edindirilecek olan kazanımları zaten bilkuvve haiz olarak dünyaya gelmektedir. Bu bilkuvve kazanımlar eğer ruhta yoksa eğitim başarısız olmaya mahkumdur(Lear G. R., 2006: 115). Bu açıdan bebeğin ruhu, forma kavuşmamış bir haldedir ve Platon için eğitim bilkuvve olan bu kazanımların bilfiil hale geçirilmesidir. Platon'un da eğitim sürecinde dikkat çektiği nokta tam da burasıdır. Ona göre şekillendirilmemiş olan bir bebeğin ruhu, içerisinde bulunduğu ortam tarafından şekillendirilebilir(Lear J. , 2006: 26). Bu nedenle eğer eğitim ortamları amaçlar doğrultusunda düzenlenmezse, ruhlar istenmeyen şekilde gelişmeler gösterebilir. Bu nedenle bebeğin ya da çocuğun içerisinde bulunduğu sosyal ortam ve bu ortamdan aldığı kültürel mesajlar, sıklıkla farkedilmeyen şekillerde ruha işler ve onu içerdikleri bu mesajlar doğrultusunda

şekillendirir(Lear J. , 2006: 26). Dolayısıyla Platon, eğitim sürecinde eğitim ortamlarının ideal devletin amaçları doğrultusunda düzenlenmesi gerektiğinin altını çizmekte ve bu alanda belirli kısıtlamalara gidilmesi gerektiğini belirtmektedir.

İlk olarak,Platon'un fiziksel çevrede yaptığı kısıtlamaları ele alalım. Platon, koruyucu sınıfa uygulanan eğitimde istenen hedefe ulaşmak için yani koruyucu sınıfın kendi halkına karşı şefkatli ve korumacı, düşmana karşı saldırgan ve haşin olması(Platon, 1999: 376c) için eğitim ortamlarının fiziksel olarak da düzenlenmesi gerektiğini belirtmektedir. Buna göre, koruyucular arasında kadın ve çocuk ortaklığı olacak şekilde bir düzenleme yapılacaktır. Dolayısıyla koruyucuların yaşadıkları, yemek yedikleri yerler hep ortak olacaktır. Böylece herkes birbirini eş, anne, baba, evlat bilecek ve toplumda sevgi bağı güçlenecektir (Arslan, 2006: 412-413). Bunun sonucunda da koruyucu sınıf için arzulanan kendi halkına karşı korumacı ve şefkatli olma tutumu bu sınıfa kazandırılacaktır. Bunun yanında yiyeceklere de dikkat edilmek durumundadır. Platon, koruyucu sınıfın düşmana karşı saldırgan ve haşin olmasını sağlayacak beden kuvvetinin kazanılması için, bu sınıfın yiyeceklerinin de düzenlenmesi gerektiğini, bu nedenle de onların fiziksel gücüne zarar verecek baharatlı, yağlı ve tatlı yiyeceklerden uzak durmalarının sağlanması gerektiğini düşünmektedir(Arslan, 2006: 413).

Platon koruyucu sınıfın eğitiminde fiziksel çevrenin düzenlenmesinden sonra eğitim müfredatında bazı düzenlemelere gitmektedir.

Platon, beden eğitiminin yöntemi konusunda o zamana kadar Antik Yunan'da uygulanan beden eğitimi müfredatından memnundur(Öztürk, 2004: 100). Bu nedenle ideal toplumda verilecek olan eğitimde daha çok müzik eğitimi üzerinde yoğunlaşmaktadır. Platon şiirden sahne sanatlarına, resimden heykele kadar bütün sanatları müzik eğitimi içerisinde mütalaa etmektedir. Bu açıdan Platon devletinde müzik eğitimi aslında sanat eğitimi anlamına gelmektedir. Fakat Antik Yunan'da kendi zamanında cari olan müzik eğitimi, Platon'un ideal devletinin amaçları açısından bazı sakıncaları içermektedir. Bu nedenle Platon, ideal devletinde verilmesi gereken müzik eğitiminin içeriğinde bazı değişikliklere gitmektedir. Bu değişiklikler, bugün eğitimde sansür olarak nitelendirilebileceğimiz türden değişikliklerdir. Platon'un eğitimdeki sansürlü amacı, eğitime tabi tutulan sınıfın yanlış yönlendirilmesinin önüne geçmek ve koruyucu sınıfın ihtiyaç duyduğu ruhsal özellikleri kazanmasını sağlamaktır.

Platon, sansüre şiir, masal, hikaye, efsane gibi sözlü sanatlarla başlamaktadır. Sözlü sanatlara verdiği bu öncelik, kendi döneminde cari olan gelenekle ilgilidir. O, yazılı gelenekten çok sözlü geleneğin eğitimde geçerli olduğu bir ortamda yaşamıştır. Platon, sözlü geleneğin sahip olduğu söz, ölçü ve ritim yapısının mesajı daha etkili ve kalıcı bir şekilde aktardığını ve sözlü sanatların barındırdıkları mesajların farkında olmadan insan ruhunu şekillendirdiğini farketmiştir(Brown, 1972: 673). Platon özellikle çocuklara hitap eden sözlü sanatlarda azami özenin gösterilmesi gerektiğini, zira onların ruhlarının daha kolay şekillendirdiğini düşünmektedir(Asmis, 2006: 347). Platon, yetişkin birinin hayatının perde arkasında çocuklukta duyduğu sözlü sanatların etkisinin olduğunu ifade etmektedir. Bu konuyla ilgili şöyle söylemektedir: "... Çocuk gizliyi açığı ayırt edemez. Çocukken duyduklarımız da akıldan çıkmaz, aklımızda öyle kalır. İşte bunun için, çocukların ilk duydukları sözlerin, iyilik yolunu gösterecek güzel masallar olmasına çok önem vermeliyiz."(Platon, 1999, s. 378e)Devlet'te örneğini verdiği Kephalos(Platon, 1999, s. 330b vd),hayatının ilk dönemlerinde duyduğu Hades ve ölüm üzerine anlatılan hikayeleri başta umursamadığını; fakat yaşlandıkça, başta duyduğu bu hikayelerin gerçek olma ihtimalinin onu endişelendirdiğini anlatmaktadır. Platon burada, sözlü sanatların insan ruhunu kişinin farkında olmadan etkilediği ve şekillendirdiği hususuna dikkat çekmektedir. Buna göre küçük bir çocuk Achilles'in kahramanlık hikayesini, henüz bu hikayelerin arkaplanında yatan düşünceleri anlayamayacağı bir yaşta duyduğunda, oyunlarında kendisini Achilles ile özdeşleştirecektir. Bu durum oyunlarında tekrar ettikçe ruhu farkında olmadan Achilles'ecektir. Bu aşamadan sonra çocuk Platon'a göre dünyaya Achilles'in bakış açısından bakacaktır. Daha sonra büyüyüp de çocukluğunda duyduğu hikayelerin perde

arkasında yatan gerçek fikirleri öğrendiğinde her şey için çok geç olacaktır. O, bu aşamadan sonra Achilles'in sadece bir hikaye kahramanı olduğunu bilecek ancak o hikayelerde anlatılan fikirler onun ruhuna işlenmiş olacaktır. Bu süreç tıpkı rüyaya benzemektedir(Lear J. , 2006: 30). Rüyalarımızın da ruh dünyamızı şekillendiren derin anlamları vardır. Rüyalarımızın ruhumuzu etkileyen gücü, uyanık olduğumuzu düşünmemizden değil, uyanık olmakla uyur olmak arasındaki farkı ayırt edebilme yetimizin geçici olarak ortadan kalkmasından ileri gelmektedir (Platon, 1999: 476c).

Bu nedenle Platon, ideal devlette sözlü edebiyata sınırlamalar getirmektedir. Fakat burada dikkat edilmesi gereken bir husus da şudur ki, Platon söz sanatlarını yasaklamamaktadır. O, söz sanatlarının ruhu şekillendirmedeki gücünden mahrum olmaktansa, bu gücü amaçlar doğrultusunda kullanma taraftarıdır(Partee, 1970: 211). Çünkü söz sanatları, ideal devlette, koruyucular sınıfının toplum için merhametli ve doğru davranışlar kazanmasını sağlamaktadır. Bu eğitim sadece genç koruyucuların iyi lezzetleri geliştirmesini değil, ayrıca iyiyi ve güzeli de sevmelerini sağlamayı amaçlamaktadır(Lear G. R., 2006: 104). Bu bakımdan, ideal devletteki söz sanatlarının içeriklerini ve şairleri ideal devletin amaçları doğrultusunda kullanmayı amaçlamaktadır.Platon açık bir şekilde şairlerin yazacakları şiirlerin içeriklerine müdahale edilmesi taraftarıdır(Platon, 1999: 378d). Bu konuda Platon'un tavrı son derece açık ve nettir: "... Tanrılar sözde de, şarkıda da, sahnede de nasıllarsa öyle anlatılmalı."(Platon, 1999: 379a). Platon, koruyucuların Tanrılara saygılı olmaları isteniyorsa, eğitimde Tanrılarla kötü, yalancı, zalim, hain gösteren anlatılara şiirlerin, masalların ya da hikayelerin herhangi birinde yer verilmemesi gerektiğini ifade etmektedir(Platon, 1999: 379b). Yine eğer Platon'a göre koruyucular ölümden korkmayan, yiğit kişiler olarak yetiştirileceklerse, bu durumda ölümden en az korkmalarını sağlayacak sözlerin söylenmesi gerektiğini belirtmektedir. Aksi takdirde, Platon'a göre zihni Hades'in kötü sahneleriyle, çekilen azaplar ve ıstıraplarla şekillenmiş bir koruyucunun ölümden korkmaması imkansızdır(Platon, 1999: 386a).

Platon sözlü sanatlardan sonra tragedya, komedi gibi sahne sanatlarına da bir takım sınırlamalar getirmektedir.Sahne sanatları Platon'un eğitim sisteminde entelektüel gelişim açısından oldukça önemlidir. Platon'a göre sahne sanatları, her ne kadar insanı epistemeye ulaştırmıyorsa da, onu epistemeye ulaştıracak olan zihne somut örnekler sunmaktadır. Sahne sanatlarının sunduğu bu modeller, iyinin ve kötünün cisimleşmiş hali olarak insan zihninde canlanmaktadır. Fakat bunu yaparken, ruhumuzun daha az bilişsel özellik taşıyan yönüne hitap etmektedir (Scolnicov, 1998: 113). Platon için sahne sanatlarının taşıdığı en önemli tehlike taklide dayalı bir sanat olmasıdır. Bu sanatların taklide olan vurgusu, Platon'un ideal devletin temel ilkesi olan ve adalet erdemini yansıtan herkesin tek bir işi yani kendi işini yapması gerektiğini ifade eden ilkesini tehlikeye düşürmektedir. Bu konuda şöyle demektedir: "*Koruyucular başka hiçbir işin taklidini bile yapmayacaklardır. Yaparlarsa bu taklit, kendi işlerinin gerektirdiği ve çocukluklarından beri özenilecek yiğitlik, bilgelik, dini bütünlük gibi erdemlerin taklidi olmalıdır. Bunların dışında hiçbir kötü işi ne yapsınlar ne de taklit etsinler. Çünkü taklit ettikleri şeye alışırlar. Bu alışkanlık da bedeni, konuşmayı, görüşleri değiştiren ikinci bir tabiat olur.*"(Platon, 1999: 395a). İnsanda ikinci bir tabiat oluşumuna yol açan sahne sanatları Platon'un ideal devletinde, Tanrılarla boy ölçüşen kahramanları, göz yaşlı döken kadınları, hasta, aşık ya da doğum yapan kadınları kısacası koruyucu sınıfın sahip olması gereken erdemlere muhalefet eden davranışları öven kahramanları barındıran sahne sanatlarına yer yoktur. Bunları canlandıran ve şiirlerine konu edinen şair ve sanatçılar yasaklı olduklarından ideal devlette kendilerine yer bulamayacaklardır(Platon, 1999: 398b).

Platon, sahne sanatlarından sonra müzik eğitiminde de kısıtlamalara gitmektedir. Platon müzik eğitimini eğitimlerin en iyisi olarak nitelendirmektedir. Çünkü müzik sayesinde çocuklar ilk eğitimlerinden itibaren güzeli sevmeye, güzele benzemeye, onunla bir olmaya, kaynaşmaya çalışmaktadır(Platon, 1999: 402b). Ona göre müzik eğitimini bu kadar etkili yapan şey, ritim ve makamlar kadar başka hiçbir şeyin insanın ruhuna işleyememesidir. Ona göre müzik eğitimi amacına uygun şekilde yapıldığı takdirde, insanı yüceltir ve özünü güzelleştirir. Müzik insana iyi ile kötü

arasındaki ayrımı yapmayı sağlayarak ruh gelişimine yardım eder(Asmis, 2006: 347). Ancak Platon amacına uygun yapıldığı takdirde eğitim için en etkili araç konumuna yükselen müziğin, kontrol edilmediği takdirde aynı oranda yıkıcı sonuçlara neden olacağını ifade etmektedir. Buna göre eğer müzik eğitiminde genel ilkelere azami dikkat gösterilmezse, bu müziğe maruz kalan koruyucular kötü yiyeceklerle beslenenler gibi yetişeceklerdir. Hergün farkında olmadan zehirli yiyecekleri azar azar yiyen biri gibi, kötülük içlerine yerleşecektir(Platon, 1999: 402b).

İnsan ruhunu şekillendirme konusunda müziğin bu etkisinin farkında olan Platon, müzik alanındaki kısıtlamalara makam ve ritimlerden başlamaktadır. Buna göre uygun müzik, savaşta ya da zor durumda kalan, yaralanan, yenilen, ölümle karşılaşıya kalan ve her türlü mutsuzluk içerisinde kaderine kafa tutabilen koruyucunun yiğitlik erdemine uygun olmalıdır. Koruyucuları sarhoş, gevşek, tembel yapacak müzik, makam ve ritimlere ideal toplum içerisinde yer yoktur(Platon, 1999: 388e). Bu nedenle Platon biri koruyucunun düşmana göstereceği sertliğe uygun "sert", diğeri ise kendi halkına duyacağı merhamete uygun "yumuşak" iki makamın ideal devlete yeteceğini belirtmektedir. Bunun Platon açısından ideal devlete bir yararı da birçok makam için gerekli olan çok çeşitli müzik aletlerine duyulan ihtiyacın ortadan kalkmasıdır(Platon, 1999: 400a).

Platon söz sanatları, sahne sanatları ve müzikle ilgili düzenlemelerden sonra eğitimin ikinci aşamasına geçmekte ve müfredatın diğer ayağını oluşturan matematik eğitimini incelemeye başlamaktadır. Bununla birlikte eğitimde ikinci aşamaya geçiş, bu aşamada eğitime muhatap olacak kesimin değişmesi anlamına gelmektedir. Buna göre Platon, koruyucu sınıfı içerisinde en iyileri eğitimin ikinci aşamasına geçirmektedir(Platon, 1999: 412c). Bu aşamada artık eğitimin yeni bir hedefi ortaya konulmaktadır. Birinci aşamada eğitimin amacı, koruyucuların görevlerini en iyi şekilde yerine getirmelerini sağlayacak formasyonun kazandırılmasıyken, bu aşamada eğitimin amacı, epistemeye ulaşarak devleti yönetecek seviyeye yani filozofluk seviyesine ulaşmaktır. Eğitim sürecinde bu tarz bir seçimin ideal devletin olmazsa olmaz şartı olduğunu söyleyen Platon, devletin başına filozoflar gelmediği sürece toplumun başının dertten kurtulmayacağını ve ideal toplumun hiçbir zaman gerçekleşmeyeceğini iddia etmektedir(Platon, 1999: 501e). Çünkü Platon için filozofun devletin başına geçmesi iktidar gücüyle akıl gücünün birleşmesi anlamına gelmektedir(Platon, 1999: 473d). Platon'un filozofa yüklediği birinci görevin temelinde filozofun bilgeliğine yapılan vurgu vardır. Çünkü Platon'un ideal devletinde filozof akıllı temsil etmektedir. Bir diğer ifadeyle bu devlet içerisinde filozof aklın ete kemiğe bürünmüş halidir. Bu nedenle devletin başındaki filozofa itaat etmek Platon'a göre akla itaat etmek anlamına gelmektedir (Scolnicov, 1998: 108). Platon, en az sayıda yurttaşın yöneticiler sınıfında yer aldığını belirtmektedir. Bunun nedeni Platon'a göre bu sınıfta yer almayı sağlayacak filozofça yaratılış ve erdemlere sahip yurttaşların kolay kolay bulunamamasıdır (Platon, 1999: 503b). Platon, ideal devlet içerisinde filozofa iki görev vermiştir: (1) Kanunları ve kurumları koruyarak, toplumsal adaleti yani tüm sınıfların kendi işlerini en iyi şekilde yapmalarını sağlamak (Platon, 1999: 484c)(2) İdeal devletin vatandaşlarının, devletin ilkeleri doğrultusunda eğitilmesini sağlamak (Platon, 1999: 521c;543a). Platon'un tüm bu açıklamalarının ulaştığı son nokta, ideal devletteki her vatandaşın gerçeğin bilgisine yani epistemeye ulaşmış, filozof olamayacağıdır. Bu bakımdan Platon, ideal devletindeki filozoflara kutsiyet atfederek, toplumun gözünde onları "seçilmişler" olarak resmetmektedir (Takala, 1998: 791).

Tekrar Platon'un eğitim sisteminin ikinci aşamasının temelini oluşturan matematik eğitimine dönecek olursak, o, matematik müfredatının ilk ilminin 1,2,3'ün bilgisi yani sayılar bilgisi olan aritmetik olduğunu belirtmektedir(Platon, 1999: 522a). Aritmetikle Platon filozofların, sayıların özüne vakıf olacaklarını bunları savaş alanlarında uygulayacaklarını ve bunun yanında bu ilmin idealara yani gerçekliğin bilgisi olan epistemeye ulaşma noktasında filozoflara yardımcı olacağını ifade etmektedir(Platon, 1999: 525c). Platon'un eğitim sisteminde aritmetikten sonra geometri gelmektedir. Platon'a göre geometri, idealarla ilgilidir. Bu nedenle bu ilmin konusu değişime tabi olmayan, her zaman

varolan idealardır. Platon geometriye ayrı bir önem vermektedir. Bu konuda "*geometri bilenle bilmeyen arasında uçurum vardır*"(Platon, 1999: 527a) demektir. Atina'da kurduğu "Akademi"nin kapısında "geometri bilmeyen buraya girmesin" yazdığı rivayet edilmektedir ki (Arslan, 2006: 181) bu durum onun için geometrinin ne kadar önemli olduğunun bir işaretidir. Geometriden sonra, nesnelere üçüncü boyutunu inceleyen, Platon'un "üç boyutlular geometrisi" dediği, bizim katılar geometrisi (Solid Geometry) olarak isimlendirebileceğimiz ilim gelmektedir(Platon, 1999: 528e). Katılar geometrisinden sonra ise astronomi gelmektedir. Bu ilim filozofa, aylar, mevsimler ve gökyüzü hakkında bilgi vermektedir. Platon'a göre filozof bu ilmi bilmek zorundadır, çünkü çiftçilerin, komutanların bilmek zorunda olduğu bir ilmi, onların yöneticisi olacak olan filozof zorunlu olarak bilmek durumundadır(Platon, 1999: 527c).

Platon matematik ilminin tepesine diyalektik ilmini yerleştirir. Bu konuda o, "*diyalektik bilimlerin doruğu, tacıdır*"(Platon, 1999: 535a) demektir. Diyalektik onun eğitim sisteminde aynı zamanda bir yöntem olarak da iş görmektedir. Platon'un diyalektikçe en üstün payeyi vermesi, bu ilmin hangi konu olursa olsun her şeyin özünü sistemli bir şekilde kavramayı amaçlamasından kaynaklanmaktadır. Ona göre diğer ilimler idealaların bir yanını kavrayarak, diyalektik tüm yönlerini kavrar. Diğer ilimlerin bu tek taraflı yaklaşımlarını Platon, bir düşe benzeterek, bunların bir takım varsayımlara dayandığını ve kanıtlanamadıkları için de idealara nüfuz edemediğini belirtmektedir. Dolayısıyla Platon, bilinmeyen bir şeyin ilke olarak kabul edilmesi durumunda, bu ilkedan çıkarılacak olan sonuçların ve yargıların bilinmeyenlerle dolu olacağını, bunların ne kadar düzene sokulsalar da tam bir bilime varamayacaklarını iddia etmektedir. Bunun tersine diyalektik bir metot olarak, varsayımları birer birer ortadan kaldırarak, gerçekliğin kendisine ulaşmaktadır. Bu yönüyle Platon'a göre sadece diyalektik idealara nüfuz edebilmektedir(Platon, 1999: 533b-e). Bu nedenle Platon'un sisteminde filozof şeylerin kendilerini görebilmekte ve ancak bu sayede mağaradan çıkıp, gölge varlık ile gerçek varlığın ayırıcısına varabilmektedir(Furfey, 1942: 76). Fakat Platon burada bir noktanın altını çizmektedir. Ona göre diyalektik onun formasyonunda bahsettiği diğer ilimler alınmadan uygulanırsa yıkıcı sonuçlar ortaya çıkaracaktır. Bir başka ifadeyle, entelektüel zihin yapıları yanlış düzenlenmiş kişiler, yanlış fikirlerden hareket ederek diyalektik uygulamaları yanlış bir ruh yapısına ve yanlış sonuçlara ulaşacaklardır(Scolnicov, 1998: 106).

Sonuç

Platon insanın gerçek mutluluğa ulaşmasının ancak belirli niteliklere sahip ideal bir toplumda mümkün olduğunu ifade etmektedir. Ona göre insanı mutlu edecek bu toplum tek bir insan gibi olmalı, tüm unsurlarıyla bir bütün olmalıdır. Devleti oluşturan farklı unsurların birliğini insan ruhuyla özdeşleştiren Platon, ruhun üç bölümüyle devleti oluşturan üç sınıf arasında bir benzerlik kurmaktadır. Buna göre üreticiler, koruyucular ve yöneticilerden oluşan toplumda yöneticiler sınıfı filozoflardan oluşmalıdır. İdeal devleti yönetmek gibi temel bir görevi haiz olan filozoflar, bu görevlerine uygun şekilde eğitilmelidirler. Platon, filozoflar için iki aşamalı bir eğitimi öngörmektedir. Bu eğitimin ilk aşamasını beden eğitimi ve müzik eğitimi oluşturmaktadır ki Platon filozofların bu eğitimi koruyucularla birlikte almaları gerektiğini ifade etmektedir. Daha sonra ise koruyucular sınıfının en iyileri arasından seçilecek olan yönetici sınıf, ileri düzey eğitimde matematik eğitimi alacaklardır. Platon, ilk aşaması beden eğitimi ve müzik eğitiminden, ikinci aşaması ise matematik eğitiminden oluşan bu süreç için dört temel ilke belirlemiştir. Bu ilkelerden birincisi eğitimi, idealaların yani gerçeğin gölgesini ifade eden doxadan, gerçeğin bizatihi kendi bilgisini ifade eden epistemeye ulaşmayı amaçlayan bir süreç olarak ele almaktadır. İkinci ilke, ideal toplumda eğitilecek toplumsal sınıfların belirli bir ontolojik hazırbulunuşluğa sahip olmaları gerektiğini ifade etmektedir. Toplumun belirli bir kesimini hedef alan bu eğitimin içeriğinin ideal toplumun amaçları doğrultusunda düzenlenmesi gerektiğini belirten ilke de üçüncü bir

ilke olarak karşımıza çıkmaktadır. Yazımızda ele aldığımız son ilke ise ideal toplumda verilecek eğitimin içeriğiyle birlikte ortamların da amaçlar doğrultusunda düzenlenmesinin gerekliliğini ortaya koymaktadır.
